Blaustein and Ferguson have done so well that it is difficult to single out any chapter for special mention. But the section entitled "Avoidance, Evasion and Delay" that deals with the obstructive measures against the implementation and enforcement of *Brown* v. *Board of Education* is of timeliest interest and gives an admirable picture of the general merit of the book. Though written before the discouraging happenings in Little Rock, the authors in this chapter showed their full awareness of the obstacles that would be put forth to block integration. Those measures fall into four categories: (1) "Interposition and Nullification" (the theoretical basis of the States rights philosophy), (2) "Disqualifying Potential Litigants." (The lower Federal courts, charged by the Supreme Court with the responsibility for implementation, are powerless to act unless a segregation suit is in litigation before them. Litigation is expensive, and so the task of instituting litigation fell by default to the NAACP. Therefore, a considerable part of the southern legal strategy has been to prevent the NAACP from operating in the Deep South. States attorneys have sought to enjoin the association from any activities within the State until it registers as a foreign corporation. The association has refused to register and it has been enjoined in several States. Some States have enacted legislation prohibiting the employment of any NAACP member by a State agency. Mississippi has a third approach, making it a crime for an organization to institute desegregation proceeding in the State courts.)

A third category is "Separation, But Not by Race," an attempt to find some method of classifying the grounds for admission to school, ostensibly devoid of racial overtones, which will nevertheless result in the continued separation of the races in the southern school systems. Some States set up a factor based upon scholastic achievement, others "health and moral factors," "aptitude" of the child and "availability of transportation." The authors do not deny that these plans are constitutionally valid—if they are enforced without regard to race or color. A Federal district judge in Virginia, however, saw through the program and declared a plan unconstitutional because in actuality the pupil assignments had been made on a racial basis. A fourth device is the "private-public schools." Virginia would abolish all public schools threatened with integreation and provide tuition grants in private schools. Georgia would close all public schools and lease the public school facilities to private persons who would be expected to carry on segregated education. It is the belief of the authors that these and similar schemes that would maintain racial segregation will ultimately be found to be unconstitutional.

The authors have made no prophecies as to what would occur if Negro pupils should be kept out of school by force, because apparently they could not have conjured up a Faubus.

"Desegregation and the Law" does give one the feeling that resort to armed action will not be the instrumentality for the enforcement of *Brown* v. *The Board of Education*. The orderly processes of the courts will win increasing acceptance by the public, the hotheads and forces of lawlessness will be increasingly discouraged, and desegregation will be accomplished "with all deliberate speed".

NATHANIEL PHILLIPS.

Mr. Speaker, other legal scholars writing in leading professional journals have also praised this important contribution to the solution of the desegregation problem. Typical is this review excerpt from the University of Maryland Law Review:

With candor, confidence and restraint the authors, both of whom are law teachers and one of whom is a Negro, have combined simple constitutional history with shrewd legal analysis to produce what surely must be at once the most readable and the most thorough book on the subject. But first of all, this is a careful book: carefully thought out, carefully written, carefully balanced, carefully complete. That is reflected in the development of the authors' principal argumentative thesis: that the Brown decision was not a brazen piece of judicial legislation utterly defiant of 60 years of established legal precedent, but rather "was a logical extension of the standards which had been created" (p. 127) by the Supreme Court in striking down racial discrimination in the graduate school cases [*Sweatt* v. *Painter*, 339 U.S. 629 (1950) and *McLaurin* v. *Board of Regents*, 339 U.S. 637 (1950)]. It is their position that the tests adopted in those cases left little room for any continued vigor of the "separate but equal" doctrine of *Plessy* v. *Ferguson*, 163 U.S. 537 (1896). Did the Supreme Court go that far? The authors think so. With admirable precision they determine that the words of the Chief Justice— ". . . in the field of public education the doctrine of 'separate but equal' has no place. Separate educational facilities are inherently unequal."—mean "that all classification by race is unconstitutional per se, and that segregation in public education is thus merely an example of such invalidity" (p. 140).

For anyone who seriously wants to understand the legal complex surrounding what have come to be known as the segregation cases, this book is required reading. For anyone who simply likes to read an interesting book with a legal topic, this item is a real find.

ROGER D. REDDEN.

Mr. Speaker, other law reviews have been complimentary. The Northwestern Law Review praised the book as having "ably recounted" the law involved in the desegregation problem. The review states that the complete story is told "in a useful way" and that it "clearly identifies the three central puzzles which underlie the school segregation cases."

The Boston University Law Review writes as follows:

The reviewer thoroughly enjoyed reading Desegregation and the Law. He could not help but recall the words of Chambers regarding books: "A good book, in the language of the book-sellers, is a saleable one; in that of the curious, a scarce one; in that of men of sense, a useful and instructive one." Professors Blaustein and Ferguson have afforded us a useful and instructive book.

And former Attorney General Herbert Brownell, Jr., writing in the Harvard Law Review, had this to say:

While the authors do not attempt to predict the ultimate answers to the questions raised by these quoted phrases, they make the valid point that an analysis of the *Brown* case is the starting point for a search for the answers. And their analysis of the *Brown* case is a competent one.

The book rightly points out that, for the future, equal to or greater in importance than the broad sweep of the Supreme Court decisions declaring unconstitutional all State-imposed racial discrimination is the method of implementing the Court's decision concerning the public schools.

Legal scholars are not the only ones who have praised this book. The following is taken from the Wisconsin Magazine of History:

This book seeks to describe, with a minimum of technical jargon, how the five segregation cases came up, the strategy of counsel on both sides, the principal precedents that related to the problem at hand, and the line of reasoning followed by the Court in reaching its ultimate conclusion. In a sense, this book may be read as an exhaustive analysis of every important aspect of one important piece of litigation. Wholly apart from the intrinsic importance of the problem which is the main subject of this book, it is worth remarking that we need more such studies of important decisions of the Court. That is to say, we must get beyond the familiar patterns of analysis of appellate court opinions to examine a case in the context of all the factors that determined its contours.

The statement on this book which appeared in the Phi Beta Kappa magazine, the Key, says:

This careful, accurate study traces the steps leading to the recent desegregation rulings of the Supreme Court and discusses the subsequent impact of the rulings. The clarity of the analysis and the straightforward style makes the volume particularly useful to nonspecialists.

In the more popular publications, the Saturday Review had this to say about the volume:

Now, in "Desegregation and the law," the two Rutgers University Law School professors who are that book's authors have traced with meticulous care the reasoning and the steps leading up to the momentous decisions of 1954 and 1955. By this means they have brought one of the most controversial issues of the decade into clearer perspective and they have thrown light upon the character, the operation, and the importance of our Federal court system.

This is supplemented by the observations in such newspapers as the Washington Post, which called the book "a sensible primer clearly written."

Nor have the publications of the South—though they disagree with the decisions—failed to praise the book.

The Pulitzer Prize-winning Arkansas Gazette, Little Rock, Ark., made these comments:

The excellent study is a must for any practicing attorney. It is within the comprehension of the average high school graduate.

The authors urge the point that "with all deliberate speed," as suggested by the Court, has a specific meaning, as indicated by its use in an earlier case involving money to be paid by a State. In that instance, 'with all deliberate speed' meant as soon as, in the regular course of affairs, the State's legislature could take the action necessary to appropriate the sum. In the school case, the authors say, "with all deliberate speed" does not rest on the majority sympathies of a local community; it has regard only to such questions as facilities, faculties, school districts.

Another southern newspaper, the Chronicle, in Houston, Tex., uses these words in writing about the book:

The burning issue of our day is segregation and most people regard the subject either with conscience or custom directing their opinions. This book, written by two lawyers, breaks away from the individual problems which set conscience and from the social order which directs custom.

Taking for granted that heated controversy, journalistic writing and even objective analysis merely publicize the issue, the authors delve into the judicial aspects of segregation and its solution.

Feelings and emotions are beside the case; cold facts and a special study of the Constitution and its final interpretation here determine the righteousness of the outcome.

One chapter, "The Color-Blind Constitution," makes clear to the layman the legal foundation upon which our social order must rest. Facts are presented without argumentation, in easy style, unencumbered with legal terminology.

This book should prove enlightening to the serious reader who desires to act without fear of selfish motivation.

The competency of the authors is beyond question. Both are professors of law at Rutgers University. Both have had legal assignments for our Government.

And the Mississippi Law Journal characterizes the volume "as both welcome and valuable as a dispassionate and unemotional study of the Supreme Court decisions."

Poison in Your Water—No. 62

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD an article appearing in the Newark (N.J.) Star-Ledger on July 31, 1958, entitled "Polluted River Diverts Five Towns to Wanaque."

The article follows:

POLLUTED RIVER DIVERTS FIVE TOWNS TO WANAQUE

(By Peter Kurzman)

The Passaic River of Paterson was so polluted yesterday that the Passaic Valley Water Commission switched to Wanaque Reservoir to provide water for its 400,000 customers.

The commission reported river water reaching its Little Falls filtering plant was devoid of oxygen, causing the death of hundreds of fish and, in turn, causing a stench which spread over parts of Passaic, Essex, and Morris Counties.

The pollution was traced to waste from three mills of the Whippany Paper Board Co. of Whippany.

The commission ordered the largest mill shut down immediately and scheduled a conference last night with company officials.

Richard Bonyun, commission general superintendent, said pollution had been getting worse for several weeks, causing hourly checks to be made at the filtering units of intake from the river.

Finally it became necessary to draw the entire 70 million gallons from the Wanaque Reservoir for consumers in Paterson, Passaic, Clifton, Nutley, and Harrison.

Bonyun said no customers received impure water at any time. The strong odor of hydrogen sulfide alarmed many residents and led to a flood of inquiries to authorities.

Garret Westervelt, Passaic County conservation officer, said the river has been low during the past weeks and waste from the mills filled bordering swamps and eddies in Essex and Morris Counties.

High humidity and Monday night's heavy rain flushed the pollution into the main river stream, he said.

Reports of the number of dead fish ran into the thousands and many were seen coming to the surface gasping for air.

Earlier this year the commission obtained an injunction against the paper company which orders the erection of more waste treatment facilities by June 1959.

The company reportedly has begun meeting these terms and has allocated $500,000 for the projects.

Why Our China Policy Is Realistic, Necessary, and Sound

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. JUDD. Mr. Speaker, there are few subjects, if any, about which there has been longer and greater disagreement in our country than our China policy. The impression has been created that the issue of what to do and what not to do about Red China is hopelessly complicated, beclouded with emotion, and stubbornly unrealistic. Actually the facts are very clear. The question while exceedingly difficult is not complicated in terms of the principles involved. And the policy this administraton has followed of not granting official recognition to the Peiping regime as the bona fide representative of the Chinese people, and nonadmission of it to the United Nations, is completely hardheaded and realistic.

The American who knows most about the Chinese Communist from firsthand experience is Hon. Walter S. Robertson, Assistant Secretary of State for the Far East for the last 6 years. Mr. Robertson was General Marshall's right-hand man in China in 1945 and 1946, in the futile effort to get a workable truce between the government of China and the insurgent Communist regime. As often as each of four cease-fires had served its purpose for the Communists they broke it. They were then, as they have been in our own long negotiations with them the last 3 years at Geneva and Warsaw, "irreconcilable"—to use General Marshall's word.

Mr. Robertson has spent more hours in personal discussion with Mao Tse-tung, Chou En-lai, and their associates than any other non-Russian white man, unless it be a Russian. He knows them and the facts about them, not rumors, guesses, and propaganda. Recently he gave an address in Canada which sets forth clearly what our China policy has been and is now—and why prudence, honor, and intelligent concern for our own future require that the policy be continued resolutely.

It gives me great pleasure to include this splendid address. It will dispel much of the fog for all who will read it.

U.S. CHINA POLICY

(Text of address by Assistant Secretary of State Walter S. Robertson before Canadian Club, Ottawa, Canada, March 13, 1959)

I deeply appreciate the honor of being your guest today and of having the opportunity of discussing with this representative group of Canadians a problem of grave concern of to the future of our two countries.

It has become a commonplace in making speeches to each other to say that Canadians and Americans share a common heritage. It is a commonplace because it expresses an obvious truth. We do indeed share a common heritage which, in the final analysis, we would both agree far transcends in importance any of the problems which arise from time to time to vex our neighborly relations. We are indeed the inheritors of personal liberties, without which all of our material blessings would count for naught—liberties which we take for granted as we do the stars, but which are now denied, and always have been denied, to the overwhelming majority of the peoples of the world.

In the seeming security of our daily routine lives it is difficult to realize that our world is in a state of crisis, that we are inded engaged in a global struggle for the survival of a free civilization. The Far East is a strategic and critical area in this struggle. It is a vast area: 13 countries, 900 millions of people, approximately one-third of the world's population. It includes: Japan, Korea, China, the Philippines, Vietnam, Laos, Cambodia, Burma, Thailand, Indonesia, Malaya, Australia, and New Zealand; 11 Asian countries and two Anglo-Saxon countries in an Asian setting.

The 11 Asian countries comprise a region of great diversity, divided by sharp differences in tradition, religion culture, and circimustances. The economies range from the great industrial, mercantile complex of Japan to the primitive economies of Southeast Asia. Eight out of the 11 of these countries have achieved their independence since 1945.

Taken as a whole, the area is one of great potential wealth in both human and natural resources, but, with few exceptions, suffering from mass poverty and ignorance, economic and political instability, shortage of investment capital, shortage of technicians of all kinds, shortage of educational facilities, deep resentments of western colonialism, deep suspicions of the white man and fears of a new explotation. It is an area seething with a new spirit of nationalism, social unrest and rising aspirations for a place in the sun and a better life for its poverty-stricken millions. And interrelated with and overriding all of its problems are the aggressions, infiltrations, and subversions of the international Communists.

Now it is the policy of the United States to meet this pervasive threat by helping to build up the military, political, and economic strength of our Far Eastern allies and friends as rapidly as possible. This is the sole purpose of our mutual security programs in these countries.

Yet the governments of all of these free countries without exception have a gnawing fear of the growing power and threat of Red China. And because Red China is a major threat to their new found independence, and therefore a major threat to the security of the free world, it is essential that China policy be coldly realistic and one that best serves free world security interests and objectives.

I need not remind you that U.S. China policy has been a subject of bitter controversy. It has disrupted friendships, has lent itself to name-calling, to the questioning of motives, and in some tragic instances to the

questioning of loyalty itself. But strange as it may seem, U.S. China policy has probably enjoyed a larger measure of bipartisan support in the United States than any other major policy of our Government.

Since 1950, the difference in basic China policy between former President Truman and President Eisenhower is the difference between tweedle-dum and tweedle-dee.

In early 1950, following the Communist takeover of the mainland in December 1949 and about the time of British recognition, President Truman vetoed the recommendation made to him that we recognize Red China. The Republican attack on the Democrats in the 1952 election campaign was not on basic China policy as it then was, but rather on what was alleged to have been the vacillations and blunders which had helped to create the Frankenstein monster of Red China and enhance its menace to the free world. In 1956, an election year, a Democratic-sponsored resolution, reaffirming support of the Republic of China and opposing the seating of Red China in the United Nations, passed the House by a vote of 391 to 0, and of 86 to 0 in the Senate. Not a single Congressman or Senator of either party was willing to vote against this resolution. This is a phenomenon unprecedented in American political history. When the parties later assembled for their national conventions they adopted almost identical planks in support of this policy. In the recent Taiwan crisis, Mr. Truman was among the first to come out in strong support of President Eisenhower's position. To repeat, the differences of opinion about China policy do not represent differences between political parties but rather differences between individuals, irrespective of party lines.

Herbert Feis called his book on the subject "The China Tangle." It is a good name. The controversy is indeed a tangle, a tangle of truths, untruths, and half-truths. It is entangled by Communist propaganda and distortions. The Communists will always see to it that this is so. It is entangled by the unwitting acceptance by many highly respected and intelligent Americans of the subtle propaganda and misinformation to which they are subjected. It is entangled by our early failures to recognize the origin, nature, direction, and control of the Communist revolution in China. It is entangled by the corruption and ineptness which existed in certain elements of the Kuomingtang, but which was exploited so as to make it appear that all Chinese Government leaders were corrupt and inept. And finally, it is entangled by honest differences of opinion among the objective and well-informed; differences of opinion which, thank God, have always existed and always will exist concerning public questions in the kind of free society we are struggling to preserve in the world today.

But despite the tangle, and however, complex it might be in implementation, our policy is simple to state. On the one hand, our policy is to face up to the realities of Chinese Communist objectives, opposing the further spread of Chinese Communist influence and power. On the other hand, as a principal means to this end, our policy is to keep alive, support, and strengthen, a non-Communist Chinese Government, firmly oriented to the free world, as a foil and a challenge to the fanatical, aggressive, hostile, and threatening international Communist regime of Peiping, an implacable enemy dedicated to the destruction of all the foundations upon which a free society rests.

It is often charged that our policy is tied to the political fortunes of one man: Chiang Kai-shek. This is a reductio ad absurdum. Chiang is in fact a time-tested friend and ally. He has never broken his word to us or an agreement with us. Following Pearl Harbor in 1941, all of the Western Powers were soon swept from the western Pacific. We were swept about as far as we could be swept this side of the South Pole—Melbourne, Australia. When the Japanese had Chiang bottled up in Chungking, having occupied all of his ports of entry and large sections of his country, and with no ally within thousands of miles, they made him a princely offer to sell out to them. He refused, fighting on against overwhelming odds. This refusal saved thousands of Allied lives. Had he sold out, there would have been released from 1½ to 2 million additional Japanese troops to oppose our advance from the south.

He refused to sell out to the Russians. After the Russians had occupied Manchuria—that great prize which they received for 5 days of nominal participation in the Pacific war, and, incidentally, the most strategic base in all of Asia for carrying out their objectives of communizing Asia—they invited Chiang to come into their economic orbit, saying that they would settle his Communist problem for him. He rejected this offer, and they retaliated by refusing to allow the United States to transport troops of the Nationalist Government into Manchuria to take over territory in accordance with solemn agreements to which the Soviets were a party. Instead, the Soviets turned over vast areas and Japanese arms and equipment to the Chinese Communists. This despite the fact that on August 14, 1945, the day the Japanese surrendered, the Soviets had signed a treaty with the Republic of China acknowledging its sovereignty over Manchuria and pledging all moral, material, and military support to that Government. And finally, Chiang has repeatedly refused to sell out to Peiping, which constantly plies him with lavish offers.

Be all this as it may, if Chiang should die tonight, the validity of our policy would in no way be affected. Today, as in the past, there are only two choices available to us: the anti-Communist Republic of China, our friend, or the international Communist regime of Peiping, a deadly enemy dedicated to our destruction.

In Chungking back in 1945, some of my friends and associates thought that the Democratic League offered a third force which we should cultivate and support. It was later recognized as a Communist front organization designed to ensnare the middle-of-the-road intellectuals.

Our opposition to the Red regime is not, as you are often told, based upon the disapproval of an ideology or an economic system, much as we abhor both. We recognize many totalitarian regimes with varying economic systems and we have not refused to sit down with them in the world forum of the United Nations. Nor is our policy, as sometimes charged, based upon an emotional reaction to the Korean war. Our policy is a coldly realistic one, based upon three major considerations, all directly related to the overall collective security of the free world.

The first of these considerations is the security interest of the United States. It is often forgotten or ignored that the recognition of Red China would, as a practical matter, mean the liquidation of the Republic of China with all that would mean to our strategic, psychological, and moral position in our opposition to Communist expansion in the Far East. Taiwan is a vital link in our island chain of defenses in the Pacific all now covered by bilateral defense treaties. The Chinese military forces on Taiwan of some 600,000 are an important factor in the military balance of power in the Pacific, and a continuing deterrent to the renewal of Communist aggression in Korea or elsewhere in Asia. If Taiwan should be given over to the Communists, Japan, the Philippines, and all of southeast Asia would be seriously threatened.

The second basic consideration is our interest in helping other Asian nations maintain their national independence. Our bilateral and multilateral defense treaties, as well as our mutual security programs, are designed to this end. If the United States were to abandon its commitments to the Republic of China in order to appease the threatening Red Chinese, no country in Asia could feel that it could longer rely upon the protection of the United States against the Communist threat. These comparatively weak nations would have no alternative but to come to terms—the best they could get—with the Peiping colossus. Not only could we then expect a rapid expansion of communism throughout Asia but the moral position of the United States upon which we must rely for much of our strength throughout the world would suffer irreparable damage.

The third major consideration is the long-range interests and future orientation of the Chinese people themselves. The anti-Communist government of the Republic of China is a symbol of Chinese opposition to communism—the only rallying point in the world for non-Communist Chinese—the only Chinese alternate focus of loyalty for millions of Chinese on the mainland, on Taiwan and throughout southeast Asia. If the Republic of China should be liquidated, it would extinguish a beacon of hope for millions of mainland Chinese. Taiwan's 10 million would be delivered to the slavery of the mainland, and the 12 million overseas Chinese would automatically become increasingly dangerous cells of infiltration and subversion in the countries where they reside.

Let no one say that representation is being denied to 600 million mainland Chinese. The fanatical Marxists of Peiping come no closer to representing the will and aspirations of the Chinese people than the puppet regime of Budapest comes to representing the will and aspirations of the Hungarian people or William Z. Foster comes to representing the will and aspirations of the American people. They have given indisputable evidence that they are part and parcel of the apparatus of the International Communist conspiracy to communize the world.

Back in the 1940's when the Chinese Communists were being reported by some observers as not being real Communists but rather the leaders of a democratic revolution for agrarian reform, Mao Tse-tung was writing of himself, "I am a Marxist dedicated to communizing China and the world under the leadership of Moscow." All of his subsequent actions have borne out his dedication to that goal. Peiping has demonstrated its unity with Moscow by faithfully following the labyrinthine twisting and turnings of Moscow's ideological line on bloc and world affairs. When there were rumblings of revolt in Eastern Europe, Mao sent Chou En-lai to rally the wavering satellites into unity "under the leadership of Moscow." In November 1957, when Mao visited Moscow he spoke to the students, including many Chinese, of Moscow University: "In the association of Socialist states," he said "there must be a leader and that leader is Moscow." Despite the price it had to pay in Asian opinion, Peiping proclaimed vigorous approval of Moscow's bloody suppression of the Hungarian revolt. It publicly applauded the execution of Nagy. Mao's bitter denunciation of Tito was not because Tito was not a Communist but rather because he dared to challenge the leadership of Moscow. Most recently, at the 21st Congress of the Soviet Union in Moscow, Chou En-lai addressed the Communists in these words: "The most sacred international duty of Communists in all countries at any time is to strengthen the unity of the countries in the socialist camp headed by the Soviet Union." Chou En-lai said to me one day in Chungking back in 1945, "Why do Americans come over here and go back and write that we are not Commu-

nists, that we are just agrarian reformers?" Then with a light in his eyes, he said, "We are not agrarian reformers; we are Communists, and we are proud of it."

The Peiping regime was imposed by force with the volition of only an infinitesimal fraction of the Chinese people. Today, after 9 years, less than 2 percent belong to the party. It has kept itself in power by bloody purges and the liquidation of some 18 million of mainland Chinese in 9 years. No regime representative of its people would have to resort to wholesale murder in order to keep itself in power.

In our view, the security interests of ourselves, of Asia and of the free world as a whole, demand that we take no action which would create international prestige for this regime, which would increase its capacity for advancing its objective of communizing all of Asia, or which would betray the hopes of those having the will and the courage to resist it.

Even if no security interests were involved, there is no basis either for the recognition of Peiping by the United States or for admission of that regime to the United Nations. By every standard of national and international conduct, it has proven itself to be an outlaw regime.

Take first the question of recognition by the United States. Since the days of Jefferson, diplomatic recognition of a government by the United States has involved two major tests. The first test is whether the act of recognition would be in the interests of the United States. In our view the diplomatic recognition of Red China would not be in our country's national interests for reasonss I have already mentioned. The other test for diplomatic recognition involves not only de facto control of territory but also the ability and willingness to live up to international obligations. What is the record of Peiping by this standard?

Gaining control of the mainland in December 1949, it promptly repudiated the international obligations of China. It confiscated without compensation properties of other nationals valued in the hundreds of millions of dollars, something over 1 billion for the United Kingdom alone. It demanded and received as blackmail money hundreds of thousands of dollars additional before it would issue exit visas for the personnel operating these properties. It threw foreign citizen into jail without trial, and subjected many of them to the most inhuman tortures. It has flagrantly violated the Korean and Indochina armistice agreements. It has failed to live up to its commitment to us, reached after long negotiation and publicly announced in Geneva on September 10, 1955, to release expeditiously all American citizens imprisoned in China. Five are still being held as political hostages.

If any of you are inclined to say that if we can tolerate the broken agreements of the Soviets, we should be able to overlook the long record of broken agreements by the Red Chinese, I would remind you that Soviet perfidy in breaking international agreements followed rather than preceded recognition by the United States.

The Bolsheviks seized power in 1917. Nevertheless we continued for 16 years to recognize the Kerensky government-in-exile. By 1933 it seemed that the Communist regime in Moscow might indeed be considered a peaceful member of society. It had committed no action of armed aggression for more than a decade. It had accepted the independence of Estonia, Latvia, Lithuania, and Poland (all later betrayed). It pledged itself to cease its subversive activities in the United States, to respect American rights in Russia, and to settle Russia's public and private debts to the United States.

We need not question that action of recognition under the circumstances which prevailed at the time. However, who can now doubt that recognition would not have been accorded even in 1933 had there been clear warning that Soviet promises given in that connection were totally unreliable and that aggressive war would soon become an instrumentality of Soviet policy. In the case of Communist China, we have been clearly and unmistakably forewarned.

Now how does Communist China qualify for membership in the United Nations?

You will remember when the U.N. was organized in 1945, it was exhaustively debated whether membership should be based upon universality or whether there should be qualifications for membership. It was decided that universality was not the test but rather that an applicant must fulfill certain qualifications. The Charter finally adopted provides that only peace-loving nations willing to assume and live up to the obligations of the Charter are eligible for membership. It further provides for the expulsion of members who violate the Charter.

Is Red China a peace-loving nation?

Let us again look at the record. In February 1950, approximately 2 months after establishing its regime on the mainland, it issued a call to all the peoples of southeast Asia to overthrow their governments, denouncing their leaders as puppets of the imperialists. Before the year was out, it invaded Tibet even though the Peiping regime had just promised the Government of India that it "would settle the Tibetan question by peaceful means." Nine years later it is still engaged in fighting the rebellious Tibetans. Also, before the year was out, it invaded Korea. For the Korean aggression, it was denounced by United Nations resolution as an aggressor against the peace of the world. That resolution is still outstanding and Red China is still defying the United Nations, charging that the United Nations are the aggressors in Korea and therefore without moral competence to supervise free elections for the unification of the country. Today Red China is still threatening war in the Taiwan Strait, stubbornly refusing throughout 87 meetings in Geneva and Warsaw to renounce war as an instrument of national policy. Its philosophy was recently expressed by the Peiping Defense Minister in this language: "Ours is a policy of fight-fight, stop-stop, half-fight, half-stop. This is no trick but a normal thing."

By no stretch of interpretation of the United Nations Charter could Red China qualify under that Charter as a peace-loving nation eligible for membership. Those advocating membership for Peiping are not demanding that Red China change its ways and conform its policies to United Nations standards, but rather are insisting that the United Nations modify its standards to accommodate the lawlessness of Peiping. Those who are opposed to such denigration of the United Nations Charter are charged with being unrealistic and denying the existence of 600 million Chinese.

You might think from much of what you read in the press that the United States occupies an isolated position in its refusal to recognize Red China. I would remind you that of the free countries of the world, 44 recognizes the Republic of China, 22 recognize Peiping. Many of the 22 recognized Peiping before it had demonstrated its lawlessness. Of the 13 countries of the Far East, only 3 recognize Red China. Instead of being isolated, we stand with the overwhelming majority of the countries of the free world in this position. It is essential that this majority continue to stand together. Other countries, particularly those most exposed to the immediate menace of Communist power, have been following the lead of such countries as yours and ours. Many of them are watching anxiously to see what we are going to do. If we should begin to break ranks and withdraw opposition to the reckless course of this aggressor these countries would have no alternative but to get on the bandwagon so as not to be left out on a limb of opposition, deserted by strong free world support.

I believe you will agree that the United States is the main military obstacle to Communist overt aggression in Asia. You might be interested in an evaluation of the Asian situation during the time of the Taiwan crisis by the Far East expert of the London Economist published October 11 last:

"America's underlying dilemma * * * might be summed up in the words: 'Little Brother is watching you.' Anxious little brothers are indeed watching the United States from all sides, and their anxieties are of excruciatingly contradictory kinds. When Mr. Dulles talks tough about Quemoy, European stomachs flutter; but when he seems to be giving even a mere inch of ground, far eastern hearts sink. The Quemoy drama is being played out with ringside seats occupied by uneasy Japanese, Koreans, Vietnamese, Filipinos, and other Asian peoples who must take into account the possibility that some day American power may withdraw altogether across the wide Pacific, leaving them alone with the newborn Chinese giant. * * * And they recall that for years Peiping and Moscow have canvassed twin projects for mutual security systems in Asia and in Europe, both of which would exclude the United States, so that China would be the dominant power in one sphere, Russia in the other. It is the complete disappearance of the American presence from the scene that the Communists are after. And whether anti-Western feeling and neutralism are weak or strong in these Asian countries and whatever their public postures, they know well enough that if the eagle once takes flight, the dragon—and perhaps the bear too—will have to be propitiated.

"If America really retires, China's immediate neighbors will inevitably again become China's vassals—not necessarily by military conquest, but by the impossibility of their resisting for long the pressure which their huge and dynamic neighbor can put upon them in many forms."

Our view of the China situation is the same as that we hold with respect to the other three divided countries of the world where the Communists now exercise de facto control over large areas of territory. We consider it to be in our national interest and in the interest of the free world as well to recognize the Republic of Korea, not the Communist regime of North Korea; to recognize the Republic of Vietnam, not the Communist Viet Minh regime of Ho Chi Minh; to recognize the Republic of Germany, not the Communist East German regime. In noneof these countries do we advocate the use of force to achieve unification, nor do we advocate the use of force for the unification of China. In fact, the contrary was recently proclaimed in the joint communique of President Chiang Kai-shek and Secretary Dulles in Taiwan in October of last year.

It is now being stated in certain quarters that we are drifting to a two-China policy. We do not have a two-China policy any more than we have a two-Korea policy, a two-Vietnam policy, or a two-Germany policy.

In closing I should like to mention an ancient Chinese proverb. It is in the form of question and answer. "What is the cure for muddy water?" the question goes; "Time" is the answer. In the long rollcall of history, nazism and fascism will be episodes only, dark incidents if you will. So, too, will communism be, although the most evil and pervasive of the three. Man will not permanently endure the cruel enslavement imposed by the ruthless regimes of international communism. But his libera-

tion will be immeasurably delayed by frustrated appeasement of the forces which enslave him. An awful responsibility rests upon us—upon our patience, upon our steadfastness, upon our courage, and above all, upon our strength. How we counter the menace now posed to our freedom will determine the climate of the world for as far into the future as we can see.

Indiana Students Write About Oregon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, on behalf of the Oregon Centennial Commission and the residents of my State, I want to thank my friend and colleague Ross ADAIR for making it possible for the student members of the Mary's Catholic Civics Club in Decatur, Ind., to become acquainted with the CONGRESSIONAL RECORD.

The seventh graders read about the Oregon Centennial in my March 23, 1959, Appendix insertion. One of them, Dick Omlar, writing on behalf of his class, told me in his letter of April 17 that his teacher, Sister M. Joan of Arc, had read to the class the sampling of comments from my colleagues concerning the Douglas-fir tree distribution.

Because the class was studying "Careers in Farming" their teacher suggested they write some verse on trees in commemoration of the Oregon Centennial.

The Indiana students have done this. They sent to me six fine poems which point out the value of trees with several specific references to the West, Oregon, and the Douglas-fir.

Under leave to extend my remarks in the RECORD, I include Dick Omlar's letter and the poetry written by James McG., Patricia P., Jon Alberding, Steve Geimer, Ann Schurger, and Karen Andrews.

I hope each member of the class and the Mary's Catholic Civics Club in Decatur has the opportunity to come to Oregon and see the Douglas-firs, participate in our centennial and visit throughout the State. They will be most welcome:

MARY'S CATHOLIC CIVICS CLUB,
Decatur, Ind.

DEAR MR. PORTER: For the first time in our lives (seventh graders) we have seen and handled the CONGRESSIONAL RECORD. Our friend and Representative, E. ROSS ADAIR has been sending it to us through Sister M. Joan of Arc, our teacher. We are writing today because Sister read us your article, "I Think That I Shall Never See," regarding humor in Congress in the March 23 issue, page A2571, of the RECORD. We enjoyed it immensely. Because we are studying careers in farming this month, Sister suggested that we write some verse on trees in commemoration of your centennial. You will take notice that we use the Oregan Centennial stamp, too, for our correspondence.

We want to congratulate you on the unique way you advertised the Oregon centennial. Our club hopes the Oregon firs will thrive in all the 49 States. We want to share with you some of the verses composed on trees and several on the Oregon fir.

Three cheers for Oregon.

Sincerely yours,

DICK OMLAR,
(Seventh grade.)

P.S.—We belong to a national Catholic civics club, with our headquarters in Washington, D.C., at the Catholic University.

KNOWN TREES

A common tree we call the fir
Is known to all of you;
The trunk is straight, the leaves are flat
And green the whole year through.
They're found in North America,
But chiefly in the West.
The spruce and the pine, you will agree
Are known to us the best.
—*James McG.*

BIRDS' REFUGE

A tree stands majestic
Against the sky's dome;
To birds of the air
It's shelter and home.
It braves the wild storm
While within their mists;
The birds are quite warm,
Safe from the storm's crests.
—*Patricia P.*

OREGON FIR

An Oregon fir tree am I
Extending far into the sky
God made me great among His trees
That I should fill His creatures' needs
Won't you be great in your good deeds?
—*Jon Alberding.*

FOLK'S TREES

There are so many different trees,
But less than the number of bees
For instance, the Douglas-firs,
Which lives longer than any miss or sir
Another well known tree, the maple,
Which awaits patiently the showers of April.
Still another is the elm
That belongs in every king's realm.
The canine tree, the dogwood,
A long-living tree, the redwood
And there is the mighty oak,
Whose wood is used to make yokes
All these trees are known by all folks.
—*Steve Geimer.*

TREES

We are given trees for shade
And also some for fruit,
But when a tree has been cut down
Replace it with a fir tree from Oregon.
—*Ann Schurger.*

SMALL TREES

Some trees are big
Some trees are small;
But you haven't seen all.
The fir is handsome
The elm is small,
You have seen some
But you haven't seen all
The Douglas-fir from Oregon
To party of United States has gone,
For Oregon's 100th celebration
As a State in the Nation.
—*Karen Andrews.*

Tribute to the American Legion

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution offered in the Senate of the Commonwealth of Massachusetts by Senator William X. Wall, of Lawrence, Mass., on April 15, 1959.

The resolution follows:

SENATE RESOLUTION 597

Resolutions paying tribute to the good works of the American Legion

Whereas the American Legion, dedicated to service for God and country, has become one of the great bulwarks of the American way of life through its leadership in all movements designed to preserve and perpetuate our free institutions and freedoms; and

Whereas the American Legion, with millions of members who have served in three wars, will in this year celebrate the fortieth anniversary of its establishment, marking the completion of four decades of patriotic labors which have had a great and beneficial impact on the welfare and security of America: Now, therefore, be it

Resolved, That the Massachusetts Senate calls upon all citizens and all organizations to join with it in paying tribute to the good works of this great veteran organization.

IRVING N. HAYDEN,
Clerk.

Poison in Your Water—No. 63

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD an article appearing in the Sunbury, Pa., Daily Item on April 18, 1958, entitled "Mine Pollution Blocks Industry."

The article:

MINE POLLUTION BLOCKS INDUSTRY—FIRMS SHUN COAL REGION BECAUSE OF ACIDS, CONFERENCE TOLD

HARRISBURG.—Mine acid stream pollution was cited today as a major factor keeping water-starved industries from locating in the economically distressed coal counties of Pennsylvania.

William Voigt, Jr., executive director of the State fish commission, stressed the need for more research to solve the problem of pollution created by acid water flowing from mines into streams.

"New industry will find it difficult to become established in the areas heavily polluted by mine acid, particularly if they require relatively clean process waters," he said.

"Our generally fine transportation system may make it possible for them to import raw or semifinished materials from other places, but the water must come from local sources."

Voigt made the statement in a speech prepared for delivery at the Sixth Annual Clean Streams Conference called by the Pennsylvania State Chamber of Commerce.

The law now requires all mine operators to take out a permit with the State sanitary water board under the Commonwealth's operations.

He described this problem as the State's "biggest headache," and added:

"It is about time some of us got interested in pushing for some kind of crash program to search out a feasible way to lick this tremendously complicated, but also tremendously important, acid problem."

Kenneth S. Watson, Schenectady, N.Y., president of the Federation of Sewage and

Industrial Wastes Associations, said municipal and industrial growth is dependent on clean streams.

He said industry would expect that it be allowed to treat industrial wastes with minimum acceptable treatment as a means to keeping down the cost of its own products.

Walter A. Lyon, acting director of the State division of sanitary engineering, commended Pennsylvania industry for what he said was "good work" in the water pollution control field.

Boosters for Better Television Reception

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks there follows a letter addressed to the Honorable J. W. FULBRIGHT by the Honorable C. C. Dill, under date of March 10, 1959, and which is self-explanatory:

SPOKANE, WASH.,
March 10, 1959.

Hon. J. W. FULBRIGHT,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR: I have just read an Associated Press report of your appeal to Members of Congress to let the FCC administer the Communications Act as it relates to boosters without undue interference. As the former Senator who wrote the radio law of 1927 and revised it into the Communications Act of 1934, I am writing to ask you to reconsider this matter. The use of boosters originated in the far Northwest in the canyons of the Columbia River and its tributaries. The communities these boosters serve are made up of what might be well termed "little people." Their homes are scattered. Often they are few in number. Because of these conditions, they are unable to pay for a translator. The cost, $5,000 to $7,000, is prohibitive. In addition, each television set would require a receiving gadget costing $35 to $40.

I wonder if you have ever seen one of these boosters. They are small contrivances placed on a high point overlooking areas where television reception is impossible. By the use of one or two amplifying tubes with an output of 1 watt or less of power, they reproduce the television signals and direct them to the scattered homes below. Thus, they provide perfect reception. Satisfactory equipment which will meet the requirements of the FCC can be secured for $500 to $600.

It should be remembered that the dominant purpose of Congress when it passed the radio law was to provide free radio service to all the people. These little boosters come as near doing that job as is possible in these lonely parts of the country where direct reception is impossible. It has taken several years for the members of the Commission to understand fully the situation. Now that 1,500 or more communities served by these low cost extremely small power boosters have been able through letters, petitions and the help of their Congressmen and Senators to induce the Commission to reconsider this problem, it seems most unfortunate that you, one of the leading and most powerful Senators today, should attempt to induce the Commission to take a backward step.

To insist upon the use of translators will mean then that most of these people living as they do in lonely unheard of places, many of whom are unable to leave their communities during the winter months because of the rough country and poor roads, will be deprived entirely of television service.

These people are not attempting undue interference. They have simply availed themselves of their right of petition. They have induced their Congressmen and Senators who understand the situation to propose amendments to the law that will require the Commission to permit them to receive television programs. By so doing, these Congressmen and Senators are simply representing the urgent needs of their constituents. All they attempt to do is enable their constituents to continue to have reception of this greatest mass communication the world has ever known.

This problem was not properly presented to the Commission members at first. The Commissioners should be commended now for showing a willingness to reconsider the situation. I urge you, therefore, at this late date in their struggle, not to interfere with the progress they have made.

The FCC officials are just like other public officials. They sometimes make mistakes. They are dealing with an art that is ever changing. Take the subject of "Cleared Channels," for example. For many years the Commissioners listening to the advice and theories of the engineers of the Commission, allowed but one radio station in the whole United States on each of 40 wave lengths. They called them clear channels. I fought that action fiercely when I was in the Senate. The Commission later reduced the cleared channels to 25 or 30, then to 12, and now indications are they will be abolished. The enlargement of the bands that can be used by radio and television in recent years has been so great that necessarily the Commission often reconsiders its decision. In fact, they would be failing to fulfill their duties, if they did not reconsider and revise a decision when they find that a change should be made.

In the case of boosters the Commission can protect all other service by requiring proper equipment and still permit good reception to the "little people" in these communities and towns where otherwise they will be without any television service at all.

In closing, let me add that I am not attorney for any community using boosters. Nor do I represent any pressure group. I have long urged members of the Commission to work out a solution to permit these simple contrivances using such an extremely small amount of power to serve the people who need television most of all. Now that they are on the way, may I urge you again to reconsider your attitude and not interfere with the forward step the Commission has already taken.

With highest personal regards, I am
Sincerely yours,

C. C. DILL.

The San Jacinto Anniversary

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. ALGER. Mr. Speaker, 123 years ago—on April 21, 1836—a handful of Texans, under the leadership of Sam Houston, fought and won the Battle of San Jacinto.

As a direct result of this victory, the Republic of Texas was brought into being.

These men had courage. They fought a larger number of better trained, better equipped foes.

These men had vision. They literally "bet their lives" on the chance that their loved ones might have a future under freedom.

These men had strength of character. The hardships, the discouragement, they conquered were more forbidding than their human enemies.

Yet, they made their decision and went on to win.

Mr. Speaker, I have one question in my mind. This is the question: "How much Federal help did Sam Houston and his Texans have in winning and preserving their independence?"

Food for Peace

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. CARTER. Mr. Speaker, today I introduced in the House a companion bill to the proposed Food for Peace Act which has been introduced in the Senate by the Honorable HUBERT H. HUMPHREY. I might say in the outset that Senator HUMPHREY has put a tremendous amount of effort and study into this bill and deserves the wholehearted appreciation and support of everyone interested not only in a solution to the problems of the world's starving people, but also the problems of American farm surpluses.

The purpose of the Food for Peace Act is to so amend and revise Public Law 480 as to make it a more effective instrument for using the U.S. surplus of food and fiber to help build essential world conditions of peace and freedom and thereby strengthen and promote foreign policies of the United States. It is intended to enable the United States to promote more effectively the economic and social development of friendly nations and to lead the way in cooperation with other nations toward the abolition of human hunger.

Under this proposed legislation, a Peace Food Administration would be established in the Executive Office of the President, headed by a Peace Food Administrator to aid the President in carrying out the purposes of the act and also the purposes of section 402 of the Mutual Security Act of 1954, as amended. There would also be created an interdepartmental Peace Food Policy Committee to advise and consult with the Peace Food Administrator and also a Peace Food Advisory Committee consisting of representatives of private U.S. groups and organizations.

Mr. Speaker, all of us fully realize the burdens that our terrific surpluses of food and fiber place upon us. We must consider the burden to the producer of agricultural commodities, the burden to the taxpayer who has to share the cost of storage and maintenance of surplus

stock piles, our burden as a leader of nations in trying to promote the cause of freedom and democracy in areas where people are starving to death at the same time that we are sitting on top of $9 billion worth of edible or usable surpluses.

Before coming to Congress, I knew of the provisions of Public Law 480 and thought that they were adequate to properly distribute our surplus food to needy peoples all over the world. I thought that our failure to more adequately dispose of our surpluses was because of political considerations which made it inadvisable to distribute these things to needy people. Now I find that this is not true, that the failure to more effectively distribute our surplus agricultural commodities has apparently been due to the fact that there was no single authority charged with this responsibility. It is my opinion that the proposed Food for Peace Act will be a great stride in the direction of meeting our moral obligations as a leader of nations, as well as helping us to solve what has become a tremendous domestic economic problem. Surely, anyone from the most erudite academician to the most uninformed member of our populace must ask why it is that people are starving throughout the world while we, the United States, are blessed—or cursed, as the case may be—with our tremendous surpluses, and why these foods are not being made available for those starving people. It is a very simple, and yet, extremely valid question. This piece of legislation will go far in providing a solution to the problem.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Tullidge Clinic Dedication

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, April 24, 1959

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address to be delivered by me at the Tullidge Clinic Dedication, at Ararat, Va., on April 25, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TULLIDGE CLINIC DEDICATION

(Address by Senator A. WILLIS ROBERTSON at Tullidge Clinic dedication at Ararat, Patrick County, Va., Apr. 25, 1959)

The happy privilege of joining with Patrick County friends in the dedication of a new clinic reminds me of the fact that my first visit to Patrick was with a young doctor from Franklin County who later located at Stuart for the practice of his profession—Dr. George T. Divers. The time was June 1912; the occasion was the marriage of Dr. Divers to Miss Evelyn Martin, the charming and talented daughter of Dr. R. S. Martin, one of the most beloved men who ever lived in this county.

The remarkable development during the intervening years of Franklin County, where I lived as a boy, and the adjoining mountain counties of Henry and Patrick, has been a source of pride and great satisfaction to me. As a State senator I was fully aware of how our mountain counties were handicapped by the lack of good roads and hence, in the State senate the establishment of a State highway system was my major goal. Four of those who served on the commission to lay out a highway system and who sponsored the legislation to adopt it, are still living—Col. Sinclair Brown, of Salem, Hon. C. O'Conor Goolrick, of Fredericksburg, the senior United States Senator from Virginia, Mr. BYRD, and myself.

During my service in the Congress I have supported the programs to bring electricity and telephones to our farmers, the promotion of scientific farming through Federal and State research and the preservation of fertile topsoil through modern conservation practices. The end result has been to greatly increase the production of the average farmer in Patrick, as well as elsewhere in the State, while good roads have not only facilitated the marketing of farm crops but also have contributed to the improvement of local schools and churches.

In giving credit to technological developments that have improved the economic status of the people of Patrick County let us not lose sight of the fact that today, as in the days of the birth of our Nation the most important product of any community is the quality of its men and women. It takes more than material prosperity to produce character and good citizenship, and Patrick County has met that test. I welcome this opportunity to pay tribute to the example of the ideal family physician set Virginia doctors by the late Dr. R. S. Martin of Stuart and to the political and civic leadership furnished by families like the Hookers, Georges, Joyces, Clarks, and Thompsons (to mention just a few of those I have been privileged to know) and to say nothing of the county's gift to North Carolina of the wizard of tobacco manufacturers, R. J. Reynolds, and his brother who was the grandfather of Richard S. Reynolds, who now heads the greater aluminum empire which has its headquarters in Richmond.

In both the State legislature and in the United States Congress I have appreciated and enjoyed my friendship with the fine and able men who have represented Patrick, including your present Representative in the House, the Honorable WILLIAM M. TUCK.

The high quality of citizenship which has characterized the people of Patrick is due in no small degree to the fact that many of the early settlers were Scotch-Irish who came to Virginia in search of religious and political freedom and who have handed down to succeeding generations a belief in the virtues of representative democracy and self-government so eloquently expressed by Patrick Henry.

You will, of course, recall that Patrick County was formed from a part of Henry County in 1791, only a year after the States had ratified the first 10 amendments to our Constitution which we know as the Bill of Rights.

Those amendments, which Virginia and several other States had insisted upon as a condition to their acceptance of the Federal Constitution, were designed to protect for all time such basic rights as freedom of religion, freedom of speech and freedom of the press, the 10th amendment clearly stating the theory which too many persons have ignored or forgotten today—that basic human rights can best be protected when the power of the central Government is limited.

In the Virginia convention, called to ratify the Federal Constitution, Patrick Henry was a leader of the faction which demanded assurance of protection from the possibility of despotic power. He said that Congress, having the power of taxation and the authority to raise an army and a navy, would have "the sword in one hand, and the purse in the other," and he asked: "Shall we be safe without either? * * * Where and when did freedom exist, when the sword and purse were given up from the people? Unless a miracle in human affairs shall interpose, no Nation ever did or ever can retain its liberty after the loss of the sword and the purse."

In the same convention Patrick Henry spoke with prophetic vision when he pointed out that Congress would have the power of involving the Southern States in all the horrors which would result from a total emancipation of their slaves, and predicted that the Northern States, uninterested in the consequences of such an act, and with a controlling majority of votes, probably would be inclined to do this.

Our fathers knew those horrors in the War of 1861–65 and the bitter reconstruction period which followed.

In the Virginia convention George Mason, the author of the Bill of Rights, also pointed out that the power to levy direct taxes given to the central Government was calculated to annihilate totally the State governments.

That has not yet happened but the administration of State governments has been made increasingly difficult by financial pressures resulting from an ever-increasing Federal tax burden required to service a mounting national debt and to carry on programs understaken by the Federal Government in areas never dreamed of by the Founding Fathers. New spending schemes are introduced with a pious reference to promoting the general welfare but nothing would better promote the general welfare than an economy program, accompanied by a reduction of Federal taxes.

Destruction of State governments may indeed be threatened in the future if the Congress continues to approve legislation authorizing Federal activities which displace those traditionally carried on by the States and localities and if the courts continue to assert, in effect, that there is no practical limit to the bounds of Federal authority.

Believing that the political wisdom of the Founding Fathers has never since been equaled I have been proud, throughout my political life, to call myself a Jeffersonian Democrat, interpreting as best I could, in terms of 20th century conditions, the political philosophy of men like Patrick Henry, James Madison and Thomas Jefferson.

The splendid and much appreciated support I have always received in Patrick indicates your approval of the firm stand I always have taken in behalf of States rights and efficiency and economy in Government. It should be needless, therefore, for me to assure you that as long as I have the privilege and honor of representing you in the U.S. Senate I shall stoutly resist the current trend to override the rights of the sovereign States and to engage in national projects of a socialistic character.

I am happy to say that the construction of a clinic with private funds at a time when many are advocating socialized medicine is in full keeping with Jeffersonian Democracy. I warmly commend the fine spirit of unselfish cooperation of the people of this community whose personal contributions have enabled Dr. Archer Tullidge to make a success of this undertaking.

The decision of Dr. Tullidge to dedicate this clinic to the memory of his deceased brother, George, is in keeping with his own decision to locate in a rural area where there was need for the services of a family physician rather than in a city where the financial rewards for his fine medical training would have been greater.

It has been my privilege to know the family of Dr. Tullidge for many years. It is a fine Christian family, of Scotch-Irish origin, long prominent in the church, civic, and business affairs of Staunton and Augusta County. Mr. and Mrs. George Tullidge, Jr., raised three fine sons, the oldest of whom was George Bowler Tullidge III. He was a sergeant of the 507th Parachute Infantry, 82d Airborne Division, who at the age of 20 years gave his life in the invasion of France, June 8, 1944. Scarcely more than a month before his death Sgt. George Tullidge wrote Tommy, the brother next in age to him, a letter from which I quote the following:

"Mother writes and tells me how big a boy you are getting to be. It seems like a mighty long time since I have seen you boys, and I guess it will be a while longer; probably I will have a hard time even recognizing you. I just know and pray that you will turn out to be the kind of boys that Mother and Dad are teaching you to be. Just take a word of advice from somebody who has had a small look around anyway. Maybe I am not so

old, but these 2 years in the Army have shown and taught me lots of things about life that I never dreamed of before. I won't go into a long discussion but just remember when you are out with boys and girls what is wrong and what is right. Please don't let them get you and Arch off on the wrong foot because they will if you are not careful. There are lots of things in life bigger and finer than some immediate pleasures; and some few seeming small things at present can break up the finer ones for you later. * * *

"Another thing that has helped me a lot is my firm belief in the Lord. Oftentimes when I feel depressed and blue it does me an awful lot of good to read my Bible and a little book that Mother sent me. A good belief in Christianity (very broad term) gives a fellow something to grasp when the going gets tough, and it does at times. * * * Best wishes and may God bless you always. Your best pal, George."

It should be a source of inspiration to the people of this community to have a local health center dedicated to the memory of a patriotic boy who gave his life for the p--petuity of our freedom and democratic institutions and to know that the new clinic will be operated by a physician who shares the faith of an older brother who, because of his implicit faith in God and the justness of his cause, could smile when he heard the rustle of angels' wings and say to the Grim Reaper, "O death, where is thy sting? O grave, where is thy victory?"

In the eighth chapter of Genesis it is recorded that after being tossed 40 days and 40 nights by the great flood, the ark of Noah came to rest upon the mountains of Ararat. By the same token may those buffeted by illness and disease find this a new Ararat of rest and solace; a tangible evidence of the fact that God still rules the world in a spirit of love.

The Name of Quarles Is Synonymous With Missile Gap

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, April 24, 1959

Mr. ENGLE. Mr. President, repeatedly, in private discussions with people intimately familiar with the defense preparedness program, I have heard statements which indicate that deputy Secretary of Defense Donald Quarles is the biggest gnat in the defense ointment. The idea of Donald Quarles ever becoming Secretary of Defense sends a universal shudder through the Pentagon and the industries working in defense production. I have wondered when someone was going to say so in public print.

Mr. Joseph Alsop, in his column in the Washington Post this morning entitled "Mister Missile Gap," has put the case in cold print.

The Constitution of the United States requires appointment of Cabinet officers with the advice and consent of the Senate. I would suggest, in the line of giving advice ahead of time, that the President take a long look at Donald Quarles before submitting his name to succeed Secretary of Defense Neil McElroy. Quarles has been so consistently wrong that his appointment could be a major menace to the defense effort of this country. I suggest a careful reading of Mr. Alsop's column—and I am sure that he has only partially set forth the bill of particulars on Mr. Quarles' lack of qualifications to be Secretary of Defense when Mr. EcElroy carries out his announced plans to retire.

I ask unanimous consent that Mr. Alsop's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Apr. 24, 1959]

"MISTER MISSILE GAP"

(By Joseph Alsop)

For the past 10 days Washington has been preoccupied with the succession at the State Department. The preoccupation was needless. Christian A. Herter was the obvious and almost necessary choice to succeed John Foster Dulles, and he is also a man of proven stature and courage, who ought to do a first-rate job.

No one, meanwhile, seems to be at all preoccupied with the succession at the Defense Department, although the early departure of Secretary of Defense Neil McElroy was foreseen some time ago. It is taken for granted that when McElroy goes his Deputy Secretary, Donald Quarles, will get the top job. Certainly the President will have the utmost difficulty in finding any other replacement for McElroy.

Yet the succession at the Defense Department really deserves more attention than the succession at the State Department, if only because the right name for Donald Quarles is "Mister Missile Gap."

Quarles has been a leading defense policymaker during the whole of the last 6 years, when the world balance of military power has tilted so dangerously against us. He has had much authority over our missile programs, and the missile gap is the worst of our problems. He currently opposes the measures that might bridge the gap. And if he had had his way in the past, there would be no mere gap, but a vast, unbridgeable, inescapable abyss.

These are rather serious things to say about the foreordained next Secretary of Defense, but they are easily documented. In brief, when Quarles first entered the Department as Assistant Secretary for Research and Development, the American long-range missiles program was in a condition that was appalling to contemplate.

The cause of this condition was bad specifications. The development of compact, relatively lightweight H-bomb warheads had not been foreseen or allowed for by the air staff. Missile designs were therefore required to carry warheads of impossible weight and size. Thus the missiles under development were then either doubtfully useful or actually impossible. In the first category were Snark and Navajo projects, both now terminated. In the impossible category was the Atlas as then conceived, as a vast, hopelessly unwieldy missile with a takeoff weight of 450,000 pounds.

On the initiative of the Air Force's assistant secretary for research, Trevor Gardner, a committee was named to review the long-range missile program under the leadership of that great scientist, the late John von Neumann. Without the Von Neumann Committee's report, we should probably have no serious long-range missile program to this day. But the changes the committee proposed were tepidly received by the air staff, and they were actively opposed by Donald Quarles. The dogged insistence of Gardner, the bold determination of his chief, Secretary of the Air Force Harold Talbott, were both needed to secure acceptance of the Von Neumann Committee report.

The principal initial change was the complete redesign of Atlas, as a workable missile built around the new, much lighter weight warheads the Atomic Energy Commission was perfecting. Somewhat later, the decision to add the Titan project also grew out of the Von Neumann report. Without Titan, this country would not even be in sight of having a long-range ballistic missile capable of being placed in a fully hard pad. But once again, Donald Quarles sharply opposed the inauguration of the Titan project; and Talbott and Gardner had to fight with tooth and claw to win the day.

Even the redesign of Atlas and the order for Titan would have been fruitless, however, without the establishment in Turkey of missile-watching radars. Nothing but the grim, indisputable intelligence derived from these radars could have driven the Eisenhower administration to spend the necessary sums for serious development of the big missiles. But once again, Donald Quarles fought the whole plan for the missile-watching radars. The project was smuggled through, without Quarles' concurrence, by the Talbott-Gardner team. In truth the country owes much to these two men, one of whom was later disgraced, while the other was briskly dismissed for his pains.

Such is the early Quarles record, in the formative period. The later record has been wholly consistent with the beginning. Indeed, the great tragedy of the hapless McElroy's service as Defense Secretary has been his choice of Quarles as his chief adviser. But with the missile gap growing more perilous with each passing month, "Mister Missile Gap" will no doubt became Defense Secretary when McElroy goes.

Free Hospitals: How Canada's New Plan Works

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, April 24, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Free Hospitals: How Canada's New Plan Works."

The article appeared in the April 27 issue of U.S. News & World Report.

I note that this magazine concludes that the hospital insurance plan has not disturbed the relations of doctors and patients.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREE HOSPITALS: HOW CANADA'S NEW PLAN WORKS

OTTAWA, CANADA.—People of Canada now are taking a long step along the road of socialized medical care. How well they make out is expected to have a big part in determining whether the United States takes a similar course.

Just a few days ago, on April 13, the U.S. Congress got a report on the cost of free hospital insurance for only one group of Americans—those on social security pensions.

The Department of Health, Education, and Welfare reported that such insurance would cost a billion dollars a year at the start, and lead to demands for broader aid to other

groups. Legislation for the insurance is strongly backed by U.S. labor unions.

In Canada, free, or nearly free, hospitalization has begun in 7 of 10 provinces. Two more provinces are expected to join this summer, leaving Quebec the only holdout. The high and rising cost of hospital care had led four provinces into earlier experiments with Government subsidies. A system that is nearly nationwide has followed.

Most Canadians who are ill today are assured of bed and board in a hospital ward with no limit on the length of stay. In two Provinces—Albert and British Columbia—a deterrent charge of $1 to $2 a day is made. In other provinces, the service is free.

Other free services include: all necessary nursing, X-rays, laboratory, and diagnostic services, use of operating rooms, anesthetics, routine surgical supplies, drugs, when administered in hospitals; blood transfusions; use of radiotherapy and physical therapy, when equipment is available.

If medical necessity requires it, a patient is entitled to a private room and special nursing care. The attending physician decides upon medical necessity. Otherwise, such extras as a special nurse or a private room must be paid for by the patient.

STATE MEDICINE?—NOT YET

Canada is undertaking to provide for everyone broader hospital care than that offered by privately financed hospital insurance in the United States. Canadians point out, though, that they are stopping short of state medicine.

The following services, provided free in Great Britain, are not available without charge to the people of Canada: payment of doctors' bills or surgeons' fees; private nurses, except for medical necessity; ambulance service; dental care; false teeth, eye examinations; eyeglasses; hearing aids; crutches, canes, and wheelchairs.

The Canadian plan also excludes, in most Provinces, the type of special care and treatment that patients get in tuberculosis sanitariums, cancer clinics, mental hospitals, old-age homes and rehabilitation centers. In most Provinces, there are other arrangements for these services.

The accompanying illustrations present in graphic form the kind of care now available under the insurance plan. The cost is shared roughly on a 50–50 basis between the Federal Government of Canada and the Provinces. The Federal share comes out of the Federal Treasury. The Provinces have adopted a variety of taxes to meet their share.

HOW COSTS RUN

In Ontario, a preminum of $4.20 a month in most cases is deducted from the paycheck of a family man; $2.10 from the pay of a single worker. Manitoba charges $2.05 for single persons, $4.10 for families. Alberta uses a special property tax. Nova Scotia levies a special hospital tax of 3 percent which, in effect, is a retail sales tax. British Columbia levies a straight sales tax of 5 percent. Saskatchewan uses a sales tax and an annual premium of $17.50 for single persons, $55 for families. Newfoundland expects to defray its costs out of general tax revenues.

Total cost of hospital insurance is estimated by Canadians to come high. The Federal Government is expected to provide $160 million as its share for the fiscal year that ends March 31, 1960. The Provinces are expected to provide at least that much or more.

Ontario, for example, estimates that the first year of the plan will cost the Province $233 million with $75 million coming from Federal funds, $71 million from the Provincial treasury, and $87 million raised from the premiums deducted from payrolls.

The plan is designed to provide hospital insurance for each one of the 17.3 million persons in the Canadian population. Basic hospital care is to be offered regardless of income, or financial resources. Most of the voluntary hospital insurance programs, such as Blue Cross, have been taken over by the Provincial governments. These private organizations, however, are continuing to operate on a reduced scale by offering superior accommodations not included in the Government program.

MORE HOSPITALS COMING?

Hospitals also are expected to be freed from annual deficits and financial worries. Each hospital accepted by Provincial authorities submits a budget and, after the budget is approved, its costs are reimbursed.

The program is expected to lead to more hospital construction on a nationwide basis. Agreements signed between the Provinces and the Government in Ottawa call for minimum standards which all hospitals are supposed to meet. And the Federal Government agrees to help the Provinces with special grants to meet hospital needs.

The Financial Post of Toronto estimates that the total cost of hospital insurance and new construction will be more than $3 billion in the next 5 years. This program is being adopted in a country where the annual budget has never exceeded $5.4 billion.

Private doctors are being relied on to keep hospital costs within bounds. The relations of doctors and patients are not disturbed by hospital insurance, but Government authorities expect that doctors will not be too lenient in recommending hospital treatment. If they are, officials say, costs will get out of bounds.

The Moscow Fair—U.S. Exhibit on the Role of Religion in American Life

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, April 24, 1959

Mr. DODD. Mr. President, on April 10, I wrote to George V. Allen, Director of the U.S. Information Agency, and urged that an exhibit depicting the role of religion in American life be included in the forthcoming American exhibit at the Moscow Fair.

I have since received from Mr. Allen assurances that such an exhibit will be included.

I wrote further to Mr. Allen and suggested that the National Conference of Christians and Jews be assigned the task of planning the exhibit, in order that we may be assured that this religious exhibit will be truly representative of America's great religious groups.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD my correspondence with Mr. Allen; an editorial from the New Haven Register of April 19, 1959; and an editorial from the Bridgeport Post of April 20, 1959.

There being no objection, the correspondence and the editorials were ordered to be printed in the RECORD, as follows:

Mr. GEORGE V. ALLEN,
Director, U.S. Information Agency,
Washington, D.C.

DEAR MR. ALLEN: It has been brought to my attention by visitors to the Brussels Fair that there was not a single display of a religious nature in the American exhibit.

It is incomprehensible to me that an American exhibit designed to portray the various aspects of American life should neglect one of its principal elements, the role of religion.

Millions of visitors from all over the world went through the American exhibit. We missed a wonderful opportunity to demonstrate to these people the importance of religion in the development of our history, and its great influence on contemporary American affairs.

Many of the early colonists of our continent came here in quest of religious freedom. Many of our first settlements were essentially religious settlements.

Throughout our history our great state documents, such as the Declaration of Independence, Washington's Farewell Address, and Lincoln's Second Inaugural, have been expressions of basic moral principles.

Therefore, I consider it inexcusable that any exhibit purporting to be representative of American life should fail to depict its most important aspect.

The next exposition of this kind will be at the Moscow Fair. Our mistakes at the Brussels Fair must not be repeated. The State Department should see to it that the American display at the Moscow Fair contains a religious exhibit indicative of the fundamental place of religion in American society.

With best wishes.

Sincerely yours,

THOMAS J. DODD.

APRIL 20, 1959.

The Honorable GEORGE V. ALLEN,
Director, U.S. Information Agency,
Washington, D.C.

DEAR MR. ALLEN: On April 10, 1959, I wrote to you urging that an exhibit of a religious nature be included in the forthcoming American exposition in Moscow.

I suggested this because our religions have played such an important role in American history, and their influence on contemporary affairs is so great, that no exhibition which purports to be representative of American life would be complete without a religious demonstration.

I realize that many difficulties will be encountered in preparing an exhibit that seeks to do justice to America's many religious denominations, and their historical contribution to our Nation.

Therefore, I recommend that the National Conference of Christians and Jews be given jurisdiction over planning the contents of this proposed exhibit.

I think this would assure a devout tone, an historical accuracy, and a proper balance that would be agreeable to our Nation's various religious groups.

Sincerely yours,

THOMAS J. DODD.

[From the New Haven Register, Apr. 19, 1959]

A RELIGIOUS NOTE IN OUR MOSCOW SHOW?

Connecticut's Senator DODD has urged the State Department to make plans for a religious exhibit at the Moscow Fair this year. Such a display, stressing the fundamental place of religion in American society, would—he feels—have an important role in defining the origins and the roots of the sort of freedom for which the United States stands.

This is a stimulating proposal.

Certainly one of the fundamental differences between our views and those of the Communist leaders springs from the Kremlin's denial of God, its denial of religion, and its attempted substitution of a totalitarian party ethic for the established beliefs of so many people in so many parts of the world that are now under its control.

"It is incomprehensible to me that an American exhibit designed to portray the various aspects of American life should neglect one of its principal elements, the role of religion," says Senator DODD. And he points out that such an element was neglected in the U.S. show at last year's Brussels World Fair.

"Many of the early colonists of our continent came here in quest of religious freedom. Many of our first settlements were essentially religious settlements. Throughout our history our great State documents, such as the Declaration of Independence, Washington's Farewell Address, and Lincoln's Second Inaugural, have been expressions of basic moral principles.

"Therefore I consider it inexcusable that any exhibit purporting to be representative of American life should fail to depict its most important aspect."

The Dodd proposal is one that the State Department and the American people should weigh most seriously. The religious freedoms which we enjoy and the individual rights which we uphold often promote a sort of bland avoidance of all religious statement in this country. Among peoples abroad, though, the religious diversity which we take for granted and the religious faith which we rarely trouble to defend may be far more impressive than any demonstration of technological progress or political objective. They are a priceless part of our heritage, a fundamental base for our liberty—and a part of our daily living which should not be ignored as we attempt to tell Russia's people of the values we cherish.

[From the Bridgeport Post, April 20, 1959]

AN IDEA, SHARP AND TIMELY

The State Department has received a suggestion from Senator THOMAS J. DODD which should obtain warm and immediate approval. When we take part in the big Moscow fair this summer, in an effort to show Soviet citizens how Americans really live, the Senator says we should include a religious exhibit, to indicate religion's fundamental place in U.S. society.

A picture of an American community would hardly be complete without showing its schools and its churches. Senator DODD in a letter to George V. Allen, U.S. Information Agency Director, recalled that there was not a single display of a religious nature in the U.S. exhibit at Brussels. Our mistakes there, he advised, should not be repeated.

Millions from all over the world went through the U.S. exhibit. Mr. DODD holds that "we missed a wonderful opportunity to demonstrate to these people the importance of religion in the development of our history, and its great influence on contemporary American affairs."

Many of the colonists of our continent came here to seek religious freedom and many of the early settlements were essentially religious. Throughout our history our great State documents have been expressions of basic moral principles.

How better to impress the Soviet citizens with the story of life as it really is in this country? Let us show them that among our freedoms, which they are denied, is the freedom of conscience, of the right to worship God as one pleases or believes is right.

An excellent suggestion and one that will give the Red propagandists something else to attack. And the Soviet people, knowing well that the Kremlin line is phony, will see and believe, and be encouraged.

School Lunch Program

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, April 24, 1959

Mr. YARBOROUGH. Mr. President, one of the finest programs in operation in our schools today is the surplus food program which provides free lunches for some school children. This insures that these youngsters will have a good meal and a balanced diet, which they otherwise might not have.

Yet some school districts have chosen not to take advantage of this very worthwhile program, even though the current recession has increased the need for it.

Mr. President, one of the best discussions of this situation which I have seen was an editorial in the Houston (Tex.) Post, one of the State's outstanding daily newspapers. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial printed in the Houston Post for Monday, April 13, 1959, under the heading, "School Lunches Paid for Twice."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SCHOOL LUNCHES PAID FOR TWICE

We who live in the Houston Independent School District pay double to provide lunches for hungry school children.

We pay once in the tax money we have invested in the country's $9 billion worth of surplus farm products, in the tax money it takes to store that surplus, and the tax money it takes to keep the surplus from becoming even greater.

We pay a second time when our United Fund donations are spent for school lunches for needy children.

We pay twice simply because the Houston School Board is unwilling to participate in Government-sponsored programs which make the surplus foods available to school districts at no cost.

Persons who live in school districts which participate in the programs pay only once to feed their hungry schoolchildren. These districts do not ask for donations from the United Fund. They do not have to.

Why is the Houston School Board willing to see its constituents pay twice to provide free school lunches to hungry pupils?

Since 1946 a majority of members have offered two chief reasons:

1. That if the district participates in programs sponsored by the Federal Government, the Federal Government will take over control of the school district entirely.

2. That if the district participates in the program, the character of the schoolchildren will be weakened to the extent that they will expect more and more help from Federal Government sources.

In the first instance, the school board members appear to be governed more by fear than by facts. The Federal Government has not attempted to control 19 neighboring Harris County school districts which participate in the programs. And there is no evidence that it ever will.

The second reason is no reason at all. If a child would grow dependent upon the Federal Government simply because his school participated in the programs, wouldn't the same logic dictate that he would grow dependent upon charity simply because his school's free lunches were provided by United Fund donations?

Certainly a needy child and his parents are aware that they are accepting charity when the child is provided a free lunch purchased with United Fund money. This is an unpleasant thing to say, but it is true. The needy child under such circumstances stands apart.

Under the Government-sponsored programs, the needy child is fed but his paying fellow students also benefit. They receive more food for less money. Borderline cases—pupils who do not always have sufficient money for a school lunch—are able to obtain a nutritious lunch more often.

Presuming that the school board members' arguments have some merit, they would not appear to have enough merit to justify a line of action which forces taxpayers to pay twice for free lunches and deprives the greatest number of children of an opportunity to obtain a better lunch for less money.

It is shocking to know that our Government has more than $9 billion invested in surplus farm products.

It is shocking to know that it costs us more than $1 million a day simply to store the gigantic surplus.

It is still more shocking to know that the surplus grows with every passing harvest, that more tax dollars are involved with every passing year.

Every thinking American hopes and prays that some formula will be found to decrease the surplus without further upsetting our economy. But no Congress or no administration since depression days has found it.

And in the meantime we must accept as hard and simple truth that the surplus is there, that it will be with us for years to come.

And we must call on such wisdom and compassion as we possess to see that it is used for the greatest good.

Senator Gore's Week

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, April 24, 1959

Mr. CHURCH. Mr. President, in the April 23 issue of the Commercial Appeal, published in Memphis, Tenn., there appears an excellent editorial, well deserved by my good friend, Senator ALBERT GORE, of Tennessee. It should be called to the attention of the Congress and the public at large.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR GORE'S WEEK

Although modesty might prevent him from seeing it in that light, last week was definitely Senator ALBERT GORE's in some vital areas related to the national well-being.

When Senator GORE returned from the Geneva Nuclear Conference last November, he recommended that the United States take the lead in proposing a stoppage of nuclear tests within the earth's atmosphere.

Last week the administration did that very thing at Geneva. The Gore recommendation, now this country's formal position, would leave the United States free to continue underground and outer space tests where developments can be assured without consequential radioactive fallout.

Since 1954 Senator GORE has been a consistent and persistent advocate of governmental development of nuclear power. In his fight to that end the Tennessean encountered formidable opposition in and out of Government.

Last week a decision to construct a Government-owned and operated nuclear power reactor in Oak Ridge was made and announced by the administration, thus com-

pletely vindicating Senator GORE's long-maintained position.

Discussing this development a few days ago, he pointed out that "the gas-cooled concept which the Government will now develop at Oak Ridge has been ready for development in our country for nearly 10 years."

"The private power industry has had not only ample opportunity to develop this concept upon its own, but has had repeated offers of governmental subsidies if it would do so. It has not, and I do not wish to be critical of the private power industry for not having developed this and other reactor concepts.

"The expense of developing a reactor concept is too great and too risky for one company to afford, but the public interest requires such an effort on the part of the Government in order to maintain U.S. leadership in the vital field of nuclear energy.

"Once a reactor concept has been successfully demonstrated by the Government through research and development, private industry can utilize it to its own profit and to the profit of the Nation. The British, incidentally, have made great headway with the gas-cooled concept. Indeed, both the British and the Russians have pulled ahead of the United States in the actual construction and operation of large-scale powerplants."

Had the administration in 1954 recognized the soundness as well as the vision in Senator GORE's pleading this would not now be the case.

One of the most memorable fights made last year on the Senate floor by the Tennesseean was that for adoption of a tax law which would require the vastly profitable insurance industry to pay a fair share of the cost of Government and national defense. His efforts were opposed by the Treasury Department and by tremendously influential Senator BYRD.

Last week the Senate Finance Committee began considering a bill recommended by the Treasury Department and supported by Senator BYRD. If enacted its general effect would be what Senator GORE was seeking a year ago.

Acceptance and support of the Tennesseean's viewpoints and thinking by those who had earlier opposed and rejected them should be as satisfying to Senator GORE as they are to his friends and constituents in this State. Certainly the events of last week further prove the electorate's wisdom in giving him an overwhelming vote of confidence returning him to the Senate.

Whither the Constitution?

EXTENSION OF REMARKS

OF

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. DOWNING. Mr. Speaker, on April 15, 1959, our colleague, the Honorable JIM WRIGHT, of Texas, was the main speaker at the annual meeting of the Virginia State Chamber of Commerce at the Hotel Chamberlin, Fort Monroe, Va.

The impact of this great speech on this distinguished audience was so readily apparent that I ask that his address be made a part of this RECORD and strongly recommend that it be read by my colleagues.

The address follows:

WHITHER THE CONSTITUTION?

(Speech by Congressman JIM WRIGHT, annual meeting, Virginia State Chamber of Commerce, Old Point Comfort, Va., April 15, 1959)

Last month, we celebrated the 170th anniversary of the Constitution of the United States.

Throughout the long, hot summer of 1788, while in the sweltering heat of Philadelphia's Independence Hall our Founding Fathers struggled to draft a Constitution, rumors spread throughout the Colonies like autumn leaves whisked about by the wind.

Speculation was rife. The 12-year-old Articles of Confederation, too loosely drawn in the beginning, had blundered and broken apart upon the rocky shoals of reality. A firmer and more adhesive foundation was clearly needed upon which to erect an enduring nation. The topic of the day in the taverns and general stores and stage coach inns concerned itself with what form the Government would take. Sophisticated couriers in the capitols of Europe speculated as to who would emerge as King.

Finally the work was ended. The document, hammered out upon the anvils of mutual compromise, was ready for public presentation. The delegates filed slowly out onto the broad portico to read it to a motley crowd which for days had been gathering outside the building. A curious little charwoman, unwilling to await its formal reading, plucked at the sleeve of Ben Franklin and insisted upon knowing what type of government they were to have.

Franklin replied: "A Republic * * * if you can keep it."

We have kept it for 170 years. I was startled some months ago when the Prime Minister of Ireland, addressing our Congress, brought greetings from an old nation and a new Republic to a young nation and the oldest Republic on earth. In point of continuous institution, ours is the world's oldest Republic.

That we continue to keep it seems to me one of the most important resolutions on earth. As valid today as when it was penned is Emerson's rhetorical question:

"For what avail the plough or sail,
Or land or life, if freedom fail?

With most of the world looking hopefully to us, not only for bread but for inspiration, the essential character of our Government is, more than ever before, "the last, best hope of earth."

Let me make clear at the outset that I am not seeking to alarm you. I do not think we shall lose it. With all my heart, I believe the fundamental faith of our Nation to be as strong today as ever it has been in our history. Yet there are certain developments which have taken us rather far afield from the points of our origin and which, unless corrected, could alter the direction of our destiny. Specifically, I should like for us to think very seriously above five particular trends * * * to consider how they have come about * * * and to resolve what must be done to correct them.

1. EROSION OF STATES RIGHTS

The first and in some ways the most obvious of these trends is a gradual and steady erosion of the rights of our States. Everyone talks about this tendency and most people lament it. Yet, as with the weather, hardly anybody ever seems to do anything about it.

In some respects, the tendency is a natural one. As the Nation has grown more compact and distance has been eradicated, attention has shifted from the States to the National Government. People more and more have looked to the Federal authority for a solution to their problems, particularly when frustrated in seeking solutions at the State level.

And the attitude of the States themselves has often hastened the trend. The impotence and corruption of State legislatures, their unwillingness to assume responsibility, have on more than one occasion driven the public to look to the Federal Congress for its remedies.

A House Committee on Intergovernmental Operations last year highlighted this truth with case history illustrations. Since 1925, the committee noted, Federal grants for nondefense programs have risen from $124 million to $5 billion for the current fiscal year. Tracing the birth and growth of activities ranging all the way from aid to State soldiers' homes to stream pollution control, the committee established that, in almost every instance, the Federal entry into the field had been preceeded by negligence and unwillingness to solve their own problems on the part of the States.

To wail against growing Federal influence in State and local affairs without being willing to support more dynamic and responsible State governments is to engage in a hollow and hypocritical gesture. If Federal Government is ever to limit its authority, then this will be tied up in one package with stronger Government close to home.

Yet, I realize fully that the converse also is true. It is like the question of the chicken and the egg. The Federal Government will not release responsibility until the States prove a willingnes to assume it. But the States cannot develop their own initiative if stifled under a blanket of growing Federal encroachment. This is the reason why many of us in the Congress believe in the importance of legislative reform such as embodied in the bill, H.R. 3. This bill, intended to restate the historic doctrine of concurrent jurisdiction, passed the House in the last session after many hard months of struggle. It is unfortunate that it became enmeshed in a parliamentary situation which prevented it from also receiving the approval of the Senate.

Let us be clear about what we mean. H.R. 3 did not presume in any way, shape, or fashion to confer upon any State a right to enact legislation which would be violative of or inconsistent with the Federal law. That question was settled when we abandoned the Articles of Confederation and adopted the Constitution of the United States. It was ratified forever in the indelible blood of the Civil War. We are not a confederation in which any State may set itself aside as an island wherein Federal law may be ignored. Ours is a Federal Union, "one Nation, under God indivisible." There is no attempt here to maintain that a State possesses any right to countermand or nullify Federal law.

What is involved in H.R. 3 is simply a protection of the historic rights of the States to exercise concurrent jurisdiction with the Federal Government and to enact statutes of their own so long as those statutes do not violate the Federal law.

This is an original and historic right. At the beginning of our history as a nation, it never occurred to anyone to question it.

Of recent years, however, the courts have held with increasing consistency that where Congress has enacted legislation on a subject, the States are deprived of all power to enact or enforce similar laws on the same subject, even though they present no direct conflict with the Federal act.

The judicial ruling in the case of *Commonwealth* v. *Nelson* which has a bearing on antisedition statutes now on the books in some 47 States is a notable case in point. It comes instantly to mind because of the publicity accorded this decision and because, ironically, it was the distinguished Congressman from Virginia, Mr. SMITH, the author of

H.R. 3, who had written the Federal act cited by the Court to nullify enforcement of the State laws in Pennsylvania.

That case, however, is no more than a symptom of what has been happening to the rights of States in the initiation of legislation and the handling of local problems. Similar decisions, involving somewhat less spectacular issues, are legion.

A fairly typical example is the recent case of *Cloverleaf Co.* v. *Patterson*. The State of Alabama, in an effort to protect the health of its citizens, had sought to inspect the product of a company, which was engaged in the renovation of butter. Some of the butter was shipped in interstate commerce, and thus subject to Federal pure food laws.

The Supreme Court ruled that Congress had therefore assumed entire jurisdiction over the subject, leaving the States powerless to enforce their own health laws. Dissenting, Justice Frankfurther argued that, if Congress had intended to preempt State enforcement entirely, it would have said so in its act.

This is the philosophy of H.R. 3, that in the absence of a clear congressional declaration depriving States of initiative in a given field of law, and in the absence of any conflict between State and Federal provisions, the States will be presumed to retain the right to enact and enforce similar laws.

The States have traditionally been valuable proving grounds for legislative policy. Many of our most far-reaching national reforms were first tested and proven in the laboratories of State government. Women's suffrage in Wyoming, antitrust in Texas, conservation laws in Pennsylvania, and lobby reform in Wisconsin, to name but a few.

Although the cry of States rights has often been abused, often used as a cloak to cover States wrongs, it is most assuredly not a reactionary doctrine to hold out for the rights of States to solve lcal problems when the solution presents no conflict with Federal policy.

Unless H.R. 3 or something substantially similar is enacted, it will be only a matter of time before the State governments will be deprived of practically all legislative initiative through this doctrine of preemption.

Congress is now required to legislate on an ever-widening variety of subjects. If, each time it does so, the States are to have another avenue of legislation completely closed to them, they will be inevitably deprived of the power to attack the problems of their people on any but a meager handful of subjects. These will be those not regarded as sufficiently important to warrant congressional action.

This legislative reform is needed unles we want consciously to abet the further erosion of the rights and prerogatives of the States. And I, for one, do not wish to do so.

2. EXECUTIVE USURPATION OF LEGISLATIVE POWERS

The second of these trends is a growing usurpation of legislative powers by the executive branch of Government. The great British statesman, Gladstone, spoke of our Constitution as "the most perfect instrument ever set down by the hand of man at a given time." He was speaking of its delicately contrived balance of powers between the separate branches of Government. It was born out of personal experience with a sovereign who had arrogated to himself authority which in its unrestrained exercise he had abused. If the Articles of Confederation had proven themselves too weak, there certainly was no wish among the authors of the Constitution to supplant them with a Government whose essential strength would be embodied in an all-powerful executive.

The greatest danger in all political systems is that of executive power. Benjamin Franklin was haunted by a dread that the executive branch would increase at the expense of the other branches until it would end in a form of authoritarianism. Commenting upon this fear, Jefferson said, "It is better to keep the wolf out of the fold than to trust to drawing his teeth and claws after he shall have entered."

Of the three branches, Congress should be the most responsive to the public wish because, by its very nature, it is closest to the public. While the population of the average constituency has grown enormously since the Constitution was drafted, it still is true that in our scheme of things, the average Member of Congress comes in closer and more continuous contact with the people whom the Government serves and represents than does any other Federal official.

During the congressional adjournment last fall, as an example, I publicly discussed our congressional activities in 114 different group meetings in my particular district. During the 4 months, I estimated that I had talked personally with some 11,000 people. This in greater or lesser degree is what most Members of Congress were doing. I believe that because of this we are better able to gage their thinking, better able to be what the term implies * * * their representatives.

Yet due to the growing variety and the burgeoning volume of legislation, Congress has come to rely more and more upon administrative interpretation to make assumptions of legislative intent. Executive agencies superimpose the details of administration upon what sometimes amount to skeleton statements of policy. In the last session of Congress, for instance, there were 6,591 bills introduced in addition to more than 11,000 which had carried over from the previous session. Of this number, 1,348 were enacted into law. With a workload of this magnitude, Congress simply cannot in each instance spell out in minute detail the manner in which each of these separate laws is to be carried out. To this extent, the growth of an executive bureaucracy has been a natural and unavoidable development.

But it is neither natural nor unavoidable for the administrative arm to replace what Congress intended with what its appointees think Congress should have intended. It is not natural, nor do I believe it has been unavoidable, for the device known as the executive order to have come into such widespread usage. Like the States, Congress must continually reassert its rights if it does not want them to diminish. Like the muscles of the body, rights if not exercised will wither and atrophy.

One of the vehicles by which the fundamental lawmaking prerogative has been sloughed away has been the Executive Reorganization Act which permits appointive agencies and commissions to revamp the administrative structure of Government.

Much good work has been performed under this act. Some savings have accrued to the taxpayer as a result of streamlining and elimination of overlapping functions.

One feature of the Reorganization Act, however, has come under sharp—and in my opinion, justified—criticism. This is the automatic nature of reorganization plans by which they summarily become law unless the Congress passes a resolution of disapproval within 60 days * * * and by a constitutional majority (a majority of all Members, not simply a majority of those voting).

Simple reflection will demonstrate how the lawmaking function can thus pass from the legislative to the executive branch. A Presidential commission can radically alter a vital function of the Government, leaving the Congress almost powerless to demur. Here's why: It takes 218 votes in the House under this provision to defeat any reorganization plan. During a recent Congress there were 181 rollcall votes. The greatest number of Members ever present for one of these votes was 426, the smallest number 233. On only 20 of those rollcalls were as many as 400 Members on the floor.

Supposing such a plan were up for consideration with only 233 Members present. Sixteen Members could defeat the will of 217 Members. If that's farfetched, assume the average rollcall attendance of 357, when 140 could thwart the will of 217.

Not only must 218 be against it, they must take the initiative, they must all be on the floor at once, and they must do it within 60 days * * * or the Executive sponsored reorganization plan will automatically become the law of the land.

Under this machinery, a number of the basic activities of the Government have been rather radically altered. It is my own conviction that we have here a departure from the traditional concept of separation of powers. For here the Executive legislates and the Congress has only a negative right of veto which seems more theoretical than actual. I believe that a portion of the integrity of the lawmaking branch could be restored by amending this sweeping Reorganization Act so as to permit legislative review by a simple majority of those present and voting, rather than by the required constitutional majority.

The one essentially indispensable power of Congress, of course, has been most clearly maintained in its control of the purse strings. Even this congressional prerogative has been the victim of an insidious encroachment. Led by a coalition of younger Members, the lawmaking body rebelled last year against this particular tendency when it enacted the bill known as H.R. 8002 to put the Government's budgeting practices on an accrued annual expenditure basis.

The fundamental issue before us in this legislation was the extent to which the people's elected representatives in the Congress can maintain actual control over the Federal purse strings.

There can be no doubt that the Constitution of the United States vested in Congress the clear responsibility to manage and control Federal expenditures. It obviously was believed by the Founding Fathers that administrative government should be directly responsible in its expenditure of public funds to the Congress, since in this way it would be responsible to the taxpaying public which elects the Congress and is responsive to its wishes.

In recent years, the practice of large sums, carried over unspect from previous appropriations, has impaired the ideal of congressional control of the purse.

We came into fiscal 1956, for example, with almost $54 billion in unexpended balances from previous appropriations. At the beginning of fiscal 1957, the figure has grown to some $70 billion.

Large balances of unexpended appropriations have thus been available annually to the agencies without any further action of the Congress. For all practical purposes, Congress had lost control of these sizable amounts of money. It was to restore congressional control that this bill was passed.

It may not result in the saving of billions, as some of its most enthusiastic advocates have estimated, but I think the requirement that agenices return to the Congress and prove up the value of programs underway will very definitely result in some saving and in greater efficiency, and any such result that accrues will certainly be to the good. Most important of all, it restores to the Congress its historic role as the keeper of the pocketbook.

But Congress, having done this much, cannot rest upon its laurels. The price of legislative rights which are the very enshrinement of representative government is eternal and unremitting vigilance.

3. WANING RESPECT FOR THE SUPREME COURT

The third alarming development, unlike the other two, has come about rather recently. It is the rapid decay of respect for the U.S. Supreme Court, brought about by

the general feeling that the Court has tended to abandon legal precedent as its guiding principle.

A very great deal, of course, has been said about this. Every newspaper pundit has commented upon it. It is easy to criticize, and perhaps the mark of statesmanship in this instance is that of restrained expression. No appraisal of the current scene, however, would be an altogether honest one without frankly acknowledging this development and examining it. When so august a body as the Conference of Chief Justices of all the States votes by a three-fourths majority to adopt a report calling on the Supreme Court for more judicial restraint, then something unique in our history has happened.

During the last Congress, there were no less than 50 bills introduced either to alter rulings of the Nation's highest tribunal or to curb the Court in one way or another. Seven of these bills passed at least one House of Congress.

But the Conference of Chief Justices in its pronouncement last August called attention also the fact that ultimate judicial power in our country must rest with the U.S. Supreme Court. "Any other allocation of such power would seem to lead to complete chaos," the report stated, adding that it is our common obligation to seek to uphold respect for law.

The Supreme Court is necessary in our system of government. If we are to have a government of law rather than a government of men, it is indispensable. If law is to have any ultimate meaning, if there is to be an anchor to keep our ship of state from being tossed about by every wave of popular fancy and taking a new direction with every expedient wind that blows, then we must have a Supreme Court, and that Court as the final arbiter of law must have respect.

Thomas Jefferson was among the first of our forefathers to see that judicial review was the only effective means of preserving the fundamental law. While our earliest advocate of popular government, he feared what he called the unrestrained "tyranny of legislatures." He knew that the legislative branch, simply because it was closest to the people, could be carried away by a tide of expediency in its desire to please the people, and he knew that it needed a checkrein.

Jefferson's law teacher, George Wythe, had expressed this philosophy as forcefully as it has ever been stated. Sitting as a judge in the case of *Caton* v. *Commonwealth of Virginia*, in 1782, he had stated his position in these words:

"If the whole legislature, an event to be deprecated, should attempt to overleap the bounds prescribed to them by the people, I, in administering the public justice of this country, will meet the united powers at my seat in this tribunal; and, pointing to the Constitution, will say to them, 'here is the limit of your authority; and hither shall you go, but no further.'"

Obviously, something needs to be done to restore the Court to the pinnacle of prestige which it must grace if the essential character of our Government is to retain its stability. I do not believe the answer lies in radically altering the jurisdiction or the responsibilities of the Court as has been impatiently suggested by some. As an institution it has served as well for 170 years. It has been under attack before. Twenty-one year ago a frustrated President was criticizing the Court as "too reactionary" and was asking authority to add to its membership. Calmer heads prevailed and the President's request was denied.

At that time, the distinguished and venerable New York Republican, the late Daniel A. Reed, posed this choice:

"I ask every American this question," he said, "Do you want to put your personal liberties in the hands of Congress and your State legislature? To those who think this is a wise thing to do, I call attention to the fact that 10 times since the year 1867 Congress, or one of its branches, has violated the provisions of the Bill of Rights. * * * The only power that stood between the citizens and these tyrannical acts of Congress was the Supreme Court * * * I cannot believe that in this period of worldwide dizziness the citizens of this Nation wish to destroy the only department of Government which can protect them from mob violence and encroachment."

What, then, can be done? If it is a duty of citizenship to respect and support the rulings of the Court, it also is true that the pronouncements of the Court, in and of themselves, should be such as to command public respect.

The Supreme Court of the United States should be composed of the nine ablest jurists in the Nation. On this Bench should sit the nine wisest and most learned legal authorities in the United States. They should be men of such judicial attainment and intellectual stature as to evoke from the public, the bar, and the bench the universal respect which is their due. Never should it be possible for anyone to say that their appointments had been essentially political in character.

The most constructive reform, in my judgment, would be the requirement that, as a minimum prerequisite to appointment, a member of this highest Court should be a person of previous judicial experience. Such a requirement could be made by a simple act of Congress, since on the matter of qualifications of Justices the Constitution is silent.

Adopt such a requirement as this, let all future appointments be confined to men who have performed previous service either on a Supreme Court of one of the States or on a Federal appellate court, and time will lay its soothing hand upon the turmoil that today surrounds the Court and heal the unhealthy ruptures that disturb our legal tranquility.

4. THE GROWING EMPHASIS OF BLOCS AND SEGMENTS

The fourth trend to which attention must be called is the ever increasing tendency to divide the United States into blocs and segments, economic factions, ethnic units, regional groupings.

Back in the 1940's, Stuart Chase wrote a book which he entitled "Democracy Under Pressure." If we were under pressure then, we are in a pressure cooker now. Schoolchildren pledge their allegiance to a flag which we hail as the symbol of "one nation, under God indivisible." If my observation of the past 4 years has given me any one great anxiety for the domestic future of our Nation, it is the dread that someday this essential indivisibility may disintegrate before the splitting onslaughts of selfish pressures.

Too many of us have come to think of ourselves not first as Americans, but first as members of the business community or indeed some segment of the business community, or as members of labor, and only secondly as Americans—as southerners or northerners first and Americans second—as belonging first to a particular racial heritage and only then, if at all, as belonging to America.

I am not certain that I know what can be done about this growing tendency. But I do know that it's growing and I do know that it is selfish at its core and insidiously un-American.

Marx and Lenin prophesied that capital and labor would be unable in the long run to coexist amicably. That class war here would inevitably come because of what they called the fundamental contradiction of a society such as ours—what they believed to be a natural hostility between the capitalist and his employee. When we allow ourselves to be divided into hostile camps, acting as though our differences were irreconcilable, each anxious to believe the worst about the other and each constantly poised to press an immediate advantage at the expense of the other, we tend to prove their satanic prophecy correct.

It is natural, I know, for Members of Congress to champion the causes of their own districts, their own States, their own regions. In this I am perhaps as guilty as any. But a Member of Congress and every public official—indeed, everyone who would set himself up as a leader of public thought—has the solemn duty to carry forever in the forefront of his mind the realization that he serves first the United States. Except as its future flourishes, his State and his town have no future. Except as the entire economy prospers, his economic segment of that economy will enjoy no lasting prosperity.

Except as business makes a reasonable return so as to permit expansion, there will not be jobs enough to go around for our growing labor force; and labor, in the long run, will suffer. Except as the working men and women of our Nation earn a decent and remunerative wage, there will be no market for the things business turns out, and business will suffer. If we forget this, we play a fool's game. He who enters the arena of politics pledged to champion exclusively any bloc or any segment, he who in public life uses his talents to divide class against class, or race against race, or region against region, prostitutes his talents; and in the end he plays the game of those who would divide us and in dividing would conquer us.

I think of one legislative reform which could minimize this growing tendency. It alone would not cure the basic malady, but it would help. The electoral college method of selecting our President and Vice President has surely outlived its original purpose. It is a relic of the powdered wig and snuff box era when nobody ever knew anything about presidential candidates and it was believed the public needed someone to do their actual choosing for them. If its only drawback were that it is archaic, there could be no harm in preserving it. The outmoded system, unfortunately, has given rise to numerous abuses, among them the glorification of voting blocs.

By lumping all of a State's electoral votes for the side which ekes out the barest margin of victory in that particular State, it has encouraged both parties to concentrate on those traditionally close areas of the country where a little extra effort can pay off most handsomely on the electoral scorecard. Undue and unintended influence thus has gravitated to the political bosses and ward politicians who can turn out the vote in those particular areas. We have come in this way to think of millions of Americans not as individual people but as members of one or another voting bloc. And in this it seems to me that we subtly degrade them as human beings and tarnish the image of a Nation of free and equal men.

We can correct this one particular cause by adopting any one of several electoral reform amendments which have been pending in every Congress for the past 20 years. I believe we need to reaffirm our faith in the average American as a person by enacting one of these proposals, to the end that one vote anywhere in the country shall be exactly equal to one vote anywhere else in the country.

Yet this alone will not cure the disease that increasingly separates and divides us. This is a task which calls for the most superb statesmanship and the most mature citizenship. Perhaps the danger has been no more clearly put than in the words of that distinguished jurist, Judge Learned Hand, who warned:

"That community is already in the process of dissolution where each man begins to eye his neighbor as a possible enemy, where nonconformity with the accepted creed is a mark of disaffection; where denunciation takes the place of evidence and orthodoxy chokes off freedom of dissent."

5. A STALE CONFORMITY AND THE BILL OF RIGHTS

Finally, to combat the stale conformity of the group-thinking which has huddled so many of us into separate camps, I think we need an urgent reemphasis of the Bill of Rights.

The most alarming revelation I have read in the past 2 years was made by Dr. H. H. Remmers, of Purdue University. His recently published book, "The American Teenager," is the result of 15 years of painstaking questioning of some 25,000 high-school students by the university's research staff.

Unless you're shockproof, you'll be shocked, not so much by teenage manners and morals, surprisingly enough, but by teenage opinions.

If the Purdue polls are accurate, the following eye-openers should be sufficient to start us thinking, and mighty seriously:

A solid 60 percent of the youngsters polled think that books, magazines, and newspapers should be censored.

A substantial 58 percent can see nothing wrong with employment of third-degree methods by police.

A third of them believe it would be okay for the Government to prohibit some people from making speeches.

Better than one-fourth think there are times when it's all right to search homes and private persons without a warrant.

Fifteen percent would refuse certain criminals the right to have a lawyer, and 13 percent even profess the opinion that religious belief and worship should be subject to legal restrictions.

The average one of these youngsters would probably fight you if so much as suggested that he wasn't a good American. Yet, if these figures are correct, an appalling number simply haven't been shown what America is all about in the first place.

If you asked if they believe in the Bill of Rights, they'd no doubt give you an emphatic "Yes." But the poll tends clearly to show that a lot of them actually do not.

Nobody, apparently, has explained to them that the Bill of Rights, the sanctity of the individual, is the one great peculiarly American contribution to the art of government.

Other nations have adopted, at least nominally, the republican form of government. Even Russia calls itself the Union of Socialist Soviet Republics. Other nations (Hitler's Germany included) have developed capitalistic economies.

Only America charted its bark by the course of a scrupulous observance of individual rights. Is a new generation losing the course?

Whose fault it is might be debatable. The schools, the churches, the families, perhaps we all share in the blame. Perhaps the younger set is merely reflecting an attitude they see in their elders. Can it be that in our frantic insistence upon "belongingness" we have made a god of conformity to our groups and have actually begun to mistrust ourselves to think for ourselves? Or to give the other fellow the right to think for himself as an individual?

When we wish to silence those who disagree with us we betray a shocking lack of confidence in our own convictions. When we confer social ostracism upon the fellow with a nonconforming opinion, we place a smothering stultification upon the very act of thinking.

There has never been a time in our history when we have needed more to encourage the processes of independent thought. Jefferson dedicated the University of Virginia to the "illimitable freedom of the human mind." The frontiers of the future are the frontiers of the mind. The future belongs to that nation, and to that society, which is not afraid of thoughts.

Ours is a nation which was founded upon the conviction that error of opinion may be tolerated so long as truth is free to combat it. Jefferson said that truth is the sufficient adversary of falsehood.

I do not despair of the future. The faith of our fathers was not misplaced. Their ennoblement of the individual is the very hope for which the world gropes in its awakening. Let us not hide that light under a bushel, for it is a light unto the gentiles and a lamp unto the world.

Alger Hiss Seeks Passport to Europe

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, April 24, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story from the New York Journal American of April 8, 1959, a news story from the Baltimore News-Post of April 9, 1959, and an editorial from the New York Daily News of April 10, 1959, all of which relate to the issuance of a passport to Alger Hiss.

It will be remembered that Alger Hiss was convicted of perjury, following his denial of participation in the Communist apparatus of this country. It is almost unbelievable that Hiss should be permitted to travel abroad under the protection of a U.S. passport.

I feel strongly that appropriate legislative action must be taken by the Congress, authorizing the Department of State to withhold the issuance of passports in cases of undesirable and untrustworthy persons, including known Communists or those demonstrated to have been affiliated with the Communist conspiracy. For that reason, I believe that these news stories and this editorial warrant the alert attention not only of Members of Congress, but also of the entire American public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Journal-American, April 8, 1959]

ALGER HISS SEEKS PASSPORT TO EUROPE

Alger Hiss has applied for a passport to go to Europe.

The New York Journal-American learned from reliable sources today the application was made to the State Department within the last few days.

In seeking to travel to the continent, divided by the Soviet's Iron Curtain, Hiss—onetime rising star in State Department officialdom—indicated he wanted to visit England, France, and Holland.

In 1950, Hiss was convicted in Federal court here for perjury after he denied a charge by onetime admitted Communist Whittaker Chambers that he passed secret Government documents to Chambers for transmission to Moscow. To this day, Hiss steadfastly has denied the charge.

SERVED 3 YEARS, 8 MONTHS

His was released from the Federal Penitentiary at Lewisburg, Pa., in November 1954, after serving 3 years and 8 months of his 5-year sentence.

The passport application was forwarded to the State Department through attorney Leonard Boudin. Secretary of State Dulles, in a passport application hearing once charged Boudin was a member of the Communist Party, in the early 1930's.

Boudin asked that speedy action be taken on the passport application.

Disclosure of Hiss' passport bid was expected to touch off an outburst in Congress, now considering legislation to correct what critics call passport loopholes.

Critics pointed out that under the current system, a Communist or fellow traveler, who has a passport issued by the State Department, can travel abroad, but does not have to request permission to continue on to Moscow if he wants to.

This can be done merely by getting another visa from the Soviet Embassy or consulate in any country, and without the knowledge of this country's officials.

In fact, this has been done. Harry Bridges, leftwing leader of the west coast longshoremen's union, went behind the Iron Curtain in this manner.

As a result of his travels to Moscow and other Red capitals, Bridges is going to be the subject of an inquiry by the House Committee on Un-American Activities.

He already has been subpenaed. The committee, it was learned, wants to ask him to give an account of his travels, which include laudatory stories about communism in Red publications.

A recent Supreme Court ruling declared there is no Federal statute to prevent the State Department from issuing passports to Communists.

The ruling does not force the Department to issue the passports. It simply pointed out the fact that Congress has not passed any legislation barring passports to Communists.

Hiss has not expressed any desire to travel behind the Iron Curtain. However, under the present setup, should he decide to want to see Russia he could do so by getting a visa abroad from Soviet officials.

From friends of Hiss it was learned his application states that he is married, but that he plans to make the trip alone.

Last January, Hiss, now 54, and his wife separated after 29 years of marriage when he walked out of their four-room apartment at 22 East Eighth Street, in Greenwich Village.

NO REASON GIVEN

No reason was given for the estrangement. His wife, Priscilla, about 55, had stood by him through his court trials and jail term and had helped him when he wrote a book after his release from jail.

The book, "In the Court of Public Opinion," was devoted to showing how and why he considered himself to have been wrongfully convicted.

Hiss now is a $12,000-a-year administrative assistant to R. Andrews Smith, president of Feathercombs, Inc., makers of combs for women, at 404 Fourth Avenue.

Hiss was convicted after two trials.

Chambers also had said that Hiss was a member of the "Ware group," a Red cell in the early 1930's.

At that time, Hiss was a lower echelon State Department official. Later he rose to a position of importance in the Department. In fact, he was so highly regarded that he acted as Secretary General of the United Nations Charter Conference in San Francisco in 1945.

Boudin, the attorney through whom Hiss' passport application was forwarded, himself was turned down for one when the State

Department fought his application for a passport to go abroad.

DULLES AFFIDAVIT

In a sworn affidavit in Federal court, in Washington, Dulles said that the basis for his opposition to Boudin's application was that the attorney's "associates and activities leads to the conclusion that the plaintiff has been, and continues to be, a supporter of the Communist movement."

Besides accusing Boudin of being a member of the Communist Party in the early thirties, Dulles said the lawyer was associated with Communist front organizations in 1947.

According to State Department charges, some of Boudin's clients included many persons seeking applications for passports who had records as Communists or being fellow travelers. They included Singer Paul Robeson, Artist Rockwell Kent, and Abraham J. Beck.

[From the Baltimore News-Post, Apr. 9, 1959]

PASSPORT PLEA MAY REOPEN HISS CASE

(By David Sentner)

WASHINGTON.—The case of Alger Hiss, of Baltimore, convicted of perjury in connection with passing secret Government documents to Moscow, may be reopened in a big way as the result of his application for a passport to go abroad.

The disclosure by the New York Journal-American that Hiss, through an attorney for well-known Communist Party members and Communist fellow travelers, had requested a quick passport for Europe was verified today by the State Department.

State Department spokesman, Lincoln White, said the application probably would be granted in the face of the recent Supreme Court ruling that there was no congressional legislation on the books to prevent issuance of passports to Communists or pro-Communists.

Consequently, a friendly race loomed between the House Committee on Un-American Activities and the Senate Internal Security Committee as to which would question Hiss in connection with his passport application.

Both committees have scheduled hearings in connection with 14 bills introduced in Congress aimed at preventing issuance of passports to Communists.

If and when Hiss appears as a witness he will be asked similar questions to those which sent him to prison for a perjury conviction.

Among the questions will be the direct query as to whether he ever was a member of the Communist Party or a Soviet agent.

The revelation that Hiss had applied for a passport to visit England, France, and Holland—possible springboard for obtaining a visa from Soviet embassies for a visit to Moscow—provoked the following speculative questions in State Department, congressional, and Government investigative agency circles:

Has Hiss been placed under Communist Party discipline, for fear of his talking?

Has his emotional upset in connection with his pending divorce by his erstwhile loyal wife created a desire to leave the United States and exile himself abroad, perhaps defecting to Moscow?

Is his trip abroad possibly another MacLean-Burgess case? Donald MacLean, and Guy Burgess, British diplomats, suddenly defected behind the Iron Curtain.

Is the global Communist appartus anxious to get Hiss abroad so they can have a person-to-person, brain-picking session with him?

Government investigative agencies expressed surprise that Hiss would permit his case being espoused by an attorney, Leonard Boudin, who has represented numerous Communists and pro-Communists in passport applications. He himself has been charged on the court record by Secretary of State Dulles with having been a Communist Party member.

Boudin is the author of a sharp letter to the State Department insisting that the application of Hiss be speeded up. He also protested vehemently to the Department for allegedly leaking the matter to the New York Journal-American.

Incidentally, the New York Journal-American is known to have obtained its lead from friends of Hiss who feared he was being shanghaied into the global Communist propaganda system.

BRILLIANT SOCIAL, SCHOOL RECORD

Alger Hiss was born in Baltimore, November 11, 1904, at the family home, 1427 Linden Avenue.

As he grew to young manhood, Hiss established a brilliant social and scholastic record.

After a term at the Maryland Institute, he entered Johns Hopkins University, where he won a series of scholarships, carried off almost every student honor available, and was elected to Phi Beta Kappa.

At Hopkins he held the cadet rank of lieutenant colonel in the Reserve Officers Training Corps.

He went on to Harvard where he studied law, gaining the distinction of being selected to serve for a year as law assistant to Justice Holmes.

After starting his legal career in New York, Hiss went to Washington in the early days of the New Deal, and was employed by the Government in various capacities, serving with the Department of Agriculture, the Senate committee investigating the munitions industry, the Department of Justice and the State Department.

On August 3, 1948, his career was wrecked when Whittaker Chambers testified that Hiss was a member of an underground Communist group operating in Washington.

[From the New York Daily News, Apr. 10, 1959]

PASSPORT FOR A. HISS

Presumably Alger Hiss has been useless to the Kremlin ever since his exposure as a passer of secret Government papers to a Soviet courier. It is doubtful that he can do any valuable work for Khrushchev on his forthcoming European trip, for which the State Department has been forced by a recent Supreme Court decision to issue him a passport.

But the episode points up the fact that under this same decision State is being compelled to issue passports to droves of known or deeply suspected Communists who don't rate such a privilege. Can't Congress kindly act on this scandal, promptly and decisively?

Ham Operators Are Prepared for Disaster

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, April 24, 1959

Mr. YARBOROUGH. Mr. President, one of the difficulties which Civil Defense authorities have encountered on occasion is the feeling of "Let George do it." This is not true in Orange, Tex.

A number of organizations in Orange, Tex., have taken an active interest in the Civil Defense program and now render an invaluable community service. These include the Orange Pilot Club, the Boy Scouts, and the amateur radio operators or hams.

Mr. President, as an example of what can be done when public spirited citizens take an interest in their community, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Robert Burns which was recently printed in the Beaumont (Tex.) Journal under the heading "Hams Answer Daily Rollcall in Orange Civil Defense Unit."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAMS ANSWER DAILY ROLLCALL IN ORANGE CIVIL DEFENSE UNIT

(By Robert Burns)

ORANGE.—At about 7 p.m. every day, Gene Steele, Orange civil defense network control operator, makes a rollcall of the 27 ham operators in the area. It's not just for fun. These calls assure Orange County residents that the civil defense organization is in a constant state of preparedness for any emergency or disaster.

Gene, known simply as K5EVE to the 27 hams who answer his calls, lives in Orangefield and goes to the Orange Memorial Hospital every night to make the rollcall, which also assures a daily test of the equipment there.

Martin Thomen, civil defense coordinator, explains that the calls could be made from any place where a ham has his communicator. Seventeen of the transmitting and receiving devices were provided by the county and the cities of West Orange, Pinehurst, and Orange. About 10 of the 27 hams, all of whom are members of the Orange Amateur Radio Club, use their personal communicators.

Frequently, some of the hams answer rollcall while traveling. The portable units can be disconnected quickly and placed in a car, boat or airplane. Most of the hams take their communicators along day or night when they leave home.

The network operates on a frequency of 50.8 megacycles. It is understood among the hams that no one is to use the frequency except in an emergency and for the rollcall.

"If anybody comes on the frequency other than at 7 p.m. we know it is either an emergency or a mistake," one explained.

Organized about 8 years ago as the Orange City and County Disaster Relief and Civil Defense Committee, the group's chief aim is to provide information to the public as quickly as possible in time of disaster.

"When a disaster strikes, people should immediately tune in their radios to station KOGT in Orange," Mr. Thomen said, "that is where all information is channeled."

The city of Orange last week purchased an emergency generator to be installed at the radio station, thus assuring that information will be broadcast in the event of a power failure.

During the flood last September, broadcasts were being made before daybreak. Mr. Thomen said City Manager Marlin Thompson notified him at 4:20 a.m. the day of the flood. He immediately contacted three civil defense operators, who contacted the other men. Within an hour information was coming in at the radio station from key points in the city and county.

The civil defense unit, however, is not limited to radio operators. At least 34 members of the Orange Pilot Club have stations where they report in the event of a disaster. About 35 Boy Scouts also have assigned stations.

The ham operators quickly locate themselves in strategic points, the naval station,

Salvation Army headquarters, schools, hospitals, and a number of the other places.

A unique alert system has been worked out to let the people know when a disaster occurs. Mr. Thomen said the fire, sheriff's, and police departments, and the funeral homes, have agreed to run vehicles over the county with sirens on.

In his home, Mr. Thomen has a small battery unit plugged into an outlet. In case of a power failure, the unit will buzz loudly and provide light for him to operate his communicator and to alert the other operators, if necessary.

Mr. Thomen said the main problem in case of disaster is advising the public.

"Every person should listen to the local radio station when a disaster strikes. When the new generator is installed, we will be assured of getting information to the public as quickly as possible," Mr. Thomen said.

Flight in the Jet Age

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. WILLIAMS. Mr. Speaker, the First World Congress of Flight was held in the United States in April 1959. The speakers and the participants, aerospace leaders of the free world, numbered in the dozens. The subjects which were examined at the World Congress of Flight ranged the whole gamut of space and flight.

One of the major conferences at the World Congress of Flight was devoted to the jet age. Fittingly, Gen. Curtis E. LeMay, Vice Chief of Staff of the U.S. Air Force, was one of the speakers and conferees at this jet age session attended by specialists, industrialists, and manufacturers. In his presentation he gave a succinct recap of jet age requirements and showed the pioneer role of the Air Force in the development of jet flight. In addition to providing this capsule history, General LeMay discussed—from a military standpoint—some of the common problems of jet flight which all participants in the jet age, civilian as well as military, may expected to encounter. Specifically, General LeMay pointed to a number of problems in the air operations and safety field which are becoming more and more critical with the attainment of the high speeds which jet flight permits. He touched on the sonic boom and the need for public understanding and acceptance of this phenomenom. He pointed to problems needful of a solution, and he listed areas which require more careful thought, study, and research. All and all, he provided a telling progress report on the subject of jet flight.

General LeMay's paper will be of interest to that increasing body of Americans who are striving to increase their familiarity with the jet age. I feel that his carefully chosen words should be brought to a wide audience of American readers and, consequently, with your leave, Mr. Speaker, I wish to enter his paper in the Appendix of the CONGRESSIONAL RECORD, as follows:

REMARKS BY GEN. CURTIS E. LEMAY, VICE CHIEF OF STAFF, U.S. AIR FORCE, BEFORE THE JET AGE CONFERENCE, WORLD CONGRESS OF FLIGHT, LAS VEGAS, NEV., APRIL 13, 1959

Ladies and gentlemen, I am honored to be here today and to have this opportunity to greet many friends and acquaintances who have gathered here from all over the world to participate in the World Congress of Flight.

I also wish to extend the congratulations of the U.S. Air Force to those individuals and organizations whose efforts have contributed to the success of this congress. This occasion certainly deserves the wide recognition which it has received from aviation interests all over the world. The many representatives who have come here from over 50 different nations are ample evidence of the universal aviation interest which this conference has generated.

The first World Congress of Flight represents a formal announcement to the world of the arrival of the jet age. Although jet aircraft have been with us for many years—first in the military services, and more recently in the civil air fleets of several nations—full recognition of their permanent status and their contributions to the advancement of worldwide air transportation, is only now taking place. Jet airpower is here to stay.

The airpower of any nation is comprised of many elements—too many for me to list here this morning. But the primary forces which influence and further the development of a nation's airpower are science, industry, and civil and military aviation interests. Each one of these forces enters the aviation development cycle at a different point—but all of them must eventually form the first-team of airpower. The speed at which this cycle moves depends not only upon the rate of technological advance in the science of aviation, but also upon the pressures of the moment. Development of jet aircraft, for instance, was expedited by military necessity—first by the requirement to win a war, and then by the continuing necessity to keep strong military airpower in face of a constantly growing threat. For this reason, military aviation, in conjunction with science and industry, has been the pioneer force behind the growth of jet airpower.

To briefly review a little history—development of jet aircraft in the United States commenced in 1941. With the assistance of our British allies, we were able to put the first American jet—the Bell XP-59—in the air in 1942. A prototype of the first American operational jet fighter—the Lockheed P-80—was flown in early 1944. Production versions of this fighter were not distributed to operational units until the latter part of 1945—not in time to gain any combat experience with this equipment in World War II. It would be accurate, then, to mark the beginning of U.S. jet airpower as December 1945—nearly 15 years ago. Since that time, approximately 22-million hours have been flown by Air Force jet aircraft—an impressive figure, particularly when it is translated into terms of accumulated experience. All of this experience has been reinvested in the pioneering of American jet airpower.

Significant new advances usually bring new problems and jet operations have provided their share. "Bugs" in early aircraft and engine designs had to be worked out—the more advanced the design, the more complex the "bugs." High speed and high altitude operations opened up new problem areas. Support facilities—that is, airfields, navigation aids, fuel, ground support equipment, maintenance and supply systems—were no exceptions. Whole new concepts had to be devised to accommodate jet aircraft. Some of these problems were peculiar to military operations—the majority of them, however, belonged to all jet operations—civil and military. This morning I want to touch briefly on a few of our common problems. These problems are the basis for our future jet-age requirements.

High aircraft speeds and increased aircraft population have crowded the usable air space of this country—and for that matter, the world—to the degree where air safety and traffic control have become our major limiting problems. No matter what remarkable developments are achieved in newer and more modern aircraft—aircraft which fly faster, higher, further, and with a greater payload—our jet potential can advance only as fast as our air safety and traffic control measures will let it.

The mid-air collisions and near misses in recent years are grim and positive evidence of the existence of this critical problem. Recent mid-air accidents can be traced almost exclusively to the cumulative effect of higher speeds, higher traffic density, relatively slow human visual scanning capacities, and man-machine reaction time. Today, closing speeds between two of our late model military aircraft are as high as 2,000 miles per hour, and two of today's civil jet airliners have a closure rate of over 1,000 miles per hour. In order to initiate evasive action under these conditions, pilots must know that they are on a collision course while they are still miles apart. Under certain light and sky conditions, even this small margin is eliminated.

Since there are practical limits to the expansion of usable airspace around the world, other positive measures must be taken to improve—if not eliminate—this type of air safety problem. Sole dependence upon human reaction is no longer adequate, and we will have to look to "black boxes" to assist pilots in doing their jobs. Some of our immediate needs in this area of development are warning devices to agument "eyeball" methods in alerting pilots to other aircraft in the vicinity; additional devices which will keep pilots from getting into "near miss" situations in the first place; means of making aircraft more readily visible from much greater distances, both day and night; in other words, any device which will afford an aircraft operator the necessary time to make his decision and to act effectively.

However, as important and as beneficial as developments of this type might be, efforts in these areas are only nibbling around the edge of the main problem—and that is effective air traffic control. A comprehensive and continuously modernized system of control, with a capacity for handling high speed and high density traffic, is a basic requirement for safe and effective jet air operations. Traffic control equipment and procedures must be kept modern at all times to meet the needs of each new development as it appears. Furthermore, this control must be exercised at all times throughout the flight—from takeoff to landing—and it must be accurate and rapid.

Control of all air traffic which operates in a nation's airspace at any given time, is an overwhelming task—and it is growing larger and more complex as traffic density and speed increase. As you well know, positive control of the current volume of traffic at all times is impossible today. If it were attempted now, about three out of every four aircraft would never leave the ground. The present system does not have the capacity to control a heavy volume of traffic to such an extent.

Although additional funds, personnel and facilities have been provided during the past years for the purpose of improving air traffic control, the system under which we operate today is still inadequate. The emergency nature of this situation here in the United States has been recognized, and as a result,

the Federal Aviation Agency was formed last year. The creation of an agency does not, in itself, solve any problems. But it supplies the means for a closer civilian-military approach to the task and thus provides the basis for a national approach to a national problem. It is a long step in the right direction.

The key to effective air control is, in my opinion, the capacity for rapid decision. Precision navigation and accurate reporting are mandatory, of course—a breakdown in these areas will cause trouble. But the essential factor in any controlling process is the decision making machinery. To meet the requirements of jet aircraft, the speed at which decisions are made on the ground must match the speed that events are taking place in the air.

Technical developments in electronics, navigation and communication equipment have generally met the needs of our newer aircraft. For instance, radar has proved to be one of the most effective measures of providing improved safety and efficiency in air traffic handling to date. Right now, as an emergency step to alleviate our present problems, 28 of the air defense radars of this country are being used for the additional purpose of air traffic advisory. A few additional radars are now in use in some of our more crowded terminal areas for active traffic control. If we are to take full advantage of the potential of this equipment, its use as a means of active air control must be extended substantially. Further, our present VORTAC system, aside from providing a means of precision navigation, establishes an infinite number of fixes thereby allowing greater flexibility in traffic handling, particularly in the denser terminal areas where rapid movement of traffic is essential. In the field of communication, use of ultra high frequencies has eliminated many of the earlier technical problems. Newer models of this equipment have made available an almost unlimited number of frequencies for traffic control and other uses.

But none of this equipment—or equipment which might supersede it—can be used to its fullest capacity, unless there is some means of assimilating and storing the information which it furnishes. Further, the information must be presented to the controller so that he will at all times have an up-to-the-minute picture of exactly what is happening in the air. Correct decisions can only be based upon timely and accurate information. Old manual, voice methods of data handling cannot keep up with our present and future needs, we will have to go to automatic equipment. The Air Force has had considerable success controlling air defense interceptors through our SAGE—semiautomatic ground environment—system. Equipment similar to this offers excellent possibilities for use in air traffic control work.

All of these problems are dynamic and their solutions must be a continuing process. Already jet transports are under development which are expected to operate at speeds of mach 2 and above. Each substantial increase in speed will bring its share of new and more complex problems. The Air Force is in the throes of one of these right now—the problem of the sonic boom. Some of our latest aircraft, cruising at speeds of mach 1, are laying down a wave of sound and pressure which in some cases is as much as a hundred miles wide—and which progresses with the aircraft along the full route of flight. So far as we know today, there are no technical or scientific solutions to counter this phenomenon. We also know—from the amount of "fan" mail we receive on this subject that these pressure waves, aside from causing considerable apprehension and discomfort, in some cases inflict physical damage to property. Today, there are relatively few aircraft capable of long cruises at supersonic speeds. It is not pleasant to imagine the widespread effect that increasing numbers of such aircraft—including supersonic jet liners—will have on the problem.

A nation's public will have a lot to say about the success of future jet airpower. Future developments will fall into the "Buck Rogers" category—and at a time when many of us can still remember when such things were only fantasies in the mind of comic-strip cartoonists. It is difficult for anyone to grasp the impact of some of the recent developments, no matter how much of an expert he might be—but it is almost impossible for someone, who is completely unfamiliar with the problems of air operations to grasp the meaning of some of these new phenomena without assistance. Public acceptance of these developments must be assured, if they are to continue.

I mentioned before that these advances are bound to bring a certain amount of annoyance or discomfort with them. This is not new—in the field of aviation alone, we have already had the noise problem, and now the sonic boom. There will surely be others. Since the technical solutions to these problems will, in all likelihood be slow in coming—if at all—public apprehension must be alleviated in other ways. If we are to continue to develop better equipment and to fly this equipment in the manner it was designed—and failure to do this will not only degrade our military forces, but will also retard the growth of civil jet aviation—people must be given the opportunity to understand these problems. The facts—good and bad—must be presented clearly—and as early as possible. It is certainly far better to grow up with a problem, understanding what lies ahead, than to be suddenly confronted with something which is completely incomprehensible. In light of this, public relations and public education on aviation problems will assume even greater importance in the future.

It is a matter of deep satisfaction for those of us who have devoted a lifetime to the field of aviation, to see the great progress which has been made to date—and the rate at which this progress has been achieved. All of us want to see this progress continue—all of us want to push the state of the art to the maximum. If we are to be successful in our efforts, it will only be through the combined resources and knowhow of every individual or agency who has a stake in this program.

We cannot operate as separate interests—researching, developing, and operating to satisfy only our own particular needs. Naturally, each one of us wants to see his own particular interests served. But the unavoidable realization that we now face overriding common problems—and common requirements—which can only be met by cooperative effort and by mutual give and take, must serve as the guiding factor. In this way—and only in this way—can we provide our various countries with effective and efficient military airpower and a thriving and safe civil transportation force and have a satisfied, cooperative, and understanding public.

Value of Cultural Exchange

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial taken from the St. Louis Post-Dispatch editorials, April 13–19, 1959:

ON WHOSE TEAM?

When the Bolshoi's dancers get back to Russia—after a visit to St. Louis, we still hope—and talk of those 18 solid minutes of applause they received in New York, they will be careful to add that some of the enthusiastic hands were those of capitalist exploiters, warmongers, and such like. They will be balancing their appreciation, having in mind one of their choreographers, Igor Moiseyev, who forgot all about balance when he and his folk dancers returned from the United States.

Moiseyev entranced a select audience of actors, dancers, musicians, and writers for 3 hours with an eloquent account of life and culture in this country. Even well-informed Russians, he said, did not know how grand was American humor, insight and grace, nor how widely and richly the arts flourished in America. Moiseyev soon was invited to repeat the speech, but he also was invited to call on the Minister of Culture.

The gentleman suffered just as did the California footbal coach after Roy Riegels carried the ball across the wrong goal line. It was an unprecedented feat, the coach admitted, but he couldn't refrain from a question: "On whose side do you think you are playing?" The Minister of Culture was too pained for anger. He simply expressed his surprise that Moiseyev could have made such unbalanced comments. The dance director said he was disappointed that great Soviet artists should be called onto the carpet. But he did not repeat his speech. Other returning Soviet artists also reported on a warm, cultivated America, but they added, according to formula, that "Americans are often deprived of political and cultural self-expression by archaic institutions that favor the rich."

Since Russians must be as immune to balance as Americans are to plug-uglies, this demonstrates the value of cultural exchanges. The actors and dancers and musicians do tell what they saw and liked in the United States. Fine.

Franco's 20 Years

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 14, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Daily News for April 4, 1959:

FRANCO'S 20 YEARS

So many things have happened in the last 20 years, it is rather a jolt to be reminded it's been that long since the Spanish Civil War ended and the dictatorship of Generalissimo Franco began.

Much of the world has acquiesced in recognizing the Franco regime, after many years of blackballing Spain from international society.

But as the inevitable end of Franco's regime approaches, there are increasing worries about what happens next. Succession is one thing even dictators are unable to dictate.

On this 20th anniversary Franco shows little signs of deviating from rigid authoritarianism or recognizing the desires of a new generation.

Speaking of "anti-Spanish" forces (and by that phrase Franco means all who disagree with him), he said:

"Periodically we see them raise their heads and in their arrogance and blindness attempt to poison and stimulate anew the innate curiosity and ambition of the young. For this reason it is necessary to shut out the deviations of the bad educators of the new generations."

Much of the unrest in Spain is among the young and the students because Franco has failed to stimulate their curiosity and ambition. If he thinks he can "shut out" thoughts and ideas other than Francoism, he has learned less than he should have over the past 20 years.

Capital Budget Bills Win Support in Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, April 24, 1959

Mr. NEUBERGER. Mr. President, in the Salem, Oreg., Capital Press for April 10, 1959, appears a thoughtful and informative column endorsing the legislative proposals of the senior Senator from Oregon [Mr. MORSE] and the senior Senator from Minnesota [Mr. HUMPHREY] for a capital budget, which would separate reimbursable Federal items from those which are entirely outgo and produce no income. I am a cosponsor of their bills.

Mr. Dewey Rand, editor of the Capital Press, endorses the Morse-Humphrey bills. I share this endorsement, Mr. President. Many of us who have studied the effective capital budget system in Sweden are aware that budget items creating their own revenues are certainly distinguishable from such expenditures as military weapons and soil bank payments, which often have no revenues to offset the huge spending involved.

I ask unanimous consent that Dewey Rand's column from the Salem Capital Press, of April 10, be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

PASSING IN REVIEW
(By Dewey Rand)

In a story from Washington this week Oregon correspondent Robert Smith reports a move by Senator WAYNE MORSE and Senator HUBERT HUMPHREY to revise the Federal bookkeeping system. The plan is to set up a capital budget of those items on which the Government can expect a tangible return separate from the actual costs of runing the Government.

This reviewer of the political scene, for one, wishes MORSE and HUMPHREY success in the plan. Billions of dollars are confusing enough to a citizen trying to understand the Federal budget without the political hocus-pocus practiced by the spenders and economizers in Washington. With appropriations for investments and other funds for expenses mixed together and numbering thousands of millions the situation lends itself to deception.

It has long bothered this writer when investments in self-amortizing projects such as power dams, mortgage loans, Federal housing projects, schools, minerals stockpiled, and many others are classed as expense. Also, with the national debt nearing $280 billion one wonders if this is all money down the drain. If so the business is in a sad state. But if this liability is offset by substantial assets the picture is not so gloomy.

Under the Morse bill capital investments are severely defined. To be so listed investments must represent a useful economic life of over 10 years and must be revenue-producing or self-liquidating. Flood control and irrigation projects would not meet the test. REA and FHA loans and Federal corporations such as the Bonneville Administration would qualify.

What change in the appearance of the collosal Federal debt would the Morse-Humphrey accounting system make for the layman? There would still be about $8 billion annual interest to pay, which is a shocking sum. But it all would not look so much like owing for, and paying carrying charges on a dead horse. It would give a business-like answer as to what part of a budget is expense and how much is investment. It would tell an honest story about the debt.

Smith, in his story on the Morse bill, reports that the House Government Operations Committee has tabulated the real and personal property of the Federal Government. The Federal property inventory as of June 30, 1958, amounted to $263 billion, within $14 billion of the Federal debt of $276 billion on that date. This sheds some light on the solvency of the biggest business in the world, the U.S. Government. It is not as bankrupt as the reactionaries in business and Government would lead us to believe.

With the sensible accounting the Morse bill would provide, another thing would be accomplished. The politics that rages over the making of the budget and voting appropriations would be subdued. If the nature of the items could not be misrepresented by bookkeeping camouflage the layman could judge the merits of the appropriation and could see what he is getting for his money.

Since the election campaign last year, President Eisenhower has been calling all those who disagree with his ideas of economy reckless spenders. In turn his 19th century ideas on the Nation's economy has been called obsolete, and worse, by those who feel a balanced budget is not the most important thing in the Nation's life.

The Morse bill, if it passes, and by properly and honestly picturing the items in the budget, would be of considerable aid to those who wish to judge this controversy.

Asbury Howard and the Right To Vote

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. UDALL. Mr. Speaker, it is a commonplace that our system of government, based as it is on the principle of equal justice under law, functions best where suffrage is widest.

It is discouraging to me that to date the right-to-vote civil-rights law passed 2 years ago by the 85th Congress has had litle effect on restrictive voting practives in some communities. Efforts of Negro citizens to register and vote have been thwarted in many instances by local authorities.

One of the most flagrant examples of interference with voting rights occurred in Bessemer, Ala., last winter. This incident, which involved Mr. Asbury Howard, one of the vice presidents of the International Union of Mine, Mill, and Smelter Workers, was the subject of an article in a recent issue of Reporter magazine.

Mr. Speaker, those in my part of the country who know Mr. Howard and his record of service as a union official deeply resent the treatment accorded him, and I am appending the Reporter piece to these remarks to protest this gross miscarriage of justice:

[From the Reporter magazine, Apr. 16, 1959]

THE DUE PROCESSING OF ASBURY HOWARD
(By Jeffrey E. Fuller)

Many of Asbury Howard's white neighbors in Bessemer, Ala., have looked on him for some years as what they call an "uppity Nigra." At 52, Howard is a massive man, close to 6 feet tall and weighing—at least he did when he began serving a 6-month sentence on a prison road gang a few weeks ago—about 250 pounds. Although his pigmentation, as black as one ever sees among Negroes, would seem to preclude his being elected to public office in Alabama in the near future, Howard speaks with the vocabulary and hearty tone employed by many southern politicians. He has never been known to affect a "yassuh boss" subservience in order to conceal the good-humored self-confidence he derives from his position as a successful businessman and a recognized leader of his community.

As an independent gas-station operator, Howard is not dependent on a white employer for his livelihood. When he was first arrested, he said that his customers, black and white, were sticking with him and that business was actually better than before. For nearly three decades Howard was superintendent of the Starlight Baptist Church's Sunday school and he has been for many years a member of its board of deacons. His son, Asbury, Jr., after serving in Korea as sergeant first class, came home and graduated from Morehouse College in Atlanta; his daughter, Cleopatra, is now a student at Howard University in Washington, D.C. Although some of these biographical facts may provide clues as to why Asbury Howard was arrested, they were not, of course, mentioned in the official charges against him.

Bessemer is a steel town near Birmingham, in an area where the usual social tensions are further inflamed by the competition for industrial employment. Howard, who has long been active in the labor movement, now serves as eastern vice president of the International Union of Mine, Mill, and Smelter Workers. In 1950 this union was ousted by the CIO as Communist dominated, but even that fact has no specific bearing on the Howard case.

We are certainly getting closer to the reason for Howard's arrest, however, when we discover that he was vice president of the NAACP's Bessemer branch until it (and the NAACP throughout Alabama) was forced out of business in 1956 after a $100,000 fine was imposed for its refusal to turn over its membership list to the State police. What's more, he helped organize the Bessemer Voters League, and in the 8 years he has served as its president the number of Negroes registered to vote in Bessemer has grown from 75 to 2,000. In a city of 31,000, of whom 17,000 are Negroes, the activities of the Bessemer Voters League have naturally been ob-

served with increasing interest by the forces of law and order.

Early in January, Asbury Howard went to Albert McAllister, a white man who operates a small sign-painting business, and asked him to reproduce on a yard and a half square of canvas a cartoon which had previously appeared in the December 26 issue of the Kansas City Call and in other Negro weeklies that subscribe to the Call's cartoon service. Howard told the white sign painter to add the words "Vote Today for a Better Tomorrow," because the poster was going to be used in the Bessemer Voters League 1959 campaign urging Negroes to register and vote. Howard has said that the poster was never going to be shown publicly: it was to hang on a wall inside the voters league hall.

McAllister agreed to do the job for $12 and was told not to hurry about finishing it. When he had almost completed the poster—only the words "Hands that can still pray" had not been painted in—Bessemer's police chief, George Barron, took the unfinished job from McAllister's workbench and called at Howard's service station. He asked Howard what he was going to do with the poster and was told it would be placed inside the voters league hall. Chief Barron asked Howard why he didn't have copies printed and tack them up on telephone poles all over town. Howard replied that he was a law-abiding citizen and knew that to do that was suggested would be a violation of the law.

The police chief then placed Howard under arrest—without showing a warrant—and took him to the city hall, where he was detained for 45 minutes before being released under bond. Howard was not told the charges against him until the next day, January 22. He learned that he had violated Bessemer City Ordinance 25–72, which deals primarily with publications alleged to be "of an obscene, licentious, lewd, indecent, libelous, or scurrilous nature" or with "any abusive or intemperate matter tending to provoke a breach of the peace, or any matter prejudicial to good morals."

If nothing else, Bessemer justice is swift in civil-rights cases like this. The trial was held 2 days later, on January 24. On the way into the city hall, Howard's defense counsel, David H. Hood, Jr., was informed by a policeman that he had orders to search him and his briefcase before he and his client were allowed to enter the courtroom. Judge James D. Hammonds opened proceedings by reading the charges against Howard and McAllister. The white sign painter's case was quickly disposed of when he pleaded guilty. (He is now serving his sentence in a city jail.) But when asked how Asbury Howard pleaded, the reply was "Not guilty, Your Honor."

Defense Counsel Hood spent a good part of the morning—the trial record is 32 pages long—attempting to extract from the prosecution some indication as to how the city of Bessemer felt its ordinance 25–72 had been violated by a poster showing a Negro praying for his rights. "If an attempt to induce or cause people to register to vote is an offense," Hood argued, "then the 14th and 15th amendments to the U.S. Constitution are void." At one point Judge Hammonds said: "David, you are making a $50 case out of a $10 case."

The last minutes of the trial proceeded as follows:

City Attorney J. Howard McEniry: "Judge, it comes down to whether in your opinion the sign tends to provoke a breach of the peace or is prejudicial to good order. If you feel it does, the defendants are guilty. If you feel it does not, then the defendants are not guilty. It is my opinion that showing a man in chains is prejudicial to good order."

Judge Hammonds: "I find you both guilty and I fine both of you $105 and 180 days."

Mr. Hood: "Like to make a note of appeal; if it please the court, Your Honor."

Judge Hammonds: "$200 bond."

As he left the courtroom after posting bond, Howard found some 40 white men lined up along the walls of the lobby and stairway leading down to the main floor of the city hall. Here is how he has described what happened next:

"As I was about to take the last step down, I was struck a terrific blow from the rear which landed on the right side of my head. * * * It knocked me off my feet. The crowd of men around the wall rushed toward me. * * * They lashed out with their feet in a vicious effort to stomp and mutilate my face, head, and body. I struggled the best I knew how upon my back upon the floor. I finally managed to reach a corner.

"In the meantime my son, Asbury, Jr., was struggling down the staircase to my rescue. The mob turned on him. My son put up a furious battle against unequal odds. After he refused to give up but kept on fighting back, they gave ground and began to scatter. There were about 15 or more policemen in and about the courtroom. The only arrest they were able to make was that of my son. All members of the mob were allowed to escape unmolested. My son was charged with disorderly conduct and resisting arrest. He was placed under $600 bond. * * *

"After escaping the mob, I needed medical care. I was badly shaken up, bruised, and bleeding badly. The blow I received on my head opened up a very bad wound that took 10 stitches to close. I was very weak because of the amount of blood I had lost.

"As I waited outside the city hall for an ambulance, I was ordered to move along by a police officer. He told me 'Get away from here or else I will carry you upstairs and lock you up.' Two of my friends helped me to walk a block or more to a car and I was taken to the Bessemer General Hospital and was given the medical care that I needed.

Asbury Howard, Jr., was later sentenced to 1 year's hard labor for his efforts to defend his father in the Bessemer City Hall. He is now out on bail pending appeal, but his father is now serving his sentence on what the Negro press usually refers to as a chain-gang. Recent observers report that while at work on the roads, prisoners do not actually wear chains. But another old southern custom is apparently still observed: On the way to and from work, Negro convicts are driven, for educational purposes, through the colored sections chained to each other and to the cagelike truck in which they ride.

"Stump Run" To Be Produced in Lane County, Oreg.

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, a lot of Californians visit Oregon to appreciate our beautiful scenery and every now and then some of them come up to take advantage of our mountains and rivers in order to make a beautiful movie.

It is, however, especially gratifying when a local corporation, headed by a local man, featuring a nationally prominent actor from Oregon; Edgar Buchanan, undertakes to produce a movie on its own in Lane County.

Under leave to extend my remarks, I am including the following story from the Eugene Register-Guard for Monday, April 6, telling of this enterprise, which will be headed by my friend, William "Red" Reynolds, of Eugene, president of the new corporation and executive producer:

CAMERAS TO START ROLLING IN MID-MAY

(By Joanne Braunberns)

Filming of a feature-length motion picture starring Edgar Buchanan and Slim Pickens is scheduled to begin in mid-May near Eugene, as the first production of the newly formed Oregon Picture Corp.

The movie is "Stump Run," and also will star Kaye Elhardt and Rand Brooks in a story about hillbilly moonshiners. The name for this light comedy was derived from the practice of aging corn whisky in a hollow stump.

According to William "Red" Reynolds, of Eugene, president of the new corporation and executive producer for "Stump Run," shooting will start May 18 and continue for 2 weeks. The film company will be on location in the Marcola area, with scenes to be filmed in downtown Marcola and on Parson's Creek.

Interior shots will be filmed at the facilities and sound stage which Oregon Picture Corp. plan to erect immediately on the outskirts of Eugene. Negotiations are now underway for purchase of property.

LOCAL ACTORS

In addition to the Hollywood personalities who will star in "Stump Run," all extra and bit parts will be played by local people, said Reynolds.

He plans on using a crew of 25 to 30 technicians in his first feature film effort, having already contracted for 16 trained people from Hollywood. Other technical assistants will be recruited from the Lane County Theatrical Union.

Reynolds emphasized that there are only about four speaking parts available to local people in "Stump Run," and he will not cast those roles until after May 4. An announcement regarding tryouts will be made later.

Buchanan, now a noted character actor, is a former Eugenean and the son of retired Eugene dentist, Dr. W. E. Buchanan of 1158 High Street. Although born in Missouri, he came to Oregon as a young boy and was graduated from high school in Ashland.

Buchanan attended the University of Oregon, majoring in medicine, but becoming interested in the theater. Later he served as an assistant in dramatics at the university.

The younger Buchanan went on to complete his studies in dentistry and had an office in Eugene for some 10 years. Maintaining an active interest in dramatics, he helped establish Portland Civic Theatre and was active in the Very Little Theatre in Eugene.

CAREER LAUNCHED

In 1937–38, Buchanan attended Pasadena Playhouse, and his motion picture career was launched. Among the best known movies in which he has appeared are "The Sheepman," "Shane," "Sea of Grass," "Penny Serenade," "Texas," and "Arizona." He has played in more than 80 feature pictures and 150 television shows.

Slim Pickens, in addition to appearing as a rodeo entertainer, has a string of movies and television shows to his credit. He has had character and feature roles in the movies "Tonka," "The Sheepman," "Escort West," "Down Arizona Way," "Return of Geronimo" and "Santa Fe Calls." On television he has appeared in the Andy Burnett series, in "Maverick," "Rifleman," "Wells Fargo," and "Restless Gun."

Rand Brooks is Corporal Boone of television's "Rin Tin Tin" series and has appeared in more than 40 motion pictures.

EXPERIENCE IN EUGENE

Formation of Oregon Picture Corp., means reality for an idea "Red" Reynolds has worked on for years. He was on the staff of KVAL–TV for the past 5 years, where he produced and starred in his own daily program, "The Big Roundup," a children's variety show. At the same time he was art director and studio supervisor for the station.

Reynolds has had theatrical experience with the Phoenix Civic Theatre, Very Little Theatre in Eugene and Willamalane Players of Springfield. He has acted, produced, and directed plays as well as serving as set dsigner and stage manager.

His motion picture experience includes a bit part in "Tonka," the Disney production which was filmed last summer in central Oregon. Reynolds also has appeared in the television series "Death Valley Days."

The 31-year-old Eugenean has the financial backing of Lane County businessmen in formation of the new movie corporation, and he expects the corporation to add a quarter of a million dollars to the economy of the Emerald Empire within its first year.

FILM SET PLANNED

The corporation is formed to produce and film feature-length movies and episodes for syndicated television. The facilities also will be equipped to produce filmed television commercials.

In addition to the sound stage, Reynolds expects to construct a two-block early western street, a walled fort and an Indian village. Permanent offices of the corporation will be located on the site. An announcement regarding the location is expected this week.

Reynolds added that having the sound stage will be his big drawing card for getting Hollywood producers to make movies in this area. He explained that Hollywood's movie industry is decentralizing, with a constant search for new sites.

"They've already filmed 'Sunset Boulevard' from four different directions," said Reynolds. "And people are getting tired of seeing the cowboys run around the same rock."

Speech of Hon. A. Willis Robertson at Meeting of Tidewater Group of Building, Savings, and Loan Associations, Norfolk, Va.

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, April 24, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able speech made by my distinguished colleague, Senator A. WILLIS ROBERTSON, chairman of the Senate Banking and Currency Committee, at the annual meeting of the Tidewater Group of Building, Savings, and Loan Associations at Norfolk, Va., on April 22, 1959.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR A. WILLIS ROBERTSON AT THE ANNUAL MEETING OF THE TIDEWATER GROUP OF BUILDING, SAVINGS, AND LOAN ASSOCIATIONS, NORFOLK, VA., APRIL 22, 1959

Former President Herbert Hoover, telling in his memoirs of the reasons for the establishment in 1932 of the Home Loan Bank System, said: "The poignant American drama revolving around the loss of the old homestead had a million repetitions straight from life, not because of the designing villain but because of a fault in our financial system."

A happy ending to that old melodrama has been written in the history of the savings and loan industry which was founded for the dual purpose of promoting home ownership and encouraging individual thrift.

Some of us can recall the time when the average first mortgage on a home ran for a period of 5 years or less with no assurance of renewal and when it had to be supplemented by second mortgages at exorbitant interest rates. This meant that too often the borrower, who was prepared to pay carrying charges, could not meet an unexpected demand for principal payments and his home ownership was forfeited. And these individual tragedies became national calamities in times of financial stress when foreclosures pyramided until demand was generated for Federal controls that threatened to wipe out our private enterprise system.

The early savings and loan associations attempted to deal with the problem by larger first mortgages, running for longer periods, which were self-amortizing. But the associations themselves were subject to failure in a period of recession. It was to meet this need that there was created the Federal Home Loan Bank System, to give the savings and loan associations the kind of backing which the Federal Reserve System had given to commercial banks.

The success of the home loan system is indicated by the fact that the 11 banks, now owned completely by members with the original Government investment retired, had in 1958 a capital of more than $800 million and assets well over $2 billion.

Public acceptance of this method of saving and financing home building is indicated also by the steady growth of the member associations. In 1951, when I had the pleasure of addressing the annual convention of the U.S. Savings and Loan League, meeting at Miami Beach, I referred to savings and loan association assets of $17 billion, but the 1958 total for those assets was close to $54 billion and represented a gain of almost $7 billion from 1957 to 1958. In 1951 I spoke also of an annual total loan rate of around $5 billion, but the 1958 rate was just under $12 billion. Meanwhile, savings accounts in these associations had grown by 1958 to a total of nearly $48 billion and exceeded by a small amount the total holdings of individuals in Government savings bonds.

Because I believe in thrift and because I believe that one of the bulwarks of our democracy is individual home ownership, I would have been happy to come here on this occasion just to commend the members of this group on their past success and to wish them well for the future.

It is a double pleasure, however, to be privileged to congratulate a great Virginia newspaper, the Virginian-Pilot, on the public service it has performed in promoting the cause of thrift.

Everyone in this room is aware of the fact that our capitalistic society is founded on the principle of thrift. It is through savings that capital can be provided for business expansion on the basis of a stable dollar and, of course, the incentive to save would be greatly reduced if citizens did not have the privilege of accumulating assets which they can pass on to their heirs.

Largely because the right is guaranteed under our Constitution to acquire, use and to dispose of property we have become the richest and most powerful nation in the world. Some lose sight of the fact that property rights and human rights are root and branch of the same personal freedom tree.

Another factor in the success of our private enterprise system is the privilege of freely communicating ideas through the press and the newer media of radio and television. As Thomas Jefferson wisely said: "The liberty of speaking and writing guards our other liberties."

So I am happy to join with you in commending the Virginian-Pilot on the exercise of that right in the public interest.

While my ability to lift the veil of the future is no better than yours, I welcome this opportunity to bring to you the best information I have been able to obtain from financial agencies of the Government concerning current economic trends and to make some comment on the significance of those trends.

We are recovering from what has generally been called a recession, marked by a declining volume of business and a level of unemployment which has caused considerable alarm, but facts which I obtained from Government agencies just before coming here present a rather encouraging picture of current business recovery.

In the fourth quarter of 1958 our gross national product surpassed its prerecession level in terms of dollar volume and during the first quarter of this year it rose above the previous high in terms of adjusted value. Industrial production in February was 144 percent of the 1947–49 average and only 2 points under its 1957 high. By this measure, recovery from the recession could be considered completed.

Also, while the pace of recovery has slowed somewhat in the last few months, there are numerous signs of a strong and broadly based expansionary movement. Personal income is rising steadily, furnishing a basis for continued strength in consumer expenditures, which dropped only slightly during the recession. Automobile sales, which showed a weakness in 1958, are up this year. Housing construction, which expanded sharply throughout the last three quarters of 1958, continues at a high level. The decline in business inventories which occurred last year has been reversed and business spending for plant and equipment has again started to rise.

On the whole, recovery in output compares favorably with experience in comparable phases of the two preceding postwar recoveries. There has been some lag in recovery of employment compared with previous experiences, but unemployment in March was 800,000 less than a year earlier, with much of the remaining unemployment concentrated in large cities producing hard goods, such as Detroit, or in spots like the coal-mining areas which have special industry problems.

The existence of unemployed manpower and excess plant capacity may be a cause for concern, but it also can be taken as an indication of our potential for further growth, rising prosperity, and an improved standard of living.

One of the most debated issues today is whether an adequate and sustainable rate of economic growth and price stability can be achieved simultaneously. Some argue that creeping inflation provides the environment most conducive to substainable growth, while others argue that such growth is possible only under conditions of price stability within the framework of a free market system.

I am frankly on the side of those who feel that a little inflation is a dangerous thing and that more inflation can be disastrous.

With general demand expanding, including the demand for investment, it is essential for stability that the volume of saving in the economy be sufficient to finance investment demands. If the supply of saving falls short, there will be pressure to meet these demands through expansion of bank credit, but too much expansion of bank credit

would result in excessive expansion of the money supply and lead to inflation.

There has been debate in and out of Congress about controls which are used to avert this type of imbalance. The monetary authorities, by raising reserve requirements, can create a tightness in credit markets with a resultant rise in interest rates and those higher interest rates serve as a brake on credit demands and also as an added incentive to savers to increase their savings, thus helping to bring back into balance the flow of savings and the demand for funds.

Critics of the way these controls have been used complain that higher interest rates increase the cost of Government for servicing our national debt—which is true. They also say that the Government could keep interest rates down by open market purchasing of Government bonds and that this would be helpful to all borrowers, including local government units engaged in public works and businessmen planning expansion. They ignore the fact, however, that such a process of artificially supporting a low interest bond market increases bank funds which become the basis for credit expansion several times the volume of the original transaction and that this is highly inflationary.

Those who say there has been too much emphasis on tight money and raising interest rates should not ignore the fact that steps taken by monetary authorities in 1957–1958 to ease credit conditions resulted in the sharpest rise in the money supply of any of the postwar recessions. The active money supply, consisting of demand deposits and currency, increased at an annual rate of 5½ percent on a seasonably adjusted basis in the first part of 1958 and for 1958 as a whole the money supply expanded by $4.5 billion or about 3½ percent.

But, in addition to the volume of money, we have to consider the velocity of its turnover in order to see the proper relation to possible inflation. The turnover of demand deposits has been rising ever since World War II and during the first 2 months of 1959 it was estimated at the six financial centers outside of New York at a peak of 31.3 times a year while the New York City rate of turnover was 54 times a year.

Balances that people hold idle in their pockets or in banks can be increased with no immediate effect on demand and supply conditions or prices, but when people use their balances more actively, this can add to the aggregate demand without any change in the dollar volume of deposits and currency.

Illustrating the changes in use of funds, in 1955 consumers provided the main impetus to economic expansion through increased purchases of durable goods and homes by a sharp reduction of their financial savings and an increase in the volume of their debt. In 1956 and early 1957, on the other hand, increases in consumers' financial savings made an important contribution toward moderating the rate of economic expansion which was becoming inflationary. In 1958, with a slackening of general economic activity, but with little reduction in the level of personal income, consumers continued to save at a relatively high rate. The savings pattern for 1959 is not yet clear but growth in time deposits at commercial banks is down sharply from the unusually high rates of the previous 2 years. Deposits in mutual savings banks seem to be rising less rapidly than a year ago, but shares in savings and loan associations appear to be rising at close to last year's rate. Consumer decisions later this year as to what they will do with their potential savings can be an important factor in accelerating business demands or slowing down the present expansionary movement.

The problem of monetary authorities in the months ahead will be to govern the rate of monetary growth so as to avoid inadequate expansion, on the one hand, which might choke off further growth, and on the other hand to avoid excessive expansion which might lead to inflation.

But all of the wisdom of the Federal Reserve Board in regulating monetary growth through the manipulation of reserve requirements and rediscount rates and all the fine work being done by building, savings, and loan associations and our commercial banks to encourage thrift, and the investment of savings in business expansion, can be set at naught by a reckless spending program on the part of your Congress.

For instance, during the past 6 years, with personal incomes running at an alltime high, the Federal Government will have added to the national debt by the end of next June the sum of $16 billion. The $8 billion required to service that debt is twice the total expenditures of the Government when I was first elected to the House of Representatives in 1932. The proportion of deficit financing which has been handled by commercial banks has been inflationary since it created bank check money faster than the production of goods and services and lacked the saving grace of the Ricardo theory that a managed currency can be sound provided money is issued solely with relation to the money work to be done.

Marriner S. Eccles, a former Chairman of the Board of Governors of the Federal Reserve System, recently said in Washington that our present economic situation was characterized by "a dangerous inflation psychology." This, he said, was reflected in the strength of real estate prices, the soaring prices of stocks, and the skidding market for bonds and mortgages, particularly securities of the Federal Government. Undoubtedly, the Government spending to which I referred has contributed to this psychology of inflation and the big question mork of the financial future revolves around the question: When will we have a balanced budget again?

The greatest contribution which the Federal Government could make toward a climate where thrift and savings could flourish is to restrain the urge to spend and to balance the budget.

I am chairman of a Senate committee that has authority to report spending bills, including what is known as the "backdoor approach to Treasury funds." I serve on five subcommittees of the Senate Appropriations Committee that handles 96 percent of the budget. I am confident that my efforts in behalf of economy, a sound fiscal policy and a stable dollar in both the Banking and Currency and Appropriations Committees of the Senate will have the active support not only of this savings and loan group, but also of the bankers I am pleased to see in attendance. While savings and loan associations are more interested in the current home building program than are commercial banks, both organizations have a common goal of preventing inflation, of preserving the stability of the dollar, and of encouraging the American people to save and to put those savings to productive use.

During the last Congress I had the pleasure of working with an advisory committee appointed to assist the Senate Banking and Currency Committee in the study of Federal laws governing our financial institutions. This advisory committee was composed of representatives of every segment of the financial life of our country and it offered a fine example of harmony and cooperation for the national welfare.

Each member of this group took a broad view of the problem of reviewing all the Federal financial statutes and recommending amendments to bring them up to date. They decided issues on the basis of what was the best way for these institutions to serve the public and compromised their differences in an equitable manner.

A majority of the committee's proposals were incorporated in my bill known as the Financial Institutions Act and, as you know, that bill was passed by the Senate but was killed in the House by the delaying maneuvers of one or two Members. There is no doubt that if the bill had been permitted to come up for a vote in the House it would have passed overwhelmingly.

This, of course, is history now, but I remind you of it to point up one of the most important issues facing the financial world today—that is, you must stick together, because if you don't the political power of those who oppose you will destroy you.

As chairman of the Senate Banking and Currency Committee, I am subject to constant pressures from groups that demand more Government grants and loans for housing, depressed areas, community facilities, small business, and many other areas of direct concern to you. These groups wield a tremendous amount of power, both economic and political, and if they have their way we shall have more and more financial business handled by the Federal Government and less and less under the private enterprise system to which both banks and savings and loan associations belong.

If you do not want the Government to usurp your functions through grants and lending programs; if you do not want the dollar inflated by spendthrift programs to the point where we can have only printing press money, you must use all of your influence, in a united way, on behalf of a sound and independent economy.

You know where I stand in this fight and so long as you keep me in Washington as your representative, I shall continue to battle for economy in government, a reduction in the heavy burden of taxation, and the preservation of our system of free, competitive enterprise.

How Much Federal Aid Did the Pilgrims Get?

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, April 24, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which appeared in the U.S. News & World Report entitled "How Much Federal Aid Did the Pilgrims Get?"

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HOW MUCH FEDERAL AID DID THE PILGRIMS GET?

They were in a depressed area. No one guaranteed them high prices for anything. Their only roads and schools were built by themselves. For security they did their own saving, or starved.

All they had was character. All they did was work. All they wanted was self-respect.

The sum of those three traits became America.

But what's going to be the sum of the traits you see today—the traits of character, or, rather, lack of it, that demand more money for less work, put security above self-respect, pamper self-pitying criminals instead of punishing them, give away resources we desperately need to protect ourselves, listen to weaklings that want Government to take care of them when they should take care of themselves.

Long years of early-American self-respect and hard work built America, but the traits you see today can destroy it, in half the time.

Daily Digest

HIGHLIGHTS

Senate continued its consideration of labor-management reform bill.

Senate

Chamber Action

Routine Proceedings, pages 5931–5942

Bills Introduced: 7 bills were introduced, as follows: S. 1788–1794. Page 5932

Bills Reported: Reports were made as follows:

Report of Committee on the Judiciary entitled "National Penitentiaries," filed pursuant to S. Res. 230, 85th Congress (S. Rept. 220);

S. 1368, to amend the Federal Aviation Act so as to facilitate financing of new jet and turboprop aircraft, with amendments (S. Rept. 221); and

S. 226, to amend Railroad Retirement Act of 1937, with amendments, and with individual views (S. Rept. 222). Pages 5931–5932

Water Resources: Pursuant to S. Res. 48, establishing committee to study development and coordination of water resources ($175,000), the following appointments were made from certain standing committees of Senate, as indicated, to the Select Committee on Water Resources:

From Committee on Interior and Insular Affairs—Senators Anderson, Jackson, and Kuchel;

From Committee on Interstate and Foreign Commerce—Senators Magnuson, Schoeppel, and Engle;

From Committee on Agriculture and Forestry—Senators Ellender, Hart, and Young; and

From Committee on Public Works—Senators Chavez, Kerr, and Case (South Dakota). Pages 5935–5936

Civil War Centennial Commission: It was announced that pursuant to P.L. 85–918, Vice President appointed Senator Scott to Civil War Centennial Commission, in lieu of Senator Morton, who has resigned therefrom. Page 5931

Labor-Management Reform: Senate continued its consideration of S. 1555, Labor-Management Reporting and Disclosure Act of 1959, taking the following further actions on amendments:

Adopted: By 78 yeas to 15 nays (motion to reconsider tabled), Cooper amendment to let State agency other than a court take jurisdiction of labor cases involving interstate commerce as to which NLRB has declined jurisdiction (so-called no-man's-land cases), after rejecting by 40 yeas to 53 nays Prouty amendment in the nature of a substitute therefor; modified McClellan amendment requiring bonding of union officers; by 86 yeas to 4 nays (motion to reconsider tabled); modified Prouty amendment imposing certain limitations on organizational and recognition picketing; a series of Morse amendments, (1) providing that union trusteeships established in conformity with constitution and bylaws shall be presumed valid for 12 months rather than 18 months as in the bill, and providing for type of proof necessary to overcome presumption of good faith, (2) providing for hearing in accordance with Administrative Procedures Act in certain cases for removal of serious misconduct of elected officer of the union, (3) providing for application of Administrative Procedures Act in certain cases under titles of bill covering reporting and disclosure and trusteeships, (4) of a clarifying nature respecting information required to be filed in reports (modified), (5) providing for actions against unions to be brought in district court or other court where violation occurred but in event of inconvenience to parties then in D.C. district court; and (6) providing that in event of denial of an exemption from making report, the Administrative Procedures Act shall apply; and

Rejected: Case (New Jersey) amendment to eliminate from bill exemption from financial reporting of unions having less than 200 members or less than $20,000 in annual gross receipts; Prouty amendment (in the nature of a substitute for Cooper amendment on no-man's-land cases above set forth under heading "adopted"); by 30 yeas to 59 nays McClellan amendment setting up criminal penalties against certain picketing activities for organizing workers or forcing employers to bargain, after rejecting by 25 yeas to 67 nays, Ervin amendment (to McClellan amendment on this subject) to allow peaceful picketing for organizational purposes; by 41 yeas to 50 nays (motion to reconsider tabled), modified McClellan amendment directed against secondary boycotts; by 41 yeas to 51 nays (motion to reconsider tabled), Dodd amendment providing that no subordinate union shall be placed under trusteeship except under certain conditions; Morse amendment providing for application of Administrative Procedures Act in certain cases respect-

Appendix

Industrial Payrolls and Tourist Trade Provided by St. Lawrence Seaway Can Furnish Example for Columbia River Basin

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. NEUBERGER. Mr. President, it is unfortunate that many people in the great Pacific Northwest still do not realize what low-cost water power and cheap river transportation can mean to the development of a vast region like ours in the Columbia River Basin.

An example of the prosperity which can come to an area by these methods is being created in Northeastern United States on the St. Lawrence Seaway. There, the huge Moses-Saunders Dam is about to generate 1,880,000 low-cost kilowatts, which will make it second in the Western Hemisphere only to our own colossal Grand Coulee Dam on the Columbia. In addition, the slack-water navigation and locks produced by the Moses-Saunders Dam will make possible oceangoing shipping all the way to the Great Lakes in the very heart of the American breadbasket.

An illuminating article in the Wall Street Journal for April 24, 1959, entitled "St. Lawrence Valley Booms as the Seaway Lures Industry, Tourists," details just what this development can mean to important sections of both the United States and Canada.

I commend a thorough and careful reading of the Wall Street Journal article to my own constituents in Oregon. There, we have had to struggle for 5 years to obtain construction appropriations for the great John Day Dam, over the opposition of the Republican national administration. Now we are about to begin our efforts to secure adequate funds to keep the construction of John Day Dam on schedule in the years ahead. Furthermore, we seek to implement the 308 report of the Corps of Army Engineers, which recommends an expenditure of some $63 million to provide effective and safe navigation all the way up the main stem of the Columbia to the orchard city of Wenatchee, Wash., a citadel of the inland empire. Any resident of the Pacific Northwest who reads this Wall Street Journal article about the prosperity brought to Northeastern United States by cheap power and inland navigation on the St. Lawrence Seaway will inevitably become a booster for the same type of development on the Columbia River system.

Therefore, Mr. President, I ask unanimous consent that the Wall Street Journal article, by Ray Vicker of that newspaper's staff, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ST. LAWRENCE VALLEY BOOMS AS THE SEAWAY LURES INDUSTRY, TOURISTS—REYNOLDS METALS, CHASE BUILD PLANTS—MOTELS, MARINAS SPRING UP ALONG THE RIVER—A MILLION VISITORS TO MASSENA

(By Ray Vicker)

MASSENA, N.Y.—Tomorrow the first deep-draft, oceangoing ship to traverse the St. Lawrence Seaway will ease into the Bertrand H. Snell lock 5 miles east of here on its precedent-setting passage.

As the ship's propeller churns the cold, green water, mighty turbines of the nearby Moses-Saunders Power Dam, which plays a role in controlling water levels for the Seaway, also will be translating the St. Lawrence River's power into electricity, turning this once sleepy valley into a bustling center of industry.

More than $125 million has either been invested or committed for plants on the American banks of the St. Lawrence by companies attracted by the proximity of large quantities of electricity and the transport facilities of the seaway. Messena, which calls itself "The Aluminum City," will boast 10 percent of the aluminum capacity of the United States when spending is completed here. And it is electricity which accounts for the expansion, because it takes 10 kilowatt hours, enough to light a 40-watt bulb for 10 days, just to process 1 pound of primary aluminum.

The new 3,220-foot-long dam thrust across the St. Lawrence near here will rank as the second largest producer of hydroelectric power in the Western Hemisphere. When its 32 generators are installed only Washington State's Grand Coulee Dam, with 1,900,000 kilowatts of capacity, will top the 1,880,000-kilowatt capacity of the Moses-Saunders Dam.

COSTS, POWER SHARED EQUALLY

Twelve of 16 generators on the American side now are turning out power, while 11 of a second 16 are in operation on the Canadian side of the dam. The $650 million cost of the power phase of the more than $1.1 billion Seaway project was shared equally by the Power Authority of the State of New York and by the Hydro-Electric Power Commission of Ontario. The power is divided equally between the two agencies.

In a modest office in New York City's Coliseum Tower, William S. Chapin, tall, brisk general manager of the New York Power Authority, exults, "We had expected to reach peak operations at Massena next fall. But we're months ahead of schedule, and our expenditures are within the original estimates." And with a broad smile, he adds: "Our power is sold out. We're assured of our revenues and we know we can pay off our bonds."

The authority floated a $335 million bond issue for its share of the Moses-Saunders project.

An expanded Aluminum Co. of America factory and a new plant of Reynolds Metals Co. will take half of the authority's power. The other half is divided among Niagara-Mohawk Power Corp.; the State of Vermont; the city of Plattsburgh, N.Y.; Plattsburgh Air Force Base; New York State Electric & Gas Co.; Paul Smith's Electric Light, Power & Railroad Co.; a new plant of the Chevrolet division of General Motors Corp., and a group of municipal and rural electric cooperatives, with a small amount reserved for the Power Authority and for operation of the seaway. The amount reserved for the Power Authority includes power for operations at a $3 million plant of Quebec Lithium Co., at Rouses Point, N.Y.

The cost of producing power here is 4.3 mills a kilowatt, considerably better than the 7 to 8 mills it costs to produce a kilowatt of electricity by coal, gas, or oil in this area.

The effect of the dam on industry is not clear cut on the Canadian side. Ontario Hydro's power is funneled into the company's regular power pool and there is no rate advantage for users adjacent to the project. So there is not the same impetus to locate near the dam as there is on the American side, where the dam already is stimulating industry.

A BIG NEW PLANT

Biggest plant attracted by the power is the new 100,000-ton-a-year primary aluminum plant Reynolds Metals has under construction near Massena. Total cost, including auxiliary facilities, is estimated at $88 million.

This new plant sprawls on a 1,700-acre site beside a St. Lawrence River channel called Polley's Gut. Construction is nearly completed; aluminum siding glitters in the weak sunlight of a spring day, and workmen are busy installing machinery and pot lines in long, airy buildings. Already alumina, the raw material manufactured from bauxite, is arriving from Texas and Arkansas via rail to feed the plant once production gets underway.

"Our first metal will be tapped in the first week of July," says V. G. Kneeskern, pipe-smoking plant manager. "We should be in full production before the end of the year."

The plant now employs 120 people, with 600 to be employed when output is in full swing. Its three lines will have 168 pots each, and electricity fed into these pots to manufacture primary aluminum would be enough to service a city of 100,000 people.

On a tour through the spacious plant, Mr. Kneeskern describes new techniques and equipment being introduced to step up efficiency. When plans originally were drawn for the plant it was expected that employment would start at 750 and eventually rise to as high as 1,000. These figures were based upon methods used in the most efficient plants at the time. Now the new techniques devised here have pared the estimate to 600 at full operation.

"Starting a new plant like this, we can introduce many new labor-saving things which might be difficult to introduce in an old plant," observes Mr. Kneeskern.

Reynolds will sell some of its aluminum in molten form. Molten metal will be drawn from pots and rushed in crucibles to a nearby Chevrolet foundry which also is nearing completion. This foundry is the first set up by Chevrolet to turn out only aluminum products, a fact that emphasizes the trend toward the use of aluminum now underway in the auto industry. In 1940 the average auto had only 6 pounds of aluminum in it; last year this figure hit 52 pounds.

Chevrolet already is in pilot production of aluminum castings at its new 213,000-square-foot plant near the end of the International Bridge spanning the St. Lawrence near here. Current plans call for Chevrolet to take about one-third of the production from Reynolds' plant here, although the figure could rise later.

Volume production of castings is expected around July, with employment of about 600 anticipated by the end of the year. Rumors persist that, among other things, the foundry will be producing aluminum engine blocks for the new General Motors small car to be introduced this fall, but Chevrolet officials refuse to comment.

Here at Massena, Aluminum Co. of America runs the oldest aluminum smelting plant in the United States still operating. With the advent of power from the Moses-Saunders Dam, Alcoa spent $25 million to renovate its plant and boosted capacity to 150,000 tons a year from 112,500.

THE FIRST CONSUMER

Prior to construction of the seaway, Alcoa obtained its power from a company-owned dam. When the seaway power project got underway, the company was its first industrial consumer.

The Alcoa plant sits on the bank of the North Grasse River, just outside Massena. Within its 8 miles of fences are 25 miles of paved highways and 22 miles of railroad track. The plant, which has some 100 acres under roof, employs about 4,000.

"All our smelting capacity now is in operation," says Paul A. Crouch, an Alcoa official. "We could use more power if more were available."

Both Reynolds and Alcoa have plans to build marine terminals at their plants for handling of incoming and outgoing shipments by water. An economics study of the area completed by Forzley and Co., Riverside, Conn., economic researchers, estimates that 250,000 tons of aluminum output a year at Massena requires 664,000 tons of raw materials, so the incoming and outgoing shipments would represent a substantial volume.

The St. Lawrence Seaway Development Corp., the U.S. Government Seaway agency, now is housed in a one-story glass and aluminum building which sits on a curved drive surrounded by winter-browned lawn in Massena. Sitting at a desk with a carved elephant tusk at his elbow, Lewis G. Castle, administrator, says, "We will be employing 180 people during the summer and 150 in the winter."

The one-time Duluth banker explains that the crew will include operators for the two Seaway locks on the American side, electricians, maintenance employees, toll collectors, and clerks.

EMPLOYMENT OF 1,200

In a temporary office building in Ottawa, a spokesman for the St. Lawrence Seaway Authority, Canada's Seaway agency, reports employment of about 1,200. This agency handles five seaway locks, and also is responsible for traffic through the Welland Canal, the Sault Ste. Marie Canal and the Lachine Canal near Montreal, the latter part of the old canal system which is being retained for vessels which can navigate in a 14-foot channel.

The Canadian Seaway agency controls both the entrance and exit of the St. Lawrence Seaway. This agency spokesman says: "Thirty hours should be a good time for a big vessel going from Montreal to Lake Ontario via the seaway."

Power to turn the wheels of industry, plus a new ship route, are concrete benefits resulting from the seaway. But there's another important benefit: Tourists.

"For this area the greatest benefit of this billion-dollar project is its value as a tourist attraction," says Chester J. Malley, regional manager at Ogdensburg for the New York State Department of Commerce.

Last year 375,000 people visited the Massena area to gawk at Seaway facilities under construction, and about 1.5 million came into the St. Lawrence Valley. This year, some 1 million tourists are expected in the Massena area alone.

Says Alcoa's Mr. Crouch: "This is the biggest new recreational area in the United States. Tourist attractions include the dam, the locks with big, ocean-going ships passing through them, the new 42-mile-long lake, the new St. Lawrence State Park near Massena, new parks and attractions on the Canadian side, and such long-established attractions as the Thousand Islands." And, he predicts, "Within 5 years this area will be attracting 3 to 5 million tourists annually compared with the 1.5 million who come into the area now."

At the end of the dam on the American side is a five-story headquarters building, with marble interior, murals by Thomas Hart Benton, and an atomsphere of refined luxury. Included in the building will be a display for tourists of models of the dam, a 40-foot relief map of the Seaway area, and a glass-panelled control room which will have all the privacy of a Macy's window.

THE VITALITY OF ELECTRIC POWER

On the Canadian side, a sister structure will house Ontario Hydro's headquarters, a viewing point of the dam for visitors, and a 150-seat movie theater where films of the Seaway will be presented. A 31-foot by 10-foot abstract painting in the observation lobby is almost certain to become a controversial topic for Seaway visitors. Painted by Harold Town, 34-year-old Toronto abstractionist, the canvas is a splatter of color and patterns which symbolize the life and vitality of electric power, according to the artist.

Shortly after the painting was hung, a wag among the workmen painting the walls of the building called his foreman, telling him one of the painters had gone beserk. The foreman rushed to the observation deck, took one look at the riot of color splattered on the wall, and gasped, "Good night. What happened?"

In the lobby of the Highland Hotel at Massena, where a billboard displays the attractions of Stunning Smith, "The Girl With The Purple Hair," who appears nightly in the ball room, Edward J. Kaneb, manager, enthuses: "We're expanding to meet the anticipated business increase."

A BUILDING BOOM

The hotel, which now has 53 rooms, has a 20-room addition under construction. Plans call for a further expansion to 110 rooms next year. Bob's Motel, which has 18 units at present, is adding 9 more. Storey's Motel is adding 6 units to the 29 now in operation. Two new motels are slated to be built soon just west of Massena, while the Schine Hotels broke ground recently for a 103-room hotel.

At Ogdensburg, the new $250,000 Gran-View Motel, a luxury establishment, is under construction. Other motels also are rising on both sides of the river. Ten new boating marinas are in or due for construction on the U.S. side, with several more being built on the Canadian side. A swarm of outboard motor and boat retailers are opening for business.

In Morrisburg, Ontario, silver-haired George H. Challies, Chairman of the Ontario-St. Lawrence Development Commission, a Provincial park agency, comments, "We are developing 5,200 acres as a park where we will preserve some of upper Canada's history for future generations."

Upper Canada is the term first applied to what is now the Province of Ontario. This is the name, too, being given to a village of the Revolutionary War period now being restored in the park, in the manner of the Williamsburg, Va., restoration.

The village is being established on the rustic north shores of Lake St. Lawrence. Already about 20 old homes, churches, and other buildings are in place, with many more to come. Many were saved from flooding when the manmade lake overran some of the historic old river towns which traced their roots to settlement by Loyalists fleeing the American Colonies during the Revolution.

The village is located in Crysler Memorial Park, scene of a battle of the War of 1812. Park literature relates how a greatly superior U.S. force was whipped by British and Canadian troops in that Battle of Crysler's Farm. Plans call for the village to be opened to the public in 1961.

A wildlife preserve is being developed near the village, while a bay of the lake will have some of the best fishing in Canada, Mr. Challies claims. Contracts for a boat marina have been let; a 9-hole golf course, a 40-unit motel, and a restaurant also are to be built.

When completed, most of the 28 miles of shore between Cornwall, Ontario, and Morrisburg, Ontario, will be a park area.

Massena is the focal point for the changes that are taking place up and down this valley. In addition to the power dam, the seaway, industrial developments and the new State park just northeast of the city, a new high-level bridge has been built across the St. Lawrence to Cornwall, Ontario; a new bridge has been thrown across the Grasse River near the center of town; four new elementary schools and a new high school have been constructed, and there has been considerable highway construction and a big expansion of retailing outlets.

"OUR DEPOSITS HAVE DOUBLED"

C. J. Ward, president of the Massena Banking & Trust Co., says, "Our resources now total $10.7 million, as compared with $3.5 million in 1954 before the seaway got underway." Across the street, Allen E. Sutton, vice president of Northern New York Trust Co., and manager of the Massena branch, adds: "Our deposits have doubled since 1954."

Total gross receipts at the local post office, which amounted to $80,438 in 1950, hit $187,175 in 1958. Population in the village of Massena has climbed from 15,000 in 1954 to 20,000 now.

Such growth has sparked a $9.6 million school-building program which culminated with the opening of the new one-story aluminum, glass, and concrete high school here this week.

Along with other evidence of progress Massena soon may have a jurisdictional labor dispute to spice life in the community. The AFL–CIO Aluminum Workers International Union has organized Alcoa workers and has been seeking to bring Reynolds employees into the union fold. This month the United Steelworkers Union opened an office in the old telephone building here.

"We will organize the Reynolds Metals Co.," says Adron Coldiron, steelworkers official in charge of the Utica-Adirondack area.

Day Care for Children When Mothers Must Work

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. JAVITS. Mr. President, on March 5 I introduced the Day Care Assistance Act of 1959, S. 1286, to authorize a program of Federal aid for the day care of children outside the home. Hundreds of thousands of children throughout the Nation will continue to be the chief los-

ers so long as we fail to recognize that providing suitable day care for the children of working mothers is a national problem which urgently requires Federal aid to activate State and local efforts in this field and to back up the outstanding voluntary programs now in effect. Until a Federal program such as the one contemplated in my bill is enacted, we are not looking after the neeeds of these children in households where economic necessity forces the mother to work outside the home. In cases where adequate adult supervision is not available, children are often exposed to influences which may lead to juvenile delinquency and the serious rise in yourth crime.

An article appeared in the May issue of Parents Magazine dealing with the question of working mothers and the need for day care for children, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DAY CARE FOR CHILDREN WHEN MOTHERS MUST WORK—A CALL FOR FEDERAL AID TO HELP SOLVE A NATIONAL PROBLEM

(By JACOB K. JAVITS, U.S. Senator from New York)

Seventy years or so ago, half the women in this country never held a job in their lives. Today, 9 out of every 10 women in the United States will have worked at some time or another during their lifetimes. What's more, over half of today's workingwomen are married. This last statistics means that about 3 million children under the age of 6 have mothers who work; 3,500,000 more children between the ages of 6 and 11 also have mothers who work outside their homes.

Despite our current 7 million working mothers; despite the fact that our national economic trend points to a more likely increase than decrease in their numbers, our social trend is to disapprove of working mothers, to view them with alarm. Opinion surveys among both women and men show an overwhelming majority in favor of the concept that a mother's place is in the home. Psychologists—and the whole battery of social scientists who work in the field of child development—agree. Children under 3, they say, need their mothers' personal care. All children, they add, need the care, the guidance, the warmth, the feeling of being wanted that mothers have immemorially provided. As a parent myself, I believe in the importance of a mother's care for a young, growing child. On the other hand, and again drawing from personal experience, I know that in many homes, due to modest circumstances or the death or physical inability of a husband, it is necessary for the mother to work. I came from such a home myself. No amount of moralizing about the mother's place can override the harsh necessity that faces great numbers of families in the United States where the mother is obliged to be away from home and to work.

The concern of the Federal Government with the welfare of our children has been long established. It dates from the establishment of the Office of Education a little less than a century ago, the establishment of the Children's Bureau in 1910 and of the Women's Bureau in 1920.

This concern matured into a more material expression with the enactment of the aid to dependent children program in the Social Security Act of 1935. To keep needy children in their own homes as much as possible, the program provides aid for those who are living with relatives but are deprived of normal support and care. It was hoped thereby that a widow would not find it necessary to leave her children behind in order to earn money for their support, but could remain home to care for them. The Federal dependent children program has since been supplemented by other programs, such as railroad retirement, old age and survivors insurance, and veterans' benefits designed to provide benefits for the orphaned child. But these programs are insufficient—particularly in the face of the rising cost of living. The average monthly payment per family in the aid to dependent children program is $105; the widow of a veteran with two children receives as little as $122 monthly. No wonder so many women seek employment to supplement these subsistence payments.

But what of the millions of children of working mothers? Their care and supervision varies from that given by other members of the family to almost none at all.

To meet the needs of the very young child of the working mother, there was established in Philadelphia in 1927 the first program of family day care. Under this program the child is placed in the home of a foster mother (who often has children of her own of like age) and returned to his own mother at the end of the working day. The program operates under a system of supervision and controls, all carefully checked. Family day care was slow to catch on at first, but during World War II, when defense requirements drew so many women into the labor force, some 90 communities had family day-care programs. However, for the most part these programs were makeshift and died out after the war.

The most firmly established and widespread programs are those instituted for the care of preschool children at the age when they develop a group consciousness and can be cared for within a group—the years from 3 to 6. In this category are the nursery schools and day-care centers. Nursery schools usually provide care for only half a day or, when a full day is provided, cover normal school hours. Their pupils are not necessarily all children whose parents absolutely require supplemental care for them. Nursery schools can serve working mothers in a part-time job, but the woman with full-time employment must go elsewhere.

The day-care center or day nursery, however, has as its primary function, according to the Department of Labor, provision of good group care and supervision of children in need of supplemental parental care during the day because their own parents are unable to care for them due to employment, sickness, or for some other reason. Today there are day-care centers throughout the United States. All but six States—Maine, Nevada, Oklahoma, South Dakota, Vermont, and Wyoming—have laws providing for their licensing. Many of the States with licensing laws, though, do not provide adequately for their enforcement or else have statutes which do not meet what is regarded as minimum standards today. In some half-dozen States, State financial assistance is given. My community, New York City, helps to support 115 day-care centers operated by 74 private agencies at a cost of $4.5 million annually.

The Federal Government at the present time has no program of support for child-care centers, although the concept of such support is not by any means new. It was accomplished with some success during the depression and the war years when young mothers in the greatest numbers were in the labor force.

In 1945 a program which received part of its operating costs from Federal funds was operating in 395 communities in 46 States. Hawaii, and the District of Columbia. The program expired at the end of hostilities and was not revived until the Korean war crisis. In 1951 the Defense Housing and Community Facilities and Services Act included day-care centers in its definition of community facilities and services. But no funds were appropriated and the effort did not get off the ground.

While these programs indicate congressional recognition of the important and helpful role of day-care centers, they are not the only programs with Federal support that have been undertaken. Others include those day-care centers at the Atomic Energy Commission facilities at Oak Ridge and Los Alamos and in local housing projects financed by the Public Housing Administration. In addition, the Congress in 1954 permitted working mothers to deduct expenses for the care of their children up to $600 annually in computing their income tax. Furthermore, the Federal Government has for years made grants not only for aid to dependent children but also for maternal and child health, child welfare, crippled children's services and a National School Lunch Program.

In recognition of the need for day-care centers in our present social order, I sponsored last year the Day Care Assistance Act to make annual grants to assist in providing facilities and services for children needing day care outside their homes. I have reintroduced this measure, somewhat revised after study by experts in day care, in the current 86th Congress. It would make such care available not only to children of working mothers but also to children requiring special attention because they are mentally or physically handicapped or lacking adequate home care.

Legislation of this type is long overdue. In sponsoring it, I am not, of course, advocating that mothers of young children be encouraged to work, but many of these mothers have no other choice. To turn our backs on this fact is to do a disservice to our national future. To wait until a national emergency arises before we give recognition to the need would be folly. The Federal Government has an obligation to work cooperatively with the States and municipalities to provide day care for the overwhelming majority of children for whom such care is not available. The time to discharge this obligation is now.

Expanded Program of Education

EXTENSION OF REMARKS

OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me relating to Senate Concurrent Resolution 24, submitted by the Senator from Wyoming [Mr. MCGEE], providing for an expanded program of education on an international level.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CARROLL

This week the junior Senator from Wyoming [Mr. MCGEE] submitted a concurrent resolution calling for an expanded program of education on an international level. I was most happy to be one of the sponsors of the resolution as I feel that it is one of the surest and most economical methods of insuring peace in this troubled world. The same resolution has been introduced in the House by Congressman BYRON JOHNSON, of my home State.

The Fulbright program has been immensely effective in bringing about a greater understanding between people in various countries, but the success of the plan only indicates it should be expanded and we should encourage the development of colleges and technical institutions of higher learning outside the continental United States.

In this regard I want to point out the sixth annual dinner meeting of the Institute of International Education will be held in Denver, Colo., April 27.

This institute administers the exchange student program between the United States and foreign countries and at the meeting students from 20 different foreign countries who are attending Colorado schools will be in attendance.

The speakers will be two members of the institute's board of trustees, the Honorable CHESTER BOWLES, of Connecticut, and Miss Blanche Thebom, widely known prima donna.

Representative BOWLES, who has had a distinguished career in foreign service, knows at first hand of the great amount of good that can be accomplished by the student exchange program. He served this country well when Ambassador to India and did much to smooth the relations between countries. Miss Thebom also has been active in the program and I am happy that they will be able to attend the meeting in Colorado.

Thousands of Americans have participated in the educational exchange program and nationals from over 70 countries have come here to study and broaden their knowledge of how the free world operates.

We have made most commendable progress, but I, along with many others, feel that this country should encourage the United Nations Organization to go even further in the educational program. No appropriation will be necessary as the plan can be financed out of unconvertible foreign currency. I can think of no way these funds could be used to better advantage.

It will afford this country an opportunity of taking a constructive leadership in bringing about better understanding between nations.

Since the international educational exchange program was started in 1938 thousands have participated. From experience in my own State, I know the thousands who have participated in the educational program have done much to improve our foreign relations. But an expanded program would multiply these benefits many fold.

Representative BOWLES will take this message back to Colorado; and I am certain that the Institute of International Education will accept with enthusiasm a move to expand the educational program that is so effective in bringing about understanding, faith, and peace between nations.

Restoration of World Court as Force for World Peace

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. NEUBERGER. Mr. President, all mankind seeks some means to prevent nuclear war and maintain peace. An uneasy peace is far to be preferred to a destructive war, as we all know. The distinguished columnist, Roscoe Drummond, has written a thoughtful column supporting various proposals to rehabilitate the World Court. These have originated with the American Bar Association as part of its crusade in behalf of "world peace through law." ABA deserves great credit for this undertaking.

Mr. Drummond's informative column was published in the Washington Post and Times Herald of April 25, 1959, and I believe it ought to be printed in the pages of the CONGRESSIONAL RECORD because of its pertinence to many of our deliberations. In addition, Mr. Drummond's column has appeared simultaneously in many leading newspapers throughout the Nation, including the New York Herald Tribune, and the Oregon Daily Journal of my native city of Portland.

I ask unanimous consent that the column may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIFE FOR WORLD COURT—SENATE MUST REPEAL CONNALLY AMENDMENT FIRST

(By Roscoe Drummond)

The American Bar Association is getting terrific support for its crusade in behalf of world peace through law.

Its objective is to put some life and law into the World Court and to begin to use it by giving it some business.

Not many projects can enlist the backing of President Eisenhower, Prime Minister Harold Macmillan, Chancellor Adenauer, Premier Nehru, President Frondizi, of the Argentine, President Garcia, of the Philippines, Sir Winston Churchill, John Foster Dulles, and Thomas E. Dewey. Vice President NIXON is for it—and so is Senator WAYNE MORSE of Oregon. Attorney General William Rogers is for it—and so is Senator HUBERT HUMPHREY, of Minnesota.

This is, indeed, an impressive endorsement. In fact, it suggests that this move to activate the World Court is either exactly the right step at the right time or it is a wistful, meaningless gesture which nobody quite has the heart to oppose.

I believe it is radiantly right.

But there is one great danger. The danger is that as the leaders of this crusade are generating mounting and massive support for the large ideal of putting the World Court to work, they will fail to generate adequate support focused sharply on the vital, first step without which the whole thing will falter and fall to pieces.

The fact is that unless the Senate repeals or radically amends the Connally amendment—the amendment which almost completely nullifies our adherence to the World Court—the United States is effectively inhibited from doing anything to promote the wider and better use of the Court.

This means that unless President Eisenhower and the leaders of both parties, who say they are for strengthening the Court, and the leaders of the American Bar Association, who have sparked this whole thing, set about promptly to persuade the Senate to alter the Connally amendment, they will end up with a cargo of idealism and no engine in the ship.

Or at least the engine won't work because the Connally amendment disconnects it.

Here is what happened: In 1946 the Senate approved our adherence to the Court and accepted compulsory jurisdiction by a vote of 62 to 2. Simultaneously, the Senate stipulated that not only would we refuse the Court's jurisdiction in domestic disputes but also that the United States alone would decide what constituted a domestic dispute.

Thus by action of the Senate, the United States has simultaneously accepted compulsory jurisdiction of the Court and reserved the right to escape jurisdiction of the Court any time it wants to say that the issue is domestic.

When we sought to hail the Soviet Union before the Court for damages caused by shooting down an unarmed American plane over the Sea of Japan, Moscow blandly denied the Court's jurisdiction on the ground that it was a domestic matter. The Court had to agree on the premise that so long as the United States reserved to itself the right to decide when an issue was domestic, the right must be conceded to all countries.

The American Bar Association is keenly aware that the Connally amendment must be changed, or the grand design of its crusade will come to nothing.

So far the Eisenhower administration, though avowing its intention to propose changes in the Connally amendment, has put nothing before the Senate. The alert Senator HUMPHREY has introduced a repeal resolution.

This whole American Bar Association-World Court project is so right, so timely, that it ought to have wide-ranging bipartisan initiative and it seems to me that the active leadership of the President is indispensable.

Action of Five Teachers' Colleges in Refusing Federal Loans for Students Is Foolish

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. YARBOROUGH. Mr. President, the Texas State Teachers Colleges Board of Regents has refused to allow five colleges under their jurisdiction to participate in the student loan program under the National Defense Education Act of 1958.

In view of the critical shortage of teachers in Texas and in the Nation, I believe this action was extremely ill advised. It is financially foolish to refuse Federal loans for needy students on the trumped-up specter of Federal control of schools—which has not materialized in numerous similar situations.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Corpus Christi Caller for Tuesday, April 21, 1959, under the heading "Aid for Teachers." This is a farsighted editorial, calling on the board to reverse its ill-advised action.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AID FOR TEACHERS

A primary and pressing purpose of the National Defense Education Act of 1958, now swinging into full operation, is to assist the States in overcoming a chronic shortage of qualified teachers. That problem is as acute in Texas as anywhere else in the Nation, a point underlined by the political favor for new taxation in this legislative session to raise teachers' salaries as a means for attracting more and abler people into the profession.

In this situation, Senator YARBOROUGH is understandably caustic in his criticism of the Texas State Teachers Colleges Board for refusing to allow the five institutions in that group to participate in the Federal student loan program. It is a decision that certainly should be reconsidered by that board.

The Federal program, partially matched by colleges' public or private funds available for this purpose, extends loans to deserving students. The loans must be repaid after graduation, with interest. The only "Federal aid" involved, as that term is usually understood, are the grants authorized in the form of excusing repayment of portions of loans extended to students who subsequently teach for a specified period.

It is absurd to fear that a Federal student loan program, with local administration guaranteed by the statute, could lead to any undesirable Federal interference in college management or undue Federal influence over students. And it is self-defeating for any State or private college system to reject participation once such a program has been nationally approved and inaugurated.

Any young man or woman who wants to be a teacher would be financially foolish not to go to a college that cooperates with a loan program that writes off a large portion of student costs as incentive to enter the teaching profession. And these are the very students that the Texas State teachers' colleges are supposed mainly to serve. The pressure of events is most likely to reverse their board's decision if wisdom fails to do so.

Editorial Comment on COPE

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. BUTLER. Mr. President, during the recent campaign in Arizona there was an open secret of the extended, but futile, efforts on part of a number of labor bosses to thwart by foul means the reelection of our esteemed colleague, Senator BARRY GOLDWATER. When the electorate overwhelmingly voted confidence in Senator GOLDWATER and his record, it proved that the insidious tactics of his opponents, while persistent, were incapable of destroying a man whose honest convictions and high integrity continually cause him to stand up and be counted.

An editorial appearing in the Arizona Republic of April 8, 1959, is timely in this regard, and I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD this editorial entitled "Orders From COPE."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ORDERS FROM COPE

The recent COPE meeting in Phoenix was a star chamber affair, with the press barred, so it is impossible for the public to know exactly what organized labor's political arm plans for Arizona. But Al Green, the labor boss with a record of union violence in California, was reportedly on hand for the meeting, which was conducted by COPE's national director, James L. McDevitt, of Washington. Green is the leader who ran last fall's ill-fated "Get Goldwater" drive, and his reappearance on the scene leads one to wonder if COPE has read the Arizona election returns.

Mr. McDevitt aparently has read the returns, because he blamed the publisher of Phoenix Newspapers, Inc., for electing Senator GOLDWATER. This would be a good chance to cast modesty to the winds, but Eugene C. Pulliam set the record straight when he said the newspapers merely told the truth, the voters elected GOLDWATER. Incidentally, with only one or two exceptions, the rest of the daily newspapers in Arizona supported GOLDWATER, but Mr. McDevitt either didn't know, or ignored this fact of life.

Although the COPE meeting in Phoenix was a secret affair, it isn't hard to imagine what took place behind the closed doors. Early in 1958, COPE drew up a seven-page single-space typewritten document headed "Five Point Victory Campaign for 1958." The objective, at the top of page 1, was "To lay out a program and procedures; to unite labor in a common effort; to elect labor's friends and defeat labor's enemies in the National Congress and the State legislature."

The program included a month-by-month schedule of activities, starting with a session in Tucson on January 18, 1958, and running right through election day. The customary blast at the "Pulliam Press" was saved for the last page.

What happened to COPE's "Five Point Victory Program for 1958" is history. The conservatives, both Democrats and Republicans, rejected outside interference and won a smashing victory at the polls. But the directors of COPE, like the Bourbons, forget nothing and learn nothing. The same old discredited out-of-staters, including the notorious Al Green, are back at the old stand. This time, however, they are shooting for the 1960 elections, more than 19 months away, although it is possible they will take a crack at the Phoenix city elections this fall.

One thing is certain. To be forewarned is to be forearmed. The people of Arizona are being given plenty of warning that the AFL–CIO Committee on Political Education is going to move heaven and earth to dictate the outcome of the State's election next year. McDevitt in Washington and Green on the west coast have already lined up the hoops they expect Arizona voters to jump through.

Fidel Castro

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by George Todt entitled "Another Step in Judging Castro."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANOTHER STEP IN JUDGING CASTRO

(By George Todt)

"It were better for him that a millstone were hanged about his neck, and he be cast into the sea." (Luke XVII: 2.)

Last January 23 I wrote in this space of the repugnant Cuban dictator, Fidel Castro, in part, as follows:

"Once again it now appears that the pinhead intelligentsia of the Nation—in counseling us to accept the latest agrarian reformer type we have lately encountered in Cuba—have in reality engineered upon us something of a monstrous intellectual fraud. * * * We are referring to the new trigger-happy dictator of Cuba, of course—a bloodthirsty gent named Castro. * * * Some of these days Uncle is going to lower the boom on one of these little flies. Too bad it can't be Castro. As a matter of fact, it couldn't happen to a more deserving fellow. If he isn't tied in with the worldwide Communist conspiracy, my name is Powatchtrdorgl. Who is he trying to kid, anyway?

"For the moment he makes it appear like 'Com Ze, Com Za'—maybe yes, maybe no. Wait and see, sucker. But the cold truth is that he received his arms from Russian submarines surfacing in the Carribbean—and Ivan doesn't give away such playthings for nodink, Tovarich. Catch on?

"The sad part about these incredible operations which bring so much joy to Communist hearts around the globe is that we usually manage to finance 'em. Nice work if you can get it. (Ah, there, Mr. Khrushchev.)"

On that occasion, I also took the opportunity to commend Senator WAYNE MORSE, Democrat, of Oregon, for having the good sense to stand up in the Senate in January and at least partially call Castro to account.

Shortly afterwards, Congress was treated to an almost daily spectacle of an Oregon Congressman, CHARLES O. PORTER, tirelessly filling the CONGRESSIONAL RECORDS with the most fulsome and complimentary articles about Dictator Castro. Under this one-man barrage, all opposition seemed to melt away like an Arab into the night. Looked like Castro was in.

I mention this background in view of a most curious statement from a somewhat disillusioned Congressman PORTER which appears on page 2815 of the Appendix of the April 7 issue of the CONGRESSIONAL RECORD, as follows:

"Mr. PORTER. Mr. Speaker, Dale Francis, correspondent for the Catholic periodical, 'Our Sunday Visitor,' knows much about Cuba. In the past, I have inserted many of his articles in the Appendix, because I was convinced of his good faith and accuracy as a reporter. I have never met him but I have talked with him on the telephone.

"Now he writes, 'My own confidence in the possibility of a victory for freedom with Fidel Castro as the head of the government has been considerably shaken.' He says that in his earlier articles he failed to anticipate the consequences of the unstable character of Castro and he overemphasized the importance of the fact that the vast majority of the Cuban people do not like communism.

"He says the biggest complication in the democratic forces was their organization. He says that he recognizes the strong possibility that Castro may be a Communist and he says Castro's behavior is 'if you say it gently, irrational.'

"Based on my own observations in Cuba and elsewhere, I have been disturbed about many developments. However, I still believe in the good faith of Fidel Castro and I do not believe that he is a Communist. I have written him at length about several important matters that do disturb me. I am looking forward to hearing his explanation by mail or next week when he comes here.

"Castro's job is tremendous and he was not very well prepared for its great responsibilities. Very few people could be. Cuba has been dominated for years by dishonest, terroristic governments. An honest and democratic government cannot be created overnight. However, we can ask that the leadership recognize its affinity with the free world against communism and we can insist that verdicts of acquittal by duly authorized tribunals not be reversed by executive decision. We can also be much disturbed about

the overthrow of able, democratic labor leaders who were open and effective enemies of Batista.

"I do not think Castro is a dictator yet, but I do see an ominous trend. I agree with Dale Francis that 'if it is true that Castro is another dictator and worse, a dictator who does the will of the Reds, then the consequences of this truth are so terrible no one wants to face them.' Face them we will have to if they do occur, but far better that we examine the trend at this time and make certain that Fidel Castro understands it for what it is and has an opportunity to reverse his policies before it is too late, both for himself and Cuba."

This, then, is the present version of Castro by his most ardent American champion in Congress. The words of Mr. PORTER, as well as the revealing article by Dale Francis which followed the remarks of the gentleman from Oregon, give us the deepest forebodings of unpleasant things yet to come. I think the final verdict on Fidel Castro is going to be a most unpleasant one—for all of our gullible U.S. citizenry who bought this red pig-in-a-poke with an irresponsible blank check.

And that includes, among others, the New York Times, the Columbia Broadcasting System, and syndicated columnist Drew Pearson—who 3 months ago ran a favorable report on Castro. The celebrated writer has recently done an about-face on this controversial matter, however, and now has Castro tabbed correctly in a recent frank story about this fellow traveler, if not an outright Red. Better late than never, of course.

I think there are going to be a lot of red faces, in addition to the one worn by Mr. Castro, among our quite numerous fourth-estaters who backed him up so assiduously in the past. Why are we so easily fooled, anyway?

Reaction on Reactors: America Lags in Building Atomic Reactors

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, April 25, 1959

Mr. YARBOROUGH. Mr. President, mankind is just beginning to learn the many uses of the mighty might of the "mighty mite," the atom.

The power of the atom can make dreams suddenly become realities for the betterment of all mankind through the creation of a more modern, healthier, and more peaceful world of tomorrow.

Yet, I believe the United States can profitably recall a childhood fable in relation to the Atomic Energy Commission's reactor program. The fable of the tortoise and the hare has a moral we point out to our children, but overlook ourselves.

I feel this Nation needs to move rapidly and purposefully into the field of atomic reactors in order to build into realities our dreams of a better world for tomorrow.

This function, I believe, can quite properly be assumed by the Federal Government, which has at its disposal the tremendous resources required for such a project.

Rapid, judicious action will enable atomic energy to bring closer the full realization of the words from the preamble of our Constitution: "To provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

Mr. President, in support of my remarks, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the St. Louis Post-Dispatch for Sunday, March 1, 1959, under the heading "A Weak Atomic Energy Program."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A WEAK ATOMIC PROGRAM

The Atomic Energy Commission's new atomic power program is disappointing. It offers neither vision nor leadership.

Of the six reactors proposed, only one would be built by the Government, and the five others are therefore problematical. The lone reactor which the Commission would build is scaled down sharply from the size of the project approved last year.

Most of the proposed projects are prototype or experimental reactors, which means that they are small-scale models leading up to the eventual development of a commercial sized plant.

Prototype plants are a necessary prelude to life-sized atomic power producers; but it is the latter in which the U.S. deficiency is most marked, and in which the Commission continues to steer a timid and uncertain course.

Not only are the AEC proposals puny, they are contingent. Chairman John A. McCone continues to insist, as did his predecessor, Adm. Lewis L. Strauss, that private industry should first have a chance to build, with Government aid.

Like Admiral Strauss, Mr. McCone says that if private industry does not seize this opportunity—and it has been showing an increasing reluctance even to being dragooned into it—the Government itself will take hold. What Mr. McCone does not say is how long public initiative should wait on private initiative before going into action.

The AEC proposals are deficient for not taking a forthright and sensible stand about generating power with the new plutonium-producing reactor being built at the Hanford plant in the State of Washington. Plutonium is necessary for tactical atomic weapons and its production generates large quantities of heat, which the AEC is now wasting into the Columbia River while buying its electric power for Hanford from the Bonneville grid system.

The byproduct heat of the new plutonium reactor could power a 700,000-kilowatt generating plant and provide that much of Hanford's electric requirements at the same time that it was paying off the cost of the total investment three times as fast as would otherwise be possible.

Yet we go on wasting the heat, buying the power it should be producing, and forgoing the opportunity to learn more about reactors that produce both plutonium and power—and all because of theoretical notions that a public versus private power ideology is involved.

The question of Government subsidy becomes more and more formidable as time goes on.

In the present state of the art no one can tell how much it will cost to build an atomic powerplant. Subsidy, therefore, is in the very nature of things a blank check.

Mr. McCone is proposing that the Government now should pay not only for research and development costs of a private atomic powerplant but up to half the cost of the entire plant—perhaps all but the cost of the conventional, nonatomic part, the turbine and generator.

If the Government's financial participation must be so preponderant, then why should not the Government itself build and operate the plant, and turn the product into the AEC installations throughout the country for which power is now having to be purchased?

Must there be waste on a massive scale simply to preserve an illusion that private enterprise is doing it all, though as a matter of fact Government subsidy is doing it?

We think Chairman McCone, far from being able to justify enlarged subsidy, will be hard put to show that it has been good business for the American taxpayer to shoulder the subsidies already expended.

Praise for Secretary Herter From State of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, April 25, 1959

Mr. NEUBERGER. Mr. President, all of us wish success to Secretary of State Christian A. Herter in the difficult and arduous task which is his. He confronts a dilemma which has faced few Secretaries of State in our history, because of the emerging might of Soviet Russia in the realm of military weapons, and economic production. A thoughtful and reassuring editorial about Secretary Herter, entitled "Able Successor to Dulles" was published in the Oregon Daily Journal, of Portland, on April 20, 1959. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABLE SUCCESSOR TO DULLES

In the wake of the Dulles cancer tragedy, this country and its allies are fortunate that so well qualified a man as Christian Herter is ready and able to move into the Secretary of State's shoes at this critical stage of international negotiation.

The American people do not know as much about Herter as they should, but he is known and respected in the circles in which his influence will need to be felt in the period immediately ahead.

The quick and warm response from Democratic Senate leadership to Eisenhower's selection of Herter assures a continuance, possibly even a strengthening of the bipartisan posture which this country has presented on the Berlin and other foreign policy issues. Prompt Senate confirmation is a foregone conclusion.

Herter has been in the State Department only since 1956, but more than two-thirds of a lifetime has been spent in the kind of public service which prepares him for the task ahead. This includes an early introduction to diplomacy as acting minister to Belgium at the age of 21 and service as secretary of the American peace commission and executive secretary of the European Relief Council following World War I.

Twelve years in Congress and two terms as Governor of Massachusetts attest to the confidence which people who know him have in him. In 1956, when Herter was first named Under Secretary of State, one newspaperman

wrote that he had won friends all over the world with his quiet but warm dignity.

As Secretary of State, he will operate differently than Dulles. He will travel less. He will listen more. He will delegate more authority. He will make fewer quick decisions. But this does not necessarily mean he will be less able to make critical decisions or that he will be less firm in dealing with the Russians.

Every man has his own particular talents. Dulles has been a man of great intellect and tremendous strength of will and purpose. Some have called it stubbornness. But whatever it was, it proved its value in some critical situations. Herter is also a man of powerful intellect. His greater warmth and flexibility do not need to mean lesser will and purpose. He has the potential to be an outstanding Secretary of State.

Community Facilities Act of 1959

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful statement by Ernest H. Newman, Jr., of Chattanooga, Tenn., in support of the Community Facilities Act of 1959.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY ERNEST H. NEWMAN, JR., TO THE COMMITTEE ON BANKING AND CURRENCY, U.S. HOUSE OF REPRESENTATIVES

Good morning, gentlemen. My name is Ernest H. Newman, Jr., of Chattanooga, Tenn., where I am branch manager of the W. S. Dickey Clay Manufacturing Co., whose headquarters are in Kansas City, Mo. We are the largest manufacturer of vitrified clay sewer pipe in the Nation.

By request, I am here to speak for H.R. 5944, the Community Facilities Act of 1959. Along with others in the manufacture of clay sewer pipe, I am in wholehearted accord with what this proposed legislation intends to do, as a practical solution to an urgent national problem.

Gentlemen, a very real, a very serious problem exists.

As manufacturers of clay sewer pipe, we are thoroughly familiar with the growing needs of growing communities, and we are a distinct part of the problem each of them faces for today, and the immediate tomorrow. In the course of my work, every single day in the office or out in the field, I am constantly reminded of the mounting pressures created by the urgent needs of our communities for all manner of public facilities. In this, the greatest Nation on earth, the small political or geographical subdivisions face a serious threat to actual survival. There are critical shortages of schools, hospitals, and water distribution systems, to mention only those most often widely publicized.

There are many other grave needs that, perhaps unfortunately, do not get the banner headlines. One example of the latter is the matter of water pollution control which accentuates the need for adequate sanitary sewer systems and sewage treatment facilities. There is nothing glamorous about a sewer line or a sewage treatment plant.

But no matter what the difficulty, every alert city father or town councilman, is most decidedly aware of the existence of these needs. These people are often abused, maligned, and certainly badgered to distraction by aroused citizens demanding something be done at once. Well, hospitals, and schools, and sewers, are not built overnight. Something more than an awareness of such needs, something more than desire and determination to provide for them, is necessary before the hoped-for stage can be passed. Adequate planning and construction funds must be readily available.

Cities and towns across the land are unable to finance these vital public projects. Their financial resources are too limited, their sources of long-term credit are too restricted and yet, populations keep growing and their service needs continue to increase. Under this bill, some of this pressure can be eased if not entirely eliminated. More and more, our communities are faced with the problem of trying to meet the urgent demand for only the very minimum of basic public facilities, at a time when their sources are sorely taxed to meet day-to-day operating expenses. Often, long-term financing through municipal bond sale cannot be had due to the statutory debt limitations, or, if such financing is available, excessive interest rates make it impractical.

Couple this with the factor of the large initial investment required for the construction of major community facilities, and you have the best reason for the abuses that have grown out of all proportion.

Our communities have had to resort to unrealistic, unhealthy, and uneconomical approaches toward a solution of these demands. For example, the most economical sequence of construction of the three major community facilities, water, sewers, and streets, is to install water and sewer systems prior to paving streets. In actual practice, however, streets are generally paved first, to make an active community more attractive, enabling it to grow and prosper. The second step is usually the installation of water facilities, which often means the newly paved streets are torn up, the water lines put in, and the streets repaved.

You can't really say that money spent in this fashion is spent needlessly, for it does fill the existing need. But surely you can't claim it is being spent economically. The same uneconomical operation is repeated when sewer lines are finally put in under existing pavements.

It is not that our city fathers are unaware of the wastefulness of this construction sequence, rather, it is the result of having to make do with inadequate capital for major public improvements. Although not always the most desirable method, city streets can be constructed little by little, a few blocks at a time, as money for public construction becomes available, a little at a time.

But, gentlemen, there is no way to start from scratch and build a sewer system one block at a time. Initial construction of a sewer system requires an integrated and well planned system of collector lines, trunk lines, and final discharge lines, including sewage treatment facilities. There is no way to construct a sewer line that doesn't go anywhere. It must be a part of a system that ultimately discharges its contents into a suitable and sanitary disposal system.

So what we are encountering more and more is the situation that a sewer system, which entails one of the largest municipal capital expenditures, is being made even more expensive as our cities are finding it difficult if not impossible to secure adequate financing. And yet, you gentlemen agree that adequate sewer systems are both necessary and desirable. You have proven this again and again, by strengthening our public health laws * * * and there you have an impasse.

The Federal and State Governments rightfully are placing greater stress on the problem of pollution. There are instances where complete halting of home and commercial construction has been threatened unless adequate sewerage systems are provided. That, of course, means stagnating and stunting a town's growth potentials. Any town threatened with extinction and legal bars to further construction, finds itself cornered. Bond capital is virtually exhausted as the credit is used up to build streets and other improvements. Thus, when the law steps in demanding something be done about wastes, it is imperative that the town find new sources of financing. This bill makes an attempt to relieve that problem. It is an extremely difficult thing to accept how many full-grown cities do not yet have a sewer system or adequate facilities for coping with wastes.

Yet when the city fathers become sorely pressed and must start thinking about building something adequate for at least their present needs—without thought of any probable expansion—the cost often staggers them, particularly when there are no financial propsects in sight to pay for these vital projects. But if they are not built, that town's growth stops by the very laws you have passed and must insist on enforcing.

There has been some criticism of spending the amount of money proposed. But I fail to see any reference in this bill to where any community is to obtain any sort of facility as an outright gift. You aren't making presents of hospitals, water or sewer systems. It is my understanding that you are hoping to save the smaller communities from serious threats to their health, welfare, and public safety. The larger towns will have equal access to funds from which they may borrow to cover the costs of similar construction.

Those who carp and criticize you for spending are often the most vocal when it comes to demanding increased facilities. But, gentlemen, a loan is scarcely the same as a grant or a gift. All you propose here is a fund from which money may be borrowed. In appearing before this committee today I have not tried to suggest that you wave a magic wand for anyone. Instead, I want to emphasize what I believe you intend to accomplish with this bill.

As good citizens, as the elected representatives of good citizens, you seek here to enact enabling legislation to help village, town, and city, to help itself. As a manufacturer of clay sewer pipe, that is also my interest. You want to replace the privvies, the cesspools, the septic tanks, and this must be done. You want your children and mine, and their children, to have a safe, a sanitary place to live and to grow in good health.

What will happen if you make these funds available at an interest rate any community can pay? For one thing, you can insure and assure proper planning for most economical building and growth. Building a sewage-treatment plant, for example, is something rarely considered in advance of building a town and striving to make it grow. The days when waste could be dumped into the nearest stream or river are gone—fortunately for ours and future generations. Yet after you have built a treatment plant, you must still lay the pipe to bring the sewage to it.

This bill will make that possible from one coast to the other, from Mexico to Canada, within these United States. This is an economic assistance program, if you will, gentlemen, that begins and ends at home—your home and mine. On the one hand you insist that communities clean up the mess—they know that inadequate sanitary facilities are a menace to public health—now you are giving them the means whereby they can economically, honestly, and practically, comply with the laws passed by you in their interest.

Thank you.

Does the CIA Dominate U.S. Foreign Policy?

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, April 25, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Does the CIA Dominate U.S. Foreign Policy" written by Frank Bellamy and published in the National Guardian of April 20, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOES THE CIA DOMINATE U. S. FOREIGN POLICY?

(By Frank Bellamy)

("If war is too important to be left to the generals, it should be clear that intelligence is too important to be left unsupervised." (Hanson Baldwin, N.Y. Times, Jan. 15, 1956.))

Spying has become a major industry of American Government. According to Harper's magazine (April 1958) no fewer than nine separate cloak-and-dagger outfits are at work, carrying out clandestine intrigue on a worldwide basis and spending each year in the neighborhood of $750 million of the taxpayers' money.

"Though exact figures are secret, estimates suggest that between 20,000 to 30,000 fulltime intelligence specialists currently are on Government payrolls," said Harry Howe Ransom, author of Central Intelligence and National Security, in the Christian Science Monitor (Dec. 1, 1958). "The cost probably approaches $750 million annually."

The most lushly financed, of course, is the Central Intelligence Agency. The other eight, which have to get along on lesser amounts, are the intelligence branches of the National Security Agency, State Department, Atomic Energy Commission, U.S. Information Agency, FBI, Army, Navy, and Air Force.

NO CONTROLS

The CIA, now housed in 30 or more scattered buildings in Washington, is erecting an enormous $55 million edifice for itself across the river in Virginia. When completed it will be the world's biggest spy center, accommodating more than 10,000 CIA employees. Best estimates place CIA's total domestic payroll at 14,000 and its budget near $500 million a year.

After it was established in 1947 under President Truman's administration, this professional undercover army was granted by law a degree of immunity from accountability for funds, personnel, and activities probably never exceeded by any other Federal agency in American history.

It is the only major agency not subject to congressional committee control.

Nobody except the President and a few other persons, including 10 or 12 select Congressmen who are briefed once a year at budget time, know how much the secret legion spends. All funds for CIA are disguised and concealed in appropriations for other agencies.

The funds themselves are not subject to audit. Top gumshoe Allen Welsh Dulles can write a $1 million check without explaining the expenditure to anyone. He is the only man in Washington, including the President, with such power.

The CIA is exempted by law from the Civil Service requirements imposed on most Government agencies; it can hire and fire at will.

SACRED COW

This is too much power and supersecrecy for Senator MIKE MANSFIELD, Democrat, Montana. Four times he has sponsored bills to create a joint Senate-House watchdog committee to scrutinize CIA. Despite editorial backing from such influential papers as the New York Times and Wall Street Journal, MANSFIELD lost each time. Most of his colleagues in Congress still look on CIA as a sacred cow.

Why is the CIA so inordinately jealous of its power and prerogatives, so anxious to maintain itself beyond the reach of the lawmakers? One reason, the record seems to indicate, is to cover up bungles—some ludicrous, most of them expensive—which would open it to ridicule.

On the ludicrous side, "there are such stories as the news account in a Washington paper some months back of a free-for-all in a downtown restaurant between CIA and FBI men. Each group, the paper reported, had mistaken the other for Communist agents." (New York Times, Mar. 16, 1958.)

On the expensive side, there was the time—as reported by columnist Westbrook Pegler—that "agents of the CIA handed over $10 million in unmarked $10 bills to the secret service of the Communist Government of Poland in the belief that they were dealing with some underground organization which was opposing that government."

Pegler, by the way, thinks the CIA is "no good and ought to be wiped out."

PLAIN LOUSY

Then there are intelligence failures for which CIA would rather not be held accountable. The most publicized fumble was its flatfootedness on the eruption of revolutions in Lebanon and Iraq. Both took place without advance forecasts from our vast espionage network. "They didn't know what was going on," Senator WAYNE MORSE, Democrat, of Oregon, angrily charged. "Our intelligence is just plain lousy."

The New York Times' military expert Hanson Baldwin said (Jan. 15, 1956): "The intelligence record of the Nation and the CIA in particular is spotty. There have been notable successes but also notable failures. * * * A great many other incidents also suggest that all is not well with our intelligence establishments."

A more significant motive for secrecy than concealing bungles and fumbles is CIA's desire to keep its bag of "dirty tricks" from the eyes of the public. It realizes that millions would disapprove if many of its devious dealings came to light. Protests would surely follow exposure of the extent to which CIA adventurism has shaped U.S. diplomacy and, in policy toward some nations, replaced it altogether.

POLICYMAKER

Charles Edmundson, who spent 8 years in the U.S. Foreign Service before resigning 2 years ago over Secretary Dulles' policies, accused the CIA in February's Progressive magazine of being "an activist group which steps in boldly to dictate foreign policy in areas not covered by decisions of Congress, the State Department, or the White House." Edmundson went on:

"It executes its projects without concern over the reaction of the public. The incidents it provokes are never acknowledged, yet can be decisive in shaping—or misshaping—public opinion and foreign policy. * * *

"The most fundamental of all civil liberties is the right of the citizen to make up his mind on public issues without having the facts concealed or distorted by his Government. The record shows that the CIA, in cooperation with the State Department, systematically contravenes this principle. A few examples of what is happening creep obscurely into some of the better newspapers, but nowhere, save in a few liberal publications, are Americans warned of the potential consequence of the farflung operations of the secrecy-ridden CIA."

Liaison between the State Department and CIA is close. Both are headed by a Dulles. Both employ about the same number of people (16,000 for the State Department versus an estimated 14,000 for the CIA). If the CIA's $500 million budget is correct, it is more than twice as much as the State Department spends on its 282 diplomatic outposts around the world.

In any case, the secret decisions of the Brothers Dulles affect the fate of the world. When ill-directed, they make enemies abroad and cause great damage at home.

Hanson Baldwin summed it up well (New York Times, Jan. 15, 1956):

"Uncontrolled secret intelligence agencies are in a position to dominate policymaking, and hence government. Their very secrecy gives them power; there are few to accept or reject their findings. * * * Any overpowerful secret intelligence agency is dangerous, not alone to the formulation of sound policy, but to the viability of democratic institutions."

Will Clayton and the Marshall Plan—The New Leader Discusses Ellen Clayton Garwood's Book

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, April 25, 1959

Mr. YARBOROUGH. Mr. President, the Marshall plan, which helped so many peoples when they most needed assistance, is one of the finest examples of democracy in action.

One of the men who played a major role in the fashioning of this plan was Will Clayton, of Texas, a man noted for his work in helping people. Will Clayton is one of the foremost citizens of Texas and the United States.

William E. Bohn discusses the part which Will Clayton played in the formulation of the Marshall plan in an article in the New Leader.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Bohn's article, published in the New Leader for April 27, 1959, under the heading "Will Clayton and the Marshall Plan."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL CLAYTON AND THE MARSHALL PLAN

(By William E. Bohn)

Until I got well along in Ellen Clayton Garwood's short biography of her father, "Will Clayton," I saw small reason why I should devote to it the best part of a fine, rainy day.

The leftists, the writers of PM, for example, were just naturally suspicious of Clayton, the tall, straight and successful Texan. He had been head of the biggest cotton company in the world. And then, without selling his stock, he had become vice president of the Export-Import Bank, Assistant Secretary of Commerce, Surplus War Property

Administrator, Assistant Secretary of State for Economic Affairs, and half a dozen other things in Washington. The fact that he had become a millionaire and lived in a fine house in Texas made everything worse.

But Clayton did not, like some other successful men whom we have had around lately, regard Federal positions as cafeteria opportunities. Reaching agreements with Europeans, Asians, and Africans was no new experience to him. His heart bled for the poverty and suffering which he witnessed around the world. During World War II he had continued his business trips over much of what we now call the Free World, doing his best to keep markets open and countries and companies afloat. Practically everywhere Clayton had friends who trusted him and whom he trusted.

Starting as a poor boy, he had developed the habit of success. His political positions were not just fortunate and accidental. He was used to organizing projects which led to improvements. When people were not producing enough to feed and clothe themselves, something had to be done. And the something was not in the line of books, articles, and speeches. Business had to be reorganized, capital redistributed, goods shipped where they were needed.

After the war, the world was in such a tragic state that these things had to be done quickly. If at the time we had had in the State Department the kind of pronouncement-making routineers we have been watching for some years, Europe would surely have gone to pot. But, fortunately we had at the helm a set of realistic, energetic men.

Among them was the subject of this biography, which is a daughter's loving tribute to an admired father rather than a comprehensive and satisfactory slice of history. Mrs. Garwood hints in her preface that a later and more expensive biography is on the way. But she does furnish enough documents to show that Clayton pulled a strong oar in the State Department while the Marshall plan was being fashioned.

This historic proposal was launched at Harvard University on June 5, 1947. The address which sent it forth was a magnificent expression of human understanding and international sympathy. If young people still learned to read as they used to do by pursuing fine speeches, this oration, simple as it is, should be a feature of all advanced reading books.

Secretary George Marshall spoke in the most restrained terms: "In considering the requirements for the rehabilitation of Europe * * * it has become obvious * * * that [the] visible destruction was probably less serious than the dislocation of the entire fabric of European economy. * * * The remedy lies in * * * restoring the confidence of the European people in the economic future of their own countries and of Europe as a whole. * * * Before the U.S. Government can proceed much further in its efforts to alleviate the situation * * * there must be some agreement among the countries of Europe as to the requirements of the situation and the part those countries themselves will take in order to give proper effect to whatever action might be undertaken by this government. * * * With foresight and willingness on the part of our people to face up to the vast responsibility which history has clearly placed upon our country, the difficulties I have outlined can and will be overcome."

These words were spoken, as I said, on June 5. On March 5 of the same year, the Assistant Secretary of State for Economic Affairs, Will Clayton, wrote a memorandum while enjoying the quiet of an airplane journey. Referring to Communist efforts to win the peoples of Eastern and Central Europe he set down: "Feeding on hunger, economic misery and frustration, these attacks have already been successful in some of the liberated countries, and there is now grave danger that they may be successful in others. The security and interests of the United States and of the world demand that the United States take prompt and effective action to assist certain of these gravely threatened countries. This assistance should take the form not only of financial aid but of technical and administrative assistance as well." Continuing, Clayton went more deeply into the whole matter than did Secretary Marshall.

The affectionate and admiring daughter makes no claims as to her father's services, but anyone who takes a look at the evidence must conclude that he was right at the center of the group of men who devised the Marshall plan and had a good deal to do with saving the free world.

Congressman Boggs Scores Hit in Chicago With Talk on H.R. 5

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a remarkable address by the Honorable HALE BOGGS, our distinguished colleague from Louisiana, at the 22d Chicago World Trade Conference. Congressman BOGGS spoke on the subject of "How To Encourage American Investment Abroad" with especial reference to H.R. 5. From the many letters I am receiving from Chicago I would conclude that few speakers have ever impressed a Chicago audience as did the gentleman from Louisiana on that occasion. The following letter is from Walker B. Davis, counsel of the Chicago Bridge & Iron Co.:

The Chicago Bridge & Iron Co. designs, fabricates, and erects large steel plate structures, such as tanks used for the storage of petroleum products at refineries and bulk stations, as well as tanks and other containers for many other industries. We have done a great deal of work in foreign countries. Sometimes we have furnished the fabricated steel, while in other cases we have erected fabricated steel supplied from outside the United States. We are anxious to continue our foreign operations, and also to expand them, but the tax burden imposed by the Government of the United States on the results of such operations puts us at a competitive disadvantage as compared with foreign contractors. Indeed, these considerations may force us to transfer the conduct of such operations to a subsidiary organized in another country.

I have had the pleasure of meeting Mr. BOGGS and listening to him speak on this subject. I think he knows a great deal about it and, of course, I need not tell you what a fine gentleman he is. Perhaps you will be interested in the enclosed copy of the address he delivered at the 22d Chicago World Trade Conference on February 27. I think it is as good a statement as I have seen of the reasons why this bill should, as I believe, be enacted into law.

Congressman BOGGS' address follows:

HOW TO ENCOURAGE AMERICAN INVESTMENT ABROAD

(Address by Hon. HALE BOGGS, U.S. Congressman from Louisiana, member, Committee on Ways and Means, at the 22d Chicago World Trade Conference, Palmer House, Chicago, February 26–27, 1959; sponsors: Chicago Association of Commerce and Industry and Export Managers Club of Chicago, Inc.)

I was delighted to receive the invitation to address this the 22d Chicago World Trade Conference. I am always glad for an opportunity to come to Chicago. Chicago typifies in so many was the dynamic industrial, commercial, financial and political leadership which has made America great. I find here so much in common with my own home city of New Orleans. We, too, have problems of slum clearance, rehabilitation of blighted areas, and long-range planning for civic improvements and industrial development. And now Chicago, like New Orleans, is to be a major seaport and center of world trade. As you know, New Orleans is second only to New York in the dollar volume of world trade clearing through its port facilities.

The leadership of the Illinois Congressional Delegation under my esteemed colleague and dear friend on the Committee on Ways and Means, Hon. THOMAS J. O'BRIEN, is so persuasive that I have supported him on most matters in which you are interested—particularly in his valiant fight for increased diversion of water from Lake Michigan.

The spirit of friendly competition which may now develop between the new and expanded port facilities in the Chicago area, and other established centers of world commerce in the United States will be beneficial to all. As reflecting this spirit of friendly competition from New Orleans, I should like to remind you that the Port of New Orleans has maintained in Chicago for several years now an executive general agent, Mr. André Mouton, who holds membership both in the Chicago Association of Commerce and Industry and in the Export Managers Club of Chicago, Inc., the two sponsoring organizations of this World Trade Conference. These two great centers of world commerce, united as they are via the Mississippi River, can provide a firm foundation for the great volume of world trade which I am convinced holds the key to the longer range hopes for peace.

It is difficult to overstate the importance of an expanding volume of world trade to the long range security of the United States and the free world. To me, peace, freedom and world trade are indivisible. World peace hinges on world trade—not a permanent program of foreign aid. And trade can be mutually advantageous over a prolonged period only if all countries have the facilities to produce whatever the combination of their natural resources, the natural capacity of their people, and their available capital will permit.

I am convinced that the people of the United States have about had their fill of what appears to be an endless program of Government economic aid to foreign countries. I find in my travels throughout the world that the really responsible people in recipient countries question the soundness of an aid program on any permanent basis. As a temporary program to insure rapid revival of the economies of Western Europe following World War II, I firmly believe that the Marshall plan may have preserved from Communist unrest a most important part of free world culture.

But it should be apparent to all that something more dynamic and less artificial must now be employed to develop the economic resources of all countries outside the Communist orbit. The last Congress recognized the significance of further expansion

of trade by extending the reciprocal trade agreement legislation for another 4 years. It is most encouraging that this program, conceived and inspired by one of the greatest Secretaries of State of all time, Hon. Cordell Hull, has now become truly bipartisan.

President Eisenhower has frequently stated that increased private investment is essential to the economic progress of less developed countries. In his recent budget message the President said:

"The greater share of investment capital and technical ability in the United States and other highly developed countries is to be found in private hands."

Thus far, however, the President in his series of messages to the Congress has failed to recommend any legislation in this area other than expansion of the program of guarantees to American private investors against losses caused by inconvertibility of currencies, expropriation, or war. Unfortunately, the administration still is in the study stage of possibilities for stimulating private investment abroad. As stated in the budget message:

"Studies are being conducted by the Department of State and the Business Advisory Council of the Department of Commerce on ways to increase the role of private investment, management, and technical training abroad."

It has fallen upon the Congress to assume the initiative in this as in many other areas which are vital to the American economy and the peace of the world. I say with some pride, we have a program equal to the task. Last December my Subcommittee on Foreign Trade Policy held a full week of hearings on the future prospects for U.S. private investment abroad. At that time statements were made by more than 50 representatives of agriculture, commerce and industry, and experts from government and academic life.

Most frequently mentioned in the testimony before our subcommittee was the recommendation for changes in the Federal tax structure to enable American private investment to go abroad on a basis competitive with investors from other countries. A number of specific recommendations were made for changes in the treatment of income from foreign sources. From these recommendations I selected those which seemed to have the greatest merit and common support. I have adapted these recommendations to conform with my own views, of course, and included them in a bill which I introduced on the opening day of the 86th Congress. This bill, the Foreign Investment Incentive Tax Act of 1959, will, I believe, encourage a substantial increase in American investment abroad.

The cornerstone of H.R. 5 is the provision for a new class of domestic corporation to conduct the foreign operations of American firms. Known as foreign business corporations, these companies would be permitted to retain the earnings derived from foreign operations for use in the expansion of foreign investment and trade activities without any immediate payment of U.S. tax. They would pay U.S. tax on foreign source income only when it is withdrawn from foreign operation, either by a distribution to shareholders or upon diversion to purposes unrelated to foreign operations. Income from foreign sources will qualify for deferral only if the foreign business corporation derives substantially all of its income from business done outside the United States.

In recent years, in order to compete with British, Canadian, French, or German businessmen, American businessmen have been compelled to seek tax shelter havens in Tangier, Lichtenstein or Panama, et al. Consequently, the proposed deferral of Federal tax burden upon earnings reinvested abroad will result in no significant loss of United States revenue; in fact, one of the witnesses before our committee predicted that, absent a change in Federal tax law during the next 5 years and assuming the world stays prosperous, he has no doubt that there would, at the end of this 5-year period, be little export income on which the United States will collect taxes. I firmly believe that United States businessmen should not be compelled to abandon the American flag when they go abroad: they should not be compelled to organize and operate under foreign flags but, instead, should be encouraged to go abroad and take with them their country's flag—and along with it the great combination of ingenuity, skill and daring that has made our free enterprise system the most dynamic economic system in the world.

You are all familiar with the tax treatment provided since 1942 for Western Hemisphere trade corporations. These corporations have been taxable at a rate 14 percentage points lower than the tax rates applicable to other corporations. These benefits are limited to a corporation which does all of its business in the Western Hemisphere. Section 4 of my bill would extend the same benefits to United States companies doing business in any foreign country if specified conditions as to kind and source of income are met. These qualifications are substantially the same as those now prescribed for Western Hemisphere trade corporations except for an increase from 5 percent to 10 percent in the leeway allowed for incidental income from sources within the United States. Experience has shown that the present 5 percent limitation is too restrictive.

I understand there was some surprise when I included this section in my bill. I have been told that the budgetary facts of life will not permit even the temporary loss of revenue. I am certainly in favor of a balanced budget and shall do all in my power to curtail unnecessary Government expenditures. But I say to you that our chance for a balanced budget will be greater, if we provide encouragement for American business to assume directly more of the risk of economic development in the countries in the free world. Indeed, there is very likely to be a greater tax yield from a 38 percent rate of return on the increased volume of foreign activities of American business than from a 52 percent rate on the more restricted activities under existing law.

The reason for enacement of the Western Hemisphere trade corporation provision in 1942 was that American corporations in South America were placed at a considerable competitive disadvantage with corporations from other countries. Since the same competitive inequity now exists throughout the free world, it is only fcir that all U.S. corporations engaged in foreign trade should be treated alike. It is high time that we discard the provincialism which gave rise to this artificial distinction between East and West.

The 14 percentage point tax differential is justified by the same considerations whether the foreign operations be conducted in Pakistan ,on in Peru—in Burma or in Brazil—in the East Indies or in the West Indies.

One of the most perplexing problems encountered by American corporations which have engaged in foreign trade through subsidiaries organized in a foreign country has been that of shifting capital from a subsidiary in one foreign country to another subsidiary in another country, where the capital can be more effectively utilized. Under existing law it is not possible to make such transfers without recognition of gain or loss unless prior clearance is obtained from the Commissioner of Internal Revenue. Likewise, if the U.S. corporation finds it necessary to transfer appreciated assets to a foreign subsidiary, a taxable gain is recognized unless prior to the transfer the Commissioner looks into the transaction and senses no potential of tax savings.

I understand that some favorable rulings have been issued in some situations, but only after much delay—accompanied with considerable pain and suffering—and frequently on a very arbitrary basis. Section 3 of H.R. 5 would relieve this situation by providing that no advance ruling shall be necessary for property actually used in a trade or business outside the United States, or for stock in a corporation actively engaged in such a trade or business. The elimination of the requirement for advance clearance in such cases will be most beneficial to corporations which have been engaged in foreign trade for a long time; however, it will also afford assurance of companies now entering foreign trade that their capital can be shipped to other areas without arbitrary delays and uncertain tax consequences.

A potentially important technique for fostering private investment in underdeveloped areas is that of tax sparing. Many underdeveloped countries try to attract capital by waiving taxes for a limited period of time upon new enterprises, or upon investments in existing enterprises. However, a program of tax sparing offers no incentive to U.S. companies, for they must pay U.S. taxes on the waived profits. It has been suggested that American companies which accept in good faith tax waivers extended to them by foreign governments should be deemed to have paid the waived foreign taxes for the purpose of the foreign tax credit provisions of the Revenue Code. The Treasury and State Departments have been much interested in this policy, and have recommended that it be accomplished by tax treaties. While many of these underdeveloped countries are not yet committed to the Soviet bloc, they are readily susceptible to domination by the Soviet bloc if that should appear to them to be their only source of capital. We may alienate otherwise friendly nations by thwarting their efforts to attract American capital by nullifying their tax sparing program with our tax laws. A serious difficulty exists in the efforts to implement tax sparing by tax treaty. Tax sparing by tax treaty circumvents congressional authority in the field of taxation. I prefer a legislative mandate which recognizes incentive tax sparing by foreign countries as taxes paid for the purposes of the U.S. foreign tax credit. Section 6 of the bill provides such a mandate, but the Secretary of State will be authorized to certify unilaterally which foreign tax-sparing legislation will be recognized for U.S. tax purposes. Under this approach the Secretary of State will not be required to negotiate complicated and time-consuming tax treaties. He may, of course, if he deems it a wise policy, negotiate executive agreements with foreign nations in order to obtain reciprocal benefits. On many occasions, this should prove to be an extremely useful instrument in implementing the foreign policy of our country.

Since the foreign tax credit provisions were first introduced into the taxing system, there has been a need for a liberalization of the strict country by country limitation. Equality of treatment has long demanded that each taxpayer have an option to choose between the country by country limitation and an overall limitation in determining his foreign tax credit. I have provided for this liberalization by prescribing an alternative means of computing the maximum amount of credit which can be allowed against the U.S. tax with respect to any taxes due foreign governments. It is only in this manner that the fundamental purpose of the foreign tax credit—the prevention of double taxation of income earned abroad—can truly be achieved.

Section 7 of my bill would correct an inequity in the present law, relating to gain realized by a parent company upon the involuntary conversion of property belonging to a foreign subsidiary. Frequently, a domestic corporation must do business through a subsidiary in a country in which it is either impossible or difficult to secure adequate insurance coverage. In these instances it is a

normal practice for the domestic parent corporation to insure the property of the subsidiary doing business in that country. If the property of the foreign subsidiary is destroyed, say by fire or by storm, the domestic parent is required to pay a tax at ordinary income rates on the insurance proceeds received even though it uses these proceeds to replace the lost property. This tax penalty deters investments in foreign countries where this insurance problem exists. There is no justifiable reason for denying the parent corporation the usual nonrecognition of gain upon involuntary conversions of this kind.

I have been much encouraged by the response which has followed my introduction of H.R. 5. Many of you undoubtedly have other equally sound proposals that you feel should be enacted. I am sure you will all recognize that there is a real danger in trying to accomplish too much. Many groups similar to yours have evidenced a genuine interest in this matter and have displayed an understanding of the necessity for the realistic approach which I have taken in this bill. I have been informed that the public advisory groups established by the President in the world trade area can be expected to come forward with constructive recommendation in the tax field. I would hope that these reports may be forthcoming at an early date. In any event, I am encouraged by the fact that the administration in Washington is at least interesting itself in this very vital problem.

Some of the proposals included in H.R. 5 have been discussed for years and have been recommended by careful students of the impact of Federal taxes upon private foreign investment. We have had enough study. Now is the time to put them into effect. The immediate importance of private investment in providing a sound basis for supplementing and replacing foreign economic aid calls for action at this session of Congress. The American people must be given a practical alternative to the indefinite continuation of $1½ to $2 billion a year in appropriation for foreign economic aid and technical development.

The most effective way to carry the message of the American way into the uncommitted countries of the free world is to make available to them private capital and business management, which this country can provide. In the long run we shall not make friends by giving handouts, and we can only teach the dynamic character of the free enterprise system by demonstrating directly how it works. This is a great cause, and I should hope that you might make it your cause.

The final decision on the future of this measure really rests with the business community—alert businessmen such as yourselves—genuinely concerned with private enterprise and with assuring that our foreign economic policy truly reflects the basic principles of our free enterprise system. You are aware of the challenges that confront us. With your support, we can reach our goal.

Thank you.

The Role of the Federal Government in Basic Research

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, April 25, 1959

Mr. HILL. Mr. President, I had the pleasure and privilege of hearing the address of Dr. L. E. Burney, the Surgeon General of the U.S. Public Health Service, at the dedication of new laboratory facilities of Wistar Institute in Philadelphia on April 17, 1959. The address was on "The Role of the Federal Government in Basic Research." It is so timely, so informative, and so very able, that I would like to bring it to the attention of the Senate and of the country. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROLE OF THE FEDERAL GOVERNMENT IN BASIC RESEARCH [1]

(By L. E. Burney, M.D., Surgeon General, Public Health Service, U.S. Department of Health, Education, and Welfare)

There is a sentence in "The Education of Henry Adams" which reads: "A teacher affects eternity; he can never tell where his influence stops." One hundred and fifty years ago Dr. Caspar Wistar began a collection of specimens to be used in the teaching of anatomy at the University of Pennsylvania. Today we honor him in the rededication of an institution bearing his name, an institution which has contributed significantly to the scientific life of our Nation and which will continue to do so in increasing measure.

When the Wistar Institute was dedicated in 1894 the principal speaker was that giant personality in medical science, Sir William Osler. If he were here today I am sure Sir William would welcome the institute's commitment to an expanded and more diversified research effort, a commitment implicit in these ceremonies.

At those same dedication exercises 65 years ago, Dr. William Pepper, then provost of the University of Pennsylvania and president of the Wistar Institute's board of managers, discussed the relations between the institute and the university. "When," he asked, "will we learn that concentration and cooperation are consistent with the maintenance of absolutely distinct individuality, and that they are the secret and the source of power and of rapid progress?"

I believe that question is answered here. Since its inception, the Wistar Institute—a privately endowed institution—has cooperated with many other groups and interests, but at the same time has retained its full independence.

Nevertheless, Dr. Pepper's question is as provocative today as it was in 1894. It is especially so for me, in view of my assigned topic: "The Role of the Federal Government in Basic Research." I should like to direct my remarks to the question, and to the way it is being answered across the Nation. I shall first comment on the term "basic research"; then I wish to discuss the essentials in any system of support for scientific research, as well as the role of the Federal Government in such a system; and finally, to illustrate the foregoing by describing how Public Health Service programs aid the Wistar Institute in carrying out its new mission.

BASIC RESEARCH

There are perhaps as many definitions of basic research as there are individuals who are willing to have the record show their views on the subject.

Basic research can be defined in terms of how the sicentist perceives his investigation. It can also be defined in terms of how other scientists appraise the results of his studies.

Basic research is a term often used to help the public understand a segment of the total scientific endeavor; it is also used to help foundations, government, and industry in the classification of the research they support or conduct.

Basic research is often used as if it were in itself a measure of excellence; in this connotation, any research that is not basic is somehow deemed inferior.

I do not propose to explore the multiple facets of what I feel to be essentially an artificial exercise in semantics. I tend to agree with Dr. H. A. Shepard, who wrote in the "Journal of the Philosophy of Science" (23, 57, 1956): "Efforts to define basic research operationally are misleading and bring about neglect of the forces that produce it—the training, discipline, values, way of life, and system of social control that motivate men to advance knowledge for its own sake. * * * Support of basic research means support of a social system which so motivates men."

There are, however, two points that I wish to make relative to the vitally important aspect of undirected inquiry in science referred to as basic research.

First, if basic research is truly to progress, if it is to have greater emphasis and broader support, we must find ways to increase the prestige, dignity, and reward associated with intellectual and scholarly pursuits of all kinds, both the sciences and the humanities. Inseparable from this is the need for elevating the status of our institutions of higher learning. Given these conditions, basic research will flourish. In the absence of these conditions, with social values focused on the immediate, material yield from investment, basic research will not progress at a rate commensurate with the need for knowledge.

Second, it is of utmost importance for those who foster basic research to recognize that the mechanisms and dollar levels of support are means, not ends. In the recent evolution of science policy in the United States, a great deal of attention has been focused on the means. This is a vital and never-ending matter of concern. But it seems clear that society now recognizes the importance of supporting research; that the essentials of sound support have been delineated, and, for the most part are applied.

Now that this foundation has been laid, we can, and should, devote more and more attention to the ends. We cannot predict whither the limitless advances of science will lead us as a Nation in an increasingly interdependent community of nations. Yet we need to comtemplate the obscure future and consider earnestly how we may assist its unfolding toward the preservation and improvement of human life.

ESSENTIALS OF SUPPORT

I have mentioned the essentials of sound support for scientific research. Simply stated, they incorporate the following conditions. The freedom of the investigator must be protected. The integrity of the institution must be maintained. There must be continuity of support with adequate sums of money. In the absence of any one of these essentials, the mechanism of support is faulty.

At the present time, these conditions may be created by the use of either private funds or public funds. In point of fact, the differences in the terms and conditions of support which formerly characterized both public and private sources have virtually disappeared. I would subscribe to the principle of diversity in the origins of support for research, both in terms of the balance between public and private support, and in terms of many sources as contrasted with a single public source of support. It is gratifying, however, that the various agencies and organizations which support scientific research are more alike than dissimilar in their policies and procedures, and can be treated in a broad sense as if they were one.

With such wide agreement in practice, can we not accept as guiding principles some of

[1] Presented at the dedication of new laboratory facilities of the Wistar Institute, Philadelphia, Pa., April 17, 1959.

the conditions which are essential for the conduct of scientific research in our society, but which are continuously restated as though they are still debatable issues? In accepting such guides, we need not specify the political and administrative mechanisms through which they operate in the various sources of support. But we would, I believe, clear the air in discussions of the roles of different sources.

I would propose the following guides for your consideration:

1. Funds for science and research must be available on an expanding scale—derived from a diversity of public and private sources; with satisfactory distribution among the fields of science, and with an enlarging proportion available for fundamental inquiry.

2. The terms and conditions of support for research should increasingly provide for broader areas of inquiry and longer periods of committed support.

3. For the investigator, the terms of support should assure freedom in choosing areas of study and flexibility in their pursuit; encourage creativity and diminish administrative burdens; permit freedom of communication and assure continuity and stability of support.

4. For the institution, such terms and conditions should provide for the full payment of the costs of research; seek a productive balance between research and teaching functions; and permit a substantial degree of freedom in the use of funds in the furtherance of institutional goals, objectives, and standards of excellence.

5. The further growth of science requires the early indentification of promising talent and motivation of talented persons toward scholarly pursuits. Hence, the educational and training process must not only provide knowledge and skill, but also encourage curiosity and imagination, impart comprehension of the unity of all scientific effort, and instill a sense of the moral and social values of science as part of a democratic society in a world community.

6. Science is but one facet of the constantly expanding panorama of human endeavor. Hence, the advancement of science must stimulate and parallel progress in political judgment, economic sophistication, creativity in the arts, humanities, and other scholarly pursuits.

The foregoing points may be stated in different ways. But I feel quite certain that however stated, they would suffice as guides equally well for a philanthropic foundation, an industry, or a governmental agency engaged in the support of research and in the creation of resources for research in the future.

ROLE OF THE FEDERAL GOVERNMENT

From the founding of the Nation, the Federal Government has had to have scientific information pertinent to its responsibilities for national resources, defense, and welfare. A government may advance knowledge through research in its own agencies or through the support of scientific investigations by individuals beyond its control. The motivation of the individuals conducting such investigations may be to acquire knowledge for its own sake; but the motivations of governments are practical and political.

The welding of such motivations in a joint endeavor may be illustrated in the history of the United States by reference to the Lewis and Clark Expedition in 1805. The explorers may have been conducting basic research of their times, since they certainly carried out a disciplined search for the unknown, using creative and analytic thought and the instruments of measurement then available. For the U.S. Government, the expedition had the practical, political purpose of opening up the great Northwest. Bernard De Voto writes movingly of this early search for knowledge by the young Government:

"They toiled westward in the sun's path * * * fulfilling a dream which Meriwether Lewis had had in his boyhood, fulfilling an older, more complex dream of Thomas Jefferson's, and by strength and skill and valor they rolled the unknown back before them. The country ahead of them was an untraveled chaos, the boundary of man's knowledge moved with them, they passed—and the map was made forever."

Scientists, institutions, governments, and the public now have a much more sophisticated view of scientific research and the role of the Federal Government in its advancement. Basically, however, there is little change in the motivations and the roles. The Government has responsibilities to get the Nation's work done—be it the advancement of hydroponic farming, the conquest of space, or the conquest of cancer. Fundamental knowledge throughout the range of scientific disciplines is indispensable to the discharge of these responsibilities.

The specific means by which the Government advances fundamental knowledge have evolved with the evolution of science, and with the growth of the Nation's intellectual and economic resources, its institutions, and its needs. The contemporary scientific revolution, worldwide in scope and nuclear-powered in drive, has broadened the responsibilities of the Federal Government for science policy and program. Its responsibilities include participation with Federal and non-Federal groups in the formulation of research policies in particular areas; conduct and support of research; and provision of other types of assistance to scientists and institutions in meeting their obligations to the national scientific effort.

These responsibilities can be examined more satisfactorily when they are reduced from the general to the specific. Let us, then, scan briefly the national research effort in the medical, biological, and related life sciences, and the part played in these activities by the Federal Government. I shall use the term "medical research" in its broadest possible connotation, to include all health-related sciences.

The total national expenditure for medical research this year is approximately $575 million. This level has been reached in a period of rapid growth beginning in the 1940's.

Half of the current expenditures comes from non-Federal sources. It is significant, I believe, that the proportion of non-Federal support is higher in medical research than in many other areas of research, such as electronics, engineering, and rocket propellants.

Prominent among non-Federal sources of support for medical research are the chemical and pharmaceutical industries, foundations and endowments, voluntary health agencies, and State governments. Although we lack comprehensive data on the expenditures of these sources, it is important to recognize that their activities are intimately related to the sound evolution of health and medical programs. One of the most encouraging trends of recent years is the increasing attention of State governments to medical research, over and above their large commitments to medical education. And I would observe here that the State of Pennsylvania is one of the most enlightened and aggressive States in this area.

The pattern of medical research in the Federal Government reflects both the importance of research as a component of any broad operating mission and the commitment to diversity in public sources of funds. Thus the National Science Foundation, the Atomic Energy Commission, the Departments of Defense and Agriculture, the Veterans' Administration—all carry out broadly conceived research programs in the life sciences, either direct or through grants and contracts. The recently established National Aeronautical and Space Agency is preparing to mount a significant program of research in biology and medicine as related to the flight of man in space. And the Department of Health, Education, and Welfare, in its primary concern with the health and well-being of the American people, administers extensive programs of medical and health-related research.

The bulk of the Department's health research activity is in the programs of the Public Health Service. Within the Service, the National Institutes of Health is our major research arm, in the scope and volume of its activities and in the formulation of research policies. This year, appropriations to the National Institutes of Health comprise 70 percent of the Federal Government's expenditures for medical research, and nearly 30 percent of the Nation's total expenditure in this field.

THE WISTAR INSTITUTE AND THE PUBLIC HEALTH SERVICE

Since the interests of the Wistar Institute and the programs of the National Institutes of Health are merged today, it may be useful to examine this relationship as an example of the general points I have been discussing.

The Public Health Service, like the Wistar Institute, has a long tradition and a capacity for change. Only a few years and a few miles separated the dedication of the Wistar Institute and the initiation of bacteriological research in the Service. The latter occurred in 1887 when Dr. Joseph Kinyoun set up one of the first bateriology laboratories in this country, in our hospital at the port of New York. For us, this marked the beginning of an ever-increasing research involvement, first in the infectious and nutritional diseases, spreading to occupational disease, and more recently to mental and chronic diseases.

Concurrent with the general expansion of medical research, the programs of the Public Health Service took on new dimensions in the 1940's. New facilities were added for our own scientific investigations at Bethesda, Md., and, what is more important, we entered upon a broad program for the support of research in non-Federal research and teaching centers.

Initially, the few thousands of dollars we had were disrtibuted to a handful of scientists working in established centers. In recent years, however, the research support programs have grown rapidly in response to many evidences of public interest. We began with the support of research projects; to this was added support of research and related training; and more recently, a beginning was made in the award of matching grants for the construction of research facilities.

These have become big programs. This year, they include some $140 million for the grant support of nearly 8,000 research projects, $60 million for a broad spectrum of research and related training, and $30 million as matching grants for the construction of research facilities. Thus the decisions affecting the size and characteristics of this program are of vital importance to the American medical research scene.

We do not consider these to be our programs. They are reflections of the people's aspirations for better health. We are merely a vehicle through which the people's money, derived from taxes and appropriated by the Congress, is used to achieve better health through research.

The Public Health Service, then, has no direct responsibility for, and no control over the decisions of non-Federal groups and organizations in the formulation of their research policies. We do, however, have a responsibility to take part in the formulation of national research policies, to make our views known, and to carry our direct and

indirect share of the total national research effort.

Thus, the Public Health Service itself does not make the scientific decisions as to how the money appropriated to us for the support of research shall be spent. These judgments are made by panels of distinguished scientists, educators, and leaders in public affairs, without whose recommendation the Service cannot approve any grant application.

Our first role, then, is simply to establish and maintain an administrative mechanism which permits a cross-section of the Nation's professionnl and public leaders to determine the most effective use of the people's dollars so that both the scientific and the public interest will be served. Our second role is to be alert to the ever-changing problems and needs of medical and health-related research, both immediate and long-range, and to do what we can to see that the problems are solved and the needs met.

These characteristics of our program make one aspect of my participation in these dedication exercises very comfortable indeed. It is true that Public Health Service matching grants provided nearly $206,000 to assist in the Wistar Institute's building program. It is true that during the present year, staff members of the Institute have received Public Health Service grants of $210,000 for research and $50,000 for training. But neither I nor any of my colleageus at the National Institutes of Health is in the position of being a donor.

We are happy, as are all friends of the Wistar Institute, that the stature of your staff, the past accomplishments and future promise of the Institute have been recognized by these representative groups as warranting a substantial investment. This has come about through selective processes based on scientific excellence, in which scientists and institutions across the Nation compete. It is not Public Health Service money given to the institute; it is a public investment in your promising future.

I am particularly pleased to tell you of another development in the relationships of the Wistar Institute and the Public Health Service. Recently, the Director of the Institute, Dr. Koprowski, has been awarded a long-term grant for study of the possible role of viruses in the etiology of cancer.

Dr. Koprowski is one of about 20 leading scientists in this country and abroad who are participating in a recently planned grants program for the exploration of this exciting and challenging field.

This one grant well illustrates the growing strength and flexibility of research support mechanisms. It is relatively large and long term, providing $118,000 this year with gradual increases committed for the subsequent 9 years. Altogether, the grant will amount to more than $2 million over a 10-year period.

Also, the grant is nonspecific. It is in support of fundamental lines of inquiry which may or may not lead to better understanding of the etiology of cancer, although the studies undertaken will derive their support directly from appropriations made to the National Cancer Institute. Moreover, Dr. Koprowski and his colleagues are free to shift their lines of inquiry at any time and in any direction. With the talent and resources combined here in productive and sustained inquiry, however, we can surely anticipate major contributions to the life sciences, from which advances in human health come.

Let me close with a thought about Dr. Pepper's question: "When will we learn that concentration and cooperation are consistent with the maintenance of absolutely distinct individuality, and that they are the secret and the source of power and of rapid progress?"

We have learned a great deal and will learn more of this secret source of progress. The relationships of the Wistar Institute and the Public Health Service emphasize the interdependence of independent institutions in medical research today. By this I mean that the acceptance of funds from outside sources, whether private or public, and collaboration with other groups in programs of mutual interest, are indeed "consistent with the maintenance of absolutely distinct individuality." These mutually supportive activities actually can enhance, rather than jeopardize, an institution's independent status.

The Wistar Institute has a splendid heritage of scientific and educational accomplishment, of institutional and intellectual freedom. I know that these characteristics will be strengthened and enhanced as the Institute moves ahead into challenging new fields.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Oregon Dunes Park Suggested as National Tourist Mecca

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. NEUBERGER. Mr. President, the unique sand-dune area of Oregon's seacoast can become an outstanding mecca for vacationing Americans. That is the objective of the bill which I have introduced to establish the Oregon Dunes National Seashore area.

Recent public discussion of the proposed park development has clarified unedrstanding of the procedures involved in establishing such a national recreational facility. Especially cogent analysis of the Oregon Dunes proposal appeared in the April 21, 1959, issue of the Medford (Oreg.) Mail-Tribune, and the April 6, 1959, issue of the McMinnville (Oreg.) News-Register. Both of these editorials emphasize the great benefits which would come to the area if and when the park is authorized.

I wish to stress one particular sentence in the editorial from the McMinnville News-Register, which reads:

The national publicity given by the very presence of the national park is beyond price.

If people on the Oregan seacoast will realize the truth of this very simple and logical statement, they will be aware that the proposed Oregon Dunes National Seashore will attract thousands and thousands of tourists to one of the most beautiful shorelines in the world, that of Oregon beside the Pacific Ocean.

I ask unanimous consent that these excellent aditorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the McMinville (Oreg.) News-Register, Apr. 6, 1959]

NATIONAL PARK ON COAST—WE'RE FOR IT

When on March 25 Senator RICHARD NEUBERGER introduced on behalf of himself and of Senator WAYNE MORSE a bill in the U.S. Senate to establish the Oregon Dunes National Seashore south of the Siuslaw River in Lane and Douglas Counties, he surely had no suspicion of the hornet's nest of opposition which would come from certain circles in the Florence area. The park would consist of not more than 34,660 acres of duneland and another area north of Florence, the locale of the Sea Lion Caves, in extent 340 acres.

According to NEUBERGER's bill the purpose of the park would be "to preserve for the benefit, inspiration, and use of the public certain unspoiled shoreline in the State of Oregon which possesses scenic, scientific, and recreation values of national importance."

We have been amazed at the amount of opposition to this measure from those who stand most to gain from it. Yet we should not have been too surprised, for there was opposition in Aberdeen to the formation of the Olympic National Park, and some of the residents of communities in and near the boundaries of the present Yosemite were radically against national park status for that scenic treasure. Those most opposed are, of course, persons who have vested interests which would be affected.

It is too bad that there was not more groundwork laid among the local people before the matter was broached. Nevertheless they should give it a real hearing before becoming so antagonistic. It is always difficult to back down once a person had become a partisan.

The dune areas on the Oregon coast have rare interest both as scenic and geological features. Due to the prevailing winds from the ocean, the accumulative sand is blown toward the east forming gigantic dunes. The dunes march and invade the inland areas. One feature on the unique side is that they dam up the mouths of the creeks and smaller rivers from the Coast Range, thus forming those attractive lakes not far from the shoreline. So we have right within arm's length of each other the great salt sea and a string of fresh-water lakes. In some places they are only a few hundred feet apart, with photogenic sand dunes between. The area is being used as an experimental project to test various grasses as to their effectiveness in pinning down the sand dunes and in this respect has drawn worldwide attention.

The Sea Lion Caves are probably the most interesting single feature along the Oregon coast and the one that attracts the most visitors. We have been down to smell the sea lions several times and always find them interesting. There are giant bulls, sleek females, and sometimes cute pups. This is the largest rookery of its kind in continental United States—Whatever that may mean now that Alaska has become the 49th State. Making the caves part of the National Park System would assure the best possible care and unkeep for this national treasure.

There are undoubtedly features of NEUBERGER's bill which should be clarified, but by and large the people of Oregon should give it support. Any time a national park is brought to an area it adds a dimension otherwise unattainable. The tourist influx along Highway 101 would be increased immeasurably. All towns along the coastal route would profit by this, and those of us along Highway 18 would also derive benefits due to traffic from the coast to Portland.

The national publicity given by the very presence of a national park is beyond price. The Oregon coast would begin to receive the attention it has always deserved as the most beautiful and dramatic scenic coastline in the United States. It is to be hoped that Senator NEUBERGER will be able to see this proposal through to fruitation. It seems to us that if he could go personally and talk to the Florence folk, most of their fears would be allayed. Meanwhile, those who are deeply concerned that the project go through should give it all the support possible.

[From the Medford (Oreg.) Mail-Tribune, Apr. 21, 1959]

CHANCE FOR THE SAVAGES

In common with other newspapers in Oregon, we were in receipt of a "news story" last week, written in the office of the weekly Siuslaw Oar of Florence.

It told, tongue-in-cheek, of the proposed establishment of the Frog Bog National Park on the shores of the Columbia River near Portland. It was motivated, obviously, by the proposal to create a national seashore in the area between the Siuslaw and Umpqua Rivers along Oregon's magnificent coast, including beaches, dunes, forests, and lakes.

Opposition to the proposal has developed, particularly in the Florence area, and the news story was one symptom of it.

The story said:

"Hearings just concluded in the vine maples by the Vine Maple Savages indicated strong public support for the establishment of the Frog Bog National Park on the shores of the Columbia River near Portland.

"The Frog Bog National Park would be comprised of some 35,000 acres of valuable Frog Bog country from Portland approximately 18 miles upstream, adjacent to and abutting the Columbia River.

"Senator JAMES E. MURRAY (Democrat, of Montana), chairman of the Interior and Insular Affairs Committee, will be requested to introduce legislation which would 'preserve for the benefit, inspiration and use of the public' certain river shores in the State of Oregon which possess scenic, scientific and recreational values of national importance. Under term of the bill the Secretary of Interior would be authorized to establish the Frog Bog National Park.

"Senator MURRAY will be requested by the proponents, if at all possible, to enter the bill in conjunction with the Senate bill by Senator RICHARD NEUBERGER, which would authorize the establishment of the Oregon Dunes National Seashore, an area similar in size, comprising lakes, homes, businesses, resorts and already established beautiful parks.

"One individual who testified at the hearing and identified himself as a frog-watcher, stated he believed that the establishment of Frog Bog National Park would be the greatest single gift that Oregon could receive during the Centennial year."

(It might be noted that one Portland newspaper printed the item, just as received, in its regular news columns without any comment—which might have tended to confuse some of its readers.)

Behind the levity in the story are some dead-serious property owners in the area, who dislike the idea of having their homes and businesses condemned for use as a national park.

While we can understand their objections, we believe there are three points which should be considered:

1. The fact that the coast in this area is of national significance, and should be preserved for the people of the Nation.

2. The impact on the area may not be as serious as they now expect.

3. The proposed boundaries are preliminary and subject to revision, during the several years it would take to put the plan

for a national park area on the coast into effect.

Further down the coast, people are not nearly as upset about the proposal, presumably because they are a little further away from the lake and resort area where the opposition centers, and also, possibly, because of the restrained way the subject has been handled in the Port Umpqua Courier, the weekly newspaper in the Gardiner-Reedsport area, edited by Bill Tugman, one of the State's outstanding editors.

Following informational meetings in the two areas, the Courier summed the main points up as follows:

1. Nobody in the area affected—from the mouth of the Umpqua area to the mouth of the Siuslaw, including all of the frontage on Woahink and Cleawox Lakes, plus Sea Lion Caves, north of Florence—will be dispossessed without full compensation and due process of law.

2. Industrial, and community rights for necessary services in or across dedicated park areas will be recognized.

3. Immediate losses of taxable valuations for school districts and other public agencies can be compensated if Congress follows precedents in other national parks.

4. Over the years the revenue losses for communities on either side of the reservation will be more than offset by tremendous gains in tourist trade and in permanent business and residential development.

In view of these facts, we believe the Vine Maple Savages would be well advised, not only to drop their opposition to the plan, but to jump heartily on to the bandwagon—and then get set for one of the most remarkable booms any area ever had, after the national status is granted to the dunes area.

Not only would they receive fair compensation for their property now, they would be in on the ground floor of a development which could well make that part of the Oregon coast the mecca for tourists from all over the world for years to come.

Effect on American Industry of Competition From Abroad

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has made a thoughtful and perceptive analysis of my recent proposal for an investigation of the effect of the sharp increase in the investment of American private capital abroad. The lead editorial declares, in part:

By all means there should be a finding of fact on the investment of American capital abroad along the lines that Senator PROXMIRE of Wisconsin proposes.

Of course, I am delighted that my proposal has received the support of this highly responsible newspaper. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BY ALL MEANS, STUDY EFFECT OF COMPETITION FROM ABROAD

By all means, there should be a finding of fact on the investment of American capital abroad along the lines that Senator PROXMIRE, of Wisconsin, proposes. We need to know the dimensions of this development if intelligent policy is to be evolved. Indeed, we need to know the full facts about all aspects of foreign competition.

There can be no doubt but what foreign competition has increased substantially. Segments of American industry have been hurt. But whether the overall effect has been harmful or beneficial remains to be determined.

Foreign competition is of various kinds. Most common is price competition. The president of Inland Steel Co. told his stockholders the other day that European and Japanese steel has recently been sold in this country below Inland's costs. A Peoria builder can buy a keg of Belgian nails for a dollar less than he would pay a local mill. An Illinois farmer can buy imported barbed wire for $40 a ton less than the American product.

Imports have won big parts of the American market for bicycles, sewing machines, typewriters, transistor radios, fishing tackle, watches, clothespins. As for autos, America imports four times as many as it exports; 4 years ago exports were four times as large as imports.

Some American manufacturers buy parts abroad for assembly in this country. Other American firms are expanding foreign sales. But instead of shipping American-made products abroad, many are setting up branch plants in foreign countries or buying into foreign firms. American exports, as a result, are reduced or their expansion at least restricted.

The ability of foreign firms to undersell is usually credited to substantially lower labor costs. American mass production and inventiveness formerly more than compensated for this advantage. But many foreign manufacturers now have modern plants, use modern techniques, and have learned how to market effectively.

If foreign firms have become too competitive, it can be said that America asked for it. The purpose of the Marshall plan and other postwar economic aid was to restore and modernize the European economy. We helped Japan and other countries in the same way.

So before we condemn the new foreign competition and set up defenses against it, we ought to find out just what the effects have been and what they are likely to be in the future. An investigation to provide these answers should be of tremendous value.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "The Seaway and Us," published in the Boston Daily Globe of April 23, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SEAWAY AND US

The St. Lawrence Seaway has bobbed up, appropriately and inevitably, at the current Canadian-American business and industrial conference here in Boston. It is an excellent theme since that vast project bears massive testimony to the benefits of cooperation between our two peoples. The inevitability of its intrusion at these meetings stems, of course, from the seaway's certain impact upon economic growth on both sides of the border.

There is a certain timeliness involved, too. Though not to be dedicated officially for another few weeks, the seaway will witness next Saturday an initial transit of shipping which will be, in a sense, a symbolic pioneering for the traffic in trade, the vision of which has made the undertaking a reality.

Lionel Chevrier, former president of the Seaway Authority, reminds us that this enterprise is the signal gun for a period of industrial development on both banks. His words merit attention in New England. It is already clear that the seaway will spur industrial growth in eastern Canada and will bring certain benefits to our Midwestern States. Less emphasis has been given the fact that the new water artery will have constructive influence upon the future of New England.

Yet that relationship is as certain as geography. Its eventual consequences may remain vague to some here, but it is emerging more clearly to others. To imagine that the industrial growth now well begun or planned on both sides of the seaway will proceed without effect in New England is surely shortsighted.

Maine is conscious of the portents. Her conformation appears, for the time being, to limit the immediate benefits of the seaway to Aroostook County, the marketing of whose potato crop will be affected beneficially. The State's planners are eyeing the seaway carefully in the meantime. How the new traffic lane and its attendant industrial surge will affect population movement in the largest of our New England States is a question only another decade can answer.

Maine's remoteness from the power generated by the dual seaways project, like her geographical position vis-a-vis Quebec, pushes appraisal into the future.

The opposite is true of Vermont. The Green Mountain State is already experiencing the stimulus of a new flow of power from the seaway's hydroelectric system which has forced an industrially valuable 10 percent cut in electric rates. The pace of industrial growth has quickened. A program for industrial land-traffic routes north to south and east to west has been launched.

These economic signals are secondary, however, to Vermont's major plan regarding the seaway. Together with southeastern Quebec and New York State, Vermont is pressing for a cutoff to link the seaway directly to Lake Champlain, and on thence past Plattsburgh to the Hudson. That would make deepwater shipping feasible and open up the entire Champlain basin on both sides for heavy industry. At present only light industry is operating along the Vermont lake shore. A cutoff would give Vermont economically useful water lanes on three sides of her territory.

Whatever benefits some of New England in terms of economic growth benefits all of it. The seaway's influence in the long run may prove revolutionary.

UNCLE DUDLEY.

Can New Laws Solve the Farm Problem?

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. WILEY. Mr. President, as we know, the Nation's farmers still face serious economic problems.

Despite the high cost of the farm program, despite a multitude of laws affecting farm prices and production, despite a dedicated effort by the administration, Members of Congress, farm organizations, the farmers themselves, and others in the economy to find a solution for the farm problem, we still have not found one.

Over the years, agriculture has experienced a tremendous mechanical and technological revolution. While this has brought blessings, the fact is, also, that the capacity to produce his outstripped the volume of consumption, thus producing a production-consumption imbalance, with accompanying economic hardships.

The great question now confronting the Nation is how to deal with this dilemma. Should there be more new laws? Should there be fewer laws?

We recognize, of course, that legislation cannot cure economic ills. Over the years, however, legislative action has proved helpful to the farm economy while it has been attempting to make adjustments. Unfortunately, however, the farmer still finds that his income is too low in proportion to the high costs of equipment, labor, taxes on property and other operating expenses.

Recently, a questionnaire was submitted to agricultural economists in our land-grant colleges. The question posed to the 49 economists was: "Can new laws solve the farm problem?"

Among the 37 economists who replied to the inquiry, 4 out of 5 said that any laws further ham-stringing the free market will hurt the farmer, the consumer and the Nation; and that legislation has not solved, and cannot solve, the farm problem, although the "right kind might help." But few economists believe we have had the right kind of such legislation in the past, and most are pessimistic about getting it in the future;

They pointed out that schemes in foreign countries to guarantee all farmers a fair income have been costly failures. They also pointed out that the law of supply and demand is not out of date, and that there is no substitute for the free market.

Mr. President, those views are not necessarily a reflection of my own views on the farm problem. Nevertheless, since they represent conclusions of highly qualified persons in the field of agriculture, I ask unanimous consent to have printed in the Appendix of the RECORD an article which sets forth additional ideas on the question of whether new laws are desirable. The article was recently published in the Farm Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN NEW LAWS SOLVE THE FARM PROBLEM?

(By John Strohm)

Those questions you see at the extreme right were part of a list that I recently sent to agricultural economists at every one of our 49 land grant colleges.

I wanted to know what these "economic doctors" had to say about our farm problem, and what they thought of congressional efforts to solve it.

I believe that the answers I got back (from 37 of the 49) will shock a lot of Congressmen. Because four out of five economists say that:

Any laws further hamstringing the free market will hurt the farmer, the consumer, and the Nation.

Legislation has not and cannot solve the farm problem, although the "right kind might help." But few economists believe we've had the right kind in the past, and most are pessimistic about getting it in the future.

Schemes in foreign countries to guarantee all farmers a fair income have been costly failures.

The law of supply and demand is not out of date—there is no substitute for the free market.

"I doubt that legislation of the type we've had will help," warns a University of Georgia economist. "On the contrary, I think it adds to the problem."

How would the economists do it then? Three specific proposals bobbed up in most of their replies:

1. Bring capacity to produce into balance with markets by shifts in land use and migration out of agriculture.

2. Get Government out of agriculture.

3. Put agriculture on the same basis as business and industry from the standpoint of price protection.

A University of Nebraska economist puts it this way: "We need more energetic policies to adjust land use and remove people from low-income, labor surplus areas."

Which farm programs have worked best? Sugar and wool by a wide margin, say the economists. But most pointed out the reason: The United States imports both commodities and therefore is trying to stimulate domestic production.

Which have been the worst failures? Wheat and cotton won this dubious distinction. Unwise legislation has piled up unmanageable surpluses, lost markets, and delayed badly needed adjustments, they said.

By an overwhelming margin, they agree that our free market system, with its weaknesses, is still vastly superior to any developed anywhere in the world. Only two think that the cooperative marketing systems of the Scandinavian countries might be better.

"Producers now selling in relatively free markets have probably fared at least as well as those selling in Government-supported markets," says a University of California economist. "Adjustments under free market conditions tend to be more severe but usually occur more quickly."

All economists warn that Government-guaranteed prices inevitably bring regulations over production, although few feel that farmers recognize this fact.

Has Congress learned anything from the failures of the past? The economists aren't sure. A majority feel that farmers will have "less freedom to plan, plant, and sell in the next 5 to 10 years." They predict we'll have farm programs and controls with us for a long time.

WHAT FARM ECONOMISTS SAY

1. Can legislation solve the farm problem? Yes, 2 percent; no, 46 percent; right kind can help, 50 percent; maybe, 2 percent.

2. Have Government attempts to raise prices hurt or helped farmers? Hurt, 38 percent; helped, 38 percent; hurt and helped 24 percent.

3. Some people argue that the law of supply and demand is out of date. Agree, 3 percent; disagree, 94 percent; both, 3 percent.

4. In foreign countries that have fixed farm prices and controlled production, are farmers better off financially as a result? Yes, 6 percent; no, 94 percent.

Do consumers there pay more or less for food, if you include taxes they pay for subsidies? More, 86 percent; less, 9½ percent; same, 4½ percent.

5. In your opinion, will U.S. farmers have more or less freedom to plant and sell in the next 5 to 10 years than they've had? More, 19 percent; less, 47 percent; same, 34 percent.

Unemployment Compensation Saves Many From Charity, the Houson Post Reports

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 27, 1959

Mr. YARBOROUGH. Mr. President, there are 4.3 million jobless persons in this Nation today. More than 2 million of them are enabled to feed their families and retain their self-respect until they can find other employment because of payments from their State and Federal Governments.

This unemployment compensation plan is accepted as routine today. Yet it was passed only in 1935, and is, therefore, a fairly recent innovation, a pioneering social experiment.

In this time of recession, the unemployment compensation plan has more than proved its worth.

James V. Mathis, chief of the Washington bureau of the Houston (Tex.) Post, has written an especially fine article about this farsighted program. Mr. Mathis is a reporter of exceptional caliber, with a distinguished record both in Houston and with his paper's bureau at the State capitol in Austin. The Post is one of the State's outstanding daily newspapers.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article by James Mathis published in the Houston Post for Monday, April 13, 1959, under the heading, "Jobless Pay Saves Many From Charity."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOBLESS PAY SAVES MANY FROM CHARITY

(By Jim Mathis)

WASHINGTON.—Consider a job hunter subsisting on an average of $30.60 a week a privileged person?

He is just that, the blue-ribboned of the unemployed.

Like the owner of a pot of stew in a jungle where others own nothing, he is a true man of distinction.

There are 4.3 million without jobs in the United States. Only a little more than half of these are drawing a weekly check as rightful, legal unemployment compensation.

The rest are on the outside looking in—on relief rolls or living on the bounty of friends or relatives. In short, on charity.

That more than 2 million are each week receiving checks to tide them over unemployment and allow them to avoid the igno-

miny of charity is a 20th-century development that is accepted casually by the bulk of the people.

But it has been a lifeline to those who need it.

Unemployment insurance, passed by Congress in 1935, is designed to guarantee a worker a portion of a wage loss when his job ends through no fault of his own. It is a social approach born in Europe, pioneered in the United States by Wisconsin, and given impetus with the depression in the 1930's.

Employers contribute to a State fund held in trust in the Federal Treasury. The contribution, or tax, may be written off up to 3 percent of the employer's income tax return.

Currently, 47 million Americans making up nearly 75 percent of the civilian labor force are covered by the provisions of various State laws. An estimated 2.1 million employers contribute from taxable payrolls in excess of $110 billion.

The Federal statutes laying out the ground rules for unemployment insurance provide chiefly for the protection of the trust funds, for prompt payment of benefits, for a fair hearing if payment is denied, and for denial of the right of either side to use the program for strikebreaking or company defeat.

Within these general provisions, the State lays out its own employment security measures.

Complete State latitude is allowed in specifrying qualifications, amounts, and duration of payment. In practice, the fair-hearing procedure is one for State decision and control. Of all the State-Federal programs—the Federal Government contributes to the administration—none is so free from Federal controls in so many basic policy areas.

BENEFIT PROGRAMS VARY WIDELY

It's not surprising, then, that such wide variation occurs in the program. Payments per week range from $45 in New York State and Alaska to $26 in Arkansas, North Dakota, and South Carolina. Duration of benefits varies from 20 to 39 weeks, and may by penalties drop to 7 weeks or nothing.

Qualifications and disqualifications run up and down the scale. Generally, qualification is based upon the claimant having worked at a specified earning level for periods prior to the filing of a claim. Payments go up and down according to the amount earned.

As a minimum, State laws deny benefits to those who are unavailable for work, are involved in labor disputes, have quit, or refused to work without good cause, or have been fired for misconduct. Denials may be for specified periods, or for only the time in which the disqualification is in effect.

In some States, the receipt of other funds either from old-age pensions, an employer's pension, vacation pay, or separation allowances, or workmen's compensation, is reason for either disqualification or lowering the amount of unemployment compensation.

Texas, for instance, reduces its benefits by the full amount of old age survivors insurance.

At least 17 States disqualify women who leave work for marital reasons, either because their husbands leave the community or because of being expectant mothers.

In the quarter year October 1 to December 31, 1958, there were 434,850 disqualifications, a ratio of 16 to every 1,000 claimants in the Nation.

Texas ran far above the national average, with 19,908 disqualifications, a ratio of 28.5 per 1,000 claimants.

There are a number of problems causing current concern in the unemployment insurance program.

To begin with, the benefit levels are in question. A survey completed late in 1958 by the Department of Labor showed that on the average, weekly benefits paid to single persons cover between 57 and 73 percent of total weekly expenses, and all their nondeferable expenses.

The story is somewhat different with heads of households who must live on the benefits. The payments amount to only 38 to 48 percent of weekly necessities, and to between 60 and 78 percent of their nondeferable expenses.

HALF-OF-SALARY PLAN URGED

President Eisenhower has urged, and the Department of Labor constantly promotes, the raising of all benefits to where they will cover 50 percent of the workers' pay. This would give some solid sustenance and at the same time would not remove the incentive to return to work.

Duration of benefits have been met on the Federal level with congressional approval of two extensions to be paid for from Federal funds. The emergency extension in 1958, from June until April of this year, put $370 million in the economy as well as the unemployed pockets during the remaining part of 1938. Roughly 70 percent of those covered and unemployed were brought in under this emergency program.

On March 25, Congress again extended the duration of benefits along the same lines until July 1, 1959. But Congress refused to extend the program for 15 months as urged by some Senators, and clearly gave as its intention that the Federal participation be temporary in nature.

President Eisenhower also holds that the issue of unemployment insurance is one for the State governments. The administration will ask, however, that some 3.2 million persons not covered by the insurance now be brought into the program.

In addition, the President will urge Congress to strengthen taxing systems to increase the reserves.

There are measures before the Congress which would set Federal standards on the program. Senator JOHN KENNEDY, Democrat, of Massachusetts, has proposed sweeping changes.

The executive committee of the Governors' Conference has expressed its opposition to further Federal intervention. States should be allowed to act in accordance with their respective needs, the Governors said, without the imposition of Federal standards on eligibility, duration or amounts of benefits.

The Bureau of Employment Security, the administrative and study agency on unemployment insurance in the Department of Labor, is one of the sources of unemployment figures through its collection of claims filed with State commissions or agencies.

REPORTS ON CLAIMS ARE ISSUED

This Bureau issues weekly reports, by States, on the number of initial claims and the volume and rate of insured unemployed under the State programs.

These figures also include the volume of unemployment compensation for veterans by States and the national figure for the Railroad Retirement Board program.

The count of uninsured unemployment represents the number of persons reporting a week of unemployment under State programs. Included are some persons who are only partially employed.

The report excludes those who have exhausted their benefits, new workers who have not earned rights, and persons losing jobs not covered by the systems. This last category covers agricultural, State, and local government workers, domestic service, self employment, unpaid family work, nonprofit organizations, and firms below a minimum size.

The initial claims are those giving notice that they have lost jobs and are starting periods of unemployment. If the claimant continues to be without a job for a week, he is counted among the insured. These initial claims are valuable as the first indication of emerging new unemployment.

Joined with the Bureau of Labor Statistics payroll count of the employed in 155,000 firms, expanded to give a national figure, and the Census Bureau estimate of total unempoyment, the figures get a working over at a meeting in the Budget Bureau. The result is a coordinated report which is the official combined employment and unemployment release.

Each of the bureaus release simultaneous reports on their individual efforts.

This system has been operating since 1954. Last year, the Department of Labor won out in a long fight to gather to its bosom all statistics and releases on labor. After July 1, the Census Bureau will collect the data and turn it over to the Labor Department for analysis.

This is a procedure followed by the Census Bureau with the Public Health Service. It reduces the agency to a collection operation, but signs are that the Census Bureau will insist upon fairly objective use of its data.

"We will be looking over their shoulder," one official at the Census Bureau said.

The Housing Bill and the Airport-Aid Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. WIDNALL. Mr. Speaker, the letter that follows is most unusual in this day and age. Mr. Robert P. Mulligan, branch manager of the Owens-Corning Fiberglas Corp. writes opposing the housing bill in its present form and the airport aid bill. The writer points out that his company is a large manufacturer of building materials and would benefit by any enlarged program of residential construction and urban renewal.

The company opposes the bills in their present form because they would unbalance the budget, force deficit financing upon the Treasury and lead inevitably to inflation. The company is certainly to be commended for placing the welfare of our Nation and a sound economy above any special benefit that they would get out of proposed programs.

I hope the Congress will read and consider the sound advice included in Mr. Mulligan's letter:

OWENS-CORNING FIBERGLAS CORP.,
New York 9, March 31, 1959.

Hon. WILLIAM B. WIDNALL,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN WIDNALL: Recent passage of the housing and the airport-aid bills raises such extremely serious fears that we would like you to know where we stand, and the point of view we are communicating to our own people across the country, including those at our Barrington plant in your own State. We hope these views receive your most serious consideration when these bills come up again for vote, either to resolve differences between the House and the Senate, or in an attempt to override any veto.

Although our company is a large manufacturer of building materials and has a big stake in both the residential construction and urban renewal programs, nevertheless we oppose the housing bill as passed (to the degree that it goes beyond the original amount) because it will unbalance the budget, force deficit financing upon the

Treasury, and lead inevitably to inflation. Once on the statute books, there will be no end. This was dramatically forecast when the mayor of one of our great cities was appearing before a committe hearing on the bill, and was asked "How much money do you need, and when?"; and his candid reply being: "Just as much as I can get, and just as soon as I can get it."

There are a number of good features in the bill (realistic interest rate, urban renewal), but, even with the most favorable budget outlook, the subsidy features are unwarranted and not needed at this time. Housing construction is certain to be at a high level in the year ahead and, at a reasonably competitive interest rate, adequate financing will be available.

We also strongly oppose the airport-aid bill, at least in the increased amount added before passage. The bill as originally proposed was certainly far from penurious. But the bill, as passed, we simply cannot afford. We feel very strongly that there is no real need for this inflated bill, because in the Toledo, Ohio, area everyone joined together and built, and have been operating successfully, a modern airport (one of the best in the country), without 1 cent of Federal aid.

These two bills will throw the budget hopelessly out of balance unless, in order to save such "pork-barrel" legislation, this Congress should commit the unthinkable act of cutting back the expenditures required for our vital military defense and those of our friends. In short, we strongly oppose any legislation which goes beyond the expenditures provided for in the budget unless the Congress has the courage concurrently to provide for additional tax revenues which cover such excess expenditures. After all, $77 billion is not austerity.

We realize that various selfish groups will bring enormous pressure on you to spend, spend, spend. Pressure groups have vast experience in getting the spending programs they want, while the ordinary taxpayer, who has to pay the bills, is usually no match for them. But we also know that all of the people cannot be fooled all of the time and that inevitably (and probably sooner than anyone suspects) the average American will come to his senses, and turn upon those who have been the architects of the unbalanced budget and an inflation which destroys the purchasing power of his earnings, eroded the value of his savings, lessened the protection of his insurance, and destroyed the basis of his pension or retirement plan. And he will know where to turn. For Congress, and Congress alone, holds the strings of the Nation's purse.

Finally, it should be obvious that the masters in the Kremlin would want nothing better than for our country to embark upon a course of fiscal irresponsibility and inflation. It is sound Marxist doctrine, recently reiterated by Khrushchev, that communism need not fight a war to conquer the West—because the system of free enterprise carries within itself the seeds of destruction, the most virulent of which is inflation. And, possible even more importantly, our friends abroad (whose loyalty and confidence we must retain) are even now wondering—as reported by Chairman Martin of the Federal Reserve Board—whether we Americans "have the moral fiber to put their finances in order." A nation which aspires to world leadership cannot make deficit financing a way of life.

The distinguished senior Senator from Virginia has pointed out that, of the increase of $14.3 billion in our annual budget since 1954, 75 percent has been outside the areas of national defense, atomic energy and mutual aid, and that it is in the nondefense areas that we have drifted into the greatest increases in spending. And so we submit that it does not take moral courage to authorize expenditures beyond our income (as some pressure groups are now preaching) but, on the contrary, it takes moral courage to limit our spending to our income.

We are fast approaching the beginning of the final reckoning. The refusal of the holders of one-third of the currently maturing Government bond issue to accept new bonds at a higher interest rate is the ominous warning. It means that this Congress will most certainly have to increase the debt limit to history's highest point, and very probably will have to increase the interest authorization above the 4½-percent maximum that was set back in the World War I era.

This has been a long letter, but we feel that the decisions reached by this Congress are the most important and vital that have confronted any Congress since 1789. We have faith in our elected representatives, and in the sound commonsense of our fellow citizens. And once it is generally understood that the way to curb inflation is not by more inflation, then our ship of state will have been safely steered past the dangerous shoals which now threaten. Now is the time for selfless statesmanship.

Yours respectfully,
OWENS-CORNING FIBERGLAS CORP.,
ROBERT P. MULLIGAN, *Branch Manager.*

Great Dangers of Inflation

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. CONTE. Mr. Speaker, I feel it is essential that we all be aware of the tremendous dangers which inflation can hold, not only for our economic health, but for the entire political future of our Nation.

Under leave to extend my remarks, I wish to include at this point excerpts from a letter I have received from Mr. Warren Chase of Ashfield, Mass., one of my constituents. I commend his remarks to all of my colleagues:

ASHFIELD, MASS.,
March 24, 1959.

The Honorable SILVIO O. CONTE,
Congressman, First Massachusetts District, Washington, D.C.

DEAR CONGRESSMAN: * * * Perhaps the most fateful matter in domestic politics in the country's history is whether or not the country is to enter of its own free will, heedless of the consequences, and irrevocably, the path of national insolvency with all its attendant crippling effects.

Let me say, first of all, that I do not feel as strongly as I do on the matter solely because of fears of personal loss and discomfort although they would not be negligible, for as long as my vigor remains, probably I should be less adversely affected on my farm by deepening inflation than vast numbers of less fortunate citizens. My strong antipathy to the course in which we seem to blithely slide proceeds from long familiarity with inflation and consequent national insolvency, some of it first hand, while serving nearly 30 years in our country's foreign service.

To begin, as a student at the University of Paris in the years 1926 and 1927, I watched closely Poincare's valiant efforts to save the franc, and then in the following years the gradual disintegration of France as repeated doses of "little inflation" gradually eroded the franc. During all of those years, 1926 to 1940, I was in Paris, Amsterdam, Hamburg, and Berne, Switzerland, where I heard the echos from the German inflation of the early 1920's and watched the French one of the 1930's. Likewise, I spent the years 1937–39 at Hamburg reporting to our Government on the insipient German inflation of those years. In the late 1940's I watched the inflation in Finland where I was on duty at Helsinki. The most rampaging inflation of all, however, that I witnessed first-hand was that in Western Germany and Berlin, where I was on duty from 1945 to 1948. There the American cigarette in effect displaced German currency as the medium of exchange. The German currency was quoted among the citizenry and the occupation forces in terms of American cigarettes, and I believe for a time reached the fantastic sum of 2,000 marks to a carton. Upon returning to duty in Washington in 1951, I discussed often at length with colleagues who had served in China the gross inflation there until the Communists finally prevailed there in 1948 and 1949.

I know that in theory one can have a little, or even a lot of, inflation without necessarily an immediate or even early collapse; but such feats seem to be possible only by the most dextrous maneuvering and, since the First World War at least, apparently only when such maneuvering is accompanied by the most stringent of politicoeconomic controls. The most successful of such controls, of course, have been in the totalitarian states; i.e., Nazi Germany and the Communist States. Rarely has it been possible to control an inflation without the discipline of a totalitarian state and all of the consequent deprivations for the citizenry. Witness Dr. Schacht's amazing wizardry in Nazi Germany in the late 1930's; please note, however, that the inflation that there grew by leaps and bounds with the citizenry being deprived of all except a tightly rationed list of necessities in favor of an expanding (growing) economy was devoted almost wholly to the new war machine—but all under the mailed fist of the totalitarian Nazis. Witness a similar mailed fist control of inflation. Since 1945 in the totalitarian U.S.S.R with its decreed decimation of individual bank accounts and effective cancellation (euphoniously called postponement for 20 years) of great portions of the national debt.

In France, China, and Latin American countries such as Chile and Brazil, where the mailed fist of a totalitarian regime has not been available to control the respective inflations, the latter surpassed control with consequent great impoverishment. Perhaps it is only coincidence, but the weak democratic governments in China and France that tolerated, when they did not actually encourage, their respective inflations were swept away eventually by a totalitarian (Communist) regime in China and by a regime of a benevolent autocrat, for a time at least, in France who fortunately for the French and us, too, is too humane to use the mailed fist. * * *

Unless the Members of the House of Representaives and the Senate are prepared to consign the fate of our country to totalitarian controls, and, perhaps practical suspension if not liquidation of at least the legislative arm of our constitutional apparatus, it would appear that those Members have little choice but to take every step however, painful to maintain the solvency of our country. Who knows whether we should be so fortunate as France in having in reserve such a high principaled human being as De Gaulle to assume the burden of saving the country without extinguishing our freedoms? I don't see such a one meditating in his tent anywhere here.

You and your fellow legislators face a most cruel dilemma, for according to the press and

radio many of the recently elected legislators have been whetting the already by no means unstimulated appetites of the citizenry for things which the country simply cannot afford while we must keep our swords sharpened. It will take a heroic effort by many of you to shut off the spigot.

Very truly yours,

WARREN M. CHASE.

Aftermath of Sputnik

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. HESS. Mr. Speaker, under leave to extend my remarks, I include a speech delivered by Albert W. Highsmith, to the Deer Park High School PTA in Cincinnati, on April 9, 1959.

Mr. Highsmith is a loyal American, who knows that the future of our country depends upon the education and ability to think of the youngsters now in school.

In these days of vast spending I hope every Member of this House will read this address, and particularly ponder the statement by Mr. Highsmith, including this quotation from the Wall Street Journal:

It is possible that parents will have to resume their job of both curbing and inspiring their youngsters, teaching them at home some of the elementary principles of good citizenship and also of intellectual achievement. As one leading educator recently put it, "This requires no money—only a change of heart."

Mr. Highsmith's speech follows:

AFTERMATH OF SPUTNIK

(Speech by Albert W. Highsmith before Deer Park High School PTA, Cincinnati, Ohio, April 9, 1959)

Any red-blooded American schoolboy would envy me tonight. Imagine what he would give for an opportunity like this to stand up before an audience of parents and teachers and tell them what he thinks is wrong with school.

The message that I bring you tonight will be a bit different, I suspect, from what it might have been when I was a seventh grader. Then I might have reflected the sentiment of the young man who reported that he had no objection to going to school—his objection was to staying after he got there.

Now I have a different perspective, and this may make my message a bit more mature and constructive. For one thing, now I am older and, I like to think, wiser. But a changed factor that contributes even more to my difference of perspective is the fact that now I am on the outside looking in.

I do not come here tonight pretending to be an expert on my subject. I am not an educator. I am a businessman, but perhaps this view from the outside will have some value for you.

We Americans have a tendency to feel a bit smug about the way we do things—to believe that we do things better than anyone else. It usually takes a sudden, dramatic, and forceful event to shock us into a frank reappraisal of anything American.

About a year and a half ago such an event took place.

For the first time in all of history, a man-made satellite whirled over our startled heads. This in itself was surprising enough but an even more surprising fact to many Americans was that it did not carry a made in America label. The Russians had beaten us into outer space.

Today, manmade satellites whirl overhead with an almost monotonous regularity, but in October of 1957 there could be no doubt that the launching of Sputnik I was a Russian triumph.

It is to the credit of America that we were not too proud to acknowledge this fact and to go a step further and see if there was a lesson for us to learn in this Russian spectacular.

One of the most far-reaching results of this was that the white light of public scrutiny was turned full on our educational system. It was obvious that Russian education had contributed to an intellectual and scientific climate that had made this event possible. In America we began to consider how our educational system might be overhauled and brought up to date to meet the challenge of the space age. And that reappraisal still continues.

The answer is not simple.

From some quarters came the familiar cry that more dollars was the answer. Now, I doubt that I will find much disagreement among members of this audience that more and better equipped schools are desirable, or that higher pay for teachers would contribute to attracting and keeping persons of the highest competence in the field of education. Many teachers are in the field of education because they are driven by a deep dedication to help young people make the most of their lives. But there are not enough of these. And even if there were, teachers have to eat, too, and deserve to be compensated commensurate with their responsibilities of guiding our children during their formulative years.

However, we must not revert in this instance to the tendency of some Americans to feel that any problem can be solved by a congressional appropriation. Attuning our educational system to the space age cannot be done by dollars alone. It is going to take a basic readjustment of the entire system.

For example, let us compare our school curriculum with that of the Russian school system.

President Eisenhower has reported that "when a Russian graduates from high school he has had 5 years of physics, 4 years of chemistry, 1 year of astronomy, 5 years of biology, 10 years of mathematics through trigonometry and 5 years of foreign language." And, all of this is accomplished in 10 years of schooling.

In our own country, only one-third of our high school graduates have ever studied science. Only one in three has had more than 1 year of algebra. Only one in five studies foreign language.

I must agree with Adm. Hyman Rickover's observation that we must get away from the idea that "every American child has a God-given right to march in a commencement procession, clad in mortarboard and academic gown with the rolled-up parchment clutched in his hot little hand."

We need to make certain that diplomas from our schools are symbols of accomplishment and mental discipline, and not just certificates that the holders have spent the required number of hours warming school benches or can perform certain basic skills. We need to build in our young people that sadly rare, but vitally needed, ability to think for themselves.

There are those who contend that the answer to all our academic problems lies in deemphasizing sports. Perhaps they do interfere with scholastic endeavor. Certainly the outstanding scholar does not receive the same adoration from his fellow students as the football hero, and no school debate teams commands a fraction of the following the basketball team enjoys.

But before we tie the athletic programs to the stake, perhaps we should look closely to see if they hold any lesson for the scholar.

The job of a coach is to develop in his young charges muscles and speed. He doesn't try to do this by letting the team members sit all day munching candy bars and watching television. Physical development comes from hard work and repetitive exercise.

Hard work and repetitive exercise are also necessary to develop mental agility. It can't be done by courses designed only to entertain students. It takes an academic diet that challenges him on which he can build the mental speed and muscles to meet the future.

I believe that this ability can best be built through the concentration that goes hand in hand with courses like mathematics, English, sciences, and foreign language. We need to emphasize courses like these in our curriculum.

It is possible that we have been trying to be too practical in establishing the curriculum of our schools. Perhaps we have been placing disproportionate emphasis on subjects with immediate application at the expense of academic, thought-building courses. It is true that auto driving and cooking classes, for example, are worthwhile, but not at the expense of courses like English, mathematics, languages, and science.

In business, of course, we are pleased to find employees with knowledge of how to perform certain basic tasks, but the more valuable employee is the one who can think through for himself how to perform even more complicated jobs.

For that matter, perhaps we need to reexamine our national attitude toward the proper role of schools. We talk piously of the responsibilities of the family but at the same time we shove more and more of what was traditionally the responsibility of the family onto schools.

I learned to drive a car from my father. It was a valuable lesson but, of greater importance, at the same time, I learned from my father a great deal about how to be a man. Many a girl has learned how to be a lady while she and her mother shared the kitchen and she learned to cook. I am afraid that today too often children seldom see their parents except in the glow of a television set. Let's not lose sight of the relative roles of the home and the school. We must never make the role of school custodial care. It has much more important work to do.

Another word of warning—we must not let the fact that the current reappraisal of our schools was born of a scientific event lead us into the fallacy of too much stress on science at the expense of basic courses. Scientists themselves have warned that success in their field comes easiest to those with a broad liberal arts base as a foundation for their scientific know-how.

Liberal arts courses, too, have their practical applications but, in addition, they offer the challenging mental exercise of which the ability to think is made. Developing such ability should be the role of education.

One of the things that has contributed to diverting our educational curriculum from basic courses of study is the lack of adequate counseling of students in the selection of courses. Left to select their own courses without proper mature guidance, too often students tend to pick snap courses or ones that appeal to their immediate juvenile interests.

Every student in America should be counseled as Senator ALEXANDER WILEY has

advised the students of Wisconsin. In an open letter to them he said:

"Use your freedoms wisely. Please don't fritter it away. Don't just take easy courses, or read easy books, because they are snaps. Don't just try for passing grades.

"Remember that the harder you work, the harder you study—the more you will tend to learn. And the greater will be the dividends to yourselves and to your country."

This is good advice for all school students, but the job is not theirs alone. We have our part.

We must go back to establishing curriculum on the basis of the real value of the courses as viewed after the fact and to counseling students in that light rather than leaving such selection entirely to teenagers. I know of no more dramatic proof of the fact that students need mature advice in selecting courses than the frequency with which we hear businessmen remark that they are sorry they did not take a particular course while in school, or the steady stream of them who are turning to night school to fill the gaps.

In establishing curriculum and scholastic requirements, we must not be afraid to make schoolwork hard. In our efforts to make sure that our children get even more out of life than we have, we must guard against overindulging them and shielding them from hard work. Such is essential in preparing them to meet the future with success.

The function of education has been summed up very well by Theodore McKeldin, former Governor of Maryland. He has pointed out, "Every great spiritual religion—not Christianity alone—but Judaism and Islam as well—agree that the Creator is very mindful of man, and none of them claims that it is on account of man's own worth and dignity. His body is one with the beasts of the field, and even his reasoning power seems to be an extension and development of that of higher animals. But, in man alone, of all living creatures, his Maker has planted a spark of His own dignity; and for that He is mindful of him. To fan this spark into flame is the highest achievement; and the education that contributes to that achievement is the only schooling worth all the effort and expense we can give it."

Of course, it is not enough just to offer courses capable of provoking thought and counseling students to enroll in them. If students are to get full benefit from such academic courses, they must find interest in them.

For this, it is first necessary that the teacher himself be genuinely interested in the course. He must have the light of natural enthusiasm that will inspire his students and whet their appetites for the knowledge he possesses. He must impress upon them that he is not taking them all the way to full mastery of the subject or even to the extent of his mastery but is showing them the way and challenging them to go on to seek greater knowledge.

He must not let the students get the idea expressed by one first grader when she lamented having to leave her favorite teacher and remarked, "I wish she was smart enough to teach second grade next year."

Nor must we let them think, after completing a course, that they know it all as did the young lady who inquired about the work of the man next to her at a dinner party. He, a famed astronomer, replied, "I study astronomy," to which the young lady commented with disdain, "Oh, I finished that last semester."

A theory that has played a seriously damaging role in lowering the standards of our schools holds that outstanding students should not be permitted to go beyond their less proficient classmates and that mentally slow students should not be held back when the rest of the class goes on. This theory holds that all students should be given the same academic diet regardless of their appetites or digestive abilities.

This is, I believe, sheer nonsense. Some people are naturally endowed with more gray matter than others and some will excel if encouraged to apply themselves with their full vigor. Such encouragement has been a foundation on which the success of our way of life has been built.

To hold a naturally bright and ambitious student to the level of the average or below average bores him and destroys his ambition. Jean Felix Piccard, the famed scientist, reported that when an exceptionally bright lad of 14 visited his laboratory he asked the boy what he was learning in school. The boy might have been answering for many outstanding students when he replied, "Nothing. Nothing at all."

To him and his fellows, the subject matter, leveled to the requirements of the less proficient, was elementary and offered no challenge.

On the other hand, to let an inferior or just lazy student pass on with the rest of his class without mastering elementary requirements is equally unrealistic and damaging. For one thing, it shields him from the realities of life that he is going to have to come up against sometime—possibly when he will be less able to adjust to their impact. And, of course, injecting him in a scholastic atmosphere beyond his reach compounds his frustrations.

What I have tried to say tonight is that, as a businessman, I believe that to meet the challenge of the space age our schools must offer each student a challenge. They must give him mental discipline and exercise. They must awaken in him an intellectual curiosity—a respect for learning.

And, speaking of respect, I think that a vital element is building respect for teachers by their students. Recently, one of my young neighbors was heard singing to the tune of the "Battle Hymn of the Republic":

"Mine eyes have seen the glory of the burning of the school
We've tortured every teacher and broken every rule
We're marching to the office to hang the principal
We brats go marching on."

Although I think my young neighbor was being facetious, evidently some of the schoolchildren of America really have little more respect for schools and teachers than this.

I believe that the sort of situation in which a teacher cannot discipline a child is the cause of much of the juvenile delinquency in our country. I think that a situation in which school corridors must be patrolled by policemen to protect life and property is a sad commentary on our attitude toward schools.

Building proper respect for authority is a proper function of the home but, if the parents fail or its training needs reenforcement, teachers should not be denied necessary reign to discipline students. There can be no doubt that one of the most important functions of teachers is to help mold the character of their charges—to supplement the training of the home in preparing children to be good and responsible citizens as well as teaching them academic subjects. In this they are partners with parents.

On the matter of the partnership of teachers and parents, the Wall Street Journal had the following editorial last spring:

"The other night, we were at the school in our hometown to see a skit. But this time all the actors were teachers. The title was 'Teachers Are Human' and plainly the present crisis in education was the inspiration.

"These teachers were human enough, leading lives riddled with annoyances petty and not-so-petty, some deeply interested in their students and some less so. But obviously their play also could have been titled 'Teachers Are Not the Parents.' As one of the teacher-actors put it, it is difficult to be a full-time daytime babysitter while trying to launch a sputnik in a classroom.

"The teachers seemed to make a point that has been made too seldom in all the talk about the shortcomings of teachers and education. Leaving aside their natural pique at being made the target of the national failure in science, there is much truth in the idea that parents still bear the chief responsibility for their offspring and their attainments or lack thereof.

"It is possible that parents will have to resume their job of both curbing and inspiring their youngsters, teaching them at home some of the elementary principles of good citizenship and also of intellectual achievement. As one leading educator recently put it, 'This requires no money—only a change of heart.' "

It has been observed that the trouble with the school system is the teachers are afraid of the principals, the principals are afraid of the parents, the parents are afraid of the children, and the children are afraid of nobody. Such a situation is just not conducive to good education.

Let me close tonight by saying that here in Greater Cincinnati we have good schools. Most of the problems I have discussed apply more readily to schools in other areas, yet it does not hurt to reexamine even the best to be sure that evils are not creeping in or if they can be improved.

This must be a constant job—not just an aftermath of sputnik. And that job belongs to you—teachers and parents alike. The fact that you are active in the PTA here at Deer Park indicates that you realize this and I congratulate you on it. But you need to redouble your efforts to get your neighbors to join you.

Here also we have fine teachers for the most part. In this we are particularly fortunate. To them and to our schools is entrusted America's most precious resource—our youth.

To fan the spark of the Creator in them into flame is the job of education. It should be the concern of every American that this job is performed with the greatest possible excellence.

Fruitful Career

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of April 23, 1959, upon the retirement of Prof. George V. Sheeder as instructor in music at Wyoming Seminary, Kingston, Pa., after 45 years service:

Retirement of Prof. George V. Sheeder, teacher of violin at Wyoming Seminary's School of Music, in June terminates a fruitful career, spanning 45 years. His wife, Mrs. Helen Fritz Sheeder, is teacher of piano at the same institution.

A graduate of Wyoming Seminary, Professor Sheeder continued his studies in the United States and Europe before joining the

seminary faculty in 1913. His pupils have included many outstanding musicians in the community and country.

Nanticoke knows Professor Sheeder as well as seminary because of his ties with the school district as supervisor of music and director of its band and orchestra until his retirement there in 1952. He also enhanced a reputation for service through his club and fraternal activities.

An adopted son of Wyoming Valley, Professor Sheeder found in the community an outlet for his superior talents and he made the most of the opportunity. It is a pleasure to salute him on behalf of a grateful community.

What the Educational Benefits of the GI Bill Mean to a Family

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. YARBOROUGH. Mr. President, one of the principal features of my proposal to extend the benefits of the Korean conflict GI bill to cold war veterans is the provision for educational assistance.

Recently I received a letter from a family in Houston, Tex., telling what the enactment of this bill would mean to them and their son, who is now serving with the U.S. Air Force in Germany.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. and Mrs. W. S. Nail, of 2220 West Alabama, Apartment 3, in Houston, Tex., written February 24, 1959.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOUSTON, TEX.,
February 24, 1959.

The Honorable RALPH YARBOROUGH,
U.S. Senate, Washington, D.C.

DEAR SIR: It was a real consolation to read in a recent paper of your interest in the GI bill. We can certainly describe your efforts as a job well done and they deserve a sincere word of gratitude.

We, too, believe that those serving our country are entitled to some benefits, and particularly an educational allowance. This is of special interest to us as parents—with some assistance along this line we could have the assurance that our son would have college training. Upon his return from Germany in August of this year, he will have completed a 4-year period in the Air Force. Certainly, he would have a more secure feeling if he could make definite plans to enter college and know that he would be able to get a degree. We feel that it would be something that he has worked for and something he would make the most of. Nowadays, it seems that only the rich can afford higher training and this leaves people like us looking to people like you for ways and means of keeping things on an even keel.

You have our very best wishes for continued success.

Respectfully yours,
SALLE NAIL
MR. AND MRS. W. S. NAIL.

Defense Procurement Policies

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. KOWALSKI. Mr. Speaker, I am alarmed by the Department of Defense's statistics which indicate that small business is participating to a lesser and lesser extent in this Nation's defense programs. These statistics show that last year just 10 companies received more than 38.7 percent of the defense contracts. About 100 firms received over 74.2 percent of the contracts. Moreover, of the $23 billion spent on procurement last year, over 86 percent was spent on negotiated contracts—which included large sums of public money spent for new facilities, when, as in my own State, Connecticut, millions of square feet of production facilities and thousands of skilled men are either completely idle or only partially productive. Only about 14 percent of the procurements last year went to advertised bidding.

The evils here involve this country both economically and militarily. It is economically unsound to concentrate over 74.2 percent of this country's defense procurement in just 100 concerns. It appears militarily unsafe to concentrate production in such a few areas. In my own State, Connecticut, defense spending has fallen off approximately $350 million in the last 2 years. Many companies, large and small, are working with no backlog or have been forced to shut down.

I believe that legislation is in order to insure that negotiated contracting is reviewed before the fact rather than after contracts have been let. I intend to introduce legislation in this session which will establish a review board to investigate the advisability of awarding negotiated contracts when certain amounts of moneys are involved. The letter I am inserting in the RECORD outlines the views of an organization, the Electronics Small Business Council, which is very close to this problem, and, as a small business council, represents members who have had years of experience in dealing with procurement policies:

ELECTRONICS SMALL BUSINESS COUNCIL,
Washington, D.C., April 10, 1959.

Congressman FRANK KOWALSKI,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KOWALSKI: The congressional liaison committee of this organization, of which I am chairman, has asked me to contact you in the hope that you, and other Members of Congress, might be willing to evaluate present Defense Department procurement policies to determine if these are best serving this country.

The Congress is clearly responsible, under section 8, article 1, of the United States Constitution, for the expenditures of moneys for the Armed Forces. I believe you will agree that this responsibility is such that the Congress is obliged not only to provide the necessary funds but insure that they are spent wisely and prudently.

Defense Department figures prove conclusively that small business is not participating to any great extent in the defense effort. We have gotten to the point where only a handful of giant corporations receive more than four-fifths of the defense contracts. Negotiated contracting is the order of the day. Five-, six-, and seven-year backlogs are not uncommon among the big firms. These firms, through their position by controlling the support of maintenance parts, are able to "dictate obsolescence" of expensive systems, aircraft and other weapons.

This organization believes that it is expedient and proper to award research and development contracts to the large companies capable of performing this work. But, when research ends—and production begins—sufficient data should be available to give many concerns, of all sizes, the opportunity to bid for production of the many thousands of items which are now being negotiated for on a sole-source basis.

There is far too much authority at the lower echelons of the Defense Department which enables too many people to allow negotiated contracting. This authority—usually involving hundreds of thousands of dollars—should remain with the Secretary of the Department concerned. Before contracts are let, it appears that a review board of qualified technical personnel should determine whether or not to negotiate.

We are not, as small businessmen, asking for special favors. We are only asking that Congress accept its responsibilities and take the action needed to prevent military procurement funds from being wasted.

We ask that we are given an opportunity to bid on those items which we are capable of producing. In these cases we know that we can produce thousands of items cheaper and faster than they are being produced under negotiated contracts.

We also know that by breaking up the concentration of contracting which exists now because of negotiated procurement, that the economy will receive a boost. In addition, vital defense components will be built in widely dispersed areas, rather than being constructed in a few easily accessible points.

I hope that we may count on you to further investigate the matter of negotiated contracting and you may be assured that this council is ready and willing to give you further assistance or information you may need.

Sincerely yours,
GEORGE ESTOK,
Chairman, Congressional Liaison Committee.

Effects of Continuing Inflation

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a very timely and significant letter written by the Honorable J. Theodore Wolfe, president of the American Gas Association, to the President of the United States. His letter serves so well

to emphasize the frightening effects of continuing inflation. I commend this letter to my colleagues and the American public as worthwhile reading material:

AMERICAN GAS ASSOCIATION,
New York, N. Y., April 2, 1959.

The PRESIDENT OF THE UNITED STATES,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The question now before Congress—whether the Federal budget to be passed for 1960 shall be a balanced one—is of major importance to every citizen, whether an employer or employee, stockholder or consumer. A balanced budget will be the basic economic factor in determining everything that we can do as a Nation at home and abroad.

In my recent conversations with industrial leaders and others across the country, I found the overwhelming majority in favor of a balanced budget for general reasons. But there seemed to be scant realization of the inflationary consequences and special effects that an unbalanced budget will have upon those businesses whose operations and earnings are regulated. These include the gas utilities and pipeline companies which constitute the main public service elements of the gas industry.

Because their rates and earnings are limited to those necessary to compensate stockholders for the use of their capital and to attract the additional capital needed for expansion, their earnings cannot absorb the rises in operating costs resulting from inflationary pressures. During the years of creeping inflation since the last war, gas utilities experienced serious difficulty in obtaining prompt and adequate regulatory recognition of their special need for rate increases to cover the increasing costs of providing service.

Continued growth of inflationary pressures will bring more rate increase applications than ever to State and Federal regulatory bodies, making prompt and adequate relief impractical. Such a situation will mean that the gas industry, the fifth largest in the Nation, will be unable to contribute its proper share to the strength of the Nation's economy.

During the next few years, the gas industry, which now provides 28 percent of the Nation's total energy requirements, will require upward of $2 billion of new capital each year for plant expansion to supply the growing public demand for its services. Inflationary pressures will raise the cost of securing these funds and thus minimize the industry's services or increase their cost to the public.

In short, the regulated industries and the public services they render are peculiarly susceptible to the impact of inflationary pressures. Their special status justifies prompt and vigorous support of your balanced budget proposal on behalf of their customers and themselves.

I am writing to advise you of my concern in this matter, first, as a private citizen; as president of a regulated public utility; and finally, as president of the American Gas Association, which represents such regulated groups within the gas industry.

Very respectfully,

J. THEODORE WOLFE,

Hon. Christian A. Herter

EXTENSION OF REMARKS
OF
HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. KEITH. Mr. Speaker, may I join with my colleagues in the Congress in commenting on the appointment of Christian A. Herter as Secretary of State of the United States.

I served in the Massachusetts Senate for 4 years while our new Secretary of State was Governor of the Commonwealth of Massachusetts. And whereas many of my colleagues have commented favorably and enthusiastically on his competence in the field of foreign affairs, which I endorse, it is of his many accomplishments as chief executive of Massachusetts that I wish to speak at this time.

Mr. Herter reorganized several of our State's departments of government. He expanded its educational system and built hospitals and highways. He balanced the State budget and gave Massachusetts its first and only substantial reduction in taxes.

We have every reason to be confident that under Mr. Herter's leadership, the Department of State will have a positive approach to the problems of foreign policy.

Furthermore, we have every reason to believe—on the basis of past performance—that his program will be effective.

I consider it a distinct honor to have been associated with Mr. Herter at the State level, and to have this privilege of speaking in his honor today in the Congress of the United States.

Sixth District of Missouri Results of Opinion Poll

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. HULL. Mr. Speaker, I am pleased to make available for the information of other Members of Congress the results of a legislative poll I recently conducted among residents of the Sixth District of Missouri.

The opinions expressed in the poll assume national significance, I believe, in view of the fact that the district, comprising 17 counties in northwest Missouri, strikes a near-balance between farms and industrial and business communities, with responses coming from persons in a wide range of occupations.

Of special interest is the fact that a majority of the large number responding to the poll did not confine themselves to voting on the questions contained in the 28,000 questionnaires I mailed out, but demonstrated their great interest in the conduct of our national affairs by adding affirmative comments of their own on the pressing issues of today.

Residents of the district are most concerned about the high level of government spending, the continued failure of the Federal Government to live within its means, and the threat of inflation.

Also, a large majority voiced their approval of legislation designed to protect the rights of union members and the public against the machinations of the few unscrupulous labor union officials whose misdeeds have been exposed in recent congressional hearings. A typical remark was that of one man who stated:

I am a union member and I favor a tough labor bill.

The results, stated in percentages, follow:

	Percent yes	Percent no	Percent undecided
1. Would you favor increased taxes if necessary to maintain national security, as opposed to continued deficit spending?	70	23	7
2. Do you favor a cut in foreign aid spending?	70	22	8
3. Do you favor Federal aid for school construction?	43	51	6
4. Would you support legislation to regulate labor organizations?			
(a) By requiring secret ballots for union elections?	85	5	10
(b) By publication of financial records?	87	4	9
(c) By restricting secondary boycotts?	70	11	19
(d) By restricting jurisdictional strikes?	69	13	18
5. The President has requested an increase in postal rates and the Federal gasoline tax. Do you favor these proposals?	[1] 30	61	4
6. Do you believe the earning limitation for social security should be increased?	58	36	6
7. Are you in favor of the administration's farm program?	22	64	14
8. Do you favor an increase in the Federal minimum wage from $1 to $1.25 an hour?	38	58	4
9. Would you favor price and wage controls if necessary to halt inflation?	71	23	6

[1] An additional 2.5 percent favored increasing postal rates only, if necessary, and 2.5 percent favored increasing the Federal gasoline tax only.

Herbert W. Voorhees

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. WILLIAMS of New Jersey. Mr. President, citizens of New Jersey and others throughout the Nation were shocked last week at the death of Herbert W. Voorhees in an automobile accident. Mr. Voorhees was the president of the New Jersey Farm Bureau. In Washington, D.C., and elsewhere, he was known as a great spokesman, not only for the good of the farm bureau, but for the good of the entire State and Nation. Many tributes have been paid to Mr. Voorhees in his life, and many have been paid since his untimely death. The following editorial, which appeared in the Trentonian of April 23, gives expression to the sense of shock and grief shared by all those fortunate enough to have known Mr. Voorhees. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HERBERT W. VOORHEES

The news columns of this and other newspapers have reported the accomplishments of Herbert W. Voorhees in depth; and even if they had not there would be little need for our recounting them in this space. What he was and what he achieved during his all too brief lifetime need no embellishing.

Instead, we join with uncounted others in mourning the shocking death of a friend. There are no words to adequately express the profound sense of loss that burdens those who knew his ready smile, who basked in the welcome warmth of his affability, who were privileged to share the keeness of his mind, who responded to his inspiring leadership.

Too few men of his caliber pass this way, and when one such is removed from our midst we are made infinitely poorer. Herb Voorhees contributed in great measure to the community, the State, and the Nation—yes, even to the world. For that he earned the accolades which are now being showered upon him. But he contributed in even greater measure to his loved ones, his friends, his associates. They will long cherish the memory of one who had so much to give and gave of it happily.

Each Right Yielded to Reds Is a Cold War Battle Lost

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. LOSER. Mr. Speaker, having obtained unanimous consent, I place in the RECORD an editorial which appeared in the Nashville (Tenn.) Tennessean, a southern newspaper of renown. This editorial points up the views of Tennesseans generally, and I believe it conforms to the views of Americans everywhere. I commend its reading to the Congress. It follows:

EACH RIGHT YIELDED TO REDS IS A COLD WAR BATTLE LOST

Briton's leaders and people are weakening the Atlantic alliance by their jittery reaction to America's stand on its rights in approaching West Berlin by air.

They seem to have forgotten that to give up any right in dealing with Russian communism is to lose it, or that appeasement, once begun, is difficult to end.

Nor are our island allies helping the situation when, in their semihysteria, they openly charge that American generals have become so powerful that they are able to defy President Eisenhower in sending planes into Berlin above the 10,000-foot level decreed by the Soviets.

There is no basis for the charge that big brass in Washington is acting against President Eisenhower's wishes or orders. Instead, if anything can be taken for granted it is that the military is carrying out the President's policy of not giving an inch on its basic responsibilities.

The welter of propaganda now filling the British press appears to be as unwise as it is unfair.

If there is apprehension over what may happen before negotiations get underway, that is one thing. But no claim is advanced that the United States is doing any more than the British themselves have done, though not lately. A foreign office study of Royal Air Force log books shows that British planes have flown above 10,000 feet to Berlin in the past, though these flights have not been repeated in the current crisis.

In other words, as long as the Soviets did not object, the high-level approach was used. But when the word goes forth that this no longer pleases Mr. Khrushchev, there is quick acquiescence lest Mr. Macmillan's summit conference be adversely affected.

And what of the open charge, though not an official one, that the military is dominating the executive department in Washington? Evidence is all to the contrary, since one Army chief of staff, a very good one, has been given the bum's rush by Mr. Eisenhower for protesting some of his economy policies, while another has recently resigned rather than face further disappointment and humiliation. There has not been an administration in many years in which the military was more under civilian control, and the situation was in no sense changed by the illness of Mr. Dulles.

Fear of nuclear war is not confined to Britain and Mr. Macmillan. But fear in itself is not a calamity as long as it does not paralyze action. It exists, we may be sure, in the Federal German republic and in France, but it has not panicked anyone. That is why some of the British press accused Dr. Adenauer and President de Gaulle of waging war on Mr. Macmillan's cherished summit policies.

Certain dangers are clearly involved in the United States action, and perhaps we stand at another brink. But this is one brink for which Russia is wholly responsible, and we see no desire by the Moscow government to do away with it.

"In peaceful negotiations ahead the West will have to be united; it would be foolish for Americans to endanger this peace (sic) or this unity by too risky a bluff on smaller issues," the London Times says, editorially.

As a matter of fact, however, there seems to be unity among the Big Three on this point, save for Britain where Mr. Macmillan's leadership assumes too much importance and where the commendable goal for nuclear disarmament is being sought with a faintness of heart which could defeat its own purpose.

On grounds that the United States is sabotaging his country's policy of negotiation with Russia, a number of British Labor Party M.P.'s are going to demand formal protest to Washington by the Government.

One of them, Mr. Harold Davies, sounds off in this manner: "If the United States does not give us full assurances that these threats of war are repudiated and the generals kept under control, then the whole policy of allowing American bases in Britain must be reviewed."

This has all the earmarks of an ultimatum, based on false premises, which deals a blow to mutual confidence and plays squarely into Mr. Khrushchev's hands. It is one which should be met squarely and firmly in Washington.

The Montgomery County Sentinel, of Rockville, Md., an Honored Weekly Newspaper

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. FOLEY. Mr. Speaker, 30 years ago a small town weekly newspaper publisher gave me my first job as a printer's devil. Since then, as I have traveled from place to place in our country, it has been my custom to read the local weekly hometown newspapers. The vigor of their editorials, their dedication to the basic principles to which all Americans adhere, have been a constant source of inspiration.

For these reasons, I am proud to note that close by the Capitol in my own county we have one of the truly outstanding weekly hometown newspapers, the Montgomery County Sentinel, of Rockville, Md. Last week the Maryland Press Association awarded five certificates of honor to Mr. Cy Campbell, publisher, and Mr. Rogers B. Farquhar, editor, of this weekly newspaper that has a paid circulation of over 11,000. First place for best news picture in 1958 went to Hugh Gillespie, staff photographer. Other certificates for 1958 were second places for best editorial, for excellence in typography, and for community service, and third place for general excellence.

The Sentinel and its contemporaries are a hardy lot. They breathe genuine meaning and purpose into the words, "freedom of the press."

Historic Shrines Should Be Preserved From Commercial Exploitation

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. YARBOROUGH. Mr. President, the current sentiment for obtaining the sites of some of the major battles of the War Between the States for national parks is, I believe, a most commendable and worthwhile project.

If we are to preserve for future generations the fields where so many of our ancestors fought and died, fields which have such battle-scarred names as Manassas, Antietam, Gettysburg, and others, we must move now. Delay in obtaining the sites of these national parks will cost us a great deal of additional expense since some of the land is about to be subdivided for commercial developments. To acquire the land later would be a very much more expensive undertaking.

America has a mighty and colorful heritage, and these lands on which dramatic acts of our history occurred, should be preserved as they existed when the great decisions of history were made there.

Mr. President, as an illustration of the necessity of this project, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Jean M. White, printed in the Washington Post and Times Herald for Thursday, April 23, 1959, under the heading, "Isolated Monument—Battle Parks Needs at Manassas Cited."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ISOLATED MONUMENT—BATTLE PARK NEEDS AT MANASSAS CITED

(By Jean M. White)

A few days after Union veterans gathered at Manassas, Va., in July 1865, to build a monument to the fallen patriots of the North and the South, a contemporary newspaper commented:

"In no better way can the deeds of hundreds of nameless dead * * * be kept green in the memories of future generations."

Right now those deeds are indeed being kept green—in the midst of a woodland with access only by a rough, unmarked foot trail a quarter mile from the road.

What's more, the monument rests squarely on privately owned land. Tourists, hardy and sure-footed though they be, can get to see the monument now because the owner has given the National Park Service his permission.

NO WAY TO HELP

Because it does not own the land on which the monument stands, the Park Service cannot spend a dime to repair the crumbling stones or mark out a trail. Vandals long ago made off with the shells and shot that the veterans used when they built the monument.

The State of the Union Monument is one of the reasons the Park Service cites to back up its request for some $900,000 to buy privately owned land within the Manassas Battlefield Park. This would add 1,740 acres and double the present size.

Here's what is happening to some of this land:

A sign on a roadside corner of a farm proclaims loudly: "Slow down * * * 300 feet ahead. Snack Bar." The 300 feet ahead is the Confederate Cemetery owned by the United Daughters of the Confederacy.

Someone has tacked an apple cider sign on the wooden stairs leading to the cemetery.

Down the road on Route 29–211, a big sign carries a for sale notice on the Dogan farm. There has been talk of a housing subdivision to go up on the land.

Less than 2 years ago there was a threat of a filling station on land close to the Stone House—one of the two remaining Civil War buildings still standing at Manassas. The Park Service scraped up enough money to save the land.

SUBURBIA CLOSING IN

Like the battlefields at Gettysburg and Antietam, Manassas is beginning to feel the squeeze of commercialism and suburbia. The urban sprawl from Washington is reaching the 26 miles to the rolling hills.

Battlefield Supt. Francis F. Wilshin feels the Park Service must move fast to buy the land. The Chantilly Airport, 11 miles away, and Interstate Highway 66, which will skirt the battlefield site, will bring a commercial boom and double the tourist flow, he predicts.

"If we are ever going to preserve this battlefield," Park Service Chief Conrad L. Wirth told a House committee, "we have very few years to do it before it will be built up and gone forever."

The Federal Role in Public Education

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. FRELINGHUYSEN. Mr. Speaker, in lieu of the fact that the House Education and Labor Committee may soon report personally on a bill to provide Federal aid to education, I would like to call to the attention of my colleagues an excellent speech on this subject by Elliott L. Richardson, Assistant Secretary of Health, Education, and Welfare:

THE FEDERAL ROLE IN PUBLIC EDUCATION

(Address by Elliot L. Richardson, Assistant Secretary of Health, Education, and Welfare, before the Boston Elementary Teachers' Club 15th educational conference and luncheon, Somerset Hotel, Boston, Mass., Apr. 4, 1959)

It is a privilege to have this chance to discuss with you one of the most important problems of our time—the cooperative functions of local, State, and Federal Governments in the support and improvement of public education.

The basic question which must be answered in any discussion of this problem is, of course, what is the proper role of Federal aid to education? As I need not tell this group, the term "Federal aid" when applied to education is a phrase that conjures up the ugly specters of regimentation and control.

It is a curious thing, but it is a fact, that only in the field of education does the mere suggestion of a need for Federal assistance arouse instant emotions of suspicion, hostility, and fear. In all other areas of State and local governmental responsibility, opposition to Federal aid may be based on budgetary considerations, or on the belief that there is no need for Federal action. From time to time, concern may be expressed that Federal funds applied in these areas may be followed by Federal requirements. It is only in the field of education, however, that proposals for Federal aid inevitably engender bitter controversy over the issue of Federal control.

Even proposals to provide Federal funds for bricks and mortar are greeted by charges that Federal officials with federally prescribed curriculum in their pockets are determined to install themselves in any building constructed with Federal help. The fact is, as President Eisenhower has put it, that once the bricks are laid, the mortar is dry, and the schools are built, the Federal mission has been completed. All control and use of the schools will be left in the hands of the States and localities.

In any event, the various proposals for Federal aid to education have provided a lively focal point of controversy for the past decade or more. Usually, the controversy has generated more heat than light. Since I first became actively concerned with the development of education legislation, it has become increasingly apparent to me that much of this heat could and should be dissipated by an objective effort to focus clearly and realistically on the alternatives which confront us.

No one questions the fact that public elementary and secondary education has traditionally and historically been the responsibility of our States and local governments. No one, so far as I know, wants to change this situation. Indeed, I believe it is fair to say that the decentralization of control and the responsiveness to local requirements which characterize this country's system of free education are generally recognized as precious assets.

It is—or should be—equally axiomatic that the Federal Government has a vital interest and an intimate concern with education. The Federal Government cannot be indifferent to the quantity and quality of the educational opportunities which our system provides, for ultimately these factors are vital to our very national survival. The Federal Government must, therefore, be concerned with the sufficiency of State and local efforts to meet the needs of education.

This national concern is reflected in a history of aid to education which is as long as that of the Nation itself. As early as 1785, 3 years before the Federal Constitution was ratified, the Congress of the Confederation adopted an ordinance setting aside the 16th section of land in every township in the new territories for the maintenance of public schools. Two years later, in the Northwest Ordinance, the concept of education as being a part of the national responsibility was expressed in the declaration that "religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged."

These measures are significant not only as manifestations of a national concern with education. They also rest on the premise that the actual provision of education is a local responsibility, for it was to the individual township that land for the endowment of education was granted.

This reliance on local autonomy in the management of schools was a practical necessity under the conditions of pioneer life in America. The frontier was characterized by the relative isolation and necessarily self-contained nature of community life. Out of such life there developed a unique and powerful habit of local responsibility for the schooling of children. Nevertheless, despite this conviction, despite the early American's fear of the tyranny believed to be inherent in centralized government, the States accepted repeated instances of Federal aid with no loss of autonomy and no diminishment of control.

From the Revolution to the Civil War, the Federal Government encouraged and financially aided education in the States. It endowed higher and common schools with lands, and made grants of surplus tax moneys. On no occasion did the Federal Government attempt to regulate the purposes, define the programs, supervise the teaching, or otherwise seek to control public education in the States.

In 1862, under the Morrill Act, the Federal Government provided an eventual grant of 11 million acres of land for the endowment of at least one college in each State or Territory that would devote itself to the teaching of agriculture and mechanics. Although the Morrill Act designated specific purposes for the use of its grants, the recipients of its benefits, the so-called land-grant colleges, have not experienced any difficulty in maintaining control of their academic programs. Moreover, the extensive public services rendered by these institutions are proof of the enduring value of Federal-State cooperation.

This pattern of Federal stimulation without Federal domination, Federal help without Federal control, has characterized every subsequent program of Federal aid to education. The Smith-Hughes Act of 1917 and the George-Barden Act which assisted the States in strengthening and extending vocational education, the numerous legislative provisions for education during the depression years, the post-World War II measures of assistance to federally affected areas—all these programs illustrate the application of these basic principles to changing times and circumstances.

Present times and immediate circumstances have heightened the national concern with education. In the last half century our society has become an intricate composite of diverse but related interests, each dependent on all others for effective functioning. As a people, we are inter-connected, inter-racial, intercultural, and international. No individual, no State, no local community can any longer stand alone and survive.

The obligations of world leadership, the increasing demands of industry and the armed forces for highly trained scientific personnel, the requirements of foreign trade and international diplomacy for personnel having mastery of languages other than their own, the increasing complexity of our economic and social arrangements—all these developments have imposed on every school district and on every institution of higher learning insistent demands for a greater quantity and improved quality of educational opportunties, facilities, and results in terms of well trained and intellectually enlightened young men and women.

On top of all this, the high birthrate of the 1940's and a generally heightened prosperity that has permitted more students to remain in school for a longer time have resulted in crowding schoolrooms far beyond their capacities and have burdened teachers to the limits of their endurance.

These conditions challenge the administrative ingenuity and the financial resources of even the wealthiest States. They pose serious problems for States of low per capita income and meager tax revenues.

Under these conditions the issue is not whether there shall be Federal aid, but what form that aid should take.

Broadly speaking, the alternatives are either to identify specific national needs and help to meet them through concentrated short-term Federal efforts, or simply to assume a permanent Federal share of the total costs of education without further regard to the purposes for which Federal funds are used.

Two fundamental considerations favor the first alternative. First, it keeps clearly in the forefront the principle that education is primarily a State and local responsibility. Second, it relates Federal assistance to specific educational needs which have a particular and current relationship to the national interest.

The other alternative rests on the proposition that the Federal tax base is the broadest and most equitable means to finance the needs of education in communities whose available tax resources are strained to the limit. Only the Federal tax base is capable of reaching resources wherever they may be and bringing them to bear wherever they are needed, and therefore, it is argued, we should face up to the necessity of utilizing this tax base if the needs of public education are to be met.

It is, of course, a fact that State and local resources are severely strained, and that efforts to squeeze more money out of the real estate tax and other forms of State and local taxation are daily becoming more difficult. At the same time it is also important to understand that what the traffic will bear in the way of State and local taxation is largely a matter of determination of relative values. We can afford what we want to afford. It simply is not true that State and local tax resources cannot stand any additional load for public elementary and secondary education when the average amount annually expended for these purposes in this country represents only 3 percent of the national income.

It should be recognized, moreover, that the argument for utilizing the Federal tax base as being the broadest and most equitable is one which, carried to its logical extreme, would lead to the virtual abandonment of State and local government. For certainly the argument made on behalf of education—that a substantial and permanent share of its costs should be shifted to the Federal Government—can be made with equal force on behalf of every other State and local service. And if it is desirable to shift part of this load to the Federal tax base, why not all of it?

We have to decide, then, whether we believe that the limited, sometimes inefficient, but time-honored institutions of State and local government are worth preserving because of the very fact that they are diverse, that they are local, that they are close to us.

Of the two alternative forms of Federal assistance, this administration has firmly and consistently held to the view that, on balance, the first is better designed in the long run to assure the sound development of our educational system. This approach, accordingly, has been taken in all the administration's legislative proposals in the field of education, starting with the school construction program recommended to the Congress in 1955.

Consider, for example, the recommendations which formed the basis for the National Defense Education Act of 1958. The general outline of this historic legislation was sketched by President Eisenhower in his famous speech at Oklahoma City in the fall of 1957, when he discussed the critical need to strengthen the educational system and develop a greater proportion of the talent of the Nation.

In his speech th President called for a nationwide reexamination of school curricula and standards to determine whether they meet the stern demands of the era we are entering, an era which would, he warned, demand not just engineers and scientists, but, in every field, leaders who can meet intricate human problems with wisdom and courage. He went on to list several specific steps as having a particularly high priority in terms of the national interest:

"We should, among other things, have a system of nationwide testing of high school students; a system of incentives for high-aptitude students to pursue scientific or professional studies; a program to stimulate good-quality teaching of mathematics and science; provision of more laboratory facilities; and measures, including fellowships, to increase the output of qualified teachers."

After exhaustive deliberation, Congress Congress agreed that the need for these particular programs was of such proportions as to justify Federal assistance. The recommendations of the administration were substantially embodied in the final act, which declares that "the present emergency demands that additional and more adequate educational opportunities be made available.

"We must increase our efforts to identify and educate more of the talent of our Nation. This requires programs that will give assurance that no student of ability will be denied an opportunity for higher education because of financial need; will correct as rapidly as possible the existing imbalances in our educational programs which have led to an insufficient proportion of our population educated in science, mathematics and modern foreign languages and trained in technology.

"To meet the present education emergency requires additional effort at all levels of government. It is therefore the purpose of this act to provide substantial assistance in various forms to individuals, and to States and their subdivisions, in order to insure trained manpower of sufficient quality and quantity to meet the national defense needs of the United States."

The National Defense Education Act, therefore, while establishing the most comprehensive program of Federal assistance in the history of education legislation, provides renewed congressional endorsement of the traditional principle that the Federal role in education is best limited to emergency and short-term assistance in attacking problems which the States acting independently cannot solve as rapidly as the national interest demands.

During the present session of Congress, this administration has submitted four proposals in the field of education, all adhering to the same basic principle. One is designed to assist the States in elementary and secondary school construction, another to help institutions of higher learning build new and remodel old facilities, a third to aid in meeting the costs of special professional services needed to carry out school desegregation programs, and the fourth to provide for the education of the children of Armed Forces personnel in places where public schools are closed.

The proposal to assist in financing elementary and secondary school construction recognizes a Federal responsibility to help States and communities overcome the tremendous backlog of school construction needs accumulated over the decades of depression, war, and population growth—needs which must be met before we as a nation can provide adequate opportunities for the children whose education is now handicapped by overcrowded classrooms. This program would authorize the U.S. Commissioner of Education to advance annually half the principal and interest on school construction bonds issued by needy school districts, provided the State undertakes to advance the remaining half of the payments. For the 5-year period in which commitments could be made, construction amounting to $600 million a year could be assisted. This sum would be allocated to the States on the basis of school population, per capita income, and school financing effort. In the 5-year period, the program could initiate $3 billion worth of classroom construction in needy and deserving school districts.

We recognize that pressures to provide the States matching share of school construction aid could, without proper safeguards against it, have the effect of retarding needed teachers' salary increases. Testifying on this point before the Education Subcommittee on Labor and Public Welfare, Arthur S. Flemming, Secretary of Health, Education, and Welfare, said, "No program of Federal assistance to school construction should operate in such a way as to depress teachers' salaries * * * it should, as far as possible, encourage improvements in salary levels. Certainly there is no national goal deserving greater effort than the goal of salaries which will increase the attractiveness of the teaching profession." The Secretary then proposed an amendment to this legislation that would specifically provide for taking into account a school system's effort to pay adequate teachers' salaries in determining its eligibility for school construction assistance.

The second proposal would authorize a two-part program to accelerate construction of college and university facilities to help meet anticipated enrollment increases. Here, too, the Federal responsibility for assistance stems from a recognition that the present inability of our institutions of higher education to provide for these enrollment increases imposes a serious handicap to the fuller development of our human resources which must be achieved to meet national manpower needs. Under this program the Federal Government would:

1. Guarantee the principal and interest on non-tax-exempt bonds sold by educational institutions to finance construction of housing, academic and related educational facilities. The aggregate amount of guaranteed bonds outstanding at any one time would be limited to $1 billion.

2. Provide debt retirement assistance in the form of Federal commitments to pay 25 percent of the principal on long-term bonds issued by the institutions to finance construction of needed facilities. Federal payments would be made in 20 equal annual installments.

This twofold program is expected to approximately triple the construction rate of

academic facilities that are financed by borrowing. By making long-term financing more readily available, it would stimulate an aggregate of $2 billion worth of new and needed facilities.

The administration's remaining two proposals are each directed toward problems arising out of the Supreme Court's desegregation decisions, unquestionably an area of acute national concern. It is, indeed, by virtue of their belonging to the Federal Union established by the Constitution that those States which previously required or permitted racial segregation in their school systems are now required to bring about desegregation. In making this transition, these States and their communities may, in varying degrees, experience temporary but real financial and educational burdens. Significant problems of organization, transportation, curriculum planning, and school-community relationships may arise.

Recognizing, therefore, a Federal responsibility to help State and local agencies meet such problems, we have proposed grants toward the costs of developing and carrying out policies and programs for school desegregation, including the cost of providing technical assistance to local agencies in connection with their desegregation programs.

Our last proposal is directed toward a different aspect of the desegregation problem. It would provide for the education of all children of members of the Armed Forces, whether or not they live on Federal property, when public education is otherwise denied them due to school closings resulting from State and local attempts to avoid compliance with Federal court decisions or decrees requiring desegregation. This proposal recognizes that the Federal Government has a unique responsibility for the education of these children, since members of the Armed Forces serve under orders, and public education is normally available to their children only as it is provided in the communities in which they live.

I have only highlighted the current administration program in the field of education, but I hope you can see how these legislative proposals are designed to advance and strengthen our schools in ways having a clearly definable relationship to the responsibilities of the Federal Government. We believe such aid to be of vital importance, not only as a means of strengthening our educational system, but as a means of maintaining and strengthening the principle of State and local control of education.

Rather than relying on massive, permanent Federal help for the solution of our educational problems, we ask that each problem be met individually, with all available resources—Federal, State, local, and private—contributing to the solution in varying degrees according to the nature of the task at hand.

In the final analysis, we believe that this answer has been tried—and proven—by the tration of resources, with inevitably greater effectiveness. Further, we know that this answer will provide a greater total concen- long tradition and history of Federal aid to education.

A Program for the National Forests

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mrs. MAY. Mr. Speaker, from time to time the Congress receives a message which in following years comes to be looked upon as a milestone in the progress of our country. Such a message was received during the Easter recess. It is from the Secretary of Agriculture. It submits for our consideration a program for the national forests.

The national forests are one of our great public heritages. They belong to all Americans. Their resources and services are available for use by everyone. Demands on the forests are now such that a program for the development of their resources and services for sustained production at practicable capacity is of the greatest urgency.

The program which Secretary Benson has recommended to us is designed to accomplish this development. It recommends both long-range objectives and a short-range program necessary to get the job done.

The short-range program is of great immediate importance. It is important for two reasons. First, the need is here, right now, to catch up with current use of these public properties. Hardly a day passes that I do not receive an appeal from mill owners large and small to do what I can to help put more timber on the market. We could do so if roads and other necessary facilities could be provided. Recreation use of these areas by people from my State—and from your States, too—has long since passed the capacity of existing facilities to handle these people—to handle this use in a way that will safeguard the purity of water supplies and provide safe places for campfires. I could cite other examples of increased use of these public forests.

This increased use is fine. The national forests belong to all the people, and we want them used. There is plenty of opportunity for even more use than present use. But the immediate problem is to catch up with the use we already have.

Moreover, what is done in the next 10 or 15 years will determine whether this great public estate contributes its fair share of the needs and necessities of our people by the end of the century and that is not many years distant.

This fair share is more important than many people realize. Large segments of agriculture and industry, many cities and urban areas, are dependent on water flowing from national-forest watersheds. Hundrdes of thousands of people earn their livelihood processing timber grown in national forests. The national forests are grazed by millions of livestock. Millions of people depend on the national forests for all kinds of outdoor recreation.

I think it is especially important to note that this program is not all outgo and no income. Last year the national forests of my State had cash receipts of nearly $16 million. It will be larger this year. Returns to the Treasury could be very much larger if we build the necessary timber access roads and do the other things outlined in Secretary Benson's proposed program.

Mr. Speaker, this program is a practical approach to a practical problem. It should have our vigorous nonpartisan support.

All That Glitters

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. PORTER. Mr. Speaker, everybody is interested in money, but few people know much about it. In an effort to reduce my own ignorance to some degree I wrote a letter on March 12 to the Secretary of the Treasury and am setting forth the text of the illuminating answer I received.

I have written to the Treasury Department again to ask them why we must pay a subsidy for gold and silver. It seems to me that we should pay the market price, not prices above the market, for both these metals.

From time to time a constituent writes me that he believes we should promote an increase in the price of gold. I think a perusal of the letter set out below will convince the person that that is not at all practical nor, indeed, reasonably to be anticipated. Under a previous consent here is the text of the letter I received from the Treasury Department dated April 8, 1959:

TREASURY DEPARTMENT,
Washington, April 8, 1959.

Hon. C. O. PORTER,
House of Representatives,
House Office Building,
Washington, D.C.

DEAR MR. PORTER: This is in further reply to your inquiry of March 12, 1959, concerning gold and silver.

The reprint, "Hard Facts About Soft Money," which you forwarded for our examination, calls for a revaluation of gold on the erroneous thesis that U.S. gold holdings are insufficient to meet domestic gold reserve requirements, and incorrectly attributes to the Treasury Department the allegation that $22.3 billion in gold is needed for domestic obligations. Since the error in the reprint argument apparently results from a misunderstanding of the role of gold in our monetary system, let me take this opportunity to distinguish between gold certificate claims and domestic gold reserve requirements, or as used in the reprint, domestic obligations.

Our gold stocks, which constitute the reserves behind our monetary and credit structure, are represented in the monetary system primarily by gold certificates or gold certificate credits issued against the gold by the Treasury to the Federal Reserve System. Data concerning gold assets and liabilities are published every day and distributed to banks, libraries, the press, and others. The enclosed Daily Statement of the U.S. Treasury, for example, shows that on March 25, 1959, there were outstanding gold certificate claims of $20.1 billion (including $200 million held as reserves against outstanding U.S. notes) against our gold assets of approximtaely $20.5 billion. The item "Balance of gold" under "Gold liabilities' represents gold against which no certificate claims have been issued.

When the Treasury buys gold it issues gold certificates or gold certificate credits to the Federal Reserve System, and when the Treasury sells gold it retires such certificates. Consequently, the amount of gold certificates and gold certificate credits can never exceed the total amount of our gold holdings, and as a matter of policy, is generally below

that figure. Besides, the March 1958 certificate and other claims of $22.3 billion could not be related to the March 1959 gold holdings of $20.5 billion. In the intervening 12-month period, both our gold stocks and gold certificate claims declined $2.2 billion. The following table, I believe, will clarify the relation between our gold holdings, gold certificate claims, and required gold reserves:

[In billions]

	Mid-March 1958	Mid-March 1959
A. Gold stocks	$22.7	$20.5
B. Gold certificates, gold certificate claims, etc	22.3	20.1
C. Required gold reserves	11.7	[1] 11.9
D. Excess of gold stocks over statutory gold reserve requirement (A–C)	11.0	[1] 8.6

[1] End of February; March data not available.

In any case, it is not correct to say, as the reprint alleges, that we now neeed $22.3 billion in gold for domestic obligations. Actually, at the end of February 1959, our gold reserves of $20.5 billion were some $8 billion in excess of statutory gold reserve requirements. Although the Federal Reserve System must maintain a 25-percent reserve in the form of gold certificates or gold certificate credits against its note and deposit liabilities, at the end of February 1959, this ratio was 43 percent, far in excess of our statutory gold reserve requirements.

With regard to United States policy concerning the sale of gold, which is discussed in the reprint, I should like to point out that we do not extend to foreign private citizens or institutions the privilege of converting their dollar assets into gold. We maintain, as an important phase of our monetary policy, the practice of buying gold from and selling gold to foreign governments, central banks, and under certain circumstances, international institutions for the purpose of settling international balances and for other legitimate monetary purposes. There is no reason to anticipate that the aforementioned entities will want to convert all their dollar assets into gold. As a matter of fact, net sales of gold by the United States this year have been at a comparatively slower rate, and as of March 25, 1959, our gold stocks declined only $92 million since the first of the year, despite the increase in foreign dollar earnings.

The administration has made it clear on many occasions that the United States has no intention of increasing the price of gold or devaluing the dollar. We do not believe that any increase in the price of gold would be in the best interest of the United States and the free world. The value of the dollar is firmly linked to gold; the official value of $35 per fine troy ounce was established in 1934. This relationship has contributed to the maintenance of a stable and strong financial structure in this country, and thus to the soundness of our domestic economy. Foreign countries have also come to rely on the dollar as a strong and secure currency, firmly fixed in value in terms of gold.

With respect to legal provisions affecting the price of gold, the United States has an international obligation contained in article IV, section 2 of the Articles of Agreement of the International Monetary Fund not to buy gold at a price above the par value of its currency (plus a margin prescribed by the Fund of 1 percent) or sell gold at a price below par value (less 1 percent). The United States has communicated to the Fund a par value for the dollar of 15 5/21 grains of gold 9/10 fine. This par value which is the equivalent of a price of $35 per fine troy ounce of gold, is the same as the gold value of the dollar as established by Presidential Proclamation of January 31, 1934, issued under the authority of section 43, title III of the act of May 12, 1933, as amended. Accordingly, the United States has an obligation under the articles not to purchase gold at more or sell gold at less than $35 per fine troy ounce plus or minus 1 percent so long as the par value of the dollar declared to the Fund remains unchanged. Section 5 of the Bretton Woods Agreements Act provides that a change in the par value of the U.S. dollar declared to the Fund shall not be proposed or agreeed to without authorization by Congress by law.

With respect to the price of silver, the U.S. coinage mints receive silver which any mint is satisfied has been mined subsequently to July 1, 1939, from natural deposits in the United States or a place subject to the jurisdiction thereof. Under the act of July 31, 1946, the return to the depositor for silver mined after July 1, 1946 is 90.5 cents per fine troy ounce. The return for silver mined before this date but after July 1, 1939, is 71.11 cents per fine troy ounce, as provided in the act of July 6, 1939. As of March 20, 1959, the New York market price for silver was 91⅜ cents per fine troy ounce.

I trust the above explanation will clarify for your constituent the misconceptions inherent in the reprint from the California Mining Journal, which is returned herewith. As of additional assistance, we are also enclosing the following materials which you may wish to transmit to your correspondent: an excerpt from the Federal Reserve Bulletin, which provides information concerning changes in U.S. gold holdings since 1946, and a copy of the Federal Reserve System, Purposes and Functions, chapters VI, VII, and VIII of which explain in some detail the relation of Federal Reserve banking to currency and gold.

Please be assured we are always glad to have an opportunity to be of assistance to you.

Sincerely,

T. GRAYDON UPTON,
Assistant Secretary.

Medical and Moral Problem of 5 Million Victims of Alcoholism

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. NEUBERGER. Mr. President, under the title of "A Progressive Disease," the distinguished medical editor of the New York Times, Dr. Howard A. Rusk, has discussed the rising tide of alcoholism in the United States in his paper for April 26, 1959.

Dr. Rusk emphasizes that alcoholics are sick persons, just as much as though they suffered from other known and recognized diseases.

Dr. Rusk also has stressed that the industrial costs of alcoholism are staggering, for most of the incidence of alcoholism occurs in the 35-to-50 age period when a man or woman should have attained the highest productivity during a career.

And Dr. Rusk tells us that alcoholism can both be prevented and cured, but that first we must recognize it as a definite disease. He also notes that alcoholism confronts not only the United States but also all other nations. And, by way of distress and some shame, he tells us that only France has a higher rate of alcoholism than the United States among the countries of the globe. The French rate is 5,200 alcoholics per each 100,000 adults while ours is 4,360 among the same number.

Because Dr. Howard A. Rusk is so learned and eminent an authority in this and other fields of medical and health problems, I ask unanimous consent that his article in the New York Times regarding our 5 million victims of alcoholism be printed in the Appendix of the RECORD.

Dr. Rusk also adjures us to back up Senator LISTER HILL'S bill for a new National Institute of International Medical Research, which could devote some of its energies and facilities to the question of alcoholism, which Dr. Rusk lists in his informative article as America's third major disease.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 26, 1959]

A PROGRESSIVE DISEASE—AN ANALYSIS OF ALCOHOLISM AND MOVES TO CURE THE NATION'S 5 MILLION VICTIMS

(By Howard A. Rusk, M.D.)

This past week a group of professional business and civic leaders met in New York at a private dinner to discuss one of mankinds oldest plagues—alcoholism.

The conferees were not temperance workers in the usual sense of this term. Among them, however, were some teetotalers who now refrain from drinking because they have learned they cannot control their drinking.

Today it is estimated there are 70 million persons in the United States who drink alcoholic beverages. These 70 million persons are primarily men and women who have a cocktail or two before dinner or a highball or two later in the evening. Among them are some persons who get high on rare occasions.

It is not with this group that the National Council on Alcoholism, which met to discuss this problem last Wednesday evening, is concerned. To them drinking presents no particular problem.

The concern is with 5 million sick people needing medical, psychiatric, and social help who are alcoholics.

Contrary to general belief, these sick people for whom drinking has become such a problem that it interferes with the unfortunates on skid row whose medical, psychiatric, and social problems have become so great that little can be done to help them.

MOST STEADILY EMPLOYED

Eighty-five percent of these 5 million alcoholics are men and women who usually are married and living with their families. Most have histories of steady employment in positions requiring skill and responsibility.

They are the hidden alcoholics. There is one or more in every business or social circle, but they are protected from general recognition not only by themselves, but by their fellow workers, foremen, union stewards, and management, for a time.

But alcoholism is a progressive disease. Left untreated, it progresses until the symptoms become so acute that the disease can no longer be hidden. Business and industry have no recourse then but dismissal.

Alcoholics are sick persons just as much as though they suffered from other known and recognized diseases. They are persons who are peculiarly susceptible to alcohol or who are suffering from some tension, physiological or psychological, for which alcohol

provides temporary relief. They are utterly unable to control their drinking themselves, but they can conquer their problem with help.

As in all health problems, this help is needed on three fronts: increased direct services through which the victim of either acute or chronic alcoholism can receive high quality professional services; increased research on the problem, and increased professional and public education.

The industrial costs of alcoholism are staggering. The great majority of the problem drinkers are in the 35–50 age group, the period when a company after years of investment in the individual's training and experience expects him to be the most productive.

Most problem drinkers were drinking for years before their disease progressed to the point that it became impossible for them to hide it from fellow workers and supervisors. By this stage absenteeism increases until the average alcoholic is losing 22 working days each year from alcoholism alone.

Many of our forward-looking industrial organizations have recognized these tremendous losses in both human happiness and money, and have initiated programs to help the alcoholic control his disease. In some instances, absenteeism because of alcoholism within various industrial organizations has been reduced by as much as 75 percent within 6 months.

Alcoholism can be both prevented and cured. The first step is its recognition as a disease.

Alcoholism is a problem that confronts not only the United States but many nations of the world. Authorities report that France, with 5,200 alcoholics for each 100,000 adults, is the only major nation where this disease problem is greater than in the United States. Our rate is 4,360.

Other nations in which alcoholism is a major health problem are Chile, Sweden, Switzerland, Denmark, Poland, the Soviet Union, Canada, Norway, Finland, and Australia.

It is also of significance that these rates are increasing in most parts of the world. Yet very little money is spent on research in the medical-psychological-social aspects of alcoholism.

The National Institutes of Health and the Office of Vocational Rehabilitation, Department of Health, Education, and Welfare, have made some relatively small grants for research in alcoholism. Last year Congress, however, for the first time made an appropriation specifically for research in alcoholism. The appropriation of $700,000 was given to the National Institute for Mental Health.

Since alcoholism is an international problem, it is an area of research that could profitably be supported on an international basis if Congress enacted pending legislation known as the International Health and Medical Research Act of 1959.

This measure, introduced in the Senate by Senator Lister Hill of Alabama, with 59 cosponsors, would create a new National Institute of International Medical Research within the National Institute of Health.

The proposed new institute would have an annual appropriation of $50 million to support international medical, health and rehabilitation research. The bill, which has had widespread professional and public support, will probably come to a vote before the Senate this week.

Through increased research efforts, tremendous gains have been made in recent years against many of mankind's greatest killers and cripplers. It is indeed unfortunate that the full resources of research have not been brought into play against alcoholism, for this is Amercia's third major disease, being exceeded only by the mental illnesses and cardiovascular disease.

An Inroad to Federal Control of Education

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. JENSEN. Mr. Speaker, I am encouraged when I receive a letter such as the one I herewith insert in the CONGRESSIONAL RECORD.

I have received hundreds of letters from the people whom I have the honor to represent in Congress opposing Federal aid to education. This letter from my esteemed friend, Mr. R. E. Wollenhaupt, of Fontanelle, Iowa, sets out well and concise the general feeling about Federal aid to education which prevails in the Seventh Iowa District.

Of course, I also receive a few letters in favor of it, but such letters are becoming fewer and fewer as time goes on, because more and more people are becoming thoroughly convinced they do not want the education of their children controlled from Washington, D.C.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 26, 1959.

Mr. R. E. WOLLENHAUPT,
Fontanelle, Iowa.

DEAR MR. WOLLENHAUPT: Thank you so much for your wonderful letter of April 13. It is so reassuring to have a thoughtful and well-considered message. One letter like yours, pleading for fiscal sanity, overcomes a dozen of the opposite variety, which insist that the Federal Treasury pay for everything from cradle to grave.

So that you will know your letter came to a sympathetic correspondent, please let me refer you to the attached speech I made in the House last summer on the subject of Federal aid to education.

Sincerely yours,

BEN F. JENSEN.

Mr. Wollenhaupt's letter and my remarks above referred to, follows:

FONTANELLE, IOWA, *April 13, 1959.*

Hon. BEN F. JENSEN,
U.S. Representative,
House Office Building,
Washington, D.C.

DEAR MR. JENSEN: At a parents and teachers meeting held recently at our public school, a film was shown entitled "Breakthrough to Better Schools." This particular film has been developed by the National Education Association and emphasizes the passage of the Murray-Metcalf bill which provides a measure of Federal aid to education for school buildings and teacher salaries.

I personally felt that the film was quite "slanted" to create a favorable attitude toward Federal aid. I also feel that the film does not in itself reveal the total picture as to what may be involved in the implementation of such Federal aid. It would seem to me that there are many ramifications relative to the administration of a Federal-aid-to-education program which might have numerous bad results. Further, that measures of this type are not consistently American in nature but instead reflect a measure of discredit on our forefathers, who, instead of pleading to the Federal Government for assistance, would by the sweat of their brow and hard work, manage to get the job done for themselves.

There is no question that we all want good, adequate schools for the children of our State and Nation and I am sure we are desirous of paying our teachers adequate and proper salaries. I feel, however, that this is not the function or the immediate problem of the Federal Government. Surely this should be, and can be handled at the local levels of Government if people will but put their minds to the task at hand. While costs of building, maintaining, and operating schools are high indeed, I cannot believe that there is any community in this State of Iowa which is unable to meet its financial obligations for adequate school purposes.

It seems to me that for too many years, now, we have been conditioned to follow the course of least resistance and instead of facing our local problems and taking necessary action, we turn to the already overburdened Federal Government to pour out money for measures which we should be providing ourselves. Unfortunately, the Federal Government is itself to blame for this situation due to its removal of the gold standard and inaugurating an irredeemable monetary system.

I firmly support the stand of President Eisenhower to hold the line on Federal expenditures to balance the budget. I hope that all good Republicans give him their unwavering support toward eliminating the reckless and irresponsible spending ventures which have been prevalent for so long.

If additional funds are necessary to care for our schools, additional taxes must be raised at the local levels involved. We all dislike taxes, but it is better to pay as we go than to have the Federal Government make handouts derived from no other source than deficit financing. Presumably such a measure as this bill would be financed in that manner. This method may seem more painless temporarily but in the long run will surely lead to our economic destruction and provide an inroad to socialism or worse.

Perhaps you would be good enough to express your views on Federal aid to education generally and on the Murray-Metcalf bill in particular.

Sincerely yours,

R. E. WOLLENHAUPT.

[From the CONGRESSIONAL RECORD, Aug. 8, 1958, House proceedings, p. 19359]

(Mr. JENSEN asked and was given permission to extend his remarks at this point.)

Mr. JENSEN. Mr. Chairman, the basic purpose of education is to develop the minds of a people so they can govern themselves and thus be the masters of their own destiny instead of being a mere servant of an all-powerful government, controlled from the seat of a powerful paternal government. That was one of the compelling reasons why our Founding Fathers placed great emphasis on the individual and established our free private enterprise system. It was never their purpose that the Congress should establish such laws as would finally bring about a system here where any freeborn American would be beholden to a paternal government for their education.

Mr. Speaker, it will be a bad day for America if the day should ever come when our boys and girls can say to their mothers and fathers, "We owe you little for our higher education," and I fear that day will come if this bill is made the law of the land. For then we will be educating our children to depend too much on a paternal government, and to expect and accept all sorts of Federal controls as is the case in every nation on earth where liberty is gone and where the individual is only a pawn in the hands of a Socialist all-powerful government, because such an act as is here proposed by H.R. 13247,

had been ruled the law of the land. We have already gone too far in that direction. Remember that age-old adage:

"Just as you bend the twig so will the tree be when it's big."

That admonition holds just as true today as when those words were first uttered.

Also, let us not forget that, at this very minute, we have a staggering Federal debt of over $275 billion—but not with my vote. Yet, here we are considering a bill which will, over a period of a few years, add billions more which our children and their children will have to pay. Yes, most of the very same Americans that this bill seeks to help will have to pay the bill in burdensome taxes, if they can, or suffer the consequences. The true facts are, there is not a school district, or a county or a State in this Union which is not more able financially than the Federal Government to provide proper and adequate facilities for their children, and I am sure if most of the parents and their good thoughtful children knew that Federal control is written into every title of this bill they would say, "kill it," as would their sons and daughters.

The first responsibility for the education of our children rests on the shoulders of the parents, next on the school district, next on the State, and only in impacted areas where Federal establishments have created a school expense too great for the taxpayers of a school district to support, there and only there should the Federal Government aid, interfere, or dictate.

Untold Story of Panama: Radio Review by Maj. Gen. James E. Edmonds

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. FLOOD. Mr. Speaker, a significant event in the cumulation of historical material relating to the launching of the Panama Canal enterprise, out of which grew the Republic of Panama, is the book, "The Untold Story of Panama," by Mr. Earl Harding, of New York, which was announced in a radio broadcast by Maj. Gen. James E. Edmonds, distinguished citizen-soldier, World War II commandant of Camp Lee, Va., war correspondent, and news commentator.

Under leave granted, I include excerpts from General Edmonds' radio broadcast of April 19, 1959, relative to the Harding book and the mounting crisis at Panama, as follows:

EXCERPT FROM RADIO BROADCAST BY GEN. JAMES E. EDMONDS ON RADIO STATIONS WEAM, ARLINGTON, VA., AND WISE, ASHEVILLE, N.C., AND FOUR OTHERS IN NORTH CAROLINA, SUNDAY, APRIL 19, 1959

There was another bit of news related to our struggle, maybe our life and death struggle, against communism. It was the announcement of the early appearance on the booksellers' shelves of a slim volume of less than 200 pages, entitled "The Untold Story of Panama."

It is a punctiliously documented, comprehensive, succinct account of how in the days of the first Roosevelt the United States came into full power over the construction of the canal to link the Atlantic and Pacific. The project had been talked about for centuries. The book relates the immense difficulties, the maneuvering and the diplomacy—the actuality of the diplomacy, much of it hitherto secret—which produced the result.

In the book is suspense, the drama of history-forming events in dangerous making. The volume could not be more timely. It appears just when, in Panama and end to end of Latin American unhappily, there is anti-American agitation, probably often Red-formented, demanding that Panama—little American-initiated and created Panama—seize or nationalize the Canal—take it over as Nasser did Suez.

The book appears just after the normally well regarded quarterly Foreign Affairs contained a lengthy article guardedly supporting the idea that the United States scuttle away from its obligations at Panama by accepting internationalization—a field in which we have not fared so well for years.

The Panama Canal is truly the lifeline of our national defense by sea and the backbone of our ocean commerce. It is under threat. Those who would save it for us and for the free world owe it to their duties to read this book by Earl Harding, of New York.

I have known him since our young manhood together as newspapermen—in peace and war. A more careful, skilled, recorder of history as he saw it made, does not live. Like Earl Harding I also as a young newsman knew Panama when that work of the ages was at its beginnings. I would hate to have my country scuttle away from its operation and defense at this late day. It might well mean our final step toward vast disaster.

Hon. George H. Christopher

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include resolutions adopted by the Missouri Senate and the Missouri House of Representatives upon learning of the death of our distinguished colleague, Hon. George H. Christopher, and also include extraneous material:

RESOLUTIONS ADOPTED BY THE MISSOURI SENATE AND HOUSE OF REPRESENTATIVES UPON LEARNING OF THE DEATH OF THE HONORABLE GEORGE H. CHRISTOPHER

HOUSE RESOLUTION 44

Whereas the house has learned with deep regret of the death on January 23, 1959, of the Honorabale George H. Christopher, Representative from Missouri's Fourth Congressional District, of Butler; and

Whereas Congressman Christopher, having been identified with many governmental, agricultural, and civic activities, and was well known and loved throughout Missouri and the Nation; and

Whereas throughout many years of public service Congressman Christopher became acquained with and a friend of the people throughout the State; and

Whereas Congressman Christopher's sincerity of purpuse and true devotion to the cause of better government and the welfare of his fellow citizens endeared him to all with whom he became associated: Now, therefore, be it

Resolved, That the members of the house of the 79th general assembly express their sincere regret at the passing of this fine citizen; and be it further

Resolved, That the speaker of the House be instructed to appoint a delegation to represent the house in attendance at the funeral services to be held Wednesday, January 28, 1959, at 2 p.m., in the city of Butler, Mo.; and be it further

Resolved, That the chief clerk of the house of representatives be instructed to send a properly inscribed copy of this resolution to each Congressman Christopher's children; Mrs. Charlotte Ward, Butler, Mo.; George D. Christopher, Amoret, Mo.; Homer W. Christopher, Butler, Mo.; Wallace A. Christopher, Butler, Mo.; Stanley Christopher, Butler, Mo.; Robert Christopher, Butler, Mo.; Monty Joe Christopher, Butler, Mo.; Moreland Christopher, Passaic, Mo.; and Mrs. Moina E. Ratliff, 1912 R Street SE., Washington, D.C.

SENATE RESOLUTION 26

Whereas the senate has learned with deep regret of the death on January 23, 1959, of the Honorable George H. Christopher, Representative from Missouri's Fourth Congressional District, of Butler; and

Whereas Congressman Christopher, having been identified with many Government, agricultural, and civic activities, and was well known and loved throughout Missouri and the Nation; and

Whereas throughout many years of public service, Congressman Christopher became acquainted with and a friend to the people throughout the State; and

Whereas Congressman Christopher's sincerity of purpose and true devotion to the cause of better government and the welfare of his fellow citizens endeared him to all with whom he became associated: Now, therefore, be it

Resolved, That the members of the senate of the 70th general assembly express their sincere regret at the passing of this fine citizen; and be it further

Resolved, That the secretary of the senate be instructed to send a properly inscribed copy of this resolution to each of Congressman Christopher's children: Mrs. Charlotte Ward, Butler, Mo.; George D. Christopher, Amoret, Mo.; Homer W. Christopher, Butler, Mo.; Wallace A. Christopher, Butler, Mo.; Stanley Christopher, Butler, Mo.; Robert Christopher, Butler, Mo.; Monty Joe Christopher, Butler, Mo.; Moreland Christopher, Passaic, Mo.; and Mrs. Moina E. Ratliff, 1912 R Street SE., Washington, D.C.

(Offered by Senator Journey.)

[From the Bates County (Mo.) Shopper, Feb. 5, 1959]

IN MEMORY, RESPECT AND ESTEEM

(By E. H. Hardinger)

Bates County, our State of Missouri, and the Nation has suffered a distinct loss in the passing of the late Honorable George H. Christopher.

He was truly a friend of the people who tilled the soul and all who so depend on it directly or indirectly for a living. His talents which he so willingly shared and his ability which he so ably performed, places him among the great. Every family in this entire Midwest, country, town or city has lost a capable sincere friend. Although another Congressman will be elected to perform the duties of Fourth Congressional District, no man can take the place of George Christopher.

Like other great men before him, now that he is gone, his true greatness and importance will indeed be realized and missed. His entire life leaves a great challenge to us all, especially our youth. It can truly be said with God's help he was a self-made and self-educated man. Born of the most lowly, step by step, ever keeping his goal in mind, overcoming all obstacles to reach great heights. One important characteristic which George seemed to always display was good commonsense. This is indeed important. Sometimes

the passing of a loved one in early life or an important public servant taken at the height of their career seems hardly fair, however, these are things for us not to question and to strengthen our faith. I deem it a great privilege and a great honor to have been a good friend of George Christopher all my life.

[From Roll Call, Jan. 28, 1959]

REPRESENTATIVE GEORGE H. CHRISTOPHER

The character of Representative George H. Christopher, Missouri Democrat, was clearly revealed several hours before he died of a heart attack Friday night. He phoned a Republican Congressman to offer his help on any action needed to help flood-stricken sections of Ohio.

Representative Christopher's desire for service crossed party lines not only in this instance, but throughout his distinguished career in the Congress.

Courageous, good-natured even after undergoing a leg amputation, able and kind, George Christopher will be missed by all who had the good fortune to cross his path.

[From the Nevada (Mo.) Daily Mail, Jan. 26, 1959]

GEORGE H. CHRISTOPHER

The American farmers, particularly the farmers of Missouri, lost a good friend and a champion of their cause Friday night when Congressman George H. Christopher, of Amoret, was called to his rewards by his Maker.

Congressman Christopher, a battling Democratic lawmaker, was proud of the fact that he was a dirt farmer. He was also proud of the fact he grew up in the true American way—hard work, honesty and the burning desire to be of service to his country and his fellow men.

Mr. Christopher knew hard times and tragedy during his lifetime but he kept right on working toward the ideals which guided him through life. He became strengthened by the setbacks he encountered and used the experience to be a better servant to his neighbors and his Government.

History records the acts of many more famous men than Mr. Christopher, but to his legion of farm friends, supporters and to his numerous acquaintances in all walks of life, George Christopher was a great man.

He was a wise, energetic and competent politician and lawmaker. He prided himself in the role of champion of the farmers' cause and well he should because the farmers of Missouri and America are the people he fought for in the Halls of Congress. He wanted his fellow farmers to get a fair deal from the Government and he died continuing that difficult task.

Mr. Christopher was also a champion for the laboring man. Always alert and sympathetic to their cause, he was interested in legislation which would insure them better working conditions and a fair wage for their efforts. He was also an advocate for honesty in the upper echelons of organized labor as a means of protection for the workers.

We pride ourselves in having been numbered amongst Mr. Christopher's friends and confidants. Oftentimes he called us from his Washington office to keep us informed about something of interest in this, the Fourth Congressional District, which he represented so well. His many appointments of Vernon County young men to our military academies is but one evidence of his service to this area.

George H. Christopher was truly a representative of the people of his district and State in Congress and he will be greatly missed. His successor, in our opinion, will be required to possess a lengthy stride to be able to walk in Mr. Christopher's footsteps.

[From the Kansas City (Mo.) Times, Jan. 24, 1959]

CHRISTOPHER IS DEAD AT AGE 70—MISSOURI FOURTH DISTRICT CONGRESSMAN SUFFERS HEART ATTACK IN WASHINGTON—VOTE IN 1958 AN UPSET—LEGISLATOR, WITH VIRTUALLY NO ORGANIZED SUPPORT, WON IN DEMOCRATIC PRIMARY

WASHINGTON, January 23.—Representative George H. Christopher, Democrat, Missouri, died of a heart ailment tonight at his Washington home. He was 70.

Christopher complained of feeling ill while watching television, lay down to rest and died a few minutes later at about 10:50 p.m.

BORN NEAR BUTLER

Christopher was born near Butler, Mo., and lived there almost all his life. He was a farmer with a special interest in soil conservation.

At the time of his death his 975-acre farm at Butler was operated by a son, a daughter, and a son-in-law. He had seven sons and two daughters. His wife died in 1952.

Christopher served in the 81st Congress, then became assistant to the director of the agricultural conservation program of the Department of Agriculture.

He was returned to Congress in the 84th Congress, and reelected to the 85th Congress. The present Congress is the 86th.

From 1948 to 1950 Christopher served from the old sixth district but there was a redistricting and when he returned to Congress in 1954 he represented the fourth district.

PRAISE FOR RECORD

Christopher was often lauded by labor for his voting record and received strong support from the farmers and rural people, to whom he was extremely close.

In the last primary campaign, often ill and recovering from a leg amputation, he fought the battle of his political life, virtually alone. The Jackson County coalition threw its support to Robert P. Weatherford, Jr., former mayor of Independence. The Jackson County faction leaders said Christopher had gone back on his promise not to seek reelection.

The State and national committees of the AFL–CIO and the local committee of the CIO stuck by him but the powerful AFL political club headed by John J. Kopp, presiding judge of the county court, supported Weatherford.

Former President Harry S. Truman gave his support to the coalition candidate.

Weatherford banked on piling up a huge majority in heavily populated Jackson County to win. Christopher concentrated on the farm vote that had been faithful to him in his other political battles. When the votes were counted Christopher had won by more than 1,100 to the surprise of city politicians.

BEATS GOP CANDIDATE

In the November election he won by 30,000 votes over James Rahm, Warrensburg lawyer, the Republican candidate.

James L. Williams, chairman of the Jackson County Democratic committee, said last night he was shocked and sorry to hear of Christopher's death.

Williams said the Governor would make an appointment to fill out the term.

The Congressman's farm was near Amoret in Bates County, near the Kansas line. His farm, and agriculture in general, were his prime interests. He served as community committeeman in the first corn-hog program and held many other local agricultural positions in Bates County.

He had long urged aid to farmers and was a strong supporter of all farm legislation. He attributed last November's Democratic sweep to farm unrest.

In Congress he served on the Interior and Insular Affairs and Veterans' Affairs committees.

LOST LEG IN 1957

In November, 1957, Christopher's right leg was amputated above the knee because of an arterial ailment.

"I never really made up my mind to run again until I knew I was going to lose my leg," he said a few weeks after the operation. "That will give me something to worry about which will make me forget my missing leg."

Upon hearing of the death of Mr. Christopher, Weatherford issued this statement in Phoenix, Ariz., where he is executive director of plans for progress, a metropolitan area planning organization:

"The passing of a great Missourian is a loss to his State and Nation. I always held a warm affection and deep respect for 'Mr. George.' Never was a more high-level campaign conducted than by him, and not an unkind word came from his lips. Our last visit was at a party given for me by President Truman at the Hotel Muehlebach in Kansas City, and I was deeply honored that my good friend, Mr. George, attended. His passing has taken a good friend, a great orator, and an able statesman from the American scene."

The Congressman, born in 1888, was a member of the Methodist church, the Shrine, and the Independent Order of Odd Fellows. He was educated in Butler and Sedalia and in 1913 married Miss Lelia Poore of Bowling Green, Mo.

The fourth district, represented by Christopher, covers the eastern part of Kansas City, the rest of Jackson County, and Barton, Bates, Cass, Henry, Johnson, Lafayette, and Vernon Counties in western Missouri.

[From the Washington (D.C.) Star, Jan. 24, 1959]

GEORGE H. CHRISTOPHER, HOUSE MEMBER, DIES

Representative George H. Christopher, 70, Democrat, of Missouri, died of a heart ailment last night at his home, 1912 R Street SE.

He lived here with his daughter and son-in-law, Mr. and Mrs. Ray J. Ratliff.

Mr. Christopher, whose leg was amputated some time ago, complained of feeling ill while watching television. He lay down to rest and died a few minutes later.

The death of the Missouri Congressman, an expert on soil conservation, made the new House lineup 282 Democrats and 153 Republicans.

Mr. Christopher represented the district that included Independence, the home of Harry S. Truman. He first came to Congress in 1949, served in the 1954 session and was reelected in 1956 and last year. He was a farmer with a special interest in soil conservation, which led to his participation in various House agricultural affairs.

ONE-TIME U.S. OFFICIAL

After one term, Mr. Christopher left Congress to become assistant to the director of the Agricultural Conservation Program of the Agriculture Department. A firm believer in the use of lime, sweet clover and alfalfa for preserving soil, he was himself the owner of a 975-acre farm near his native Butler, Mo.

While in the House, Mr. Christopher served on the Agriculture, Veterans' Affairs, and Interior Committees.

FATHER WAS FARMER

Mr. Christopher was a graduate of the public schools in Bates County, Mo., and of Hill's Business College in Sedalia in 1907.

The son of a farmer, he repeatedly preached the urgency of widespread adoption of scientific erosion control methods. It was the responsibility of every farmer to do his part, he insisted, but the city dweller also could not ignore the land problems.

Mr. Christopher was a Mason and a Shriner. He spent his life in Bates County except for brief periods as a young man spent in Oklahoma and Illinois. He was known among his congressional associates for his humor.

[From the Kansas City (Mo.) Star of Jan. 24, 1959]

A CHRISTOPHER ATTACK FATAL—THE MISSOURI FOURTH DISTRICT MEMBER OF CONGRESS DIES IN WASHINGTON—BETTER SOIL HIS GOAL—BATES COUNTY FARMER, 70, PUT SPECIAL STRESS ON NEED FOR CONSERVATION

WASHINGTON, January 23.—Representative George H. Christopher, Democrat, of Missouri, died of a heart ailment tonight at his Washington home. He was 70.

Christopher complained of feeling ill while watching television, lay down to rest and died a few minutes later at about 10:50 p.m.

BORN NEAR BUTLER

Christopher was born near Butler, Mo., and lived there almost all his life. He was a farmer with a special interest in soil conservation.

At the time of his death his 975-acre farm at Butler was operated by a son, a daughter and a son-in-law. He had seven sons and two daughters. His wife died in 1952.

Christopher served in the 81st Congress, then became assistant to the director of the agricultural conservation program of the Department of Agriculture.

He was returned to Congress in the 84th Congress, and reelected to the 85th Congress. The present Congress is the 86th.

HALTS WEATHERFORD BID

In last year's primary, Christopher defeated Robert P. Weatherford, Jr., former mayor of Independence, who was supported by the Jackson County coalition.

Christopher was endorsed by both the State and national committees of the AFL-CIO and the local committee of the CIO.

In May 1958, the Fourth District Congress Member denounced what he termed "unfounded rumors" that he would withdraw from the primary race.

Christopher had long urged a sound farm program and said he would always support farm legislation. He attributed last November's Democratic sweep to farm unrest.

FAVORED HIGH PROPS

Calling for a return to a price support program of at least 90 percent of parity last November, Christopher said the former program should be expanded to include vegetables, feed grains, poultry and other commodities.

[From the Kansas City (Mo.) Star, Jan. 24, 1959]

DEATH SWIFT TO ARRIVE—CHRISTOPHER DIES WHILE VIEWING TV PROGRAM

(By Jack Williams)

WASHINGTON, January 24.—George G. Christopher, Representative in Congress from Missouri's Fourth District, died here last night before an ambulance could reach the home.

Details of the death of the 70-year-old Congressman were given this morning by Mrs. Moina Ratliff, his daughter. When in Washington Christopher makes his home with his daughter and her husband, Ray J. Ratliff, who is a doorkeeper in the House.

Mrs. Ratliff said her father was watching television when he began complaining that his chest was bothering him.

"He said it felt like the heart attack he had back in 1951," Mrs. Ratliff said. "We called an ambulance, but he was dead before it arrived."

Mrs. Ratliff said a funeral service would be held at 3 o'clock Monday afternoon at the Hines chapel in Washington. Then the body will be flown to Missouri for services in the Congressman's home community in Bates County. Relatives in Missouri will not attend the Washington service, Mrs. Ratliff said.

Details of the Missouri services have not yet been completed.

The House is expected to meet briefly at noon, Monday, eulogize Christopher and then adjourn out of respect to him, and in order that the Members can attend the Washington service.

It is anticipated SAM RAYBURN, Speaker of the House, will name a delegation from the House to represent that body at the services.

[From the Washington (D.C.) Post and Times Herald, Jan. 25, 1959]

CONGRESSMAN CHRISTOPHER, 70

Representative George H. Christopher, Democrat, Missouri, who considered himself a farmer first, died Friday night in the home of his daughter at 1912 R Street S.E. He was 70.

Born on a farm in Butler, Mo., in 1888, he lived in the Fourth Congressional District near Independence, Mo., home of former President Harry S. Truman. He was first elected in 1948.

Former President Harry Truman paid tribute to Representative Christopher:

"I'm as sorry as I can be to hear of his death," said Truman. "He was a fine Congressman and a fine man. I've known him for many years. Christopher was the best-informed man on farm policy of any man I knew."

Representative Christopher returned to his 975-acre farm after he lost to a Republican in 1950 but he came back to Washington to stay in 1954.

In Washington he lived with his daughter, Moina, and his son-in-law, Ray J. Ratliff, a doorkeeper in the House. Mrs. Christopher died in 1952.

Representative Christopher was a member of the Interior and Insular Affairs and the Veterans Affairs Committees. But agriculture was his main interest.

Representative Christopher was bitter about the waste of land resources. He criticized his fellow farmers for carelessness about soil erosion and he stumped for effective conservation programs. He was proud of the miles of terracing on his own farm.

Father of seven sons and two daughters, Representative Christopher proudly boasted that all his sons were farmers. Aside from Moina, all of his children live near the ancestral home in Missouri.

Four years ago, Representative Christopher suffered his first heart attack. In November 1957, his right leg was amputated just above the knee as the result of a circulatory defect.

Funeral services will be held at 3 p.m. Monday at the S. H. Hines Funeral Home, 2901 14th Street N.W. Representative Christopher will be buried in Butler, Mo., with the Missouri congressional delegation serving as honorary pallbearers.

[From the Kansas City (Mo.) Star, Jan. 25, 1959]

CHRISTOPHER RITES SET—SERVICES WILL BE IN BUTLER, MO., WEDNESDAY

BUTLER, Mo., January 24.—Funeral services for George H. Christopher, Representative in Congress who died in Washington Friday night, will be at 2 o'clock Wednesday at the First Baptist Church here.

The body of the Congressman will be brought here after services in Washington Monday afternoon.

HIS HOME COUNTY

The services in Christopher's home county will be conducted by the Rev. Orval F. Woolery, pastor of the church. Burial will be in the Oak Hill cemetery here. The Christopher farm home is 7 miles northwest of here, near the Kansas-Missouri line.

[From the Washington (D.C.) Star, Jan. 25, 1959]

HOUSE SCHEDULES TRIBUTE TO CHRISTOPHER TOMORROW

Funeral services will be held at 3 p.m. tomorrow at the S. H. Hines Funeral Home for Representative George H. Christopher, 70, who died of a heart ailment Friday at his home, 1912 R Street SE. The body of the Missouri Democrat will be sent to his native Butler, Mo., for burial, where a memorial service is planned Wednesday.

The House planned to meet briefly tomorrow at noon to eulogize Mr. Christopher and then adjourn out of respect for him. His death resulted in a new House lineup of 281 Democrats and 153 Republicans.

His right leg was amputated in 1957 as a result of a circulatory defect. He suffered an earlier heart attack 4 years ago.

Mr. Christopher was an advocate of progressive soil conservation policies.

Representative NEWELL A. GEORGE, Democrat, of Kansas, and one of Mr. Christopher's closest friends, said yesterday:

"With the death of Representative Christopher the farmers and little businessmen have lost a real champion and a true friend. His loss will not be easily replaced."

Mr. Christopher, who was born near Butler, Mo., and graduated from public schools in Bates County, was a farmer first and last. He had a special interest in soil conservation and was active in various House agricultural affairs. The son of a farmer, he repeatedly preached the urgency of widespread adoption of scientific erosion control methods.

Mr. Christopher represented Missouri's Fourth District, which included Independence, the home of Harry S. Truman. He was elected to Congress in 1949, served in the 1954 session and was reelected in 1956 and last year.

After one term, Mr. Christopher left Congress to become assistant to the director of the agricultural conservation program of the Agriculture Department.

While in the House, he served on the Agriculture, Veterans' Affairs, and Interior Committees. He was known among his congressional colleagues for his humor.

Mr. Christopher was a graduate of Hill's Business College in Sedalia, Mo., in 1907. He was a Mason, a Shriner, and Odd Fellow.

A widower, he leaves two daughters, Mrs. Ray J. Ratliff of the home address, and Mrs. Edward Ward of Butler, Mo.; and seven sons, George D., Moreland F., Homer W., Charles S., Wallace A., Robert L., and Joseph M., all of Butler. Also surviving are two brothers, Frank, of Lake Grove, Oreg., and Edward, of Hardin, Ill.; and a sister, Mrs. Julia Reavis of Corcoran, Calif.

[From the Kansas City (Mo.) Star, Jan. 26, 1959]

A CHRISTOPHER TRIBUTE—LAWMAKERS GIVE EULOGIES IN CONGRESS—SESSION THEN IS RECESSED TO PERMIT MEMBERS TO ATTEND RITES

(By Jack Williams)

WASHINGTON, January 26.—Twenty-three Members of the House of Representatives today eulogized the late George H. Christopher of Missouri, who died Friday.

"His career was a striking example of freedom of opportunity and limitless possibilities under our form of government," Representative CANNON, dean of the Missouri delegation in Congress, said "He started as a young man without land, capital or influence."

SERVICES IN CAPITOL

The House adjourned after the eulogies so that Members could attend funeral services here this afternoon. Flags atop the Capitol flew at half mast. A scheduled meeting of the Interior Committee, of which Christopher was a member, adjourned in honor of the deceased member.

The body will be taken by train tonight to Kansas City, from where it will be moved to Butler, Mo., for services there at 2 o'clock Wednesday afternoon. A resolution was adopted by the House expressing sympathy to the family and naming the other 10 Missouri Representatives to be honorary pallbearers. Several of them will attend the funeral services at Butler.

The fight the Congressman made for renomination last year was referred to by CANNON and Representative BOLLING, of Kansas City.

"A DECISIVE VICTORY"

"When he announced his candidacy he was handicapped physically and politically," CANNON said. "He was marked for slaughter by his opponents. He fought through the primary and won a decisive victory on his record of service."

Bolling said that in the last primary campaign Christopher was "opposed by forces so strong he was not thought able to survive." He added that after Mr. Christopher's victory he held no malice against those who had sought to prevent his renomination.

Representative MCCORMACK of Massachusetts, Democratic floor leader, praised Christopher's hard work in Congress and summarized him as "a great man who took his work but not himself seriously."

Representatives BOLLING, KARSTEN, CARNAHAN, SULLIVAN, and BROWN of Missouri are planning to attend the services in Butler.

[From the New York Times, Jan. 27, 1959]

CHRISTOPHER EULOGIZED—HOUSE MEMBERS PAY TRIBUTE TO MISSOURI REPRESENTATIVE

WASHINGTON, January 26.—Twenty-three House Members today eulogized Representative George C. Christopher, Democrat of Missouri, who died of a heart attack here Friday.

The House then adjourned out of respect to Mr. Christopher after delegating its other members from Missouri to attend a funeral service here and in Missouri.

The service was held at a funeral home here this afternoon with the Rev. Bernard Braskamp, House chaplain, and the Rev. Arthur Underwood of St. Timothy's Protestant Episcopal Church in Washington officiating.

Another service will be held in the Baptist church at Butler, Mo., Wednesday afternoon. Burial will be at Butler.

Representative CLARENCE CANNON, a Democrat and dean of the Missouri delegation, cited the courage of Mr. Christopher, who, although handicapped by a leg amputation a year ago, had fought to victory in the election.

[From Roll Call, Jan. 28, 1959]

REPRESENTATIVE CHRISTOPHER FIRST DEATH OF 86TH

Ten of his congressional colleagues accompanied his body west to Butler, Mo., as the House of Representatives paid its reverent respects to George H. Christopher, 70, who died of a heart attack Friday.

The veteran legislator succumbed at the home of his daughter and son-in-law after complaining of feeling ill early in the evening. He had served for nearly 10 years and represeented ex-President Harry Truman's home district.

Members of the House eulogized Christopher, the first death of the 86th Congress, and the House adjourned Monday out of respect for the solon, whose final services will be held today.

He was the son of a Missouri farmer, grew up in Bates County, and was an expert on agriculture and veterans affairs. He served on the Agriculture, Veterans Affairs, and Interior Committees.

Funeral services in Washington were held Monday at the S. H. Hines Home. He is survived by two daughters and seven sons.

[From the Kansas (Mo.) City Times, Jan. 28, 1959]

RITES TODAY AT BUTLER—BODY OF REPRESENTATIVE CHRISTOPHER ARRIVES HERE—LABOR AND POLITICAL FIGURES AND BATES COUNTY CITIZENS MEET TRAIN

A large delegation of labor and political figures and Bates County citizens was at the Union Station last night when a train arrived with the body of U.S. Representative George H. Christopher.

In a private car on the back of the train were three Missouri Representatives who served with Christopher in Washington. They were RICHARD BOLLING, of Kansas City, A. S. J. CARNAHAN, Elisinore, and MORGAN M. MOULDER, Camdenton.

EIGHT TO ATTEND

The three are among eight of Missouri's Representatives to the House of Representatives who will attend services for Christopher today at Butler. Christopher, Missouri Fourth District Representative from Butler, died Friday in Washington.

CHARLES HARRISON BROWN, Springfield; W. R. HULL, JR., Weston; Mrs. LEONOR K. SULLIVAN, St. Louis, and FRANK M. KARSTEN, St. Louis, arrived last night by plane. KARSTEN is acting head of the House delegation.

Kenneth R. Harding, sergeant at arms of the House, said the congressional delegation will go to Butler this morning by motor car.

DAUGHTER ON TRAIN

Mrs. Ray J. Ratliff, Christopher's daughter, met the train. She, with her husband and 4-year-old daughter, Ramona, attended memorial services for her father Monday at Washington, then drove here.

Also present was Leonard Irving, congressman from the fourth district from 1949–53. He is now president and business representative of Laborers Local 264.

H. L. Oberweather, mayor of Butler, met the train. He had issued a proclamation requesting that all businesses in Butler close tomorrow from 1:45 until 2:45 o'clock. Services for Christopher will be at 2 o'clock at the First Baptist Church.

[From the Kansas City (Mo.) Times, Jan. 29, 1959]

BIG CROWD ATTENDS CHRISTOPHER RITES—ABOUT 1,500 PERSONS AT BUTLER CHURCH FOR SERVICES FOR U.S. REPRESENTATIVE COME FROM MANY AREAS, FELLOW LEGISLATORS, LABOR, MASONS, AND OTHER GROUPS ARE REPRESENTED

(By James R. Ashlock)

BUTLER, Mo., January 28.—George H. Christopher, the 70-year-old Member of the House of Representatives from the Fourth Missouri District, was buried today beside his wife and mother in Oak Hill Cemetery, 2 miles east of Butler. Representative Christopher died Friday night in Washington.

About 1,500 persons crowded into the small Butler Baptist Church for the funeral. Only about 600 could be seated in the sanctuary. Others sat in Sunday school classrooms and the basement, listening on a public address system.

Seated in the front row were seven of his House colleagues. They were FRANK M. KARSTEN and Mrs. LEONOR K. SULLIVAN, St. Louis; RICHARD BOLLING, Kansas City; W. R. HULL, JR., Weston; CHARLES H. BROWN, Springfield; A. S. J. CARNAHAN, Elsinore, and MORGAN M. MOULDER, Camdenton.

HILLELSON IS PRESENT

Jeffrey P. Hillelson, acting postmaster at Kansas City, was representing Representative THOMAS B. CURTIS, Webster Groves. Hillelson, a Republican, once held the Fourth District House post and was unseated by Christopher. Also present was Kenneth B. Harding, Sergeant at Arms for the House.

The Reverend Orval Wooley sketched Christopher's career. He told of Christopher's soil conservation practices and of his efforts in Congress to assist farm interests.

Not far from Butler, near the Amoret community, is Christopher's 950-acre farm where he spent most of his life. It was his farm background that won him favor among the agricultural people. But he had support, too among nonrural labor groups.

Christopher had sought benefits for postal workers. In appreciation of this, five members of Kansas City Local 67 of the National Federation of Postoffice Clerks attended the funeral. William H. Cady, 7706 East 112th Street, Hickman Mills, president of the local, headed the delegation.

LABOR IS REPRESENTED

Other labor groups who supported Christopher were represented by H. E. Carroll, area director for the United Auto Workers and Julius Frazer, international representative of the UAW. Both are from Kansas City. Oren Lee Staley, Rea, Mo., president of the National Farmers organization, was present.

Christopher was a member of the Amsterdam Masonic lodge, which meets near his farm home. He joined the lodge in 1937. Eighteen members of the lodge were among the 200 present for the Masonic ceremony at the graveside.

Richard H. Ichord, speaker of the Missouri House of Representatives, appointed a five-member delegation which attended the service. They were Mrs. Olive Hedger McGuire, Bates County; Curtis Vernon Davidson, Henry County; Calvin Holloway, Sinclair County; W. C. McGraw, Johnson County, and George Duensing, Jr.; Lafayette County.

[From the Bates County Democrat, Butler, Mo., Feb. 5, 1959]

A crowd of 1,500 crowded into the Butler Baptist Church last Wednesday afternoon to attend final rites for Congressman George Christopher, who died at his home in Washington, D.C., Friday night, January 28. Services had been held earlier in the week in Washington and the body was escorted to Butler for the memorial and graveside services.

Included in the throng of mourners were people from all walks of life—from congressional and farm organization dignitaries to personal friends and acquaintances of the colorful Democratic Congressman from the Fourth District.

Rev. Orval Woolery, pastor of the Butler Church, in his sermon recounted Christopher's distinguished career as a farmer and lawmaker. Passages from the Sermon on the Mount and Golden Rule (Christopher's favorites) were recited in the brief but impressive service. The memorial actually began at 2 p.m., but the mourners began streaming into the church before noon to pay their last respects.

At the conclusion of the services, the body of Christopher was laid to final rest in the Oak Hill Cemetery east of Butler. These services were conducted by Christopher's home Masonic lodge of Amsterdam, Mo.

Deep personal loss of a friend and lawmaker was reflected on the face of each

mourner as he passed by the casket of George Christopher. The countless floral displays paid a final tribute to the fallen Congressman.

Governmental dignitaries here to attend the funeral services included:

Congressman Frank M. Karsten, St. Louis, Mo.; Richard Bolling, Kansas City; W. R. Hull, Jr., Weston, Mo.; Charles H. Brown, Springfield, Mo., A. S. J. Carnahan, Ellsinore, Mo.; Morgan M. Moulder, Camdenton, Mo.; and Mrs. Leonor K. Sullivan, St. Louis, Mo.; Assistant Sergeant of Arms of the House, Kenneth R. Harding, Washington, D.C.; House of Representatives, Jefferson City, Mrs. Olive Hedger McGuire, Bates County; Curtis Vernon Davidson, Henry County; Calvin Holloway, Sinclair County; W. C. McGraw, Johnson County; George Duensing, Jr., Lafayette County; State Senator Kelso Journey and Mrs. Journey, Clinton, Mo.; National N.F.O. President Oren Lee Staley, Rea, Mo.; National Director Gordon Shafer, Elm, Mo., Fourth District chairman; Glenn Nelson, Nevada, Mo.; Fourth District chairman J. E. Hambright, Harrisonville, Mo.; LaFayette County Democratic Chairman Q. J. Bernard, Lexington, Mo.; Vernon County Democratic Chairman M. L. Welty, Nevada, Mo. Labor union, John E. Rinkenbaugh, H. E. Carroll, Julius Frazier, and J. A. Sanders, all of Kansas City.

EXCERPTS FROM THE SERVICE CONDUCTED BY THE REVEREND ORVAL F. WOOLERY, BUTLER BAPTIST CHURCH, BUTLER, MO., JANUARY 28, 1959

THE BLESSING OF WORK

Scripture (Matthew 5: 1–16):

"And seeing the multitudes, He went up into a mountain: and when He was set, His disciples came unto Him. And he opened His mouth, and taught them, saying, 'Blessed are the poor in spirit: for theirs is the kingdom of heaven. Blessed are they that mourn: for they shall be comforted. Blessed are the meek: for they shall inherit the earth. Blessed are they which do hunger and thirst after righteousness: for they shall be filled. Blessed are the merciful: for they shall obtain mercy. Blessed are the pure in heart: for they shall see God. Blessed are the peacemakers: for they shall be called the children of God. Blessed are they which are persecuted for righteousness' sake: for theirs is the kingdom of heaven. Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely for My sake. Rejoice, and be exceedingly glad; for great is your reward in heaven: for so persecuted they are prophets which were before you.

"Ye are the salt of the earth: but if the salt have lost his savor, wherewith shall it be salted? It is thenceforth good for nothing, but to be cast out, and to be trodden under foot of men. Ye are the light of the world. A city that is set on an hill cannot be hid. Neither do men light a candle and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house. Let your light so shine before Me, that they may see your good works, and glorify your Father which is in heaven."

Text (Matthew 5: 16): "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

Poem, "Friends," by Lloyd Carleton Shank:

"Can any earthly possession
Be esteemed above a friend?
Can other in time of sorrow
Greater comfort lend?

"Across the pages of history
And down to the present time
No sweeter theme is recorded
Than friendship's pact sublime.

"He that is guilty of using
His friends for selfish gain
Should never again feel worthy
Their confidence to retain.

"True friendship's highest regard
The Master clearly commends
In setting forth the lesson
Of loyalty to friends."

We seek comfort in various ways: First, friendship; second, meditation; third, work. All three are important and can bring much comfort.

I. Friendship truly is of such worth we would be rich if we had friends but none of the world's goods.

Again, should we not have earthly friends but know Him who is the friend that sticketh closer than a brother, we are rich.

II. Meditation has been vital in every life that has achieved. It has been the springboard to accomplishment. Meditation has been a blessing to those who sorrow. For through it we often find the key that unlocks the treasure house of blessing; we find the light that dispels the darkness that surrounds us; and we find the courage to overcome our fears.

With the psalmist we would say, "Let the words of my mouth, and the meditation of my heart, be acceptable in Thy sight, O Lord, my strength, and my redeemer."

Poem, "The Secret of His Presence," by Lloyd Carleton Shank:

"It is good for us to wander
Through the fields and far away
From the trials and temptations
That beset us every day:
To the secret of His presence
Where He teaches us to know
That 'tis here we find refreshing
Where His living waters flow.

"O, the rapture of this meeting
With the friend who understands
And calms out every tempest
Through the power of His commands.
So my brother, I entreat you
That you seek without delay
And you'll find in Him the quenching
For your thirsting soul today."

III. Work, "The tree of life is laden with promise for him who works." (Rev. S. R. Bratcher, Methodist minister.)

George Christopher was a worker.

The Sermon on the Mount teaches us that to work is blessed.

Poem, "Work," by an unknown author:

"This is the gospel of labor,
Ring it, ye bells of the kirk;
The Lord of love came down from above
To live with the men who work.

This is the rose He planted
Here in the thorn-cursed soil.
Heaven is blest with perfect rest,
But the blessing of earth is toil."

We who remain today can find comfort in work.

The Apostle Paul said, "I am debtor."

Three things that prompt us to work:

1. An awareness that we owe something to ourselves and families.

2. We are indebted to others: (a) for our heritage, (b) for our blessings.

3. We are indebted to God:

(a) Therefore, my beloved brethren, be ye steadfast, unmovable, always abounding in the work of the Lord, forasmuch as ye know that your labor is not in vain in the Lord. (I Corinthians 15: 58.)

May we find comfort then in friendship, in meditation, and work.

ORIGINAL AND UNPUBLISHED POEMS WRITTEN BY THE HONORABLE GEORGE H. CHRISTOPHER

JIM

He had religion's blessed hope
Of mansions in the sky.
But it so happened that one day
Jim took his bed to die;
"Up yonder" then he whispered as the
Preacher closed his prayer,
"But going from Missouri
I'll get lonesome over there."

REMEMBERED NAMES

Remember the names we knew long ago
When in youth we first lived in this land?
There was Westover, Armentrout, Bailey, and
Scott
And Marshall and Allen and Hand.
There was Rabourn and Cowdry and Maddy
and Park
And Dawson and Barton and Burns;
They are gone like dry leaves in a November
wind
And scarcely a memory returns.

YOUTH'S SPIRIT

A few more years—a few more years
The past will be behind,
Sweet in the shroud of faded hopes
Dear to my inmost mind.
I think 'twill haunt my after life,
That spirit young and bold
That will take me back to the long ago,
Ere I became so old.

MY VANISHED FRIEND

Around the corner, I had a friend,
I knew not he was nearing the end;
The days slipped by and weeks wore on
And before I knew it, my friend was gone.

And for months I had not seen his face
For life sets a swift and terrible pace
And that's what I get and deserve in the end:
Around the corner—a vanished friend.

ETERNAL SPRING

There came a spring so long ago
The winter's sleep was scarcely broken,
The south wind and the sun returned
Listening for words that were never
spoken.

Though two score years and more are gone
Spring now comes just the same as then,
And if we had it all to do
We'd do it just the same again.

There was a spring that never came
But we have lived enough to know,
That what we never have—we keep
While everything we have must go.

LOST LOVE

I walk alone beneath a wishing moon
Where love bends low to kiss a dream good-
by;
Since God has said, with me she could not
stay
Each morn I wake to greet a loveless day.

MY BELOVED

A moss-covered cabin by a flowing brook
At the foot of a mountain in a shady nook,
With a winding path to a sparkling spring
Were bluebirds warble and the cardinals
sing.

It was there we came on Easter Day
And the jonquils nodded their heads so gay.
And we kindled a flame on our heartstone
there
For the fog was chill in the mountain air.

But our hearts were warm with youth and
love
Though the fog shut out the sun above.
And happiness dwelt in our first home there
As the firelight gleamed in your golden
hair.

WASHINGTON D.C., *January 26, 1959.*

DEAR MR. AND MRS. RATLIFF: Words can't seem to express the many thoughts and sincere sympathy that are with you at this time.

WOMAN'S AUXILIARY,
CHURCH OF SAINT TIMOTHY.

JANUARY 27, 1959.

The officers and members of the Washington Heart Association gratefully acknowledge a contribution from his friends in the Agricultural Conservation Program Service, U.S. Department of Agriculture, and Mr. and Mrs. Joseph Vellone (former neighbors), in memory of the Honorable George H. Christopher toward the conquest of heart disease.

KANSAS CITY, MO., *January 25, 1959.*

To the Family of the Hon. George H. Christopher:

May you find strength and courage
And understanding, too
In deeply sympathetic thoughts
This message brings to you.

We were married 50 years the 24th of December, and we received a congratulatory letter signed by your dear father. We were so surprised and so happy to receive it, and cherish it so much—we wouldn't take anything for it.

He must have been a wonderful man, and we would have been pleased to have met him. When we read in our paper of him passing away we were so sorry.

Please accept our deepest sympathy and we pray that God will give you physical strength and spiritual power to carry you through your great sorrow.

May God bless and comfort you all.

Sincerely,

Mr. and Mrs. O. A. FELCH.

WASHINGTON, D.C., *January 25, 1959.*

DEAR MOINA AND RAY: My family and I wish to convey our deepest sympathy on the death of your father, the Honorable George H. Christopher.

While our grief can never match yours, his passing meant a great loss to us also.

We came to know Mr. Christopher well as a neighbor and a friend and we're going to miss his kindness, wisdom, and ready wit every day of our lives.

I shall always remember especially those evenings when your father, relaxing on the patio after a strenuous day on the Hill, would hold us spellbound with his reminiscences of things past and his wise interpretation of things present and future. I'll never forget, either, the early morning coffee, which we all enjoyed so much. After his coffee and a restful night, your father could always face the day with high spirits and zest. His example was an inspiration to all who knew him and I'd like to think that I'm a better man for having known him and called him friend.

Again let us attempt to tell you how much we sympathize with you in your loss and to assure you that he is going to be missed by everyone as a fine legislator and a fine gentleman.

Sincerely,

CHARLES H. STEPHENSON AND FAMILY.

CLINTON, MO., *January 30, 1959.*

DEAR MOINA AND RAY: Two years ago tomorrow Pet (Mrs. Sperry) left. My sorrow was so deep that I felt that life would not be worth living. My sorrow now is just as deep, but I learned that I must live whatever time may be allotted, and that I must adjust myself to the finality of death.

Pet and I attended your mother's funeral and your father wept with us in his sorrow. He wept with me a few years later, in mine. We have many times talked with each other about our great loneliness.

I told him at the cemetery, where he now rests, that I had come with him as far as mortal man can go, to the graveside of his beloved. Thereafter, he must seek his own solution, a new way of life, bereft of that which he held most dear. He understood. So it was with me, when Pet was laid to rest. So it must be with you, now that George is gone. Even my children could only walk with me to the graveside, they can't really share my terrible sorrow, although they, too grieve for their mother; but their grief, they alone must bear; mine, I alone must bear and learn to live with.

But friends can still love the families of those who are gone. I shall always love and respect his friendship, and my affection for his family and close friends will continue through the years that I have left.

Sincerely and affectionately,

Hon. FLOYD L. SPERRY,
Judge, Kansas City Court of Appeals.

P.S.—I write this to you because I knew you better than I did other members of the family, but I would like them to know how I feel.

ARLINGTON, VA., *January 24, 1959.*

DEAR MOINA and RAY:

THE PATH BEYOND THE BEND

Have you ever walked along a path
And looked ahead of you
To where the road turned suddenly
And seemed lost awhile to view?

Think of your dear one living still
Where the road goes on without end
It's only we who do not see
The path beyond the bend.

Nell and I extend to you and all the family our sincere and heartfelt sympathy in this dark hour of your bereavement. We are sorry.

George Christopher has been one of my best friends for many, many years. I was deeply shocked to learn of his passing. We had a nice visit by phone earlier in the week and he was in his usual cheerful frame of mind.

Like you, we shall miss him terribly. He was a fine gentleman, a conscientious one, who was devoted to his family and his work.

Sincerely,

NELL and CHARLES HASLET,
Charles Haslet,
Associated Press, Washington, D.C.

ROSCOE, MO., *January 31, 1959.*

Mrs. MOINA RATLIFF,
Washington, D.C.

DEAR MRS. RATLIFF: I extend to you and your family my sympathy in the loss of your father. He had endeared himself to many by his sense of humor and his sincere friendliness. I personally feel that I have lost a very close friend. I know that all of the Missouri farmers have lost a friend that fought to solve their problems to the utmost of his strength. I realize that, in the last few years, much of his strength and courage came from the loving care that you had given him.

I hope that you will find solace in your sorrow that he was doing the work that he had chosen, up to the very end of his life. His closeness to God and nature during his life, can only mean that he has reached the eternal home that we all seek.

Sincerely yours,

CALVIN HOLLOWAY AND FAMILY,
Associate in the PMA program and now State representative.

ALEXANDRIA, VA., *January 29, 1959.*

DEAR FOLKS: I was terribly shocked to learn of the sudden death of your father this morning, upon our return from a short vacation. Although we will attend the service in Washington today, I deeply regret that we cannot be in Butler on Wednesday.

I am quite sure it is not necessary for me to tell you how much I thought of your father. He was a warm and loyal friend of my father and mother, and of me, for all the years he knew us, and he has done many great favors for all of us. I have always been very proud of him and of the outstanding record he made in the various positions he has held. It has been a source of great regret to me that I was in Europe during the past 4 years. It kept me from seeing your father and visiting with him as we used to do when I was living in Butler and Hickman Mills.

I can't help but feel that you have been very fortunate to have had your father with you as long as you have. My father died when I was 9 years old, and I can't really say I ever knew what it was to have a father. George lived a full life, he leaves a wonderful treasure of memories, of accomplishments, and of outstanding performance in positions of public trust and responsibility. Somehow, I don't believe any man can do more in one lifetime.

May God bless you and comfort you in this time of sorrow and sadness.

As always,

DONALD DAWSON,
Former Prosecuting Attorney, Bates County, Mo., now assigned to the General Accounting Office.

WASHINGTON, D.C., *February 15, 1959.*

DEAR MOINA: I was so sorry to hear of the death of your father. I have been thinking of all of you knowing that you all loved and respected him deeply and that you and Ray especially will miss him very much.

He was a courageous person and a dedicated man to his principles and ideals and did not hesitate to try and carry out that which he felt was right.

You and Ray, however, know that you were his greatest help and were so devoted to him. It is not everyone that has such loyal children. I know this was appreciated by all your friends.

My most sincere sympathy to you all.

Affectionately,

KATHERINE COX
Mrs. Joseph Cox,
Widow of former President of Michigan State College.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
Washington, D.C., September 1, 1958.

Hon. GEORGE H. CHRISTOPHER,
Member of Congress,
Butler, Mo.

DEAR GEORGE: The 85th Congress made outstanding history. In the making of this great record, you played a most important part. I take this opportunity for myself and for Speaker RAYBURN to convey to you our sincere thanks for the splendid cooperation you have so loyally and unselfishly given to us.

The people of your district are justified in feeling proud of you. You represent them in the Halls of Congress with ability, vision, and courage. Your voice and vote have always been favorable in support of legislation to make our beloved country strong, so essential to our national security, in the face of the world challenge of international communism. You have always been on the side of a firm foreign policy and strong defense, so essential to our Nation. In the field of domestic affairs, your vote and voice have always been on the side of the people; in support of progressive legislation; of measures that will strengthen our family life and benefit our country as a whole.

You are, in every sense, "a people's Congressman."

You richly deserve reelection. I sincerely hope, as I am confident, that the people of your district will reelect you to the 86th

Congress, enabling you to continue in their behalf, your great record of service in the Halls of Congress.

With kind personal regards, I am

Sincerely yours,

JOHN W. MCCORMACK,
Majority Leader.

NEW YORK, *December 1, 1958.*

Hon. GEORGE H. CHRISTOPHER,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: This is a belated note but I want to tell you how pleasing it is that you will continue to serve your State and the Nation as a Member of the House. You have my very best wishes for another happy and successful term.

Sincerely yours,

JAMES A. FARLEY.

KANSAS CITY, MO., *February 1, 1959.*

MRS. RAY RATLIFF.

DEAR MRS. RATLIFF: Your dear father sent my mother such a beautiful letter on her 90th birthday which was a year ago.

We are so sorry he has been called to his eternal rest, but God always knows best.

We just wanted to send our sympathy.

Thinking of you and remembering your father in our prayers.

We are,

Respectfully,

MRS. OLIVER CORRIGAN AND MOTHER,
MRS. ELLA BICKENBACH.

WASHINGTON, D.C., *January 25, 1959.*

FAMILY OF THE HONORABLE GEORGE H. CHRISTOPHER: With sympathy.

There is little one can say
And little one can do
Except to express the heartfelt wish
That comfort be granted you.

THE MISSOURI SOCIETY OF WASHINGTON, D.C.,
HARRY WAKE, *President.*

BOLIVAR, MO., *February 10, 1959.*

FAMILY OF THE HONORABLE GEORGE H. CHRISTOPHER: We were so sorry to hear the sad news of Mr. Christopher's death. It is not only a loss to his relatives but to our State and Nation as well.

We shall never forget him.

Mrs. F. L. STUFFLEBAM,
Editor and Publisher,
Bolivar Herald.

JOPLIN, MO., *January 27, 1959.*

FAMILY OF THE HONORABLE GEORGE H. CHRISTOPHER: With sympathy in the loss of your father.

Your father meant so much to you
In such a special way
That all who know you know how deep
Your sorrow is today,

But may your loving thoughts of him,
Your cherished memories, too,
Lend comfort to you now and keep him
Always close to you.

Mrs. G. W. BERRY and
GEORGIA E. BERRY,
Widow and daughter of Dr. Berry.

FEBRUARY 11, 1959.

DEAR MOINA AND FAMILY: I want to send my sincerest heart felt sympathy to you and yours in the loss of your wonderful father. I too, have lost a dear father and mother and I can really and truly say I sympathize with you. Your heartache will always be there—you will always miss him—more as time goes on, but the wonderful memories you have of him will ease that ache. They are proud memories. Memories that will make your personality unfold into a bigger, better, lovelier lady.

His funeral was the biggest funeral ever held in Butler, the services were very nice, altho the minister did not eulogize him too much. The presence of all his friends displayed the best eulogy of any unspoken words.

I shall always remember my wonderful privilege of working with you 2 years ago.

Love,

GLADYS AND JESSE BLAKEMAN.

(Long a family friend and former employee of the Congressman.)

WARRENSBURG, MO., *January 25, 1959.*

To the Family of the Honorable George H. Christopher, Butler Mo.

DEAR FRIENDS: Please permit us to express to you our deep sorrow upon reading in the Kansas City paper of January 24 of the sudden death of Mr. Christopher. Little did we realize last October during the campaign when we talked to him here in Warrensburg, it would be our last meeting with him. Mr. Christopher was one of those rare individuals who went the second mile in behalf of all of his constituents of the Fourth Congressional District. His place can not be filled by anyone. He will be missed by those of us who regarded him as a very close personal friend.

With deepest regards,

We are

Mr. and Mrs. ROLLA F. WOOD.

(Mr. Wood, professor, Central Missouri State College.)

[From the Evening Star, Washington (D.C.), Jan. 24, 1959]

Christopher, George H.: To the officers and members of Columbia Chapter, No. 15, OES, notice is given of the death of our late brother, George H. Christopher. Funeral services will be held at 3 p.m., Monday, January 26, 1959, at the S. H. Hines Co. Funeral Home, 2901 14th Street NW.

DOROTHY M. WIGHTMAN,
Worthy Matron.
E. GERTRUDE SMITH,
Secretary.

WASHINGTON, D.C., *January 25, 1959.*

DEAR SISTER MOINA AND BROTHER RAY: "For I am thy God: I will strengthen thee; yea, I will help thee." (Isaiah 41: 10.)

May God who watches over us
Be with you in your sorrow
To give you comfort for today
And courage for tomorrow.

Most sincerely and fraternally,
DOROTHY and RALPH WIGHTMAN,
Worthy Matron and Worthy Patron,
Columbia Chapter, No. 15, OES.

KANSAS CITY, MO.,
January 26, 1959.

FAMILY OF HON. GEORGE H. CHRISTOPHER: May you find some measure of comfort in this sincere expression of sympathy.

EDWIN W. KETTLESEN,
Secretary-Scottish Rite (Masonic group).

WASHINGTON, D.C., *January 24, 1959.*

DEAR SISTER MOINA AND BROTHER RAY:

This brings you deepest sympathy
And comes to let you know
That you will be thought of often
Through the days that come and go.

Our love and sympathy to you. May God give you strength and comfort.

Fraternally and Sincerely,
ROY AND ELVIRA OSTROM.

(Roy Ostrom, past patron, Columbia Chapter, No. 15, OES and worthy grand patron, grand chapter, District of Columbia, OES. Elvira Ostrom, past matron, Columbia Chapter, No. 15, OES.)

WASHINGTON, D.C., *January 25, 1959.*

DEAR MOINA and RAY: In this hour of sorrow may you be comforted by the heartfelt sympathy of your many friends and loved ones.

No one can take the place of your father or mother, but we know the parting is only temporary.

Fondly and Fraternally,

VIRGINIA KEMP,
Associated Matron Columbia Chapter,
No. 15, OES.

WASHINGTON, D.C., *February 4, 1959.*

DEAR SISTER MOINA and BROTHER RAY: To express sincere sympathy to you in your sorrow in the loss of your fine father.

Fraternally yours,

GRACE and HARVEY GODDARD,
Past Matron and Patron,
Columbia Chapter, No. 15, OES.

WASHINGTON, D.C., *February 2, 1959.*

DEAREST MOINA and RAY: Please accept my sincere sympathy over the loss of your loved one. Words mean so little at a time like this, but I want you to know my thoughts are with you. Jack, too.

With my love,

PEGGY SHAW KERR,
Past Matron, Columbia Chapter,
No. 15, OES.

WASHINGTON, D.C., *January 25, 1959.*

DEAR MOINA and RAY: All who knew your loved one are thinking of you today, and sharing your loss with understanding and deepest sympathy.

Please feel free to call upon me at any time if I can be of assistance in any way.

"I will lift up mine eyes unto the hills from whence cometh my help." (Psalms 121:1.)

Sincerely and Fraternally,

JAMES L. EVANS,
Past Matron, Columbia Chapter
No. 15, OES.

WASHINGTON, D.C., *January 26, 1959.*

DEAR SISTER MOINA AND BROTHER RAY: May it help you now in some small way to meet each new tomorrow just knowing someone shares your grief and understands your sorrow.

With love and deep sympathy,

MYRTLE HUMPHREYS,
Past Grand Matron, Grand Chapter,
District of Columbia, OES.

WASHINGTON, D.C., *January 25, 1959.*

DEAR SISTER MOINA AND BROTHER RAY: With sincere sympathy to you in your sorrow—our deepest sympathy to you and yours in the passing of your beloved father.

Sincerely and fraternally,

LOLA AND HARRY BEACH.

(Harry Beach, past grand patron, grand chapter, District of Columbia, OES.)

WASHINGTON, D.C., *January 25, 1959.*

DEAR MOINA AND RAY: Please accept the deepest sympathy of us in your bereavement.

If there is anything we can do to ease the heaviness of your hearts or assist you in any way, please call upon us.

Sincerely and fraternally,

IRENE LANGDON,
Secretary, Golden Sunbeams of 1957
Association.

WASHINGTON, D.C., *January 24, 1959.*

DEAR MOINA AND RAY: Sister and I want to express our heartfelt and understanding sympathy to you in the passing of your dear father.

No matter the length of time they have been spared to us, we are never quite ready to part with our loved ones.

May God grant you His comfort and peace.

With love,

ETHEL CALVERT,
Member, Columbia Chapter No. 15, OES.
FRANCES DUFFY.

WASHINGTON, D.C., *January 25, 1959.*

MOINA, MY DEAR: I've just learned of the sudden passing of your father and do want you to know my heart goes out to you in sincere and loving sympathy and I pray our Heavenly Father will give you strength to bear your great sorrow.

If there is anything I can do, just let me know.

Sincerely and fraternally,

RUTH DURNO,
Member, Columbia Chapter No. 15, OES.

Washington, D.C., February 13, 1959.

DEAR MOINA:

Somewhere the Sun is shining
Thru mists of hazy blue.
Somewhere there is no sorrow
And hearts are happy and true.

Somewhere there is no parting.
Somewhere there is no pain.
Somewhere loved ones are waiting
To greet us once again

And tho beyond our understanding
May this set your heart at rest—
Somewhere in all His wisdom
A loving God knows best.

So sorry this is late to remind you more of your sorrow, but although time passes quickly, it somehow can never erase memories of our loved ones.

Want you to know my thoughts have been with you.

I still have the inspiring letter your father wrote to me when he was in the hospital. You can be sure he is in "His loving care" now. Columbia has lost a dear member.

Sincerely,

ETHEL GOUGH,
Member, Columbia Chapter, No. 15, OES.

WASHINGTON, D.C., JANUARY 26, 1959.

DEAR MOINA:

"I cannot say, and I will not say
That he is dead—he is just away!
With a cheery smile and a wave of the hand
He has wandered into an unknown land
And left us dreaming how very fair
It needs must be since he lingers there.
So think of him faring on, as dear
In the love of there as the love of here,
Think of him still as the same, I say
He is not dead—he is just away!"

—*James Whitcomb Riley.*

Sincerely,

Mrs. AGNES (TED) DORSEY,
Member, Columbia Chapter, No. 15, OES.

WASHINGTON, D.C., *January 16, 1959.*

DEAR MOINA AND RAY:

"Near shady wall a rose once grew,
Budded and blossomed in God's free light,
Watered and fed by morning dew,
Shedding its sweetness day and night.

"As it grew and blossomed fair and tall,
Slowly rising to loftier height,
It came to a crevice in the wall,
Through which there shone a beam of light.

"Onward it crept with added strength,
With never a thought of fear or pride;
It followed the light through the crevice Length
And unfolded itself on the other side.

"The light, the dew, the broadening view,
Were found the same as they were before;
And it lost itself in beauties new,
Breathing its fragrance more and more.

"Shall calm of death cause us to grieve
And make our courage faint or fall?
Nay, let us faith and hope receive;
The rose still grows beyond the wall.

"Scattering fragrance far and wide,
Just as it did in days of yore,
Just as it did on the other side,
Just as it will forevermore."

—*A. L. Frink.*

Deepest sympathy,

EDWARD and JEAN WHITE,
Family Friends and Members, Columbia Chapter, No. 15, O.E.S.

Argentina and the United States

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. FASCELL. Mr. Speaker, all of us recall with pleasure the memorable visit of President Frondizi of Argentina to the United States a few months ago.

I call to the attention of the Members a thought-provoking editorial on this subject from the Diaro las Americas. This important newspaper is a clarion voice on Latin America. In this editorial it makes a very significant observation regarding the visit of an outstanding and distinguished Argentine citizen, Rogelio Frigerio, Secretary of Socio-Economic Relations.

I feel sure all of us join in the hopes and expectations expressed herein that the tangibile results of his visit will be renewed and invigorated relations between our two countries. Certainly to be counted among these results in a more mutual understanding of one another's problems, and a deeper and clear appreciation of one another's aims in the achievement of worldwide freedom and peace.

The editorial follows:

[From the Diario Las Americas, Apr. 23, 1959]

THE UNITED STATES AND ARGENTINA

A retrospective analysis of President Frondizi's visit to the United States produces a reaction which is a mixture of positive satisfaction and just anxiety. The tradition of cold political relations between the "Casa Rosada" and the White House was broken after a lapse of 23 years, when the President of the Argentine nation returned the visit to Buenos Aires made by President Roosevelt in December 1936.

President Frondizi made his trip in the midst of a domestic political tempest and an undeniable inter-American crisis. His doings were carefully watched by impartial observers, by his critics, and by his friends. Still to be resolved is the final chapter of this great event, and it cannot be anything but tangible results which should benefit—without any doubt—the daily life of both nations. The opposite would be to reinforce the thesis of those who opposed the trip and indicated that its only purpose was that of facilitating the historical halting of Argentina's international policy with no advantages for the nation.

A distinguished citizen of the political and industrial world of the great nation to the south is in the United States as a guest of the universities of Boston, Columbia, Harvard, and Stamford. We refer to Rogelio Frigerio, the man who, as Secretary of Socio-Economic Relations of the Presidency, was the main architect of a renovated Argentine policy based in the close collaboration with all the nations of the hemisphere, on free initiative in economic matters and the full development of all of Argentine resources.

Mr. Frigerio's presence in the United States is the logical continuation of President Frondizi's visit inasmuch as he was the most enthusiastic supporter of that visit which defined new routes in the relations between this country and Argentina. The defined inter-American concept of Mr. Frigerio, better expressed by the violent attacks of which he is the object on the part of the official organ of the Communist Party, gives policymakers of the United States a brilliant opportunity to continue studying, unhampered by the rigidity of official missions, a series of paths that may lead to strengthening the success of President Frondizi's visit to Washington.

To obtain solutions to the very grave economic and social problems facing the government of President Frondizi, and to obtain these solutions through the comprehensive aid of the U.S. Government, is to demonstrate the error of the tradition of international policy formerly followed by Argentina and which was no other than one of aloofness from Washington. The United States would attain an extraordinary moral victory which would result in magnificent and opportune repercussions throughout the Western Hemisphere.

Why Latin America Is Vital to Us

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thought-provoking article which was published in yesterday's New York Times magazine section. The article is entitled "Why Latin America Is Vital to Us." Later today, in the course of my remarks, I shall refer again to the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY LATIN AMERICA IS VITAL TO US

(By Herbert L. Matthews)

When Secretary of State Frank B. Kellogg drew up his instructions to the American delegation to the Sixth International Conference of American States at Havana, Cuba, in January 1928, he began with a sentence that was then true:

"It is an established principle of our international policy," he wrote, "that among the foreign relations of the United States as they fall into categories, the pan-American policy takes first place in our diplomacy."

Came the Second World War, and times changed. Latin America took a back seat. Europe, Asia and the Middle East moved forward. The cold war was a struggle of East against West. The United States had put isolationism behind; its defense was global, not hemispheric, and so were its responsibilities.

In the late thirties and early forties, things had been different. First, preparations for the great war that everyone saw coming and then the war itself—with the knowledge that Latin America must play a vital, if largely passive, role in it—had kept that region in the forefront of American foreign policy.

When the war ended and the Latin American countries found themselves pushed into the background—their raw-material prices no longer supported, the things they bought from us skyrocketing in price, the Marshall plan devoted exclusively to Europe, American attention concentrated on the thrust of communism from Russia in Europe and China in Asia—they felt resentful. The charge of being neglected rose bitterly and persistently all over the region, through the Democratic regime of President Truman and—despite campaign promises to end the neglect—even more loudly in the Republican administration of President Eisenhower.

The pent-up feelings exploded with a tremendous shock when Vice President NIXON made his now famous trip to South America in April and May, 1958. Virtually all students of Latin American affairs agreed at the time that Mr. NIXON drew the right conclusion from his experience—that the hostility was not directed against him personally but against U.S. policies toward the region, especially economic policies, and the favoritism shown toward Latin American dictators.

An agonizing reappraisal of those policies was begun immediately in Washington, because it was realized that whether Latin America takes first place or not, it is still of supreme importance to us. The cold war cannot be won in Latin America, but it can be lost. If it be conceded that this struggle is a defense of the free and uncommitted countries and of the institutions that make life worth living for free men, then these principles must be defended on our doorstep and in our own hemisphere.

This was what Mr. NIXON must have had in mind in a recommendation which has been repeated so often that it will surely rank as a historic pronouncement. The United States, he said, should have nothing but a cool, correct handshake for dictators, but it should have a warm embrace—un abrazo—for democratic leaders.

The NIXON concept is based on a recognition of the fact that, without a spirit of cooperation, mutual respect and friendship, Latin America—or some countries in the area—could withdraw toward neutralism or an aggravated Yankee phobia. A negative attitude of that type is as much to be feared as a positive and favorable attitude is to be desired. In either case, one must start from the premise that Latin America is of enormous—perhaps even vital—importance to our continued existence as a free and prosperous Nation.

On its side, Latin America is an area in process of phenomenal growth. It has the highest rate of population increase in the world, averaging between 2.25 and 2.5 percent annually. At this moment, the United States has a population of about 175 million. The 20 Latin American countries total about 185 million. By the year 2000, it is estimated, Latin America will have a population of 593 million and the United States only half that.

The area is passing rapidly from an underdeveloped agrarian and mineral economy into an industrial revolution. The strongest feature of Latin American affairs today is social revolution, to which, in recent years, is linked the tidal wave of democracy that has swept most of the region's dictators away. It stands to reason that such an area is politically unstable, in a social ferment and emotionally sensitive. In other words, it is potentially a fertile field for communism.

While there is no threat in any Latin-American country of a Communist seizure of power, and while the Soviet Union is only beginning to show interest in the fields of trade and power politics, the long-range threat is formidable and inevitable. In several countries (Bolivia, where a right-wing revolt was crushed last week, is a clear example) a descent into economic and political chaos could be swift. A military-oligarchic reaction from the right would no longer be tenable in the nations that have thrown out their dictators. A reaction from the extreme left—which in our day means communism—or from a combination of military elements with Communists is more likely.

In considering this possibility, Washington, like any government, must give the first consideration to self defense. The hemispheric policy of the United States since the era of the War of Independence and the Monroe Doctrine has been based on the continental security of the United States.

Without bases in the Caribbean islands and without the Panama Canal, the United States would be wide open to invasion. If one could conceive of hostile missile bases in Mexico or Central America, the peril would be obvious.

Subtract the votes of the 20 Latin American nations from our side in the General Assembly of the United Nations and where would we be? The Afro-Arab-Asian bloc muster 30 to 40 votes on some issues. Add the Soviet block of 10 votes and one has a majority in a total of 82 members.

At every point it has to be said: "If we did not have Latin America on our side our situation would be desperate."

To be denied the products and the markets of Latin America would reduce the United States to being a second-rate power and cause a devastating reduction in our standard of living. A few of the basic economic facts of our national life are enough to prove this.

Of 77 articles listed as strategic materials for stockpiling in the Second World War, 30 are produced in large quantities in Latin America. We get more than 90 percent of our quartz crystals, two-thirds of our antimony, more than half of our bauxite, half of our beryl, a third of our lead, a quarter of our copper from the area.

Zinc, tin, tungsten, manganese, petroleum, and iron ore are some other important raw materials we get from Latin America. Some, like bauxite, iron ore, petroleum, and manganese, are becoming more important every year.

About one-quarter of all our exports go to Latin America and one-third of all our imports come from the area. U.S. private investments in Latin America now reach the amazing total of about $9.5 billion. The Export-Import Bank, an American institution, has authorized $3.5 billion in loans to Latin America since the war, $477 million in 1958 alone. This is just under 50 percent of its total world loans.

The trade between the United States and Latin America, both ways, now exceeds $8 billion a year. U.S. receipts for exports of goods and services and for net long-term investments were more than $6.8 billion in 1958. The figure for payments by the United States to Latin America for imports of goods and services, net donations, and investments in excess of liquidations or repayments was roughly the same.

It should be remembered, incidentally, that we get nearly all our coffee and most of our imported sugar from Latin America. These may not be strictly strategic materials, but one would hate to live without them.

What all this adds up to can be stated simply. Latin America is our most important trading and investment area. Latin American raw materials are essential to our existence as a world power. A friendly Latin America is necessary to our military security.

These are the facts of life, and yet we see the paradox of Latin America being taken for granted, neglected, and moved down in what Secretary Kellogg called the categories of our diplomacy. The axis of American foreign policy, one might say, is directed most emphatically east and west. Yet, the axis of our economic and financial interests is directed north to Canada and south to Latin America, which together outweigh the rest of the world.

If it were easy to formulate a policy toward Latin America that would correct this anomaly and eliminate the causes of anti-Yankeeism, it would have been done before now. The career Foreign Service officers working in the State Department and in the embassies around Latin America are, for the most part, of exceptionally high quality. The trouble is that their ability to make policy is limited and there are serious limitations, also, on what the United States can do.

The extent to which John Foster Dulles, as Secretary of State, kept policymaking under his individual control is well known; besides, his attention was turned elsewhere. There has been no Secretary of State since Cordell Hull who has made a close study of Latin American affairs. Moreover, the choice of ambassadorships rests largely in the White House, not the Department of State.

The Department knew perfectly well in the spring of 1957 that the Cuban situation desperately required an experienced career diplomat, and the first choice was such a man—H. Freeman Matthews. Unfortunately for the United States, and for Cuba, he felt obliged to turn down the transfer and, also unfortunately, the Republican National Committee wanted to reward a "good Republican" with an ambassadorship.

So the post went to a man with no diplomatic experience and no knowledge of Cuba—Earl E. T. Smith. There is no doubt that the present distressing degree of resentment toward thet United States on the part of Premier Fidel Castro and the Cuban people could have been avoided or greatly lessened by expert diplomacy in Havana.

This points to one of the obvious things that can be done to improve U.S. relations with Latin America. It is to choose ambassadors with more care and a greater sense of responsibility.

Another obvious limitation on the State Department, and hence on policy, is the division of power in our system of government. The State Department knew that to impose import quotas on lead and zinc would cause

hardship and a general sense of bitterness and resentment in Mexico and Peru, and criticism everywhere in Latin America. However, it was powerless to overcome the work of the strong mining lobbies in Washington backed by the Senators and Representatives from the mining States.

Again taking the case of Cuba (although the feature in question applies to other countries), we see that the State Department has not prevented the Pentagon from making crude blunders in Latin America. It is true that the belated decision to put an embargo on arms to President Fulgencio Batista in March, 1958, was a qualified triumph for State. However, the Department could not induce the Pentagon to withdraw three American military missions from Cuba, with the result that they were there when Fidel Castro's rebels took Havana.

Moreover, the State Department could not prevent high American military officers from decorating and entertaining Cuban generals hated by the Cuban people for their cruelty and corruption.

Better liaison between the Pentagon and the State Department and a closer and more enlightened control from the White House would obviate or reduce such blunders.

The particular case of Cuba has been much in our eyes—and in those of the whole hemisphere—thanks to the visit of Premier Castro, which is just ending. Cuba not only supplies 40 percent of the sugar we consume, she is the repository of something like $800 million worth of American investments. A glance at the map is enough to show the strategic importance of the island. It lies astride all the sea and air approaches to the United States from the south. Our naval base in Guantanamo Bay is the key base in the Caribbean area.

Fidel Castro himself is of great importance to us. The masses of Latin America see him as the outstanding champion of the social justice for which they are striving. As a friend of the United States he could be very helpful; as an enemy he could be very harmful. Taking Cuba as a whole, the same is true in magnified form. Taking Latin America as a whole, one gets into a field that comes close to deciding our national existence as a power greater than—or even comparable to—the Soviet Union.

The main complaints of the Latin Americans lie in the field of economics and finance. There are some basic differences of concept plus some exaggerated ideas on the part of Latin Americans of what the United States can do.

Although industrialization is taking place, the Latin region has essentially an agrarian and mineral economy. Too many of the countries are still overwhelmingly dependent on one commodity like coffee, sugar, copper or tin. The fluctuations in world prices of commodities can bring a temporary prosperity, as they did during the Korean war. But since then prices have been weak, especially in the past few years, and Latin America, taken as a whole, is in economic crisis.

Our neighbors to the South, therefore, have been asking us to help them to stabilize commodity prices. They have also asked for development loans from the U.S. Government to help them finance the production of their natural resources and public utilities. They wanted a hemispheric banking instituttion that would make such loans.

The U.S. Treasury, driven by the rigid orthodoxy of Secretary George M. Humphrey and later—until the shock of the Nixon experience—of Secretary Robert B. Anderson, would hear nothing of these measures. In fact, they were dismissed with little patience and some contempt.

Since the NIXON trip, we have discovered that we can try to help stabilize commodity prices, as we are doing with coffee, lead, and zinc, and that a development bank is, after all, feasible. One has just been agreed upon with a capital of $950 million—40 percent to be furnished by the United States.

The realization has been growing in Washington that inflexible financial orthodoxy demands too much of an under-developed Latin American country without enough experienced government officials, or managers and technicians in the industrial structure, or workers with a well-developed trade union movement and a philosophy of high productivity. Moreover, the political set-up is usually such that to demand strong measures of austerity would endanger or even destroy a government.

What this means is that American economic policies must be better adapted to the realities of Latin-American life and politics, to their weaknesses and possibilities. There has been a lack of understanding which lies at the root of much that is wrong with United States-Latin American relations.

Very few of our Senators and still fewer of our Representatives have any interest in or knowledge of Latin-American affairs. President Eisenhower has no one on the White House staff who is a specialist in Latin America. If he had, he might have avoided such outstanding errors as decorating the Venezuelan dictator, General Marcos Péres Jiménez with the Order of Merit, and sending American Marines to Caribbean posts when he thought Vice President NIXON's life was endangered.

Péron Jiménez, one of the most brutal and predatory dictators in Latin-American history, is a reminded of another great and bitter Latin-American complaint—U.S. favoritism toward dictators.

The last two American Ambassadors in Caracas, Fletcher Warren and Dempster McIntosh, were warm and publicly demonstrative friends of Pérez Jiménez and his Himmler-like police chief, Pedro Estrada. This fact undoubtedly contributed to the hostile reception that Mr. NIXON received, and he clearly indicated as much.

When American friendliness to dictators leads to Latin-American (and North American) complaints, State Department spokesmen, like Assistant Secretary of State Roy R. Rubottom, Jr., invariably counter by saying: "We are bound by the policy of nonintervention." The argument is beside the point, because no Latin American wants the United States to intervene to overthrow a dictator or even to use economic sanctions against him. Latin Americans would be the first to complain.

The error in policy is the unnecessary friendliness to dictators. That is why Mr. NIXON made his famous recommendation of a handshake for dictators and an embrace for democrats.

Moreover, to show favoritism to dictators is a form of intervention on their behalf. The power of the United States in the hemisphere is such that whatever we do or do not do influences the internal affairs of each Latin American country. The choice, therefore, is not between intervention and nonintervention but between objectionable and acceptable kinds of intervention.

This is a problem in U.S. diplomatic relations with Latin America that obviously has not yet been solved. Otherwise we would not have made the elementary mistake of favoring dictators at a time when an irresistible wave of democracy was sweeping over the hemisphere.

The problems are formidable and complex. Diplomacy, like politics, is an art, not a science. Every Latin American, for instance, stresses the fact that more understanding, sympathy and patience are required on the part of the United States. These qualities are in the realm of the spirit, not of dollars, goods or arms. The psychology, the character and temperament, the traditions and customs, the religion in most cases, the whole attitude toward life and government are different from our equivalents.

The efforts in every respect to improve relations between the United States and Latin America should be mutual. But we, being stronger, wealthier and one country, while it is weak, poor and divided into 20 parts, have the greater opportunities and responsibilities. We also have to adapt our policies more realistically to the basic fact that Latin America is of immense importance to us.

Statement of MacDonald Gallion, Attorney General of Alabama, Before the House Judiciary Committee on Civil Rights

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. GRANT. Mr. Speaker, it is my pleasure to insert in the RECORD a statement recently made by the Honorable MacDonald Gallion, attorney general of Alabama, before the House Judiciary Committee on Civil Rights. Attorney General Gallion, prior to his present office, was chief assistant attorney general of the State of Alabama. He is a deep student of law and one who is dedicated to public srevice:

STATEMENT OF MACDONALD GALLION, ATTORNEY GENERAL OF ALABAMA, BEFORE THE HOUSE JUDICIARY COMMITTEE ON CIVIL RIGHTS

Mr. Chairman, in making preparation to appear before this committee to testify on proposed civil rights bills and amendments to the present Civil Rights Act of 1957, I first requested that copies of these bills be forwarded me for study. I was frankly expecting to be the recipient of a mere handful of bills, assuming that the principal proponents of the bills would have first conferred among themselves as to the matters and things that they wished contained therein. Much to my amazement, I was supplied with a flood of bills introduced by quite a number of Congressmen, covering a wide variety of subject matter, and in many cases either duplicate in scope or basically the same with minor changes.

While I am sure that many of the Members of Congress are sincere in the legislation they advovate, I cannot help but feel, after reading a number of these bills, that there is a total lack of sincerity in many of them. The great majority of the bills have a preamble that has the suspicious tenor of a political speech directed toward the gaining of favor of minority groups in a particular Member's bailiwick.

In view of the large number of House bills presented, I do not intend to discuss in lengthy detail the contents of each of these so-called civil rights bills. I will make reference to some of these bills and my associate, Mr. Willard Livingston, chief assistant attorney general of Alabama, will perhaps go into more detail.

I wish to register strong opposition to all the bills inasmuch as I feel that they are all completely unnecessary and would constitute a further shocking encroachment of the cen-

tralization of Federal Government over State authority, and can only fan the flames of a situation that already exists.

I appeared before a similar committee in 1957 and expressed my concern, and, therefore, my opposition to various bills that were then being drafted, the total result of which came out as the Civil Rights Act of 1957. My concern was well founded as events have proven in my State. The previous harmonious relationship that existed between the colored and white races in my State has greatly deteriorated. The breach was beginning to widen at the time of the tragic school desegregation decision of the U.S. Supreme Court in 1954, and this has continuously widened with the persistent agitation of individuals and groups outside the South since that time to force integration upon the South. A definite barrier is being built up by the continuous pressure of the Federal Government to invade the sovereignty of the State on matters that have been traditionally handled at the local level. No longer is there proper communication between the two races, and a satisfactory working arrangement of mutual trust and respect, each for the other, has been replaced by suspicion and wariness.

Alabama, as has many of her sister States of the South, until recently been one of the poorer States, and has been used as a whipping boy. During Reconstruction days, after the War Between the States, the economic plight was most serious. Alabama and the other States of the South have had to literally pull themselves up by their own bootstraps to the level of prosperity they now enjoy. The greatest recipient of a higher standard of living in the South has been the Negro. Instead of being down-trodden and held back, as apparently pictured throughout the rest of the Nation, the gains of the Negro of the South in bettering himself have been nothing less than astonishing. The whites of the South have been the ones that have in the main footed the bill.

I would be hopeful that each of you could understand with clarity the tremendous impact that has resulted from the school desegregation decision of 1954 and the ensuing trend of events in the racial field since this day.

The State of Alabama has bled her poor economy in the past to eke out every available penny to improve her situation in the educational field, and this improvement has been for her citizens, both Negro and white. Relying on the separate but equal doctrine which through the years had been the prevailing law of the land, the people of Alabama invested hundreds and hundreds of millions of dollars in school buildings from one border of the State to the other. The State has in recent years been spending approximately one-third of its total tax income on education, and local communities have supplemented this effort. It is true that there are many dilapidated and rundown Negro school buildings, but for each such school you find you will also find within a short radius of miles an equally dilapidated rundown white school building. On the other hand, we also have many fine school structures that we are proud of and this includes Negro schools as well as white schools. There are actually more white children going to schools in substandard school buildings than there are Negro children. Negro teachers are actually paid more on the average than white teachers.

Today Alabama and other States of the South are faced with chaos in education. The people have demonstrated time after time that they simply will not have integration in the public school systems forced down their throats. With racial tensions increased because of the 1954 decision, it is a tragic thing indeed that Federal pressure continues in the form of such approaches at the Civil Rights Commission and the ever sterner so-called civil rights bills that are sponsored.

If we ever needed concerted action of all of our people working together at such a time in world history, it is at the present time. If ever we needed a harmonious relationship of all the races, it is at the present time. If ever we needed a concentration of effort in the educational field to remain abreast of our common enemy, it is at the present time. However, it has appeared that while Russia was concentrating on a invasion of outer space our own Federal Government was concentrating on the invasion of Central High School in Little Rock. The people of Alabama bittery resent the continuous encroachment of the Federal Govment on State's affairs. They bitterly resent the sponsorship of the Civil Rights Commission and the various so-called civil rights bills, and view this action as not only punitive in nature but in direct conflict with the principles laid down by our Founding Fathers when this Nation first saw birth. They feel that is it contrary to the concepts of government—that concept of government recognizing the sovereignty of individuals States—as first laid down by the Founding Fathers.

The fear persists that in the creation of the Civil Rights Commission is the creation of a monster now directed at the South, that may well turn later to devour the East, West, and North also.

It would appear to me to be wise that Congress take full cognizance of the recent denunciation pronounced by the chief justices of the entire United States gathered together at Los Angeles last fall wherein they expressed their alarm for the trend of the decisions of the U.S. Supreme Court in its court interpretations that lean violently toward Federal centralization. This is no more than a protest against Federal encroachment in the field of the rights of the sovereign States. The same basic viewpoint was announced in scathing terms by the American Bar Association in convention at Chicago. The American Bar Association, of course, is composed of thousands and thousands of outstanding lawyers from every section and part of the Nation.

With these preliminary remarks, I voice my very strongest opposition to all of these bills.

H.R. 2538 extends the life of the Civil Rights Commission to January 2, 1961.

H.R. 619 provides for a permanent Civil Rights Commission.

To these and all other similar bills, I voice my opposition. For reasons hereinbefore enumerated, I state that these bills should be allowed to die a natural death. My position is that if this committee is sincerely interested in bettering the race relations of the white and colored people in Alabama at the present time they would recommend that not only the Civil Rights Commission now formed be allowed to expire, but that they curtail any further activities in the State at all.

H.R. 353, H.R. 914, and perhaps others advocate antilynching legislation. If I hadn't read some of these bills I actually wouldn't believe some of the contents. H.R. 353 heads section 4 with the caption "Right To Be Free of Lynching." Now, stop and think for just a moment of that caption. The "Right To Be Free of Lynching"—doesn't the caption itself reveal profound thinking ultimately leading to a revolutionary discovery in the field of human rights? So much has been said of the "unenlightened South" that I had assumed that other sections of our Nation are enlightened, at least to some basic degree. If the tragedy of ignorance wasn't woven into such a bill as this, any serious discussion would assume the proportions of a comic opera.

We haven't had a lynching in Alabama to the best of my knowledge in more than 20 years. If an isolated instance has occurred it has escaped my attention. Do the proponents of such a bill actually believe that we have daily or weekly lynchings as a matter of routine? I'm beginning to wonder just who needs enlightenment. Of course, we have State statutes making it a criminal offense to participate in or commit an act of lynching, and the penalties are more severe than that provided here. Section 6 of H.R. 353 says if you aid in or commit an act of lynching you can be fined $1,000 or imprisoned for a year, or both; provided, however—and this is a gem—if the lynching results in serious physical or mental injury the punishment might be as much as $10,000 and 20 years imprisonment. Now can you imagine a lynching that didn't result in serious physical or mental injury? It taxes my imagination to visualize otherwise.

Of course, we are against lynching, and I certainly would feel that I would be derelict in my duty as attorney general not to vigorously prosecute any such offenses if they should occur. However, we do say to Congress not to invade upon our State police powers and confine yourselves, if you please, to fields of legislation properly belonging to you.

If I was surprised at the lack of enlightenment outside the South regarding the antilynching bills, imagine my astonishment to see this in title V of H.R. 619:

"Whoever holds or kidnaps or carries away any other person, or attempts to hold, kidnap, or carry away any other person, with the intent that such other person be held in or sold into involuntary servitude, or held as a slave; or

"Whoever entices, persuades, or induces, or attempts to entice, persuade, or induce, any other person to go on board any vessel or other means of transportation or to any other place within or beyond the United States with the intent that he be made a slave or held in involuntary servitude, shall be fined not more than $5,000 or imprisoned not more than 5 years, or both."

Now, does a Congress of these United States in the year 1959 actually thing it necessary to pass legislation preventing slave traffic in the South today and the calling to a halt of slave running vessels to the coast of Africa? Gentlemen, I simply will pass on from here without further comment.

H.R. 617 relates to public accommodations, entertainment, and the like. The substance of it is to integrate or be punished up to $1,000 fine and go to jail for a year, and this is made a felony. For such an offense to stamp a person as a felon is abhorrent.

The so-called Civil Rights Act of 1959.

H.R. 430, H.R. 913, H.R. 3212, H.R. 461, and H.R. 3147 are all substantially the same. H.R. 300 and H.R. 2786 are also substantially the same except that they upped the amount of money to be wasted. The one thing the Congressmen do have in common is that they all condescend to have their particular bill credited to them as the Civil Rights Act of 1959.

Following preambles that shame the preambles of the Articles of Confederation, the Constitution of the United States, and the verbiage of the Magna Carta all thrown together, title II provides in each instance for the Secretary of Health, Education, and Welfare to render technical assistance to local governmental units from States all the way down to school districts to enter into com-

pliance with the Supreme Court desegregation decision.

The Secretary will distribute information, make surveys, meet with various officials in discussion groups, set up advisory councils, and report frequently to Congress. Just how one man was going to do all this worried me at first until I came to section 202 where I found out he can employ an untold number of specialists who can mill all about the South doing this for him. Perhaps to keep the traffic clear they in turn can have private individuals or groups meet them at given places and these people in turn will have their expenses paid for getting to talk to each other.

Then we come to title III, and here I will get most serious for here we come to a most solemn and diabolical offer. For implementing integration in any governmental unit that unit will become qualified for grants of money. How despicable is such an offer. It is no more than a bribe to purchase for cold cash the principles and convictions of an honorable section of our Nation. This is repugnant to good conscience and our past American standards. It is a force bill that would bring tears to the eyes of George Washington, Thomas Jefferson, and all of our Founding Fathers were they here to witness it. No, gentlemen, certainly our honored Congress of the United States of America would not stoop so low. Certainly, Members of Congress from all sections of our Nation will join hands to defeat the substance of these bills.

Time does not permit me to elaborate on other proposals offered. I do want to conclude by saying this:

There is no real reason for the Civil Rights Commission to exist or for any such acts to be passed. I opposed the Civil Rights Act of 1957 and my reasons for doing so have been justified. Apparently first aimed at securing voting rights for the Negroes of the South, the results have not been forthcoming because the results were not there initially to obtain. The propaganda swallowed just simply did not prove true. Of course, we may have isolated instances of improper voter registration denials, and this is for both white and Negro, but generally speaking, you will find applicants in Alabama allowed the voting franchise when properly qualified.

The Birmingham News, a respectable news media, just recently conducted a thorough statewide survey and found this without question to be true. Negro voter registration in Alabama, as well as economic and educational advances, has been astounding. The great majority of the Negro masses realize this. It is only the handful of agitators that you apparently listen to. Today the number of Negro registered voters is estimated at sixty to seventy thousand, an amazing increase, especially in the last few years.

We have adequate laws in this field and they are fairly administered. Do you think we are all out in our opposition to the Federal suit in the Macon County case solely because 20 Negro complainants are involved? What do 20 voters amount to in a mass of 70,000 voters, as far as we are concerned?

No, gentlemen, ours is the cause of States rights. Ours is the fight to maintain constitutional government; to maintain that concept of government that recognizes the sovereign rights of the States as was originally contemplated by our Founding Fathers; to maintain that concept of government that recognizes a separation of powers and jurisdictions between the Federal Government and each individual State. It is this that has made this Nation the greatest Nation ever to rise on the face of the earth. Let us not destroy this.

Victor Herbert Centennial

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. CELLER. Mr. Speaker, it is ironic, is it not, for me, a legislator, to rise in praise of a maker of songs? For, has it not been said, "Let me make the songs of a nation, and I care not who makes its laws?" Moreover, if I had any spirit I should be up before you singing the songs of Victor Herbert rather than using the flatness of prose to talk about him. But I do remember how many hours I spent playing his songs on the piano and the violin. The gay and sentimental songs, the marching songs, the heart lifting to the melodies and the rhythms. For, surely, he was, and is, a beloved composer. When I think of all the Victor Herbert melodies we played and sang at home, I grow nostalgic. I tell my grandchildren that they are missing a good bet in not knowing the songs of Mr. Herbert, cellist, conductor, composer. For, it seems to me, and I hope I am sadly mistaken, that the younger generations, not knowing him, are a bit prone to condescend toward his music; are more apt to dismiss the songs we loved as sentimental effusions. But I maintain that they are the losers.

The younger generation has been so busy educating us that it is time we turned the tables and educated them. I propose that the theater, television, and radio combine in one huge conspiracy to bring them the music of Victor Herbert. Once again, we would hear a lot of "Toys," from "Babes in Toyland"; "Kiss Me Again," from "Mademoiselle Modiste"; "Ah, Sweet Mystery of Life"; "I'm Falling in Love With Someone," from "Naughty Marietta"; "Gypsy Love Song," from the "Fortune Teller"; "Moonbeams," from "The Red Mill"; "Sweethearts," from "Sweethearts." And that is at least one small contribution we could make to bring a spot of joy to this world of atom bombs and everyday crises. There are few enough as is.

Herbert's music is universal. It needs no interpreter. Herbert illustrates what Confucius said so many years ago:

Music produces a kind of pleasure which human nature cannot do without.

It is music like Herbert's that washes away the dust of everyday life. He recalls a compelling statement of Disraeli:

Music is miraculous. A blast from a trumpet and millions of soldiers rush forward to die. A peal of the organ and uncounted nations sink down to pray.

Let us remind these know-it-all youngsters that Mr. Herbert was an accomplished musician, a cellist of the highest rank, who played with the Metropolitan Opera; that he was the most famed conductor of his day of the Pittsburgh Symphony. That, born in Dublin, he had the joyous flair of the Irish; educated in Germany, he had the meticulous workmanship of the Germans; and living in America, he had the largeness of heart, the generosity, and the friendliness of the Americans. With these traits he made good music, fresh music, music to be loved, and music to be sung. That we here tonight pay tribute to Victor Herbert is no small wonder. There is no mind too sophisticated nor heart too simple that cannot embrace him. Perhaps this evening can initiate a national revival of Victor Herbert's music. For my grandchildren's sake, I hope so.

Members of Congress and Their Families Will Visit New York City May 22, 23, and 24

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. VAN ZANDT. Mr. Speaker, the annual congressional tour of New York City on May 22, 23, and 24 for Members of Congress and their families has been perfected. The tour includes an evening in Chinatown, a visit to the United Nations, New York Stock Exchange, city hall, Empire State Building, Broadway theaters, a visit to the French transatlantic liner, steamship *Flandre*, New York's planetarium, as well as several prominent restaurants in the New York area.

A copy of the official announcement which recently was sent to Members of both branches of Congress is as follows:

ALL EXPENSE 3-DAY CONGRESSIONAL TOUR, MAY 22, 23, 24, $39.50; CHILDREN 5–12, $34.50

SCHEDULE OF EVENTS

Friday, May 22, 9:45 a.m., daylight time, party will leave Washington via Pennsylvania Railroad; luncheon in dining car; 1:45 p.m., arrive Penn Station; motor coach will take party direct to stock exchange to observe trading on the floor and look over exhibits; 4 p.m., leave stock exchange for visit to United Nations tour and welcome by Ambassador Lodge; 6 p.m., leave U.N. by motor coach for Paramount Hotel; 7 p.m., leave hotel for reception and dinner at the Town and Country Club.

Saturday, May 23, 8:30 a.m., motor coach will leave for breakfast and visit to Empire State Building; 10:30 a.m., leave Empire State Building for city hall for official reception by Mayor Wagner; 11:30 a.m., leave city hall by motor coach to Chinatown for reception and luncheon after which we will return to hotel; 6:30 p.m., leave hotel by motor coach for reception and dinner at Oscar's Delmonico's and back to hotel at 10:30 p.m.

Sunday, May 24, 9:30 a.m., motor coach to pier 88, to board steamship *Flandre* for reception, breakfast, and inspection of ship; 12:30 p.m., motor coach back to hotel for reception and luncheon; 3 p.m., leave hotel for visit to the American Museum-Hayden Planetarium for sky show "Unseen Worlds"; motor coach will return us direct to Penn Station; 5:20 p.m., daylight time, our train

will leave for Washington. Members will meet at Penn Station, west gate, track 13, at least 10 minutes before departure time. Dinner will be served in dining car enroute home.

Make your reservations today. Dial Extension 4576, room 1104, House Office Building.

Appropriation for National Board for Promotion of Rifle Practice

EXTENSION OF REMARKS
OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. HUDDLESTON. Mr. Speaker, on last Friday, April 24, 1959, an outstanding constituent of my district, Mr. Irvine C. Porter, president of the National Rifle Association of America and a member of the National Board for Promotion of Rifle Practice, appeared before the Department of Defense Subcommittee of the Committee on Appropriations in behalf of the appropriation of $300,000 to the National Board for Promotion of Rifle Practice for fiscal year 1960. Because of the thoughtful and informative nature of Mr. Porter's statement, I am happy to insert same herewith in the RECORD. The Members of Congress are urged to give the statement their close and careful study and attention:

STATEMENT OF MR. IRVINE C. PORTER BEFORE THE DEPARTMENT OF DEFENSE SUBCOMMITTEE ON APPROPRIATIONS, HOUSE OF REPRESENTATIVES, WASHINGTON, D.C., APRIL 24, 1959

Mr. Chairman and gentlemen of the committee, my name is Irvine C. Porter. I appear today as the president of the National Rifle Association of America, which, as its executive director, Mr. Louis Lucas has just stated is composed of more than 300,000 individual members and almost 9,000 affiliated membership groups. I, also, appear as a civilian member of the National Board for Promotion of Rifle Practice, representing the country at large, this being the Board whose appropriation is being considered by your committee today.

Please accept my thanks and appreciation for affording both Mr. Lucas and myself an opportunity to appear before your committee in support of this Board's appropriation, which is in the sum of $300,000, as recommended by the President in his budget for the fiscal year ending June 30, 1960, under the title, "National Board for the Promotion of Rifle Practice, Army." I have been privileged to appear before this subcommittee and similar subcommittees in the Senate in support of this Board and its appropriation on a number of occasions in the past, and I have come to Washington, again, from Birmingham, Ala., where I practice law, specifically for the purpose of urging this committee to fully support and approve that portion of the budget for the Defense Department for fiscal year 1960 which relates to, and supports, the activities of this Board.

I am informed that this committee has previously been furnished a very detailed statement of the activities of the Board during the last year by its executive officer, Col. Hugh W. Stevenson, who also fills the the position of Director of Civilian Marksmanship, Department of the Army. This statement covered in detail the number of rifle clubs and schools enrolled under the Board's program; the number of individual's involved; the attendances at the various smallarms firing schools conducted by the Board; the number of civilian teams attending the national competitions from the respective States and Territories, and the ammunition requirements of this program. I will not attempt to go into detail concerning those figures and statistics, but I do desire to suggest that a careful analysis of them justifies the conclusion that there has been a steady and healthy growth of the activities supported by the National Board during the last several years, and is, again, definitely expected and forecasted for fiscal year 1960.

Participation of civilians in this program is definitely on the increase, and as I have heretofore suggested to this committee, is directly related to the fact that Congress has seen fit to provide travel funds for State civilian teams, both rifle and pistol, to attend the national training schools set up at Camp Perry, Ohio, and has furnished sufficient ammunition to meet the growing needs and demands of Board-sponsored activities throughout the country.

I cannot urge you too strongly to approve this budgetary amount of $300,000, as recommended by the President in his budget for the support of the National Board during fiscal year 1960, in its entirety. I especially urge that you continue to approve the manner of handling the ammunition requirements of the Board by authorizing the Secretary of Defense, under General Provision 630 of the President's budget, during fiscal year 1960, to transfer from agencies of the Department of Defense to the Board ammunition from stock, or which has been procured for that purpose in such amounts as the Secretary may determine upon the requisition of the National Board and without the necessity for reimbursement. In my opinion, this is the most important single requirement of this Board. There are thousands of range facilities available throughout the United States, and hundreds of thousands of weapons which might be otherwise available for use by interested civilians, but without a sufficient quantity of ammunition, both .22 caliber and .30 caliber, being made available, it is impossible for this Board to fulfill its primary function of promoting markmanship training among able-bodied citizens of this country who might hereafter be called upon in the adequate and proper defense of it.

While the Board's program of activities are and have been expanding at the rate of approximately 15 percent per year, it is still my feeling, not only as president of the National Rifle Association, but, also, as a civilian member of this Board, that the Board's program is not as extensive as it should be for the best interest of this country. It is my opinion that it would be highly desirable and in the best interest of the proper defense of this country that every person now or hereafter eligible for military service should have a reasonable and adequate opportunity to fully familiarize himself with and become accustomed to the use of the basic weapon of the Armed Forces of this country, the rifle, under proper supervision and competent guidance. The National Board for Promotion of Rifle Practice is the agency which Congress created for this purpose, and I am certain that the gentlemen of this committee are reasonably familiar with that fact. I am certain, also, that there will not be a time in the foreseeable future when the necessity for the use of the rifle as a basic weapon in the defense of our country will not be of paramount importance. I quote Maj. Gen. J. H. Hinrichs, Chief of Ordnance, on this point. He said in an article published in the May-June 1957 issue of Ordnance, page 961, that:

"Even in an atomic war in which the Army could employ a wide spectrum of nuclear weapons, I can visualize many tactical situations in which an atomic blast would not satisfy the requirement; for example, destroying or capturing an enemy platoon. Bringing down an atomic blast on such a target would be like cracking nuts with a piledriver. In any case, there would be many occasions around the periphery of an atomic blast, and in other operations like exploiting breakthroughs and mopping up, in which small arms would be absolutely vital. I can visualize no war in which our soldiers will not need a personal weapon for attack or defense.

"In the widely dispersed units that will be necessitated by the threat of atomics, it will be mightly lonely out thar without Old Betsy resting in the crook of your arm."

While we have before us today the main issue of the approval of the $300,000 appropriation for the support of the National Board for fiscal year 1960, I should like to pass on to the members of the committee the thought that not only myself but many of my colleagues on this Board, particularly those who are civilians, feel that Congress could well afford to expand the activities of this Board many times, and that such an expansion could be accomplished in an orderly fashion without any waste of Government funds and at a very low per capita cost. We feel that such an expansion would be in the best interest of the proper defense of this country and that the results would be apparent in the vigorous undergirding of the character of our people. Furthermore, we are convinced that there is a tremendous interest in the activities of this Board in the preinduction age group (which has jumped from about 40,000 participants in 1949 to over 132,000 participants as of the first of this year in the activities of the National Board, alone) which is not being met at all throughout the country. I feel confident in saying that, if this committee and that of the Senate were to so direct and provide the necessary budgetary support, the figure which I have last mentioned of 132,000 preinduction youngsters could be increased almost tenfold in 3 or 4 years.

With reference to the funds provided in this budget for civilian team travel for fiscal year 1960, there has been provided the sum of $56,000, which compares favorably with the sum of $57,000 in the budget for fiscal year 1959. In the year prior to 1959 only the approximate sum of $25,000 for this purpose was provided. This increase last year caused the total number of teams, both rifle and pistol, attending the national training schools set up by the Board at Camp Perry, to jump from 174 to a total of 229. As both Colonel Stevenson and Mr. Lucas have indicated, these teams constitute a vital source of competent instructors for the expanding of the Board's program throughout the country. Looking ahead, I believe that it can be safely said that, should this committee provide the funds, this aspect of the Board's program could be increased in rapid order in the same degree that took place between the budget years 1958 and 1959.

In conclusion, permit me to say that I wish to thank the chairman of this committee and those members present for permitting me to attend this hearing and for the patient attention given during this presentation. I wish to state further that if there are any questions which any member of this committee desires to have answered, both Mr. Lucas and I are ready now to undertake to answer or discuss them to your satisfaction. If we do not now know, or have, the necessary information or answer, we will endeavor to get it and furnish it to the committee as part of the record of this hearing.

The Big Dilemma: Conscience or Votes

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 27, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting and thought-provoking article entitled "The Big Dilemma: Conscience or Votes." The article was written by former Senator William Benton, who, in my opinion, is one of the most able and courageous men to sit in the Senate during the last 25 years. His article, which was published in the New York Times magazine section of yesterday, deals with the whole philosophical problem which faces every politician—namely, whether he ever has a right to compromise his conscience by compromising what he knows is a matter of principle.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BIG DILEMMA: CONSCIENCE OR VOTES
(By William Benton)

Should a legislator compromise his principles in order to be a successful politician? How far should he go in order to be elected? Is it enough to be right most of the time, but to yield, on occasion, to the predilections or even the prejudices of his constituents?

Many people have asked me about the dilemma implicit in these questions which has puzzled students of politics since representative government began. But, paradoxically, I have found that legislators themselves are much less puzzled—and not because they are morally insensitive. The problems they actually confront, either as candidates or as lawmakers, are rarely black-and-white issues of conscience. Almost always they are questions of prudence and judgment—the height of a tariff or a subsidy, the size of a budget item, or, more particularly, the best tactics for advancing a particular cause in the face of opposition from colleagues or from constituents at home.

Nevertheless, the classic dilemma has a new relevance. Issues of civil and human rights—for example, segregation—tend to fall in the category of conscience, and these are critically important today. We had a dramatic example last November in the write-in, paste-in blitz that unseated Representative Brooks Hayes in the Little Rock district because his record, his campaign and his conscience had classified him as a moderate on race issues.

It has been said that I was myself defeated in 1952 on an issue of conscience because I had insisted on denouncing Senator McCarthy and on demanding his expulsion from the Senate. The parallel is valid only in that I was willing, on principle, to take publicly a position that seemed politically dangerous at the time. As it turned out, I lost because 1952 was an Eisenhower year, not on the McCarthy issue, and I ran well ahead of the national ticket.

In the corridors of the Capitol in Washington one hears it said occasionally that if a Congressman votes right 95 percent of the time—that is, in accordance with his own best judgment—he can afford to be "wrong" on 5 percent of his votes—that is, against his own judgment or conscience—in seeking to serve some particular end, including his reelection. (He is supposed to console himself that his defeated opponent would doubtless have done worse.) The same formula has been said to apply to a campaign in which the candidate is forced to take controversial stands.

Is this attitude justifiable? Can such wrong votes be defended?

I invited some of my former colleagues to share in this discussion. They tend to focus on the question, Should a legislator, once elected, compromise as a matter of practical politics in order to push necessary legislation through? They see this as closely intertwined with the question, Should a legislator compromise his principles in order to be elected?

None of these colleagues will openly admit that a principle should ever be abandoned, under any circumstances. Almost all would agree with the formulation of Prof. T. V. Smith, the philosopher-politician, who wrote: "A politician is a man who can compromise an issue without compromising himself, and who can in a pinch give an issue away without himself away."

Two thoughtful Republicans who have just retired—voluntarily—after distinguished careers in Congress come to different conclusions about the issue of conscience and compromise as applied to segregation. I have worked intimately with both. They are men of high principle. Senator Ralph Flanders of Vermont, who seemingly does not want to see Governor Faubus in the Senate, writes me:

"There is a saying to the effect that 'a Senator's first duty is to get reelected.' This sounds a bit cynical, but there is a real vein of truth in it.

"If I were a southern Senator and were facing the Little Rock situation, I would be strongly moved to avoid the extreme segregationist position, but would also avoid crusading for antisegregation. I would join the moderates so far as seemed safe and hope for reelection, knowing that if I were defeated in the primaries my place would be taken by a rabid segregationist."

Representative John Vorys, of Ohio, who was the intellectual leader of the Republican minority interested in foreign policy in the House, says:

"I am extremely cautious about calling political decisions moral issues. On the other hand, I think that Congressmen and Senators are expendable rather than indispensable, and no Congressman or Senator should cast a vote he knows is wrong in order to be reelected. It makes no difference whether the wrongness is on a moral, legal, economic, or other issue.

"As Edmund Burke said: 'Your representative owes you, not his industry only, but his judgment; and he betrays instead of serving you, if he sacrifices it to your opinion.'

"Taking the example you mention, I think that if a southern Senator is opposed morally to segregation he should vote his convictions and take his medicine. For one thing, he might be surprised to find how many people admire that kind of courage."

Two of my correspondents cited the vote on the 1957 civil rights bill and reached opposite conclusions. Senator WAYNE MORSE, of Oregon, never one to shirk an unpopular cause and one of the most courageous men in the history of the Senate, argues that the politician's dilemma can usually be resolved if he works hard enough at informing his constituents. He writes:

"Too often and too readily politicians—when they vote against something they know is in the public interest—fall back upon the excuse that 'I know it is right, but people don't understand it.'

"What these politicians don't understand themselves is that it is part of their function in representative government to get the facts across to the people so they will understand. Instead, they become panhandlers for votes. We have many in public life who are afraid or unwilling to be defeated. Winning is their only goal, not true public service."

Senator MORSE is certain he could not have been reelected to the Senate in 1956, in the face of the Eisenhower landslide, if public opinion, which had opposed some of his votes when he cast them, had not later swung over to his view.

Having battled for civil rights throughout his career, he was nevertheless the only Senator outside the South who voted against the 1957 civil rights bill. Here is an example of his individuality and his spirit. He says:

"Of course, I recognize the need for compromise in legislation. But the civil rights bill of 1957 was passed because Members of Congress wanted to be on record as having voted for something with that title; their bill actually compromised the civil rights guarantee of the 14th amendment. I do not accept the view that such a compromise of principle is ever justified. When a principle is compromised it is destroyed and all that is left is a statement of expediency.

"'But,' says the doubter, 'when does the legislator know when he is dealing with a matter of principle?' The answer is that his brains and conscience always tell him so, and he always knows when he has compromised a principle."

Senator CLINTON P. ANDERSON, of New Mexico, one of the most able, experienced and humble men in public life, reached a different conclusion about the same measure:

"The House had passed a civil rights bill. It came to the Senate. The Judiciary Committee was bypassed and the bill came at once to the Senate floor. Some Senators were determined to try to pass a civil rights bill with the strongest possible language and the most drastic provisions. They could have adopted all their amendments, perhaps, but could never have passed the bill * * *.

"I became disturbed at the situation because I wanted a civil rights bill passed. * * * I talked it over with Senator LYNDON JOHNSON and out of our conference came my approach to Senator GEORGE AIKEN, of Vermont, whom I greatly admire. We developed an amendment and were subsequently joined in it by a third cosponsor, Senator FRANCIS CASE, of South Dakota. That amendment to section III was not pleasing to those who preferred defeat of the bill to any compromise, but it was adopted by the Senate and paved the way for adoption of another amendment previously offered by Senator O'MAHONEY and others. When the amending process was finished the southerners realized they could not successfully filibuster against the revised bill * * *.

"Maybe the civil rights bill was not everything it ought to be; maybe it will need to be amended in view of Little Rock and other spots. That will, however, come easier because of abuses which followed the passage of civil rights legislation by the 85th Congress and will be much easier than would have been the case had the no-compromise faction had its way and no bill resulted."

Senator JOHNSON of Texas, widely admired as majority leader of the Senate, writes me:

"The real issue is not whether a man should compromise—because I do not believe in compromising a principle—but whether he should insist on asserting his position aggressively on every single issue that comes along.

"Everybody is fond of quoting Clausewitz' dictum, 'War is politics carried on by other means'. The reverse is also true that politics is war carried on by other means. When it is viewed in that perspective the answer becomes somewhat more readily apparent. It would be ridiculous to say that a captain of infantry out on a scouting expedition should charge into a regiment that he meets unexpectedly.

"Nobody would expect him to do so. In fact, he would be court-martialed if he did anything other than the sensible thing, which is to fall back to the main body of troops and gather his forces so he can be ready for action when action is feasible.

"The captain of infantry has not compromised his position because he refused to sacrifice his men or his followers by fighting under impossible circumstances. Similarly, I do not think that the political leader should be accused of compromising his position because he too refused to fight on impossible terrain. It is essential for a political leader to be able to pick the terrain and the time upon which he will give battle."

Representative JOHN W. MCCORMACK, of Massachusetts, majority leader of the House of Representatives, whose job requires him to steer legislation through the House, seems to agree with Senator JOHNSON. He writes:

"As between partial progress and no progress, it seems to me that the constructive mind takes the road of progress.

"I never place myself mentally in the position of compromising principle and conscience. But there are times when I might harmonize differences in order to make progress, or maintain unity, and then start the journey from there.

"The extent of 'compromise' or 'harmonization' depends upon the circumstances of each case, the atmosphere, the strength of the opposition, as well as the support for a measure, and other factors. But sometimes there can be no 'compromise' or 'harmonization,' such as the extension of the Selective Service Act in 1941, 3 months before Pearl Harbor."

Senator JOHN F. KENNEDY's book, "Profiles in Courage," written in 1955, consists of case studies of political courage in the Senate going back to 1803. He finds that it sometimes takes courage to compromise. He writes in his book:

"We shall need compromises in the days ahead, to be sure. But these will, or should be, compromises of issues, not of principles. We can resolve the clash of interests without conceding our ideals * * *. Compromise need not mean cowardice. Indeed, it is frequently the compromisers and conciliators who are faced with the severest tests of political courage as they oppose the extremist views of their constituents. It was because Daniel Webster conscientiously favored compromise in 1850 that he earned a condemnation unsurpassed in the annals of political history."

Senator KENNEDY now writes me:

"I think even more now than I did in 1955 that the politician faces this dilemma more than the member of any other professional or occupational group. Others face different moral choices perhaps, wondering when a compromise is one of accommodation or one of principle—but no one else has to do it in such a glare of publicity, or in such an irretrievable manner, on a permanent record, and with only the answer of an 'aye' or 'nay' to choose between."

This last point is of high importance. There are no footnotes in the voting record; each vote is the monosyllable "aye" or "nay." The business executive seldom faces such dilemmas. His mistakes tend to be buried in the overall record of profit and loss—or at least they can be explained in his annual report.

In my opinion, these statements by Senators and Congressmen (and others like them I have not quoted) deserve the highest respect, even from those who may disagree.

Further, my own experience as a legislator persuades me that Congressmen are fully justified in intermingling the question of campaign policies and tactics with the question of legislative policies and tactics. These two are inseparable. The great majority of legislators who are elected in a given year in the United States—Federal, State, and local—have been reelected. From the moment they were first sworn in as legislators they were running for reelection and this is seldom out of their thoughts. Each must run on his legislative record; he knows his next opponent will scrutinize that record with a magnifying glass.

Finally, the issues that actually confront a legislator are rarely simple. When a major bill reaches the floor it is a long, complex document. If a Congressman or Senator disagrees with some aspect of it, he may seek to amend that aspect from the floor—but it is usually an exercise in futility. Generally he must cast his "aye" or "nay" on its net value.

In my judgment it is often impossible for a legislator clearly to separate considerations of prudence from moral principles. Indeed, he must frequently fall back on prudence if he is to advance his moral principles.

One of America's greatest social thinkers, the late Prof. Robert Redfield, discussing progress toward race equality, pointed out that a right and moral action may in some circumstances defeat or postpone the social end it is intended to serve.

Abraham Lincoln never doubted that slavery was wrong. Yet in December 1860, a month after his election as President, he offered to guarantee to the Southern States, in perpetuity, their right to a slave system, providing they agreed there should be no extension of slavery in the territories. Lincoln hoped that this offer might avert civil war; and undoubtedly he hoped also that the slave system would in time dissolve and disappear.

The danger in the argument for prudence is that, for those of us who are less than Lincolns, it can be an excuse for weakness. Like most other men, politicians too often underestimate the long-range values of boldness and stubbornness in defense of an ideal. Gandhi can be an example as well as Lincoln. Gandhi won because he was bold and stubborn and preferred jail to compromise.

I am so impressed with this danger that I cannot personally agree with any argument to the effect that a legislator need be morally right only 95 percent of the time—and can thus give away the other 5 percent even if it involves an affront to his conscience.

Ultimately, each Member of Congress must make his own decision each time a matter of principle arises—to compromise or not to compromise, to stand fast or to yield ground in the belief that his action will help achieve the desired final goal. His burden is that he must make the decision again and again and again—and not just once in a moment of emotional intensity—for there may be some 200 aye or no rollcall votes each year plus hundreds of votes in committee or elsewhere, any one of which may involve a moral choice.

A whole nation will be watching. But for each Member of Congress the decisions, whatever they may be, must be taken in the solitude of heart and mind and conscience.

The Brigantine "Yankee"

EXTENSION OF REMARKS
OF
HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. KEITH. Mr. Speaker, I am today introducing a bill on behalf of the brigantine *Yankee* which will, I believe, do much to keep alive for American boys and girls the seafaring tradition of New England—and especially of the salt-of-the earth section I am proud to represent—an area that includes Cape Cod, the islands of Nantucket and Martha's Vineyard, and the famous onetime whaling town of New Bedford.

In recent years, training youthful mariners in sailing and seamanship has been carried on aboard the famous brigantine *Yankee*. Voyages in coastal waters as well as around the world have helped to develop in these youths self-reliance, and the ability to assume leadership.

The *Yankee* has changed hands, but her new owners wish to carry forward the same program of training our youth.

The bill I wish to introduce will, I am advised, permit this training to be resumed, as it grants the *Yankee* registration as yacht under specific restrictions.

The Pitfalls of Negotiation

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Christopher Emmet, executive vice president of the American Council on Germany, which appeared in the April 20 issue of the New Leader. I believe that this article, which concerns the British Government's recent attitude and proposals, as symbolized in their reservations about our high flights to Berlin, will be of interest to all Members of the House:

THE PITFALLS OF NEGOTIATION
(By Christopher Emmet)

The danger of Soviet Premier Nikita Khrushchev's Berlin ultimatum was always indirect as well as direct. From the beginning, it was hardly conceivable that the Western allies would yield on Berlin itself, except to the extent of tolerating an East German takeover under protest and treating the East Germans as Soviet agents, as long as they do not interfere with Western traffic into the city. However, a camouflaged surrender always appeared to be a greater danger—in other words, that we would buy tacit and probably temporary Soviet acceptance of the status quo in Berlin by making other concessions. Such concessions might include a beginning of disengagement; an atomic test ban without adequate inspection; a relaxation of East-West trade restrictions; an extension of credits to the Soviet bloc; a so-called European security pact; and a summit conference at which these concessions would be formalized.

Such Western concessions would represent a whittling away of an already gravely weakened Western position, unless matched by Soviet moves toward German unification in freedom. All these demands have been included in Khrushchev's recent speeches and in the Soviet statement of March 29 on the North Atlantic Treaty Organization Conference. More ominous still, the acceptance of all of them has been urged by British Prime

Minister Harold Macmillan, in one form or another. Under his influence, there are now indications of a drift toward some form of retreat from present allied positions, such as those listed above, without any comparable Soviet quid pro quo. If so, the Soviet blackmail on Berlin will have paid off.

It is true that no concessions seem as yet to have been definitely agreed upon by President Eisenhower and Macmillan, except the decision to hold a summit conference even if the foreign ministers' conference does not succeed; and even this change has not been definitely announced. Nevertheless, the whole trend of well informed press speculation, and the trend of nearly everything Macmillan has said since his return from Moscow, has been in the direction of some retreat. Although Macmillan has advocated firmness against a Soviet take-over of Berlin, he has urged a willingness to make changes in the direction of neutralization, and even Khrushchev himself never demanded Communist occupation of West Berlin. A troop and arms freeze in all Germany, which Macmillan tentatively discussed with Khrushchev, would mean surrendering the whole western program for German rearmament—and all this without even demanding German unification, let alone raising the issue of Soviet treaty violations in Hungary or the other countries of Eastern Europe. No wonder the British report that Khrushchev called a military freeze for Germany an interesting suggestion.

By leaving the initiative to Macmillan, the West has been leading from weakness in its negotiations with the Soviets. Britain is now the weakest link in the alliance, not only because of Macmillan's grave domestic political problems and the overhanging elections, but because of Britain's economic fear of German competition and of the Common Market. The motive of Macmillan's pro-summit policy s probably mainly political, but it may also be an effort to pressure France and Germany on the Common Market issue.

Another factor may well be the increasing Soviet domination of Iraq and the consequent threat to the great British oil interests there and to the British Protectorate of Kuwait, which by itself contains one-quarter of the world's oil reserves. No doubt this soft policy also expresses, at least in part, his sincere and objective judgment. However, Macmillan's motives are less important than the fact that he has initiated this policy to a chorus of praise from the British press, and he tends to be increasingly committed to it as it gathers momentum.

The Conservative papers in Britain naturally made a virtue of necessity and built Macmillan's humiliating and discouraging experience in Russia into a great triumph, with Macmillan assuming the leadership of the free world in British eyes. This, of course, was routine party politics; but even the independent and pro-Labor British press has joined the praise, partly from national pride over his assumption of international leadership, and party because they really approve his proposals.

The U.S. press met the British praise of Macmillan at least halfway, first, because his proposals were news (in the sense that they represent a new line), and second, because of the general sympathy for Macmillan's domestic political difficulties and a proper desire to preserve and strengthen the Anglo-American alliance. All this is understandable, but it has obscured the American people's comprehension of the real implications of Macmillan's policies.

Because of its popularity in Britain, only some new Khrushchev blunder or the united pressure of all of Britain's allies can now force a shift in the general Macmillan line. This issue was not fought out in the Eisenhower-Macmillan meeting, which, aside from settling the terms for a summit conference subject to French and German consent, involved an exchange of views rather than definite agreements. The issues remain to be hammered out between now and the foreign ministers' conference. For even if Macmillan only succeeded in putting over his plan to end atomic tests without adequate inspection, that alone could be disastrous in its psychological and military implications.

British press reports have probably exaggerated the degree of disengagement which Macmillan favors, but the whole trend and philosophy is wrong. He is bent on preventing a showdown on Berlin, whereas the hope for the West lies in a showdown from which Khrushchev would have to retreat. A Soviet setback in Berlin offers the best chance in a long while for the West to regain the initiative and launch a diplomatic offensive.

The whole risky Berlin maneuver indicates Khrushchev's fear of the captive peoples, especially, of course, the East Germans. This was stressed by Gen. Maxwell Taylor, Army Chief of Staff, in his recent Senate testimony. The Soviet fear of the satellite peoples, he noted, is one of the main reasons that it would be folly for Moscow to go to war. What is the West doing to exploit and reinforce those Soviet fears in bargaining with the Kremlin?

The Berlin ultimatum must be made the occasion for negotiations not on Berlin, nor even on Germany alone, but on the whole problem of Germany and East Europe. All this is now being lost sight of. The East European captive nations are not even mentioned except in connection with a proposed overall security pact. Such a pact would only serve to prevent Western aid to any future satellite revolution, and so stabilize the Soviet tyranny.

The demand for German unification is even being watered down to the point where, under the guise of a step toward unification, Macmillan is really promoting the beginnings of Khrushchev's plan for a German confederation, which means increased recognition for the East German puppets. Thus any steps toward unification by confederation rather than by free elections would help Khrushchev's Trojan horse tactics, and relieve his fears about East Germany by increasing the recognition and stability of the puppet regime.

The reunification of Germany would be of little advantage to the West unless it is made part of a general European settlement which restores some real measure of freedom to Eastern Europe. That is the only goal which could justify the risks to the West of any large measure of disengagement. But in any case, because of our promises to the German people and Khrushchev's own promise at Geneva in 1955, Western acceptance of any kind of disengagement or other concessions, without insisting on at least German unification, would clearly be an indirect surrender to the Soviet ultimatum.

Moreover, the Macmillan formula of first steps toward unification, in which improved relations between East and West Germany are made the beginning of confederation, would be the worst thing the West could do, for two reasons:

1. By raising false hopes of unification in freedom, it would help fix German political attention mainly on the unification goal, rather than on the integration and security of Western Europe and the liberation of Eastern Europe, including East Germany. This would help German neutralists and nationalists and weaken pro-Western policies.

2. It would increase the prestige of the East German Communists and so help Khrushchev control unrest in the East Zone. This would be appeasement in the name of unification. It would be far better for the West to return to its insistence on the free election formula, which is the only safe, honest and democratic method of upholding the ideal of unification in freedom. In the meantime, until the Soviets accept the formula, it would ensure the maintenance of the status quo, which Khrushchev is trying to change. The free elections formula is the symbol of the liberation of East Germany and of all Eastern Europe. It is the one goal for which the West could afford to pay something in the way of disengagement or atomic tests concessions.

But by the terms of the Macmillan policy, we will pay dearly to get something far worse than the present status quo which worries Khrushchev so much. Like George Kennan a few years ago, Macmillan would have us accept the finality of the Soviet satellite empire. He would relieve the Soviet fears, stressed by General Taylor, and would repudiate our pledges to press for free elections in those countries, without getting anything in return.

Beyond all this, Macmillan at Moscow apparently went far in promising to eliminate the last vestiges of restrictions on trade with the Communist bloc. Yet since the West has so little to negotiate with—we cannot threaten war—it would be suicidal folly to grant economic concessions without obtaining Soviet political concessions in return. But instead of demanding such concessions, Macmillan is adding increased trade to the other offers he wants us to make—on the summit conference, on German unification, on disengagement, on the issue of atomic tests, and on a security pact. It is even reported that Macmillan wants to draw the United Nations into West Berlin; this would be a step toward the city's neutralization, a loss of its present status as a Western outpost guaranteed under the Potsdam Agreement.

Possibly the most dangerous of all the proposed Macmillan giveaways is his reported tentative agreement with Khrushchev to accept the end of atomic testing without adequate inspection, if the United States could be persuaded to agree. Such an agreement would be all the more idiotic coming after the revolutionary new U.S. space tests, with their possible effects on missile warfare; and especially after the recent statement by General Taylor that to end testing now would seriously injure the relative military position of the United States. Once having created the Frankenstein monster of nuclear weapons, we would be foolish to end testing at this point, just when the bombs are at their most destructive, most poisonous, and least flexible phase.

But aside from the military disadvantage to the West of halting tests without making the ban part of a more general disarmament agreement, to accept the kind of token inspection which Macmillan reportedly discussed with Khrushchev would set a highly dangerous precedent. It would imply an element of trust in Soviet promises that would violate the fundamental Western principle President Eisenhower has repeatedly stated: Since Soviet promises cannot be relied upon, all agreements with them must be self-enforcing.

Macmillan's thesis is that we must make these concessions in order to get Khrushchev to negotiate, that he will not negotiate except at the summit and that there is no one else in Russia to negotiate with. We are told that a summit conference is the price we must pay to avoid a dangerous showdown in Berlin. But it was generally agreed from the start that it would be fatal to yield to that Soviet blackmail. In other words, it was agreed that we must face the Berlin showdown, for until it has been faced the threat will always be hanging over our heads like a sword of Damocles.

The series of indirect concessions which Macmillan proposes, however moderate in degree they may be, will be interpreted by the world as at least a partial Western surrender to the war threat. Instead of calling Khrushchev's bluff in Berlin and ending the effectiveness of new Soviet threats, at least for a long period to come, we will have made it easier for him to blackmail us again later. The parallel with Hitler's Rhineland is obvious.

As a matter of fact, the series of endless summit conferences which Macmillan proposed to Eisenhower would facilitate future Soviet threats like the present one on Berlin. According to Macmillan's formula, all such threats would be negotiated at summit conferences, on the principle of mutual concessions from both sides—the Soviets' concessions amounting merely to willingness to give up most of what they demanded in their threat. So the compromise starts from the new situation which Khrushchev's threat has created. This is the precedent which Macmillan's plan for dealing with the Berlin crisis would establish.

Another dangerous aspect of negotiating a new and more neutral status for West Berlin, thinning out military forces in a zone of central Europe, etc., could be its effect on Congress and the Democratic Party opposition in the United States. The Democratic leadership has been playing a constructive role in urging a greater defense effort and in backing the policy of not yielding an inch on Berlin. But if the administration avoids a Berlin showdown by making such concessions as Macmillan desires, the Democratic opposition will naturally shift its emphasis to the party's proposals for more domestic spending and for welfare measures which promise benefits to groups of voters. Thus the opportunity to use the Berlin crisis to get the American people and Congress committed to a greater defense and foreign aid effort will be lost, and the trend toward the disintegration of NATO through the unwillingness of its members to make the necessary sacrifices would be resumed.

The favorable press which Macmillan has received all over the world makes it more difficult, but also more necessary, to clarify these facts. It is in the interest of the United States to help Macmillan with his political difficulties. It is in our interest to do what we can to conciliate the British, who are our most important allies. But if we go nearly as far as the British press indicates Macmillan wishes us to go, we will risk abandoning the main purpose of the alliance in order to preserve the alliance.

If we are as firm as Secretary Dulles would have been and as German Chancellor Konrad Adenauer and French President Charles de-Gaulle still wish to be, Macmillan will have no choice, committed as he is to the alliance, but to stand with us. An when it comes to the election showdown, the British people can probably be counted on to back him, even if we do not go along with the policies he proposes. For if we stand firm, the British voters will have to choose between Macmillan and the NATO alliance, on the one hand, and the breakup of the alliance, on the other. It is unlikely that they have already forgotten the meaning of Munich.

Poison in Your Water—No. 65

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD an article appearing in the Daveport (Iowa) Democrat on April 23, 1958, entitled "Hepatitis Outbreak Emergency":

HEPATITIS OUTBREAK EMERGENCY

An emergency hepatitis situation in Silvis was declared Monday night by Mayor Peter J. Dreier.

At the same time, the city council approved Dreier's appointment of Dr. Harry DeBourcy as temporary health inspector during the hepatitis epidemic.

DeBourcy will direct an innoculation program expected to affect the 900 elementary school students in Silvis, Dreier explained.

Fifty-four students are now ill with the disease, which began with two cases in January. Dreier said cause of the disease is still not definitely known, but he declared State tests have again found city water uncontaminated.

A Silvis father last week contended that a Moline physician attributed "dirty" city water as the cause of hepatitis in his son.

It is now believed that improper hygiene in some homes is the cause of the hepatitis outbreak.

Statement of Willard W. Livingston, Chief Attorney General of Alabama

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. GRANT. Mr. Speaker, I am pleased to include for the RECORD a statement made by Hon. Willard W. Livingston, chief assistant attorney general of Alabama. Mr. Livingston, while a learned attorney in his own right, is the son of the distinguished chief justice of the Supreme Court of Alabama.

I have known the Livingston family for many years; in fact, the brother of the chief justice, the late Frank Livingston of Tuscaloosa, and I were classmates and friends at the old Southern University in Greensboro.

STATEMENT OF WILLARD W. LIVINGSTON, CHIEF ASSISTANT ATTORNEY GENERAL OF ALABAMA, BEFORE THE HOUSE JUDICIARY COMMITTEE ON CIVIL RIGHTS

Mr. Chairman and members of the committee, my name is Willard W. Livingston and I am chief assistant attorney general of the State of Alabama. I have been an assistant attorney general for approximately 11 years with a majority of that time devoted to handling tax matters and tax litigation for the State of Alabama. However, I am very much interested and concerned with respect to the proposed civil rights bills which are now under consideration.

I am opposed to this legislation because I do not think that it is needed. In my judgment, such legislation is aimed at the destruction of many of the basic principles which have caused this Nation to become the greatest nation of the world. I am a firm believer in States rights and had it not been for such belief by our forefathers, this country might never have been established and organized on the basis that it was. The war for independence was fought long and hard and the new country not yet a nation because of the weakness of the compact that bound the 13 Original Colonies together, struggled for her existence. We had won our independence, but we now found it necessary to pay for it. The Articles of Confederation were not adequate for this need and were insufficient to meet a common desire among the 13 Colonies. Eleven years after the Declaration of Independence, in 1787, the Constitution of the United States was drafted, signed, and submitted to the people of the several States.

The need for some form of national government, made necessary for the common defense, was desirable and yet the 13 independent colonies were reluctant to surrender their independence, so recently acquired from England, to a Federal Government which might in time prove as dictatorial and oppressive as England had been. So fundamentally, our Constitution was an attempt to reconcile the conflicting desires of those who believed in a strong central government and those who wished to keep their government on a State and local level.

Many of the drafters of the Constitution were doubtful that the States would accept it. Leadership, tact and even salesmanship were needed to foster this new document on to a new and troubled people. However, once the States were guaranteed the first 10 amendments, commonly called our bill of rights, the Constitution was adopted and the embryo of today's National Government received life.

The 10th amendment to our Constitution is a part of the people's bill of rights and it is so short, yet so clear and meaningful, I would like to read it to you with a reverence that has not found expression here in Washington for many many long years. It provides:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

To me, this means exactly what it says. It says to Congress, the President, and even to the Supreme Court of the United States that you must look to the Constitution for any power you attempt to exercise over the people of the respective States. If you cannot find it granted to you, expressly or by necessary implicaiton, in one of the provisions of the Constitution, then you have no power to act, because that power belongs to the States or to the people.

We in Alabama have exercised that power and have constitutional provisions and statutes relating to the very things which the proposed civil rights measures under consideration attempt to regulate. We say these are matters, the regulation of which should be by the respective States and not by the Federal Government.

I would like to call the committee's attention to certain Alabama constitutional provisions and statutes relating to electors and the registration of voters, statutes relating to lynching, dynamiting, and a constitutional provision relating to slavery.

We already have on the statute books in the State of Alabama the necessary laws and we certainly can enforce our own criminal statutes. We have done so in the past and it is our intention to do so in the future. Federal assistance is not needed and will be more of a hindrance to the States and will cause a wider breach between the races, particularly in the South, than already exist. It is beyond question that the actions of the Civil Rights Commission in Alabama the latter part of last year did more to further strain the relations between the races in Alabama than any one thing. It is my understanding that one member of the Civil Rights Commission stated in substance that he saw no solution to the race question insofar as legislating against segregation and it is also my understanding that several members of the Civil Rights Commission have indicated that it was their desire to resign from the Commission.

I would like to close with a quote from the case of *People Ex Rel. King, etc.* v. *John Gallagher*, 93 New York 438 (1883): "In the nature of things there must be many social

distinctions and privileges remaining unregulated by law and left within the control of the individual citizens, as being beyond the reach of the legislative functions of government to organize or control. The attempt to enforce social intimacy and intercourse between the races by legal enactments would probably tend to only embitter the prejudices, if any such there are, which exist between them, and produce an evil instead of a good result." (*Roberts* v. *City of Boston*, 5 Cush. 198.)

The above statement is most appropriate in view of recent developments during the last 2 or 3 years with respect to the segregation issue. Any further attempt by the Federal Government to interfere with matters, the regulation of which belongs to the States under the 10th amendment to the Constitution of the United States, can only lead to chaos and ultimate destruction of this country which has become great on the democratic principle that it is a "Government of laws and not of men."

"Uncle Sam" Wilson

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. O'BRIEN of New York. Mr. Speaker, a movement, unfortunately too typical of our times, has been launched to eliminate Uncle Sam as a symbol of our Nation. He is outdated, say those who seem to think a crew-cut or Elvis Presley sideburns would be better.

"Uncle Sam" Wilson, the inspiration for the Uncle Sam character, lived and died in Troy, N.Y.

It is fitting to place in the RECORD the views of a distinguished Troy journalist on this "scrap Uncle Sam" effort. Here, as they appeared in the New York Times of April 12, are those views:

"UNCLE SAM" WILSON

(Many readers have asserted, as does the writer of the following letter, that "Uncle Sam" derives from a Samuel Wilson who lived in Troy, N.Y., in the late 18th and early 10th centuries. A formal declaration to that effect was issued recently by the New York State Legislature. The theory is accepted by some specialists in American history and folklore, but not by others.)

If "Uncle Sam" is an out-of-date stereotype, as Mr. Nevins says, then "The Star-Spangled Banner" is totally archaic, for both were born in the crucible of the War of 1812.

The symbol of "Uncle Sam" is not the creature of a cartoonist's pen, but the result of the evolution of the American dream—as expressed in the life story of one of the most representative of all Americans, "Uncle Sam" Wilson, who was born in Menotomy (now Arlington), Mass., on September 13, 1766, and who died in Troy, N.Y., July 31, 1854.

The story of Sam Wilson's life is an abridged story of America. As a boy, Sam helped his brothers and sisters run the Wilson farm at Menotomy when their father, Edward Wilson, answered Paul Revere's dramatic call on April 18–19, 1775, and took part in the battle of Lexington. And Sam himself ran away from home at the age of 14½ to enlist as a service boy in the American Army, and served until the end of the war.

Almost penniless, Samuel Wilson at 23 migrated to Troy, where by dint of hard work he took root in the community and became known for his honesty and commonsense, wielding great influence for good. Just as he had spoken out against those defeatists who believed the Colonies could not win independence, he now opposed those pessimists who said the new Nation could not survive as a weak and debt-burdened country.

By the beginning of the War of 1812 Samuel had become prominent in the State. A tall, slender man with a "nutcracker" face, he was especially liked by children, who called him Uncle Sam. People came from miles around for his counsel.

In October 1812 Sam Wilson, who had begun a meatpacking business, was made inspector of provisions for the Army in New York. A group of visitors to his plant in Troy asked what the initials "EA-US" on the barrels of meat stood for. A workman replied that the "EA" stood for Elbert Anderson, a contractor, and added jokingly that the "US" (actually an abbreviation for "United States") stood for "Uncle Sam" Wilson.

The allusion caught on and spread rapidly, for Sam Wilson was popular. He epitomized the plain American, with a devotion to honesty, self-reliance, and a passion for justice for himself and all men. The step from this to an impersonation of our country by an ideal Uncle Sam was a logical sequence. Suddenly America had a flesh-and-blood symbol to give it courage, at a time when the was war going badly.

By 1814 British ships had taken over the Atlantic coast and British marines raided towns in seacoast States. "Uncle Sam," tall and resplendent in his red, white, and blue attire, came to life when the Nation needed him most. The widespread use of "Uncle Sam" in lithographs and cartoons helped to arouse and inspire the country.

Today, "Uncle Sam" lives on as a spokesman for all that went before him in the building of America, and all that is yet to come. We must interpret the true Uncle Sam to the rest of the world For the solution to the life-or-death riddle of the atomic race with Soviet Russia lies in showing other nations that our way of life, which "Uncle Sam" Wilson symbolizes, holds the greatest promise for struggling mankind.

THOMAS I. GERSON.

SCHENECTADY, N.Y.

Cheaper To Pay Off Our Debt Than Owe It

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest throughout the country in the necessity for a systematic program of national debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested, a very fine editorial which appeared in the Abilene Reporter-News on Saturday, April 18:

CHEAPER TO PAY OFF OUR DEBT THAN OWE IT

Year after year, Congress after Congress, administration after administration, lipservice has been paid to the thesis that we must begin to pay off the national debt and start to get out from under the crushing burden of interest payment, which will amount in the new fiscal year to more than $8 billion, a sum equal to one-third of all that we owed at the end of the First World War.

We were well on the way to paying off the World War I debt—it had been cut down from around $24 billion to around $16 billion by the mid-1920's—when an era of high tariffs, tax reductions and income tax refunds reversed the trend and brought on the big boom followed by the big bust.

The national debt stands today at $283 billion. Time after time the debt ceiling has had to be raised so all the camels could get under the tent.

Why? For want of a fiscal program aimed peculiarly at debt reduction.

Congressman JIM WRIGHT of the Fort Worth district introduced early in the first session of the 86th Congress a resolution which, if adopted and carried out with singleness of purpose, would eventually whittle the national debt to manageable size.

It expresses "the sense of Congress that the national debt should be reduced annually by an amount not less than 1 percent of the total" now outstanding, and that the Secretary of the Treasury should include such an amount in any request for funds to pay any obligatory interest payments which become due and payable.

He suggested that the plan be implemented beginning with fiscal 1961 and continued "without interruption until the total national debt now outstanding is retired." Estimated cost allocated to principal and interest, about $2.8 billion per annum.

Congressman WRIGHT sees in the trend to higher interest that the Government will soon be paying at the rate of $9.8 billion a year, assuming the total debt remains unchanged.

It is, he declares, cheaper to pay than to owe.

"In profound but simple terms," he said in submitting his plan, "these figures reveal the amazing and yet inescapable fact that it is more than $485 billion cheaper to pay off the debt in 100 years than it would be simply to continue paying the interest for that period of time."

We don't know what chance Congressman WRIGHT's resolution has at this session, but we imagine very little chance. "Balancing the budget," which is meaningless in the long haul, a mere matter of bookkeeping, should give way to a new slogan: "Start paying off the national debt; it's cheaper that way."

Missouri River Diversion

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. BURDICK. Mr. Speaker, I should like to advise my colleagues again that the "no new starts" policy of this administration has brought new water resource development to a halt. North Dakota has cooperated fully with the Flood Control Act of 1944 and has not only given up 566,000 acres of its finest land for reservoir purposes but has taken them from the tax rolls of our State.

Now, after 15 long years, no construction of the Garrison unit has been commenced, although authorized as a part of

the development under the 1944 act. The reauthorization bill has been locked up in the Bureau of the Budget as are many other projects. The responsibility for this situation rests upon the executive branch of this Government. It is little wonder that the Minot Daily News, a pioneer in water resource development in North Dakota, is running low on patience. Under leave to extend my remarks, I am happy to place its just complaints before the Congress in an article published April 11, 1959, entitled "Virtue of Patience Is Tested":

VIRTUE OF PATIENCE IS TESTED

Up to this time North Dakota has done all of the giving in connection with development of the Pick-Sloan plan and has received none of the benefits that were promised.

This fact was brought out by Milo Hoisveen, State engineer, in an address at Grand Forks this week.

The original compact was just as clear as any agreement could possibly be. North Dakota was to give up a half million fertile acres of Missouri River bottomlands that produced abundant feed and winter shelter for great herds of beef cattle, in exchange for a million acres of irrigation.

The area to be flooded—and much of it is already flooded—has been removed from the tax rolls, depleting the income of counties and the State, as well as some townships where only a portion of the area has been taken.

The plan report has long since been completed and worked through channels into the Interior Department which it finally cleared to run into what looks to many like a stone wall in the Bureau of the Budget. This all-powerful Department seems to be held in great awe in Washington.

Every question of the Bureau has been answered. Technical points have been cleared up and still the report continues to develop a moss coat.

From the time the report was completed there has been every evidence of a studied campaign of delay from Washington, seeking to keep the report from Congress. Because there has been a change in plans that call for taking water from Garrison Reservoir in place of near Fort Peck, technical legal minds in Washington called for a reauthorization of the project which had once cleared Congress.

North Dakota is today solidly behind the Missouri River diversion project. In the pioneer days there were not too many willing to carry the torch. Minot has the distinction of furnishing leadership and sizable funds. It was a rough road but gradually opponents were converted.

The time has now arrived when North Dakota, with the support of many other Missouri Valley States, is demanding that Washington keep faith. We have just about reached the point where patience ceases to be a virtue.

North Dakota has every right to demand that the benefit chapter of the Pick-Sloan compact be approved and a start made on a project that will take several decades to accomplish.

We are entitled to nothing less.

Effect of the Railroad Relief Act of 1958

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, April 27, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I would again like to respectfully call to the attention of my distinguished colleagues the continuing urgency of the railroad-commuter problem in New Jersey. And what is happening in my State is rapidly developing into a pattern across the Nation.

In connection with my remarks asking for rapid action on S. 1450 which I believe would close some of the gaps in the Transportation Act of 1958, I think it would be of interest to review once more the background which led to the enactment of the Transportation Act of 1958, commonly referred to as the Railroad Relief Act.

I, therefore, ask unanimous consent that the following article from the New Jersey Municipalities, February 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EFFECT OF THE RAILROAD RELIEF ACT OF 1958

(By Toward T. Rosen, deputy attorney general, board of public utilities commissioners)

As you know, when a railroad today desires to curtail or discontinue the passenger service it furnishes by train or ferry to your towns it is required first to obtain the permission of the regulatory agency. That regulatory agency in New Jersey will be either the New Jersey Board of Public Utility Commissions or the Interstate Commerce Commission. The one agency is an integral part of the State government of New Jersey; the other is an administrative agency of the U.S. Government.

I would like to tell you a little about the pattern of regulation that existed before the recent Railroad Relief Act was passed. The situation then was fairly clear. A railroad that wanted to discontinue passenger service within the State of New Jersey took its case to the New Jersey Utility Commission. This commission weighed the financial losses that the railroad suffered from the service along with the need of the community for the service and came up with an answer which sometimes made one side happy; more often it wasn't completely acceptable to any side, but it was the best that could be done in a situation where there is no yardstick for what is absolutely right or absolutely wrong.

In considering these services, it has been the policy, the philosophy of the State public utility commission, that the primary emphasis must be given to the need of the local community for service. A study of the opinions and decisions of the New Jersey board will reveal that that need has been given emphasis over and above the loss that the railroad claimed or the loss that the railroad actually did suffer in individual service problems.

However, you have the situation where the board has been sensitive to the financial difficulties of the railroads, particularly the financial difficulties that followed passenger commutation service since the second World War. In a case where a municipality was using its local train service but where the people had other means of transportation to get to their destination, the board would permit the railroads to curtail or discontinue entirely the service to the communities. As you know, those other alternate means would most often take the form of bus transportation.

But in those communities where the railroad was the only public means of transportation available or, if the other public transportation, if the bus systems, were inadequate, then even despite an acknowledged heavy loss on service, the New Jersey board would require the service to continue. It, however, took into account or took under advisement the impact of the loss on the overall operations of the railroad—the amount, for example, that the railroad might be earning from its freight operations in the area or the State as a whole. Considering all of these things, the board come up with an answer, remembering, however, that it felt a primary obligation to preserve the transportation system of the State of New Jersey.

NEW FEDERAL LAW

What happened in the spring of 1958 was that the financial troubles of the railroads became acute. I won't try to analyze the reasons here. That particular situation was certainly accentuated by the recession that the economy faced. The railroads went down to Washington, told their story, in many respects a legitimate story, and the Federal Transportation Act of 1958 resulted, popularly known as the Railroad Relief Act.

This act contains many things, but the ones we are interested in today are the provisions with respect to the passenger service of the carriers. Changes were made by that law. Briefly, the changes were these: The railroads now were told to take their passenger service cases to the Interstate Commerce Commission if the train involved ran from one State to a point in another State. Thus, hypothetically, a railroad running a train between Elizabeth and New York City—Trenton and New York City—which, previous to the new legislation, had submitted its case to the New Jersey board insofar as any changes taking place within New Jersey, now, without delay, can submit its case to the Interstate Commerce Commission.

Prior to this act, the Interstate Commerce Commission did not have jurisdiction over that kind of service. The only service on which it could hear cases concerned those where the railroad proposed to abandon an entire line of railroad, not just cut down the service, not just eliminate passenger service and keep freight service, but abandon an entire line of railroad. That is how some of the ferry cases, which you may have read about some time ago, came to the Interstate Commerce Commission on the claim that the railroad was abandoning its entire ferry line.

Those cases now, of course, have been litigated by the State. The State of New Jersey has taken the position that those weren't abandonments at all but merely curtailments of service, since the railroad expected to continue its freight service across the river by means of other carriers—that is, the barge and lighter service.

The main point to be remembered is that the Interstate Commerce Commission's jurisdiction over passenger service prior to this new law was a most limited one but it was significant for this reason: In the area where the ICC did have jurisdiction, it pretty plainly pointed out its philosophy, the direction it could be expected to take if its jurisdiction over the service were to be lost.

IMPACT OF LAW

That philosophy, or policy, is a very different one from that administered by the New Jersey board. It is different in this respect: The Interstate Commerce Commission conceives of itself as having a mission primarily to preserve and protect and nourish the railroad system. If the Commission (a) receives a case where there seems to be a choice between the losses of a railroad and the service rendered to a community or a region, by and large, the Commission will generally take the financial picture of the railroad in preference to the needs of the local people. This is where there has been a difference in approach between the attitude of the ICC and the New Jersey Board of Public Utility Commissioners.

This new act was motivated in very large part by the campaigns of the railroads that the State commissioners, New Jersey among them, had been too parochial in their respect for local interests, too narrow in not taking

into account the impact of these passenger losses on the financial health of the national transportation system. I cannot say whether it is right or it is wrong, but that is the complaint which the railroads took down to Congress and that is the complaint which Congress pretty much accepted when they drafted this new legislation.

But the Congress didn't buy the railroad story completely. The new legislation that was submitted to the Congress originally provided that any railroad company could discontinue any passenger service on which it could demonstrate a financial loss. Now, of course, there was dynamite in the bill as originally written. Implicit in it was the power of the railroads to discontinue overnight, virtually all commuter service in our suburban and urban centers.

The law didn't get through Congress in that form. It was modified very substantially. The law as it came out gave the Interstate Commerce Commission jurisdiction over interstate rail service. You will remember my illustration of the train running from Elizabeth to New York City. In those cases the railroads were given an option of taking their case either to the State board—in the Elizabeth-New York case it would have been the New Jersey board, by and large—or to the Interstate Commerce Commission. It was fairly predictable that the railroads would prefer to take their case down to the Interstate Commerce Commission for the reasons that I have attempted to outline to you.

On the local service cases, that is, the train running between points within one State, that which we call intrastate service, the railroads were still required to take their case to the State public utility commissions, with this little twist, however: If the Public Utility Commission wouldn't give them relief, the railroads were permitted to appeal to the Interstate Commerce Commission. So that under this new legislation as drafted, you can expect a shift in regulatory emphasis to take place from the State-local level to the Washington-Interstate Commerce Commission level, and that shift has already started.

IMMEDIATE ACTION

The day after the President signed the new bill, one of the major local carriers in northern New Jersey filed with the Interstate Commerce Commission to discontinue a ferry service. The next day, that is, two days after the new bill was signed, another major local carrier filed to discontinue its ferry service. The Interstate Commerce Commission, not unexpectedly, refused even to hold a hearing and as things stood, the ferries were to be discontinued within 30 days from the filing.

This case has been taken by the State to the Federal district court and since it is now pending in the Federal district court[1] I am not at liberty to discuss it at length. It is up to the court to decide that case but, fundamentally, I will say this to you: The case raises the issue of whether it is fair procedure in a due process, in a constitutional sense, for a railroad to be permitted to discontinue service by a Federal agency without first affording a hearing on the claims of the riders of the municipalities which are served. The issue raised is not whether the Federal Government has the power over the service—it is pretty clear that it does—but whether the Federal Government is required to give a hearing and afford due process to the users of the service and to the regions which may require the service.

As matters now stand, the constitutionality of the major provision of that new Railroad Relief Act is in issue. The answer, we won't attempt to predict. The chances are we will get an answer from the Federal court soon, and the chances are also most likely that no matter how the answer comes out from there, it won't be resolved finally until the case reaches the U.S. Supreme Court.

Today, the regulatory pattern is a little foggy. You can't lay it out and say, "This is just how things are." There have been changes. The extent of the changes, we can't know until we get the answers from the litigation now pending. It does seem clear, however, that the changes herald a shift in emphasis from the local level to the Federal level; that this will most likely result in train service being curtailed at an even greater rate than you have seen in the last few years.

The Illusion of Nuclear Plenty

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Leader of April 27, 1959, written by Mr. Morton A. Kaplan, professor of political science at Chicago University and a fellow of the center of international studies at Princeton University:

THE ILLUSION OF NUCLEAR PLENTY

(By Morton A. Kaplan)

In a recent scientific meeting at the California Institute of Technology, the missile policy of the U.S. Government was denounced. It was asserted that the United States already has the power to destroy the Soviet Union, that additional missiles are useless or even part of a policy to deliberate waste designed to keep the economy going, just like some of the planned obsolescence in civilian industry.

The belief that armaments are necessary to the economy seems to be a widespread hangover from the economic determinism that prevailed during the 1930's. The strikingly favorable reception of Soviet Deputy Premier Anastas Mikoyan by American businessmen led him to assert after his return, that American policy does not reflect the views of the business and industrial elite. This might indicate that even the Soviet high command rejects the myth that armaments are necessary to prosperity in capitalist economies. In any event, the best economic studies, such as those of the National Planning Association, support the view that, although the economy can support the present military budget without harm, or even a much larger military budget without serious economic costs, there is no evidence that the economy is best supported by armaments expenditures and much evidence to the contrary.

Nevertheless the charge has been made. If the charge is false, it is dangerous to leave it unrebutted. If scientists believe it, the various Government and private research organizations working on military policy will find it difficult to recruit the staff necessary to carry on vital programs or to maintain the kind of morale and sense of urgency necessary for effective work.

In fact, the charge is false, although it represents a widespread and dangerous illusion. The policy of the Government is subject to legitimate indictment, but for precisely the opposite reason. The safety of the United States and of the American way of life is being endangered because of an inadequate defense program that is based upon a misunderstanding of the problem of the nuclear missile age.

The United States does have the power to destroy the Soviet Union provided the Strategic Air Command can deliver its nuclear payload unhindered by the Soviets. Unfortunately, this kind of successful strike cannot be assumed, for the U.S.S.R. may destroy most SAC planes on the ground; others may be halted by the active Soviet air defense; and the planes that get through, if any, may do little damage because of the civil defense precautions that the Soviet Union has taken. In brief, the time may soon come when the Soviet Union can afford to attack the United States at relatively little expected cost.

Assume that SAC has some 43 bases in the United States. If the Soviet Union had about 250 ICBM's with a payload of 5 megatons, and a circular error probability (CEP—the radius of the circle within which one-half of the missiles aimed at the center of a target may be expected to fall) of 5 miles, and a reliability of 0.5, it could take out every SAC base with a very high probability. (Overseas bases could be taken out easily by Soviet IRBM's). Now it might be that the Soviet Union does not have ICBM's with 5 megaton warheads, although some of Soviet Premier Nikita Khrushchev's remarks to Senator HUBERT H. HUMPHREY, Democrat, Minnesota, in December might be interpreted to include such a claim. (Incidentally, I cannot remember, in the postwar period, a single official Soviet claim about their weapons system that was not later verified.)

The Soviet moonshot, according to expert testimony at recent congressional hearings, would indicate a guidance system with a 15-mile CEP, although the Soviet Union might not have used its best guidance system, or that particular shot might not have been a good shot. And the Soviet Union might not have 250 ICBM's, although cutbacks in other military areas would seem to indicate a massive production program in that field.

Even if the Soviet Union cannot risk a sneak attack today, it is difficult to feel confident that it will not be in a position to risk such an attempt in a year or two, when it possesses a large number of improved missiles.

Meanwhile, developments in active air defense, particularly in the missile field, make it more and more difficult for planes to penetrate an elaborate active defense system, even if they survive a sneak attack. SAC commitment to the manned plane at the present time can be understood because of the heavy payload that planes can carry and because active defense cannot be expected to halt a massive attack carried out by an undamaged SAC.

Moreover, planes will continue to be useful, after missiles have knocked out the enemy striking forces and air defense, to pose the threat of massive destruction and thereby to force surrender. Unfortunately, it may be the Soviet Union and not the United States which is able to make this threat effective if the present U.S. defense policy is continued.

The United States has no effective missile program. The projected IRBM bases in Europe will be highly vulnerable. As part of a much larger system, they would nonetheless be useful. But there is no operational ICBM and the projected production schedule is pitifully small. The administration argument is that it does not want to waste money on first-generation missiles, when there is no current urgency, and when the United States will soon be able to make use of second-generation missiles like Polaris and Minuteman. Unfortunately, we cannot be

[1] (EDITOR'S NOTE.—After this address, the Federal district court sustained the constitutionality of the new legislation. The State of New Jersey has taken an appeal to the U.S. Supreme Court, but a final rule is not expected until the fall.)

very confident that the situation will not be urgent before the second-generation missiles are available. In addition, it is highly doubtful that the second-generation missiles are adequate to do the job they are supposed to do.

The Polaris and Minuteman carry small payloads; some public estimates have been in the range of 200 kilotons. This is sufficient to do heavy damage to a large city. But, if there is an effective civil defense program, the damage they can inflict might not be sufficiently worse than some German and Japanese cities received during World War II; they are unlikely to incapacitate an enemy. Polaris and Minuteman do not carry a big enough warhead to be useful against hardened Russian launching sites.

On the other hand, the Soviet Union's ICBM's probably will carry a big enough warhead to knock out American missile-launching sites. And the very large numbers of missile sites or the hardness of bases necessary for minimal safety in the next few years are not being designed into present production plans.

Less than 10 Polaris submarines are planned, and even the Navy apparently is not asking for more than 50. These could be hunted down at sea and destroyed in peacetime. The United States could do nothing except watch helplessly as its striking forces were destroyed; or it could launch a suicidal attack—suicidal since the Soviet Union could strike back with undamaged forces. In addition, the planned range of the Polaris is 1,200 miles.

It so happens that even if Polaris were not hunted down in peacetime, it could not be used against the Soviet Union except in a narrow range off the Eurasian continent. The Polaris submarines could be destroyed as they surfaced to fire, since the area is patrollable (although this would not be the case if the Polaris range were increased to the original plan of 1,500 miles).

Thus, present administration plans call for creating a highly vulnerable missile force that is not useful against Soviet launching sites. This force could not be used in a first strike unless the United States were in a suicidal mood. The Soviet forces could be used in a first strike. A dangerous asymmetry is in process of creation. In consequence, a good situation for nuclear blackmail by the Soviet Union is likely to develop.

Indeed, the Soviet Union would have to be either unsure of its advantage or stupid not to blackmail the United States in such a case. The world would be a very uncomfortable place to live in. The Soviet Union would hardly feel safe if the United States were to adopt an intelligent defense program. What better time to insure its safety than when it possessed an effective preponderance of military force.

True, there would still be many uncertainties in the situation. Even the best laid military plans often go wrong through miscalculations, mistakes or inefficiency. Accident may not play the role in modern war that Tolstoy thought it did in 19th-century war, yet its possible consequences could hardly be neglected by any sensible government. However, when this is admitted, the Soviet Union would run only slight risks with a policy of blackmail. The United States might accede.

The United States might prove stubborn, but it could hardly adopt the suicidal strategy of striking first, particularly since a Soviet first strike would be directed against American military bases rather than against the centers of population. And if the Soviet Union struck first, the attack might succeed in destroying the effective American military power. If it did not succeed, the United States could hardly afford to hit back at Soviet cities, since it could not hope to knock out the Soviet launching sites aimed at American cities. Therefore, except for the few attacking planes or missiles that responded immediately and automatically to the Soviet strike, the best the United States could do would be to threaten to bomb Soviet cities unless the Soviets called their attack off, and to alert the remaining American striking forces as a protection against a second sneak attack.

The American situation is made worse by the fact that no effective civil defense program has been established. Having given up on the possibility of defense, the entire American population becomes a hostage to Soviet benignness, on the assumption that the population could not be saved in any event. This is a very dubious assumption. Moreover, the Soviet Union is operating on the assumption that civil defense can make a difference.

The entire American defense program is shot through with false assumptions. The administration does not recognize that even hard bases can be destroyed by sufficiently large and accurate ICBM's, that mobile targets can be located and knocked out, that enough cities can be defended to make a large difference in potential recuperation (particularly if provocative acts provide warning during which evaluation can be carried out), that planes can be destroyed on the ground, that numbers and dispersion of bases might prove crucial, that signaling systems can be fooled, that communications can be knocked out. In short, that blackmail can be employed successfully against an inferior military establishment. Everything hinges on the relative rate of technological development in the Soviet Union and the United States.

It is ironic that a program as faulty as the present American military program should be regarded as a needless luxury. At a time when the values of Western civilization rest upon the defensibility of the United States, it is important for sicentists to recognize the supreme importance of the tasks they are performing in defending the physical security of the United States. Not a day passes that some technological innovation or discovery may not change the entire balance of military power.

Unless American scientists remain dedicated—not merely on the job—the United States is in desperate trouble. It is necessary for scientists to tell the Government that its complacency is without foundation, that any defense can be penetrated, and that any offense may be nullified by technological innovation—unless we possess considerably more powerful weapons than those on the planning boards. The Government's complacency is not justified, and scientists have an obligation to say so.

There are undoubted dangers in a long-continued arms race. It might bring technological innovations giving such an advantage to the first strike that any responsible government would strike first. These innovations are not likely in the next few years; in any event, unilateral withdrawal from the technological race will not remove the danger. Indeed, such unilateral action can only increase the danger by insuring a Russian first strike advantage and by reducing the Soviet incentive to agree to reasonable arms control.

This is the time for the most responsible individuals in the scientific community to make a dispassionate analysis of the problem. They must inform their colleagues and the public at large of the nature of the situation, and of the responsibilities of the scientist and the humanist in the light of the fundamental values to which this Nation has been dedicated from its birth. If these values are forfeited now, the loss may be permanent.

A revolution in biology may one day permit us to control the gene structure and the environment in general. But it would be an awful thing if future generations were to be deprived of the right to live as free men in the way their consciences dictate.

He Will Be Sorely Missed

EXTENSION OF REMARKS

OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an editorial which appeared in the Clarksville Leaf-Chronicle, one of the most outstanding newspapers in my congressional district. In my opinion, this article well expresses the general feeling and sentiment in regard to the resignation of Secretary of States Dulles; and, I would like, therefore, to share it with my colleagues in the Congress.

The editorial, "He Will Be Sorely Missed," follows herewith:

HE WILL BE SORELY MISSED

Cancer-ravaged John Foster Dulles has finally decided to do the inevitable. He has resigned his duties as Secretary of State.

Announcement of Mr. Dulles' decision was made Wednesday by President Eisenhower, who has described Mr. Dulles as the greatest Secretary in U.S. history. The President was visibly moved by the decision of his old friend in whom he has placed the utmost faith.

It took unselfish courage on the part of Mr. Dulles to relinquish the post for which he had been trained for years and to which he was completely devoted. But cancer has taken its deadly toll and regardless of the physical stamina of John Foster Dulles, he could not bounce back and give full time to the office of Secretary.

Mr. Dulles has been one of the most controversial personalities in an office that is familiar to controversy and criticism. Perhaps no other post other than that of the Presidency is so open to both praise and abuse.

While Mr. Dulles steps down, his record remains and only history can be the fair judge. Extravagant praise at the moment ranges from a thoroughly dedicated man to the greatest Secretary in U.S. history. Extravagant criticism pictures Mr. Dulles as a "brink dancer," and a stubborn statesman without imagination and vision. He was neither. But he will be known for one outstanding characteristic—his unbending purpose to steer U.S. foreign policy on a straight course and without yielding to compromises.

Regardless of Mr. Dulles' place in history, at this particular moment he is sorely missed. Cancer incapacitated him almost on the eve of the important Foreign Ministers' Conference. Much of the free world's stand against communism was anchored on Mr. Dulles' policy. And while U.S. policy is not expected to change, the bulldogged determination of John Foster Dulles will be missed.

Democrats and Republicans alike deplore the grievous illness of Mr. Dulles and the necessity for his resignation. The man who succeeds him must assume tremendous responsibilities that can affect this Nation and the whole free world.

Freedom for Bulgaria and Opposition to Communism

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 27, 1959

Mr. KEATING. Mr. President, at the third congress of the Bulgarian National Front of the United States of America and Canada, held in New York City on March 7 and 8, several important resolutions were adopted. In these resolutions this fine organization reaffirmed its opposition to atheistic communism and rededicated itself to the freeing of noble Bulgaria.

Because this group has established an enviable record of service to America and to the cause of the liberation of Bulgaria, and because these people know at first hand the treachery and dangers of communism, their views deserve wide dissemination. I ask unanimous consent that the resolutions recently adopted by the Bulgarian National Front be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS OF THE THIRD CONGRESS OF THE BULGARIAN NATIONAL FRONT OF THE UNITED STATES OF AMERICA AND CANADA

The delegates at the third congress of the Bulgarian National Front of America and Canada, Inc., convened at the Biltmore Hotel in New York City on March 7 and 8, after having heard the reports of the president of the central executive board and the other officers and after having discussed the issues raised in those reports, adopted the following resolutions:

"RESOLUTION I, ON CURRENT INTERNATIONAL ISSUES

"Whereas the international situation during the last year has fundamentally changed in favor of the free nations, as the result of the resolute resistance demonstrated by the free world under the leadership of the United States against Communist aggression in the Far East, in the Middle East, and lately in Germany; and

"Whereas the leaders of the free nations recently are acting in a way which implies that they no longer entertain any illusions as to the ultimate aims of the Communist bloc of nations and in their diplomatic relations with the Soviet Union manifest more realism and sense of responsibility than in earlier times so as to leave the Communist aggressors to choose between the alternatives of war or peace; and on the other hand

"Whereas the free nations have reconciled with the status-quo created after the Second World War in Eastern Europe and their opposition to communism do not go beyond defending this status-quo, thus leaving the enslaved nations to Communist tyranny, though, from time to time, responsible statesmen come out with platonic declarations promising them support for their liberation; be it

"Resolved, That the third congress of the Bulgarian National Front of America and Canada expresses its feelings of admiration to the President of the United States Gen. Dwight D. Eisenhower, and to the leaders of the other free nations for their courageous policy of resistance to Communist aggression in the Far East, in the Middle East, and in Germany and urges them to stand firm in defense of the free city of Berlin where the Soviet Union is lately trying to destroy the moral and the political prestige of the Western Powers; and be it further

"Resolved, That the third congress of the Bulgarian National Front extends its heartfelt wishes for a fast recovery to Secretary of State John Foster Dulles and congratulations for his tireless efforts and sacrificial dedication to the cause of democracy in the world; and be it further

"Resolved, That the third congress of the Bulgarian National Front warns the leaders of the free nations not to atone the peace of the world with the slavery of the nations in Eastern Europe, and to reject the formula 'Peace at any price' as immoral; and be it further

"Resolved, That the third congress of the Bulgarian National Front wishes to assure the leaders of the Great Powers that the Bulgarian people, at the present engaged in an uneven struggle against the Red tyranny, imposed upon him by the Soviet troops in September 1944, is ready to join the free nations after its liberation for the establishment of a world order of justice, peace, and cooperation among all nations on the basis of free covenants freely arrived at; and be it further

"Resolved, That the third congress of the Bulgarian National Front expresses its firm belief in the imminent liberation of all enslaved by Communist nations.

"RESOLUTION II. THE BULGARIAN NATIONAL FRONT AND THE STRUGGLE OF THE BULGARIAN AGAINST COMMUNISM

"Whereas as the result of tragic developments and against the will of her people, 15 years ago, Bulgaria was occupied by the Soviet troops, her independence reduced to trivial formality and the Bulgarian people forced to accept a regime of cruel tyranny, terror, and political distatorship; and

"Whereas in the very day of Bulgaria's fall under communism the entire Bulgarian nation joined in a desperate struggle for liberation, sacrificing the flower of a generation, and despite the tremendous odds against her cause and without sufficient moral and material support from the free nations she continues this struggle with unwavering spirit and determination; and

"Whereas in the course of this struggle the Bulgarian people realized how misunderstood and misinterpreted their national internal political problems have been abroad, due to a concerted foreign and domestic propaganda, and how the specialists and the specialists and the representatives of the Great Powers have manifested, and continue to manifest, a complete ignorance as to the substance of the Bulgarian national politics, and continue to pay tribute to outdated prejudices and, by doing that, willingly or unwillingly, weaken the spirit of resistance in Bulgaria, as well as the sacrificial enthusiasm of the Bulgarian people; and

"Whereas in spite of the enormous difficulties and disappointments, caused by the aforesaid facts of official and unofficial foreign and Bulgarian agencies, who have shown interest in the struggle of the Bulgarian people against communism with the explicite of the implicite desire to impose on this struggle personalities, ideas, methods, tactics and aims irrelevant, incompatible, false or detrimental to this struggle, the people of Bulgaria, led by its unmistakable instinct and by its patriotic leaders, have never ceased to carry this struggle for life or death, being determined to hold its destiny in their own hands and to organize the future of liberated Bulgaria according to the best interests of the Bulgarian people; be it

"Resolved, That the Bulgarian National Front bestows the greatest honor upon the memory of those who have fallen in the struggle for freedom in Bulgaria and pay them the deepest respect of its members; and be it further

"Resolved, That the Bulgarian National Front extends greetings.—

"To his Majesty King Simeon II, the Constitutional Representatives of the enslaved people of Bulgaria abroad and its legal leader in the struggle for freedom, to whom, all delegates at the congress and all members of the organization pledge their loyalty and promise their support in fulfillment of his mission, imposed on him by the providence—to be the King liberator of Bulgaria.

"To the Bulgarian fighters for freedom: those who are fighting communism in the mountains, those who are in prison and concentration camps, those who are at large and day after day escape the vigilant eye of the Communist secret police, those who have escaped out of Bulgaria and carry the struggle against communism abroad; and

"To the Bulgarian patriotic officers and soldiers in the Communist army of Bulgaria and to recall them that the Bulgarian soldiers have many a time glorified the name and have defended the honor of Bulgaria and that, at the present, the fatherland looks them as the future saviors of the nations who, at the decisive moment of the national struggle for freedom, will turn their weapons against the enslavers of our country and will take over the destinies of Bulgaria until the Bulgarian people are given the opportunity to choose freely their government;

"To the Bulgarian youth serving in the labor troops as a punishment for their democratic convictions and for their part and sympathy with the struggle against communism;

"To the Bulgarian youth, who have grown up and have been educated in the Communist schools but which have been nourished by the covenants and the ideals of the glorious Bulgarian past and its struggles for freedom and independence and which, with self-sacrifices and determination worthy for admiration, follows the traditions of the youth of the Bulgarian renaissance as the vanguard in the fight for freedom;

"To the patriotic Bulgarian workers and peasants who were called to perform the greatest acts of resistance against communism and who made the heaviest sacrifices in the struggle against the slavery, being the prime object of Communist political and economic exploitation and pressure;

"To the patriotic Bulgarian intelligentsia: clergy, writers, artists, scientists, professors, teachers, students, lawyers, doctors, civil servants and businessmen who succeed in escaping the vigilant eye of the Communist police and support, by all means, the national struggle for liberation;

"To the thousands of Bulgarian mothers in whose hands is the future of Bulgaria, the youth, to encourage them to follow the example of the national heroine, Baba Tonka, educating a generation worthy to wear the wreath of liberation of the fatherland;

"To the entire Bulgarian people for their courageous and uncompromising struggle for freedom and to assure them that the members of the Bulgarian National Front abroad will not give sleep to their eyes and rest to their feet until they see the down of freedom over the long suffering Bulgarian land.

"RESOLUTION III

"Whereas the organization of the Bulgarian National Front abroad was set up by proven in the past anti-Communists, belonging to various political groups, with the sole purpose of organizing a strong anti-Communist liberation movement among the Bulgarian exiles abroad, for the restoration

of the Tirnovo constitution in Bulgaria and the rights and the liberties of the Bulgarian people guaranteed thereby; and

"Whereas the Bulgarian National Front came to existence on the Bulgarian political scene abroad in times and circumstances which had forced many a Bulgarian political leader to renounce ungloriously the cause which they had served for decades and either to disappear in oblivion or to accept shameful collaboration with the enslavers of Bulgaria; and

"Whereas in spite of the extraordinary hardships, as the result of the self-sacrificing dedication of the members of the Bulgarian National Front, the cause of the Bulgarian people, buried in prejudices, slandered and denounced was resurrected and was imposed as a leading force among the Bulgarian political exiles; and

"Whereas the growth of the Bulgarian National Front as the strongest political movement among the Bulgarian national emigration abroad disturbed the schemes of the Communist tyrant of Bulgaria and they began, with all the available means, to work for the destruction of the organization; be it

"Resolved, That the struggle of the Bulgarian National Front for the overthrow of the Communist regime in Bulgaria and the restoration of the Tirnovo constitution remains the most important motive for the existence of the organization; and be it further

"Resolved, That the third congress of the Bulgarian National Front declare to the entire Bulgarian community abroad that the realization of the cause of the liberation of Bulgaria depends exclusively on the cooperation and the unity of all national democratic forces in exile and in the fatherland; and be it further

"Resolved, That the Bulgarian National Front has always been in favor of a Bulgarian representation abroad which should unite all Bulgarian immigrants in the national struggle for the liberation constituted by the representatives of the Bulgarian democratic parties, organizations and institutions abroad, having a representative character; and be it further

"Resolved, That the third congress of the Bulgarian National Front appeal to all members of the organization to join with the central executive board to endorse it with their confidence and give it their support for carrying the anti-Communist struggle and, at the same time, to denounce the attempts of the Communists to sow disturbance and divisions in the ranks of the organization.

"RESOLUTION IV

"Whereas the relations between the United States and Canada on the one hand and Bulgaria on the other had always been based on mutual recognition of their respective interests and the Bulgarian people have always been well disposed for a complete understanding and coordination of the policy of Bulgaria with the policies of America and Canada, in view of the best interpreted interests of the three countries; and

"Whereas the fall of Bulgaria under Communist slavery placed the people of Bulgaria against its will, within the camp of the enemies of America and Canada; and

"Whereas the entire Bulgarian people have put their confidence and their hopes for their liberation on America; and

"Whereas the severance of diplomatic relations between Bulgaria and the United States in February 1949 and the continuation of this situation is considered by the Bulgarian people as an act of moral support on the behalf of the American Government for the struggling-for-freedom Bulgarian nation; and

"Whereas the Bulgarian Communist Government makes desperate efforts to restore the diplomatic relations between Bulgaria and the United States and, by doing that, to inflict a new blow on the Bulgarian liberation movement, presenting it to the Bulgarian people as a recognition of the existing regime of tyranny by the American Government; be it

"Resolved, That the third congress of the Bulgarian National Front urges the President of the United States, in the interest of the national struggle for the liberation involving the entire Bulgarian people, not to allow the restoration of the diplomatic relations between Bulgaria and the United States; and be it further

"Resolved, That the third congress of the Bulgarian National Front assure the American and the Canadian peoples that the Bulgarian people have not ceased to nourish warm friendly feelings toward them and that the support which they give him now or will give him in the future, in the decisive hour of the national struggle for freedom, is welcome with a feeling of profound gratitude; and be it further

"Resolved, That the third congress of the Bulgarian National Front expresses deep gratitude on the behalf of the Bulgarian immigrants who were allowed to resettle in the United States and Canada, for the hospitality shown to them, and urges the respective Governments to take the necessary steps and assure the admission to the United States and Canada of those Bulgarian political refugees who are still in the refugee camps or who would escape from Bulgaria in the future."

Now or Never

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. CANNON. Mr. Speaker, the Nation may not be in serious danger, but it is in greater danger than ever before.

Russia has more submarines, more planes, and more divisions than we have—and is adding to them faster.

Every year we have more enemies and fewer friends. The last to go is oil-rich Iraq.

Every year Khrushchev is more aggressive and more insulting.

Every year we have a larger national debt. Interest alone is $7½ billion dollars. Next fiscal year it will be over $8.1 billion.

Every year Congress spends more than our income, the larger part for nondefense spending, things we have been doing without and can continue to get along without.

Every year we vote to increase the number of civil employees. They now number more than 2,300,000 at an annual payroll in excess of $13 billion.

Every year it is harder for the U.S. Treasury to sell Government bonds; harder to borrow the money Congress spends above the budget—and interest rates go up.

Mr. Speaker, when Congress votes to spend more than the budget the Government must gobble up more money to finance the big spending:

First. When Congress votes to spend more than we take in the dollar depreciates. Your money buys less.

Second. When Congress votes more money than the budget, the cost of living goes up for every family in America. Prices increase in every store.

Third. When Congress votes more money it is harder to get a loan. And interest is higher.

Fourth. When Congress votes to spend above the budget your savings are worth less. Your old age will be harder than you expected.

Fifth. When Congress votes to spend for things we have been doing without and can continue to do without, your life insurance will do less for your family and your fire insurance will not build your house back.

Sixth. When Congress keeps on voting to spend past the budget your pension will not support you as well, and your social security will not provide as much security.

Seventh. When Congress votes to issue more bonds and borrow more money, gambling on Wall Street grows more frenzied and the crash is that much nearer.

Eighth. When Congress keeps on spending after we have used up all our income, inflation burns higher and you have less confidence in Congress and the Government.

Ninth. When Congress keeps on spending, taxes must go up instead of down.

Tenth. When Congress spends and spends our allies lose faith and want to compromise with the enemy. Our enemies gain confidence and refuse to disarm.

Eleventh. When Congress spends for nondefense pressure groups, war is nearer. Khrushchev is just waiting until Congress spends us into bankruptcy.

Every time Congress votes to spend a dollar we do not have for things we can get along without, they are voting you and your family and your Nation into greater danger and shorter rations.

Here is what the Reader's Digest says about it:

THE OMINOUS DISTRUST OF THE DOLLAR

The flight from Government bonds is more ominous than most Washington officials care to admit publicly. Several recent Treasury financing operations have failed badly. As a result, the Treasury is being forced to run faster and faster merely to keep up with its maturities. The fact is that the richest nation in the world is now operating on a hand-to-mouth basis.

The effect of all this seems utterly lost on advocates of dynamic new spending programs to speed business expansion, eliminate unemployment.

The Treasury cannot spend more money than it gets through taxes and Government security issues. Yet professional and naive investors both now distrust the latter. This means recourse to financing through the banks, which increases the money supply and is directly inflationary.

The classic sources of savings upon which the Treasury must draw if it is to manage the public debt in orderly fashion are being diverted. Institutions and individuals alike are investing their funds elsewhere. This clearly reflects basic distrust of the Govern-

ment's fiscal responsibility. As Federal Reserve Chairman William McC. Martin puts it, "Investors cannot be induced to purchase fixed-income securities if they fear a steady erosion in the purchasing power of the dollar." Yet this is precisely what they do fear.

Official Treasury figures tell the story. During the past 6 years the assets of insurance companies, mutual savings banks, savings and loan associations and pension funds rose by about $100 billion—but not a penny of this additional money went into Government issues.

During this same period, private citizens had new savings on the order of $137 billion available for investment either through savings institutions or directly in securities and mortgages. None of this flow of capital went into Government obligations, on balance.

Refusal of the investing public to put new funds into Federal issues forces the Treasury to finance by devious means. For example, it sells tax anticipation notes to corporations at whatever price the market offers. This is, in effect, a method of collecting taxes before they are due. And it sells other short-term issues to banks, which treat them as cash, since they can be turned into dollars by rediscounting—thus creating more money.

Unless hopes for balancing the budget can be revived, the Treasury will have no alternative but to continue this course. That creates still further problems: (1) It will push up its interest cost even higher; (2) it will necessitate new offerings at more frequent intervals.

Restoration of faith in the dollar requires facing up to the Treasury's dilemma. But that is something Congress still seems unprepared to do. The testimony of Treasury officials has brought out clearly the need for fiscal sanity. But such pleas for a balanced budget mean comparatively little to a Congress which is being pressured from all sides to approve vital new Federal spending programs.

These pressures are direct, and every Member of Congress is subject to them. The sad truth is that they do not come solely, or even primarily, from labor-liberal groups. Conservatives are just as active in sponsoring spending programs when their own interests are involved.

Congress lacks any real machinery, moreover, with which to keep the budget under control. Its dual system of appropriating directly for some programs and authorizing agencies to borrow from the Treasury, with no time limit on either type of spending, skirts the whole problem. There is no close tie between the voting of expenditures and the voting of revenues to provide the necessary funds. This makes a hold-the-line policy difficult under any conditions.

Spot checks of congressional mail fail to reveal any strong national demand for a balanced budget. Many people are writing, but most also want local needs considered.

Federal debt-management problems not only arouse concern on the part of Treasury officials but also affect the taxpayer's pocketbook. Interest cost on the money the Government has hired now runs to $8.1 billion yearly. This is second only to defense in the fiscal 1960 budget of $77 billion, and represents almost a 30-percent increase within the past 5 years alone.

The continuing shift in Treasury debt to shorter and shorter issues is creating other worries. With buyers backing away from issues having a longer term than a year, refunding operations become larger and more frequent. Financing exclusively in the 1-year area means that within 4 years 75 percent of the total debt would have to be refunded each year.

The upward trend of interest rates has, moreover, still some way to go. Not only does the Treasury face further maturities this half-year which must be refunded; it will also have to raise some $6 billion to $7 billion of new money in the second half. If business recovery continues as expected, the Treasury will be competing with heavy business loan requirements.

Eisenhower's impossible position on spending versus economy is illustrated in his effort to boost rural electrical cooperative interest rates. He wants co-ops to pay the same rate (about 4 percent) that the Treasury must bear when it borrows in the open market—just enough to cover basic costs. Yet the President is stymied by the congressional farm bloc. Democratic leaders assured the cooperatives that the 2-percent rate will go untouched.

At the heart of the Treasury's problem is a simple fact, easily grasped by anyone. This is that governments, like individuals, cannot spend more than they take in, without being hurt. In the case of governments, continuing deficit spending debases the currency. This is the essence of today's distrust of the dollar.

It may be added, Mr. Speaker, that the next world war will be different in many respects from any previous world war in history. We will not be fighting for victory; we will be fighting for survival.

The decisive phase of the war will be fought in America. And if America loses it will be a war of extermination. The Russian firing squads will leave only the uneducated and the unskilled, and our form of government, our way of life, and our people as we know them today will cease to exist. It is a familiar program followed in every satellite government Russia has liberated.

With that in prospect, however remote, can we not for the present tighten our belts a little and deny ourselves some of the nondefense "knicknacks" the pressure groups are urging?

He Gave His Life for His Country

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. BASS of Tennessee. Mr. Speaker, the Daily Herald, of Columbia, Tenn., recently carried an excellent editorial in regard to the career and service of John Foster Dulles. I would like to call this outstanding article to my colleagues' attention; and, I am, therefore, under leave to extend my remarks, including it herewith.

The editorial, "He Gave His Life for His Country," follows:

HE GAVE HIS LIFE FOR HIS COUNTRY

"A life dedicated to the service of his country."

If ever these words have been appropriate about a man still living, whose tasks are ended, they are true of John Foster Dulles.

His work as Secretary of State has been roundly criticized by many. Seldom has his work been the subject of unbounded praise. For John Foster Dulles was not a man who sought praise, nor one who did the spectacular in order to achieve praise.

And there are honest differences of opinion as to whether he has guided this Nation along the best course during the past 6 years.

But there is no difference of opinion about his honesty, or his dedication to his country.

His patriotism, and his sincerity have never been questioned by ayone in their right mind.

Nor has his courage.

He worked quietly. He worked long hours. He worked sometimes alone. But always he worked not for John Foster Dulles, not for the Republican Party, but for this Nation. And for world peace.

Long before he was Secretary of State he was adviser to the Democratic heads of state on foreign affairs. And long after men of less dedicated service would have been enjoying a respite from difficult and unrewarding duties, he was on the job, working toward one goal and one alone—the best interests of his fellow men.

Now his task is ended. He is the victim of disease. He is no longer at the helm of the ship of state. Today the entire free world sorrows and suffers.

During his active career he met gibes and sneers, praise and cheers, and let none of these deter him from his chosen course.

In his illness and old age, he has the comfort of a life well spent, a life of dedicated service, a life which has been, and is, an inspiration to literally millions of free people. Of him it can be as truly said as of any man who ever wore the uniform of the United States: "He gave his life for his country."

Let's Not Be Silly

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks I submit an excellent editorial from one of the great newspapers of our Nation, the Buffalo Evening News. I concur in its views. The editorial follows:

A RIDICULOUS RULING

A recent ruling of the Federal Communications Commission in reference to political broadcasts requires amendment, clarification or, better still, outright repeal.

As the matter now stands, no matter how fair or honest a radio or television station may be, or tries to be, in respect to political broadcasts or news reports of political events, the February 19 ruling of the Commission practically makes it impossible to conform without opening the door to all sorts of weird and wild requests for equal time to reply.

The ruling appears to be a new concept of section 315 of the Communications Act. Whether this is valid, or straining to stretch a point, isn't clear. It is clear, however, that it will require prompt action either by Congress or the Commission itself if freedom is to be restored to the airways.

On the one hand the Commission urges radio stations to editorialize on the air, and on the other it puts into effect this new requirement which would suggest that any responsible broadcaster would be out of his mind if he did so.

The ruling is so far-fetched that President Eisenhower has taken the almost unprecedented action of asking the Attorney General of the United States to see what can be done about it whether the remedy lies in legislative action by Congress or otherwise.

Speaking for the President, and with his authority, White House Press Secretary James C. Hagerty said:

"The emphasis here is that it is ridiculous to have the law tell radio stations they have to give equal time in the coverage of news."

Dr. Frank Stanton, president of CBS, has pointed out in connection with the ruling that had the FCC ruling been in effect in 1956, that network would have been required to give equal time on regular newscasts to 24 presidential and vice presidential candidates of 12 parties, most of which wouldn't be recognized by the general public. The same requirement would have been imposed upon the News stations, which always have prided themselves in giving fair political coverage, or to any other station which carried these network programs. It imposes an impossible condition.

Chairman John C. Doerfer, of the FCC, speaking in Chicago this week, said that strict interpretation of section 315 would emasculate radio and television news coverage during campaign periods, and, he might well have added, at other times. He said if the section is not repealed or amended by Congress before the 1960 presidential campaign the public inevitably will be denied the opportunity to see and hear candidates. We don't know why he limited his remarks to 1960; a local election campaign is coming, and the ruling of the Commission could have the same effect on local campaign coverage here and elsewhere.

The courts, of course, might take a hand in the matter, but that would ential much delay, without certainty of relief. Wouldn't it, perhaps, be better for the FCC to take another look at the law, the many and long-standing previous rulings based upon it and determine whether this new and strained interpretation is in fact what Congress intended? If it had, we are inclined to think that fact would have been discovered long ere now.

The Immorality of Evading the U.S. Debt

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. WRIGHT. Mr. Speaker, the Secretary of the Treasury, Robert B. Anderson, in addressing the annual meeting of the Associated Press in New York last week, made a telling point as to the imperative desirability of our making payments to retire the national debt.

What the Secretary of the Treasury said on that occasion is so much in harmony with what some of us in the House have been advocating, that I feel his remarks should have special attention.

I am taking the liberty of including herewith for printing in the Appendix of the RECORD an excellent editorial which apeared in the Fort Worth Star-Telegram on Thursday, April 23, concerning this speech by Secretary Anderson:

THE IMMORALITY OF EVADING THE U.S. DEBT

Failure to make payment on the national debt in prosperous times was branded by Secretary of the Treasury Anderson, in his speech to the annual meeting of the Associated Press in New York, as immoral.

Neglect in meeting our obligations incurred by the Federal Government in war and peace is sheer evasion of responsibility since every dollar borrowed carries a pledge of repayment with interest, but, instead, further borrowings are pyramided on the colossal debt. This improvident expediency, increasing each day the obligation for posterity, amounts to national capital depletion which results from inflation.

The necessity for constant refinancing portions of the Federal debt does not signify official condonation of moral irresponsibility toward that record obligation, but is only an enforced course consequent to continued default in debt reduction. No manner of fiscal rationalization or economic sophistry can hide the unethical nature of debt evasion.

What, indeed, can happen to a nation of free people which runs from its financial responsibilities in that way? The long chain of cause and effect should not conceal the true nature of this evasion. Deficit financing year upon year is due to the pressure groups which force unwise spending on a pliant government, to officials and legislators who play politics by being subservient to such influences, and to both government and the people who fail to provide enough margin between income and outgo to permit payment on the debt in prosperous years.

The debt is a colossal monument to our cowardly evasion that is nothing less than dishonesty, as Mr. Anderson declared. Deficit financing and its effect of inflation amount to robbery of millions with fixed incomes, including those small investors in Government bonds. To fail to see that our debt policy is undermining the strength and fiber of our Government and our freedoms is only the blindness that destroys. This moral decay from within is all that Communist Russia could hope for. It is toward fulfillment of the Communist belief that our own excesscs will spell our doom.

Due Credit to "American Forum of the Air" and "Youth Wants To Know"

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. CELLER. Mr. Speaker, the "American Forum of the Air," America's oldest discussion program, and "Youth Wants To Know" are time honored programs. The radio and television industry has presented these programs to the American public for many years. It has long been recognized that there is a need for programs of this nature. Unfortunately, they have been the victims of poor scheduling, that is to say, they have been presented usually early Sunday afternoon, along with other educational and informative programs.

This year, the Westinghouse Broadcasting Co., in cooperation with my friend, Theodore Granik, has pioneered in making these two fine programs available to the American public during regularly scheduled evening hours on weekday nights, when the largest potential viewing and listening audience is available. This move is to be highly commended. This innovation provides the opportunity to present the important issues by leading authorities in their fields. Never before has such a large potential audience been made available by the network for this type of programming.

Both the "American Forum of the Air" and "Youth Wants To Know" are telecast once each month. The programs are recorded by video tape facilities and are distributed by the Westinghouse Broadcasting Co. to television stations throughout the Nation. Many of my distinguished colleagues in the House have had the opportunity of appearing on either one or both of these fine programs and it is most gratifying to know that they will have the opportunity to continue to bring to the attention of the American people the crucial issues facing Congress.

Several of the Members of the U.S. Senate have already appeared in this new series. Senator WAYNE MORSE and Senator BARRY GOLDWATER opened the new series, discussing the need for labor legislation and recently Senator JAVITS and Senator TALMADGE discussed the controversial civil rights proposals pending before the U.S. Senate. On "Youth Wants To Know" the guest was Senator HUMPHREY, who was questioned by high school students regarding his recent trip to the Soviet Union.

Great tribute should be paid to Mr. Donald McGannon, president of the Westinghouse Broadcasting Co., and Theodore Granik, founder and producer of the "American Forum of the Air" and "Youth Wants To Know" for pioneering this new concept in programing. This opportunity for leaders in the field of government, education, science, business, labor and others to debate openly the issues affecting all the citizens of this great Nation, attests to the public service performed by the radio and television industry. The continued success of the "American Forum of the Air" and "Youth Wants To Know," the first to be presented during prime evening time, demonstrates that at last the broadcasting industry has recognized the need for informative educational programing in the most advantageous time periods.

I would like to add a personal note here. Theodore Granik, who produces both of these shows with the Westinghouse Broadcasting Co., is, I repeat, an old dear friend of mine. I was the first guest on the "American Forum" 31 years ago, the progenitor of this program and "Youth Wants To Know." On many a night Ted and I struggled to bring these programs into being and my colleagues in the House and Senate have joined me in recognizing the proud record created by both these programs. From my vantage point of 37 years in Congress, I say to Ted and the Westinghouse Broadcasting Co. well done.

Governors of 10 Midwestern States Urge New Starts for Flood Control

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. GEORGE. Mr. Speaker, each of the 10 Governors of the States compris-

ing the Missouri River States Committee joined in adopting a resolution on April 15, 1959, which emphasizes the great injury to the development of our natural resources and the deteriorative effect upon the economic strength of this country should the Congress accept the shortsighted no-new-starts policy of the administration in connection with flood control, reclamation and water conservation projects.

In 1951, Mr. Speaker, a tragic flood occurred which caused over a billion-dollar loss in the Greater Kansas City area alone. Many cities in Kansas and Missouri also suffered huge losses. This flood, which brought suffering and despair to so many of our citizens, could be repeated at any time. The total cost to complete the entire flood control program in this region would not nearly match the overall loss in revenue to the United States government if such a disastrous flood should again wreak havoc and destruction upon the people, their homes and their businesses.

Mr. Speaker, the Congress is here given another opportunity to correct a grievous error on the part of the administration and to add momentum to the effort to relieve many of our citizens from the fear, the terror, and the horror of another catastrophic flood and the constant threat of such a disaster.

Mr. Speaker, under unanimous consent, I include the resolution adopted by the 10 distinguished Governors in the extension of my remarks:

RESOLUTION ADOPTED APRIL 15, 1959, BY MISSOURI RIVER STATES COMMITTEE AT COUNCIL BLUFFS, IOWA

We, the Missouri River States Committee, consisting of the Governors of the States of Iowa, Colorado, Kansas, Montana, North Dakota, South Dakota, Minnesota, Missouri, Nebraska, and Wyoming, comprising one-sixth of the area of the United States of America, in meeting assembled, do hereby adopt the following resolution:

"Whereas the Missouri River States Committee, created in December of 1941, was organized for the express purpose of securing flood control, irrigation, navigation, power development, and related improvements of the entire Missouri River Basin; and

"Whereas through the efforts of the Missouri River States Committee and other groups, the Missouri Basin Project was authorized by Congress in the year 1944; and

"Whereas during the 15 years since that time substantial progress has been made in meeting the objectives of flood control, navigation, water supply, and power development and, to a lesser degree, irrigation and other improvements; and

"Whereas the orderly development of natural and human resources of the Missouri River Basin is impeded and severely handicapped by the no new starts policy; and

"Whereas said no new starts policy impairs the economic strength of the entire country by preventing the development of natural resources in the basin as an investment in the future welfare and security of the United States as a whole; and

"Whereas the construction of planned projects would strengthen the economic base of this region and of our whole country at a time when full development and use of our national resources are urgently needed in the struggle between the free world and the areas of the earth dominated by communists: Now, therefore, be it

"*Resolved*, That this committee urge the Congress of the United States to implement its authorizations of reclamation and flood control and other projects by appropriating the necessary money for the initiation of said projects; and be it further

"*Resolved*, That this resolution be forwarded by the chairman of the Missouri River States Committee to the Honorable CLARENCE CANNON, chairman of the Appropriations Committee of the House of Representatives of the United States, and the Honorable CARL HAYDEN, chairman of Appropriations Committee of the Senate of the United States."

Guiding Impressions of the Middle East

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. HAYS. Mr. Speaker, there are a number of political analysts in this country who presently warn us that the next major crisis will again be in the Middle East. In fact, according to these observers, while the world's attention is focused on Berlin, feverish preparations are being made by Moscow for another eruption in the Middle East. These analysts are of the opinion that even the firmest position taken by the West on the Berlin issue would not lead to war. On the basis of their knowledge of the captive countries in Eastern Europe and Central Asia, they are convinced that Moscow couldn't possibly afford a hot war now or in the foreseeable future unless it is bent upon Russian national suicide, and this is most unlikely.

One such observer is Dr. Lev E. Dobriansky, professor in Soviet economics at Georgetown University and also national chairman of the Ukrainian Congress Committee of America. Aware of the possibility of historical accidents, Dr. Dobriansky nevertheless strongly believes that in the present situation Moscow will behave according to traditional Russian imperialist pattern. In line with Lenin's dictum and that of his Czarist predecessors, it will take one step backward on Berlin if for no other reason than to have its current preparations and involvements in the Middle East fructify in the next stage of the incessant cold war. Operating on the peripheries of its empire and true to its centuries-old borderland policy, Moscow has nothing to lose by precipitating these successive crises and it has everything to gain. It has much to gain not only by achieving fresh inroads in the areas of the free world but also by continually deflecting our attention from the crucial captive nations to the separate issues created or aggravated by it in these different areas of Russian colonial opportunity. So long as we have no active and imaginative policy toward the captive nations—and this means not only the "external satellites" in Central Europe but also the "internal satellites" within the U.S.S.R.—we insure Moscow's power to initiate such crises at will.

The logic of Dr. Dobriansky's position is developed in some degree in an interesting article which appeared in a recent issue of the Ukrainian Quarterly. The article itself is based on a trip taken through the Middle East. The manner in which it relates the problems of this area to the primary problem of the captive nations can be applied to Berlin or the Far East. As a contribution to a more integral understanding of these problems, I ask that this article on "Guiding Impressions of the Middle East" be printed in the RECORD:

GUIDING IMPRESSIONS OF THE MIDDLE EAST

(By Lev E. Dobriansky)

A few months ago this writer had the honor and real privilege of joining an official group on a visit to the Middle East. In every sense of the word the trip was incomparable. The people we met, the discussions we engaged in, and the many vital things we observed, all contributed to the richness and the depth of our experience. The trip could not literally be purchased by a private citizen for even a million dollars. Covering over 23,000 miles by air, land, and water, it included not only several of the Middle Eastern States but also a number of countries which are, strictly speaking, not in the Middle East area. However, the interests of these bordering countries are perhaps more immediately related to turns and changes of development in the Middle East than those of our own country.

The fact that one was fortunate to make a trip of this sort does not, of course, qualify him as an expert on the subject. Ineed, the writer is far from being a specialist on the Middle East. Yet, judging by the insular views and even unbalanced perspectives of some of our acknowledged Middle East experts, particularly where they concern U.S. foreign policy, it seems quite advantageous not to become too engrossed in the details of data flowing out of the Middle East. This does not mean that thinking Americans should not be interested in a variety of ways with the problems and tasks of the peoples of the Middle East in like manner that we are with those of peoples and nations elsewhere. On the contrary, in behalf of our own interests we have definite objectives in the Middle East and the fulfilment of them requires the support of the nations involved. But the observation does mean that we should constantly maintain a clear perspective of the Middle East and its hosts of problems and difficulties in terms of the global struggle between national freedom and Russian Communist imperialism and colonialism. This primary perspective, based on a rational scale of priority of problems, is frequently lost in the writings of those experts who in their rapturous attachments picture the solutions of Middle East problems as ends in themselves.

As one would expect, each of us on the trip approached the area with an individual set of preconceptions. Actually, to have done otherwise would have meant entering it blindly. These necessary preconceptions were developed in the course of a year's intensive study aided by some of the best minds on the subject. In a thoroughly scientific manner we entered the area with general views that served a number of purposes. One, they enabled us to seek out essentials with minimum of time and effort. In contrast to many American visitors to the Soviet Union, for example, we knew beforehand what to look for. Second, they facilitated a process of question-raising which quickly focussed the issues of any problem. And thirdly, these preconceived views were in essence hypotheses which demanded empirical proofs by direct observation.

In my case the most important preconceptions were as follows: (1) from the viewpoint of U.S. national interest, the Middle East is and will continue to be a secondary area on the field of the current global conflict; (2) the Middle East is nevertheless a crucial and significant area, even more so than the Far East, from which to wage a successful offensive against the imperialist Russian threat to all independent nations; (3) the United States can and should assist in the solution of certain problems in the Middle East, but it would be futile and naive to hope for a moderately longrun solution of every major problem in the area; and (4) the paramount goal of U.S. policy in the area is to prevent at whatever cost the entrenchment of colonial Russian power in any part of it. It was with these preconceived views that the writer embarked upon an empirical study of close observation at a time immediately prior to the Lebanese crisis and the subsequent Iraqi revolution.

TUNISIA AND NORTH AFRICA

Our first important stop was Tunisia. The country, with its 48,000 square miles, is much like Louisiana in size. Its population of approximately 4 million people consists of over 3 million Moslemic Tunisians, about 180,000 French, and the rest made up predominantly of Italians, Algerians, and Jews. This newly independent country is chiefly agricultural in character, the main crops being wheat, barley, olives, and grapes. It possesses a number of major mining industries in iron, lead, zinc, and natural gas, but its greater potentialities in these and related enterprises await further economic development. To realize such development in more rapid course, Tunisia unquestionably requires foreign aid, the largest contribution to which can come only from the United States.

There are many general and specific factors that enter into the consideration of granting aid to foreign governments for economic development. One paramount factor is that the absorptive powers of an economy must be carefully considered if sound and balanced development is to be sustained. In Tunisia, as almost everywhere else in North Africa, the Middle East, and South Asia, illiteracy is high, poverty is widespread, and capital in the form of national experience and skilled resources is in short supply. In varying degree this is the characteristic pattern one encounters throughout these areas. The pattern sets limits to the amounts of capital that can be prudently injected into most of these economies. In fact, for all these areas the prime element of capital is time—time for training, time for education, time for cumulating experience.

Those politicians and columnists who clamor for the United States to adopt as its prime objective a broad economic and social development program in these areas, are not only unthinking and unrealistic politically but also economically. Such an international New Deal program would lead to inevitable wastes and would hardly contribute to stave off the encroachments of Russian colonialism. As a matter of pointed fact, if the history of 40 years of Russian Communist aggression demonstrates anything, it is the truth that healthy and growing economies are in themselves insufficient deterrents against Russian colonial expansion. Historical accidents, political strategy and tactics, and the threat of unleashed military power weigh far more heavily. This observation applies to these areas just as much as it did to Eastern Europe, the Caucasus, and Central Asia. Looked at more critically, there is a certain unrealistic amount of economic determinism in the position taken by those politicians and columnists who argue that economic and social betterment is a sure guarantee against the inroads of Russian imperialist expansionism. They fail to ask themselves the question that if this were so, then why does Moscow offer its material contributions to many of these countries which, in some instances, have for centuries been prime goals of Russian conquest? The answer to this should be obvious.

To avoid the economic and also political wastes of any international New Deal program, sound foreign aid measures should carefully examine each national economy on its own merits, and in every case a priority of evaluation should be given to political considerations. In the case of Tunisia the situation is really not as involved as some picture it to be. Led by its dynamic and colorful President Habib Bourguiba, the Republic of Tunisia is undoubtedly a focal point in North Africa. With proportioned aid for its internal development, Tunisia can play a leading role in the solution of the Algerian problem and in the practical realization of a North African federation of Arab states. Even recent rifts between the Bourguiba government and both the Algerian F.L.N. and Morocco would not seriously hamper this.

These broad directions for U.S. foreign policy in the area would satisfy many ends. Contrary to some opinion, such developments would actually contribute to the gainful interests of our French ally in view of the organic economic ties that would persist between such a federation and France. They would also meet the natural urges of Arab nationalism and present another form or stage in the evolution of Arab unity. Moreover, they would create a tremendous impact on the rest of the Arab world and would virtually eliminate some of the existing vulnerabilities in North Africa to indirect Russian penetration. The resulting dynamic stability would provide untold advantages in oil, defensive military posture, and psycho-political strength against the common enemy. It should not be difficult to discern what the alternative to such policy directions, and all its negative consequences, would be.

Before proceeding on to Iraq and other states in the Middle East, a point of considerable value deserves emphasis here. Conversations with Tunisians and other Moslems disclosed a keen awareness of the oppressions to which their brother Moslems in the Soviet Union are being subjected. These expressions of knowledge and sympathetic affinity were, however, of an individual and isolated tenor rather than an organized one. Moreover, they were on a religious plane rather than on the more important level of mutual nationalism. Despite these shortcomings, the Tunisians displayed a greater familiarity with this vital subject in the Soviet Union than our own people assigned to Tunis. There is virtually no effort exerted by the U.S. Information Service to inform Moslems in North Africa about Russian colonial domination over Moslemic Turkestanians and others in the U.S.S.R. This is a serious defect, largely born of ignorance, which one meets with throughout these Moslem areas. Yet concentrated effort on such information, disseminated with meaningful conceptual forms, is one of our most powerful weapons against Russian duplicity and infiltration.

IRAQ AND THE MIDDLE EAST

The Middle East is undoubtedly a maze of problems, conflicts, and entanglements. It is worthwhile for us Americans to continually bear in mind that this maze has roots dating back decades and even centuries. Most of the issues in the area well antedate the current global struggle in which we are engaged. To plunge deeply into this mire of problems and unavoidably lose progressive sight of our primary objective in the region would spell disaster. For an anti-imperialist nation with responsibilities of free world leadership thrown upon it a certain transcendence of thought and attitude is necessary to avert deep sectional involvements and vacillating positions in this environment of flux and change. This is not an easy task, to be sure, but it is the only peaceable course by which the major forces now at work in the region can be channeled in favor of our primary objective.

We landed in Iraq many weeks before the startling revolt. From there it was Saudi Arabia and, later on, Israel. At these three vantage points we felt the pulse of movements emanating from other quarters in the area. Each of these points tells a story in itself to correct some of the unsafe notions harbored by experts with biases in one direction or another. To be pro-Arab or pro-Israel, prolegitimacy or prorepublican, or promilitary defense or proeconomic development—and we met spokesmen for each grouping with, of course, some cross-sectional ties—usually distorts the picture in some degree of emotional heat. Keeping in mind the chief threat to the area, i.e., the Russian bear to the north, one can view the forces represented by each of these groupings with some objective detactment and prepare tactically for their canalization toward our primary goal. It must be remembered that regardless of rifts between governments and the mistakes that we have made in the past, we still have countless Arab and Israeli friends in all strata of their societies. Difficulties and even dilemmas will constantly haunt us, of course, but if we steadfastly maintain our valid objectives with principle and firm determination and within these broad limits adapt ourselves flexibly to swift changes which should be anticipated in the form of real possibilities, there is no reason why our paramount objective could not be successfully realized.

No; in Iraq, at the time, there wasn't the faintest concrete indication that a revolt was brewing. The country, with its 6.5 million population in an area 168,039 square miles, like that of California, was bubbling with intense economic activity. According to the premises of our economic determinists, this condition should have conduced to maximum political stability. Much was done economically and socially for general development. Substantial oil revenues were invested in irrigation projects, redistributed land, hospitals, education, and the like. The financial condition of the country was excellent and the 60 percent of the population in agriculture was prospering in staples of barley, wheat, rice, and cotton. A political overturn nevertheless did take place. The The nationalist urge for Arab unity did successfully express itself.

Saudi Arabia, the birthplace of Islam, is another example of wealth, social and economic development, and attempted reform. This hereditary monarchy under King Saud ibn Abdul Aziz has a population of 7 million in an area of 618,000 square miles which contains tremendous oil reserves. It is a country of sharp contrasts between the ancient and the modern. Significant development projects have been undertaken; but, as elsewhere, illiteracy is rife. The most modern schools and hospitals have been built, but there is a marked dearth of trained personnel to run them. Politically, the situation is a shaky one, and even with an expected shift to a constitutional monarchy the forces of Arab unity will continue to make deep inroads among the Saudis.

For our purposes these two examples stand well above Egypt, Lebanon, Jordan, Syria, or any other section in the Arab States area of 1,675,234 square miles to demonstrate the foolhardiness of subordinating political objectives to the economic. The driving force for Arab unity among the approximately 48 million Arabs in the Middle East should have been long ago properly weighed and appreciated. It is truly a cause for wonderment

that following the Lebanese call for American intervention several U.S. Senators finally realized that nationalism is a basic force in the Middle East and urged that we support it. Those, including this writer, who have for years advocated this, continue to emphasize that our support of the forces of nationalism be founded on a single standard of morality. Such a view serves multiple purposes, especially in the general area of the Middle East. By clearly supporting both Arab and Israeli nationalism and working toward their harmonious coexistence we would undoubtedly weaken the false Russian appeal which thrives only on division. Concurrent with this, our plain and astute support of the forces of nationalism within the Soviet Union itself—particularly the Moslemic Turkestani, Azerbaijani, and others in reference to this area of free Islam—would completely nullify Russian colonial objectives. This operational view demands that we perceive things in their interrelated totality, but this writer scarcely witnessed such an orientation among our own people in these regions.

In setting these guidelines it should be realized that what is called Nasserism is not conceptually identical with Arab nationalism. It is one of its expressions and Nasser himself is one of its leading symbols. Many Americans share the thought that we have made several grave mistakes in relation to Nasser. These mistakes have forced him to look elsewhere for aid. However, the situation is not beyond repair. The appeal and popularity of Nasser is far and wide. The dynamism represented by this symbol will bring further changes in the Middle East. But these changes will certainly not take place along linear routes. Even Nasser is subject to the desires and opinions of his own Egyptians, not to mention other Arab pressures in Iraq, Lebanon, and Saudi Arabia. Necessarily playing it by ear but always cognizant of our own primary objective, we must be prepared to accommodate ourselves to the inevitable changes toward more integrated Arab unity, one that will be achieved in stages and very likely in different forms. What is of essence is the increasing friendship of the Arab world, including the present United Arab Republic, and the consequent reduction of any possibility of a Russian colony emerging in this region.

A harmonious coexistence between Arab nationalism and Israeli nationalism is by no means an impractical goal. Indeed, it is a necessity. Israel is here to stay, and intelligent Arab spokesmen privately admit it. With proper gestures and mutual accord it won't be long before public Arab acceptance of this fact will be noticed. Of the size of New Jersey and populated by over 2 million people, including some 180,000 Arabs, Israel is one of the most progressive and prosperous countries in the Middle East. Its economy is fairly well balanced and its leadership is highly enlightened. The spirit of its people is vibrant and confident. There can be no doubt that if the independence of Israel were seriously threatened, the people would fight to the last soul. Actually, it would take years for any such Arab threat to materialize, and during this time a peaceful development would serve to obviate the possibility of an outbreak of hostilities. Again with an eye on our primary objective, it is definitely in our interest and in the mutual interest of Arab and Israeli alike that such a development be furthered. The Arab world would gain immensely from a respected, prosperous, and cultured Israel. Israel would gain reciprocally from the cultural and material advancements now in being throughout the Arab world. The party that would be sure to lose is imperialist Moscow.

THE NORTHERN TIER AND INDIA

One of the most significant features of Israeli thinking is its full understanding of the nature of the global struggle. The writer was impressed by ideas along these lines in Iraq, too. He would go so far as to suggest that many American officials and wandering students might learn a great deal about the subject in certain sectors of this part of the world. The brute menace of Russian imperialism and colonialism is clearly understood for what it is. The facade of "international communism" is realistically discounted and the centuries-old Russian problem is freely and frankly discussed. None of the misleading vagaries about Marxism, "the Soviet peoples," "Soviet communism" and the like is permitted to becloud their perception of the real problem and threat.

As one travels in the Muslim countries of the vital "northern tier"—Pakistan, Iran, and Turkey—the realism of both official and private leaders, concerning the Russian problem, is refreshing and encouraging. It is ultimately this firm knowledge about the problem and what to expect from the Russian imperialists that provides us with sturdy and loyal allies in these countries. To frustrate the traditional borderlands policy of Russia, which for centuries has used it as a weapon of conquest and empire building, the independence and internal strength of these nations are indispensable to the United States in realizing its primary objective. In terms of our interest there is a vast difference between some Arab State joining a larger Arab unity and one of these METO partners leaving the pact or being undermined by Russian subversion. Of course, the former must be watched because of outflanking possibilities. The latter must be prevented at all costs because it would unquestionably open a dike for the Russian inundation. The basic distinction between the two cases is that a solidification of nationalism is involved in one and an endangerment to nationalism emerges in the other.

Each of these Muslim countries has its set of problems. The Kashmir issue, the problem of the five rivers, border disputes, and internal economic difficulties beset Pakistan. The illiteracy rate is high in this Muslim democracy, split between West Pakistan and its 33.8 million and East Pakistan with its 42 million. However, notable economic progress has been achieved, although much remains to be done. The United States is assisting this valuable ally in a proper way and the interests of the two are mutually served. The Pakistani are sturdy fighters. Some of the specimens seen up north and in the Khyber Pass are models for any nation. A close affinity exists between the Pakistani and the enslaved Turkestani just up north in the Soviet Union. With additional resources the Pakistani would have no fear in seeking the liberation of their brothers in the Russian prison of nations. As one high level official told this writer, "You don't have to impress us with this goal. You should sell this to your own government." The bold fact here, as elsewhere, is that sheer ignorance blinds us to the opportunity of reversing for freedom the old Russian borderlands policy.

In the basically agricultural countries of Turkey and Iran similar economic and political problems exist. Cyprus, internal development, the Syrian neighbor, and the existence of Kurd and other minorities present Turkey with actual or potential difficulties. Economic problems characteristic of the area contribute to a political instability in Iran which the Russian influence in the country does not hesitate to promote. The solution of some of these problems naturally requires our proportionate assistance; and both countries are receiving it. However, our guidelines of interest in the area would require more than just ancillary help if, for example, the present regime in Iraq or Moscow itself should show signs of stirring up the Kurds for the creation of a satellite Kurdish state, extending from portions of Iraq through northwestern Iran and eastern Turkey into the Soviet Union. There are about 10 million Kurds, mostly Sunnite Mohammedans, whom Moscow sought to arouse as late as 1945. Approximately 1 million are in Iraq alone. A venture of this sort would unmistakably be indirect aggression deserving of our firmest direct action. The possibility of such a venture is real and would be in tune with traditional Russian policy. It can be best offset by a policy of freedom directed at the submerged nations to the north of the "northern tier." The writer feels quite certain that, as in the case of Pakistan, both Turkey and elements in Iran are prepared to launch in coordinated action a policy of this nature.

The visits to India and later to Greece and Portugal were somewhat marginal concerning the problems of the Middle East. It was, of course, instructive to learn from high sources the problems peculiar to their nations and their views in relation to the Soviet Union and the rumblings in the Middle East. In India it appears that Russian agents are doing a far more effective disinformational job than our own USIA is doing an informational one. The impressions certain Indian leaders have of the Soviet Union are hardly worthy of a nation which successfully overcame a foreign colonialism. India is doubtlessly an important and integral part of the free world, but in addition to wheat, credits, and other forms of aid, it is in dire need of a comprehension of Russian colonialism and imperialism within the U.S.S.R. itself. In Greece and Portugal the writer sensed a deep interest in this fundamental subject. As elsewhere, the two countries have their respective interests and difficulties. However, as to the primary importance of the Russian menace, there is no question of their dedication to its eventual defeat.

The preconceptions stated earlier were more than confirmed by the direct observations of this unique trip. The writer is more than ever convinced as to their validity. He is more impressed than ever by the necessity for American officialdom to assume an integral view of these situations and developments and to take advantage of the great opportunities afforded by both Africa and Asia. On a scale of priority, the most essential areas of concern and policy for the United States and Eastern Europe and Central Asia. These are the basic sources of insecurity and danger to imperialist Russia. We must never allow ourselves to guarantee these two areas to Moscow so that it would be free to concentrate its weight in any of the essentially secondary areas. On the contrary, girded to the support of nationalism, our policy should be aimed at a combined effort of nationalist forces within and immediately outside the Russian Communist Empire to overwhelm through peaceable means, as concerns any global war, the tentacles of colonial Russian domination. In pursuing such a policy we and our allies need have little fear of the forces of the Soviet Union. With half of them being non-Russian, these forces have always been feared for their unreliability in the act of war by Russia itself. To view these situations clearly and to see them as a whole are our prime requisities.

National Parks Facilities

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. METCALF. Mr. Speaker, a recent news release by the gentleman from Washington [Mr. MAGNUSON] follows:

NEWS RELEASE BY CONGRESSMAN DON MAGNUSON, SEVENTH DISTRICT, WASHINGTON

WASHINGTON, April 8.—Recent hearings held by the House Interior Appropriations Subcommittee brought out the alarming fact that we are falling behind on our Mission 66 plan for developing our national parks while use of these facilities continues to increase by leaps and bounds.

The Mission 66 program, initiated in 1956, was designed to develop adequate facilities for an estimated 65 million people who are expected to visit our national parks in 1966.

As a member of the subcommittee which approved the initial money to get this program underway, I am concerned over the way the administration has permitted Mission 66 to fall so far behind schedule.

Part of this slowdown must be blamed on inflation. When Mission 66 first was approved in 1955 it was estimated that the 10-year program would cost $459 million. Since then, rises in construction costs have increased this by $61 million. Additional projects have upped the anticipated cost another $125 million.

The National Park Service, adhering faithfully to the administration's balanced-budget-at-all-costs policy, has asked for only $47 million for fiscal 1960 while we originally planned to spend nearly twice that amount.

Conrad L. Wirth, Director of the National Park Service, shed little light on how the Service expects to get back on schedule. He admitted that the program was lagging badly and suggested that $80 million a year should be spent during the next 2 or 3 years to get back on schedule. But he did not ask for that amount or say where he expected it to come from.

These neglected resources mean a great deal to a large segment of our population. Last year 59 million people visited national parks and an additional 68 million went to national forests for their recreation.

With park development falling behind our burgeoning population, we face the grim prospect of having to reserve cabins that we used to be able to drive to on the spur of the moment; pulling into crowded, smoky camp sites that used to be quiet and out of the way; fishing in streams with more fishermen than fish and even being turned away from full campsites.

In this morning's mail was the following press release on the same subject from the National Park Service:

FIRST-QUARTER TRAVEL TO NATIONAL PARK: BREAKS ALL RECORDS

The number of visitors to national parks and other areas in the National Park System for the first 3 months of 1959 has set a new record for first-quarter travel, Director Conrad L. Wirth of the National Park Service, Department of the Interior, announced today.

Total for the first 3 months of 1959 was 7,119,000, Wirth announced. This represents an increase of 24.5 percent over the total of 5,717,300 for the same period in 1958. The previous high for the period was 6,345,000, set in 1957.

Travel in March of 1959 totaled 3,152,200, a gain of 36.9 percent over the 2,302,000 visits recorded in March 1958.

Among nearby areas, the Blue Ridge Parkway recorded a 39 percent increase in visitors in the 3-month period. Other increases in individual park areas ranged as high as 204 percent. The National Historical Areas of the System were highest among category increases with a gain of 48 percent, followed by the 29 national parks with an increase of 42 percent.

"These heavy increases in visitation," Wirth said, "clearly justify the Mission 66 program to provide adequate facilities and services for the many millions of Americans who visit and use the approximately 180 areas administered by the National Park Service.

"Our original mission 66 planning took into consideration a probable total of 80 million visitors a year by 1966, the year the mission 66 program is scheduled for completion. These travel figures for the first quarter of 1959 cause no dampening of our previous estimates that the total by 1966 may be well above 80 million."

Mr. Speaker, I note that Mr. Wirth says mission 66 "is scheduled" for completion in 1966. But, as the gentleman from Washington points out, Mr. Wirth admitted that the program is way off schedule and does not know how it is going to get back on.

Editor Mel Ruder of the weekly Hungry Horse News, published at Columbia Falls, Mont., near Glacier National Park, has suggested that the program be renamed mission 76. That apparently is the only way this program is going to get back on schedule.

British Policy Starts U.S. Diplomats Wondering

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

BRITISH POLICY STARTS U.S. DIPLOMATS WONDERING

(By Edgar Ansel Mowrer)

The Berlin crisis, the advance of communism into the Middle East, the Arab countries' gang-up against foreign oil companies—all these would seem to indicate a crying need for Western solidarity. With a single resolute policy in Berlin, on disarmament, on the cessation of nuclear tests and with a common attitude toward Nasser, of Egypt, and Kassem, of Iraq, the harrassed Western countries would be a rock. Divided they give an impression of weakness and vulnerability even when they are basically strong and in good position.

Yet instead of seeking such a united policy through appropriate organs to which the power of decision has been delegated, they publicly argue and bicker among themselves, with the press of various countries sniping at allies as though they were enemies.

No NATO country is free from this. American organs have never shown any particular regard for the sensibilities of even our closest allies. The French press has somewhat overemphatically supported the French Government's claim to become one of a three-power NATO directory. The British are the latest offenders.

Why, Washington officials are asking, have the indomitable British suddenly begun to insist on a soft line towards the U.S.S.R.? Why has the British Government gone flexible in and out of season and the British press gone sour on allied peoples that will not tamely submit to Britain's latest whim? These officials make allowance for the British Tories' need to compete with pacifist labor in an effort to win the coming election. They realize how fresh are Britain's scars incurred in the last war—and how eager the British masses are to disarm and spend the money that now goes into armament on living. But they suspect that this is not the whole story.

Hardly anyone in Washington, Paris or Bonn shares Prime Minister Macmillan's apparent belief that the U.S.S.R. will make war for Berlin or his desire to accept Russia's conditions about the height at which allied planes may fly to Berlin. Anyhow, these Americans insist, the danger, if any, is no greater for Britain than for West Germany, France or Italy, none of which shares Britain's apprehension.

What then is ailing the British? For a possible answer, allied diplomats go back into Britain's history and come up with some disquieting examples.

For instance: Britain's chief policy has been to keep the continent of Europe divided. But recently, six continental countries have set up a Common Market (customs union) which promises to develop into a single state. British spokesmen, after some hesitancy, insist that Britain does not want to break up this market but merely to enjoy its benefits without joining. Since the French particularly have refused to extend what one could call a guest membership, is the British Foreign Office trying to enlist American support and use Soviet pressure against the Common Market countries? If so, what about NATO?

Drew Middleton recently wired the New York Times that the British do not really feel themselves allies of the continental countries: the United States is the only country they recognize as an ally. Where does this leave NATO? Is there a British belief that by accepting certain Russian desires Britain may pressure the Common Market countries?

One of these Russian desires is European disengagement, which would imply West Germany's withdrawal from NATO. Another is to prevent West Germany from obtaining nuclear weapons. Do the British wish to get West Germany out of NATO? Do they really believe that Germany will for long accept essential disarmament so long as the U.S.S.R., the United States and even Britain possess nuclear monsters?

In the past, after each major war Britain has turned against its allies and built up its former enemy. That is how World War II came about. Now, embittered by its failing influence and the obduracy of the Common Market countries, is Britain ready to sacrifice German unity and equality to its own fear of another war?

British statesmen say no and they are honorable men. But American diplomats can sometimes see no other motive for Macmillan's apparent desire for an understanding with the Soviets even at the cost of Germany and NATO and the Common Market. So they wonder.

One Hundredth Anniversary of Birth of Paul Dresser

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. WAMPLER. Mr. Speaker, last week, on April 22, 1959, the State of Indiana, and particularly the city of Terre Haute, marked the 100th anniversary of the birth of Paul Dresser, the author of the State Song of Indiana, "On the Banks of the Wabash, Far Away."

In memory of and as a salute to that gentleman whose prodigious musical talent brought, and still brings, melodious pleasure to hundreds of thousands, I should like to set forth an article titled, "Mark 100th Birth Anniversary of Paul Dresser," which appeared in the April 22, 1959, issue of the Terre Haute (Ind.) Tribune.

Paul Dresser was born April 22, 1859, at 318 South Second Street, here in Terre Haute. His parents were Paul Dreiser and Sarah Marie Schanestp (the mother's maiden name was very blurred in the church record). Paul was baptized May 24 at St. Joseph Church and his godparents were Dr. James Bell and Mrs. Margaret Breen.

Terre Haute's first city directory of 1858 lists the father as living on South First Street, between Walnut and Poplar Streets. In 1863 the family was living at 56 North Second Street. In 1872 they lived at the southwest corner of 12th and Walnut Streets. Three years later their address was 203 South 12th Street.

By 1879, Paul, Jr., was listed as a laborer at 209 South 12th Street; then as a musician boarding at the National House and at 533 North 7th Street. In 1880, 1881, and 1883 he was residing at 205 North 13th Street, and his occupation was listed as lightning rod agent. Another source says he left Terre Haute with the Lightning Liniment Co. as an entertainer in their medicine show. What are we to believe all these years later?

Paul Dresser worked at many jobs in his younger days. He sold newspapers in the old post office and worked in a bakery on North Fourth Street.

Research concerning his birthplace became very complicated. The abstract for the property at 318 South Second Street shows the initial payment for the "North one-half of lot 155 in original town" was made by George F. Ellis, proprietor of the Riverside Woolen Mill where Paul's father was employed. The mother sewed for Wabash Avenue tailors for 50 cents a day to help pay for the house. The deed shows the last installment of the $300 note on the property was paid by Paul's father on January 18, 1859. With some help his father made the little one-story brick into a two-story house as it is today.

HISTORY CONFUSED

On October 7, 1863, he sold the house for $875. I don't believe anyone will ever know the true and complete story of the Dreiser (or Dresser) family. Certainly Theodore Drieser did everything he could to cloud the true picture and add to the confusion of facts.

Of Paul's bothers and sisters we know Romance Marcus was born February 12, 1860; Mary Frances was born July 7, 1861; Emma Wilhelmina was born January 29, 1863 (it was at her home that Paul died); and Theodore born August 27, 1871.

After Paul left Terre Haute and became a full-fledged entertainer, he returned to town on several occasions in various theatrical presentations. On one occasion he led the noontime parade down Wabash Avenue of the Haverley Minstrel Show. Dressed in a buff-colored morning suit and plug hat, he looked every inch the great showman he later became.

In 1923 "Dresser Day" was observed in Terre Haute on April 23. In honor of the celebration a valuable enlarged photograph of Paul Dresser was presented to the Terre Haute Elks Lodge No. 86. This large framed three-quarter study of Paul Dresser was in the possession of the "White Rats," a famous New York theatrical association which was disbanding, and they gave the valuable picture to Paul's brother, Theodore Dreiser, who in turn gave it to the Elks. It was stipulated that should the Elks not be able to care for the picture, it was to pass into the possession of the Vigo County Historical Society, where it is now at their museum, 1411 South Sixth Street.

Paul Dresser is best remembered for our State song, "On the Banks of the Wabash, Far Away." The story is told that one time Ed Wynn, known in entertainment circles as the perfect fool, once introduced this famous song on a radio show by announcing "now comes the song so popular with commercial trust companies of Indiana—'On the Banks of the Wabash.'"

COMPOSER'S GODCHILD

Eighty-two-year-old Mrs. Amelia Schultz, of 227 South Ninth Street, tells me that Paul Dresser was her godfather. Her godmother was Miss Amelia Zoble, a pretty young woman whom Paul admired very much at that time in 1877.

Mrs. Schultz' parents, Frederick and Catherine Miller, were good friends of the Dresser family, particularly of Paul's father. By this time, Paul's mother had left his father who was employed in a woolen mill at 10th and Wabash. Paul's father, a former schoolteacher at St. Benedict's School, was a very devout man and attended vespers every Sunday, after which he would come to the Miller home for Sunday dinner.

Mrs. Schultz was only a small child at that time but she clearly remembers the elder Mr. Dresser and his Sunday visits. There were 12 children in her family and her childhood memories are happy ones. Her brother played the guitar and they would all sing.

Sometimes the 10 children of the Breinig family would be there. Whenever Paul Dresser came to the house, she remembers that he was such a large man and so heavy that the family feared for the safety of their sofa.

Everyone remembers Paul's voice differently. Some say he only "talked" his songs; others tell that he had a "nice voice." Mrs. Schultz remembers particularly how good natured and jolly he was.

At the museum is an autographed album of Paul Dresser's sheet music of 1898 which contains 25 of his early hits. Included are: "On the Banks of the Wabash" which is "respectfully inscribed to Miss Mary E. South, Terre Haute, Ind." "Just Tell Them That You Saw Me," "Don't Tell Her That You Love Her," "I Wonder If She'll Ever Come Back to Me," "In the Sweet Summer Time," "Sweet Savannah," "Come Tell Me What's Your Answer, Yes or No," "A Dream of My Boyhood Days," "I Wish That You Were Here Tonight," "Our Country May She Always Be Right, But Our Country Right or Wrong," "He Brought Home Another," "Your God Comes First, Your Country Next, Then Mother Dear," "A Sailor's Grave by the Sea," "The Old Flame Flickers and I Wonder Why," "If You See My Sweetheart," "I Was Looking for My Boy, She Said on Decoration Day," "You're Going Far Away, Lad, or I'm Still Your Mother Dear," "Take a Seat Old Lady," "Every Night There's A Light," "We Fight Tomorrow Mother," "He Fought for the Cause He Thought Was Right," "Show Me the Way—Sacred Song," "We Are Coming Cuba, Coming," "You's Just a Little Nigger, Still You'se Mine, All Mine," and "Say Yes, Love."

Paul Dresser died in New York City, January 24, 1906, but was buried beside his mother in St. Boniface Cemetery, in Chicago, Ill. While Ora Davis was mayor here, there was much talk of bringing Dresser's body back to Terre Haute for burial, but nothing ever came of the plans.

Fair Trade

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD an article appearing in the Home Furnishings Daily of Friday, April 10, 1959, under the headline "Rambling With Ray," by Mr. Raymond S. Reed.

Mr. Reed chronicles still other weaknesses in State and Federal fair trade legislation.

I hope all Members will read this and other articles which I have been inserting in the RECORD on the subject of fair trade and will join me in defeating H.R. 1253 and other vicious price-rigging legislation. Fair trade will not help the little man, but on the contrary, will help destroy him. It must not become law.

RAMBLING WITH RAY

(By Raymond S. Reed)

Is the flaming fervor for the floor price sagging a wee bit? Is the zeal to create a fire break to check deterioration of the list price a little less zippy? Are some electric housewares makers awakening to a horrible realization? Is their pet floor formula just a junior tintype of the Fair Trade Act which is presently (and I'm afraid permanently) kaput? There are some indications.

In a report from Chicago it was stated that "Sunbeam Corp. contracts with west coast dealers, franchised under the firm's test consignment plan, make no reference to an ad program or minimum pricing. In separate statements which refer to separate printed bulletins, Sunbeam fills in a few fundamentals on the matter of violating printed principles, as well as the basics of selective selling, particularly on the consignment plan of distribution. It's a strong, straightforward statement of policy consistent with Sunbeam's long and sincere effort to protect its product leadership and preserve its retailers' profit.

Frankly and realistically, Sunbeam recognizes a vulnerability which it can't forestall under present ground rules. That's the deliberate and deceptive undercutting of the 15 percent established minimum. In such instances Sunbeam has to wait until the undercut is a fait accompli and to review the deed in newspapers of the area. Then Sunbeam can select the offender out.

The important aspect of the Sunbeam plan is its sincerity of purpose. The determined intention to preserve some profit for the retailer is crystal clear. And we must admit that no policy, no matter how legal or lofty, is worth a hill of beans unless it is sincerely backed with right, determined intention.

On that score, Sunbeam rates an "A" for effort and a helping hand in its objective from many retailers.

You can't legislate the ruthless price-cutter out of business. And, let's be fair with the facts, you can't expect the FTC or any other Government agency to decree that any retailer has to get a specified amount of gross margin over his cost. It's a situation that may be hell to suffer through, but it is also, and in all ways, a restraint of trade.

That was the Achilles heel of the defunct Fair Trade Act. I know and agree that there was much to be said in favor of fair trade. In fact, its diehard loyalists are currently repeating and rehashing all these virtues in Washington today in their wishful campaign to revive the dead horse.

Fair trade, per se, had its disadvantages too, which harmed the retailer, even though designed to protect him. It provided a beautiful, broad umbrella of pegged list prices under which the price wrecker could duck with comparative ease and safety.

We can have a smorgasbord of floor, ceiling, list, established, suggested or even intimated prices. They can be served up and dished out any way you want. They won't amount to a tinker's unless backed by the purposeful intention of manufacturers with a case history of high integrity of distribution. That's the net of any plan for retail profit preservation.

Address by Hon. Solomon Blatt, Speaker of the South Carolina House of Representatives, to the Hebrew Benevolent Society, Charleston, S.C.

EXTENSION OF REMARKS

OF

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. FORRESTER. Mr. Speaker, Hon. Solomon Blatt, speaker of the house of representatives of the great State of South Carolina, addressed the Hebrew Benevolent Society, of Charleston, on April 6, 1959.

Mr. Blatt is a Hebrew and his address was made to Hebrews in the city of Charleston. Mr. Blatt is and has been proud, indeed, of the people of his State and of the South. Mr. Blatt feels that praise should be accorded the South instead of condemnation. Mr. Blatt believes that any person discriminated against in the South causes that discrimination. Mr. Blatt's address is so genuine, so logical, and so true that every person of every race should have the opportunity of reading it. Not only should all races read it, they should follow his sound advice. It is high time that agitation cease and commonsense be practiced.

Mr. Blatt's address is as follows:

ADDRESS BY HON. SOLOMON BLATT, SPEAKER OF THE SOUTH CAROLINA HOUSE OF REPRESENTATIVES, TO THE HEBREW BENEVOLENT SOCIETY, CHARLESTON, S.C.

No occasion could give me greater pleasure than to participate in this, the 175th anniversary celebration of the Hebrew Benevolent Society.

The distinguished record of this organization, coupled with the whole history of the Jewish race in America's most historic city, makes me proud to be included among you.

Not the least of the pleasures I have experienced as a result of your kind invitation has been the delving back into history—the studies I have made of the records in Charleston, dating back to 1695 when the first Jews settled here.

Those were the days of the lord proprietors, Joseph Blake was Governor through one-half of 1695, being succeeded by John Archdale in August of that year. The culture of rice had just been started in the Province, and the State was just beginning to be called South Carolina, instead of the southwest portion of the Province of Carolina.

Many Indian tribes inhabited the State—some friendly, some hostile.

The last years of that century tested the courage of all inhabitants. There was an epidemic of smallpox, killing many settlers and Indians. The epidemic was followed by a great fire that destroyed about one-third of Charles Town, as the city was then called. There was an earthquake, a siege of yellow fever, and during the yellow fever plague a violent hurricane struck Charleston. The sea came in with a tidal wave which forced the people to take refuge in the second stories of their homes.

South Carolinians began to talk about leaving a country that seemed marked for ill fortune, but few actually left and the development of the Province really took root about that time, with Jewish people as part of the pioneering inhabitants.

I have been impressed by reading Thomas J. Tobias' booklet on "Tombstones That Tell a Story," a history of the Coming Street Cemetery, the first burial place of Jews in Charleston.

I have read with great interest and enlightenment the book on the bicentennial celebration published by the Charleston Jewish Community in 1950, under the brilliant editorship of Mrs. Jeanette Pearlstine.

The preface in this book by Rabbi Allen Tarshish cited the fact that Francis Salvador, of Charleston, was the first Jew to hold an important elective office in the United States. He was a member of the first and second Congresses of South Carolina in 1775 and 1776, and on August 1, 1776, he was the first Jew to die in the war for American independence.

Having been somewhat of an officeholder myself, it was particularly interesting to recall that a Jew had served in the legislative halls in South Carolina nearly 200 years ago.

During the intervening years many more of our race have served with honor. At the present time, the Senator from Marlboro, the Honorable William C. Goldberg, is a highly respected man. One of the oldtimers in the house, Matthew Poliakoff, of Spartanburg, is one of our most popular members.

I recall during my time in the legislature others of our faith including Julius B. Ness of Bamberg, and Isadore Bogoslow, of Colleton, have served with us.

Mr. Ness is now a circuit judge, and making an outstanding record as a South Carolina jurist.

We all know that many, many members of our faith have attained national acclaim for their talents in many fields of endeavor.

In the judiciary, we look with justifiable pride upon the records of Associate Justices Benjamin Nathan Cordozo and Louis Brandeis.

We are proud of such great figures in medicine as Jonas Edward Salk.

In business and finance, we in South Carolina revere the name of a native son, Bernard Baruch.

An outstanding figure in the development of atomic energy and now the Secretary of Commerce, we pay our respects to Adm. Lewis L. Strauss, who previously had distinguished himself in the Navy.

Another great naval man, Adm. Hyman Rickover, is recognized as the father of the atomic submarine, and is a national inspiration to those who see the imperative need for constructive changes in public education, especially on scientific subjects.

In music, no other man today stands above the distinguished Conductor-Composer Leonard Bernstein, whom many of us have enjoyed recently in national TV broadcasts.

In opera, Richard Tucker is one of the foremost contemporary singers.

In the lighter forms of entertainment, we point with pride to veteran performers Eddie Cantor, Jack Benny, George Jessel, and many others.

We have read of the contributions made by Solomon to President Washington in the American Revolution.

Down South, we remember that Judah E. Benjamin was widely recognized as the brains of the Confederacy serving as both attorney general and secretary of state in the Confederate States.

We could go on and on calling the names of distinguished members of our faith, both in the past and in the present American scheme of things.

The Jewish citizens of Charleston have contributed much to the progress of this fine city and county. I could, if time permitted, call the names of many of our faith in Charleston who are good citizens and who have had a part in this progress. I want to pay public tribute tonight to one of South Carolina's most outstanding citizens. He is a gentleman of the highest character, a man of integrity and outstanding business ability. He is always thinking of how he can help his fellowman whatever his faith. He is charitable and civic minded. I know of no finer citizen anywhere than Ed Kronsberg and I am happy to call him my friend and publicly pay him this well deserved tribute.

It is right and proper that we should take personal pride in the accomplishments of Jews throughout the history of this wonderful Nation. We should sing their praises at all times, but we must also be careful to remember that their greatness came, not because they were members of any particular faith, but from their merits as individuals. That is true of all outstanding men and women, no matter what their origin.

People become great because they are endowed by God, born with certain sparks, and because they take advantage of their talents, working against any and all odds to perfect and apply the good that is in them to the welfare of human beings everywhere.

Not all of us, of course, can be great and distinguished doctors, scientists, composers, or writers. Many of us simply do not have the mental and physical attributes; others simply fail, often due to unfortunate circumstances, to develop themselves to the fullest extent.

The important thing, however, is that all of us in this great free country have the fullest opportunity to become whatever we can make of ourselves, not because of any particular national or racial origin, but because of the dedicated contributions we are able to make to a freer, happier, healthier and more prosperous Nation.

I dwell upon this particular theme for a definite reason. I have endeavored to show that from the early times in South Carolina and in the Nation the Jewish race has enjoyed the rights and privileges which come from living in a free country.

I have singled out a few of the Jews who have become great national figures, and a few who have especially earned and received the honor and respect of the people of our own State. I did not pretend to call the whole roll, but simply wanted to illustrate, through the use of some names, the fact that, like members of all other races, we are

recognized as individuals according to our worth and our performance.

There are dangerous inclinations among some of the Jewish people in America today, out of the goodness of their hearts, to establish themselves as a minority force in the tragically exaggerated storm of political propaganda which surrounds and confuses the Negro question in the South.

Let it be clearly understood that if there were indeed conditions anything similar to those which prevailed during the Hitler persecutions of Jews in Germany—if there were any such persecutions against any particular race in America, I think that all good Americans should and would rally to defend the oppressed, whomever they might be.

But let us examine the status of the Negro race in South Carolina. We all know about our own problems better than we do about the problems elsewhere in the Nation, and, by the same token, we know better about our own problems than do people who live elsewhere in the Nation.

The fact is that nowhere else on the face of the earth are Negroes happier, more prosperous, more contented, more a part of the general way of life than in South Carolina.

During the last 25 years especially the Negroes have made tremendous strides in this State politically, economically, professionally, and otherwise.

Never before in any other part of the world has so much relative progress been made by the Negro race as has been enjoyed in the South during the present generation.

Where else in America are such a large proportion of Negroes actively participating as respected ministers, teachers, lawyers, doctors, businessmen, and citizens in general?

About 40 percent of the schoolteachers in South Carolina are Negroes, teaching school in the most modern buildings, receiving the same State aid salaries as white teachers in their classifications, and otherwise becoming more and more a large and constructive force in our way of life.

Where else in America, outside of the South, are Negroes able to afford to become such extensive and prosperous participants in all phases of life?

There are more Negro teachers in the schools of South Carolina today than there are in any five or six States combined, outside of the South—and in that respect this includes such States as New York, Michigan, California, and others where political propaganda is rampant, where the South is being used as a whipping boy for ambitious propagandists who have no genuine interest in the real progress of the Negro.

We know that in South Carolina the already excellent relations between the races have been so sound and friendly that all of the misrepresentations in national newspapers, magazines, and over television and radio have not so much as dented the good will existing down here.

That, to me, is the finest evidence available that our good relationships are based on proper understanding, proper treatment, a proper and rapid rate of progress, and a proper perspective for the future.

If our relationships were not based on strong and deep-rooted goodwill, we would be in a state of utter chaos because of the unwise, unfriendly and generally deplorable and deliberate misrepresentations which have been heaped upon us.

Make no mistake about it—our racial relationships in the South have been put to the acid test, and we have not been found wanting.

Still another strong evidence is the fact that, as we have good reason to believe, the truly thoughtful and sincere people over the rest of the Nation are beginning to understand, despite the false and tragic curtain of propaganda, that the South does indeed live in a much more healthy and promising atmosphere of racial goodwill than any other section of the country.

We do not have in South Carolina the kind of gangs, and mobs, and misunderstanding, and social conflict, and teen-age terrorism which prevails in States like New York, Pennsylvania, Michigan, and California—the very States from which have come the most abuse against the South.

So I say, that every race living in South Carolina has equal opportunity for happiness and progress—that the members of every race living in South Carolina have the wide open opportunity, as individuals, to prove themselves for what they are worth.

No group of people is entitled, as a group, to be given special treatment.

If I had to select the one outstanding element in this Nation's rise to becoming the greatest nation in all the history of the world, I would say that the freedom of the individual to express himself and to gain recognition according to his worth ranks ahead of all other blessings and attributes.

No, my friends, the Negro race, nor any other race is oppressed in the South Carolina way of life today, and I am a living example of the tolerance of the people of this great State.

People of all races in South Carolina can look forward with confidence to the future, knowing full well that if they have character, talents, and abilities, and if they exert themselves intelligently and constructively they will be recognized and appreciated.

The Jewish people who moved into the Carolina Colony in 1695, moved wisely into an area where their descendants have become respected and responsible parts of the communities and States in which they live.

Members of the Jewish race have fought in all of the wars in which our people have been engaged.

Seven Charleston Jews who served in the American Revolution are buried in the Coming Street Cemetery.

Four veterans of the War of 1812 are to be found buried in this same cemetery.

More than 180 Charleston Jews served in the Confederate forces, of whom some 25 were killed.

Thousands of our faith served in World War I, World War II, and the Korean war.

Many of them died on the fields of battle, but their sacrifice was not in vain.

Quoting Mr. Tobias: "During the century prior to the fatal firing on Fort Sumter, Charleston prospered from the thriving plantation economy it served—with a heritage of religious freedom from its founding. Charleston's Jews participated in their city's prosperity and shared in its culture, developing men who contributed to the community and left their mark in all walks of life.

"Such a man was Mordecai Cohen, who died in 1848, but who had risen from a peddler to the second wealthiest man in South Carolina. He was noted for his civic leadership. His tombstone best summarizes the kind of man he was: 'He was a good citizen, an enterprising merchant and one of the largest contributors to the improvement and revenue of this city. By his strict integrity, his just and charitable disposition, he won the confidence and esteem of the community.' "

Now, not all Jews have risen to become the second wealthiest man in South Carolina, but to me the story of Mordecai Cohen, on a lesser but equally as commendable basis, applies to literally thousands of Jews who have lived in Charleston and the rest of South Carolina since 1695.

My personal feelings toward Mr. Cohen are doubly sympathetic, because my own father, came to South Carolina from Russia many years ago. Like Mr. Cohen, my father was a peddler, but because South Carolina is a wonderful State of opportunity, my father was able to overcome all handicaps and to become a substantial merchant in the town of Blackville in Barnwell County.

Many, many times, especially in recent years, I have thanked God that my parents did come to this country, and to South Carolina, escaping what was then a tragic plight in Russia, and what now—in a godless nation—would be far worse than any plight I can imagine.

Now let's talk about the subject I happen, through experience, to know best—the government of South Carolina.

Though, at times, public service seems to be a thankless job—especially when as at present we are faced with imposing new taxes for desirable public services, public service nonetheless is one of the most compensating experiences to which men and women can devote themselves.

Twenty-seven years ago, in 1932, I was elected to the house of representatives from Barnwell County. Two years later I was elected speaker pro tempore of the house without opposition, and then in January 1937, I was elected speaker of the house over one opponent.

Except for 4 years, it has been my great honor to have served ever since as speaker. It is my information that no other man has ever served so long in this capacity in this or any other State.

And so, as a Jew, and proud of it, I feel that I can speak from full experience when I emphasize again that there is no intolerance in public life in South Carolina.

In the beginning, I pointed out that no other generation has enjoyed more progress in South Carolina than has the generation of which most of here tonight are a part.

In 1933, South Carolina was in the throes of the great depression.

For a moment, let's pause to make several pertinent contrasts between then and now.

Listen to this: In 1932 the legislature had appropriated $9,500,000 for general purposes, and the highway department whose funds were separately accounted, had received $9,900,000 in revenue, a grand total of $19,400,000 for all State purposes as compared with more than $200 million a year at this time.

We were concerned only with the $9,500,000 for general purposes, and the State had, mind you, a deficit of $9 million. We were running, therefore, almost exactly a year behind in finances. Our credit had been exhausted and we could not borrow a dime.

The Farmers' and Taxpayers' League met the new legislature with mass demonstrations on the State house steps, demanding that we cut 1933 appropriations in half. As a matter of fact, during the opening week the house, by a vote of 79 to 34 resolved to hold appropriations below the $5 million level. That was less for all purposes than the single item in our current appropriations of $6 million for the State hospital.

State aid to public schools had amounted to only $3,600,000 in 1932, but the budget commission, under pressure of the Farmers' and Taxpayers' League, was recommending just $2,042,000 for 1933. Think of that. Today for public schools alone the State appropriates more than $85 million a year.

Conditions were like that 27 years ago.

But we had weathered the depression, and in every year since, during war and peace, we have weathered problems, all of the time moving forward into eras of greater development.

The restoration of South Carolina most certainly has experienced its realization during the past quarter of a century.

We believe that South Carolina taxpayers get as much, if not more value received from tax dollars, than those of any other State of the Nation.

It has taken a tremendous amount of working together, and of putting first things first. The taxpayers demand services from

the State government and if these services are to be given the people, then they cannot and must not complain about the imposition of additional taxes to provide the demanded services.

What has been accomplished already, and what we have reason to believe will continue to be accomplished in the future, as a result of the solid foundations which have been laid, could not have been attained without the services of dedicated men and women in government, without free and loyal citizenship in general, and without the contributions made through such essential services as improved public education, public health, and highways.

Probably in no other State has a better balance of government and private enterprise been reached. Our progress has been rapid but sound and our accounts are being balanced without backbreaking taxes on anyone.

South Carolina, for a decade now, has been enormously conscious of the industrial development which has been enjoyed, bringing with it the blessings of payrolls, revenues for government, and money in circulation for all types of business and the professions. All over South Carolina, the additional money in circulation is reflected in new school buildings, highways, hospitals, and other desirable and necessary public institutions. These businesses and industries should and must be protected from those who would destroy them.

From an agricultural viewpoint, within a relatively short time, a considerable transition has occurred, complicating the general economy of the State.

Agriculture will always be a major factor in our economy, but mechanization, irrigation, pest control, and artificial fertility have brought about extensive changes in the methods of farming. The result has been much larger yields, much better produce, and wider diversification.

But, while these good things were taking place in agriculture, the other side was not nearly as bright—because the modern trends have resulted in declining employment. We get heavier production with fewer human hands.

In many counties of the State, no employment was available for thousands of people who could no longer find jobs on the farms. New industries have helped in many areas to fill this void, but still there are many counties, especially in the low-country, the midlands, and the Pee Dee sections which do not have either new industry or enough existing industry to employ the people.

The future prosperity of South Carolina, especially in those areas without industry, unquestionably will depend upon the continued development of new industry and the expansion of existing industry.

Decisively important in the attraction of new industry is the constant improvement of governmental atmosphere, both statewide and in the counties and municipalities. We feel that excellent progress has been made already, but much remains to be done. We not only have conditions which need legislative adjustment and correction, but we must continually be alert to constructive new ideas.

Not only is more industry developing, but more and more of the larger industries are dispersing their operations, locating additional plants in various parts of the country. This is a healthy trend, both from the standpoint of bringing further balance to the whole economy of the Nation, and in the area of national defense. Where industry is too concentrated, an attack on this country might easily disrupt production unless plants are widely scattered throughout the Nation.

As industry shows a growing tendency to spread, the competition among States, particularly in the Southeast, has become more aggressive.

Your native son, the new Governor of South Carolina, our mutual friend Fritz Hollings, has clearly recognized the need of the State and the pulse of our citizens on the subject. Throughout his campaign and during the early months of his administration, he has placed major emphasis upon the subject.

First, however, it was necessary to solve the temporary financial deficits, and the Governor took bold and courageous action from the outset to assure a balanced budget. In all of my service in the State government, I have never seen a Governor act as forthrightly on financial problems. It would have been much easier for him to have passed the buck to the legislature, but he realized that if we were to get on with constructive economical development, we first had to put our financial house in order.

Every citizen of South Carolina should applaud his willingness to place first things first so that the way would be cleared for greater progress.

Please remember this, that the current session of the legislature is not imposing new taxes for extravagance in government. It simply is balancing the budget for the kind of government the people have demanded, and our financial crisis resulted from a slowing down of industrial development during the recent national recession, plus a 5-year drought in profits for our largest industrial resident, the textile industry.

If the textile industry had been enjoying just normal profits during the last 5 years, it would have been paying enough in income taxes and additional employment, with the benefit of extra payrolls, to have kept us on a balanced basis.

Our textile leaders tell us now that they have strong hopes for a return to reasonable profits within the near future. If this develops, then we will have considerably more revenue from existing taxes, and we will be able to do more for education, public health, and other humanitarian causes without additional and increased taxes facing us at every session.

Now, in my opinion, one of the prime reasons why South Carolina has boomed in recent years has been the wholehearted spirit of good government. It do not believe that business, professional, and other substantial citizens are yet exerting themselves enough, but I do believe that the active interest they have shown in recent years in proper government has had a remarkably healthy influence upon those who try to perform public service.

I cannot urge you enough to extend even further your good citizenship. For too many years substantial citizens seemed to think that their responsibility as citizens was to complain about everything that happened in government.

In the legislature, we have noticed in the last 5 or 10 years that business people especially are showing a more constructive interest in what goes on and a greater appreciation for the proper services of government. If you continue to do that, and if you acknowledge the good things about government, and if your criticism is sincere and intelligent, then we in government welcome your criticism.

All over South Carolina there has been a much better statewide acceptance of both blessings and responsibilities. No longer do we hear petty arguments of sectionalism. Charleston, perhaps more than any other community, should recognize this change in attitudes because there were times in our lifetime when other sections of the State looked upon Charleston with suspicion and jealousy.

What finer illustration could I use here tonight than to point to the fact that both houses of the legislature voted for the $21 million ports' development program for Charleston, Georgetown, and Port Royal. I was proud and I know you were proud that one of the foremost leaders in this great development has been Milton Pearlstine. Enactment of the port's program demonstrates that, insofar as economic development is concerned, fulfilling the advantages of one area is important to the whole State.

Let me thank you again from the bottom of my heart for this opportunity to be with you tonight. It is truly one of the highlights of my lifetime. I will never forget your kindness in inviting me, and I assure you that everything I do I will do as a South Carolinian, as one of your faith interested in the welafare of all our people, and I believe I will be a better man because of this experience. May God bless and keep you, each and every one.

The Indian Problem

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. McGOVERN. Mr. Speaker, I include for the attention of the Congress a letter to the Christian Science Monitor by Mrs. Angus F. Lookaround, a person with many years of firsthand experience in Indian affairs. The letter appeared in the April 25, 1959, issue of the Monitor as follows:-

THE INDIAN PROBLEM

TO THE CHRISTIAN SCIENCE MONITOR:

The purpose of this letter is to comment upon the article, "The Indian Problem: A Challenge," by Kimmis Hendrick, in your issue of March 17.

The writer has lived on the Menominee Indian Reservation in Wisconsin, is a white woman, and the widow of a noted Menominee Indian athlete and musician. She has been a resident of the reservation since 1934, has written several books about Indians and lectured widely on the subject of Indian history. She is the owner and curator of the Angus F. Lookaround Memorial Museum at Keshena and a member of the Midwest Museums Conference.

Therefore, she speaks from experience and out of 40 years of research in Indian history and folkways.

It is difficult to solve the problem resulting from the more than 300 U.S. treaties with the the Indians that have been broken by the Government of the United States. This is what we have to face up to and solve.

Mr. Hendrick refers to the relocation program. It has succeeded in very few cases. I personally do not know of a single successful experience. It uproots Indian families who should have been helped to stay at home. That help should have been through te establisment of industries and schools on the reservations.

There have been schools, the Industrial Government schools (my husband who was born in 1893 went through the 6th grade three times because there was no seventh grade), but these were not adequate for an Indian's necessary competitive living in modern times. And he must compete.

Now, we have to make up for lost time, for the ineptitudes and errors of the past. If

there is an answer, the Association on American Indian Affairs has the answer. This large organization, headquartered in New York City and under the chairmanship of Oliver La Farge, has a legislative program headed by House Concurrent Resolution 40, a bill introduced by Representative GEORGE MCGOVERN of South Dakota.

This bill embodies a point 4 program for Indian communities advocating economic aid so that tribal resources can be better utilized, industrial developments made, and tribal lands retained by the Indians for their own use, benefiting at the same time the neighboring areas.

There is also the Indian economic development bill (S. 953) introduced by Senator WILLIAM LANGER, of North Dakota, and now before Congress.

If these programs are put to work, Indians need not be forced into unfair competition away from home. Indians have a great deal to teach us, a great deal to contribute to our civilization if we will only be humble enough to learn and to accept, willing to discard prejudices and keep open the way for a better understanding of, and opportunities for, the Indian people. It is up to us. Writing your Congressman will help.

Mrs. ANGUS F. LOOKAROUND.

KESHENA, WIS.

Misrule for the District of Columbia

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. DORN of South Carolina. Mr. Speaker, the Federation of Women's Clubs of the District of Columbia very wisely adopted a resolution against so-called home rule. These ladies are tremendously interested in a beautiful, cultural and charming National Capital with an American, patriotic atmosphere. These ladies are taking a stand alongside of George Washington, Thomas Jefferson, Benjamin Franklin, Alexander Hamilton, James Madison, James Monroe and the other great Founding Fathers of our country.

The Federation's resolution opposing home rule is in absolute keeping with their resolution favoring Washington's Cultural Center. I hope they are successful in both projects. This great and wonderful organization is presently headed by Mrs. T. David Gates in the District of Columbia who is doing an outstanding job as president.

Mr. Speaker, the proposed home rule program would be anything but home rule. It would be misrule with the government of Washington being run by political bosses in the smoke-filled headquarters of some dues-paying society of agitation in other areas of the country.

The following are excerpts from my talk before the Federation of Women's Clubs of the District of Columbia on last Saturday:

You are to be congratulated on your patriotism and foresight in opposing home rule for the District of Columbia. Millions of Americans in every section of the United States share your thinking that representative government and freedom might suffer by home rule in the District of Columbia.

Under home rule in a very short time the Congress, the courts, departments of the Federal Government, and even the President would be subjected to harassment, demonstrations, picketing, undue pressure, and propaganda coined and conceived in a socialistic mill hundreds of miles from Washington, if not in foreign lands.

Under home rule the local political machine would soon become the pawn of more powerful and sinister pressure groups with headquarters elsewhere. There would be no real democracy in Washington under home rule. Local politics would be controlled by pressure groups, propaganda, and stupendous slush funds from other areas. The local machine would become a stepping stone to be used by every Capitol Hill presidential aspirant on his way to the national convention. Both national political parties would use the local political machine to lobby for their pet projects on Capitol Hill at the expense of the taxpayers at the grassroots of our country. If Washington were granted home rule, conditions would become so intolerable that the people of the United States would demand that the Capital be moved.

In considering this home rule question, we all should remind ourselves that the overthrow of every French Republic was bred and nurtured by the Parisian mob of France's capital city. Only last year the Communist coup d'etat in Iraq was made possible by the capital city mobs of Baghdad who, overnight, lynched the government officials, mobbed Americans, and took over the government.

The Founding Fathers moved the Capital to the District of Columbia to escape local political pressure in Philadelphia. The Founding Fathers saw the immediate necessity of the Government operating in an atmosphere free from undue local pressure and mob psychology.

Annual Sudeten Germany Day To Be Observed May 17–18 in Vienna

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter dated April 15, 1959, from Dr. Walter Becher, secretary-general, member of the Bavarian Landtag:

SUDETEN GERMAN COUNCIL,
München, den, April 15, 1959.

Hon. DANIEL J. FLOOD,
U.S. Representative,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE FLOOD: I take the liberty to call your kind attention to the annual Sudeten German Day which will take place on Whitsuntide, May 17–18, in Vienna, Austria. Hundreds of thousands of Sudeten German expellees are expected to visit the day, coming from Austria, West Germany, and other countries, members of the Austrian Federal Government being festival speakers at the rally.

The Sudeten German people will reassert their dedication to the cause of freedom, democracy and anticommunism, their faith in the right for self-determination for every people and in the right to live in freedom in the native homeland for all those who have become victims of Communist totalitarianism. The Sudeten Germans will appeal to the free world for freedom for the enslaved nations, Czechs, Slovaks, Poles, Ukranians, Bates, Hungarians and all other nations and will take stand against any West German confederations with Communist regimes which could end only in the way they ended in China. The close and firm cooperation with the nations of the West, especially the United States is for the Sudeten German people the highest maxim.

It would be a great honor and encouragement for the 3.5 millions Sudeten German people, if you would kindly sent a few words of message for their Sudeten German Day.

With best personal regards.

Yours very sincerely,

Dr. WALTER BECHER,
Secretary General, Member of the Bavarian Landtag.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 25, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

Legislative activity now is mostly in the committees' study of spending bills. Many big spending proposals are marking time as Members of both Houses of Congress weigh the temper of the citizens. The Johnson resolution proposed by the Senate majority leader is indicative of this new stop, look, and listen attitude. This resolution is intended to set up a joint legislative-executive commission composed of leaders of business and labor "charged with the responsibility of visiting * * * centers of abnormal unemployment" to "taste, smell, feel, and hear the dispair of those parts of the country where men and women cannot find work * * * required to report back to Congress within 60 days." Tied to these findings are listed a depressed areas Federal aid bill, a housing bill, acceleration of public works, and other Federal expenditures. There are, as usual, the two fallacious underlying assumptions: (1) That Government is responsible for providing jobs for everyone, and (2) that throwing Federal money at a problem will solve it. Forgotten apparently are the two current studies, one by the joint House-Senate Economic Committee on maximum employment and a second by the Cabinet Committee on Price Stability for Economic Growth. These two studies are already underway. The Johnson resolution thus has the earmarks of political expediency.

My suggestions are: (1) Get the findings of the two committees already authorized; (2) study areas of full employment to learn techniques, new products, and "lessons of success" that can be transplanted to underemployment areas; (3) study unemployment figures to learn actually the correct extent of unemployment, recognizing that at least 2½ to 3 million unemployed is normal in a 68 million work force; take into account the fact that anyone over 14 not working and seeking a job is listed as unemployed, that many others are secondary or part-time workers, such as housewives, seasonal workers, and other workers by choice; (4) reduce,

not increase, Federal spending, so that we live within our means, cut the debt and cut taxes, thus restoring State and local government strength and preserving the value of the dollar; (5) remember that Congress, not the President, controls spending, taxes, and the national debt. (Item.—Since 1900, the 32 Democrat years of Congress control have seen a debt increase of $284 billion and in 26 Republican years a debt decrease of $6 billion—significant or not?)

The need for a labor bill to control dictatorial labor leaders and monopolistic unions was never better demonstrated than as a result of Harry Bridges' (head of the ILWU) testimony before a House committee this week. He showed a ready willingness to take action directly contrary to U.S. Government policy, if he personally saw fit. Of course, it is not unusual for union leaders to act as though above the law, but it is not right. Such arrogant dictatorial flouting of the national interest must be curtailed, even as union lawbreaking and violence must not go unprosecuted here at home. It's up to the Congressmen now to write a law providing this protection.

In testimony against a civil rights bill before the House Judiciary Subcommittee, I pointed out that (1) the timing is wrong; ((a) we just passed a bill; (b) we haven't weighed the Civil Rights Commisison findings); (2) the pending bills give the Attorney General unlimited discretionary power to sue citizens ((a) defendant would be pitting his own resources against the U.S. Treasury; (b) there is no limit to staff and expense the Attorney General can use); (3) both political parties are trying to garner the Negro vote and political expediency in this field can jeopardize all the civil rights we enjoy; (4) what civil rights are we talking about, other than voting—freedom of speech, assembly, press, worship—what? (5) Federal laws, nonconforming to local custom and usage, like prohibition, are unenforceable: You can't safely or successfully legislate social customs.

(6) The 10-point code of ethics for Government employees should be taken to heart by all public servants. These include: Put loyalty to the highest moral principles and to country above loyalty to persons, party, or Government department; give a full day's labor for a full day's pay, giving to the performance of his duties his earnest effort and best thought; make no private promises of any kind binding upon the duties of office, since a government has no private word which can be binding on public duty; seek to find and employ more efficient and economical ways of getting tasks accomplished; and uphold these principles, ever conscious that public office is a public trust.

We should not lose our capacity to become angry over malfeasance in office, nor should we tolerate cynicism. In our country, actually everyone has a part in government.

Armenian Martyrs' Day, April 24

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. MULTER. Mr. Speaker, on April 24, 1915, all the leaders of Armenian communities in Turkey were arrested by Turkish authorities, kept incommunicado and then, in small groups, taken to various parts of Asia Minor and put to death there. This sudden and shocking move by the Turks was the unfolding of the hideous plan of exterminating 2 million Armenians in the Ottoman Empire.

The coldblooded execution of the plan sounded the death knell of the Armenian race in the Empire, for within a year, while Europe was in the death throes of the First World War, the Turks had successfully and with impunity carried out their mission through wholesale massacres. At the end of that war, when the sky had cleared, and the dust had settled over the areas formerly populated and cultivated by Armenians, there was hardly any trace of life. In this unprecedented human holocaust in modern times more than 1 million Armenians lost their lives; most of the survivors were scattered as refugees in neighboring lands, and only a small number of Armenians were spared.

From that day on, every year Armenian communities everywhere observe April 24 as the day of their martyrs, paying homage not only to the memory of a few thousands of their leaders, but also in commemoration of 1 million innocent and helpless Armenians who lost their lives in that human carnage.

I gladly join Americans of Armenian descent in the commemoration of that event, the Armenian Martyr's Day.

Bill To Amend Transportation Act of 1958

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. MACDONALD. Mr. Speaker, I have today introduced a bill which provides for thorough consideration and review by the Interstate Commerce Commission before commuter and passenger trains are permitted to be discontinued.

My bill would amend the Transportation Act of 1958, which now permits railroads to automatically discontinue passenger trains 5 months after the application for discontinuance if no formal action has been taken by the Interstate Commerce Commission.

I would like to point out that 27 notices to discontinue approximately 100 trains are presently pending before the Commission. And railroads are threatening to discontinue additional service affecting many more thousands of passengers. The records show that a time range of 5 months has been proven inadequate for the Interstate Commerce Commission to properly investigate and make findings upon this flood of discontinuance requests. Thus, it seems to me, the net result would be discontinuance of passenger trains which will be accomplished by default, without public hearings and without a careful determination by proper authorities. This inevitably would be followed by an ignoring of the public interest.

Mr. Speaker, my bill is designed to correct this situation. For example, after the filing of an application for discontinuance of passenger service, the Interstate Commerce Commission must hold a public hearing prior to acting upon the application. Likewise, all interested parties would be permitted to be heard at the hearing. It would seem that the restrictive 5-month time limitation now placed on the Commission should be eliminated. The Commission must be empowered to protect the public interest. Under the present law the Commission has no such power. By following this procedure the interests of both the railroads and the commuting public, as well as the public at large, would be properly recognized, and any decisions regarding railroad passenger service must be made only after all relevant factors have received full consideration in the appropriate body.

I understand very well the financial troubles of the railroads, especially those on the eastern seaboard, and I am willing to assist them in their present difficulties. As a matter of fact, the Transportation Act of 1958, for which I voted both in committee and on the floor of the House, provided $500 million for their relief. On the other hand, I insist that we must give every consideration to the interests of the public.

Mr. Speaker, as you know, this problem is certainly not a brand new one. In fact, 2 years ago I strongly protested the curtailment of passenger service in my Eighth Congressional District by the Boston & Maine Railroad. At that time I stated that I thought such large curtailments were in disregard of the public interest. Many of my constituents cannot reach Boston by public conveyance, inasmuch as the only bus line serving the district has been on a very prolonged strike. The fact of the matter is that for all practical intents and purposes there is no bus service. This, coupled with the continuing abandonment of train service, forces most to reach their place of employment by private automobile. On arriving at Boston, the motorist finds no place to park; he also finds that both he and his car are unwelcome, that parking for pay facilities are nonexistent, and his personal transportation problems almost unsolvable.

Dr. Paul Dudley White recommends bicycling as a way to strengthen our heart and preserve our health. However, the inclement winters and springs of Massachusetts make this alternative to the transportation problem a difficult one, even if at times it seems as the only possible solution to the present attitude of the railroads against carrying passengers.

Many hundreds of my constituents have either purchased or built homes with reliance on train service which was then in existence but presently is merely a memory. Their problem is personal, but their interest is public. To that extent I feel legislation to return the concept of public interest to the running of railroads is imperative.

I realize that my proposal today is not a cure-all for solving the present commuter crisis in cities along the Eastern Seaboard. But I do believe that maintenance of adequate railroad commuter service is of critical importance to these

areas. It is, therefore, my hope that hearings by the House Interstate and Foreign Commerce Committee, of which I am privileged to be a member, will soon be scheduled on this important legislation.

Teacher Recognition Week

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. GUBSER. Mr. Speaker, speaking as a former teacher in the public schools in California I honestly believe that the teachers of America probably contribute more to our present and future way of life than any other one group.

Unfortunately the marvelous work done by our teachers, at ridiculously low rates of pay, often goes unnoticed by the American people.

I am proud to announce that the Santa Clara County School Trustees Association in my own congressional district is recognizing the value of the teachers in our public schools with Teacher Recognition Week during the week of April 5–11. It appears to me that similar observances all over the country would be in order.

I am enclosing a copy of a resolution to be introduced by Assemblymen Bradley and Allen of the 28th and 29th Assembly Districts of California in the Assembly of the California State Legislature. This resolution focuses proper attention upon Teacher Recognition Week in Santa Clara County:

RESOLUTION RELATIVE TO TEACHER RECOGNITION WEEK

Whereas the American public school serves as the basic unit of grassroots democracy and a close bond between the community and its teachers and schools contributes to the strength of democracy; and

Whereas in the daily interaction of teacher, pupil, school and community the most lasting and most vital attitudes are built as bulwarks to our democratic faith; and

Whereas the outstanding successes and achievements of the teaching profession are evident in the unusual teacher contributions to the cultural and social life of the community and the Nation; and

Whereas the teacher is a vital member of the community, a human, sympathetic, skillful individual serving as a molder of youth and the preserver of America's heritage; and

Whereas the essential nobility of the teaching profession is animated by unselfish zeal and devotion and numbers within its ranks men and women of courage, ability and vision; and

Whereas the Santa Clara County School Trustees Association is directing its attention toward creating and strengthening the interest and support of the people in their teachers and schools since such interest and support is an inevitable obligation of citizens in a democracy; and

Whereas in furtherance of this effort, the Santa Clara County School Trustees Association is initiating a Teacher Recognition Week program in Santa Clara County during the week April 5–11, 1959, to provide an opportunity for every citizen to discover and to understand more fully the relationship of our schools and teachers to the values from which democracy receives its deepest meaning: Now, therefore, be it

Resolved by the Assembly of the State of California, That members of this body join with the Santa Clara County Trustees Association in proclaiming April 5–11, 1959, as Teacher Recognition Week; and be it further

Resolved, That the assembly approves and commends the project of the Santa Clara County School Trustees Association in this important field of teacher-community relations and pledges full and active support and participation to insure the success of this worthy program.

Farr Terms Fair Trade a Useless Crutch

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Home Furnishings Daily on April 22, 1959.

The article by Mr. Bob Johnston tells how Mr. Mort Farr, board chairman of the National Appliance and Radio Dealers Association, declared that fair trade is a crutch of no use to dealers and has never been enforced fairly.

I hope all will read this article and will discover how all the heat and smoke on this subject has obscured the real issue in the preservation of small business and in what is needed to protect and help the small businessman.

Certainly, fair trade is not the way.

FARR TERMS FAIR TRADE A USELESS CRUTCH

(By Bob Johnston)

PHILADELPHIA.—Fair trade is a crutch of no use to dealers and never has been enforced fairly, Mort Farr, board chairman of the National Appliance and Radio Dealers Association, declared here Monday night.

Addressing a dinner meeting of the Philadelphia Housewares Club, Mr. Farr stated he was flatly opposed to fair trade. However, he was speaking as an individual and not for NARDA, he asserted.

"We are being kidded by the legislators who indicate there is some chance of passing a national fair trade bill," the Upper Darby, Pa., dealer declared.

"In any event, fair trade never covered more than 10 percent of all retail items and only about 2 percent of all appliances, including majors."

Instead of a return to fair trade enforcement, Mr. Farr called for stricter enforcement of the Robinson-Patman Act. "We also need a law to prohibit transshipping, if any Government regulation is needed," he added.

ASKS INDEPENDENCE

"It's up to the individual dealers to make a profit by their own ingenuity, and not depend on the Government. We have only ourselves to blame for the present abuses in the appliance industry.

"More redtape and Government regulation can lead only to curtailment of individual initiative. This is not the American way; we shouldn't look to the Government to stifle competition." He asserted that discount houses have profited as much as anyone from fair trade."

Commenting on the hopeful signs for an upturn in the appliance business, Mr. Farr said that "never has an industry been so good to so many people and so cruel to itself."

This dealer cited as possible factors for an improvement in sales the trend toward more leisure time for consumers and increasing interest in their homes.

SEES SPECIALTY'S DECLINE

Specialty appliance retailers now are accounting for only about 20 percent of electric housewares sales, while some years back they were a much bigger factor, he noted. "Perhaps we need better distributor salesmen, more store demonstrations, and creative selling."

Mr. Farr proposed that electric housewares be added to utility bills so that customers could purchase them on a $1 down $1 a month basis. He suggested that some floor planning program be worked out for electrics, similar to those now in effect for major appliances.

John W. Ferguson, Rival Manufacturing Co., and newly elected housewares club president, also spoke.

Three veteran PHC members, now retired, were given life membership cards: Benjamin Weiner, founder of Weiner Manufacturing Co., here; George Spangler, formerly of Westinghouse Electric Supply Corp., and Walter S. Kucker, ex-Knapp Monarch representative. Mr. Farr also was presented with an honorary membership in the club.

Oscar Howe: Indian Artist

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. McGOVERN. Mr. Speaker, it has been my privilege to know as a friend and former teaching colleague, Oscar Howe, now a professor at the University of South Dakota, who is the foremost living American Indian artist in the United States today. The designer of the murals of the Corn Palace in my home town of Mitchell, S. Dak., Professor Howe has had his paintings exhibited at the Chicago Art Institute, Denver Art Museum, Gallerie for Living Artists, Museum of New Mexico and the Modern Museum of Art as well as foreign exhibits in Paris and London. In 1947 and again in 1954 he won the grand purchase award at the Philbrook Art Center in Tulsa, Okla. Acclaimed as artist laureate of the Middle Border, Professor Howe is an outstanding example of a reservation-born Indian who has with great personal courage and amazing artistic skill carved for himself a place of honor among the people of our State. Under unanimous consent, I include in the RECORD a biographical account of Mr. Howe prepared by Dr. George Agogino of the University of South Dakota and Professor Howe's wife Heidi for the Museum News, Vermillion, S. Dak., March 1959:

OSCAR HOWE SIOUX ARTIST

(By George Agogino and Heidi Howe)

Prof. Oscar Howe is a neat, conservatively dressed, mild-mannered, and well-appreciated member of the faculty of the State

University of South Dakota. In appearance he is rather stocky, slightly above medium height, and with features and skin color that might easily allow one to imagine he was talking to an oriental exchange professor.

Oscar Howe is, however, a fullblood Sioux Indian. His parents were George T. Howe and Ella Not Afraid of Bear. He was born May 13, 1915, at Joe Creek, a small community on the Crow Creek Indian Reservation of South Dakota. His paternal grandparents were Don't Know How (grandfather) and Bone Necklace (great-grandfather). Bone Necklace was head chief of the lower Yanktonaise, and was noted for his gift of oratory. Perhaps his most famous speech was made on behalf of his people before the Northwestern Indian Commission in June 1886.[1] Oscar Howe's maternal grandparents include the Yanktonaise chief, Not Afraid of Bear (grandfather) and White Bear (great-grandfather) who distinguished himself at the time of the Santee uprising in 1862 and received a plaque from the Government for his services to the whites at that time.

Oscar Howe's preadolescent years were characterized by poverty, illness, and frustration. He attended the Pierre Indian School until 1933. This institution at the time was under the military system. The boys wore uniforms with stiff celluloid collars. Punishment was swift and severe even for minor violations and the school sought to discourage runaways by offering a bounty for the return of students who sought to return to the reservation without the proper authorization.

It was a violation at the Pierre Indian School for an Indian to speak his native tongue. Since Oscar Howe could speak only Sioux when he entered this institution he soon had the opportunity of testing the corrective physical punishments administered by those in authority. Among punishments experienced were being shoved into heated radiators which if not sufficiently effective was often followed by the traditional rubber hose applied to his face and head.

While at this school Oscar Howe developed a serious but unidentified skin disease. So disfiguring was this affliction that he suffered social isolation to the extent that even his own brothers completely avoided him. His misery increased when he discovered he had trachoma, a painful eye disease that almost blinded him. It is no wonder that after the school doctors informed him that his skin disease was incurable the 10-year-old boy contemplated suicide by jumping out of the second story hospital window. There was to be no bounty on Oscar Howe, for it was the policy of the school to send hopeless cases back to the reservation.

The next year was one of crisis in the young Indian's life. Determined to rid himself of his skin condition, he washed his entire body with a commercial soap, allowed it to dry on the skin, and then rinsed the product from his body. This procedure was repeated hour by hour, day by day, and week by week, until after many months his skin condition began to clear and finally was cured, along with his trachoma.

While Oscar Howe was now physically sound, there were still deep psychological wounds to repair. By hard work he must make up for the shame of ostracism leveled against him by his friends and relatives when ill. He must find an avenue of success, a medium to fame, so that "they would be ashamed for ever being ashamed of him."

He returned to school and finally completed his high school education in 1938 at the Santa Fe Indian School. While at this progressive institution he first took up art under the direction of Dorothy Dunn Kramer. He was an instant success, and before he graduated he had exhibited his paintings across the Nation from the Brooklyn Museum's Gallery for Living Artists to San Francisco's Civic Center. Even more impressive was the fact that he also had his work exhibited overseas in both London and Paris. Many of his paintings entered private collections, and some were reproduced in magazines both at home and abroad.

Returning to his father's home (his mother died when he was 9) led to another period of despondency. To the little Indian community of Joe Creek on the Missouri his artistic success was evaluated only in dollars and cents since South Dakota at that time offered little market to the art that had been honored in great galleries. It was during the depression and desperate for work, Oscar Howe accepted the position of art instructor at the Pierre Indian School, his pay consisting of room and board.

In 1940 Oscar Howe was assigned to the South Dakota artists project where at Mitchell he painted the interior dome of the Carnegie Library with symbolic designs of sun and rain clouds over hills. After a course in mural painting at the Indian Art Center, Fort Sill, Okla., he was assigned to paint in oil 10 large murals depicting in lifesize figures the history of the Missouri River Basin. The work was to decorate the walls of the new auditorium at Mobridge, S. Dak. Although the artist had to make concessions to local tastes favoring literal portrayal, these paintings still retain several aspects of Oscar Howe's imaginative art.

With the advent of World War II, Oscar Howe spent 3½ years in the U.S. Army with combat battalions in North Africa, Italy, and Germany. It was while a corporal in Germany that he first met Miss Heidi Hampel, who today is his wife and a naturalized U.S. citizen. Her trip to America was financed by Oscar Howe's first national award. In 1947, Mr. Howe entered his tempera picture, "Dakota Duck Hunt," in the second annual National Indian Painting exhibition at Philbrook Art Center, Tulsa, Okla. His entry won the grand purchase prize of $350. After traveling and marriage expenses were deducted, the young couple found they had but $20 for a nest egg. However, it is doubted that an Indian ever had a better deal from a "white," for in addition to a wife, Heidi Howe also became a biographer, historian, business manager, and publicity agent for her husband.

Shortly after his marriage, Oscar Howe was commissioned to supply the illustrations for a two-volume book titled "North American Indian Costumes." The text was written by Dr. O. B. Jacobson of the University of Oklahoma, and the book was published in Nice, France, in 1952. The money was certainly welcome because in June 1948, their only child, a daughter, Inge Dawn, was born in the Talahina, Okla., Indian Hospital.

In the fall of 1948 Oscar Howe was chosen by Dakota Wesleyan University, Mitchell, S. Dak., as artist-in-residence. There he was an instructor as well as a student in art. More important than his formal education and recognized status was the fact that he found people in his own region who began to recognize his achievements and potentialities as an artist. Before he received his undergraduate degree he had won the Harvey Dunn medal in art and had been offered a full-time position in the art department, but he decided to engage in graduate art studies at the University of Oklahoma. He received his master of fine arts degree in 1954.

The people of Mitchell more than those of any other community consider Oscar Howe their own since it was here he first received acceptance within the State of South Dakota. For the past decade he has yearly designed the decoration of the 11 panels at the Mitchell Corn Palace. Each of these panels depict larger than life size scenes carried out with corn in its natural colors. When the Friends of the Middle Border dedicated their new museum near the Dakota Wesleyan campus, the society presented him with a scroll naming him artist laureate of the region.

Beginning in September of 1943, Oscar Howe became director of art at the high school at Pierre, S. Dak., a position he held until his appointment in 1957, as an assistant professor of fine arts at the State University of South Dakota. He is the artist in residence at the university and also serves as assistant director of the university museum.

In every moment that he can obtain aside from the time he must devote to carrying out the duties in these positions, Oscar Howe is busy creating new work of art. His many awards, exhibits, and other achievements are listed at the end of this article. It is suitable to close this brief biography of Oscar Howe with a statement of his work by art critic, Dorothy Dunn Kramer, on the occasion of his one man show in Santa Fe, New Mexico, in 1957.

"How well Oscar Howe's art progresses was clearly evident in his recent Santa Fe exhibition. The paintings demonstrate eloquently how true is Rene d'Harnoncourt's assertion that a capable, creative artist with a strong native background can become erudite in the techniques and philosophies of the art schools and come through, at last, with his original art strengthened, not harmed, by his experience. Howe's painting emerges broadened, deepened, and uncorrupted, still Sioux at the core.

Most of Howe's compositions would be at home in any contemporary show; yet were it possible for the artist's great-grandfathers, Bone Necklace and White Bear, to see them, they could at once recognize each motif and symbol of the rites, the dancers, warriors, and other tribal figures. This seeming paradox lies not so much in the fact that Howe, through skilled use of modern media and techniques, brings his pictures up to date as in the fact that the art of the old chieftains' day appears modern. It is, so to speak, an art that was ahead of its time so far as style is concerned. In Howe's work, the resemblance of old to new is inherent rather than acquired.

This painting states emphatically that the artist knows the value of his particular cultural heritage to the amalgam culture of the whole country; that Sioux art forms are eternal in significance to the American scene."

AWARDS

Grand purchase award, Philbrook Art Center, Tulsa, Okla., 1947.

Second award, Philbrook Art Center, Tulsa, Okla., 1949.

Second award, Philbrook Art Center, Tulsa, Okla., 1950.

First price, Philbrook Art Center, Tulsa, Okla., 1951.

Second and third prize, Philbrook Art Center, Tulsa, Okla., 1952.

Dorothy Field award, Denver Art Museum, Denver, Colo., 1952.

Second award and honorable mention, Philbrook Art Center, Tulsa, Okla., 1953.

Purchase award, Denver Art Museum, Denver, Colo., 1953.

Grand purchase price, Philbrook Art Center, Tulsa, Okla., 1954.

Tribute to Tom Rivers: Ambassador of Recreation

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. CONTE. Mr. Speaker, Howard Henderson, vice president of J. Walter Thompson Co., the world's largest advertising agency, has sent around a memorandum to his friends about a graduate of Mount Hermon School. Since the days of Dwight L. Moody, this Massachusetts institution has enkindled within its students a world vision and world mission. One of these graduates, Mr. Speaker, is Thomas E. Rivers, director general, International Recreation Association, with offices on the United Nations Plaza, New York. In Mount Hermon, Rivers caught a vision which has matured through more than 4 decades of service to recreation. As a young man he learned from John R. Mott that life should be an earnest effort to make every decision in the light of the whole world from the perspective of the dedicated heart.

For nearly 40 years "Tom" Rivers, as he is known around the world, served as an executive of the National Recreation Association. In 1956 a great international recreation congress was held in the city of Philadelphia with the effective cooperation of the Nation's foremost recreation executive, Commissioner Robert W. Crawford. With the active leadership and financial support of the National Recreation Association, the International Recreation Association was incorporated under the laws of the State of New York on October 3, 1956. Among the important projects developed by IRA has been the annual cooperative community recreation exchange project, administered under grants from the State Department. Lord Luke, chairman of the International Recreation Association Board, said at a reception at Buckingham Palace recently that "Mr. Rivers has taken a technical subject and lifted it to the level of statesmanship."

Now, Mr. Speaker, the reason for my mentioning Mr. Rivers in connection with the memorandum circulated by Mr. Henderson is that Paul Douglass, a member of the bar of the U.S. Supreme Court and one of America's leading educators, in an address on "Types of Creative Leaders" at the 13th annual Great Lakes Training Institute of Indiana University at Pokagon Park, selected Rivers as one of our representative creative leaders, "the kind of human beings who dream, pioneer, invent, act, and lead."

Quoting Paul Hoffman's favorite phrase from Kipling, Mr. Douglass said that today there is a search for a principle that will "walk up and down in the hearts of men." He went on to say that the world struggle of ideologies does not seek merely more bread, but rather to increase income as surplus over minimum needs to provide for man the most prized of all desires—leisure in freedom—and the wherewithal to enjoy it. What all the people of the world want, Mr. Speaker, is to share a common dividend of creative leisure from the operation of our heavily industrialized society.

You will remember, sir, that Emerson, one of our Massachusetts' immortals, advised us that "every great and commanding moment in the annals of the world is the triumph of some great enthusiasm" and that Thomas Paine observed that "an army of principles will penetrate where an army of soldiers cannot; it will succeed where diplomatic management would fail." Mankind everywhere is yearning for the enjoyment of the creative life in the experience of leisure. As the international ambassador of recreation, Tom Rivers deserves the support of every American. Massachusetts is proud of him.

Michigan Meets Its School Challenge

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. CEDERBERG. Mr. Speaker, the State of Michigan is meeting the challenge in the field of education.

This is brought out in a recent report by the citizens research council which pays tribute to the willingness of the people of Michigan to support their schools. Instead of standing at the doorstep of the U.S. Treasury seeking Federal handouts for their schools, the people of Michigan rolled up their sleeves, taxed themselves, and built their own schools. They have kept supervision, management, and control exactly where it should be—at the local level.

I would suggest that other States take note of what is being done in Michigan.

In that connection I submit for consideration an editorial in my hometown newspaper, the Bay City Times, entitled "Greater Support for Schools."

The editorial follows:

GREATER SUPPORT FOR SCHOOLS

In a survey which, it claims, explodes myths about public school education in Michigan, the Citizens' Research Council pays a glowing tribute to the willingness of the people to support their schools.

Although surveys tend to be controversial or can be used to prove almost anything, the council's report appears to have a great deal of validity as a measure of the performance of Michigan in meeting the well-known challenge of education.

The shortcoming of the report, which is readily admitted by the authors, is that it presents only the overall view of the school situation in the State.

Conditions vary from district to district. For example, the council's finding that the pupil load per teacher in the State as a whole has steadily declined and now is at its lowest point is of little comfort to the people of Detroit, who are seeing their high schools lose accreditation because of overcrowding.

By the same token, a teacher in a district which still is paying substandard salaries may not be at all impressed by the report that the average annual salary in 1957 was $5,067 per year.

At the same time, the survey is valuable because it does, as the authors claim, explode some extremely popular myths.

One of these is that the State is lagging desperately behind in the effort to recruit teachers, that financial support of the schools is weak when related to personal income, that districts lack the financial potential to supply needed classrooms, and that overcrowding is a general condition.

The council reports that, on a statewide basis, Michigan has been able to add teachers faster than enrollments could climb. The pupil-teacher ratio in 1947 was 29.5 to 1. In 1957 it was 27.2 to 1.

As for teachers' salaries, the council claims the gain from 1947 to 1957 was 44 percent

in absolute increases—that is, over and above the cost-of-living increases.

One of the most striking figures offered is that showing the increase in spending for operating purposes per pupil in the public-schools system. The council says that in 1957 Michigan's schools were spending more than twice the amount per pupil spent in 1947.

But how about inflation?

Well, the council claims that when the figures are adjusted for the inflation factor, operating expenditures per pupil are from 30 to 50 percent higher.

Expressing this spending in terms of percent of total Michigan personal income, it still presents a picture which reflects favorably on the people. In 1947 revenues for operating purposes—as distinguished from building—amounted to 1.7 percent of total personal income. By 1957, the last full year for which figures are available, the percentage had risen to 2.7.

Dipping into spending for capital improvements and the status of the race to end the classroom shortage, the council found definite figures hard to obtain.

It could establish that annual property tax revenues for capital outlay showed a 570 percent increase between 1947 and 1957.

Whether this seemingly magnificent effort has really met the classroom needs, the council cannot say, claiming that no reliable inventory of facilities is available.

It reports, however, that although the school debt in 1957 was five times greater than that of 1947, State school districts as a whole had plenty of credit left to meet any forseeable school building needs. This conclusion was arrived at by balancing total debt against valuation.

Now it is not possible to jump to the conclusion that just because the people's performance with respect to any given public need has improved immeasurably that a perfect job is being done.

In the final analysis, the important thing is whether the spending for schools today meets today's demands, not how it compares with a decade ago.

And, as the council points out, what is true for the State as a whole may not be true in any given local district. Conditions may vary widely among the schools of a single county—which certainly is true here.

Still, the figures are extremely significant as a general gauge of what Michigan is doing to meet the challenge of the preseent and future.

And certainly some of the claims about the crisis in education, which are dinned into the people's ears day after day, are "myths." The crisis may not be nearly as bad as it has been pictured.

National Forests

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. GAVIN. Mr. Speaker, my intense and continuing interest over the years in the well-being of our great national forests is well known to this distinguished body. We in the Congress are proud of the fact that when issues affecting our forests are at hand there emerges a singleness of purpose that assures the future safety, conservation, and wise use of these forests.

Mr. Speaker, the report on a "Program for the National Forests" which Secretary of Agriculture Benson sent to you on March 23, and which I inserted in the CONGRESSIONAL RECORD on March 24, 1959, is a significant step forward toward more complete development and intensive management. Secretary Benson, Assistant Secretary Peterson, Chief McArdle of the Forest Service, and the others involved in the preparation of this report are to be congratulated.

On July 31, 1953, in a special message to the Congress about the Nation's natural resources, President Eisenhower stated that the Federal Government has a responsibility to see that the national forests are managed wisely. Secretary Benson's report clearly states the measures and action needed to achieve the full development and use of the resources involved. It is now the responsibility of the Congress to study this "Program for the National Forests" and to take the necessary action to carry out both the short-term and long-range objectives.

I am interested in this program not only for its impact on the 181 million acres of national forest in 39 States and Puerto Rico, but also for the opportunities it presents to make the one-half million acres of the Allegheny National Forest in my State more productive and more useful to all our citizens.

The national forests are an operating public enterprise. The timber, wildlife, recreation, water and other resources are not locked up or withheld from orderly public use. The total cash receipts from the sale of timber and related resources now exceed a billion dollars. The second billion dollars in receipts should be reached within the next 10 years.

Each resource on the forests, however, must be developed, managed, and used in a coordinated manner if full renewability and adequate supplies are to be maintained for ourselves and the generations ahead.

We are not harvesting the full allowable cut of timber on all national forests. On the Allegheny we are now cutting about 22 percent of the cut the national forest will sustain. Research in new uses for hardwoods, better quality tree growth and better protection from insects and disease is needed. The accelerated forestry research program covered in this report will do much to improve the forests for expanded use.

The Armed Services Committee, of which I am a member, is constantly confronted with the staggering amounts of nonrenewable natural resources which are consumed to maintain a strong position in this nuclear age. We in the Congress must never overlook the need to build up and improve the renewable natural resources of the national forests as an added source of stability and strength. Research, therefore, is a must.

The flood of people from our cities to the national forests for recreation, hunting, camping and fishing and to enjoy the scenic beauty of the out-of-doors is now a major forest use.

The 1950 census showed some 47 million people living within 300 miles of the Allegheny National Forest. This is a day's drive by car. The next census will show more.

In 1958 over 800,000 people visited the forest for some type of outdoor recreation. An additional 930,000 people from Pennsylvania and surrounding States made day visits to the forest to enjoy beautiful scenery. If this present trend continues we anticipate an annual use over the next 10 years of about 1½ million people. This estimate is based on the forest as it now stands without any major developments to increase the recreation potential.

This "program for the national forests" tells us that the recreational use on all our national forests is expected to almost double within the next 10-year period. Where population figures are concerned, estimates are usually on the conservative side. Hence, we might have more than the 130 million people expected on the national forests by 1959.

The report tells us also the kind and number of improvements needed to meet this demand for more outdoor recreation by more millions of our citizens. The major improvements needed to provide better hunting and fishing by the increasing numbers of Americans going to the forests each year is revealing.

As America's population and economy expand, we in the Congress should make sure that the management, protection, and use of the resources of our national forests expand also. The direct benefits to our Nation will be rewarding.

Our small national forest in Pennsylvania now returns cash receipts of over one-fourth million dollars annually. Under this "Program for the National Forests" the cash receipts for all the national forests could be doubled in the next 10 to 15 years to over $210 million annually. The capital value of our forest property would be increased about a billion dollars. Payments to local counties for schools and roads will increase. Some 620,000 people would be employed in the harvesting and processing of national forest timber.

We cannot place a dollar value on the recreation, soil, and wildlife benefits that will accrue to millions of Americans in all walks of life. Better and more ample supplies of water for industrial and domestic uses, so vital in the West, will also be a benefit here in the East.

Mr. Speaker, we have made substantial progress in the development of our national forests over the past 50 years. Our past accomplishments are not sufficient to meet the resource demands of the future.

In this "Program for the National Forests," we now have a solid base for launching the most realistic and responsible national forest improvement program in our history.

Poison in Your Water—No. 67

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CON-

GRESSIONAL RECORD an article appearing in the New York Journal-American of January 12, 1958, entitled "Rensselaer Boils Water."

The article follows:

RENSSELAER BOILS WATER

RENSSELAER, N.Y., January 11.—The 15,000 inhabitants of this city and two of its suburbs were ordered today to boil their drinking water to guard against an epidemic of hepatitis.

The precaution was taken after an outbreak of the disease was threatened by pollution of the Hudson River, source of the city's water supply. The towns of East and North Greenbush are also part of the Rensselaer system.

Dr. Andrew C. Fleck, county health commissioner, said the Hudson water needs seven parts chlorine per million to make it fit for human consumption. The chlorine level had been reported at one-tenth the required minimum.

Change of Command Ceremony, U.S. Naval Support Force, Antarctica

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. FRIEDEL. Mr. Speaker, during the summer season in Antarctica, November 1957, I had the privilege of visiting this vast continent as a member of the Subcommittee on Transportation of the Interstate and Foreign Commerce Committee. I was greatly impressed, at that time, with the work being done by both the military services and the scientists.

I was particularly impressed with the excellent morale of our servicemen stationed at the bottom of the world in Operation Deep Freeze. I know the fine morale of these servicemen was directly attributable to the outstanding leadership of the operation's commander, Rear Adm. George J. Dufek, and I would like to commend him for the great contribution he has made in the exploration of this heretofore unknown continent.

On Tuesday, April 14, I attended the change of command ceremonies held in New York on board the historic icebreaker *Glacier*, and the luncheon given in honor of Admiral Dufek and Admiral Tyree by the Navy League, at the Waldorf Astoria. The New York Times covered the historic event, as follows:

Rear Adm. George J. Dufek relinquished his post yesterday as commander of U.S. Naval Support Forces, Antarctica.

In a sunlit ceremony here aboard his flagship, the Navy icebreaker *Glacier*, Admiral Dufek turned over his command to Rear Adm. David M. Tyree, a 1925 classmate at the United States Naval Academy.

The ceremony took place at 10:30 a.m. on the fantail of the *Glacier* berthed at 46th Street and the Hudson River. Before the ceremony Admiral Dufek held a news conference—his last as head of Operation Deep Freeze—in the icebreaker's wardroom.

For the last 4 years he headed the operation that supported U.S. research in Antarctic under the International Geophysical Year.

Yesterday he spoke of jet aircraft that would in 10 years be flying a south polar route. Admiral Dufek noted that a present-day flight from Sydney, Australia, to Buenos Aires, Argentina, covers 12,000 miles. A south polar route would cut the mileage in half, he said.

To support such a route, he said, a permanent, ice-free airfield would be necessary as a safety field for the flights of jet airliners. Admiral Dufek noted that for 2 years engineers had been surveying a strip of land near McMurdo Sound for such a field.

Mayor Wagner designated April 14 as U.S. Navy Antarctic Day.

A number of messages commending Admiral Dufek for bringing a new challenge to the U.S. effort in Antarctica were read at the ceremony. Among these was one from Adm. Arleigh Burke, Chief of Naval Operations, who himself has had much to do with the success of the U.S. effort in Antarctica during the past 5 years. The message from Admiral Burke also commended Admiral Dufek's successor, Admiral Tyree, to the new tasks and challenges before him:

On the occasion of the Navy League change of command luncheon for Admiral Dufek and Admiral Tyree, I should like to again pay tribute to the initiative and planning that has gone into the Deep Freeze operations. The Navy has been fortunate to have men with the experience, courage, and ability exemplified by Admiral Dufek. Admiral Tyree continues the work that has begun in this vast and most unexplored continent. He brings to his new command a wealth of enthusiasm, initiative and ability to continue the pattern that has been established so outstandingly by Admiral Dufek.

The Navy is proud of the part it has played in the exploration of Antarctica but in the final analysis, it is men like Admiral Dufek and Admiral Tyree who determine the success or failure of projects like this. They have established a tradition which will go down in the annals of Navy history as one of the brightest moments for our nation. To Admiral Dufek I extend a most sincere and grateful well done. To Admiral Tyree, my congratulations on receiving this command and my best wishes for a successful tour of duty. (Arleigh Burke.)

Mr. Speaker, until his retirement on September 1, Admiral Dufek will be assigned to the Office, Chief of Naval Operations. I am sure I can speak for my colleagues here in the House when I say our very best wishes go with him for success in any endeavor he may undertake.

Economic Aid for Latin America

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. REUSS. Mr. Speaker, the Milwaukee Journal, speaking through its editorial colums recently, has pointed up the fallacy of our overemphasis on military aid and our underemphasis of economic aid to Latin American countries:

CUT OR DROP MILITARY AID TO LATIN AMERICA

If there is any area where American military aid is indefensible, it is Latin America. The area does not need armaments. It cannot afford them. All American arms do is stir feuds among neighbors, encourage military dictatorships and earn ill will for the United States. The claim that these countries must be armed as part of the free world effort against Communist aggression is dream stuff.

Senator ELLENDER, Democrat of Louisiana, recently returned from a Latin American study of U.S. Government operations. He paid particular attention to military aid activities. Here are excerpts from his report to the Senate Appropriations Committee.

"It is my fear that armies created in Guatemala or other countries to the south of us may end up doing nothing but fighting each other.

"It appears to me that if Nicaragua wants arms, it is well able to buy them. I do not think it is advisable to indiscriminately create large armies throughout this section of the world.

"Equipment is flowing into Colombia. * * * Much of this will be used for road-building. I question the use of military forces to build roads. * * * In many of these countries the military forces exert a strong, if not controlling, influence over civilian goverments. I question the wisdom of a move which would have the effect of further vesting civil functions in a foreign military service.

"The United States should immediately reevaluate the need or necessity of maintaining advisory military missions in the countries to the south of us. I found that we were not wanted in some countries, but we seem to persist in remaining there.

"Most of these governments are now struggling to make both ends meet, and for us to suggest imposing greater burdens upon their already struggling economies may well result in making them more dependent upon the United States."

Economic aid is something else. This is needed and is generally prudently and constructively administered. The new Inter-American Development Bank, to which the United States will subscribe $350 million, should have a helpful place. But military aid, other than helping us to dispose of some obsolete American weapons, serves no good purpose in Latin America.

And President Eisenhower has proposed raising military aid to Latin America by 72 percent. A wise Congress will reduce it by that amount.

Better yet, it will eliminate it.

Scripps Professor Receives Award

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, I am happy to make part of my remarks an extraction from the clip sheet issued by the University of California pertaining to an award made to Martin W. Johnson, professor of marine biology at the University's Scripps Institution of Oceanography.

Professor Johnson has made a great contribution in this important field. I know that you, who are interested in it,

are happy to see that his work has been recognized by the National Academy of Sciences.

The field of oceanographic study is one that affects all the people of this country. It behooves us to recognize its importance so that through our support benefits may be reaped in our defenses, our economy, and our food supply:

SCRIPPS PROFESSOR RECEIVES AWARD

LA JOLLA, April 4.—Martin W. Johnson, professor of marine biology at the University of California's Scripps Institution of Oceanography, has been awarded the Alexander Agassiz Medal of the National Academy of Sciences—one of the greatest honors in the field of oceanography.

Established in 1911 by the British oceanographer Sir John Murray in honor of the American oceanographer Alexander Agassiz, the medal has been awarded at infrequent intervals for outstanding contributions to the science. Only two members of the Scripps staff have previously won the award. They were Thomas Wayland Vaughan and Harald U. Sverdrup, both of whom were directors of the institution.

The award to Johnson cites his outstanding contributions both to biological oceanography and to oceanography in general.

Johnson is an authority on marine invertebrates, animals without backbones, including such creatures as lobsters and crabs. He is the coauthor, with Sverdrup and Richard H. Fleming, of the book "The Oceans," which is the first modern reference book in oceanography. It was published in 1942.

Johnson's achievements in research during World War II won him wide recognition, including a Certificate of Commendation from the Navy for outstanding research.

Moral Re-Armament, a World Force for Peace and Harmony

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to insert the text of an article I have received from Mr. Vicente Villamin, a well known Philippino of Los Angeles County, Calif. His calling attention in paragraph 2 of this article to the fact that Hon. Joseph Scott, late of California, a distinguished lawyer of national renown, was an active endorser of Moral Re-Armament gives me opportunity to state that I am ever grateful to the memory of Joseph Scott. I say this because when I was a young lawyer in Los Angeles County just starting out, he, on more than one occasion without financial compensation, extended me courtesies of his office and of his wonderful staff of associate helpers in his office. In those days my law office was situated in Long Beach, Calif., about 20 miles from Los Angeles courthouse, and also in those early days there was no branch of the Superior Court of Los Angeles situated in Long Beach. Hence, as a Long Beach lawyer his courteous extension to me of his office courtesies on many occasions was then and now is very appreciatively recalled.

The article following appeared in the Windsor, Canada, Star, Saturday, January 10, 1959:

NO CONFLICT BETWEEN MORAL RE-ARMAMENT, CATHOLICS—PHILIPPINE WRITER SEES VATICAN SUPPORTED IN ANTI-COMMUNIST DRIVE

(By Vicente Villamin)

What is Moral Re-Armament? It is a world movement to bring about harmony between individuals and between nations. It seeks to change individuals by shedding their bitterness and introducing instead the four moral standards of the movement—absolute honesty, absolute purity, absolute unselfishness and absolute love.

It is not a religion nor a religious movement. Persons of different religions are admitted to it. There are thousands of Catholics in it. Among them are Princess Castelbarco, of Italy, whose family have produced a Pope; Mr. Gabriel Marcel, the leading Catholic philosopher-writer of France; the late Mr. Joseph Scott, of California, a leading Catholic layman in the world and a papal knight; and many others prominent in their countries.

All the Catholics in Moral Re-Armament testify that their interest in the movement has not shaken by an iota their Catholic faith. As Archbishop Cushing, of Boston, told me last September, the Catholics who were with Moral Re-Armament became better Catholics and that, therefore, he was for it, adding that he did not mind at all if he was quoted anywhere to that effect. The dynamic prelate has since been designated a cardinal by Pope John XXIII.

I was in Rome last October and November. I was going to be received in private audience by the late Pope Pius XII to discuss the subject of communism in Asia on which I submitted an 11-page memorandum to him and other Vatican authorities. But he passed away before I arrived in Rome. So I had to make other arrangements and talked with many cardinals and other prelates in and out of the Vatican.

I found deep interest and sympathy about the work of Moral Re-Armament, particularly in the international field. While the preservation of the purity of the faith is of prime importance, what is at stake in the world today is the preservation of religious faith itself, which the Communists are determined to abolish.

In reality, there are no basic conflicts between the Catholic Church and Moral Re-Armament. The Catholic publication in London, the Tablet, affirmed this in connection with the so-called gentleman's agreement in Switzerland.

A few years ago the Holy Office in the Vatican, which guards the purity of the Catholic faith, issued directives to Catholics regarding participation in Moral Re-Armament, cautioning them about possible indifferentism. Indifferentism is the idea that all religious faiths are at bottom the same in their moral validity. Catholics are expected to reject that.

This danger is answered by the Catholics themselves in Moral Re-Armament. They affirm that that question never comes up in the observance of the four moral standards mentioned above. In fact, they add, that that observance helps them to discharge their duties as Catholics more faithfully and assiduously.

Another danger which the Holy Office pointed out is that Moral Re-Armament might lead to syncretism, which is defined as an "error (which) consists in uniting conflicting religious beliefs so as to reduce them to a common denominator acceptable to all." This is met by reiterating the fact that by no stretch of the imagination could Moral Re-Armament be considered a religion or religious movement.

There must be no mistaking the massive fact that Moral Re-Armament believes in God, His dominion and His direction, first, last, and always. On this, the Moral Re-Armament accords to compromise no sanction and to criticisms no fear.

I was profoundly impressed by the bigness, goodness, and devotion of the prelates whom I met at the Vatican. With many of them I had more than an hour's talk, on more than one occasion. As a Catholic, I felt proud that the heads of my church were of such caliber.

I was told that the late Pope Pius XII was very much worried about the advance of communism, especially in Asia, and that, realizing the necessity of presenting a formidable united front, he wanted to see all religions act in unison, but that he found no way to bring it about.

It was my purpose to suggest that Moral Re-Armament might be used as the common ground for all efforts to face and resist communism, which is ever stepping up its cold war propaganda in the free countries of Asia. In my memorandum, I pointed out that no group of any kind and character is doing that except for the military and the inadequate work of information of the American Government.

I discussed these matters with high prelates in the Vatican. I found them both understanding and sympathetic. One of them, very high in the Vatican category, even said that there would be a change of attitude toward Moral Re-Armament. Another, a cardinal, told me that he read an Moral Re-Armament book "America Needs An Ideology," during the solemn conclave to elect a Pope, and liked it. Still another, also a cardinal, complimented Dr. Frank Buchman, the initiator of Moral Re-Armament, for his good work for humanity and for the world.

In the last 8 months I have traveled around the world on two occasions for Moral Re-Armament. I met the heads of many nations in Asia as well as many leaders in different fields of endeavor. I found them all worried about communism and the lack of united effort against it on the part of the free countries.

They all expressed hope that Moral Re-Armament will furnish the plan, the method, the purpose and the men to carry on the fight against communism, proving its superiority, dynamism and appeal of its principles and policies. Moral Re-Armament is charged by mankind with that grave responsibility. And it will meet it with all the sacrifices that it might entail.

Thus Moral Re-Armament richly deserves the support of all persons of good will. Why should it be discouraged among the Catholics or others who profess other religions? It does not infringe on the sacred mission of the Catholic Church. It does not produce indifferentism, synchretism or any other effects corrosive of the Catholic faith.

And, above all, it does not oppose the Catholic Church, either, openly or covertly. The only church in the grounds of the Moral Re-Armament training center in Caux, Switzerland, is a Catholic church, owned by Moral Re-Armament, where masses are said regularly.

In this enlightened day and age, especially when humanity is challenged at every point in its life by militant, godless communism, movements, like Moral Re-Armament should have the universal support of all men and women who consider themselves as God's children faithful, loyal and true to Him. Moral Re-Armament, when its ranks are swelled by such men and women all over the world, has the capacity to bring more happiness to the world and to save it from disaster at the hands of the Communists.

Poison in Your Water—No. 66

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Eugene (Oreg.) Register-Guard of March 8, 1959, an article entitled "Sewers Called Health Threat":

MEDICAL SOCIETY URGES REMEDY—SEWERS CALLED HEALTH THREAT

(By Dean Rea)

Sewage disposal and drainage problems in east Springfield were termed "dangerous" health threats to Eugene and Springfield area residents in a resolution adopted Tuesday night by the Lane County Medical Society.

The medical group, which represents more than 150 physicians, in the resolution also urged Eugene and Springfield residents to actively support those measures which will eliminate this health threat.

In the society's action, which comes under the heading of "Preventative Medicine," attention was called to contamination of Eugene's source of drinking water supply by effluent which drains into the McKenzie River from the east Springfield area.

The resolution also noted that even current high chlorination of Eugene's drinking water may not destroy organisms producing disease found in human excreta.

Dr. Harold Osterud, county health officer, said Wednesday morning that chlorination of Eugene's water has prevented any epidemic to date.

However, Osterud said certain diseases, including typhoid, infectious hepatitis, polio, viruses and dysentery, may be transmitted through a water supply. He added the east Springfield area is fortunate in having a good water supply.

The current incidence of infectious hepatitis cases is not necessarily linked to the water, he said. "About 90 percent of the cases diagnosed have resulted from person-to-person contacts," Osterud explained.

The county health office reports 28 cases of infectious hepatitis so far this year, including 4 this month, in Eugene and Springfield.

Osterud said his department has been concerned, too, over the possible spread of diseases which might result in an epidemic resulting from health problems posed in the east Springfield area.

He said a committee is studying the problem in east Springfield and that a solution "will be a difficult one, won't be cheap but for the survival of the area is necessary."

The medical society's resolution states that "there exists at the present time heavy contamination by human excreta of surface water and drainage ditches in the area east of Springfield and that this contamination is due to poor soil drainage and inadequate sewage-disposal facilities."

It also states that "this heavily contaminated water flows by drainage ditches directly into the McKenzie River in considerable amount, one-half mile above the intake for the water supply by the Eugene area."

"Because of the excessive contamination," the resolution continues, "heavy chlorination of the water supply is mandatory and this has made the water objectionable in taste and odor to many people.

"Certain organisms, producing disease found in human excreta, may not be destroyed even by hyperchlorination," the resolution adds.

In summary, "the Lane County Medical Society states emphatically it's deploring the existing dangerous condition."

The resolution was the first stand by the medical society on the "fringe" area health problems which have been part of a controversy that has raged for more than 3 years east of Springfield generally between 32d and 58th Streets.

Measures for eliminating the health hazard were not detailed in the medical society resolution but may refer to three unsuccessful annexation attempts held in the area during the past 4 years.

Sixty medical society members gave overwhelming support to the resolution in a voice vote; one dissented.

Physicians, in discussing the resolution, called attention to "other" fringe area health problems but were generally agreed that the east Springfield health problem was more acute and felt they should sound a "warning."

Osterud said Wednesday other fringe area health problems include those in Danebo, south Eugene, Bethel, and Willakenzie, and are the result of rapid population growth. He said there is a serious health threat in polluted surface water which drains in the McKenzie ditch near schools and residential areas.

The medical group met jointly with the Lane County Bar Association to discuss mutual problems relating to court cases.

Hear That Lonesome Whistle

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Railway Labor Fact Sheet No. 6 provided by the Railway Labor Executives Association of Washington, D.C.:

SOARING RAILROAD PROFITS: NET EARNINGS NEAR PEAK OF WHOLE POSTWAR PERIOD

The railroads of the Nation today, as always, are crying poverty, but are their cries justified? Not at all when you check into the facts and figures which reveal that railroad profits are nosed upward and nearing the peak of the entire postwar period.

Truth of the matter is that U.S. railroads have snapped back from the recession of 1957–58 and their basic financial position is excellent today.

In the last 4 months of 1958, the railroads were chalking up earnings at the rate of more than $1 billion per year in net railway operating profits.

That figure represents a higher mark in profits than in most of the postwar years; in fact it is close to the peak earnings during that period.

Meanwhile, profits in 1959 are showing a further upward trend with carloadings on the rise. In the first 3 months of this year, carloadings registered a 6 percent gain over the similar period of 1958.

Rail labor's contention that the rail profit picture is far better than the carriers would have the public believe is confirmed by information released by the railroads.

For instance, the estimated net railway operating income of class I roads in February of this year amounted to $39,793,000—that compared with $9,067,000 in the same month of 1958. And in the first 2 months of 1959, the estimated net railway operating income was $75,963,000 compared with a net of $40,982,000 in the corresponding 1958 period.

Other figures stemming from the Bureau of Railway Economics of Association of American Railroads reveal that total operating revenues showed a 4.1 percent increase in the first 2 months of this year—$1,532,496,964 compared with $1,472,791,123 in the corresponding period of 1958 while operating expenses increased less than one-half of 1 percent.

The railroads are and have been recovering very well from the recession that hit most industries, carloadings-wise and profitswise.

In the week ended April 4, 1959, the railroads loaded 590,133 cars, representing a boost of 73,886 cars or 14.3 percent over the corresponding week in 1958.

The Wall Street Journal recently conducted a survey which unearthed some interesting information that disproved the gloom and doom cries of the Nation's railroads.

The survey showed that the railroads have been doing much better in the profit column, in making a return from the economic slump, than have the big corporations of the country in general.

Profits of the major firms in the fourth quarter of 1958 were approximately 2 percent above those of a year earlier. Class I railroads, however, had registered a whopping 23 percent increase in that period. They earned $248 million compared with $202 million in the last quarter of 1957.

As did many industries of the Nation, the 1957–58 recession hit some railroads severely, but no serious damage was caused. No new railroads found themselves in a state of receivership or bankruptcy.

Dividends of some carriers were reduced or abolished for the year of 1958, but total dividends for the rail industry as a whole were reduced only moderately.

Total net railway operating income for all railways from September through December 1958, was $368,932,000—20 percent higher than for the similar period of 1957 and only 6 percent below the corresponding period of 1956, a year when net railway operating income surpassed $1 billion.

After all charges, net income during the last 4 months of 1958 was $323,774,000. That was a 25-percent increase over the 1957 level; only 6 percent under 1956.

The net railway operating income, which is the operating profit of the railroads, has continued to be $1 billion or near it during most of the postwar years. Before World War II, the net operating income frequently slumped well below $500 million and even below $200 million during the depression years of the 1930's.

It has not dropped below $750 million since 1949.

Net income—the final corporate profit of the railroads—has remained very stable.

The carriers as a whole reported net deficits in some years prior to the war. This has not occurred since the war's end and in recent

years the net income has been well over $500 million.

The same has held true for the individual railroads as for the rail industry as a whole—nearly all carriers have maintained net income in each postwar year. The number of roads which have failed now and then to register corporate profits has been small, even in times of temporary recession.

Following the 1949 recession, with recovery in 1950, the railroads of the United States moved ahead to attain new earnings' records. They amassed the largest net income in history, up to that time, in 1953, when they bettered the best of the lucrative 1920's and the peak years of World War II.

They endured another recession in late 1953 and throughout most of 1954, but hit a new peak level in 1955 when the 1953 record was smashed.

The U.S. railroads are making an impressive recovery from the 1957–58 recession and nearly all individual roads have shared in the industrywide return to better days.

Most carriers have increased their earnings well above the closing months of 1957 and near to the high peaks of 1956.

Some railroads have made higher profits than in 1956.

The outlook for 1959 is excellent.

Predictions for carloadings, stemming from shippers' advisory boards and other authoritative groups, are that a substantial traffic increase above last year's level will be registered in 1959.

Profits are looking up.

Less-Than-Honorable Discharges

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present to the attention of your own busy self and all the other Members of this great legislative body, the text of three letters of approval and endorsement which I have recently received from three of the nationally known veterans groups in the United States of America. I am sure that you and all of us interested in this ever-present and vital subject of less-than-honorable discharges to thousands of our military personnel each year will be pleased to see these three letters.

They are as follows:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
OFFICE OF DIRECTOR, NATIONAL
LEGISLATIVE SERVICE,
Washington, D.C., March 17, 1959.

Hon. CLYDE DOYLE,
Member of Congress, U.S. House of Representatives, Washington, D.C.

DEAR MR. DOYLE: This is in response to your letter of February 16, 1959, with attached copy of H.R. 88 which proposes to amend present law to provide that the Board for the Correction of Military or Naval Records and the Boards of Review, Discharges, and Dismissals which give consideration to satisfactory evidence relating to good character and exemplary conduct in civilian life after discharge and dismissal in determining whether or not to correct certain discharges and dismissals and to authorize the award of an exemplary rehabilitation certificate. The Veterans of Foreign Wars is on record as having endorsed in principle H.R. 8772 of the 85th Congress and we gave this bill our full support. We shared your keen disappointment when the bill failed to move forward in the Senate and died with the adjournment of the 85th Congress. It is noted that H.R. 88 is almost identical to H.R. 8772, with one major exception: For those meeting the requirements of this legislation an exemplary conduct certificate will be issued rather than a general discharge limited as was proposed in H.R. 8772.

The VFW wholeheartedly agrees with the principle of issuing an exemplary certificate based solely on the record of rehabilitation after service with no change in discharge—solely because of such rehabilitation. We endorse the proposal that an exemplary certificate is much more preferable and appropriate than general discharge limited. As has been pointed out this bill is not designed to grant or change discharge certificates but rather is intended to remove the stigma that attaches, sometimes for life, to a veteran with a less than honorable discharge certificate.

We certainly will lend our full support to the principles and objectives of H.R. 88. If further hearings should be scheduled with respect to this legislation, the Veterans of Foreign Wars will be deeply appreciative of being advised so that a representative from this office may be present and testify in behalf of our organization.

Thanking you for inviting the views of the VFW concerning this most meritorious legislation, I am,

Respectfully yours,
OMAR B. KETCHUM,
Director.

DISABLED AMERICAN VETERANS,
NATIONAL SERVICE HEADQUARTERS,
Washington, D.C., April 1, 1959.

Subject: H.R. 88 and about 30 companion bills on the same subject.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR MR. DOYLE: Your interesting letter of March 24, 1959, on the above subject, with enclosures, has been received and very carefully considered.

The then DAV national director of legislation, Maj. Omer W. Clark, in his letter of June 26, 1957, addressed to you as chairman of the Special Subcommittee on Military Discharges, House Committee on Armed Services, commented upon the provisions of H.R. 1108, 85th Congress, and the numerous identical bills before that Congress. Major Clark stated in effect that the Disabled American Veterans did not have an official mandate either to support or oppose such proposed legislation but he indicated that the DAV viewed with considerable misgivings the possible effect of the bill in question should it be enacted into law and placed into operation. As the above mentioned statement is a part of the printed record of the hearings conducted by your subcommittee it is not believed necessary at this time to reiterate the reasons given for our doubts and apprehensions.

In my opinion, H.R. 88 of this Congress, in eliminating the reference to "General Discharge (Limited)," is more acceptable than was H.R. 1108 and its companion bills. However, there is considerable doubt in my mind as to just how much good the possession of on exemplary rehabilitation certificate will do the holder of a less than honorable discharge from the Armed Forces, when he goes to seek civilian employment. It seems to me that if such veteran shows such certificate to a prospective employer the latter will immediately note the word "rehabilitation" on it with the distinct possibility, if he if he is interested enough to follow it up at all, that he will delve into the adverse facts and circumstances resulting in separation from the service with an other than honorable discharge. In the VFW letter of March 17, 1959, a copy of which you enclosed, the term "exemplary conduct certificate" is used in one place and I believe this is an improvement due to omission of "rehabilitation." It might even be advisable to add the word in parens "(civilian)" after "exemplary conduct certificate" to emphasize that the good conduct was post-service and had no reference to the actions in service, as previously determined by the Armed Forces.

In providing a certificate such as that contemplated by H.R. 88, designed for a special purpose (employment), the question arises as to whether or not such a certificate would militate against some veterans obtaining favorable reconsideration of their service discharges by the Department of Defense. Human nature being what it is we cannot help but feel that it would react unfavorably in an appreciable number of cases. The existence of the certificate and the procedure incident to its issuance would offer an easy way out for interested officials of the Defense Department by enabling them to take some action in the interest of the veteran-applicant without going to the extent of changing the character of his service discharge. There are still other considerations that come to mind bearing upon the advisability of adopting such legislation, and these relate to morale in the Armed Forces, the very considerable burden that would be placed upon the Department of Defense during these highly critical and dangerous times—both as to investigating and adjuticating these cases, and the possible threat that such a system might impose on our nationl defense through permitting dangerous elements who had been separated from the service because of communistic affiliations or actions to infiltrate our great industrial network and to wreak havoc when the time came for them to carry out the orders of their foreign masters.

Some might say that there would only be a comparatively few such instances in the last mentioned category. That could be true but it would only take one agent who gave no thought to his own safety, and one nuclear bomb, to completely wreck a vast industrial complex, and the entire area for many miles around.

In conclusion, permit me to thank you for communicating with me about this proposal of yours. I know how sincere and earnest you are in pressing for the enactment of the legislation. I am also certain that you appreciate the position of the Disabled American Veterans, in the absence of a mandate binding upon this legislative department. In this letter I have tried to touch upon some of the points that require much soul searching upon the part of the Congress before taking the long step embodied in H.R. 88 and its companion measures.

Sincerely yours,
ELMER M. FREUDENBERGER,
Acting National Director of Legislation.

AMVETS NATIONAL HEADQUARTERS,
Washington, D.C., April 9, 1959.

The Honorable CLYDE DOYLE,
U.S. House of Representatives,
House Office Building,
Washington, D.C.

DEAR MR. DOYLE: This will acknowledge your letter dated March 25, 1959, with enclosures, relative to H.R. 88, a bill introduced by you which would make certain changes in the Servicemen's Readjustment Act of 1944 regarding the type of evidence that should be considered by the Boards for the Correction of Military and Naval Records and Boards of Review, Discharges and Dismissals. Additionally, your bill would authorize an award of an exemplary rehabilitation certificate to certain veterans who

have demonstrated exemplary conduct subsequent to service. AMVETS has long been interested in this general subject of discharge reviews and has always made our views known not only in supporting bills that you have introduced but also in discussions on this subject with various Defense Department officials. We are of the firm opinion that this entire area is in need of further study including not only the laws, regulations, and procedures under which the Correction Boards and Boards of Review, Discharge and Dismissals operate, but also procedures under which various branches of the services discharge personnel administratively and otherwise.

AMVETS is in full agreement and strongly endorse the first section of your bill which would mandate the Correction Boards and Discharge Review Boards to take into consideration, when reviewing an other-than-honorable discharge, conditions and circumstances prevailing at discharge of the individual, his age, what the punishment in civil life would be for the same offense, and the moral turpitude involved. Making the consideration of these features mandatory may tend to make the members of these Boards more liberal and equitable by permitting them to consider a wider range of factors in their determination as to whether or not a discharge should be changed. It will also enable the veteran or his counsel to build a stronger case. In our judgment, therefore, your proposal, if enacted, would greatly benefit the veteran in his application for a change or correction of discharge.

We also support the concept underlying the other major feature of your bill calling for an award of an exemplary rehabilitation certificate. This would be issued, according to your bill, to a veteran with an other-than-honorable discharge who can establish by affidavits and other evidence that for 3 years following service he demonstrated exemplary conduct in every respect in civilian life. While this award would have no bearing on the veteran's discharge, it would certainly tend to mollify to some degree the stigma attached to his undesirable discharge or other discharge not under honorable conditions. While we can envision difficulties in the administration of this law, as it relates to this award, this fact would not alter our support of such legislation. As we have indicated earlier in this letter, this entire area, including inservice discharge procedures and procedures governing postservice reviews are in need of continuing study and review in order to develop the most equitable and fair method of handling these matters. We commend you for your interest in these problems and your efforts to institute changes for improvement in the entire system. AMVETS appreciate very much this opportunity to express our views on H.R. 88.

Very sincerely yours,

JAMES W. HAFEY,
Assistant National Service Director.

In addition to H.R. 88, 30 Members of this House have also filed companion bills and I am pleased to state that just a couple of days ago, after waiting about 3 months for report from the Pentagon Building, Hon. CARL VINSON received an adverse report to H.R. 88 and all of the companion bills. In due time, Mr. Speaker, I hope and expect that this whole subject matter of less-than-honorable discharges in the initial form of H.R. 88 and companion bills will again come to the attention of the House of Representatives. In fact, I hope it will be before long. As you will no doubt remember, during the 85th Congress, owing to your gracious and understanding courtesy and cooperation, the Doyle bill, H.R. 8772, which was the predecessor to H.R. 88, passed the House by an overwhelming vote of 226 to 8, but largely because of delays in transit in getting the report out from the Pentagon Building at an earlier date, said bill did not get to the Senate committee's attention as early as it should and, therefore, the Senate did not consider the bill last session. But I am pleased to state that Senator STENNIS from Mississippi is ready to file the text of H.R. 88 and companion bills in the Senate.

These bills, Mr. Speaker, are very moderate bills; they do not ask nor intend to ask the Military Establishment to change any military record nor to grant any boy who uses the provisions of any of these bills any upgrading of any discharge. The proposed Certificate of Exemplary Rehabilitation does not compete with any honorable discharge or discharge under honorable conditions. In fact, is it not a discharge. It is a proposed certificate by the Military Establishment that if a boy, after living an exemplary life in civilian pursuits for not less than 3 years, and if he can prove that to the satisfaction of the Military Establishment; in their sole discretion, then they can at their sole discretion issue to such boy an exemplary rehabilitation certificate. It is hoped that this certificate will at least help a deserving lad who has made minor offenses or errors while in the military to remove at least a little of the stigma and help him at least a little bit to get employment. It grants him no Government benefits. It will not interfere with military discipline.

Mr. Speaker, it seems significant, does it not, that these three great nationally known veterans groups so cordially and emphatcally support H.R. 88 and companion bills? I have received word from the American Legion that they cannot act upon the proposed legislation until their national convention later on this summer.

Railroad Traffic Is Up—But Railroad Employment Is Down

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Railway Labor Fact Sheet, No. 7, provided by the Railway Labor Executives Association of Washington, D.C.:

RAILROAD UNEMPLOYMENT: CHRONIC AND CRUEL

Railroad unemployment is extremely acute. Over 200,000 railroad workers were unemployed in January 1959. More than 160,000 of them were drawing unemployment insurance, but 40,194 had exhausted all payments available to them under the Railroad Unemployment Insurance Act.

During fiscal 1957–58 more than 300,000 workers, representing 21.2 percent of the qualified work force, drew unemployment compensation.

The picture is even darker than these figures indicate.

Thousands of workers lost their jobs before the 1957–58 recession. These workers no longer qualified for unemployment compensation, and thus were not counted among the unemployed in this computation.

The latest figures—for December of last year and January and February of 1959—show railroad employment is at the lowest level of the 20th century.

Average midmonth count of positions on class I railroads

1952	1,206,312
1956	1,042,664
1959 (January)	810,675

Traffic is up on the railroads but employment is down.

January carloadings were slightly above the same period last year.

February carloadings were 8 percent above the 1958 level.

March carloadings were 11 percent above March 1958.

Railroad jobs in January 1959 were lower by 8 percent than in January 1958.

Railroad jobs in February 1959 were lower by 5.6 percent than 1958.

Railroad unemployment hits the older worker particularly hard. It should be remembered that railroading is different from other work, and most railroaders cannot carry their skills—and more than their seniority—to other industries.

Of the more than 300,000 workers unemployed in the rail industry last year, 111,600—36 percent of the total—were over 45 years of age; an additional 36,000—11.7 percent of the total—were between 40 and 45.

Despite the overwhelming statistics of unemployment hardships, railroad management has consistently refused to alleviate any of the suffering. The railroads stubbornly resisted even negotiating on job stabilization. Rail management has vigorously opposed improved unemployment compensation benefits for employees.

Ground-Breaking Ceremonies, Sunday, April 26, 1959, for the New Reserve Training Center, Bellefonte, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. VAN ZANDT. Mr. Speaker, before a large crowd of interested citizens ground was broken Sunday, April 26, 1959, for the Army's new Reserve Training Center at Bellefonte, Pa. It was my privilege to deliver the principal address, which follows:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE GROUND-BREAKING CEREMONY FOR THE NEW ARMY RESERVE TRAINING CENTER, BELLEFONTE, PA., APRIL 26, 1959

It is an honor to have been invited to participate in these ceremonies.

The Reserve training facility which will be constructed at this location is one of thousands of similar installations throughout the country authorized by the Congress of the United States to provide our Reserve forces with the necessary physical facilities.

The Army Reserve training facility which will be constructed here will house the 430th Quartermaster Company, and the 1st platoon, A Company, 491st Engineer Battalion.

This armory, when completed, will cost nearly $300,000 and both of these combat support units will then be able to maintain their proficiency in the complicated art of modern warfare.

Speaking of our Reserve forces as a whole, they have not always been in the favorable position of having available adequate training facilities that the Bellefonte units will have available in the near future.

Frankly, prior to World War II and also for a period of 4 or 5 years after World War II, our Reserve forces were sadly neglected.

However, at that time the Congress recognizing the deplorable state of our Reserve forces enacted into law the National Defense Facilities Act of 1950.

The National Defense Facilities Act of 1950 enacted as Public Law 683, 81st Congress, initially authorized the appropriation of Federal funds in the amount of $250 million over a period of 5 consecutive fiscal years for the acquisition, construction, and expansion of facilities for the several Reserve components.

In 1955, Public Law 302 of the 84th Congress increased this basic authorization to $500 million and extended the time period during which this authorization remained in effect until 1958.

Subsequently, by succeeding legislation this general authorization was increased to $668 million.

Under the provisions of this basic law—which is the keystone upon which our Reserve facilities programs operate—Congress has indicated it would underwrite the construction of permanent training facilities throughout the country so as to insure the maintenance of an adequate Reserve program.

Under the provisions of this legislation armories are constructed which are 100 percent federally owned and authority is also given to contribute to the individual States for the construction of new National Guard facilities.

In the latter case, the Federal Government contributes 75 percent of the money required for the development of the Reserve facilities in conformance with Federal requirements.

At this point I would like to briefly review the actual status of this program.

ARMY NATIONAL GUARD

Upon enactment of the National Defense Facilities Act of 1950 the several States and Territories had in existance only 916 armories adequate to properly house federally recognized units, and these facilities were constructed without Federal assistance provided therein.

Subsequent to the enactment of the aforementioned legislation the Army National Guard has completed or placed under construction contract more than 1,000 armories with appropriate Federal contributions as I previously indicated.

U.S. ARMY RESERVE

There are, in the case of the U.S. Army Reserve over 1,810 U.S. Army Reserve centers in use including those constructed, leased, or donated.

However, only 458 of these leased and donated facilities are reported by Army commanders concerned to be adequate for continued longrange use.

Therefore, in the cast of the U.S. Army Reserve the Department of Defense with the permission of Congress has initiated a vigorous and accelerated program of construction designed to replace existing inadequate facilities.

Thus, during 1958 there were 112 new centers under construction and 80 additional centers were programed for fiscal year 1959 and 1960 thereby resulting in a total of more than 465 newly constructed facilities for the U.S. Army Reserve by the end of fiscal year 1961.

NAVAL RESERVE

At present, there are 300 Naval Reserve training centers, 19 Naval Reserve training facilities, 155 electronics facilities, and 9 electronic stations.

Of the 319 training centers and facilities, 74 percent are used jointly with one or more other Reserve components of the Armed Forces.

MARINE CORPS RESERVE

The Marine Corps Reserve occupies a total of 230 facilities.

Of the 230 training centers 156 are jointly occupied with the Naval Reserve, 2 jointly with the Army and Naval Reserve, and one with the Army Reserve.

The remaining 71 facilities consist of 48 federally owned training centers and 25 commercially leased.

AIR NATIONAL GUARD

The Air National Guard program is of comparatively recent origin.

However, during fiscal year 1958 funds in the amount of $22 million were utilized in the construction of facilities for the Air National Guard.

Under the National Defense Facilities Act of 1950, these projects are completely supported by Federal funds and require no State contribution.

At the present time there are 573 Air National Guard units in operation occupying a total of 134 Air Force National Guard bases.

Ninety-three of these bases are flying bases and the balance of 41 are nonflying bases.

AIR FORCE RESERVE

In the case of the Air Force Reserve 37 flying bases are now operational.

Twenty of these bases are jointly used with the Regular Air Force, nine bases are jointly used with the Air National Guard, three bases are jointly used in connection with the Navy, and only five bases are confined solely to Air Force Reserve operations.

In addition to the foregoing, there are 93 Air Reserves centers (nonflying) where tactical nonflying training is conducted.

COAST GUARD RESERVE

Due to its relatively small size, the Coast Guard utilizes training facilities of the other Armed Forces, primarily those of the Navy or existing facilities of Coast Guard operating units.

In a few instances, space is leased for drill sites from other Government agencies or commercial interest.

READINESS OF THE RESERVE

The assignment to the National Guard of concurrent responsibility with Regular Army forces for the manning of Nike batteries located throughout the United States is indicative of not only the state of readiness of various Reserve components but reveals the new mission of the Reserves in modern warfare.

Assignment of 24 more Army National Guard Nike batteries to the air defense of key U.S. cities will take place between June 30 and September 1, 1959.

These batteries, now in their final stages of training, represent elements of 14 National Guard air defense missile battalions in 7 States.

They will take over Nike-Ajax sites from the Active Army and will have full operational responsibility for manning these sites 24 hours a day.

In each battalion, one or more batteries will become active.

The designation of these National Guard units to man Nike batteries will bring to 28 the total number of Army National Guard batteries in the on-site missile program.

The overall program calls for the deployment of 33 battalions at 116 sites by June 30, 1962.

All 24 of the batteries scheduled to go on-site this summer have key personnel currently training at the Army air defense center at Fort Bliss, Tex.

The remaining members are actually training at Nike sites under the supervision of the Active Army.

Final transfer of the sites from the Active Army and deployment of the National Guard units will take place following 2 weeks of field training this summer.

National Guard missile sites are operated in much of the same way as a volunteer fire department.

A nucleus of full-time technicians man the equipment around the clock, keeping it in constant readiness and capable of initiating effective fire on the enemy without additional help.

The remaining members of the unit are citizen soldiers in their communities and keep up on their military skills by attending weekly drills with their units.

In the event of an air attack, they would report immediately to their Nike sites, ready to perform their assigned mission.

Similar to the utilization of the Army National Guard units in connection with the manning of Nike installations is the proposed plan of the Department of the Air Force which envisages utilization of Air National Guard units for the manning of Bomarc defense installations throughout the country.

Inasmuch as these Bomarc installations are still in the process of construction actual assignments of individual Air National Guard units have not occurred.

However, it is fully intended by the Department of the Air Force to utilize these Reserve forces in connection with the future development of this program.

In conclusion, as a member of the House Committee on Armed Services, which has legislative jurisdiction over the Reserves of our country, I wish to take this opportunity to commend the officers and men of Bellefonte's Army Reserve units and at the same time congratulate and thank the citizens of this area for the support they have always given our civilian soldiers, sailors, and airmen who in the final analysis are the bulwark of our Nation's defense.

Passover, 5719

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. BOLAND. Mr. Speaker, now, as the solemn and joyous season of the Passover is observed by the Jewish people, it is appropriate for Americans to think over the relationship between our Nation and the nation of Israel, and the history of the Jewish minority group within our multifarious civilization. This is a time for making sure that our national policy toward Israel keeps to the generous and helpful direction set during the Truman Administration, so that the courageous new country, with its ancient traditions and its strong moral purpose, may form a center of both spiritual growth and material prosperity for the discouraged and impoverished region of the Middle East. As, with the Jewish people, we recall the Biblical tale of oppression in the land of Egypt, let

us work with the Jewish people to make sure that no such authoritarian rule, no Communist or other dictatorship, shall prevail in that region, and that no nation or race shall oppress another. We must do all that we can to open the channels of trade, of travel, of immigration and emigration. Political freedom is freedom in name only so long as it does not include freedom of trade and freedom of movement. Our American immigration laws should be liberalized and equalized so as to admit more refugees from eastern European nations, and particularly from Rumania, where the need is particularly pressing.

WE JOIN WITH THE CHILDREN OF ISRAEL IN PRAYER FOR PEACE

Within our own borders, and throughout the world, we should be ready to speak and act with firmness and vigor to eliminate discrimination, and to prevent violence against the Jews or any other minority groups. Surely all Christians, and men of good will of all faiths, can join wholeheartedly with the children of Israel in the prayer that forms the final benediction of the Passover Seder:

With songs of praise we have lifted up the cup, symbolizing the divine promises of salvation, and we have called upon the name of God. Let us again lift our soul to God in faith and hope. May He who broke Pharoah's yoke, forever shatter all fetters of oppression and hasten the day when swords shall at last be broken and wars ended. Soon may He cause the glad tidings of redemption to be heard in all lands, so that mankind—freed from violence and from wrong and united in an eternal confidence of brotherhood—may celebrate the universal Passover in the name of our God of freedom.

Continued Gains in Our Economy Predicted by President of B. F. Goodrich Tire & Rubber Co., of Akron, Ohio, in Speech to Marshall, Tex., Chamber of Commerce

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. PATMAN. Mr. Speaker, as a subscriber I receive the Marshall News Messenger, published at Marshall, Tex., in the congressional district that I have the honor to represent. In the April 22, 1959, issue I read a very interesting speech made by Mr. E. F. Tomlinson, president of the B. F. Goodrich Tire & Rubber Co., of Akron, Ohio, at the annual Marshall, Tex., Chamber of Commerce banquet the night before. The Marshall News Messenger referred to this speech as follows:

Highlight speaker of the 40th annual Marshall Chamber of Commerce banquet was E. F. Tomlinson, president of the B. F. Goodrich Tire & Rubber Co., of Akron, Ohio. Mr. Tomlinson's address was on the topics of business, growth and expansion—all things that mean a greater future for Marshall as a city.

In his speech he said:

I want to talk to you tonight about business. Business, growth and expansion—a subject that I know is of great interest to many of you men here tonight who are actively working to attract new businesses to your community.

The growth and prosperity of your community and the Nation are linked closely to the successes of business. Business, in turn, relies on an enlightened community, attitude and action, to maintain a climate favorable to a profitable business growth.

WHIPPING BOY

There are some political figures who consider it smart politics to use business as a whipping boy and unduly attack business. The capacity of such politicians for public disservice is very great.

Nothing is more important to the progress, prosperity, and security of your community and of our Nation than a mutually responsible and respectful relationship between those who conduct our public affairs and those who operate our private enterprise system.

We have the responsibility in our educational system to teach a better understanding of the profit system which has been the backbone of our business growth in this country.

The word profit is too often related to those moneys paid the stockholders—the capitalist. So many thousands of our people do not realize that from profits we pay taxes that run our Government, that provide us the social benefits that we enjoy, that provide the funds for the replacement of equipment in existing plants, that provide the moneys from which we build and expand into new plants—all of which create jobs. Without profits there could be no growth in our business system.

IMPORTANT TO ALL

What happens to business happens to everyone. If business is good the employment level is high, people have money to spend and they live a better life. When business is bad unemployment is high and people suffer. The interdependence of business and the employee are inseparable.

Young people coming into the labor market must have jobs. Older people leaving the labor market must have accumulated savings, investments, annuities, pensions or other means of living out the balance of their lives.

From 1957 through 1968 business will have to absorb 7½ million 18- to 24-year-old applicants. In this same period of time the family unit will increase by 500,000 per year and, of course, we must have an equal expansion in the labor market.

LARGELY IN GAINS

These new jobs will be found largely in products and services. We believe that the largest growth in the next 10 years could well be in the services field.

We believe there will be a shift of consumer's tastes. For instance, they will buy fewer numbers of automobiles—they will spend more money for recreation.

With the shorter workday and workweek and the increase in paid holidays and vacations, there is going to be more time for recreation. With the improvement in roads there is going to be more desire to see other parts of our country or, for that matter, the world. The want to go is going to substantially increase the amount of money spent in the field of recreation.

There will be a need for an increase in the level of education and this cost of education will be greater. The average family will be spending more money for education and less money for capital goods.

INFLATION TO GROW

We do not believe there is much question but what inflation will continue to grow at a rate of approximately 1½ to 2 percent each year.

The backlog of demand for existing goods are fairly well satisfied. In these areas the industries affected will have a growth rate approximately equal to the expansion of our national economy—which is estimated to be 3 to 4 percent per year.

Such a rate of growth obviously will not be sufficient to absorb the 7½ million new members of the labor force. It becomes quite apparent that our economy must expand or we must provide ways to accept higher unemployment levels.

There undoubtedly will be some of both. As a result, we can anticipate that the government will attempt to spend its way out of unemployment—which will create further inflation trends.

CHANGE NECESSARY

On the other hand, industry must look to change in order to obtain expansion.

This change will be dictated by consumer tastes. What the consumer wants will have to be furnished and his wants in the next 10 years will be different than they have been in the last 10 years.

As an illustration, in the past 20 years we have seen natural gas take over the fields formerly had by coal. But now we see coal making a comeback.

Coal priced itself out of contention. Now with the mechanization of mines, larger equipment for stripping and the increase in costs of distribution of gas it is possible for coal to come back and resume a substantial position in the industrial fuel field. As a result, natural gas will likely grow at about the rate of our national economy whereas coal will exceed this rate.

CONSTANT TUG

We see each year the results of the constant tug between costs and prices. As one product prices itself out of business another product takes over. In a few years that product goes through the same evolution and another product, or the old product, rehabilitates itself into the marketplace.

As transportation costs increase industry moves closer to its markets. As industry moves into new markets, new family units are created and all services of the community—including homes, water, heat, electrical and the many, many other requirements of community life—must be expanded in that community.

In this next 10 years we expect to see the large growth in the following industries:

"First—residential building. With the 500,000 annual increase in new family units and the very heavy attrition in old housing, the tendency to move to the urban areas is going to create a demand of over 1 million homes per year.

SALES CLIMB

Into these homes must go all of the utilities common to a modern home today. Increased sales in the refrigeration industry, for instance, will not be as a result of people purchasing refrigeration for existing homes but be purchased for new homes. The backlog of demand in the existing homes is fairly well filled so we will see the change from the conventional refrigeration to the built-in unit and from the removable kitchen stoves to the built-in type.

The second industry for the greatest potential growth is the boating industry. There is going to be more time for recreation—there are going to be longer holiday periods and more vacation time.

"Today time payment terms have been extended to boats—this paper is being handled by many banks much the same as automobile payment terms.

MORE AVAILABLE

The development of the outboard motor has taken the boat out of the luxury class and made it available to the multitude.

The third area of expenditures will be in the field of recreation, primarily in travel. Today it is possible to take world trips on a time payment basis—either accumulating the funds before the trip or taking the trip and paying for it after it is completed.

The airplane has cut down travel time, making it perfectly possible to spend a 2 weeks vacation in a foreign land.

A few years ago travel was considered a luxury that could be indulged in by a relatively few but the airplane has changed all this and the world has become immeasurably smaller.

NEW DRUGS

Our fourth selection for a growth market is in the field of drugs. A very large segment of our total population today are on one or another kind of a health program.

As a larger percentage of our population gets older and with the increasing numbers of young people the need for drugs will increase.

The records will show that the young and the old are the drug consumers and as these two extremes will be increasing in this next 10 years the drug industry will increase proportionately.

OTHER GAINS

The fifth area of expansion will be in business services.

Let's take a very commonplace example of the bank checking account. As new families are created more checking accounts will be opened. The clerical force used in a bank to handle commercial checking accounts is growing very large and very expensive. They will have to be replaced by mechanization.

This is not only true in the bank but it is true in all clerical areas. In so doing, new equipment will be needed and additional maintenance will be required. The clerks will be replaced by the mechanics. The need for greater skill becomes apparent.

This same thing is true in the field of automobiles. We feel confident that the average ownership of automobiles will increase. Instead of trading your late model car in 2 to 2½ years the tendency will be to run it for another year. As the cost of the automobile increases the need for a longer depreciation becomes apparent.

INCREASED NEED

At the same time, all of the services necessary to proper maintenance will be increased. In the automotive industry we will need more mechanics and fewer salesmen.

Our sixth area of growth we believe will be in the field of air transportation for reasons which we have stated earlier—primarily related to recreation. The future of the overnight passenger train is very limited.

The seventh area of growth is in electrical energy. As we mechanize our plants and build new ones and as we build new more modern homes and equip them with all our modern appliances—television sets, and so forth—the amount of electrical energy needed will increase very rapidly.

NEW FIELD

The eighth area of growth is in the field of electronics which have opened up whole new avenues of the control of equipment—machinery as well as missiles and communications.

We believe the big growth in electronics will be primarily in the military field. The conventional manned military airplane as a combat vehicle is rapidly coming to the end of its effectiveness.

Our present weapons systems are not adequate for our future defense and fantastic and radical changes are coming rapidly.

ONE-TRIP ITEMS

As we gain proficiency in the use of our new defense mechanisms and as we practice the art of war, there will be millions of dollars of electronic equipment used up completely as much of it is only designed for one trip.

Our ninth growth area is in the field of aluminum where we in the United States are far ahead of Europe.

This metal is domestically available. The cost is being rapidly decreased and the differences in cost that have existed between aluminum and other metals are fast disappearing.

We will see a very large increase in the use of aluminum in the automobile. For that matter, in all fields of transportation. The effort will be made to get the weight of carrier down in order to improve the revenue load which returns the income on the investment.

In these growth businesses are the new products that will have to be supplied, the new jobs that must be created and may well represents opportunities for Marshall, Tex.

What does new industry look for in a community? What effect does a new industry have on a community? What does industry need after it is located in a community?

MANY FACTORS

The answers to these questions are a real big subject in themselves. We can touch on only a few of them tonight.

Many industries today look very favorably on the smaller communities—in the semirural setting rather than in or near a large city.

A principal reason behind this interest is the stability of the labor market in the smaller communities.

But a responsible manufacturer must also appraise the adequacy of the labor force to his needs so that he does not dominate the local market and assume too great a responsibility for employment in any given community.

Industry will look at your public school system and what churches are represented. Are there vocational schools that might enter into mutual training programs with the industry? Does the community have a definite plan for attracting new industry which will fit the community's needs. Is the community a pleasing place in which to live and work and raise a family? What are the available transportation facilities?

TAXES OVEREMPHASIZED

Many communities overemphasize low taxes or no taxes at all, low rent, free insurance, free land and even free buildings.

"Many large companies look upon these concessions as artificial concessions and they feel that they may be offered at the expense of other companies already located in the community.

In providing them it may result in poor service from the community and at some future date may lead to higher tax rates for them to pay.

Industry is not looking for concessions. They are looking for favorable working conditions—where employees want to live, where fair wages and a fair day's work aré synonymous.

EFFECT GREAT

What effect does new industry have on a community? Most people think of a new industry in their community in terms of economic benefits. A company moving into a new community makes a substantial capital investment.

The company builds or buys a plant and stocks it with production machinery. The community supplies the talent and the manpower to staff the plant and operate the machinery. It is an arrangement of mutual benefit.

The company brings new capital into the community. It pays taxes, it gives jobs and pay-checks, and it buys materials and services directly from local merchants. It causes economic expansion of many other facets of the community life—such as banks, retail sales, residences, telephones, and all other services.

The majority of forward looking, progressive industries recognize their community responsibilities and support the various social agencies—the YMCA, the YWCA, and hospitals—or any project in the community that is in the public interest and is not related to race or to religion.

MUST BE CITIZEN

Industry must be a good citizen and it must support all of the community interests that are in the interests of the community.

New industry means new schools and roads, hospitals, better fire protection and more public services.

New industry in a community means that the young people—especially the young men—will find employment and careers at home instead of leaving and migrating as strangers to other parts of the country.

Now what does industry need after it is located in a community?

Well in general it wants about 3 things:

First, it wants fair treatment—the right to run its business in a businesslike way. It wants the same consideration and the same protection as that you give to any other taxpayer—no more, no less.,

NO PENALTIES

It wants no privileges. It wants no penalties.

The second thing that is important to a new industry in a new community is that it wants to be accepted as a citizen of the community and not looked upon as an outsider.

The third thing that industry wants is understanding by the community of its operating problems and its responsibilities of what it must do in the community to run a successful operation.

The community must realize that the management of a manufacturing plant must organize and use efficiently the company's human resources—the people who will be employed.

Management must train men who can move up into the managerial positions of the company and management must manufacture a product which will sell competitively in the market place and return a profit. If management is not permitted these prerogatives it cannot organize its effort and pay its own way. If it does not pay its own way it will not survive.

Today you read many pathetic stories of industries leaving communities, of the unemployment problems that are left behind and of the numbers of people who have worked for many years for the company who are now closing their doors.

These industries are often accused of having no heart but, generally speaking, the results of these moves have been the results of community lack of understanding of the problems of the business and the failure to cooperate and correct the problems in time to save the business.

MUST BE COMPETITIVE

A new plant located in any community must compete with similar plants in other communities. Competition is not merely between companies but also between communities.

It is extremely important that the business leaders and the people of a community understand the problems that a business may have and take an active interest to see to it that their community and their businesses do not become noncompetitive.

Management, labor, the citizens of the community and government must recognize that what happens to business happens to everyone.

Statement by Mrs. Virginia M. Gray Before the House Committee on Foreign Affairs

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made before the House Committee on Foreign Affairs, by Mrs. Virginia M. Gray, executive secretary of the Citizens Committee for UNICEF, on April 27, 1959:

STATEMENT OF MRS. VIRGINIA M. GRAY ON BEHALF OF THE AUTHORIZATION FOR THE APPROPRIATION FOR THE UNITED NATIONS CHILDREN'S FUND

The Citizens Committee for UNICEF, an informal clearing house of legislative information serving a number of national organizations which support continued U.S. participation in the United Nations Children's Fund (UNICEF), has been authorized by the following such organizations to present this joint statement:

American Association of University Women, American Parents Committee, Inc., American Veterans Committee, Association for Childhood Education International, Cooperative League of the U.S.A., Friends Committee on National Legislation, General Alliance of Unitarian and other Liberal Christian Women, Jewish War Veterans of U.S.A., Methodist Church-Woman's Division of Christian Service of the Board of Missions, National Association of Colored Women's Clubs, Inc., National Association of Social Workers, Inc., National Board of Young Women's Christian Association, National Council of Jewish Women, United Church Women, and Women's International League for Peace and Freedom.

These organizations support enthusiastically the request of the Executive Branch for a U.S. contribution of $12 million to UNICEF in the fiscal year ending June 30, 1960. Many of our organizations have supported the work of the children's fund since its beginning. Others have become interested more recently as knowledge of the accomplishments of UNICEF has spread and recognition of its enduring benefits to children has likewise grown.

We believe that a U.S. contribution of $12 million is a modest request both in relation to the resources of the United States and in terms of the enormous needs of children in the underdeveloped areas of the world.

SIZE OF CONTRIBUTION

In case a doubt exists as to the financial ability of the United States to contribute this amount, it is important to point out that, while the United States has been the largest single contributor to the children's fund to date, it ranks only 27th among the donor nations for 1958 when its gift is correlated with our gross national product.[1] In other words, 26 other countries, led by Costa Rica, Iran, and Honduras in that order, contribute to UNICEF an amount that is a higher percentage of their gross national product. Or, on the basis of population our gift of around 6 cents per capita could not, in any sense, be considered excessively generous.

In this connection attention should be called to the steady financial growth of UNICEF's resources to meet the needs of the underprivileged children, a growth measured both by the increase in the number of governments contributing to the central account, which rose from 30 in 1950 to 80 in 1957 and to 87 in 1958, and in the absolute amount of money so contributed by central governments. In 1957, 80 governments gave $17.9 million; in 1958, 87 governments gave $19.9 million. One half of this increase represented gifts by governments other than the United States and the other half was an increase by the United States. The 1959 pledge of the United States remained the same as its 1958 contribution: $11 million.

When one realizes that this growth in voluntary contributions to the central account of UNICEF has taken place at the same time that many donor countries are financing other urgently needed projects of economic development that compete for their limited financial resources, and in addition, that many of these same governments are struggling to provide the necessary internal matching funds for meeting their own children's needs, the conclusion is clear that their is almost universal agreement on the merits of this work for children and on the high priority that governments attach to it. At this point a word should be added regarding the dramatic increase in the internal matching by the assisted governments. From the beginning of UNICEF's operations, every government seeking UNICEF aid has been required to contribute from its own resources (in goods and services) an amount equal to the funds given by UNICEF. At the March 1959 executive board meeting allocations of funds amounted to slightly over $10 million. The corresponding commitments of recipient governments totaled $31.9 million, thus matching at a rate of more than 3 to 1 the international funds received.

Now, however, the fact should not be overlooked that the number of governments contributing to the central account has about reached its maximum. Little further increase can be expected therefore from any untapped sources of support. Steady but not spectacular increases may be anticipated from the regular contributing governments but, in the year ahead, these could not offset any loss to UNICEF should, for any reason, the full amount of the recommended $12 million contribution not be received from the United States.

NEEDS OF CHILDREN

To turn now to the story of the enormous needs of the world's children, we find that UNICEF is currently assisting 328 projects in 105 countries and territories. The Executive Director reported to the UNICEF Board last month (March 1959) that over 50 million children and expectant and nursing mothers benefited in 1958 from the principal large-scale disease control campaigns and maternal and child feeding programs. These were direct beneficiaries; the number of children indirectly aided, for example, through the availability of safe milk bought from a pasteurizing plant that received help from UNICEF cannot be counted. A study of the 105 countries now receiving UNICEF aid shows that these areas fall almost entirely within the category defined by the Population Branch of the U.N. as technologically underdeveloped areas. The child population (up to 15 years of age) of this area is approximately 550 million. Of course, no one would even hope to reach all of these children with aid in any form, but such statistics can give a rough idea of the magnitude of the need. When to this is added the increasing child population of the countries assisted by UNICEF—an increase estimated at the rate of approximately 2½ percent a year due primarily to a reduction in infant mortality rather than to an actual increase in the number of births—the fact becomes vividly clear that there is, indeed, "need to run faster just to stand still." Furthermore, the needs of these increasing numbers of children come on top of the present programs directed toward improving the level of services to children.

Sheer numbers of children doomed to starvation or to a life of hopeless poverty, chronic illness, and ignorance is not the whole story, however. UNICEF, while sensitive to these almost limitless opportunities for assistance, is not attempting to increase direct aid on such a mass scale. Rather there is a major effort to improve the quality of the programs which recipient countries are carrying forward, and to concentrate on the type of project that will use the limited resources available for aid most efficiently and thus to promote basic permanent gains for the greatest number of children. Thus programs of aid are determined not only by the existing need but, also, by the ability of the country itself to carry forward its own assistance beyond the limited period of UNICEF aid. A fundamental requisite is the availability of local people who can be trained to carry forward the immediate gains over the long run in an ever-widening area of effectiveness.

There is an awareness also of the interrelationship of the problems of hunger, disease, ignorance and poverty; of the fact that the temporary cure of illness is not enough unless the dangers of reinfection are also removed; that education in basic principles of personal and environmental sanitation is essential; in short, that an an ounce of prevention is from every point of view better than the necessity for more expensive cure. Thus we have the continued battles against the major scourges of yaws, malaria, tuberculosis, and leprosy, and an expanding work against the ravages of trachoma. While these basic programs are making progress, the community development movement expands the usefulness of maternal and child health clinics by demonstrating to the beneficiaries of aid how they can best help themselves toward the goals of a healthful life and a useful place as citizens in their country. In these ways UNICEF is laying foundations for programs of economic development upon which sound future growth and political stability of many areas will depend.

These then are some of the broad needs of the world's children and a glimpse of the way UNICEF is mobilizing a relatively small budget to accomplish a very large measure of permanent betterment for the future citizens of the world. Our organizations believe firmly in the soundness of procedure and the value of the results already obtained by UNICEF. We hope that the United States will continue to afford an unwavering example of leadership by supporting this work with every cent of the $12 million recommended for the year ahead.

[1] Figures for GNP in 1955 taken from "The Role of Foreign Aid in the Development of Other Countries," a study prepared for the U.S. Senate Special Committee To Study the Foreign Aid Program, U.S. Government Printing Office, Washington: 1957, p. 81.

Individual Liberties, National Security, and the Courts

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. LINDSAY. Mr. Speaker, I should like to include in the Appendix remarks

that I made on the subject of the Supreme Court, individual liberties, and national security in a panel discussion conducted by the National Civil Liberties Clearing House in Washington a few days ago. I include these remarks in the RECORD because this subject currently is of such great importance and may come before the House shortly in the form of one or more bills designed to overcome certain decisions of the Court:

Today our attention is properly focused on the Supreme Court, which necessarily has been required to find a fulcrum between the forces seeking to broaden and tighten the circumference of our national security and those seeking perfection in the safeguarding of our individual liberties. It is the judicial branch, rather than the executive or legislative branches, that has been required for one reason or another, to assume the risks of decision in this field, and consequently has drawn the fire. If the lightning rod thus proffered by the judiciary has drawn the heat, the legislature and executive correspondingly have been spared. As a legislator I should be grateful for small favors. But I would be foolish if I didn't recognize that we are all part of this show, and will continue to be, and that responsibility for its proper performance must necessarily be shared by all of us.

I rather suspect it is a dangerous state of mind to become overly persuaded as to the cyclical nature of controversy over the Supreme Court. Like diseases of the body or intellect it will not do to adopt an "it will pass" attitude. If I am persuaded about anything it is that basic liberties do not maintain themselves and must continually be fought for. The mere fact that the Bill of Rights is pedestaled and permanently enshrined in the Archives Building insures us absolutely nothing. I fear that when one or more of our basic rights are destroyed they will not be felled like a giant tree under the woodman's ax, but will be whittled away, chip by chip, with no instrument more ominous looking than a pen knife.

It doesn't seem to do much good, however, to point out to those who view with despair and alarm certain decisions of the Supreme Court that the Court does not go about blithely creating constitutional dilemmas for itself; that the Court did not give the Negro darker skin than Caucasians; and that it did not plant in the minds of the Soviet dictatorship a thirst for world domination. And to those who seem to be guided by passion rather than reason it seems only to feed the flames of impassioned overstatement to point out that the Court must cut new paths in the course of resolving deep social and political clashes. These are clashes which are themselves made inevitable by the inexorable passage of time and the movement of history. And just as inevitably those paths lead across political soil. But if this be trespass, then time has stopped and the human situation remains frozen and unchanged.

Today the search for individual and collective security reaches such monstrous proportions that the preservation of the status quo has become a national craving. Material well-being, the sheltered life, and conformity blank out everything else. We assume that we will live forever and that what was good for us is necessarily good for our children and our grandchildren.

I do not mean to say here that in seeking new adjustments, in keeping with a changing world, the courts, or this Supreme Court, are infallible. Far from it. Their decisions and their methods of arriving at decisions are often quite properly subject to strong criticism, as often are the decisions and methods of the legislature and the executive. But there is need here for restraint. Being a legislator I of course reserve the right to be foolish. Being also human, I reserve the right to be nettled when the Court points out the error of my ways. But I can express my disagreement publicly—a prerogative that is not directly available to the courts. This is a distinction which legislators will do well to remember, along with the realization that the function of a judge is quite different from that of a legislator or administrator.

To the legislator, I suppose that Justice Holmes ought to be the ideal Justice. Alpheus Mason puts it this way, bringing in a rather well-known remark of Holmes: "Having himself no infallible measure of right or wrong, he (Holmes) upheld the programs and policies of legislators even though he considered them in error or foolish. As he himself said, 'I am so skeptical as to our knowledge about the goodness and badness of laws that I have no practical criterion except what the crowd wants. Personally I bet that the crowd if it knew more wouldn't want what it does—but that is immaterial.' Holmes was asked by a friend one day if he had ever worked out any general philosophy to guide him in the exercise of the judicial function, 'Yes,' the aged jurist replied. 'Long ago I decided that I was not God. When a State came in here and wanted to build a slaughterhouse, I looked at the Constitution and if I couldn't find anything in there that said a State couldn't build a slaughterhouse I said to myself, if they want to build a slaughterhouse dammit, let them build it.'" This would indicate a degree of judicial restraint that legislators would find admirable. But, I submit, it is a restraint which exists today in the Court far more than is generally recognized. And Holmes, like the present Court, was progressive in his interpretation of the Constitution and laws when the individual and personal liberties of human beings were at stake.

The briefest examination of previous uproars over the Supreme Court lends proof to the thesis "that time has upset many fighting faiths"; that much more is at stake in the present-day consternation about the Court than the reconsideration of a few decisions.

It is worth remembering, for example, that the political temperature surrounding the Supreme Court at the time *Marbury* v. *Madison* was such that the new President, Jefferson, had refused to permit the Secretary of State to appear in the proceedings, and that the new Congress had not only repealed the Judiciary Act of 1801, defying Marshall and the Court, but even went so far as to legislate out of existence all terms for the Supreme Court scheduled for 1802. This step alone constituted one of the severest setbacks the Court has ever suffered. And then after Marshall had the audacity to hand down his opinion, now universally hailed, public statements condemning the Court came crowding in from every direction. The following excerpt from a contemporary letter to an editor is a mild example:

"Is it right, sir, that an extrajudicial opinion should be given * * * in any case? Is your tribunal organized to exhaust its time in dissertation on ordinary subjects of political speculation? To decide upon the merits of any cause without jurisdiction to entertain it (is) contrary to all law, precedent, and principle."

Some time later, after *McCulloch* v. *Maryland*, the South and the West lashed out at the Court for failing to strike down an act of Congress, much in the same tone that these sections had assailed the Court after *Marbury* v. *Madison* for having claimed the power to do so. As a matter of fact, Ohio refused to accept the McCulloch decision and forcibly seized money from the Ohio branch of the U.S. bank to cover the State taxes which the Supreme Court had flatly declared unconstitutional. Federal marshals had to unscramble that one.

No one here has to be educated about the attacks against the Court from the North after Taney's opinion in the Dred Scott case. The North's own Atlantic Monthly in protest wrote "* * * The most sacred and binding compacts of former years were annulled to make way for it; and the judicial department of the Government was violently hauled from its sacred retreat, into the political arena, to give a gratuitous coup-de-grace to the old opinions and the apparent sanction of law to the new dogma." And in a later issue: "Whatever the * * * Judges of the Supreme Court may seek to maintain, they cannot upset the universal logic of the law, nor extinguish the fundamental principles of our political system." Denunciations of this sort were immediately followed by plans and proposals to clip the Court's wings. There were few who foresaw that it would take a civil war to reverse Dred Scott. An error, no matter how basic, is not cured by abolishing or crippling the constitutional institution from whence it came.

The current consternation over some of the recent decisions of the Supreme Court in the area of national security is possibly small stuff compared to some of these more ancient battles that the Court has survived. But danger signs are nevertheless clearly present, particularly in the form of proposed legislation once again designed to curtail the jurisdiction of the Court.

History, commonsense, instinct, and a small knowledge of the fallibility of systems, programs and organizations all tell me that Watkins, Nelson, Cole, Kent, and Dayton are sound decisions and that the Court has properly exercised its legitimate powers in deciding them as it did. It misses the point to argue that these decisions and opinions give aid and comfort to those who would undo us. The function of the Court is not to oppose those who would overthrow us; it is to apply constitutional and legal principles to specific cases. It is even more absurd to attack the Court because of these decisions on the ground that the Court has overreached its powers. Even if one were tempted to call these decisions political moralizing they can hardly be said to break new frontiers—they only bring us back to a level of sanity below which this country had descended for a period of time, caught up as it was in a frenzy of fear out of all proportion to the facts. "Such fears as these," Learned Hand tell us, "are a solvent which can eat out the cement that binds the stones together."

May I comment briefly on one specific area, which is again before the Supreme Court in another context, and therefore I approach it with restraint. This is the question of the use of confidential information in the administrative process. A few weeks ago, in discussing the problem of passport legislation I summed up what I conceive to be the danger here as follows:

"The authority to use confidential information in the administrative process, under imprecise standards, coupled with the power to delegate the authority to subordinates, can result in a breeding ground of arbitrariness in the course of which innocent people may suffer."

Most people might generally agree with this statement as a matter of principle. But then the "for"—"buts"—and "ands" commence and we are back where we started. The high-wire balancing act performed by those who press for the preservation of the device is interesting. The most current argument is that it is universally used in other democratic countries in dealing with the question of passports and other aspects of national security. On reflection, I find this relevant but hardly material. Not long ago this country was regarded as the cradle of a new liberty and we thought it important to set up a structure which would safeguard our liberties from the arbitrariness of the

sovereign. That structure imposed standards which I like to think are just a bit higher, go a bit further, in protecting the individual from the possibility of arbitrary or capricious acts.

On a more practical note, it is interesting to look back on the action taken by the Commissioner of Immigration and Naturalization following the decision of the Supreme Court in *Jay* v. *Boyd*. That happened to be a case argued by me for the Government and by our friend Will Maslow as amicus curiae for the petitioner. In a 5 to 4 decision the Court sustained the use of confidential information in connection with the Attorney General's discretionary power to suspend deportation, under certain circumstances, of aliens otherwise deportable. The funny thing was that after the hullabaloo was all over the Commissioner of Immigration, a man of courage and fair instincts, met the still lingering problem head on and took steps to abolish, for all practical purposes, the use of the device in this area. A recent check with the Commissioner's office reveals that no case presently exists in which resort to the use of such information was found necessary to a decision. My point is that not only may the damage that can be done to individual liberties under such procedures be all out of proportion to the needs of the security that we seek to safeguard, but the corollary is also true, namely, that the advances we make in the safeguarding of individual liberties, however small, do much to strengthen the foundation of our liberties and, often to our surprise, do not result in any shocking impairment of our safety and security.

There will always be disagreement with the work of the Supreme Court. The Court does not labor in a vacuum. We may support the Court's conclusions, or we may oppose them. We are of course secure in our right to approve decisions of the Court only insofar as others are secure in their right to criticize them. But there is a difference between criticism and ignoble attack. The Supreme Court is a naked institution. The Constitution has provided it with no means of enforcing its decisions; its effectiveness as an institution and as a constituent element of our system of government rests entirely upon the voluntary acceptance of its decrees by other elements of government and by the people. Disagreement with the Court's decrees will not enfeeble its institutional strength. But disagreement coupled with broadside attacks upon the institution itself or upon the character or purpose of the justices will surely erode the institution at its base.

We, who by reason of training or office are in positions of public responsibility, have a duty to expose the destructiveness of any attempt to weaken the Judiciary as an institution. Particularly in times of stress we cannot risk the loosening of our strongest bulwark against any enemy, namely our Constitution and the fundamental liberties embodied in it. Without a strong and independent Judiciary the weakening of both our individual liberties and our national security will surely result.

Southern Regional Council

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks, I include the following letter from Mr. Charles J. Lewin, editor and general manager, the Standard-Times, New Bedford, Mass.:

THE STANDARD-TIMES,
New Bedford, Mass., April 1, 1959.

Congressman JOHN BELL WILLIAMS,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WILLIAMS: On March 2, 1959, an editorial which had been published in the Richmond Times-Dispatch was introduced into the CONGRESSIONAL RECORD, page A1647.

The Times-Dispatch editorial challenged the accuracy of certain statements in a 1958 series of articles written by Mr. Edward B. Simmons of the New Bedford Standard-Times and republished in the Times-Dispatch.

We would appreciate it if you would publish in the CONGRESSIONAL RECORD this substantiation of the accuracy of the statements made in the Standard-Times articles.

The Times-Dispatch described as inaccurate a statement that the Southern Regional Council was an "offshoot" of the Southern Conference for Human Welfare. It also challenged the accuracy of the statement that "the Communist Daily Worker openly boasted that James E. Jackson, chief of the southern branch of the Communist Party, was a cofounder of the regional council."

These statements in the Standard-Times articles were in no way inaccurate.

Papers of incorporation of the regional council and the latest listing of officers and directors of the organization (April 1957 listing was latest at time articles were written) show the following:

"Three of the five persons listed as incorporators of the Southern Regional Council had been active in the Southern Conference for Human Welfare. One had been a member of the Southern Conference for Human Welfare's executive board, and a second incorporator was a member of its southern council.

Three top officers of the Southern Regional Council, as of April 1957, had been affiliated with the Southern Conference for Human Welfare: the president, a vice president, and the chairman of the executive committee.

Fourteen members of the Southern Regional Council's board of directors, as listed in April 1957, had been affiliated with the Southern Conference for Human Welfare.

Thirteen members of the Southern Regional Council's board of directors, as listed in April 1957, were or are affiliated with the Southern Conference Educational Fund. This latter organization was identified by the U.S. Senate Internal Security Subcommittee as "operating with substantially the same leadership and purposes as its predecessor, the Southern Conference for Human Welfare."

Twelve former directors of the Southern Regional Council had been affiliated with the Southern Conference for Human Welfare.

In summary, then, three incorporators of record, three of the top officers and a total of 39 interlocking directorships link the Southern Regional Council with the Southern Conference for Human Welfare and its lineal descendant, the Southern Conference Educational Fund.

As to the statement about James E. Jackson, the Communist Daily Worker of December 1, 1954, stated on page 6, that Jackson "participated in the formation and building of * * * the Southern Regional Council and many other movements which in any important way challenged the status quo of Negro oppression and southern social backwardness."

The Times-Dispatch editorial conceded that "a James E. Jackson" attended the meeting of "leaders" that led to formation of the Southern Regional Council. Both James E. Jacksons are one and the same.

We would emphasize that the purpose of the Standard-Times articles was not to expose a particular individual or organization. However, we feel that the cause of racial harmony and justice is best served when the qualifications and background of all who are active in racial matters are open to public inspection.

If it is desired, we can substantiate all of the above information by photostated documentation.

Yours sincerely,

CHARLES J. LEWIN,
Editor and General Manager.

Soviet Publications in Japan

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 16, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an article by Mitsuru Uchida that I recommend to the reading of my colleagues who may not have been alerted to the intense campaign the Soviet is making to capture the minds of the younger generation in Japan by the printed word.

Recently I spoke at length on the classics of democracy program, which is meeting the Soivet challenge by translating into many languages. The classics of democracy that inspired our forefathers and making them available in inexpensive editions. I have spoken also in support of the information media program that enables American publishers to distribute American books in foreign countries by furnishing a means of converting local currencies into American dollars.

Nothing could more convincingly picture the necessity of these programs than Mr. Uchida's factual presentment of what the Soviet is doing in his native Japan. Mr. Uchida has a master's degree from Waseda University in Japan. He is preparing for his doctor's degree, and is now in the United States as a congressional intern in the program sponsored by the American Political Service Association. Up to the Easter recess he was a member of my congressional staff, I might add a most valuable member, who did the little chores and performed the important assignments with equal willingness and grace. He is serving the remainder of his congressional internship in the other body. His article follows:

COMMUNIST PUBLICATION ACTIVITIES IN JAPAN

(By Mitsuru Uchida)

Before the end of the war, Communist activities were strictly outlawed in Japan. In those days, therefore, its propaganda activities were carried out inevitably in a clandestine, underground fashion, mostly through the printed word. Communist and leftist books, magazines, pamphlets, etc., were then surreptitiously distributed by secret party members and sympathizers.

It was partly due to the high rate of literacy among the Japanese people that the Communist Party could rely so much upon these kinds of communication channels for its propaganda. But it was also due to the fact that the party, under such difficult con-

ditions, had almost no other means to appeal to the public and that the Communist influences were restricted at that time within a small portion of the intelligentsia, students, and workers with rather high education.

After the war, however, the Japanese people really experienced a revolutionary change in the political atmosphere. The Communist Party came out in the sun and was publicly recognized as a political party for the first time in its history. Today, publications of leftist or Communist origin reach readers quite openly through the facilities of a modern and highly sophisticated publication and distribution network.

Under the circumstances, the Japanese Communist Party (JCP) and its front groups regularly publish their own newspapers and magazines. The daily party newspaper, Akhata (Red Flag), is estimated to have a circulation of 59,000 copies. The monthly magazine Zen'ei (Vanguard) has a circulation of 30,000 copies. Among the readers of these publications, one can find not only members of the party, but also some rather independent citizens who want to know the Communist view concerning various issues.

In addition to these nationally distributed publications, some 460 publications are turned out by local JCP organizations. These range from newspapers and magazines, tracing their lineage back to prewar clandestine sheets, to workshop throwaways published in only a few successive issues before either dying or being replaced by new publications. Be that as it may, these local publications undoubtedly play a role in linking the leaders of the party with its supporters at the grass roots.

The JCP has its own printing plant in Tokyo. The Akatsuki Insatsu Kabushiki Kaisha (Akatsuki Printing Co.) is its name. Needless to say, many of the central party newspapers, magazines, leaflets, and other propaganda literature are turned out by this plant. Party publications are also produced by other publishers such as the JCP publishing front, Shin Nippon Shuppan Sha (New Japan Publishing Co.).

The JCP is not the sole figures in the leftist or Communist publication program. Some private publishing companies produce a number of leftist books and magazines. The Mokuyo Kai (Thursday Society) is known as a group of these democratic publishers. This organization, which was set up in 1952, has a core membership of some 15 publishers and it boasted of some 1,670 items in print as of March 1957.

With these publishers, two translations societies have a quite intimate relationship. One is the Nisso Honyaku Shuppan Konwa Kai (Japan-Soviet translating and advisory group), and the other is the Nitchu Honyaku Shuppan Konwa Kai (Japan-China translating and publishing advisory group). In cooperation with the Mokuyo Kai publishers, these groups translate and distribute Russian and Chinese works. Thus, the Nisso Honyaku Shuppan Konwa Kai reported in 1956 that it had translated and distributed 170 titles in 934,000 copies in that year alone.

It must be noted, moreover, that all of the Communist publications are not produced internally. Great quantities are imported directly from Communist China and from the Soviet Union. The Foreign Languages Publishing House of Moscow and the People's Publishing House in Peking are the primary suppliers. While statistical data on the numbers of titles and copies or the yen value are not available, an official Japanese Government publication in October 1957, estimated that the annual total imports of Communist bloc publications, including magazines and newspapers, was 1.5 million items from Communist China and about 3 million items fro mthe Soviet Union. A fair share of the imports from the Soviet Union are technical works and are in the original Russian.

In this way, a considerable number of Communist publications from foreign countries are spread among the Japanese people, especially among the students. The primary reason for it is that books of this kind are unusually cheap and inviting. For instance, as a state controlled enterprise, the Foreign Languages Publishing House of Moscow does not have to be concerned with the need for profit. This fact in itself obliterates many obstacles to the export of books through normal commercial channels.

The existence of loyal, disciplined and energetic party organizations presents a second favorable stituation for the importation and distribution of Soviet and Communist bloc publications into Japan. In most cases, these publications are imported free of charge and any revenues earned allegedly go into the local party treasury. This technique has been recognized as an important means of raising funds for the support of Communist parties and front organizations throughout Asia including Japan.

Generally speaking, American books are far more popular among the people of Japan. Of late, at least two series of American novels and poems have been published in Japanese and both have been well received. The names of American authors such as William Faulkner, Ernest Hemingway, and John Steinbeck are quite familiar in Japan—particularly to the younger generations. Some books in the fields of social sciences and the natural sciences are likewise translated into Japanese. In spite of this, the Japanese students cannot get all the American books they want in Japanese editions.

The American books in their original English language, however, are too expensive for them. Books by Profs. Robert M. MacIver and Paul A. Samuelson, for example, are greatly desired by the Japanese students. But, regrettably, very few students can afford to buy even a single copy of such books. As you know, these books cost from $5 to $10. You can easily see how discouraging these prices are to students in Japan when you remember that a graduate gets some $30 a month just after he has left his college. The average price of Japanese books is less than 300 yen ($1 is equivalent to 360 yen), and among the students there, books which cost them less than 100 yen must be the most popular.

Recently, to the great joy of the Japanese students, cheap editions of American classics have been published in Japan. Thomas Paine's "Commonsense," Benjamin Franklin's "Autobiography," and Herbert Schneider's "History of American Philosophy" are now within the easy reach of students, costing them only 10 or 15 cents. Unfortunately, it is not enough. Too few contemporary works are included in this series. The Japanese students are anxiously waiting for more of the low-priced editions of good contemporary works in all fields.

Pontifical Mass in Honor of Most Rev. John W. Comber, M.M.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. LANE. Mr. Speaker, one of America's most beautiful churches, St. Mary's, is located in Lawrence, Mass.

April 11, 1959, was homecoming day for a famous ecclesiastic who once served as altar boy at St. Mary's, and there received the inspiration which revealed to him his true vocation.

A pontifical Mass, attended by many church dignitaries, prominent laymen, and a crowded congregation of the faithful, was celebrated in honor of Most Rev. John W. Comber, M.M., who was recently elevated to the office of bishop in the missionary order where he first took his priestly vows.

The sermon on this impressive occasion was delivered by the pastor of St. Mary's the Very Reverend Edward J. Carney, O.S.A.

Father Carney is tall and broad-shouldered. When he ascends the pulpit to speak, his platform presence, his winning personality, and his eloquent sincerity, hold his listeners spellbound.

He is known as the veterans padre.

As a naval chaplain in the South Pacific during World War II, he brought spiritual strength to thousands of our fighting men.

After the war, he continued his interest in their welfare. He became a dynamic member of Lawrence Post No. 15, of the American Legion. Blessed with an abundance of energy and an outgoing heart for the problems of veterans and their families, his good work in their behalf attracted national attention. The Legion recognized and honored his leadership qualities by electing him to the position of National Chaplain where his achievements established a high standard that will be difficult to surpass.

Under leave to extend my remarks, I bring you Father Carney's moving and memorable sermon that graced the pontifical Mass for Bishop Comber:

FIRST SOLEMN PONTIFICAL MASS, MOST REV. JOHN W. COMBER, M.M., ST. MARY'S CHURCH, LAWRENCE, MASS., APRIL 11, 1959

In the 6th verse of the 62d chapter of the Book of Isaiah we read: "Upon thy walls, O Jerusalem, I have appointed watchmen all the day and all the night." In the 19th verse, and the 28th chapter of the Holy Gospel according to St. Matthew we read: "Going, therefore, teach you all nations, baptizing them, in the name of the Father, Son and Holy Ghost."

Your Excellency Bishop Comber, Your Excellency Bishop Lane, Rt. Rev. and Very Rev. Monsignori, very reverend and reverend fathers, reverend brothers and sisters—dearly beloved in Christ:

In the history of every nation, state, city or parish, there is always some one achievement, some special event or anniversary that is treasured by the people in loving and lasting remembrance. Even so in the life of the individual, there is a certain day or a particular event, around which will ever linger the holiest, the happiest and the sweetest of memories.

Seldom, perhaps, does this fact come home to us so forcibly as on occasions like the present when we are assembled amid hallowed associations around the altar of God, to participate in the joy of a triumph whose meaning and inspiration are more easily felt than described.

Today we are privileged to attend a first solemn pontifical mass and to observe its great solemnity. Everything about the altar and the sanctuary imports joy and gladness, and involuntarily the words of Mother Church spring to our lips: "This is the day

which the Lord hath made; let us be glad and rejoice therein."

A stranger present at this solemn and beautiful pontifical ceremony might conclude that we are here to honor the genius of some great statesman or scientist, or to praise the hero of some gory battlefield or to listen to the latest preacher of some new brand of manmade religion.

But it is not any of these. This inspiring ceremony is just one more witness to the divinity of Jesus Christ and the perpetuity of our heritage—the Catholic faith. It plainly demonstrates that He does not change—"Christ yesterday and today and the same forever." Hebrew xiii: 8. This is ample proof that the divine charm of His personality over the minds and hearts of men has not waned. His invitation extended to the fishermen of Galilee—the first priests and bishops of more than 1900 years ago—"Come, follow Me," is still heard and answered—has been heard and answered by one whom we honor today; for within the sanctuary, upon the altar steps, the episcopal robes upon him, the chalice in his consecrated hands—we look upon one of God's anointed and consecrated ones whom He has chosen from your midst to labour in His vineyard, to spend and be spent in His service—another watchman upon the walls of the new and more glorious Jerusalem the Catholic Church.

Look upon him then, this anointed one, this Levite, this other Christ—Look upon him with pride and joy, exultation and thanksgiving, for he is yours, who only a few yesterdays ago was a boy of your parish and, therefore, especially near and dear to you. At the same time pray for him with fervor today and all days as you think of the dignity, the power, the responsibility of the individual bishop, the mutual obligations of bishop and people.

"Boyhood dreams of long
Saw an altar fair,
Consecrated, trembling hands
Lifted there in prayer.
And those dreams have led him on,
Dreamlike though they seemed;
Now dear friends thank God with him;
He is what he dreamed.
Other dreams has he today,
Bright in spite of fears;
That his human heart might be
Christlike through the years.
Pray for him when on your knees
That this dream come true;
Bowed before this altar fair
There he'll pray for you."

The episcopacy is the fullness of the priesthood of the Catholic Church, the continuation of the eternal priesthood of Jesus Christ; what mind can comprehend it, what tongue can describe this exalted vocation? Saints, doctors, scholars—the great and learned of all ages have acknowledged their inability to do justice to this sublime subject.

There is no dignity so exalted, no power and responsibility so great, no rank on earth so high as that of the Catholic bishop; and thus a certain saint has well said: "If I met a priest and an angel, I would salute the priest before the angel."

In the infinite and unfathomable mind of God, there are innumerable images of all that is beautiful, perfect, enchanting, sublime, magnificent conceptions beyond the ken of mortal man; but of all that we can conceive after Jesus and His own Blessed Mother Mary, the bishop of God's church stands out—the grandest and noblest we either know or have power to imagine. Jesus Christ and nature itself, separate the bishop from other men as an ideal and for this reason a cry of horror escapes the lips if it be discovered that he is not all he was set apart for.

At times, dearly beloved, you stop and wonder and ask yourselves: "Why such deference and respect for the Catholic bishop or priest in all ages?" Why do the people, almost without exception, look upon him as one in the world—yes—but not of it? Why is there no earthly dignity, power, or responsibility comparable to his, which transcends this earth and reaches even to Heaven itself?

It is the intimate union of the priest with Jesus Christ that entitles him to respect, honor, and love; which vests him with powers and prerogatives supernatural; which makes him conscious at once of his dignity and yet of his humility. In the words of Holy Writ: "Not that we are sufficient to think anything of ourselves, as of ourselves; but our sufficiency is from God." (II Corinthians iii.) "He humbled Himself becoming obedient unto death, even to the death of the cross." (Philippian ii: 8.) "You have not chosen Me; but I have chosen you; and have appointed you, that you should go and should bring forth fruit; and your fruit should remain." (John xv: 16.) "You are the salt of the earth." (Matthew v: 13.) "A minister of the holies and of the true tabernacle, which the Lord hath pitched and not man." (Hebrew viii: 2.) "Called by God a high priest, according to the order of Melchisedech." ((Hebrew v: 1.)

The bishop is adorned with the surpassing prerogatives of sacrifice and absolution and consecration—power over the natural and over the mystical body of Christ, prerogatives which belong to God alone. Christ at the Last Supper said to His apostles and through them to their successors, the bishops and priests of His church: "This is My body, this is My blood. Do this for a commemoration of Me." In these words and by His command, He gave them power over His natural body, to renew daily from the rising of the sun even to its setting, the sublime sacrifice of Calvary, and to give to the faithful His body and blood.

Moreover, Christ gave to His bishops power over His mystical body, the church, in the words: "Whose sins you shall forgive, they are forgiven them; and whose sins you shall retain, they are retained." John xx: 23. At Christ's word, the blind saw; the deaf heard; the dumb spoke; the lame walked; the dead rose to life; and sins were forgiven. Christ's minister by the words of absolution restores to the soul the beauty of sanctifying grace, the friendship of God, her place in His mystical body—the church.

The two powers of sacrifice and absolution are beyond the reach of created beings, beyond the angels, the archangels, the cherubim, the seraphim, the thrones, the dominations, and all the rest of the heavenly host—yes even more, beyond the power of Mary Immaculate, full of grace. These powers belong to God alone and He has entrusted them to His bishops and priests. Do we marvel now when we hear St. Catherine of Sienna say: "If I met a priest and an angel, I would salute the priest before the angel" or the author of the Imitation when he writes: "Great is the mystery and great the dignity of priests, to whom is given that which is not granted to the angels."

Christ associates the bishop with Him in the glorious work of the Apostolate, in the evangelization of the world. On the Mount of the Ascension, He stands and speaks to His bishops: "Going, therefore, teach ye all nations; baptising them in the name of the Father and of the Son and of the Holy Ghost. Teaching them to observe all things, whatsoever, I have commanded you and behold I am with you all days even to the consummation of the world." Matthew xxviii: 19. In these words, in fact, the last words of Jesus, He strikes a deathblow to the popular fallacies of the present day such as, "It makes little difference what a man teaches or believes, so long as he leads a good life," or "Deeds not creeds our motto," or "Love your neighbor and be not concerned about religious differences." But the Saviour says so clearly and trenchantly: "Teaching them"—not what you think ought to be taught—not your fads, fancies and vagaries, but all things, whatsoever, I have commanded you," and then, and not until then, "I am with you all days even to the consummation of the world."

In the early dawn, close by the quiet waters of the lake of Galilee, we see the Master and St. Peter; Peter the bishop and apostle who had been a coward, who had denied Christ, but now penitent and humbled, hears these wondrous words—to him and to all those bishops who would come after him until the world's consummation: "Simon, son of John, lovest thou Me?" Jesus said to him: "Feed My lambs; feed My sheep." John xxi: 17.

Is not then the bishop the shepherd of the sheep? Is he not the father of the people committed to his care? Is he not the watchman on the walls of Jerusalem all the day and all the night? He must in very truth, as St. Paul says: "Be all things to all men, to save all."

He has his part in all the varied scenes of this life. From the time he takes the little infant babe from the arms of its earthly natural mother to make it an heir of heaven, a child of mother church, through the regenerating waters of baptism, he parts with that child no more. Not even when the Angel of Death touches its eyes and steals from them the light of day, for does he not offer up the great sacrifice, chant over the grave the eternal requiem, and usher that soul at last into the house of God? But few of us ever ponder over the blessings that are ours from a priest's beautiful anointed hands.

"We need them in life early morning
We need them again at its close;
We feel their warm clasp of true friendship
We seek them when tasting life's woes;
When we come to this world, we are sinful
The greatest as well as the least;
And the hands that make us pure as angels
Are the beautiful hands of a priest.

"At the altar each day we behold them,
And the hands of a king on his throne
Are not equal to them in their greatness
Their dignity stands all alone
For there, in the stillness of morning
Ere the sun has emerged from the east,
There, God rests between the pure fingers
Of the beautiful hands of a priest.

"God bless them and keep them all holy
For the host which their fingers caress;
What can a poor sinner do better
Than to ask him who chose them, to bless?
When death-dews on our eyelids are falling,
May our courage and strength be increased
By seeing raised o'er us in blessing
The beautiful hands of a priest."

There is only one High Priest, properly speaking, in the world—Jesus Christ, but one shepherd and guide of souls—and this shepherd and guide of souls ever and always is Jesus Christ. Jesus is the source whence come all the graces that enrich the church: The episcopacy and the priesthood are the channels through which these graces flow. Jesus is the voice, the bishop but the echo of that voice. The bishop speaks, no matter how feebly, no matter how unworthily, but he speaks what the Saviour spoke, he utters nothing that Christ has not said. This is the work of a bishop, not to preach self, not his idea of religion, not modern 20th century paganism, but Jesus Christ and Him crucified: to carry on the work of saving souls a little farther but to be succeeded by another in the eternal priesthood of Jesus Christ, "according to the order of Melchisedech."

In the words of St. Pius X of happy memory to his priests on the occasion of his

own 50 years in the priesthood, he said: "Let us rejoice in the heights upon which we stand, but let us fear the depths to which we may fall."

How little you know, dear friends, or realize the trials of those who minister to you spiritually. How much it costs at times for the bishop to be cheerful, kind and patient when his heart is torn by unfriendly criticism, misunderstanding, lack of charity, no appreciation of what he does; when his words and admonitions go unheeded, when he sees the ugly gaping wounds in Christ's mystical body, the church—then it is that he begins to realize that his union with Christ cannot be consummated on Mount Tabor alone—in the shining sun, the white garments and the glory of the transfigured Lord, but rather amid the gloom, the darkness and the blood of Calvary, he must become another Christ.

Today as never before, your bishops and priests need your encouragement, your cooperation and your charity in their work. In these days of "false Christs and false prophets who come to you in the clothing of sheep but inwardly they are ravening wolves" look to the watchman on the walls. In these days when enemies of the priesthood and enemies of the cross of Christ seek to stir up racial hatred and hatred of the church, that church which saved the world when they were of generations yet unborn, taking upon their polluted lips the sacred name of patriots, while waving high their flag of antigodism, communism, and of bigotry—in times like this do you, O Christian men and women, rally round the true cradle of patriotism—the Church of God—and there learn the principles of justice, liberty, equality, fraternity, love of God and love of one another—principles learned and practiced by the Catholic Church and taught to the faithful for more than 1,900 years.

Dear friends, today is a day of rejoicing in the court of heaven, a day of rejoicing in the Christian world in general and for you who are gathered here in particular, as another shepherd goes forth to labor in the Master's cause, to stand between heaven and earth offering sacrifice for the quick and the dead, absolving the contrite of heart, preaching God's changeless word, being another apostle, another Christ.

It is a day of unspeakable joy to Bishop Comber himself, for he has run the race well and today "receiveth the crown" not a fading, perishable, corruptible one; but an unfading, imperishable and incorruptible one. He has become a link in the unbroken chain which binds him directly back through the ages in a royal lineage to Peter and Christ Himself.

His Excellency Bishop Comber's heart is filled with joy and gratitude today, despite the apprehensions that abound because of the responsibilities of his high office.

He is first of all grateful to Almighty God in so many ways. Then to our Holy Father the good Pope John XXIII who conferred this great honor upon him. He looks back in blessed memory to the wonderful father and mother who raised him and his brothers and sisters in a model Christian home. Even now ever so deeply he feels he is what he is because of them. What a shining example they were of Christian parenthood. Under the inspiration of God, they must have indelibly implanted the words of his episcopal coat of arms "going, therefore, teach" in the hearts of his sisters, Sister Frances Helena, a sister of Notre Dame, a repatriated prisoner of the Japanese, who taught school in a Notre Dame convent in Japan and Sister Rita Clare, a Maryknoll Sister presently assigned to the Philippine Islands and formally doing missionary work in China, captured and imprisoned by the Japanese and repatriated as was her brother his Excellency Bishop Comber.

What awe and admiration all must have at beholding these Sisters in the religious life and the rest of his family as they kneel here now in thanksgiving before the altar of God. What joy his father and mother must feel as they adore him this day and at this very moment from their mansions in heaven. To them, the heart of the newly consecrated bishop goes out today as never before. Father, mother, home, a trinity of joys, whose completion and perfection are to be found only in the trinity in heaven. Around these loved ones—father, mother, sisters, brothers, cluster memories too precious, associations too endearing for utterance. They will ever remain a shining recollection in the lives of all; but they have a still deeper and more tender effect upon those who did leave them for a little while, not for worldly ambition, power and name, but to follow Him who reigns and rewards beyond the everlasting hills and carry out His wish, "Go you and teach all nations, baptising them in the name of the Father, the Son, and the Holy Ghost."

With pardonable pride the Augustinian Fathers here at St. Mary's take great honor in having you and Bishop Lane, two Maryknoll bishops and superiors general, come out from St. Mary's School—surely a justification and reward for our efforts. You never seemed to lose sight of the Augustinians who loved you from the day you served mass at this very altar. For in every country you labored, the Augustinians had been laboring there for centuries before.

The Sisters of Notre Dame, the Xavarian Brothers, the Jesuits and most of all your own men of Maryknoll can be justly proud of the part they played in molding your career. Today you salute them with gratitude overflowing. I do not dare to vex or oblige you, your excellency, to listen to personal accolades, tributes, praise, or flattery. Nor your men of the Catholic Foreign Missionary Society of America. You and Maryknoll's deed have renown.

It is my great privilege and honor today and personal satisfaction to voice the good wishes, the heartfelt congratulations to you, your excellency of the priests here present, the good Sisters and Brothers, who have come here and your brother priests of Maryknoll, one and all, and all of my fellow priests in the Order of St. Augustine. Last, but not least, your relatives and friends of your family and parishioners of St. Mary's and all who are here today. With you we rejoice and we look with confidence to your future for we know that during the long and arduous years in the mission fields of foreign lands, you have not been found wanting.

Your excellency, may God's benediction rest upon you today and all the days of your episcopacy. May our Mother of Good Counsel guide all your ways, and may St. Paul and St. Francis Xavier inspire you and yours of Maryknoll with an everincreasing zeal, so resplendent in their lives. Keep ever before you the admonition of Saints Peter and Paul to the bishops of their day. Continne to: "Labor as a good soldier of Jesus Christ." (II Timothy II, 3.) "Feed the flock of God which is among you, taking care of it not by constraint but willingly according to God; not for filthy lucre's sake, but voluntarily * * * And when the Prince of Pastors shall appear, you shall receive a never-fading crown of glory." (I Peter: 2.)

From the hearts of one and all gathered around God's altar on this festal day, may fervent prayers ascend to the Most High for you and all your flock. May He help you ever and always as you work your work in the souls of men. May He help you ever to stand worthily on the mystical Mount Moses, the great high priests of days long gone, and out of the darkness and sin of Egypt look toward the light and peace of the promised land—until the reign of "one God, one faith, one baptism" be blessed reality, until the prayer of Jesus, "That they all may be one as is the Father in Me and I in Thee" be fulfilled, and there shall be "one fold and One Shepherd."

Very Rev. Edward J. Carney, O.S.A.

The Problem of Presidential Disability: An Analysis by Prof. Paul C. Bartholomew

---

EXTENSION OF REMARKS
OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. BRADEMAS. Mr. Speaker, the question of Presidential disability is one to which Members of Congress have in recent months given serious attention.

Prof. Paul C. Bartholomew, professor of political science at the University of Notre Dame and an outstanding authority of American Government and constitutional law, has prepared an extremely interesting discussion of the constitutional problems raised by the problem of Presidential disability and of some of the proposals aimed at solving them.

I am pleased to include Professor Bartholomew's article in the Congressional Record:

A Summary View: The Problem of Presidential Disability

(By Paul C. Bartholomew)

"In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected (art. II, sec. 1, clause 6).

This is the portion of the Constitution that presents a major problem that is disturbing a lot of persons—Government officials, academic personnel, and others. Furthermore, it is a problem to which no pat answer seems to be available and, in fact, a matter on which there is no real agreement. The past dozen years of cold war have taught us that we do not need an immediate solution to all problems. We do not need a definite answer to everything. Some things just have to be lived with until such time as Fate decides an answer. This may very well be the case with the matter of Presidential disability, and that viewpoint may not be at all irrational.

Two questions immediately present themselves. (1) Who or what body is to determine the disability of a President? (2) Does the Vice President, once disability has been determined, succeed to the office of President or only to the powers and duties of the office? There is a corollary question as to whether an amendment to the Constitution is necessary in order to answer either or both of these questions, and on this the experts are not agreed. There does seem to be sufficient reliable opinion that Congress has the power to act for us to assume that Congress can act legally, but certainly a careful student of the subject must urge, regardless of what action is taken, that an amendment be introduced concurrently as a

cover for congressional action in case of an adverse Court decision.

What of the proposals for deciding the person or persons on whom the burden shall rest of determining the disability of a President? The suggested solutions are many and diverse. However, all of them contemplate initial action by either the Vice President or the Congress. As for the Vice President, himself and alone, declaring that the President is unable to carry on the duties of this office, obvious difficulties present themselves. Judging by the men who have held the post in our history, the Vice President might be very reluctant to do this. Such a decision would certainly be embarrassing to a man with any sensitivity of nature. Then, too, there is some doubt as to the legality of unilateral action by the Vice President. However, no less authority than the Attorney General of the United States has recently noted that "it is a well-established rule of law that in contingent grants of power, the one to whom power is granted is to decide when the emergency has arisen. Thus the Vice President is constituted the judge of the President's inability."

Mr. Brownell was simply echoing previous observations by men such as Judge Lyman Trumbull, and the bulk of opinion today seems not to question this legal view. However, the view is not unanimous, and many question the prudence of placing the decision solely in the hands of the Vice President. There may even be some danger of usurpation (although experience with our Vice Presidents is all to the contrary) both in the initial assumption of power and in the relinquishing of power if and when the presidential disability passes. Again, this is a case of more power than a good man should want or a bad man should have. Some have suggested that provision be made for a medical board named by the President at the time of his inauguration. This board could then advise the Vice President as to the President's mental or physical condition, and thus an objective judgment would be available to guide the Vice President in assuming or giving up presidential powers.

DECISION BY CONGRESS—FURTHER PROBLEMS

Congress is often suggested as the agency to take the initiative in determining presidential disability. Those who favor leaving the question to Congress rely upon the "necessary and proper", or the "elastic" clause of the Constitution.[1] Thus they hold that Congress could pass a resolution determining the procedure for answering the question of presidential disability.

At this point the experts part company. There are almost as many specific procedures suggested as there are persons talking and writing about the matter. Some propose that Congress designate itself as the body to determine (when the occasion arises) that a President is disabled. Others urge that Congress give the Supreme Court this duty because it can act quickly and without partisan political overtones. This, no doubt, in the light of previous Supreme Court decisions, would require a constitutional amendment to get around the question of judicial jurisdiction.

Still others have suggested that the Cabinet be entrusted by Congress with answering the disability question. A variation of this Cabinet approval is that the Secretary of State inform the Cabinet and that that body should then decide. Another plan is that any two members of the Cabinet should inform the Chief Justice of the United States of the supposed disability, and that the Supreme Court should then decide. Still another variation is for the Cabinet to advise the Vice President who, in turn, would inform the Congress, which would then call on the Supreme Court for a final decision. The practical defects of any plan involving direct action by Congress, if, as, or when a possible case of disability arises, are obvious. Congress itself is not always in session, and it is an unwieldly body in such a situation. Political partisanship would be a real danger.

A PERMANENT COMMISSION—SOME PROBLEMS RAISED

In this general area of congressional initiative, the most frequent suggestion is that Congress provide for some kind of permanent commission to "stand by" and determine when there is a real mental or physical disability on the part of the President. These proposed commissions have been "baptized" by their sponsors with a variety of names—Advisory Council, Commission on Presidential Disability, Inability Council, Special Continuing Committee, Presidential Commission, Commission on Presidential Inability, and Presidential Powers Commission. Likewise, the specific composition of these groups is diverse. Some would have the Vice President, the Speaker of the House, the President pro tempore of the Senate, and the Cabinet constitute the board. Others suggest that there be six members from Congress and five from the Cabinet. Others get more specific and urge that the Chief Justice and the two senior Associate Justices of the Supreme Court serve, along with the Secretary of State and the Secretary of the Treasury, and the majority and minority leaders of the Senate and the Speaker and the minority leader of the House. Another suggestion is that the committee be composed of the President's wife or a member of his family, two members of the Supreme Court and the leaders of the President's party in the House and Senate. One suggestion is that this group be composed entirely of physicians named by the Chief Justice. Another urges that the commission be composed of private citizens with no more than three from any one party and including at least two men of outstanding reputation in medicine and psychiatry.

There seems to be general agreement that in case of temporary disability of the President, the determination of the cessation of disability (when that is not apparent) should be made by the same body that decided that the President was disabled.

These are the chief answers that have been given to the first question. Some, including Speaker Rayburn and Professor Howe, maintain that the best answer is to make no provision at all, that we can meet the situation if and when it arises, that the great virtue of the Constitution is its flexibility, and that any determination of procedure to determine disability would introduce an unnecessary element of rigidity.

Not one of these solutions is entirely satisfactory—the Vice President probably will not and should not exercise the power, the Congress is too unwieldy, too involved in partisan politics and not always available in emergencies. Also, congressional action on this matter might be construed as a violation of the doctrine of separation of powers. Political partisanship would be increased whenever the Congress might be controlled by the party in opposition to the President or even by a hostile faction of his own party. The Supreme Court is a judicial body and is not supposed to solve political questions, even though its objectivity might not be doubted. However, in the absence of a constitutional amendment, there are real legal difficulties in any arrangement that would involve the Court, since giving it the power to determine Presidential disability would involve giving it jurisdiction in a political question, the problem of original jurisdiction, and the question of Presidential immunity from court action.

Any proposal giving such power to the Cabinet has a disadvantage in view of the reluctance on the part of trusted advisers to suggest that "the Chief" is disabled. The other side of that coin is the possibility—verified by history—that Cabinet members might be feuding with the President and take this means of attacking him. If a commission should be used, obviously, the make-up of that group would be all important. The Speaker of the House and the President pro tempore of the Senate probably should be excluded because of their placement in the order of succession to the Presidency after the Vice President.

No matter what plan may be ultimately adopted, the great and overriding consideration will be the objectivity of the agency selected to determine Presidential disability. Only with complete objectivity can we secure the essential requirement of public respect and acceptance of the decision.

As to the second great question, does the Vice President succeed to the office of President or only to the powers and duties of the office, the experts seem to be agreed on this. The Constitution specifies that "In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President. * * *" Regardless of what the Founding Fathers may or may not have meant by this (and there is no agreement on this), the experts today are as one on the point that, in case of the temporary disability of the President, the Vice President succeeds only to the President's powers and duties, that he becomes "Acting President." However, should the Preesident's "disability" be permanent, as in the case of death or resignation, then the Vice President succeeds to the office itself and becomes President. Succession to the title is a matter of constitutional custom based on the actions of the seven Vice Presidents who have fallen heir to the office. Two conclusions seem necessary, if we are to assume, as most persons do, that some provision is needed. First, Congress must initiate action aimed at a solution of this problem. Both from the point of view of the strictly legal and the practical, that seems to be the proper procedure. Second, a resolution of amendment to the Constitution should be started on its way to ratification regardless of what interim provision is made by Congress. This will insure legal, if not practical, perfection.

[1] Art. I, sec. 8, clause 18: "To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Growth for the Nation and the West

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. CARROLL. Mr. President, we Democrats of Colorado are greatly indebted to the able and distinguished Senator from Missouri [Mr. SYMINGTON] for the recent thoughtful and inspiring address he delivered at our annual Jefferson-Jackson dinner in Denver.

The Senator from Missouri was received with wide acclaim by the people and press of Colorado, and inspired the unanimous enthusiasm of Democrats.

It is my opinion that his fine speech should be read by all who are interested in an expanding economy in the Nation, and with particular attention by all who seek a blueprint for the full development of the American West.

I ask unanimous consent to have this address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GROWTH FOR THE NATION AND THE WEST

(Address by Senator STUART SYMINGTON, Jefferson-Jackson dinner, Denver, Colo., April 18, 1959)

It is a great privilege to be here in Denver tonight, and see so many old friends, including my colleague, JOHN CARROLL, one of the West's finest representatives in the Senate of the United States, and a fighting Democrat to the tips of his fingers.

Every time I come to Denver, I wonder at the continued growth of your city. You now have over a million people in your metropolitan area. With real progressive leadership, there is no limit to what you can do in this beautiful land.

When I say "progressive leadership," I mean Democratic leadership. The last election showed us that the people of Colorado and the West have pinned their hopes for progress on the Democratic Party.

With 23 Democratic Senators and 7 Democratic Governors, the West is going to have an increasingly strong voice in our national councils. And it is going to be a clear voice, calling for full development of the wealth of this great country.

This Democratic voice will drown out the feeble cries of pessimism and bankruptcy which are coming out of official Washington today.

Perhaps it cannot make itself heard properly between now and 1960 under a Republican administration. But that voice will make it even more certain that we will elect a Democratic President in 1960.

And then watch the progress.

The pattern was set clearly in the last election. The people of Colorado examined the record of their superb Governor, Steve McNichols. They saw his accomplishments as chairman of the Western Governors' conference. They were mighty proud about how he represented to the entire Nation the western views on resource development. So they reelected him by a great majority, and along with him practically the entire Democratic ticket.

The people of Colorado looked at the fine job being done by WAYNE ASPINALL and BYRON ROGERS. So they reelected them, and also BYRON JOHNSON. This gives our party a 3 to 1 margin in the Colorado congressional delegation.

Last fall the pattern of Democratic victory was the same all over the country. If ever there was a mandate, this was it. You would think the Republicans would have learned from this experience. Instead they have taken the result of the election as an invitation to commit political suicide by continuing to pursue the same backward policies they have championed for the last 6 years.

As a result, in 1960, we Democrats will have such a gigantic victory, it will make 1958 look like a draw.

Of course, we're not going to win without a fight, but it's comforting to know the Republicans like to warm up for a national election by first fighting with each other.

In fact, it appears some of them would rather do that than take on the Democrats.

Right now, it looks like the Governor of New York is trying to get a half-Nelson on the Republican nomination for President.

The Vice President noticed how effectively Mr. Rockefeller campaigned in New York when he spoke in Spanish. So this week he is taking Spanish lessons from Fidel Castro.

Seriously, though, my friends, the Democratic party will have to move forward with dynamic responsible leadership if we want to be certain we will be entrusted with the leadership of the Nation in 1960.

We lost the last presidential election by some 10 million votes. Therefore, we have a lot of converts to make.

We will never win the next election if we kick away our chance, with our heavy majority in Congress, to meet the growing needs of a growing Nation.

We will win if we pass the laws we think America needs—veto or no veto.

We will win only if the people are convinced that the Democratic Party is still the party of action and growth, the party always striving to have our country's reach exceed its grasp.

To do this, we must first destroy some misconceptions that have been spread throughout the land in recent months.

The first concerns deficits, and balanced budgets. From 1953 until last year, we did not hear very much from Republicans about deficits. They were ashamed to bring it up because they were piling up a deficit in those years of $20 billion.

At the beginning of this year, the administration realized that the recession had cut down tax revenues, and the deficit for the fiscal year 1959 alone was going to run about $13 billion.

Imagine—$13 billion in 1 year alone—the largest deficit in peacetime history.

This problem was too big for the Republican fiscal experts, so they turned it over to the political managers, who hit on the following ingenious political trick. If the onus of deficit financing could be placed on the Democratic Congress, the administration would be relieved of the blame for the terrible fiscal mess it was developing.

So the word went down from the political to the fiscal managers: Balance the budget.

They balanced it, all right, like the Leaning Tower of Pisa. It was balanced with new revenue that is not going to come in, and new taxes which are not going to be levied. The latest objective estimate is that, even if Congress does not appropriate 1 nickel more than the President recommended, the deficit for next year will still run into many billions of dollars.

Let me tell you tonight that this Congress is not going to play into the hands of the political managers of the next Republican campaign by running away from this issue.

We know that these deficits came about, not because Democrats invested money to make the country grow, but because Republican cutbacks caused our revenues to shrink.

In 3 weeks we are going to celebrate the birthday of a great American President, Harry S. Truman. When Mr. Truman was President, our economy grew at the rate of 5 percent a year. Since he left office, it has grown at the rate of 1 3/10 percent per year.

Is this the way to provide for a population that has reached 176 million people; and by 1975 will be 235 million?

Is this the way to promote the growth of the West? Or is it the way to stunt the growth of the West?

Is this the way to arm ourselves for the protracted conflict we now know we face with the Communist world—a conflict we know is going to be political, economic, psychological, and perhaps physical?

I visited Berlin a couple of weeks ago. Even in East Berlin, which we have been told is a poor and exploited city, the rate of economic growth is 10 percent per year.

And ours is 1.3 percent per year.

What a tragedy to have this lag in the country with the greatest resources, and the greatest productive skill, in the history of the world.

The second misconception we Democrats intend to correct is that, if we invest in those public projects needed to keep up with our growing Nation, we will have inflation.

Now, obviously, no one wants inflation. But there is a difference between inflation and growth. In the first, prices rise because production lags. In the second, a rising price level is absorbed by the rising well-being of the people.

From 1922 to 1928 the price level was quite stable.

But that did not reflect any healthy economy, as was so well proven by the great depression.

And the third misconception we are laboring under is that spending and investment are somehow bad for the country; while only saving is good.

Now, thrift is a great virtue and waste in Government is inexcusable. But the man who put all his money in his mattress did not help build America.

What would there be in the West if people had not spent effort and wealth to get out here; and their Government had not helped them? What would our great industries be like if they had not, and did not, spend for expansion? Would we not be a pygmy country, instead of the giant we are today?

We need saving and what we need to save most is the American economy.

That economy needs to be saved from the terrific waste of manpower and other resources which are now lying idle.

It needs to be saved from more years of economic stagnation.

It needs to be saved from the ultimate peril of neglected national security, neglected education and scientific research, and neglected development of our great natural resources.

My friends, all this talk we hear from the Republicans about balanced budgets, inflation, and spending, is just a smokescreen to conceal their real ideas. The fact is that the Republican Party is afraid of growth. In its scheme of values, money is more important than people, and balancing the books comes before increasing the wealth of the country.

So the Republican Party tries to scare the people with threats of deficits and inflation, just as it used to warn people that if we adopted social security we would all be wearing dog tags.

Let me give you some figures to show what the economic lag under the Republicans has already cost this country.

If we had been able to keep up the Democratic growth rate between 1953 and 1958, it would have meant: $2,800 more income for each family; $31 billion more for our farmers; 10 million more man-years of employment; and $39 billion more private investment.

Every segment of our economy would have been more prosperous than it is today.

It is important that we Democrats set straight the economic record. But if we are to win in 1960, we must do more. We must come forward with a positive program for growth.

We Democrats must plan now to operate as near as possible to full production. Right now, between 15 and 20 percent of the productive capacity of the United States is idle—and unless we recognize this condition, it will only grow worse. Because by 1960, our population will be up over 5 million from 1958; and our labor force up over 2 million. And by 1964, the population will be up 17 million—our labor force 7 million.

This tremendous increase can be either a blessing, or a curse. It can be the cause of more unemployment and suffering; or it can be used as a great engine of increased productivity.

With these additional people at work, we can forge ahead in our standard of living, and at the same time generate more tax revenues to meet the needs of the larger population.

The greatest field of idle resources lies right here in the West. In your mountains and your valleys, your fields and rivers, you have the riches to provide additional wealth for millions.

I believe there are three requisites to the full utilization of the resources of the West.

First, there must be more general appreciation of the vast economic opportunities which lie waiting.

I don't want to knock the television western, which one of our national magazines has called the "great American morality play." But in the minds of many people it has perpetuated the ideal of the West as still a frontier.

Today the West is far from any frontier. It is a prosperous and cosmopolitan part of our Nation. If every American could come to Denver, this illusion of Cripple Creek would soon vanish as he saw the old corner saloon replaced by your mile-high center, and six shooters with NORAD.

Secondly, there must be more willingness on the part of Government to conceive and carry out broad economic plans, instead of responding haphazardly to such crises as droughts, slum areas, and floods.

As we all know, the difference between civilized man and the savage is planning. The difference between men and animals is that men look ahead.

Long-range planning of resource development, therefore, on a multi-State basis, would enable the West to know where it was going, and how fast.

Third, and most important, there must be a new willingness to invest in projects for the development of western resources, resources which our exploding will need critically in the years to come.

The present policy of no new starts in public works is a recipe for stagnation.

No successful corporation ever got started without investing in capital expenditures. It is a fundamental of good business management that sound expenditures repay themselves many times, and with interest.

Investment in natural resource projects is the best way to bring the prosperity of full production to our Western States.

Programs of this sort are in the democratic tradition. They wear the brand of the Louisiana Purchase, the Tennessee Valley Authority, the electrification of our farms through REA, and other democratic programs characteristic of our history.

Such a program can win, because it is right.

With continuing faith in the principles of our party, and the Nation, we can establish for the people a dynamic and progressive leadership, and through that leadership bring about the peace and prosperity they so richly deserve.

Salute to the Turners

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. WILEY. Mr. President, on Sunday, May 10th, the Milwaukee Turners and their friends will hold their 105th annual exhibition in Milwaukee, Wis.

As we know, the Turner program is designed to develop the physical and mental training of individuals in order better to enable them to be energetic, patriotic citizens of our Republic. In attempting to strengthen the fiber of the individual, as well as family life, Turner societies have classes and study groups in many mental and cultural activities; including basketry and weaving, ceramics and sculpture, the study of history and economics, development of photographic and hobby clubs, competition in gymnastics, including competition in volleyball, basketball, and track and field events, and a variety of other constructively organized and healthful activities for folks in the community.

For the program on May 10, the Milwaukee Turners have outlined an outstanding program which will have a cast of more than 500 men, women, and children participating in a unique and colorful presentation.

Recognizing that activities of this nature contribute constructively to the development of better individuals, stronger family ties, and firmer-knit communities, I ask unaimous consent to have excerpts from an editorial by Loretta Schultz, entitled "Salute to the Turners," printed in the Appendix of the RECORD.

There being no objection, the excerpts from the editorial were ordered to be printed in the RECORD, as follows:

A SALUTE TO THE TURNERS

Sunday, May 10, 1959, will be a very special day for all Milwaukee Turners and their friends. This is the date of our 105th annual exhibition, to be held at the Milwaukee Auditorium at 2:30 p.m. The excellent program, "Salute to the Turners," will have a cast of over 500 men, women, and children; costumes will be inspiring, unique and colorful. It has been our privilege and good fortune to secure the Milwaukee Auditorium, centrally located and with a seating capacity of 2,000, for the show by which the Milwaukee Turners will celebrate their 106th year of physical education, cultural, and social activities for the entire family. We can certainly be proud of the fact that we have no juvenile delinquents and are the most healthy people in the city.

This exhibition will also be the Schigets' 10th year with the Milwaukee Turners and the program that will be offered will be more outstanding than in the past, due to the hard work put in by both of them.

J. E. (Ed) O'Connell, Founder of the Eddy Bakeries in Helena, Mont.

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. MURRAY. Mr. President, recently my good friend, Mr. J. E. (Ed) O'Connell, founder of the Eddy Bakeries in Helena, Mont., was honored at a testimonial dinner.

During the early years of our State, Mr. O'Connell had great faith in its development and in that of the whole Northwest section of our country. He started his bakery in Helena, and through the years it has grown and prospered into the bakery empire it is today. Well over a million loaves of bread are distributed by his company throughout the Northwest.

Friends and executives gathered from all over the country to pay tribute to Mr. O'Connell as a leader in his industry and in his community.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the newspaper story concerning this testimonial dinner, and the list of guests from coast to coast who attended from out of State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Helena (Mont.) Independent-Record, Apr. 12, 1959]

J. E. O'CONNELL LOOKS BACK ON PLEASANT ADVENTURE MEMORIES AT FETE SATURDAY

Founder J. E. O'Connell looked back Saturday night on his efforts which welded together the baking empire of Eddy Bakeries as a pleasant adventure full of memories which made it worthwhile.

The silver-haired baking industry leader told the testimonial dinner friends and executives gathered from coast to coast at the Montana Club that his was the role of camp tender, not dynamic leadership, in the creation of an industry whose products are a byword throughout the Northwest.

"Memories are always pleasant," Eddy O'Connell mused, "and humanity is so constructed that we cannot retain unpleasant happening.

"All of us look back on occasions that were pleasant adventures for us and pleasant circumstances for those about us."

O'Connell said building memories was his prime motive in the years that took his fortunes from that of a club steward to a nationally known executive.

Putting aside the leadership role ascribed to one of such prominence in the business world, O'Connell described the operation he heads as "We have been a bundle of twigs bound closely together in a common purpose."

O'Connell went on to explain about the position considered all important by sheep ranchers in the West.

"It is the camp tender," he said, "the man who cares for the shepherds high in the hills, sees that their commissary is well cared for, there is kerosene for the lanterns, cornmeal for the dogs, and liniment-salve to care for his sheep, horse, and dog.

"In Eddy's, I have been the camp tender. I've been the man who brought the groceries, who solicited and sorted ideas of operating heads, of suppliers who sold us merchandise and equipment, of merchants who displayed and sold our products, and of the buying public who are the court of last resorts."

Helena is a great little town, the silver-haired baking executive mentioned, and excels in many things, but most of all in the quality of its people.

"Our family has taken great comfort in Helena, and our Helena friends. We have taken much pride in the fact that on well over a million loaves of Eddy's bread going out each week across the this great Northwestern empire goes the message 'General Offices, Helena, Mont.'"

During the evening, Hugh D. Galusha, Jr., master of ceremonies, introduced several men who paid their respects to the honored guest.

Russel Hug, of New York, president of the General Baking Co., of which Eddy's is a unit, said "We, in the General Baking family, are tremendously proud of Ed O'Connell.

"His counsel as a member of our board has been an inspiration to all of us, as has our association with the fine organization of Eddy's. His wisdom, his unfailing humor and tact, and above all, his capacity to give so generously of his time and energies, has not only made him a first citizen of Helena, but a first citizen in the hearts of his friends from coast to coast."

Gov. J. Hugo Aronson praised O'Connell for his faith in Montana and his business judgment, which has materially helped this great State of Montana, while A. T. Hibbard, Helena banker, told of O'Connell's activities in ranching, raising livestock, and horsemanship.

"Ed is a man who loves to work and with his executive ability is able to surround himself with a hard-working staff," Mayor O. L. Brackman said. He went on to explain that he first met O'Connell in Cody, Wyo., in 1906 and their acquaintances have grown since both arrived a few years later in Helena.

Montana's Democratic delegation in Congress also sent a congratulatory telegram, signed by Senators JAMES E. MURRAY and MIKE MANSFIELD as well as Representatives LEE METCALF and LEROY ANDERSON.

"We, too, pay our respects to Eddie O'Connell for his contributions to the development of the Northwest," the telegram stated. "Starting in Montana, he pioneered the establishment of a major industry, a wholesale bakery group in the Northwest. We are sorry we cannot be with you to honor him."

Very Rev. Robert J. McCarthy, chancellor of the Helena diocese, gave the invocation. D. E. Walsh provided accordion music during the evening.

LEADERS OF BUSINESS, FINANCE COME FROM ALL OVER UNITED STATES TO HONOR J. E. O'CONNELL

Out of town guests attending the J. E. O'Connell dinner Saturday night came from both the east and west coast.

Those present included:

J. M. Feist of Minneapolis, district manager for Standard Brands, Inc.; Vern Fortin of Los Angeles, president of Van De Kamp's; Rush Harris of Denver, president of Colorado Mill and Elevator; E. O. Jenkins of Minneapolis, chairman of board of First Bank Stock Co.; John Johnston of New York, General Baking Co.; Fred Kuhlman of Ogden, Utah, manager of Continental Bakery; Walter Lamphier of Minneapolis, sales manager of International Mills; Walter J. Malmberg of San Francisco, regional manager of Standard Brands; and Lloyd Mitchell of Seattle, president of Van de Kamp's.

George Morrison of New York, chairman of the board for General Baking Co.; M. G. (Dusty) Rhodes of New York, president of Standard Brands; Ernie Rhodes of Aberdeen, S. Dak., president of Rhodes, Inc.; Jack Robins of Minneapolis, sales representative of Joe Lowe Donut Corp.; Lawrence Tomsky of San Mateo, Calif., vice president of Standard Brands; and W. T. Winn, of Minneapolis, president of W. T. Winn Co.

Jack Arnold of Birney; Garland Boone of Havre, superintendent of Eddy Bakery; Clarence Fishbaugh of Great Falls, manager of Eddy Bakery; Harry Hahn of Missoula, sales manager of Eddy Bakery; Rep. Tom Haines of Missoula, secretary of Montana Food Dealers; Henry Keehn of Minneapolis, manager of Eddy Bakery; C. R. McClave, Jr., of Great Falls, president of Montana Flour Mills; S. K. Malone of Choteau, and L. J. Lambkin of Lincoln.

Steve Maronick of Great Falls, manager of G. L. Tracy Co.; Fred Martin of Livingston, manager of Park County News; Paul Matteucci of Great Falls, president of Super-Save Drug; William Meyer of Butte, Sig Meyer of Butte; Gene Murphy of Great Falls, Montana Flour Mills; Ralph A. Nelson of Billings, manager of Eddy Bakery; Charles F. Noble of Great Falls, vice president of Noble Mercantile Co.; Robert B. Noble of Great Falls, president of Noble Mercantile Co.; R. A. Neil of Butte, Montana Power Co.; Trev Povah of Yellowstone Park, president of Hamilton Stores; Haskell Preffer of Yakima, manager of Eddy Bakery; Frank Reardon of Butte, president of Pay and Save Super Market; Rt. Rev. Msgr. Emmett J. Riley of Butte, and J. E. Dougherty of Elliston.

Jack Roberts of Dillon, Roberts Food Store; Charles Rubie of Havre, vice president of Citizens Bank of Montana; Richard Rubie of Havre, president of Citizens Bank of Montana; Melvin Sather of Bismarck, N. Dak., manager of Eddy Bakery; George Schotte of Butte, president of Butte Motor Co.; Frank Stayner of Boise, president of Town and Country Bakery; Earl Stemple of Great Falls, superintendent of Eddy Bakery; T. E. Uppinghouse of Great Falls, Uppinghouse Market; R. S. Williams of Great Falls, president of Buttrey Foods, Inc.; and Frank Young of Butte, manager of Eddy Bakery.

Another Civil Defense Fiasco

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES

Tuesday, April 28, 1959

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled, "Civil Defense Fiasco," which was published in the Springfield Daily News of April 18, 1959. This newspaper is one of Ohio's important daily newspapers.

The editorial presents convincingly the waste of taxpayers' money on an utterly useless program, and deals with inept management of the Office of Civil and Defense Mobilization. I commend the editorial to my colleagues in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL DEFENSE FIASCO

If that mythical mass nuclear bomb attack Friday had been the real thing, there probably would have been just about as many victims under the current civil defense program, as if no such program existed. Those precautionary measures as were taken in various communities could have been handled just as well and just as efficiently by existing civilian authority as was possible with the expensive Federal civilian defense organization.

The sounding of alerts in the various communities is, of course, desirable and necessary, but beyond this, the precautions taken as the result of those alert signals would have likely saved few lives even with a comparatively low-power nuclear bomb such as the first one exploded in Japan. Today's bombs are terrifically more powerful. Certainly the price that the Nation is paying for virtually this sole service of sounding alerts by the civil defense organization is excessive.

Take a look at what happened Friday. The State government temporarily moved from Columbus. In hospitals, public schools, and similar institutions, the existing authorities handled all precautionary measures whose value is questionable but possibly might have some beneficial results.

In New York City, traffic was stopped and the streets cleared. Most of the folks took refuge in neighboring office and business buildings. The protection against nuclear attack thus afforded is negligible. Probably Columbus turned on its synchronized traffic light system to which taxpayers throughout the Nation contributed nearly a half million dollars, and possibly because this was an imaginary attack, the motorists may have obeyed it. But if real bombs had been falling, how many would have heeded a red light?

In the most cases of evacuation, there was movement of parts of the civilian populace to stations not more than 30 miles distant. What good would that have been had a real nuclear bomb landed in the area?

Scientists acquainted with nuclear weapons admit there is at present no known protection for human beings who happen to be anywhere within a tremendously large area in which one or more of the bombs may be

exploded. It is somewhat a matter of luck, though some precautionary steps may be of help.

Why not keep the local authorities throughout the United States acquainted with these precautions, advising them what should be done to obtain community or area cooperation? They have the facilities, and certainly in most cases, just as much "brains" as might be obtained for the purpose otherwise.

Some place in Federal Government, there are obvious attempts to establish Civil Defense as a new Federal Government agency. The fact that certain Federal Government surplus equipment is withheld from political subdivisions which decline to go entirely along with the Civil Defense organization is somewhat proof of this.

It is to be assumed that in the eyes of the Federal Government or at least that group which sets up Civilian Defense, that persons residing in areas which decline to throw their money away on foolish Civil Defense programs are not worthy of protection?

Senator STEPHEN M. YOUNG, who has been calling Civil Defense on the carpet, would be doing the Nation a great favor if he would awaken his colleagues to the point where they would insist that surplus Federal property be distributed to the political subdivisions without any condition that they contribute money to the existing Civil Defense setup.

The wasteful neglect which led to the loss of several thousand dollars worth of radio equipment entrusted to Civil Defense in Washington, D.C., is now almost equalled in the same city by the offering for sale of a bus; the cost $15,000 to Civil Defense, never used except for practice, and now offered for 50 cents. Yes, that is right, 50 cents. These wastes have been duplicated in many another community.

So it stands as of now that virtually the sole value of Civil Defense is establishing a nationwide communications system to handle the operations of Conelrad and local alert systems, plus possibly advising local authorities what to do in case of a bomb attack. Does this require all the money being spent and being asked by the national Civil Defense organization? That would appear extremely doubtful.

Big Boost for Padre Island National Park

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. YARBOROUGH. Mr. President—

Padre Island presents one of the last remaining opportunities for this Nation to preserve such a length of beach in its natural state. In future years, America's growing population will have few chances to experience and gain inspiration from a vast sweep of ocean shore unaltered by man. To its people, this country has always symbolized bigness and spaciousness. * * * To preserve America's longest beach will provide not only an outstanding area for biological and geological study, but also a place where future generations of Americans can experience a wild spaciousness that is their heritage.

Mr. President, the words I have just read are not my own. They are taken from the very eloquent and absolutely factual report of workers from the U.S. Department of Interior National Park Service who made a field investigation of Padre Island.

In addition to this report, I am in receipt this date of a letter from Secretary of the Interior Seaton advising me that the Advisory Board on National Parks has adopted resolutions favoring establishment of a national seashore on Padre Island. These resolutions urge the Secretary of the Interior to report favorably on my bill, S. 4, to set aside portions of Padre Island as a national seashore.

Mr. President, I ask unanimous consent to have the text of this resolution of the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SHORELINES

Whereas the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments has consistently urged that an effort be made to salvage and protect our outstanding natural shoreline areas; and

Whereas there are several bills in Congress calling for the acquisition and protection of shoreline areas, which already have been recommended by the Board; and

Whereas significant shoreline areas, which can be preserved, are rapidly disappearing:

Therefore, the Advisory Board recommends that the Secretary of the Interior report favorably on those bills now in Congress intended to set aside portions of Cape Cod, Padre Island, the Indiana Dunes, and the Oregon Dunes, stipulating (1) that these should be created as shoreline areas as distinguished from national parks; (2) that steps will immediately be taken to eliminate hostile uses in any of those areas as quickly as possible; and the Board hopes that the Secretary will view with favor and lend his support to the principle of establishing, in the other relatively few remaining suitable areas, shoreline areas as entities different in standards and administration from national parks, monuments, or historic sites.

Approved: April 22, 1959.

H. S. WAGNER,
Secretary.

Mr. YARBOROUGH. Mr. President, I wish to emphasize that establishment of this park, a matter which I have been urging on the attention of the Senate for a year and a half, is not for the benefit of Texans alone. It is a project of immeasurable inspirational value to millions of Americans, including generations yet unborn. The park sought here is a monument to our country's greatness which will link its magnificent yesterdays with its fabulous tomorrows.

But it is an opportunity that will not last much longer. We must move this session. Enabling legislation on the State level has been introduced by the Honorable State Representative Roger Daily of Houston, and others. It already has been favorably reported out of committee in the Texas House of Representatives. On this project, particularly, State and Federal legislators are working in harmony for the people.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the summary section of the Field Investigation Report on Padre Island, February 1959, made by the U.S. Department of the Interior National Park Service, region 3.

There being no objection, the summary section was ordered to be printed in the RECORD, as follows:

Padre Island, stretching for 117 miles along the Texas Gulf coast from Corpus Christi on the north almost to Mexico on the south, is the longest island or barrier beach along the shores of the United States. It affords the longest stretch of undeveloped seashore remaining in America and has been recognized for more than 20 years as one of the Nation's outstanding potential seashore recreation areas. So outstanding are the features of Padre Island that it has been recognized to be of national significance and worthy of preservation for public use and enjoyment.

The island is a typical example of a barrier beach, unusual because of its great size which enhances its primitive character. The wide, clean beach, composed of fine sand and broken shell, extends in an unbroken sweep from horizon to horizon. The slope of the shore is uniformly gentle, providing ideal conditions for swimming, surf fishing, and other beach recreation.

A distinctive feature of Padre Island are the windswept, irregular dunes. Lacking extensive vegetation, much of the sand is shaped and reshaped by the wind. When stable, the dunes bordering the beach are often imposing, up to 40 feet high. Elsewhere, unstable dunes are smaller, often in the shape of small rippling mounds, or else nonexistent, resulting in flats stretching from sea to sound. The general atmosphere of the island is one of undisturbed isolation and seemingly endless expanses of flat, sparsely vegetated beachland.

Somewhat broader at the north than in the south, the island varies in width from a few hundred yards to about 2 miles. Laguna Madre, the bay separating the island from the mainland, achieves a maximum width of 10 miles, although large portions are little more than mud flats, and the water seldom reaches a depth of more than 6 feet.

The vegetation of Padre Island is quite uniform in appearance and consists of a relatively small number of species. Typical dune vegetation consist of seaoats, beach croton, and beach morning glory. Other plants commonly ecountered are sea-purslane, beach evening primrose, ragweed, seaside spurge, partridge-pea, and a variety of other shrubs and grasses.

Between the coastal dunes and the lagoon are many large areas well covered with grasses and low shrubs. The only trees appear to be a very few scrubby oaks near the north end of the island. Extensive grazing over a long period has destroyed much vegetation, resulting in widespread areas of shifting sand. Large salt marsh areas are found along the northern part of the island adjacent to the Laguna Madre.

The coastal region of Texas is noted for its excellent waterfowl habitat and productive fishing waters. The sheltered bays, marshlands, and islands along Padre Island are especially attractive to many forms of birdlife, providing both feeding and nesting grounds. Some of the more common resident birds include white and brown pelicans, American and snowy egrets, little blue and great blue herons, gulls, and at least four species of terns. South Bird Island, in the Laguna Madre, is famed for its large nesting colony of white pelicans and other water and shore birds.

The animal population of Padre Island itself is relatively small, both in numbers and species. There is ample evidence of the presence of many small rodents and there should also be rabbits, raccoons, coyotes, and badgers. Deer and peccary are among the larger animals reported.

Both surf and deep sea fishing are popular sports, and commercial fishing operations are carried on from nearby ports. Chan-

nel bass and pompano are among the fishes caught in the surf, while boats land bonito, cobia, black grouper, snappers, snook, and tarpon. Oysers and shrimp are taken by commercial boat. The usual forms of shore marine life and a wide variety of shells are found along the beach.

The history of Padre Island is highlighted by many colorful events. The island was the domain of the savage, cannibalistic Karankawan Indians when the first Spanish fleet sailed along the beach in 1519. Through the years its bleak expanses invited little permanent settlement until about 1800, when the Spanish priest Padre Nicolas Balli, for whom the island was named, obtained sovereign right to the island and carried on grazing operations with longhorns and mustangs. Cattle and, for a time, sheep, have continued to be the main residents of the island.

Occupying the same latitude as the south Florida coast, Padre Island enjoys an attractive climate for year-round outdoor recreation, with cool gulf breezes in the summer and warm sunshine in the winter. The average January temperature of 57° insures that most winter days will be in the sixties and seventies. The average July temperature is 83°. Freezing temperatures are rare and citrus fruits and other semitropical plants flourish on the Texas mainland in this region. On the island the prevailing winds are southerly, and hurricanes may on occasion strike during late summer or early fall.

Just a few years ago Padre Island was almost inaccessible, totally undeveloped and unspoiled. Today it is readily reached by causeways at each end, where considerable development is underway. However, the major part of the island is still unspoiled and might yet be preserved for public use and enjoyment if steps are taken without delay.

Virginians Honor Fauquier County in Her Bicentennial Year

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an article in the Virginia Record of March 1959 by Philip V. Brennan, Jr., entitled "Fauquier—A Virginia County Ages Gracefully."

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

FAUQUIER—A VIRGINIA COUNTY AGES GRACEFULLY

(By Philip V. Brennan, Jr.)

February 22, Washington's Birthday, took a bit of added significance this year for the residents of Fauquier County, Va. Two hundred years ago, on February 22, 1759, the colonial assembly enacted legislation which created Fauquier County by excising it from the body politic of Prince William County as of May 1, 1759. Thus, on May 1 of this year, Fauquier will celebrate its 200th birthday. No "200-year-old" ever looked better. * * *

Warrenton, county seat of Fauquier, was originally known as Fauquier Courthouse. On January 5, 1810, it was incorporated as Warrenton. It was named for the Revolutionary War hero of Bunker Hill, General Warren. It is a thriving and prosperous town. The county courthouse sits on a rise near the center of town. The courtroom is a marvelous example of Virginia colonial decor. Richly paneled, its walls are of pale and dignified green. Soft light filters in from its high windows and the room takes on a quiet and almost churchlike atmosphere. Arranged on the walls are portraits of former circuit judges and State officials and, at the rear of the judge's bench, an enormous and magnificent painting of John Marshall presides over the silence with stern and judicial assurance. A solitary visit to this empty room is a lesson in Virginia history. Its quiet elegance, rustic but dignified, speaks eloquently of the character of a State. * * *

On April 30 of this year Fauquier will commence its observance of its 200th anniversary by opening the doors of John Marshall's home, Oak Hill, to the public. The following day, after a giant parade, honor will be paid to one of Fauquier's great native sons, HOWARD WORTH SMITH. "Judge" Smith, chairman of the powerful House Rules Committee, is the South's most articulate and effective spokesman in the House of Representatives. A rock of intelligent and dynamic conservatism in a muddy sea of confused and meaningless liberalism, HOWARD SMITH is what Virginia excels in producing—a gentleman of dignity, well-rounded knowledge, quiet good sense, and courage.

Another native of Fauquier will be honored that day when a statue of John Marshall, the Nation's greatest Chief Justice, will be unveiled. Many other memories will be honored silently, including those of the industrious people who lived quietly and simply through 200 years of Fauquier history—people many of whose names are long forgotten but whose existence was vital to that of the county's.

Fauquier's present is little different from its past. It continues to provide its share of greatness to the Nation—its Howard Smiths. Its future seems to hang suspended above it, from the northeast, in Washington. The exodus from that city has engulfed the suburbs immediately beyond its borders, and suburbia creeps ever southward. Fauquier will someday, in the not too distant future, have to cope with the problems of suburbanization.

This encounter should be interesting to observe, a true collision of the old and the new. Fauquier's 200 years of experience, however, weighs heavily in its favor, and the transformation of this old Virginia county into a suburb of Washington will undoubtedly take place on Fauquier's terms. Properly planned for, it will bring to Fauquier its greatest prosperity and it might very well turn fox hunting into a new suburban rage. One thing, however, is certain—Fauquier will do whatever it must do as it has done everything else in the past—gracefully.

American Press Reaction to Fidel Castro

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. NEUBERGER. Mr. President, because our relations with Cuba are so vital to hemisphere safety and solidarity, all of us are concerned over the recent visit to the United States of the Cuban Prime Minister, Dr. Fidel Castro.

Dr. Castro addressed the American Society of Newspaper Editors, and one of the observers of his presentation was Robert C. Notson, managing editor of the Oregonian, of Portland. Mr. Notson is one of the first Pacific coast editors in many years to be elected a director of the society.

In the Oregonian of April 24, 1959, Mr. Notson has analyzed the reaction of his fellow editors to Mr. Castro's views and statements, and I ask unanimous consent that this article by Mr. Notson from the Oregonian be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CASTRO MADE A HIT WITH U.S. EDITORS

(By Robert C. Notson)

Fidel Castro has done an outstanding job of selling himself to the American people on his current visit to the United States. This was a general opinion voiced among members of the American Society of Newspaper Editors, who heard him speak Friday in Washington, D.C., and who watched him perform elsewhere over the weekend. Appearance of the Cuban Premier had been attacked by some of the editors. Others had expressed misgivings over the invitation, which had bypassed the State Department. Despite all controversy, there was great curiosity as to Castro, as a person, and what he would do and say. A throng greeted him in the Presidential Ballroom of the Statler Hotel.

When he entered with his whiskered entourage, applause was sparse. A few editors struggled to their feet, a gesture common in case of a distinguished guest. Then a few more got up, followed by more. Most of the crowd stood, but it was a ragged demonstration.

At the end of 2½ hours of very earnest speaking by way of questions and answers, the crowd rose spontaneously and gave Castro a real hand. Editors who had been cool to him admitted that they were convinced of his essential sincerity and good intent.

Castro labored to get over his ideas in English, and did a pretty fair job of it, with only occasional aid from his interpreter, as he searched for the right expressions. It was difficult to cast this soft-spoken, but intense, young man in the role either of a vengeful conqueror or potential dictator.

The editors applauded roundly his statement that he was not a Communist and that Communists, if any, played no significant role in his Government. They also gave approval when he made it clear that he would favor the United States in any clash with Iron Curtain countries. He said that his "neutrality statement" had been widely misunderstood. He meant, he said, only that Cuba had no present ability to assist in any military enterprise.

He made it clear that he would honor all international commitments, including those for U.S. bases in Cuba. Without American bases, Castro said, Cuba would have no defense against external aggression.

The Premier strongly justified his executions of war criminals. He protested the statement that has recurred in the American press that he was executing followers of Batista. Executing mere followers would be a crime in itself, he said. While proceedings had been summary in some cases, in every one of them there was a well-documented dossier of proof, supported by testimony, he maintained.

Castro charged that 20,000 persons had been tortured and put to death under Batista, and that the public treasury had been stripped of $200 million.

He made two telling points with the editors:

The revolutionary army had been singular for its discipline, and there had been no substantial instance of mistreating prisoners or abusing civilians.

This was the only revolution in history where there had been an orderly take over of power without rioting, looting, and lynchings.

The reason, he said, was that he had promised the people expeditious justice for war criminals and, lacking this, the people would have taken matters into their own hands. Military courts handled the cases, because all other courts had been corrupted by Batista.

He promised reconstituted courts in a few weeks and free elections in 2 to 3 years. An election now would simply result in overwhelming victory for his 26th of July movement, as there is no opposition worthy of the name, Castro observed.

He told of 20 percent unemployment and serious economic dislocations and declared that the first job of his administration would be to get business and farms functioning. Castro noted that he had been prodded by the press of this country as to when he would restore all freedoms. He said most of them had been restored, and all would be, but the right to eat comes first.

Despite demonstrations, picketing, and challenges, as the large delegation disported itself around Washington, no untoward incident was reported. The bearded retinue behaved in exemplary fashion. Castro brought many of his intimates who had been long with him in the mountains. He said he couldn't pick and choose.

Desirability of Increasing Consumption of Dairy Products

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, April 28, 1959

Mr. WILEY. Mr. President, we recognize that one of the major problems confronting the farm industry is the task of establishing a consumption-production balance of farm commodities.

Particularly is this true of the dairy industry. Today dairy production supplies 30 percent of the Nation's diet of animal proteins and produces 15 percent of the total retail food sales. Dollar for dollar, these products are the best buy in the family food basket.

In addition, dairying produces about 10 percent of the gross national income from agriculture. Consequently, improving the health of the dairy industry would result in an accompanying improvement in the overall farm economy.

A major challenge confronting the industry, therefore, is that of increasing the consumption of dairy products. As accomplished, this will not only contribute to better economic health for the industry, but also will provide greater health and well-being for the American people.

Among the ways and means by which consumption can be increased, is that of greater sales and promotion efforts.

The April issue of Pure Milk News contains an article entitled "Occasional Milk Drinkers Offer Best Promotion Target for Increasing Sales." The article offers a summary of methods for increasing milk consumption and thus improving the outlook for the dairy industry.

In view of the fact that there are a number of bills pending before Congress relating not only to the dairy industry but to the farm economy, I suggest that this article offers one constructive way in which the Government, through its Promotional Services Department in the Department of Agriculture, the State departments of agriculture, and the dairy industry, itself, can tackle this problem of achieving greater consumption. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OCCASIONAL MILK DRINKERS OFFER BEST PROMOTION TARGET FOR INCREASING SALES

The Alfred Politz Research, Inc., has announced its findings in the eighth of a series of studies conducted for the American Dairy Association to determine public attitudes toward dairy products.

Following is a quick summary of the findings:

1. The best way to expand the market for fluid milk is to increase the frequency of consumption of occasional milk drinkers.

2. The occasional milk drinker is most likely to consume milk at meals, or in the evening and at bedtime.

3. A smaller portion of adults consume milk on Sunday than any other day of the week.

4. Milk is more acceptable as a mealtime beverage away from home than as a between-meal beverage.

5. Refreshment and thirst quenching are closely associated with between-meal beverages, whereas nourishment is closely associated with beverages consumed with meals.

6. Energy is an important factor in consumers' attitudes toward beverages both between and with meals.

7. A beverage that provides energy is thought to have nutritional value, probably is sweet, more likely to be hot than cold and may be fattening or refreshing.

8. Proteins and sugars are thought to provide the best type of energy.

9. Sugars are thought to provide quick energy while proteins provide longer-lasting energy, energy without being fattening and energy that helps build the body.

10. People are more concerned about getting enough protein than any other nutrient.

11. Consumers feel that milk is a top supplier of protein along with meat and fowl.

12. Consumers think of chocolate milk and chocolate drinks as children's beverages. Buttermilk, skim milk and 2 percent milk are all considered adult beverages.

13. Housewives do not look with disfavor on the idea of stocking more than one variety of milk. Chocolate milk is more frequently mentioned as another variety to be stocked by families with children while buttermilk is more frequently mentioned by housewives with no children.

14. Almost two-thirds of all housewives have to make special trips to the store and almost half go to a different store from where they usually shop.

15. More housewives have to make a special trip to the store for milk than any other product. However, once they are in the store they also buy numerous additional products on their shopping list.

New British Air Route Threatens U.S. Taxpayer and U.S. Airlines

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. LAIRD. Mr. Speaker, prior to the Easter recess, the gentleman from New York [Mr. DEROUNIAN] brought to the attention of the House a current proceeding of the Civil Aeronautics Board involving the application of British Overseas Airways Corp. for a foreign air carrier permit to begin service on a route extending from Hong Kong to Tokyo, Honolulu, San Francisco, and New York.

The gentleman's remarks interested me greatly, because the circumstances which he described appear to indicate that this is another instance in which this Government has conceded valuable air rights to another nation which will have an adverse economic effect on the U.S.-flag air carriers.

The extent of this economic damage to U.S. carriers is apparent from a report made last week to the Civil Aeronautics Board by Examiner Ferdinand Moran. This report recommended that the CAB deny BOAC's application to serve Tokyo on its transpacific route in the public interest, because, among other things, BOAC would divert $13 million a year in revenue from the two U.S. transpacific carriers, Pan American and Northwest.

Mr. Speaker, as a member of the Committee on Appropriations, I have been familiar with the costs involved in subsidizing the development of international air routes, and I am gravely concerned with the growing competition of foreign-flag carriers, and the potential effect of this competition on the future economic well-being of U.S. air transport enterprises.

It has been gratifying to observe that, in recent years, most of the domestic trunkline and international air carrier operations have reached a stage in which they can operate profitably without further Government assistance in the form of direct subsidy payments.

In the Pacific area, this status was achieved only after substantial assistance from the Government. During the years 1946 through 1955, the transpacific operations of U.S. Airlines required more than $87 million in Federal subsidy. Of this, Northwest received about $24 million and Pan American about $63 million. Additional subsidy, in amounts yet to be determined, is being claimed by Pan American for the years 1956 through 1958, but Northwest has been subsidy-free since 1954 and Pan American will be in the future.

None of the U.S. international carriers will be able to maintain a subsidy-free status, however, if this Government continues its past policies giving away valuable air rights without regard to the effect on the U.S. carriers, and without obtaining rights of equal value in return.

It is imperative that every effort be made to give the U.S. carriers the protection required to maintain their subsidy-free status. No further air rights should be relinquished to foreign flag carriers unless compensating U.S. rights are obtained.

In the case under discussion, if BOAC is handed this route between the two largest cities in the world—Tokyo and New York—the initial diversion is estimated, as I have mentioned, at $13 million. But that is not the end.

If this precedent is established, other foreign flag carriers authorized to operate between Tokyo and the west coast will have a powerful argument that they, too, should be given co-terminal status at New York, with further losses in revenue resulting for the U.S. transpacific and transcontinetal carriers.

The ultimate effects of this diversion, particularly during a period when the carriers are undergoing a costly transition to the jet age, could well be so serious that the sound economic status which the U.S. carriers have achieved, at great expense to the taxpayers, will be sacrificed and further subsidies may be required.

It does not seem reasonable or logical that this Government should be in the position of diverting revenue to the foreign flag carriers by the award of routes to which they have no legal entitlement under existing international agreements, particularly when the American taxpayer may be called upon to pick up the tab.

Mr. Speaker, I believe the gentleman from New York has made a sound suggestion in proposing an immediate investigation of this case, and I urge that the Transportation Subcommittee of the Interstate and Foreign Commerce Committee undertake such an investigation at once.

New British Air Route Threatens U.S. Taxpayer and U.S. Airlines

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. DEROUNIAN. Mr. Speaker, I am grateful to the gentleman for his comments regarding the economic impact which the award of this new route to BOAC would have upon the competing U.S.-flag carriers.

As I have pointed out previously, the award of a Tokyo-New York route to the United Kingdom was never contemplated in the Bermuda agreement. Tokyo has been added to that agreement without negotiations, and no equivalent rights were obtained for the U.S. carriers in return.

In addition, however, the traffic on the route would be largely "fifth freedom," or third country, traffic to which a British air carrier has no claim. The examiner in the case refers to the fact that an estimated 99 percent of the passengers diverted from the U.S. carriers by BOAC would not be British subjects, or passengers traveling between points in British territory. The vast majority would be American citizens.

This fact makes the diversion to which the gentleman from Wisconsin has referred of even greater significance, since the passengers diverted would be largely passengers who properly should be carried by airlines of the United States or Japan.

This increasing diversion of American traffic to foreign-flag airlines is of growing concern, not only to the U.S. airline industry but the U.S. airline employees.

Pan American Airways pilots have pointed out, in a document circulated recently to many Members of the Congress, the extent to which foreign carriers are increasing their position in the international air transport market.

They point out that in 1948, 74 percent of the air traffic across the North Atlantic was handled by American carriers. In 1957, TWA and Pan American carried less than 43 percent of the total—this despite the fact that approximately 70 percent of the passengers were U.S. citizens.

The award of a Tokyo-New York route to BOAC will hasten the day when the same situation will prevail in the Pacific, to the great detriment of the U.S. air transport industry and its employees.

Mr. Speaker, I thank the gentleman for his support of my suggestion that a committee of the Congress undertake an investigation of this problem, and I hope that this will be done.

National Coal Policy Conference

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. GAVIN. Mr. Speaker, following is the text of a speech by Howard E. Simpson, president, Baltimore & Ohio Railroad Co., at the national fuels policy dinner, sponsored by the National Coal Policy Conference, in the presidential ballroom of the Statler-Hilton Hotel, Monday evening, April 27, 1959:

The opportunity for a railroadman to participate in this program and to put in a word for a national fuels policy is deeply appreciated. As you will readily understand, the industry I represent has an enormous stake in the outcome.

First of all, it should be pointed out that failure to evolve a well-reasoned, all-inclusive national fuels policy will seriously affect the ability of your railroads to serve all segments of the economy. The Nation's railroads have available for coal traffic a fleet of over 500,000 hopper cars and an investment of over $3 billion in equipment and facilities used primarily for the movement of coal. Beyond this, practically every portion of the rest of the overall plant is used in part for coal handling.

As an example, the Baltimore & Ohio owns 48,000 hopper cars, and has invested more than $300 million in cars, locomotives and fixed plant used almost exclusively for coal traffic, which contributes 30 percent of our freight revenues. On some roads the relative importance of revenues from coal is even greater—as much as 70 percent.

It is clear that a progressive drying up of coal's share of the fuel market will seriously affect railroad plant. Cars, locomotives and tracks supported primarily by coal traffic don't stand idle indefinitely until they are suddenly needed again. Lost also would be a substantial portion of more than 800,000 skilled railroaders now at your service. Business concerns like railroads are forced to scrap excess facilities. No self-supporting enterprise can afford to maintain standby service.

The fuels issue is not a simple fact of open competition for a market. If it were, we wouldn't be here tonight. The issue, as I see it, is this: Is the present policy assuring this country a steady supply of fuels and transportation service susceptible of rapid growth and expansion and able to serve without interruption in a time of national emergency?

Certainly, the coal industry adequately passes these tests. It is a stable domestic enterprise, and is capable of immense expansion in time of need, provided it does not have to contend with further shrinking of its market. The railroads pass the same tests with a wide margin. Like coal, they are a realiable domestic industry. Furthermore, railroad charges are regulated by public authority. Granted fair and equitable Government policies for transportation, the railroads can absorb striking increases in traffic volume.

Continued shrinking in the market for solid fuels will seriously affect the ability of the railroads to move coal, and it will also force a contraction of the overall plant, thereby making the rail industry less able to serve the entire traffic needs of the country. For the prime characteristic of the American railroads is that they are volume carriers. Without volume they cannot exist—certainly not under private ownership and operation. Moreover, in terms of importance to the Nation, the railroads are the only true common carriers. They are the only form of transportation that can, and will, haul anything, at any time, in any quantity, between any points on a continent-wide system.

The railroads have built-in flexibility enabling them to expand the use of their roadway, or fixed plant, capacity almost indefinately and with a minimum drain on the country's resources in time of need. In World War II, the railroads were sufficiently flexible to increase and expand their facilities and operations, with the result that they handled 91 percent of the military freight and 97 percent of military passengers. This is one of the reasons why, in military logistics, the railroad is regarded as basic.

The issue before us, then, is whether this country is to have a steady, dependable—and expandable—supply of fuel, whatever the future may bring, and, secondly, whether we are to have a strong, reliable system of railroad transportation for all of our traffic.

The business interests of the coal industry, or of the railroads, or of the consumers of coal are really not the issue here. The real issue is our Nation's economic strength and security.

I emphasize that the railroads—the Nation's strong arm of security—face the future with confidence. An important reason for that confidence is our conviction that leaders in Government will promptly consider and adopt a fuels policy that will be sound and farsighted, and, in addition, protect its citizens in peacetime, as well as in times of national emergency.

We urge you as Americans dedicated to the Nation's interests and survival to support the objectives of the national conference.

The Place of Coal in the Present and in the Future Economy of the United States

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. GAVIN. Mr. Speaker, the following is the text of a speech by Philip Sporn, president of the American Electric Power Co., at the national fuels policy dinner, sponsored by the National Coal Policy Conference, in the Presidential ballroom of the Statler-Hilton Hotel, Monday evening, April 27, 1959:

It is a signal honor and privilege to have this opportunity to speak to this distinguished audience on the role of coal in our economy. This subject, I strongly feel, is of vital importance not only to the coal industry and to the railroad utility industries, but also to the very well-being, strength, and even survival of the United States.

The coal industry has had a great history. It has provided the very foundations of the industrial expansion and development in all of the Western World, starting with the industrial revolution some 200 years ago. Its first use was as a source of heat energy converted into mechanical energy; later as a major component in steelmaking. If the last 50 years have been the age of steel, they have been even more so the age of fuel-generated energy, and until quite recently this has meant primarily the age of coal.

Although oil and natural gas have now been under development for about 100 years in this country, their growth to a position of primacy in the energy picture of this country has been relatively slow and gradual. Natural gas, particularly, made no significant impression on the energy supply of the country until the last decade and a half.

In 1920 coal, both bituminous and anthracite, supplied over 78 percent of the energy consumed in this country, and as recently as 1947, when the production of bituminous coal reached its historic all-time peak of 630 million tons, it still provided about 50 percent of this country's energy supply. But since that date there has been a rapid change in coal's position, and coal production has now declined to the point where, in 1958, it supplied less than 25 percent of the country's energy, while oil and gas supplied over 70 percent. Coal production has fallen from the record levels of 1947 by over 200 million tons, or about one-third.

This, of course, has confronted both the management and labor segments of the coal industry with many very difficult adjustments. Some people have been prepared to write off the coal industry as a major factor in our economy, but this certainly is not true of those who are knowledgeable or who have given serious thought to our energy problems. It definitely is not true of the coal industry itself, which in the postwar period has made substantial strides in technology that have rapidly increased efficiencies and productivity.

And yet the coal industry is in difficulties. These difficulties have resulted from several important developments. In railroad transportation, the rapid change to the diesel locomotive since 1947 has resulted in almost complete loss to the coal industry of a market that at its peak was close to 150 million tons per year. The extensions of gas pipelines throughout the country in that same period have materially decreased coal's position in the home-heating market. The competition of imported oil, particularly residual oil, in the eastern seaboard has made significant inroads on coal's markets both in utility and in industrial fields. The combined effect of these last two attritions has been a loss close to that of the railroad market.

Thus, there now remain only two major growing markets for coal—the metallurgical and the electric power—and of these two, the more rapidly growing by far is the electric power market. Since 1947 the increased tonnage consumed by the utility industry has absorbed about 70 percent of the lost railroad tonnage.

The electric power industry has demonstrated remarkable vitality and growth that has resulted in a doubling every 10 years throughout its history of a little over three-quarters of a century. And there is every reason to believe this will continue for the next several decades. In 1920 the electric utility industry accounted for a little over 10 percent of the total energy consumption of the United States and of this, about 55 percent, or 43 million tons, was coal. By 1957 the utility industry utilized about 20 percent of the total energy consumed in the United States. The use of coal by the utilities increased fourfold to over 160 million tons and continued to account for about 55 percent of the utility industry's total energy use. This has happened despite all the dramatic improvements in the efficiency of electric power generation which have reduced requirements for electric generation from over 3.5 pounds of coal equivalent to about 0.9 pound per kilowatt-hour.

For some time now I have been studying the question of the likely energy requirements of this country for the period around the middle of the decade of 1970–80, and more recently I have tried to carry these studies to the year 2000. While I realize the difficulties and dangers of such long-term projections and recognize the danger of substantial margins of error in such long-term projections, the directions and order of magnitude indicated by these studies are, I believe, sound. These projections indicate that by 1975 energy consumption by the electric utility industry will account for about 25 percent of the total energy requirements of the United States, and this will increase to 40 percent by the year 2000. At the same time, total energy requirements of the United States will increase 2½ times.

There are those who mistakenly believe that the future increases in total energy utilization, and even more rapid increases in electric energy use will be met by nuclear power. I have studied this question very carefully and have come to the conclusion that on the whole this is a mistaken oversimplification. Specifically, it fails to recognize coal's important position in the period of the next 20 years, and even as far ahead as the year 2000.

In my judgment nuclear power will, by the year 1975, provide no more than the equivalent of 50 million tons of coal for electric power generation. Further, this will constitute virtually the entire nuclear contribution to our energy supply. Coal, on the other hand, will have to supply 475 million tons for electric generation alone and as much as another 425 million tons for metallurgical and other uses. This represents well over a doubling of present coal production and 50 percent more coal than the peak production achieved by the coal industry in 1947.

In the period 1975–2000 nuclear power is likely to become more widespread. But even granting it the benefit of extreme optimism about the peacetime atom, and assuming that nuclear power accounts for 75 percent of all the additions to electric generating capacity between 1975 and 2000, and allowing for a tripling in electric generation in that period from 2 trillion to 6 trillion kilowatt-hours, atomic energy will still provide, in the year 2000, the equivalent of only 855 million tons of coal. But the use of coal for electric generation will continue to grow—although more modestly than in the period between now and 1975—to 600 million tons, with an additional 600 million tons required for all other purposes. Thus, while nuclear power may provide as much as 21 percent of this country's total estimated energy requirements in the year 2000, coal will continue to provide about 30 percent.

I have said nothing about the role of oil and gas and hydroelectric generation in the growth of electric utility generation in these periods because, relative to the total generation and total energy required for this generation, they will play only minor roles. But they will still have an important place in the total energy picture.

This optimistic picture of the potential growth and prosperity of the coal industry has led some people to look upon the coal industry's present problems with some complacency. They forget that if the coal industry is to be the strong, vital, efficient supplier of one-third of this country's growing energy requirements 40 years from now, it must first solve its present problems of growing up and living so as to survive what currently is a near crisis in its economic condition. If coal is to successfully play its indispensable role in the future—a role without which the welfare and even the defense of this country cannot be assured—then coal must have markets, production, earnings, and employment for its skilled work force in the present—right now.

But this requires a reorientation of policy vis-a-vis coal and the coal industry. This requires that everyone—not just the people in the coal industry itself and even Government, but major users—the utility industry, for example, which has such a large stake in the continued availability of adequate and economical sources of raw energy to be utilized for conversion into electrical energy—and including literally everyone interested in the welfare and safety of the United States must be concerned with the present state of the coal industry's health and with finding the means necessary to assure its vigorous survival.

National Coal Policy Conference

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. GAVIN. Mr. Speaker, there follows the text of a speech by George H. Love, chairman of the National Coal Policy Conference, at a dinner arranged by the conference, April 27, 1959, in the presidential ballroom of the Statler-Hilton Hotel, Washington, D.C.:

On behalf of those groups who form the National Coal Policy Conference, I have the pleasure and honor to welcome you tonight. Your hosts have joined together in this conference to find a solution in the national interest to their common problem: the revitalization of the essential coal industry. We are mine operators and owners, officers of the United Mine Workers, presidents of the some 30 railroads which transport coal in volume, coal consumers represented by the great utility companies, and we are presidents of the companies which produce the great machines and equipment now used in our coal mines.

As world trade has become more important and we have learned more about the other nations, we have all been impressed most strikingly by the concern of each nation for its energy sources. Everyone everywhere knows that the increasing use of energy is a key to progress as an economic society, is a way to leadership as a nation, and in the end is the one way to win the world race with communism. We have all heard of the Russian 5-year plans and their programs to double steel and aluminum production but at the bottom of it all is the race to use increasing amounts of energy. Not only does it take great quantities of energy to produce steel and aluminum but the amount of energy used is the best barometer of a nation's standard of living.

That being true, every country with which I am familiar feels it is almost the prime purpose of government to have a national policy toward energy and toward the sources of such energy. A typical example of this national interest in energy sources occurred in Western Germany last year. A company for which I work was building a large dock in Dotterdam, with Dutch associates, to handle iron ore for the German steel industry along the Rhine. We had in mind doubling the size of the dock to handle coal for these same German customers, coal that would come from this country and could be delivered to the industrial Rhine area for several dollars cheaper than their own coal. In addition, we were prepared to store the coal for the German steel companies on our docks, as this heavily industrialized Rhine area has very little storage place around the plants. However, the Germans said in essence: "Everything is fine, gentlemen. We need the savings you suggest and we like the quality of your coal, but our own coal mines are one of our greatest national assets and we must keep them in existence and not lose a single worker from them, because these mines are our only domestic source of energy. Yes, we will take your iron ore, but our own coal mines must continue to work." This story is typical, and I might also point out in passing that our neighbor to the north, Canada, has had a recent study of that country's energy sources by a royal commission.

This, fundamentally, is the reason for this meeting tonight. We believe that this Nation must establish a national fuels policy and do it at the earliest date. We are fortunate enough to have in varying amounts all the major sources of such energy. Therefore, we need a national policy more than any other Nation because we must balance the use of these fuels with their varying reserves so that each makes the greatest possible contribution to the national welfare. Let me mention three problems, the proper solution of which can only come from an unbiased government—

You have heard, even in the Halls of Congress, that the present mandatory controls on importation of residual oil promulgated by the President on March 10 might serve to deny heat to our citizens in New England and along the coast. This is purely ridiculous, as home heating oil and residual oil are two completely different animals, the former selling for at least twice as much as the latter. Restrictions of residual oil have nothing to do with heating homes, because this particular product is used in large industrial and utility plants under boilers where domestic coal or natural gas can also be used.

Let me explain very quickly why residual oil is such an unfair competitor from time to time and can alone wreck the entire coal industry and the eastern railroads, which need the coal traffic so badly. Any great natural resource such as oil must at times be in oversupply. Plans for production of oil are made five and ten years in advance, and exploration and development sometimes bring in great new fields unexpectedly. Every 4 or 5 years the world seems to be faced with a tremendous oversupply of oil. This never happened in greater volume than in 1958.

The only place in the entire world where this oil surplus could suddenly be absorbed in volume is along the eastern seaboard where so many of our large industrial plants and utilities are equipped with dual burning equipment, so that by turning a valve a plant may switch from coal to oil.

That is all right, if coal were not the fundamental and cheapest fuel for these seaboard plants (at least 80 percent of the time) and if the coal and railroad industries could survive as standby industries during this short period of oil surplus. And finally, it would be all right if this foreign oil could be available during the next world emergency. But in every past crisis it has rapidly disappeared.

Let me give you two or three sentences about natural gas and, in doing so, point out that it is a perfect household fuel when it is available on an economic basis. It is a clean and convenient fuel and has other higher uses where coal or oil does not fill the bill. Because it does have these unusual properties and because its reserves are limited, certainly then it should not be dumped under large industrial boilers at prices frequently as low as one-third the price the householder pays and actually sold at less than cost to knock coal out of that particular market merely to give a pipeline company or two a 100% load factor. Obviously our natural gas reserves must be thought of as having a life of two or three decades as opposed to 1,000 years for coal, or there would not be such great present efforts being made to import increased amounts from Mexico and Canada.

Finally, let me mention atomic energy. Of course, this country must be first in knowledge, and ability, to use this great new source of energy and that is the situation today—we are first. The coal industry wants us to stay that way, but we do not believe that any rational, national fuel policy would permit us to rush to produce energy from the atom costing 60 mills in coal territory where coal can produce the same energy for 4 mills. Do we put our own essential coal miners and railroad workers on the streets in order to have our taxpayers subsidize power costing 10 to 15 times as much? Let us continue to be first in knowledge, but then let this new source of energy find its proper place among the other fuels on the basis of economics rather than politics.

In conclusion, let me say that this country has had many inquiries into its energy sources. In the late thirties a group headed by Harold Ickes issued recommendations seeking a sound national policy concerned with conservation and prudent utilization of our basic energy resources. In 1951 Senator O. MAHONEY, as chairman of a study group, raised many questions still unanswered. There was the Paley Committee Report on natural resources in 1952. As late as February 1955, a Cabinet Advisory Committee on Energy Supplies, appointed by the President raised the question: What steps may be taken to improve the economic position of the coal industry, now seriously depressed, without penalizing competing industries as a means of enhancing the ability of that coal industry to contribute to the national defense? Incidentally, this Committee recommended limitations on foreign residual oil and prohibitions against the sale of natural gas at less than cost.

We, the National Coal Policy Conference, now ask for an unbiased Joint Congressional Committee to study this whole problem and thus provide a forum where representatives from the gas, oil, atomic, and coal industries may be heard and then find the proper policy for the balancd use of these fuels from a broad public point of view. Having found that proper policy, let us then implement it by law, if necessary, so that the recommendations may be carried out this time.

Colorado Communists Convicted Again

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica Outlook of Santa Monica, Calif.:

COLORADO COMMUNISTS CONVICTED AGAIN

A jury in a Denver Federal court has just convicted the same Communist leaders that a previous jury convicted, but who had been granted a new trial by the U.S. Supreme Court. That could have happened in California if the U.S. attorney had sought a new trial, but he felt a conviction was not obtainable under the rules of law the High Court prescribed for Smith Act trials. So he let them go, and we read recently that those same Communist leaders are busy leading their flock into more subversive activity and recruiting new members of the subversive party.

Maybe the U.S. attorney was right in dropping the case, but in view of what has just happened in Denver, maybe not. There could have been stronger evidence of inciting to action in the talk of the defendants in the Denver case, but to most aware observers there was plenty here, and the feeling was general that the Commies were properly convicted and should have been sent to prison to serve their 5-year terms.

There are two heartening things about the Denver case. One was the courage of the Federal prosecutor in bringing a new case. He was up against heavy odds of a High Court's frowning on the use of the Smith Act—the same act it had favored in the original case up from Judge Medina's New York Federal court. The other is the action of the jury in convicting. Juries are good cross sections of American opinion, and though they heed the judge's instructions on the law to apply, they invariably temper their findings in controversial cases with the general thought and modes of the community.

Though the Denver defendants will doubtless appeal from this adverse verdict, there is always the chance that this time they will fail and that the High Court will sustain the conviction. It might do it, and meanwhile, other communities can be heartened by the conviction to the point of prosecuting their own Commie leaders. And with juries indicating that their sentiment is still to imprison the people who urge violent overthrow of our system, even Congress may wake up to the need of repassing the Smith Act in form that is bound to be acceptable to the judges.

Nomination of Brooks Hays Commended

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. EVINS. Mr. Speaker, the nomination by the President of our former colleague, Brooks Hays, of Arkansas, as a member of the Board of Directors of the Tennessee Valley Authority, has been greeted with commendation in the press of my State. As examples of the press' reaction to this appointment, under unanimous consent, I insert in the Appendix of the RECORD an editorial appearing in the Nashville Banner and the Washington Report from the Nashville Tennessean for Sunday, April 26, 1959. The editorial and article follow:

[From the Nashville Banner, Apr. 24, 1959]

HAYS APPOINTMENT ACCEPTABLE

President Eisenhower's choice of Brooks Hays, of Arkansas, to succeed Frank B. Welch on the Tennessee Valley Authority Board hardly will encounter formidable opposition.

It did evoke surprise—for the former Congressman's name had not been among those on which speculation turned for this assignment. It does incur some regional regret, for the reasonable preference was for an appointment from within the valley area: someone both acquainted and identified with the interests served by this vast operation.

The President patently has avoided playing partisan politics, for he had named a Democrat to join two Republicans on the Board, and his choice accents the factor of public respect and personal integrity. Those are elementary in any treatment of office as a public trust.

With Chairman Herbert Vogel, and Arnold Jones, Mr. Hayes will round out a capable directorate—and apart from the valley's natural wish for a more direct representation at the agency's supervisory helm, it will welcome the appointment. Its genuine interest forbids perpetuation of the political gambit which fabricates a conspiracy on TVA every time some incumbent or aspirant runs for public office.

TVA is in good hands, and the Hays appointment will not detract from that.

[From the Nashville Tennessean, Apr. 26, 1959]

WASHINGTON REPORT—BROOKS HAYS' PRESTIGE HIGH—TVA APPOINTEE MAY BE THE ANSWER TO AGENCY'S MOST PRESSING NEEDS

(By Lois Laycook)

WASHINGTON.—Evangelist Billy Graham once described Brooks Hays as a rare combination of a man possessing the humor of Mark Twain, the common sense of Benjamin Franklin, and the integrity of Lincoln.

The former Arkansas Congressman, nominated for appointment to the TVA Board of Directors by President Eisenhower last week, probably has more congressional friends and admirers in both political parties than any figure in public life. Despite his defeat for reelection last fall, his prestige in Washington remains at a high level.

Even Southern Members of Congress who were pressured into a public display of hostility toward Hay's views on civil rights privately expressed admiration for his courage and integrity. There is no evidence that any Southern Senator will oppose Hay's nomination on the Senate floor. In fact, a number of Southerners, including Senators JOHN SPARKMAN (Democrat, Alabama), and J. WILLIAM FULBRIGHT (Democrat, Arkansas), have issued laudatory statements on the nomination.

Hays may turn out to be the answer to one of TVA's most pressing needs—a public relations missionary who can restore congressional and public confidence in the Agency's objectives.

Because of his many close friendships on Capitol Hill, Hays could be of invaluable service in helping TVA overcome repeated private power victories in the legislative field. He may be of assistance in the forthcoming battle over the TVA self-financing bill, provided he is confirmed by the Senate in time.

FERVENT SPOKESMAN

In addition to better liaison with Congress, TVA has long needed a fervent spokesman on the Board willing to go before the American people and give an eloquent presentation of the TVA story. Not since the days of David Lilienthal and Gordon Clapp has the agency had a dedicated spokesman ready to give TVA a real hard-sell campaign.

Hays has been in constant demand as a speaker throughout the country for many years. His humorous Ozark stories made him the best-known, best-liked raconteur in Congress with the lone exception of the late Alben Barkley.

Hay's humor has even reached the serious halls of the United Nations. As a U.S. delegate to the U.N., he once answered a Russian demand that Outer Mongolia be admitted to the U.N. by offering a counter proposal that Texas also be admitted to the U.N. under the new name of "Outer Arkansas."

The proposal broke up a tense U.N. meeting with belly laughs.

KIND-FACED MAN

Hays is a 60-year-old thin, kind-faced man with eyeglasses and a receding hairline. Never outwardly ruffled, he keeps a busy schedule with little fuss. A deeply religious intellectual, he became the first layman ever elected president of the 8 million-member Southern Baptist convention. His 2-year presidential term expires May 22.

As a moderate on civil rights, Hays tried desperately but unsuccessfully to play the role of peacemaker in the Little Rock school integration crisis. He arranged the Newport, R.I., meeting between President Eisenhower and Governor Orval Faubus in an attempt to prevent a direct clash between State and Federal authority in Arkansas. The effort failed.

Faubus later instigated the write-in campaign that resulted in Hay's defeat by Dale Alford in the November congressional election.

SOUTHERN CATALYST

In 1949, Hays stepped into what was virtually a vacuum to become a Southern catalyst in trying to find a formula for solving racial problems.

He introduced a bill—later to become known as "the Arkansas plan"—which sought to compromise three highly controversial issues, the poll tax, the proposed northern-supported antilynch bill, and the so-called fair employment practices commission.

The bill attracted widespread editorial support in newspapers throughout the country, including several in the South. However, the Truman administration insisted on its stronger proposals and the Hays' proposal died.

FIRM BELIEVER

For the most part, Hays supported New Deal and Fair Deal proposals during the Roosevelt and Truman administrations. A member of the House Foreign Affairs Committee, he was a firm believer in a bipartisan foreign policy.

Hays was a supporter of TVA throughout his service in Congress with the lone exception of the Dixon-Yates contract. He favored the contract, he said, because the construction of a powerplant in West Memphis, Ark., would have helped the critical unemployment situation in Arkansas. He also argued the contract was good for TVA.

There was no record vote on the Dixon-Yates contract when it was before the House in 1954. However, Hays openly supported the measure and voted for it on a teller (nonrecord) vote.

RECORD IS FAVORABLE

On public power issues generally, Hays' record is for the most part favorable. According to a National Rural Electric Association tally of votes on major power issues during his service in Congress from 1943 through 1958, Hays voted propublic power on 35 out of 41 opportunities.

Three of the thirty-five dealt with TVA legislation. In 1949, he voted for funds for the New Johnsonville steam plant on two separate rollcalls. The vote on this issue was crucial because it represented TVA's first venture into steam plant construction and stirred up the all-out opposition of the private power lobby.

In 1957, Hays cast his vote against a Republican amendment to kill all funds in the TVA appropriation bill earmarked for power facilities. The amendment was defeated.

The tally shows Hays supported all appropriations for the REA as well as for the Southwestern Power Administration. However, he is listed with unfavorable votes on two issues affecting the Bonneville Power Administration and the Southeastern Power Administration.

He also voted to turn over to the private power companies the development of Niagara Falls power projects in 1953.

Fire Prevention Award

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. DADDARIO. Mr. Speaker, on Monday night, the U.S. Chamber of Commerce presented awards for its annual interchamber fire safety contest. For the 14th time, the city of Hartford, capital of Connecticut and principal community in my district, received first award in its population class. Moreover, in 1940, 1943, and 1953, Hartford achieved the distinction of being chosen as the grant award winner and is now in permanent possession of the trophy. These awards recognize the outstanding effort made by the community and the distinguished record of the Hartford Fire Department, headed by Chief Henry G. Thomas. Chief Thomas is retiring this week and I think this latest chamber of commerce award is fittingly timed to call attention to the splendid record he has achieved. In addition, I should like to mention the work done by Fire Marshal George Kennedy in organizing the activity that is the basis for the award.

Hartford has had some destructive and tragic fires in its history. In all of them, the Hartford Fire Department has battled with remarkable speed, order and effectiveness to control this tragic

force. Many Hartford firemen have demonstrated exemplary bravery in action and all have shown the courage and resourcefulness that has inspired gratitude in adults and admiration in children. But the department realizes that firefighting is only part of its job. It turns to the fire prevention effort with vigorous steps because it knows that here is the most rewarding part of the problem—the public education that can stem losses.

Untold property damage and countless lives have been saved by the progressive program of fire safety that Hartford has carried out. Three times Hartford has been singled out for the grand award of the U.S. Chamber, retiring the trophy. Among the highlights of this program has been the naming of junior fire marshal, grammar school students trained in habits of fire safety.

The Hartford Fire Department and the city of Hartford deserve acclamation for their efforts. I am proud to salute Hartford as the Fire Prevention City.

The A-L-S-O of School Lunch

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. SANTANGELO. Mr. Speaker, in November of 1958, I spoke before the American School Food Service Association at its national convention in Philadelphia, Pa., in connection with the school-lunch program. The speeches and the discussions regarding the school-lunch program were very informative, and I observed the intense interest of the dedicated public servants and directors who are guiding the school-lunch program in the schools throughout the United States.

One of the speeches which I heard pleased me immensely and demonstated foresight and vision. The speech of Dr. John N. Perryman, executive secretary of the American School Food Service Association, was a forerunner of the program to utilize our food surpluses as a bold instrument in our U.S. foreign policy. Our school lunches are programs providing food for thought and food for health. The following is the speech delivered by Mr. Perryman which I am certain will prove of immense interest to the readers:

You know, 1 week from today is Thanksgiving Day and this means we are not only on the eve of the Thanksgiving season, we are on the eve of the whole holiday season, the Christmas period as well. And very soon, as part of that glad and glorious occasion that is Christmas, we will be singing again those wonderful old Christmas carols. This is my favorite and possibly yours as well:

"O Little Town of Bethlehem,
How still we see Thee lie.
Above Thy deep and dreamless sleep,
The silent stars go by.

"Yet in Thy dark street shining,
The everlasting light.
The hopes and fears of all the years
Are met in Thee tonight."

You know, Bethlehem is not just a name. It is also a word from the Hebrew language meaning "house of food," and is one more of the legion of examples in the literature and the history and religion of mankind of his dependency upon food. And so, in this carol, "O Little Town of Bethlehem," what, in a sense, we are saying is that in the house of food there is an everlasting light that shines. In the house of food are met "the hopes and fears of all the years," and certainly, with the devoted and dedicated people who work in the world of school lunch, this is true.

Well, now, you might possibly be thinking at this point, "Aren't we getting carried away just a little bit here? Is it school lunch we are talking about after all, isn't it? And we have lights shining and devoted and dedicated people, etc. Isn't it just a feeding program? Aren't we just giving food to hungry little monsters at noon?" Unfortunately, I am afraid this is a rather widely held belief and is held even among some school administrators.

A young mother said to me in my travels this autumn, "I don't get away from home during the school year because I have to fix lunch every day for my young daughter." I said, "No school lunch program?" "Oh, yes, but we live too close to school to be able to use it. All families within a considerable radius of the school are not permitted to have their children participate in the school lunch program." She said, "Our superintendent doesn't believe in overtaxing the supervisory facilities of the faculty and he has consequently made this rule." This seems to me, if you will pardon the expression, like a plumbing approach to school lunch, that it is nothing more nor less than a physical facility to meet an urgent, pressing, physical need. If the child can possibly wait long enough to get any place else to fulfill that need, he is expected to do so—a terribly, pathetically, tragically inadequate definition and description of the school lunch program.

So, this afternoon I want to talk to you about the "also" of school lunch. We know school lunch is intended to serve food. We take that as our point of departure and go on from there to examine the "also" of school lunch. I intend to use this word as a word and also to use it for its initials because, you know, initials can be very handy pegs on which to hang ideas. I think perhaps our featured speaker of the afternoon might enjoy a chuckle with us if we reminisce for amoment about the early days of the Roosevelt administration. You will recall that at that time the Government was undertaking many additional activities and creating additional agencies to administer these activities, and for purposes of brevity and convenience most of these agencies had their own separate initials. I remember a political wag of the day commented that the New Deal administration was setting up an alphabetical government which the Supreme Court was throwing out the window three letters at a time. (To Mrs. Roosevelt.) That may bring back some memories.

Nevertheless, initials are useful, a useful means of remembering ideas, and I had planned to use them this afternoon to help me remember what I want to say and I hope you will use them, too, for the same purpose. In other words, the initials A-L-S-O, I hope you will not throw out the window but rather take with you out the door.

The A-L-S-O of school lunch. What are you in addition to those who prepare food? Architects of the anatomy; leaders of learning; sources of survival; and as you try to communicate with your own communities as to the real meaning of the program in which you function, you are hopefully also operators of opinion. Architects of anatomy, leaders of learning, sources of survival, and operators of opinion—the "also" of school lunch.

Let's look at each of these briefly. First of all, architects of the anatomy. And what a fantastically wonderful mechanism the human body actually is. Two billion muscle fibers in each of us. In the brain, 14 million distinct cells. In the lungs—have you thought, perhaps, they were just like a couple of collapsible paper bags? Hardly. Seven hundred and fifty million air sacs. In each kidney, 1,200,000 little tubes. And the heart—the heart is the most amazing part of the whole mechanism. Each and every day it pumps 500 gallons of blood, 17 million gallons in a lifetime, and beats 2,500 million times to get the job done. The average family eats 2½ tons of food a year to provide the fuel for this amazing mechanism. We think the family car nowadays is quite a gadget, and it is. But the chances are good that you will see several of them on the ash heap while you are still going strong. It is an amazing mechanism this package in which we walk around, but it takes a lot of fuel and it takes fuel of the right kind, the right proportion, the right mixture, the right amount. And as you look at the youngsters around you and watch them grow up and see them as they are, you may realize that you have the opportunity of actually being architects of the anatomy, of actually helping them physically to be what they should be.

But even at best, if you are just a crackerjack at this school lunch business, you have provided only 5 meals out of the 21 in a week for less than 10 months in a year and for very few years in a lifespan. So it is not enough for you to be an architect of the anatomy. Now you must also be a leader of learning so that as these youngsters go on from your care they will be educated to the point of making intelligent choices. Oh, this is so tremendously important. General Hershey, in testifying to a congressional committee, stated that 150,000 men were rejected, were classified as 4–F, during World War II because of difficulties traceable directly or indirectly to nutritional deficiencies; 150,000 men physically unable to serve the needs of their country because no one had taught them how to eat. It is no accident and it is no meaningless phrase that the National School Lunch Act starts with the words, "In the interest of national defense * * *." What more vital, what more important information can our youth acquire in school than this knowledge that will give them health, that will give them vigor, that will give them physical ability for the rest of their days. And yet I wonder how many schools represented in this great ballroom have a nutrition course in their curriculum; and I would be willing to wager a sizable amount of money there is not one school represented here that has any required nutrition information.

Not only is this knowledge tremendously vital to the living of life itself, not only is it just a part of every minute that we live and breathe, but, more than that, if the youngsters don't learn it from you, they are very likely not going to learn it at all. What a tremendously significant and frightening teaching opportunity you have in your hands. And so, architects of anatomy today; leaders of learning for tomorrow.

Third, sources of survival, and I think again there is a today and a tomorrow in this activity. The today, of course, is preparation and planning for the disaster that may happen today. You have the know-how; you have the kitchens; you have the dining rooms; you have the equipment; you are very likely to have some food. You have, in short, the ability to help meet the needs of an emergency. But I think I would mention this to you, not exclusively from the humanitarian standpoint this afternoon. A school superintendent whose community had been badly hit by a disaster discussed his experiences with me some months ago, and let me tell you in approximately his words what he said.

He said, "Someone called me up one night, got me out of bed and said, 'We are coming into your school at 5 o'clock tomorrow morning. Who will be there to open the door?'" And he said, "They came in at 5 o'clock the next morning, people who did not know the school, our equipment, how to handle it, sincere, well-meaning, hard-working people. But we suffered a considerable amount of damage. And, finally, our own people had to come in in the long run." And he said, "I am telling you if I ever get out of this mess, I am going to take a different approach." He said, "This was my own fault—nobody's but mine. I said to my staff, 'We want no part of this. We do not want to become involved in disaster operations.' But," he said, "I now realize that if disaster strikes, schools are going to be used and we want them to be used by people who know our facilities.

I believe this is tremendous important and I hope when you go home you will talk this over with your own administrators and even endeavor to work your staffs and your facilities into the disaster planning of your own communities.

Well, this is the today part of it. There's a tomorrow of this long-ranging that I believe people, such as yourselves, who have a deep knowledge and comprehension of food must consider. Disaster planning for today, of course, is what to do in the event of a disaster. Disaster planning for tomorrow is how to avoid one, how not to have one at all. And I think by understanding a little better the world in which we live and the tremendous role the food plays or can play and should play in this world, we can do much to prevent a disaster. History has played a peculiar trick on us which perhaps not too many people have stopped to think about. Three hundred years ago, before the industrial revolution, the world was far apart geographically and close together economically and politically. It took a long time to go from anywhere to anywhere, and yet if one had made the journey from the England of Henry the Eighth to the Russia of Peter the Great he would have found that people were living much the same in both parts of the world. He would have found absolute monarchs; he would have found similarities in both government and economy. France, as we today know it, is the most ornery country in the world as far as being a democracy is concerned. One of Louis XIV's court asked him once, "What is the state?" And he sneered and he said, "L'etat? L'etat c'est moi." ("The state? The state is me.") People lived under similar governments and under similar circumstances throughout much of the civilized world.

Today the situation is exactly reversed. No one lives far from anyone now. The size of the world shrank by 40 percent this fall with the introduction of commercial jet aviation. You know, while we are gathered in this room this afternoon, even if Mrs. Roosevelt and I do not become carried away from the meeting and precisely on time, one of the manned satellites in the heavens will have circled the globe. That's as long as it takes. Everyone lives close to everyone else nowadays. But does everyone live in a manner similar to everyone else? We know that there are violent extremes in government between the democracies and the totalitarian states. And what about economies? The per capita income in the United States is $1,870 per person per year. In Canada, our nearest rival, it is $1,310. In England and West Germany, about $870; in Israel, $470; in Egypt, $120; and in India and China, $60 a year, and one-third of the earth's population lives in that $60 area.

Why the spread of communism? Not the ideology but the stomach. It's stomach communism; it's hunger. Why not fight with food? The empty promises of communism are only appealing to people of desperation. Now, please do not misunderstand me and think I am suggesting that we should do away with our military forces because certainly I do not. If we were not well armed today, we would be overcome tomorrow, and I have not the slightest doubt of that. But what I am saying is if we look ahead to the future, if we plan for the next 50 years, in a world as small as ours we can no longer rely upon political intrigue to save our lives. We must plan differently.

A jet fighter costs $9.9 million. That's about the amount of money spent on all the turkeys given to all the schools in 1957. One nuclear submarine costs $200 million. Two of these are the equal of all the food distributed last year to all outlets, domestic and foreign. I am proud that my countrymen developed the nuclear submarine and I am tremendously thankful that we have it in our arsenal. But I do not believe that that weapon or that any weapon of death will preserve the peace of the world in a shrinking world. Why not concentrate upon weapons of life? Why not fight with food? Food is the key to the future of the world and its survival.

Finally, operators of opinion. A friend of mine said the other day, and he is connected with the school lunch program from a business standpoint, "You will get a kick out of this. My oldest daughter is a senior in high school this year. She's decided she doesn't want to eat the school lunch." And I inquired as to the reason why. "Oh, well," he said, "she thinks it isn't in vogue. None of the gang she runs around with are doing it. So she makes her mother pack a sandwich for her." I think this is so typical of the thinking of many people: that it is something that can be so easily taken or left behind. I said to him, "What would you do if your daughter came home and said, 'Gee, I'm not going to study English and American history. None of my gang's doing it.'" He said, "I'd turn her over my knee and tell her to be with the gang in the evenings and get her education during the day."

Why not the school lunch program? Probably for two reasons: 1. We may be failing to make that program the education it should be; and 2, we are not communicating the real potential of this activity to others. I think we just have to make up our minds that we are not going to accept the plumbing approach to school lunch; we are not going to accept a definition of our work that does not go beyond the preparation of food. And as we concentrate on these goals in our own thinking and in our own working, we must also emphasize them in our communications with others.

Well, perhaps at this point you may be inclined to say, "Well, now, all of this sounds fine, but it really does mean a lot of work and you know, after all, the job doesn't pay too awfully well and I don't know whether I am really being successful if I am in this work. It doesn't carry too much prestige with it," and what have you.

You know it is only the "also" of school lunch that turns your job into a profession. It is only the "also" of school lunch that really gives your work a purpose, a tremendously deep and meaningful significance.

Henry Wadsworth Longfellow wrote these words:

> "Life is real, life is earnest,
> And the grave is not its goal.
> Dust thou art, to dust returneth
> Was not spoken of the soul."

It is only with the "also" of school lunch that your work has a soul.

I want to tell you a little story. It is appropriate for the autumn, I think, because a duck was flying along, heading south and getting rather tired. Looking for a place to rest, he saw this very attractive, little pond and another duck floating on the water. So he flew in for a landing and just swam up for a little chat. And he happened to look up into the cattails and realized that he was looking right down both barrels of a double-barreled shotgun. So the first duck said to the second duck, "Duck," and he ducked. He heard these two great explosions over his head and he came back on the surface of the water and looked for his companion, but he didn't see him. Then he noticed some splinters floating on the top of the water and he said, "Oh, 'wooden' duck, huh."

Of course, the moral of the story is to always look up. I think that's very true in our work as well. If you don't look up, then your work becomes just so many splinters floating on the surface. The temperature of the rinse water, the monthly report that has to be gotten out, the piece of equipment that needs repair, it's always splinters. But if you look up to the "also" of school lunch, if you realize that you are also architects of the anatomy, leaders of learning, sources of survival, and operators of opinion, then your job will take new meaning and new form and will not be just a bunch of disconnected and superficial splinters.

I would like to leave you with what I believe is a workable formula for success. How does one achieve success? It's very easy. Just fall in love with something big enough to fill your heart. The "also" of school lunch is big enough.

Poland's Constitution Day

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, May 3, 1959 marks the 168th anniversary of the adoption of Poland's Constitution.

This anniversary provides a unique opportunity for the Congress to evaluate the situation of the people of Poland who suffer under Communist domination as part of the totalitarian bloc.

I include here a short resume of the facts pertaining to the present situation in Poland, which were assembled for me by the Polish American Congress:

FACTS PERTAINING TO THE PRESENT SITUATION IN POLAND

The political and moral oppression and the economic misrule and exploitation by the regime, clearly subservient to Moscow, resulted in the Poznan revolt of June 1956. It forced the Communists to make concessions and to liberalize the regime headed by Wladyslaw Gomulka, the new first secretary of the party. Moscow, fearing repercussions in the other captive nations, protested violently but in the showdown in Warsaw in October 1956 Khrushchev, who had personally flown in to stem the tide, had to give way lest an attempt at brutal oppression lead to disastrous results.

Among the gains won by the Polish people were the regime's new policy toward the church, which again permitted religious teaching in schools and other concessions which led to the liquidation of the collective farms so detested by the peasants; the relaxation of censorship which permitted greater freedom of the press—though criticism was tempered by the common knowledge that Soviet Russia would not permit the installation of a non-Communist regime; and the

cessation of terror by the security police. Although these achievements by no means restored the full enjoyment of human rights they were important.

As the Communist Party regained control of the situation, the improvement was short-lived. Developments in the course of 1958 have been marked by intensified repression of the people, retrogressing toward the conditions in force before October 1956. This retreat from the gains of the Polish October is particularly evident with regard to the freedom of intellectuals, to workers' rights and church-state relations. There are many signs that the gains of October are to be further reduced.

For several months, a ruthless press campaign has been waged against the church and against religion. The Minister of Education of August 4, 1958, forbade religious instruction in state schools by members of religious orders and congregations. On August 9, 1958, the Catholic hierarchy lodged a protest, calling the order an unconstitutional violation of the basic church-state agreement.

Recent statements by leading party members indicate that collective farms are to be reinstated. Gomulka himself stated on September 7, 1958: "The only correct road must in the long run lead to the collectivization of Polish agriculture."

There has been no genuine freedom of opinion in Poland since the loss of independence, and even the freedom of criticism which Gomulka announced at the VIIIth Plenum in 1956 lasted less than a year. Censorship has been reestablished. Many papers have been banned, including the outspoken organ of the young Communist intellectuals, Po Prostu, party control was increased over newspapers and the planned weekly Europa was not allowed to appear at all. In May 1958 a ruthless campaign against the more independent newspapermen and writers was proclaimed by Werblan, head of the party propaganda machine. Today the press and other media of information are again becoming as subservient to the party and the regime as before October 1956.

Increasingly, the regime in power in Poland is resuming the traditional Communist pattern of violating and denying the basic human rights and freedoms.

The people of Poland always manifested strong attachment to the Western World and their desire for the democratic way of life which we enjoy. It is important that this flame of freedom burning in the hearts of freedom-loving Polish people be not permitted to be extinguished.

It is therefore very important that the United States give economic aid and moral support to the Polish nation in this difficult period which they are now enduring.

Congress Should Override the Veto of the REA Bill

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. McGOVERN. Mr. Speaker, as one of the sponsors of the legislation which Congress recently passed by a large margin restoring full loanmaking authority to the Administrator of the Rural Electrification Administration, I was keenly disappointed that the President saw fit to veto such a logical proposal.

I cannot understand why anyone would think it is sound policy to ask the Rural Electrification Administration to examine a loan application from one of our rural electric cooperatives, make a careful appraisal of that loan based on the criteria laid down by Congress, and then have the whole evaluation reversed by an arbitrary decision made by Secretary Benson or some future Secretary of Agriculture.

Why do we bother to establish an REA administrator and furnish him with a competent technical staff to examine loan applications if we are then going to permit a politically appointed Cabinet officer to use some kind of a political test or his own personal whims to decide whether or not a loan should be approved or disapproved?

Mr. Speaker, I am getting weary of government by veto. It seems that every time we are successful in passing legislation through the Congress to help farm people, Mr. Benson speaks to the President and all our hard work is lost with one stroke of the veto pen.

In 1956, after great effort and long hours of hearings and debate, the Congress passed a 90 percent of parity bill for agriculture to help give our farmers a fair return on their labor and investments. That much-needed bill was quickly vetoed by the President at Mr. Benson's insistence.

Last year, Congress passed legislation simply to hold the line against further price drops. Even this modest legislation was killed with a Presidential veto after it drew the opposition of Secretary Benson.

Now once again, after Congress has passed a measure necessary for the protection of our rural electric associations, the President has used the veto weapon.

I urge my colleagues in the Congress to reverse this ill-advised veto. It is in the best interest of rural America and sound administration that we do so.

Nehru Must Choose

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Time and Tide, London, England, of April 4, 1958, and a press release of April 16, 1959:

[From Time and Tide, London, England, Apr. 4, 1959]

NEHRU MUST CHOOSE

Mr. Nehru, Prime Minister of a great nation which aspires to the leadership of the uncommitted countries of Asia, seeks, as he told the Indian Parliament on Monday, friendship with both Tibet and China. He regards the destruction of Tibetan monasteries by Chinese Communist artillery and bombs as most unfortunate, but asserts that it would be impolite to discuss Tibetan affairs in the House of the People.

Mr. Nehru is known to be a sensitive man. Yet the Western Powers, and particularly those which still have imperial commitments, may be forgiven if they feel that his sense of politeness extends in an eastern direction only. No considerations of etiquette have inhibited the Prime Minister from criticizing in the freest terms and on every suitable public occasion any activities of which he disapproves, undertaken by Great Britain, France, Portugal, or other Western Powers in their dealings with the overseas territories for which they are still responsible. When the Soviet Union, 3 years ago, chose to crush a spontaneous rising by the people of a nation technically sovereign and independent, Mr. Nehru could scarcely summon a word of disapproval to his lips. As with Hungary, so now with Tibet. Mr. Nehru's politeness appears to operate in one direction.

The Indian press and informed opinion in the subcontinent have already noticed the blinkers which the Prime Minister has clamped upon Indian policy. The acid comments of Indian political leaders and of most of the influential newspapers of the country and the angry protests of the crowds which demonstrate in New Dehli and elsewhere, in favor of hands off Tibet, indicate clearly that the Prime Minister and the Congress Party which he leads lag far behind enlightened opinion.

The Government of India now faces one of the great decisions of its brief history. For the past 12 years Mr. Nehru and his colleagues have had things easy. To ensure a steady flow of sympathy and of material assistance from the United States, from whom, in the experience of the Republic of India, all blessings flow, it has sufficed to conjure up the bogeyman of imperialism against any European power which happened to present a suitable target at any given moment. Now the aggressor is not an ally of the United States, but on the contrary, her avowed enemy. The heart of official Washington can be wrung by the suffering of Mau Mau Kikuyu, of Cypriots, of Algerians, of Goanese when these are eloquently expounded from New Delhi and when the "oppressors" are America's own allies. It is hardly likely that Washington will be equally sympathetic to Mr. Nehru's complete indifference to the agony of the Tibetan people at the hands of Communist China.

Mr. Nehru says, quite rightly, that no one should expect India to go to war with China over Tibet. Nobody expected Great Britain and her allies to go to war with Russia over Hungary. Yet public opinion in this country and throughout the free world was allowed to express its abhorrence of the methods used by the Soviet Union in crushing a small state of South-East Europe. The British Government lost no time in condemning the Russian rulers for a violation of human rights no more flagrant than that from which the Tibetan people are now suffering. Moreover, the Western Powers opened their frontiers to refugees from Communist oppression. It remains to be seen whether India will dare to do likewise.

Not very long ago, and at a cost in blood of which India too paid her share, the world learned that appeasement can never bring peace. If India now aspires, as she is well entitled to do, to the leadership of the Asiatic nations which seek to live in peace between the two great blocs she must learn the meaning of neutrality.

In this matter India might learn a lesson from a nation far smaller than she and far more perilously situated. Sweden seeks no leadership in the world. She seeks neutrality and she is prepared to make great sacrifices to defend it, as the state of her armed forces testifies. For the past 10 years Russian designs upon Finland have been checked by the knowledge that Sweden, with

a population of 7 million people, would not remain indifferent to the fate of her northern neighbors. It must not be said that India with her 350 million inhabitants is less capable at least of speaking up on behalf of a small peaceful nation on her own northern frontier.

For that matter neutral Austria, with Russian shells falling across her frontier did not hesitate, in 1956, to give sanctuary to Hungarian refugees or to express her detestation of their tormentors.

Mr. Nehru must choose. There can be honor in neutrality, but people who truckle to bullies cannot hope to lead their fellowmen. On the contrary it is all too likely that those who today ignore the cries of the oppressed will tomorrow themselves be the victims of the evil forces which they sought to ignore.

APRIL 16, 1959.

His Excellency, JAWAHARLAL NEHRU, *the Prime Minister of India, New Delhi.*

DEAR MR. PRIME MINISTER: In the world press on April 8, 1959, there appeared a notice that before the Dalai Lama reaches New Delhi you are going to meet with him and request that he leave the territory of India and return to his native land. Such a request is said to be motivated by the following considerations:

1. The Chinese Communist Government has never accused the Dalai Lama but only his "reactionary entourage," of fomenting revolt;

2. The Panchen Lama has not been appointed by the Chinese as the successor of the Dalai Lama but is only the guardian of his throne until its rightful possessor returns to Lhasa;

3. The Peking Government recognizes the great influence of the Dalai Lama over the Tibetan people and therefore Peking wishes to arrive at an agreement and cooperation with the spiritual leader of Tibet.

This information is not official but issues from "reliable sources." However, we find it credible in the light of your past position vis-a-vis the Peking and Moscow Governments and in the light of your recent statement to a Tibetan delegation: "Fortify yourself with wisdom and patience. Return to your homeland. Your cause will triumph."

Therefore, we American Kalmyks, who are adherents to Buddhism and who look to the Dalai Lama as our spiritual leader, are very much concerned. The Dalai Lama has just escaped safely from enemies of freedom. It is hard to believe that you would press him to return into their hands.

Our concern is the greater because we Kalmyks have also experienced Communist rule. As a national minority in Russia, we were among the first victims of Bolshevik communism. We became such in virtue of our religious beliefs, in virtue of our regard not only for human life but also "for all six kinds of living beings," as our Buddhist faith teaches.

We are well aware of the untruthfulness and merciless intent of the Red leaders. We heard many beautiful promises from them and saw them commit many more inhuman acts. Solemnly they promised us national autonomy, and they brought us slavery. They promised us full religious freedom but razed our Buddhist monasteries, over a hundred of them. NKVD tribunals passed judgment, sight unseen, on all our Buddhist monks, who numbered over 2,000, and sentenced them to serve terms in concentration camps. Matters came to such a point that the Soviet leaders exiled the entire Kalmyk people, detaining them in forced labor under insufferable conditions of life and work for 13 years.

The parallel between our experience and recent events in Tibet is all to plain. And so your reported intention to advise the Dalai Lama to return home where the Communist Chinese are killing innocent Tibetans has given us great alarm. Such advice would be tantamount to suggesting that he put his head under the axe of an executioner to make the job of executing easier For we frankly fear for his life.

We therefore respectfully request you not to take such a fatal step, not to press our spiritual leader to turn back into the Red Chinese maw but rather to grant him the privilege of political asylum. By the custom of all civilized nations every person seeking to save himself from political oppression is given this privilege. The more should the spiritual leader of millions of Buddhists be granted it.

We also hope that your protection of the Dalai Lama, once granted, will not be tantamount to giving him the status of political prisoner by restraining his freedom to speak out as the rightful spiritual and temporal ruler of Tibet.

A Program for Developing Our National Forests

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. McINTIRE. Mr. Speaker, the "Program for the National Forests" is a document that sets forth a realistic approach for developing our national forests toward the end of future needs.

This is a splendid effort, one that deserves high praise from all who are interested in the preservation and development of this invaluable national resource.

In conjunction with this program, I submit a statement to the RECORD, and I would like to commend Assistant Secretary Erwin L. Peterson, Forest Service Chief Richard E. McArdle, and all others in the Department of Agriculture who have played a part in drawing up this constructive and forward-looking program.

Mr. Speaker, as a member of the Agriculture Committee, I have reviewed with interest and enthusiasm the report referred to the Congress just prior to the Easter recess. I refer to the document entitled, "Program for the National Forests."

I predict that this far-reaching conservation plan for the full development of the Nation's national forest system will not only stimulate action in the Congress but also move the public, who owns these forests, to demand accelerated development and more intensive management. This prediction is based on the tremendous benefits that can be expected by implementation of the program.

Forests cover 85 percent of the land area of the State of Maine. The care and wise use of the renewable resources from these forests is essential in an expanding economy. In fact, few people realize that New England has a higher percentage of its land surface covered by commercial forests than any other region in the United States.

Wherever forests occur their resources of water, timber, recreation, forage and wildlife habitat affect the economy. Over one-third of all the people employed in Maine are engaged in activities involving the harvesting and manufacture of forest products. Many communities in America are completely dependent on the resources provided by adjacent forest areas whether in public or private ownership.

My interest, therefore, in the development of the national forest system in America to its full potential is based on a "grassroots" perspective of the true economic and esthetic value of a well managed and wisely used forest resource.

Population in the United States has increased 32 percent in the 13 years following World War II. If estimates for the future hold, there will be some 332 million people by the year 2000. This is just 40 years away, and is more than double the 1950 census. During this same period the gross national product is expected to increase over five times.

My colleagues from the West who have most of the national forests, should be interested in the estimates for population growth in their section of our country. In the 11 Western States the population is expected to triple by the end of this century.

Today an average American has 50 percent more time for leisure than he had 40 years ago. In the next 40 years there may be one-third more time for play and recreation than now.

Our expanding economy demands great amounts of nonrenewable resources not only from America but also from the free countries of the world. At the same time, the impact of our rapid population and economic growth is demanding ever-increasing quantities of renewable resources; the resources covered in this "Program for the National Forests."

The national forests are truly national in character because they affect millions of our people whether they are cutting timber for a living or pitching a tent in the forest for a few days hunting, fishing or recreation. The national forests, particularly those in the West, have only begun to feel the relentless pressures of our space-age economy. The forests are no longer generally inaccessible. Their stores of timber, wildlife, water, and recreational areas are no longer hard to reach. With more people and greater use we have the urgent need for the strong national-forest action program covered in the document now available to the Congress.

The short-term proposals for action in the next 10 to 15 years and the long-range objectives for the year 2000 involve all facets of resource development and management on the national forests. To

mention them briefly, they are: More and better timber for the Nation, adequate recreational facilities for added millions of people, increased water supplies of finer quality, better hunting and fishing, improved range resources for better grazing, intensified forest protection from insects, fire and disease, an expanded road system for timber sales, protection and recreational use, accelerated research in many fields of forestry, boundary and ownership adjustments, and finally provision of the structures and equipment needed to keep this resource development program moving.

I refer you to the complete report in the CONGRESSIONAL RECORD of Tuesday, March 24, 1959, for the multiple benefits of this "Program for the National Forests." I do want to mention in closing that the report states for timber alone, "it is estimated that for every dollar of national-forest stumpage sold the end products will be worth $20 by the time they reach the ultimate consumer. This means that the annual sale of 11 billion board feet of sawtimber expected to be reached by the end of the short-term period will have a total consumer value of $3.7 billion."

A program of this magnitude and promise for our national forests merits the serious consideration of every Member of the Congress.

Statement of the Attorney General of the State of Tennessee Before the Civil Rights Subcommittee of the House Committee on the Judiciary at Hearings on Proposed Civil Rights Bills, Thursday, April 23, 1959

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement of the Honorable George F. McCanless, the attorney general of Tennessee, before the House Judiciary Subcommittee on Civil Rights, in which he voiced opposition to the pending bills relating to the subject.

I believe each Member of this great body will want to read this excellently prepared testimony. It follows:

STATEMENT OF GEORGE F. MCCANLESS, ATTORNEY GENERAL OF TENNESSEE

Mr. Chairman and distinguished members of the committee, may I express my thanks for this opportunity to make a statement about the bills designated as H.R. 3147 and H.R. 3148, to which I am opposed. His Excellency Buford Ellington, Governor of Tennessee, has asked me to extend his greetings to the members of the committee and to express his regret that an engagement of several weeks standing has made it impossible for him to appear before you and voice his opposition to these bills.

My first reference is to title VI of H.R. 3147 and to H.R. 3148 which would confer upon the Attorney General of the United States the authority to institute "for or in the name of the United States a civil action or other proceeding for preventive relief, including an application for an injunction or other order, against any individual or individuals who, under color of any statute, ordinance, regulation, custom or usage, of any State or territory or subdivision or instrumentality thereof, deprives or theatens to deprive such person or group of persons of the right to the equal protection of the laws by reason of race, color, religion, or national origin and against any individual or individuals acting in concert with them." Clearly, the suits authorized by this provision could be brought not only against State and local officers to deter official action but also against individual citizens whenever the Attorney General should decide that a person had been deprived or threatened with deprivation of some right under circumstances within the provision just quoted.

Under the principle of the reserved powers of the States there can be no doubt that the Congress would be without jurisdiction to enact legislation of the kind now under study if it were not for the provision of the first section of the 14th amendment to the Federal Constitution, which forbids the denial by any State to any person within its jurisdiction of the equal protection of the laws. The draftsmen of these bills have skillfully sought to bring them within the limited provisions of this "equal protection" clause, but the Supreme Court itself has consistently refused to extend the scope of this clause beyond that signified by the language used therein. We find in the opinion in the comparatively recent case of *Shelley* v. *Kraemer* (334 U.S. 1, 92 L. ed. 1161, at p. 12 of U.S. and p. 1180 of L. ed.) this statement:

"(The 14th amendment erects no shield against merely private conduct, however discriminatory or wrongful." It is thus clear that, to the extent that the bills in question undertake to ordain sanctions against private individuals in redress of discriminations or wrongs committed against other individuals, they find themselves without basis in the Constitution.

As I have already said, the legal proceedings that the Attorney General would be authorized to institute could be against private citizens in their private capacities as well as against State and local officers: such a precedent could be grave in its consequences and this and other legislation patterned after it, and the litigation that might be prosecuted under its authority, could be used as a weapon of tyranny to impair seriously the rights and liberties of all the people. I urge that power so pregnant with evil should never be conferred upon any official.

I seriously object to the provision in H.R. 3147 that the Secretary of Health, Education, and Welfare may prescribe and put into effect a plan for the elimination of racial segregation in the public schools of a State, municipality, or school district. This would be an intolerable invasion of State sovereignty and should not be authorized. The provision that grants of Federal money may be made to localities which are in the process of eliminating racial segregation in their schools is evil in principle: it would provide for the purchase by the Federal Government for cash of the consent of the States and their political subdivisions to the Secretary's program. The suggestion is deplorable.

It will not be inappropriate for me to remind the committee that for the past 5 years the people of the southern States have lived under a heavy burden of dread. They have seen the Supreme Court of the Nation put aside the precedents of more than a century; they have experienced an assault upon their social order of a kind and intensity not experienced in this country since the shameful years of the reconstruction. The southern American is as law abiding, as patriotic, as stanch, and as charitable as the citizens of any other region. He and his forebears have lived in this land of ours for 2 centuries and more and he is second to none in his appreciation and love of the traditions that have made America great. He requires no tutelage in personal or civic morality from his brother of the north or the west. What he needs and needs so badly now is a small measure of kindness, of sympathy, of patience; his dangers, his problems, his hopes require understanding; his virtues deserve a degree of appreciation.

This is not the time for coercive or punative legislation; it is a time for forbearance and charity.

Space Age Essays

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. DADDARIO. Mr. Speaker, I should like to call to the attention of the House an essay contest recently held in a community in my district. It was sponsored by the Smalley Brothers Auxiliary, Veterans of Foreign Wars in the high school at Windsor Locks. The subject was the space age. I think it is an indication of the interest and awareness, both on the part of the adults and of youngsters on the magnificent possibilities and the awesome responsibilities that science has opened for us.

First prize was awarded Miss Martha Vecchione. Second was given Miss Anita Favata. The presentation was made at the annual installation of officers by the post and auxiliary last week. Mr. Victor Sasali was essay committee chairman.

I think it is remarkable that both winners, while conscious of the implications of the space age, stressed also that there remains a great challenge on earth. In the words of Miss Anita Favata in her essay:

I believe that space is important to our future, but equally important is our need to live in peace with one another on earth. We must also give money, time and effort to the cause of human relationships so that we can learn as much as possible about all peoples. We must understand and communicate freely and without fear. And before we go farther in the exploration of space we must organize an international space program under the direction of qualified delegates from all countries. These delegates should set up a body of laws pertaining to activities in space and satisfactory to all.

Only through cooperation can Americans meet the challenge of the space age.

Under unanimous consent, I include the text of the first prize essay by Miss Martha Vecchione:

"The heavens and the earth were finished, and all the furniture of them. And on the seventh day God ended his work which he had made, and he rested."

For thousands of years man has been studying creation, the vastness of creation which God made in 7 days. He has studied

the sky, the earth, the very air we breathe, and he has been carried away by his imagination. He has tried to comprehend infinity and to grasp a grain of truth on that wondrous beach of knowledge. He has tried to imagine, to reach out for the grotesque things of his imagination, and to create. He has tried to conquer disease, to invent, to reproduce of his own kind and of others, and to accustom himself to his surroundings. Now he is trying with profound and complete ingenuity to conquer the heavens.

Man, a self-righteous creature, is attempting to conquer space, while he has yet to conquer himself. He wants to be superior to everything, to everyone, and anything that gets in his way must be destroyed, lest he be overcome. He must be first in everything he does, or he shrivels up and hides, and gradually becomes obscured.

But now, after 2,000 years of creation, man's mind is starting to bloom. He is attempting to conquer space. He has launched his rockets; he must be the first one to reach the moon. Instead of working wtih his neighbors of all countries and uniting with others in a common interest, he feels he must be first, or he will be destroyed.

The space age is not a challenge to America alone. It is a challenge to the world. Men can't be classified by the color of their skins or by their language. No race has the right to feel superior to any other. If men want to advance themselves, they must do it intelligently and tolerantly. They must extend their hands and share their thoughts. Above all, they must trust and respect each other.

Yes, God did create the world in 7 days, and men will go on studying it for a thousand years, but some morning the sun may rise to light a world bursting with prosperity, creativeness, and peace.

Afghanistan Is a Land That Has Everything

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. LOSER. Mr. Speaker, under leave previously grated to extend my remarks in the RECORD, I am including the third of a group of articles written by the Honorable Coleman A. Harwell, editor of the Nashville Tennessean, during a world tour.

This article on Afghanistan is a most interesting one. Mr. Harwell vividly describes the trip there, the country, its people and some of the customs. You will want to see this country through the eyes of this American newspaperman and I commend the article to your reading. It follows:

AFGHANISTAN IS A LAND THAT HAS EVERYTHING

(By Coleman A. Harwell)

FOREIGN AFFAIRS

KABUL, AFGHANISTAN.—The American woman spoke with real emotion when she said:

"What a pity you will only be in Afghanistan a week."

We responded with a cliche to the effect that we were lucky to come for even a short visit, to which she replied:

"But if you stay here 2 years, as we have, you'd see why we love it so."

A number of other Americans had indicated they liked the place. But her enthusiasm set me to thinking.

There are two things that give a place its character. One is its geography—that is, its climate, scenery, and other attractions of nature, including food. The other thing is the people.

ON BOTH COUNTS

And during our week here we encountered the most perfect weather imaginable, cool nights and sunny days, breathtaking scenery and an abundance of fresh vegetables, fruit, and tasty bread. And, more importantly, we met some of the most charming and gracious people we've ever known, Afghans and foreigners, with emphasis on the Afghans.

Now, don't be in too big a hurry about giving up your vacation trip to Europe or Florida or Gatlinburg in favor of Kabul. There are a few disadvantages. For instance, getting here.

Our last program had been in Israel, some 4,000 miles away as the plane must fly. You have to avoid Arab countries when you come from Israel, so we flew roundabout to Turkey, where we had an interesting Sunday, and then to Teheran, where we spent 24 hours sightseeing and resting because our flight was delayed.

A RELIC OF THE WAR

From there we flew via Ariana (Afghan) airline in one of their prized DC-4's, a relic of the war, but trim and good to fly in, especially when you know there is a veteran pilot up front like Wiry John Willard, of Phoenix, Ariz.

First we flew 1,000 miles over arid mountains and deserts to Kandahar, ancient former capital in southern Afghanistan.

We dropped passengers in Kandahar and picked up more, including a quaint old gent in a white turban who smiled and counted his worry beads as we took off. Sorry mine weren't handy, for I would have used them. First, when we were told we would not be able to land in Kabul because the airport was under floodwater. And later when we flew between some of the handsomest and most forbidding snowpeaked mountains you'll ever see. We were considerably lower than some of them.

These were part of the Hindu Kush Range, of which even higher peaks were visible toward the north. Hindue Kush means "Hindu killer," the name thus recalling that many men had died trying to scale the range.

We had the frustrating experience of flying over Kabul, which looked trim and green from high up, except for the water-covered airport. After that we wove between other mountains, glimpsing historic Khyber Pass, gateway to what was once part of India and is now Pakistan.

DOWN ON THE DIRT

Then John Willard set us down neatly on a hot, dusty dirt runway near the city of Jalalabad. The terminal office was in a tent. The air-conditioned bus we had expected turned out to be a wood bench job, and a narrow bench at that. We were lucky that a fellow passenger was Roger Lewis, of Los Angeles, vice president of Pan American Airways, who was going to Kabul to attend the annual board meeting of Ariana, which Pan American is nurturing. He was met by Frank Swayze, Pan Am's man at Kabul, and they included us in the passenger list of their Chevrolet station wagon.

The thrilling ride, unbelievably dusty but equally beautiful and exciting, took us 100 miles through three gorges of the Kabul River that match, maybe outdo the Rockies. We made Kabul in record time, 3 hours against 7 for the bus.

First impressions of Kabul are not favorable. Seeking homes on streets that depart from the few main paved thoroughfares, you are on rutted, dirt byways, lined by ditches that serve as drains and impromptu sewers. Walls 12–15 feet high run the length of them. Entrance gates range from a few neat ones to many nearing collapse, but all securely locked. A string rings the bell, tied to a tree inside.

A bright-eyed youngster, in ground-length cassock, met us at the home of the American press officer, where we were to stay. We found our hosts concerned as to our arrival, which had been expected much earlier. Such irregularity, we found, is customary here.

A GUEST COTTAGE

We occupied an attractive guest cottage in the enclosure, fixed up for visitors' use by the embassy. The problem of feeding us was shared by various hospitable Americans and, in one instance, by an Afghan graduate of Vanderbilt.

Inside the enclosures, the Americans had homes that made you feel at home. The U.S. furniture and family photos blended with paintings and art objects that always told you where the man or woman had served previously.

Spring was in the air, so we found gardening going on at a great rate, flower beds being trimmed, plants and seeds being put out.

CELEBRATION OF ID

As we arrived on the last day of the religious observance of Ramadan, we next encountered the big 3-day celebration of Id. This is the time when everyone breaks his fast, families visit together for big meals, children receive gifts and wear gay costumes. Weird Persian music blares from the radio and gramaphones continuously. The kabab stands—roast lamb—cook constantly. You'll see a family of four riding a burro across the hills to visit relatives. Groups dancing. Man ceremoniously shaking hands doubly and wish one another happy Id and God's blessing.

We joined a small group of Americans for picnics on two days. One day we drove 20 miles to the mountain town of Istalif. There is one narrow street, running three or four blocks. Bazaars of every kind were open, tiny stores of all kinds. The ones doing big business were the sweet shops and souvenir stores. A favorite sweet was ice cream—made by scraping from a burlap sack of snow brought in from the mountains, to which was added sugar and goats' milk. A line of youngsters were gobbling it up.

We drove to a public inn higher up and spread our lunch there. We had Spam and similar Danish canned meat, Kraft cheese from Australia, Norwegian sardines, coarse, delicious Afghan bread, French wine, German beer and canned U.S. cokes. Consumed to tunes of an itinerant tamboor player, sounds of a mountain waterfall and a magnificent view of the Hindu Kush.

Next day we went to Paghman, another mountain village, where the king and other higherups have summer homes. We drove to a park near the snowline, had lunch there beside a gushing stream. Afterwards Howard McVitty, U.S. press officer, and I took a walk several hundred feet higher into the snow and around a bend that opened into another spectacular valley. The mountain side has been terraced with rocks and was under cultivation up to the snow. A village was perched on the opposite mountain and people were out in bright costumes dancing; a thousand feet higher two eagles were soaring above the topmost snowpeak.

You have never seen more gracious people than Afghans. We had no idea what to expect of the press people. They proved to be

intelligent, attractive men, from the press department president, who holds cabinet rank, on down. This included men who spoke no English. Of course we were able to communicate better with those who did, especially Sabchoddin Kushkaki, assistant editor of Islah, who spent five years in the United States, graduating from Nebraska and Illinois, and M. H. Zhobal, director of cultural relations for Afghanistan, who graduated from Princeton.

Especially interesting was our luncheon visit in the home of Ahmad Isa, 1957 graduate of Vanderbilt's valuable economics course for foreign students. He is now on the planning staff here. He and his wife and her brother served us a variety of dishes—a vast platter of saffron rice, with a smothered chicken inside; tender, fried eggplant, an elaborate egg dish and another of lamb—their bread favorite, nan, with the texture of souffle potatoes. Ending with coffee and fruit.

They recalled with much gratitude their days in Vanderbilt, when they lived on Highland Avenue and West End. Did she have trouble keeping house there? She replied that shopping was somewhat puzzling but they lived well, mostly on rice and chicken.

THE CLINCHER

The welcoming clincher for us was the entertainment program put on at radio Kabul. It was a replica in nearly every detail of grand ole opry. Roy Acuff, Chet Atkins and the zaney Oswald were all there. Maybe a bit more restrained, a bit less tuneful.

We heard doleful vocals in Persian and Pushtu that held everyone in a spell. The crooners were big stars Hussein Arman, Bailtoon and Sher Zaman. We had instrumental numbers on the dutar, tamboor and rubab. Fun, man, fun. Really.

Maybe this doesn't make quite clear why we enjoyed Kabul. Maybe part of it was the realization behind this mixture of charm and mystery there was a game being played with unknown rules for vast, unspecified stakes.

Be that as it may we understand what the woman had meant. The charms of Kabul are very real.

Presentation of Portrait of John McRaven Holbrook to the Lowell, N.C., High School

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. WHITENER. Mr. Speaker, on Monday, April 27, 1959, I had one of those rare experiences that come to a man only once in his lifetime. On that date it was my honor to participate in the ceremony at which a portrait of Mr. John McRaven Holbrook was presented to Lowell High School, at Lowell, N.C.

I am a graduate of Lowell High School, now John M. Holbrook High School, and Mr. Holbrook was principal of the school at the time I graduated. He is an outstanding educator and has rendered long and faithful years of service to the youth of his community. His sterling character and spirit of helpfulness meant much to me in my youth in formulating those ideals by which my life has been guided.

I am taking the liberty of including in the Appendix of the RECORD the remarks I made at Lowell on Monday when Mr. Holbrook's portrait was formally presented to the school and community for which he has labored so long.

REMARKS OF HON. BASIL L. WHITENER, MEMBER OF CONGRESS, ON THE OCCASION OF THE PRESENTATION OF THE PORTRAIT OF JOHN MCRAVEN HOLBROOK ON APRIL 27, 1959

It is great joy for me to be here today to participate in this very delightful occasion which does honor to one who has meant much to so many of us—John McRaven Holbrook.

The gentleman whom we honor has made his mark in every phase of worthwhile community life. Since early boyhood in Huntersville and Mecklenburg County, he has evidenced the qualities of leadership which have contributed so much to the wellbeing of the people of his community, county, and State.

His record as a student in the schools of Huntersville and at the University of North Carolina is a brilliant one indeed. His service as a soldier in the U.S. Army during the World War I period was equally lustrous.

While a very young man, he dedicated himself to the field of public-school education and has held positions in the schools of both Mecklenburg and Gaston Counties. It was a fortunate occasion in 1924 when he became affiliated with the public-school system of Lowell. His continuous service here now approximates 35 years.

Mr. Holbrook has not confined his worthwhile efforts to his employment as head of the Lowell school system. He has held a broader view of public service as is evidenced by his participation and leadership in the civic, religious, and economic life of the area.

Always he has been active in the work of the Presbyterian Church. He has served as a deacon and elder and held many other important positions as a lay member in the church of his choice. His devotion to the broad programs of the Presbyterian Church has been a very vital factor in the advancement of the spiritual welfare of his community.

In the field of civic activity he has been an outstanding leader in our community, county, and State. He has served as president of the Lowell Lions Club, president of the Schoolmasters Club of Gaston County, official in the Alumni Association in the University of North Carolina, and as a member of the Board of Trustees of Peace College. He has been an active Mason and Shriner. In all of these, and the many other important positions of honor that have been bestowed upon him, he has always fully measured up to the highest standards in his efforts for the causes of those organizations.

During his career, John McRaven Holbrook has had the assistance and cooperation of his beloved wife, Mrs. Elizabeth McGirt Holbrook. She, too, has for several years been active as a public school teacher and an official in Gaston County. The zeal of this dedicated couple for the cause of public school education has been transmitted to their only daughter, Miss Betty Holbrook, who now occupies an important position in the public schools of the State of New York.

I believe that I can speak of the man whom we honor today with some authority. I know that I can speak of him with a deep sense of personal appreciation for what he has meant to me during my boyhood and manhood. In 1929, I became one of his students at Lowell High School and was then impressed with the personal interest which he took in my welfare.

Throughout the years that I have spent in college, in profession of the law, in military conflict during World War II, and in government service, he has continued to show a constant interest in my welfare.

I do not mention this personal relationship which I have enjoyed with the man whom we honor today in a sense of vanity. On the contrary, I hasten to point out that he has had the same interest in the welfare of each person who has been privileged to be one of his students.

It is most fitting that the Beta Club of this high school has provided the portrait of our dear friend which will everlastingly hang in this magnificent high school building which was named "John M. Holbrook High School" in 1956 in recognition of the splendid service of our honored friend to this community.

In presenting a portrait of a true gentleman whose career has been so full of inspiration, whose accomplishments are a great credit to the education profession, who has a brilliant future still ahead, we are doing an act which will become even more significant in future years. What finer tribute could be paid to any person than to have the youth of the community who have been in his charge say that he is a gentleman; that he is one who merits their beautiful token of appreciation for his service. Yes, this is a wonderful occasion since it marks a gracious expression of gratitude which generally is done only after the completion of a man's activities.

This portrait is evidence of more than just appreciation of its donors. It is recognition of the zeal of John McRaven Holbrook, his personal sacrifices, his devotion, and his allegiance to the cause of public education and the highest devotion to public service. It is a beautiful attempt of these young people to say that he is a good leader; that he has all of the attributes of leadership including those of courage, loyalty, understanding, initiative, and vision, and a saving sense of humor.

Just as the community of Lowell unanimously approved the naming of its new high school in honor of our friend in 1956, the people of this community will today again unanimously applaud the action of the Beta Club in making this presentation of a handsome portrait. As the future years unfold this portrait will be a reminder of the unselfish service of this outstanding citizen to the school and community which he loved so much.

It is, therefore, a high privilege and a great honor for me, as an alumnus of this outstanding high school, to participate in these proceedings in which the Beta Club presents this excellent portrait of John McRaven Holbrook. In doing so, I express to him the good wishes of every person of this assembly for his future health and happiness. We express the hope that he will continue his outstanding public service for many more years as a leader in our educational, social, and civic life.

Japanese Competition in the Hardwood Plywood Industry

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. O'KONSKI. Mr. Speaker, the tragedy facing the hardwood plywood industry in America should concern every Member of Congress. How this industry keeps going with competition from Japan is one of the miracles of the ages.

Unless the U.S. Tariff Commission or the Congress gives relief to the hardwood plywood industry, it will become another thing of the past. I can safely say that unless the U.S. Tariff Commission or the Congress gives relief to this industry, by the end of this year there will be no hardwood plywood industry in northern Wisconsin, and thousands will be added to the unemployment rolls.

Mr. Speaker, I would like to include with my remarks a statement delivered by M. C. McIver, president and general manager of Splicewood Corp., Ashland, Wis. After reading his remarks before the U.S. Tariff Commission, Members of Congress will have a clear picture of how our present policy of imports is driving another industry into bankruptcy, further swelling the unemployment rolls within our borders.

HARDWOOD PLYWOOD

(Statement of M. C. McIver, for Splicedwood Corp., before the U.S. Tariff Commission)

Mr. Chairman, members of the Commission, my name is M. C. McIver. I am president and general counsel of Splicedwood Corp., Ashland, Wis., which I will hereafter refer to as our company.

Our company is a small business concern located in the small community of Ashland in northern Wisconsin. In 1955 we had an average of 177 persons working for our company in Ashland. In 1958 the average was 140. Today we have 93. Our company produces ordinary hardwood plywood for sale to distributors, industrial users, and the furniture industry. We are solely dependent on our hardwood plywood sales to keep our plant operating.

Our principal product was high-quality birch plywood of the top grades until 1957, when market conditions created by low-priced imports required us to add to the line lower grades of plywood in an attempt to stay the serious decline in our sales. Our salesmen had reported to us that the much lower priced imported plywood and the entire price structure of the market had been lowered. We could not produce our plywood to sell at lower prices than we were then charging; so we added the lower quality and lower priced panels in 1957. Unfortunately, this move, as you will see, did not stem the flood of imported plywood, and our sales in 1958 were at an alltime low for our company.

In considering what has happened to our company in the past few years due to the imports, I would like to call to your attention a most pertinent fact. The Department of Commerce statistics on birch plywood imports from Japan show the following:

Year	Quantity	Total f.o.b. Japan value	Average value per thousand square feet
1954	7,510,000	$836,000	$111.32
1955	17,083,000	1,894,000	110.87
1956	31,007,000	3,856,000	124.36
1957	27,126,000	3,488,000	128.58
1958	31,235,000	3,586,000	124.81

The average value of the Japanese birch including all thicknesses was $128 per 1,000 square feet f.o.b. Japan. Duty and shipping might increase this by 30 percent on the average, so a U.S. average sale price would be $167. The report which we have filed with you shows that in 1957 and 1958 when we were producing a lower grade than previous years our price for one-quarter inch was $68 higher than the average price of the Japanese plywood f.o.b. United States duty paid. The $68 shows only a part of the difference as the margin widens in the prices of the thicker and more expensive panels.

Here is what the imported plywoods have done to our business:

Production in 1958 was 42 percent less than 1955. For the 3 years 1956 through 1958 we lost 10,200,000 square feet of production. Birch plywood represented 77.3 percent of our production in 1955. Our production of birch plywood in 1958 was 62 percent less than 1955 and we lost in the 3-year period 9,500,000 square feet of birch plywood production.

It has been stated that our plants made no thin panels so the thin panels from Japan did not injure our companies. This statement is pure fabrication without a fact to support it. In 1955 62.7 percent of our production was panels less than seven-thirty-seconds inch in thickness. In 1958 only 28 percent of our production was in these thin panels. Over the past 3 years we have lost 9,600,000 square feet of thin panel sales.

In our efforts to meet the competition created by the low-priced imports, we have sold off our list price and have reduced our list price on our principal items by 10 and 15 percent, respectively.

The community where we have our plant is small, our payroll plays a substantial part in the economic welfare of our area. For this reason we have tried to keep our employees on the payroll, nevertheless.

Our plant work hours have declined by 254,000 for the past 3 years in relation to 1955; 1958 plant hours were 30 percent less than 1955. Our payroll has also declined. We have contributed $216,000 less to the community in the past 3 years. In 1958 our payroll was 21 percent less than 1955 which you will agree is ridiculous when our sales dropped 46 percent.

Our feeling of responsibility for our employees may appear foolish to the persons opposing the American producers but we believe that Americans have a responsibility to their employees which is not recognized in other countries or by some in this country whose greatest worry has been to meet the rent or pay a secretary.

In addition to shipping tremendous quantities of Lauan in the white or not prefinished, the Japanese are shipping a large quantity of prefinished Lauan which has been printed or colored to look like American hardwoods. This prefinished Japanese Lauan is sold at prices consideraly less than we require for our panels in the white. The Japanese prefinished Lauan is given the names of American woods so that the American consumer, not being a wood technician, will believe that he is receiving genuine American woods. One importer in San Francisco calls this prefinished Japanese Lauan by names such as the following:

Golden oak, smoky beige oak, colonial walnut, honey walnut, titian walnut, smokey beige walnut, colonial oak, silver walnut, desert bloom walnut, honey oak, titian oak, golden walnut, and blonde walnut.

There is not one single sliver of walnut or oak in any of the panels so described nor do the importers disclose that the panel is Lauan made in Japan.

I bring this matter up with the hope that you will consider this new unfair method of competition which has been devised not only to take our business but to deceive the American consumer.

In 1955 we heard a great deal from the importers' attorneys and the importers about how the American public insisted on the exotic Lauan which brought new beauty into the American home. Well, the bloom of the beauty of Lauan has finally caught up with the importers and Japanese producers because they now have to hide under a print and paint, sell it at less than American producers' costs, and falsely represent their product.

In closing I would like to say that we managed by extreme measures, such as officers reducing and waiving in part their salaries for 1956, 1957, and 1958, to keep our company in the black in 1956 and 1957. In 1958 we could not withstand the tide and we went into the red.

We are close enough to other American hardwood plywood producers to know that the difficulties encountered by our company are universal in the industry. The Wisconsin plant of one of the largest producers of ordinary hardwood plywood has a pattern similar to our company. This is true throughout the industry. The question you must decide is whether we are to be allowed to continue to operate our plants or will you determine that we must go out of business so the importers and foreign producers can have all of the market. If the American industry is to survive it must no longer be treated like an unwanted stepchild to take the crumbs dropped from the table by the more favored importers and foreign producers. We must be allowed to compete for business on a fair competitive basis, not with a club over our heads.

Our officers and each one of the employees firmly believe that they are entitled to the protection of our Government when invasion threatens. Our markets have been invaded and the forces of the invaders are too strong for the Americans so it is up to our Government to give us the protection we require. This may be over simplifying the issue but I can assure you that is the way our workers feel and I agree with them.

Further Events in Battle To Save Uncle Sam

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. BOSCH. Mr. Speaker, the membership of this body knows that I have been greatly disturbed about an apparent campaign to discredit "Uncle Sam" as a symbol of the United States. I guess that there is some good in everything, if one looks hard enough to find it. I believe that this compaign may have stirred some of us into a fight to preserve him for posterity.

The Committee on Interior and Insular Affairs on May 7, 1959, will hold hearings on House Concurrent Resolution 106, introduced by my colleague, the gentleman from New York, DEAN P. TAYLOR. This resolution expresses the sense of Congress with respect to the recognition of the grave of Samuel Wilson, progenitor of the symbol "Uncle Sam" in Oakwood Cemetery, Troy, N.Y., as a national shrine. I call upon my colleagues to rally to the support of this resolution.

Under leave to extend my remarks, I include a letter on this subject written by Mrs. Helen P. Lasell which appeared in the April 25, 1959 edition of the Tablet:

FURTHER EVENTS IN BATTLE TO PRESERVE UNCLE SAM

DEAR SIR: It has been said, "The pen is mightier than the sword." So the result depends upon whose pen it is. Along with this, we can say that all the important battles for our country are not necessarily fought

on the battlefield under military command, nor will they all be fought in space. An illustration of this is the battle stirred up over Uncle Sam by the pen of an extreme liberal historian, Allan Nevins, and published in the magazine section of the New York Times March 1, titled "Let's Disown Uncle Sam."

So many protests of that article were received (which they refused to print) that Mr. Nevins apparently found it necessary to appeal to his so-called liberal colleagues to come to his assistance. Therefore a second long, vicious, and unwarranted article appeared in the same magazine section of the New York Times on April 12, titled "Is Uncle Sam Obsolete?—A Fiery Debate." We fail to see where the debate comes in, since the Times, which claims loudly to oppose discrimination, printed no signs of debate.

It should not be necessary to defend Uncle Sam, our national anthem, or our Stars and Stripes, all symbolizing very much the same things, but this attack was, of course, not an attack on a picture or a man dressed in a familiar costume representing the United States of America, but an attack by the pen resulting in rank propaganda intended to undermine the significance of Uncle Sam and, therefore, help destroy that which he symbolizes. This, of course, means our American tradition and our America as we have known it and wish to keep it, free from agents who infiltrate our schools, colleges, churches, papers, and even expensive magazines with fine sounding names such as American Heritage, with the intent of changing our traditions and undermining our form of government.

It is interesting here to note that one of Mr. Nevins' friends who came to his rescue in the Times article of April 12, stating that "Uncle Sam is just plain ugly," happens to be another extreme liberal professor, which the New York Times thought deserved space in an article they printed January 18: Prof. Eric Goldman, of Princeton University, who conducts the American modern social history course there. The article states, "Some 371 Princeton undergraduates have decided the present U.S. Constitution does not meet requirements. * * * Changes were recommended by Professor Goldman, termed an 'intellectual experiment' * * * the project takes the place of a final examination * * * changes ratified by the entire course membership were for stronger Federal Government, a diminishing of States rights, more power to the President and less power to Congress."

Needless to say if these students fail to cooperate, they would not pass their examinations. Why this professor does not like Uncle Sam is obvious but unfortunately is he not promoting the dislike equally among the college students—our future citizens?

To review the many liberal affiliations of Mr. Nevins and others who expressed views in accord with his would take far more space than a letter of this kind could cover. But rest assured that whenever there is such a vicious and sinister attack directed at Uncle Sam or any other symbol of our American traditions, all that is necessary to expose the reason why is to check and expose the record and affiliations of the attackers.

The deplorable part is, our so-called free press can be used, or rather misused, to spread such destructive propaganda across the Nation. In this instance it places the New York Times in the same category with the attackers.

Sometimes such attacks boomerang back to the attackers, and the result: What they desire is defeated by their own overzealous efforts. This story of Uncle Sam has become a veritable serial story, and we would be amiss if we did not complete it. Americans have taken such matters for granted in the past and have not taken the necessary measures to protect them. In this case, the story of how Uncle Sam originated has not been sufficiently known. The symbol of Uncle Sam we love and respect was never officially protected through the proper congressional action.

Now, because of these attacks, there will be hearings May 7 at 9:30 a.m. before a subcommittee of the House Committee on Interior and Insular Affairs to accomplish what should have been done long ago. Thomas Gerson, who sent an article to the Times refuting the attackers' charges, has compiled a most attractive booklet, "The Story of Uncle Sam," and is leading a delegation to Washington for the hearings. It was through his work, also, that the New York State Legislature passed a resolution just before closing to support all this concerning Uncle Sam and calling for September 13, the birthday of Samuel Wilson, the creator of Uncle Sam, to be declared "Uncle Sam Day" in New York State.

In the delegation with Mr. Gerson, which includes members of veterans groups and Boy Scouts, will be a tall man, dressed in the costume of Uncle Sam. They expect radio, TV, and press coverage. All patriotic groups are asked to participate, and if either or both of the resolutions (H.R. 104 and H.R. 106) are passed, this will be the final chapter of our serial story.

Let us all help, by letters or other means, to make our answer to these attackers, that Uncle Sam is here to stay.

HELEN P. LASELL,
Chairman, U.S. Flag Committee.
JACKSON HEIGHTS.

Challenge to the American Economy

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Missouri [Mr. SYMINGTON] before the National Press Club today.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Lawrence, distinguished guests, and gentlemen, thank you very much for asking me here today.

Every man in this room knows the nature of the basic conflict in which we are engaged.

It reaches around the world, and from outer space to the bottom of the oceans.

It involves our deepest beliefs in God and man.

It involves freedom or slavery for our people and the people of every other nation.

It extends all the way from cultural exchange to nuclear war; and from economic growth at home to economic growth in Ghana and India.

It is a protracted conflict. If we are fortunate enough to avoid nuclear war, it will last without letup through this century, and perhaps into the next. We are in for a long pull.

You have been writing about this for years—explaining the danger and sounding the warning. You have compared the continued complacency among the American people with the dynamic dedication of the Russians and Chinese Communists.

You have reported how the Sino-Soviet leaders plan their foreign policies years ahead, while we only react to the crises these policies create.

The history of the last 6 years has been one of long and inglorious retreat by the United States from world influence, world power and world prestige, even from adequate capacity to defend ourselves. It has been a period in which the Communists have been persistently on the offensive, the United States constantly on the defensive.

Most statesmen, and all serious students of world affairs, agree we are losing the protracted conflict—the political, economic, technological, psychological, and physical conflict we are engaged in today. These analysts do not exaggerate and are not hysterical. After much study, they conclude that the Sino-Soviet group is gaining on us in strength—and steadily extending its influence throughout the world.

In an effort to avoid this situation, some of us have been talking for years about the growing missile gap, and other gaps. But the greatest gap of all is that between the precepts of this administration, and its performance.

It is a gap which cannot be written off to weakness, or even carelessness. There is mountainous evidence to support the belief that it is the product of intent; that it is part of a deliberate policy to conceal from the people the weakness of our position, and the ineptness of the administration in correcting that weakness.

Let me present several examples.

For a long time the administration led us to believe that the defenses of this Nation included planes on air alert. Last year, however, the Congress elicited the admisison that we did not, and do not, have any such alert.

Another example: for a long time we have known of extensive ballistic missile firings by the Russians. But that fact, plus other information about their tremendous progress in this field, was concealed from the people for years, until the launching of the first Sputnik made that particular Soviet progress obvious.

And another example: when the Berlin situation once more became critical, the administration announced it did not intend to get caught in any ground war, and emphasized that it placed its main deterrent on massive nuclear retaliation.

The administration added that over 90 percent of that capacity for retaliation lies in the Strategic Air Force. Under questioning, however, the administration admitted that three-quarters of the present Strategic Air Force bombers are obsolescent; and that its 3-year plan for replacement of these old bombers will replace only 5 percent of those now in operation.

And here is one I recently encountered. Last January the Chairman of the Joint Chiefs of Staff testified there were intermediate range ballistic missiles in England "which are just as effective or more effective than those ICBM's" and that these American IRBM's were "sitting there and ready to go."

Ten weeks after that statement was made to the Congress, I visited that IRBM base of ours in England which was nearest to completion.

There was nothing "ready to go."

There was nothing which met operational standards.

There was nothing adequately dispersed.

The entire installation was literally a sitting duck for sabotage.

And those naked IRBM's in England are by far the most advanced of anything we have on that score in any foreign country.

Yet the administration continues to compress the military budget, and continues to allow the Russians to increase their lead in intercontinental ballistic missiles, while at the same time assuring the country that we

have a balanced defense capable of deterring attack.

The present period in this country is ominously reminiscent of England under Stanley Baldwin.

The people of England were lulled into a false complacency because they were not given the facts.

Turning now to another field, I fear that we are no better prepared to meet other forms of Soviet and Chinese attack than we are to meet military attack. Lenin's fondest dream was to overcome capitalism without war. You will also recall that Stalin shifted the emphasis to economic performance, penetration, and domination. Khrushchev and Mao Tse Tung proclaim this to be their goal.

It is incredible to note how long it took the administration to recognize the existence of the Soviet economic offensive.

This program was recognized publicly only 2 years ago; and even since then any counteraction has been wholly inadequate.

Consider the mutual security bill before the Congress today. Responsible officials in the Department of State let it be known last year that there was urgent annual need for a billion to a billion and a half dollars for the Development Loan Fund. They actually had urgent screened applications totaling one and a half billion dollars awaiting action. But as of today, the administration asks for only $700 million for the Development Loan Fund, and has dropped its request for any long-term program.

How can the Congress proceed with any wisdom under executive leadership of this quality?

Only the President can lead and inspire the people to do the job and make the sacrifices that are needed to protect the vital interests of this nation.

He is not doing it.

You here today know the importance of the psychological front in this protracted conflict with communism.

In this country we have, in rich measure, freedom, religious ideals, material abundance, and cultural accomplishment.

The Communists have tyranny, deprivation, and compulsion. Their only gods are state power and economic materialism.

Nevertheless, even though they offer only the hope of material progress, they are steadily gaining adherents or slaves, all over the world. Science and technology have opened up great vistas of opportunity to all peoples.

But are we leading the world toward anything in particular? Are we communicating effectively with peoples who still dream of a better life in their generation?

We are not. We do not even equip ourselves with the necessary tools.

For want of funds, our information program, our cultural relations program, our educational exchange program—are all kept on short leash.

I realize there is considerable resistance to these programs in Congress. But the administration does not ask for adequate funds, or ever really fight for them.

I have said only enough to suggest that in a wide variety of fields we are not doing what we must do, to even begin to win this conflict with the Sino-Soviet Empire. There are glaring needs across the board.

Does this administration point out the needs and ask the Nation to make the necessary sacrifice? It does not.

Instead, it calls on us to worship at the altar of the budget—and not just any budget, but its own conception of a budget which is balanced by looking backwards.

Does this administration speak the words which move men's souls to the defense of freedom?

It does not.

It uses the great publicity power of the office of the President to divert our attention from the real needs and rivet it on the account books.

It has appealed to instincts which should be subordinated, and has created an atmosphere in which it is extremely difficult to pierce public complacency.

It labels as "reckless spenders" all those who are willing to make the necessary sacrifices for our national security and well-being.

I am as opposed as anyone to wasteful spending—in business and in government. I have always fought excessive payrolls, duplication, extra committees and commissions, useless programs.

But it is totally unsound to describe what is essential as wasteful spending. All wise investment is sound.

I would classify as such, investment in our people, investment in our cities, investment in scientific research; investment in the development of our resources—including our greatest resource—our children.

And investment in our allies and those uncommitted nations who some day will have a major part in determining the destiny of the world.

In business, after making a major decision for plant expansion, a president doesn't present that decision to his board with embarrassment. On the contrary, he considers the proposed expansion an asset, recommends it as such, and expresses it on the asset side of his balance sheet.

Why is there such pathetic reluctance on the part of this administration to provide, for all the people, such necessary assets as dams, and adequate highways, and an adequate defense.

Why do they treat such potential assets as liabilities?

Far from wasteful spending, these are sound investments in the future of America.

With real leadership in this country, we can meet the Communist challenge, win the conflict and stay solvent and prosperous.

To do this, however, we must have two prerequisites now clearly lacking.

One is vision. The other is application of good business management to government.

We have had a lot of constructive advice to this end—from the Rockefeller report, the Gaither report, the Report of the Committee for Economic Development, and others.

But the prophets of bankruptcy in this country say we cannot afford to do what these reports all recommend that we do, because that would result in a deficit, or a rise in taxes.

So let me list three areas in which, through the application of sound business practices, we can provide more funds for our needs, without raising taxes and without deficit spending.

First, we can save billions of dollars, and at the same time build a more adequate defense, if we stop preparing ourselves against the way the enemy would have attacked 10 years ago, and start preparing for the way they will attack now, if they attack at all.

This means that we should stop building our defenses on the basis of the traditions and the command structure of World War II, and start building them and operating them in recognition of the nuclear space age in which we now find ourselves.

As an example: This Nation, each year, is now spending over $5½ billion on a continental air defense which is completely ineffective against ICBM's and against missiles launched from submarines.

Most of this gigantic sum of money is being put into protection against long-range bombers, even though for some time our intelligence has told us that the Soviets are building an extremely small number of such bombers, but are pouring a steadily increasing percentage of their resources into long-range missiles.

Also, a large part of this $5½ billion has been spent in an attempt to defend our cities with ground-to-air missiles which, in modern warfare, would not travel far enough to reach those bombers.

In this year's budget, we are being asked to spend some $300 million for a new aircraft carrier for limited wars—even though we already have plenty of carriers for that purpose.

We are spending too much money on tactical airpower, when its only real role is in close support of ground troops.

We are spending far too much money on ground-to-air missiles and short-range fighters whose usefulness in possible future wars will be negligible.

And we are allowing waste and duplication to be compounded in a Military Establishment in which honest participants admit service friction is increasing instead of being reduced.

We still have no true semblance of service unification. As an example, we have six separate air forces and the enormous expense which results from these duplications.

Second, we could raise several billion dollars in new tax revenue at existing rates, if we would enforce the present tax laws as they should be enforced.

This month the Commissioner of Internal Revenue testified that between $25 and $26 billion of taxable income is not now being reported for tax purposes.

The Commissioner emphasized that substantial additional revenue could be collected with more enforcement personnel. He further stated that each additional employee used for this purpose would, in 1 year, bring in 10 to 15 times his salary.

Yet again in the name of its false economy, the administration has cut enforcement personnel by thousands.

If this is economy, it is the most short-sighted economy I ever heard of.

Finally, if our economy grows as it should, and operates at full production, we could raise far more revenue at current rates.

Right now, over 15 percent of our economic capacity lies idle—and of course one result of unemployment is smaller revenues.

What we need is more national wealth and production—more production every year to accommodate our growing population, our growing needs and our growing responsibilities.

It has been estimated that if under the present administration, our economy had grown as fast as it did under the preceding administration, tens of billions of dollars would have flowed into the Treasury.

Under present world conditions, our nation can no longer tolerate a stagnant and partially idle economy. We must make whatever investments are necessary to assure the high rate of economic growth which in turn is essential for security and prosperity.

I believe in this country.

I believe in its capacity to grow.

I believe in its ability to snap out of this complacency. I believe that, with leadership, we can mobilize our energies and resources and turn back the Communist challenge, keep the peace, and build a better world.

I have faith and confidence we will do so.

Action at Gettysburg

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. QUIGLEY. Mr. Speaker, 8 days ago on the floor of the House I urged the Congress to reconsider the appropriation

which would enable the Park Service to acquire land at Gettysburg Battlefield. At that time I stated that the problem was one which needed local action in addition to whatever Congress might provide—that Congress could only rectify mistakes of the past and that it was up to the greater Gettysburg community to see to it that no mistakes would be made in the future, namely, that Cumberland township and other interested localities should institute modern zoning practices.

Today I am happy to report to the Members of the Congress that Cumberland township has initiated action in this direction. Within the last 2 days a planning commission of five citizens has been appointed to study the planning and zoning question and to report measures to accomplish that end. The members of that committee are Col. Thomas H. Nixon and Messrs. John D. Teeter, Charles C. Garland, Paul R. Knox, and Frederick Green.

Now that greater Gettysburg has begun its part of the job I can only trust that Congress will get on with its responsibility and restore to the budget the necessary funds to remove from this field of honor the presently existing desecrating structures.

Chemical and Biological Weapons Can Provide Us With a Deterrent to War

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. SIKES. Mr. Speaker, I wish to call to the attention of my colleagues an unclassified excerpt from a classified briefing given by Maj. Gen. Marshall Stubbs, Army Chief Chemical Officer, before the American Chemical Society Advisory Committee of the Chemical Corps in Boston, Mass., on April 7, 1959. I feel that this briefing carries an important message for the Congress and for the public. I submit it for printing in the RECORD, as follows:

In the gathering momentum of world tensions since the close of World War II, it has become increasingly apparent that this Nation must forge ahead in all fields of military preparedness if we wish to maintain our position of supremacy among the nations of the world. Rapid technological advances have been and are being made both by the free world and the Communist world, changing the nature of war itself. Since scientific and technological advances can make an impact upon our weapons systems and determine our military strength, we must look to science for the advances that will help us maintain our world leadership.

Today, when our national survival depends on the availability of weapons systems superior to those of a potential enemy, time is the controlling factor. I believe that two things are beginning to become increasingly clear to the public, as well as to the experts: (1) that we are in a weapons research and development race, and (2) that all weapons systems must be adequately provided for if we are to have no chinks in our armor. Soviet leaders have openly stated that future wars will be characterized by various means of mass destruction, such as atomic, thermonuclear, chemical, and bacteriological weapons.

In the light of that statement, it must be clear to you that we cannot lag for a moment in the development of chemical and biological weapons systems and defenses, both for protection against the use of these agents against us by a possible aggressor and as a deterrent to war.

I firmly believe that chemical and biological weapons can provide us with that deterrent to war. An enemy, convinced that our chemical and biological capability is effective enough and that our defenses are invulnerable would hesitate to launch an attack knowing that the counterattack would be devastating to him.

In 1866, Jules Verne said, "the Yankees, those foremost technicians of the world, are engineers, as the Italians are musicians, and the Germans metaphysicists—from birth." That national attribute is a prerequisite for our continued success. We must continue to be the foremost technicians of the world. But even more than ever before, we must originate new ideas.

We in the Chemical Corps are actively pursuing a program which, I am confident, will give us a constant input of ideas and concepts, both from within the corps and from scientists and engineers of industry, universities, and research organizations. Known as the blue sky program, it is designed to stimulate imaginative thinking on chemical and biological weapons.

We need new and novel ideas that are applicable to our field of interest, and we want them before they have been laboriously perfected and put on your drawing boards. While not all of these will prove fruitful, failures must be accepted as a part of the program. For if we wait until we can be sure that we can be successful, we will in many cases have waited too long. We must close the time gap between the birth of an idea and its translation into a reality.

I hope you will encourage your people to freely submit ideas to us, no matter how "out of this world" they may seem. You may recall that not too many years ago space ships and missiles were only figments of the cartoon artist's imagination.

Let me give you a few examples of areas where the blue sky program could be put to good use. One of our primary aims is to so equip our fighting men that they would be impervious to a chemical and biological attack and would be so unencumbered that they could effectively continue their mission.

We are also vitally interested in developing more adequate and rapid early warning systems that will detect a chemical or biological attack. Since many chemical and biological weapons agents cannot be detected by the senses, it is imperative that simplified methods be devised that would rapidly warn our Nation and our Armed Forces of chemical or biological weapons attack. An enemy could easily launch an attack such as this from submarines lying offshore or from planes and missiles.

Novel ideas are needed in concepts of employing physiologically active materials to stifle an enemy's will to fight.

I have great confidence that the blue sky program with contributions of scientists throughout the free world will provide us with the margin of difference that will keep us in the forefront in the technological race for chemical and biological supremacy. It is clear that the Russians are making a bid for first place. We know that the strength of our military forces depends directly on technology and we must keep Jules Verne truthful in labeling us Yankees as the foremost technicians of the world.

Radio and Television Ratings

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 28, 1959

Mr. MONRONEY. Mr. President, in further support of the statement I made on Saturday regarding the slavery of networks to the TV-radio rating services, particularly in regard to the networks' refusal to sell prime time to "The Voice of Firestone," despite its sponsor's willingness to pay for such time, I ask unanimous consent to have printed in the RECORD an article distributed by the New York Herald Tribune News Syndicate and printed in the Washington Post of April 27, 1959. It is written by John Crosby, one of our outstanding TV critics.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WRITER SAYS RATINGS ARE LOT OF NONSENSE
(By John Crosby)

This is the first year that I have dipped a very tentative toe into the field of lecturing. I have reached two broad general conclusions. First, it is wonderful fun, a conclusion I did not at all expect. Second, the broadcasters don't know what they are talking about when they talk about their audiences, a conclusion I very much did expect.

Audiences out of town seem to be no different from those in New York. People are very much the same everywhere—a finding that will strike Madison Avenue dumb with astonishment. The most famous entertainer in the United States at the moment—now hold on to your hat here—is Jack Paar. Yet his rating is nowhere near that of "I've Got a Secret."

All of which goes to prove that ratings are a lot of nonsense. The rating people will say I didn't talk to enough people—yet I have talked to a lot more people than Neilsen samples on his hallowed rating service which determines whether a show lives or dies, whether a sponsor will blow 25 million bucks or not. (I never heard anyone mention Desilu Playhouse or whatever they call that darned thing that Westinghouse spends $12 million a year on. I don't think anyone has ever seen it. Betty Furness has had people commiserate with her because she's off the air—except that she's been on for 10 years.)

The questions that I am asked in Wichita are no different from the ones your literate friends ask you here. What happened to Firestone? Aren't they ever going to get enough westerns? What's Jack Paar really like? (An awful lot of people say: "I don't like Jack Paar but I like his program"—something that would bother me if I were Paar. Paar, on the other hand would be flattered, perhaps even alarmed, if he knew what a national phenomenon he is. Paar today is far bigger than Steve Allen ever was in the same spot and bigger—that is, in sheer conversational value, speculation, national awareness than anyone since the apotheosis of Arthur Godfrey 4 or 5 years back.)

If I were the head of a network, I would worry about the numbers of people who say they don't look at television any more. Immediately, this will be countered by the assertion that I'm talking to a lecture audience which isn't at all typical. Certainly it

isn't typical. But if you move around the country, you meet a lot of other people besides those in your audience. You meet airline hostesses and taxicab drivers and waitresses and the guy who carries your bags and the people who sit next to you in airplanes and newspapermen and TV interviewers and friends and relations—and oh, lots of people.

One general rule you can make is this: That a guy who moves around the country and asks questions knows a lot more about what is going on in the country than a guy who sits on his duff and pores over charts prepared by somebody else. You may set this down as Crosby's law: That any research service you pay money to will, in general, tell you what you want to know; they're not going to tell you a lot of unpalatable truths because you might stop paying the money.

It is no accident that Capt. Joseph Medill Patterson, founder of New York's Daily News, was the most successful publisher of his day. He didn't hire a survey outfit to check the subway crowds he was aiming at. He rode the subways himself during rush hours and looked over people's shoulders to see what they were reading in his paper. Or, if they were reading somebody else's paper, what they were reading.

One vice president wandering around the grassroots wouldn't cost any more than one of those silly surveys, and he would be amazed at the amount of wisdom he'd bring back with him about the taste and the intelligence of the countryside which the networks so consistently and grievously underestimate.

Georgia's Great Industrial Growth

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 28, 1959

Mr. TALMADGE. Mr. President, the May issue of Coronet magazine contains an excellent article by Mark Nichols reporting on the tremendous rate of industrial growth which is reshaping the economy of the State of Georgia. It is entitled "Everything's Jumping in Georgia," and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVERYTHING'S JUMPING IN GEORGIA

(By Mark Nichols)

"Jumpin' gerrymanders!" the native Georgian exclaimed. "Where did all the cotton-pickers go?" As he looked around Atlanta—after an absence of 10 years—he discovered that ante bellum white-columned houses had given way to a sprawling metropolis of skyscrapers, glass-enclosed factory buildings, and elegant entertainment facilities. Traveling across the State on business, he became increasingly excited about prospects he spotted. Whereupon he rushed back to New York, resigned his job and moved his family to Atlanta. That was 3 years ago. Today, he has a comfortable income as a small-parts manufacturer, few business pressures, and a gracious way of life. Presiding over the barbecue spit in his honeysuckle-entwined back yard, he has fallen back into the habit of southern hospitality that comes as naturally to Georgians as their drawl.

His story has been duplicated by literally thousands of servicemen, college graduates, and industrial workers, all contributing to a new look in Georgia today. The land of magnolias and languid living wears the proud look of economic growth and success. Since the end of World War II, this enterprising State has combined research and southern charm to attract 17,000 new commercial and industrial firms. These businesses provide jobs for nearly 250,000 persons.

"Georgia couldn't go on relying just on cotton," an American newspaperman explains. "When it was a good crop, it was very good for the State. When it was bad, it was disastrous." Awakened to the folly of one-crop dependency, Georgians began looking earnestly for other crops and industries to diversify their economy. Their success can be measured by the jingling change in Georgia jeans today.

The State now leads the United States in the production of tufted textiles, poultry broilers, saddles, mobile homes, naval stores, marble, peanuts, and pimiento peppers. "Not bad, huh?" smiles State Director of Commerce Abit Massey, whose department concentrates on the encouragement of new industry. "And four new businesses every day are taking advantage of our year-round temperate climate, natural resources and our anxious-to-please labor force—plus the cooperation of every State government department."

"Not bad" is typical Georgia understatement. Massey's roster reads like a Who's Who of American business: American Cyanamid Co., Armour Co., Continental Can Co., General Electric Co., Johns-Manville Corp., Manhattan Shirt Co., Viking Trailer Corp., Westinghouse Electric Corp.

"Georgia industries now turn out everything from automobiles to zippers," says Massey. "Like chain reactions, one business seems to spark another." As an example he cites the 105 plants that turn out tufted textiles in the State. These created such a demand for latex backing for the carpet products that a latex rubber company moved in to service them better. Other related industries followed.

This kind of chain reaction is jet-fueled by the resulting prosperity, too. Earning more, Georgians are spending more, creating a supply and demand cycle that multiplies at a vigorous rate.

Why have so many manufacturers established plants in Georgia? A food canner lists some reasons: "For me, the weightiest factor was the all-out help I got from the State. After I expressed interest in the Savannah area, the State department of commerce came up with every relevant bit of information, including weather, water and power, and even the types and number of workers available.

"The picture looked good to me," the canner continued, "but I couldn't spare time from my Ohio plant to supervise construction in Georgia. The department of commerce met with the town's civic leaders and persuaded the community to finance and erect a building to meet my needs. Then it was leased to me at advantageous terms—with options to buy later. Because the site was in a rural district, I had to have good roads for shipments. The highway department stepped in and laid new roads. Next, the State department of education trained workers in the area. I provided the machines and the training space and they put my foremen on salary as instructors. By the time the plant was ready to open, the workers were familiar with our methods.

"And with the community financing the building," the canner concluded, "everyone in town is rooting for the business to succeed."

One look at northwest Georgia would dispel any notion of southern indolence. Here, the raising of broilers is a 24-hour-a-day enterprise. Commercial broiler production began before World War II when Jesse Jewell, a feed merchant, tried to boost his poultry feed sales. He bought chicks, sold them on credit to nearby farmers, and then sold them feed on an IOU basis. Soon a widespread, easy-to-operate industry was underway. The beef shortage during World War II helped accelerate its growth and broiler raising has become Georgia's largest agricultural enterprise.

Farm mechanization released large numbers of rural workers for industrial jobs, increasing the labor pool. To present an attractive labor picture to prospective businesses, the State last year passed its own right-to-work law, allowing citizens to work without union affiliation if they so chose.

Georgia's college graduates today have no need to migrate elsehere in search of career advancement. Take, for instance, interior decorator, Carolyn Becknell, Atlanta's 1958 Woman of the Year in Arts. Setting up shop as Becknell Associates, she found a ready need for her services by industry and homeowners.

"Everything's jumping in Georgia," says Miss Becknell. "Northerners may come here and decide to slow down, but they are likely to be bumped from behind by a Georgian who is swinging with the times."

Lockheed Aircraft Corp. has discovered that its Marietta location is a persuasive attraction for hard-to-get engineers who yearn for the majestic vistas and open country of the State. Another valuable asset for Lockheed is the availability of the Georgia Institute of Technology's graduates and research facilities.

Two other industrial giants have made Georgia their focal point for southeastern operations. The General Motors Corp. plant at Doraville alone turns out 46 different types of passenger cars on the same assembly line. Ford Motor Co. has nearly doubled the space of its first postwar plant on 75 acres outside Atlanta.

Why do manufacturers choose one particular location? The reasons vary from solid business sense to whimsy. Manufacturer Dan Brown chose Dawsonville because his mother's maiden name was Dawson. Another businessman, advised by his engineering consultants to locate in town A, was persuaded by an industrial development go-getter to look over town B. Learning that he was a sportsman, town B organized a quail hunt for him, followed by a pheasant dinner. (P.S.—The plant is now located in town B.)

An Iowa industrialist, vacationing at Sea Island, fell in love with the peaceful palmetto country while indulging in his favorite sport, boating. He moved his commercial insecticides plant to Brunswick, and now spends all his free time on the water.

His passion for the water is shared by thousands of Georgians. With plenty of leisure and lakes, they have turned to boating for fun in the sun—and brought a new industry into their midst.

One Georgia boast is not idle: the State has a more-than-abundant water supply for recreation, industry, and agriculture. Farmer John Butler, resting his elbow on a hoe and regarding the warm, blue sky, says, "We get an average of 49 inches of rainfall a year. And we don't have to worry about floods since we got all those new dams." Five new dams constructed by the U.S. Army Corps of Engineers make navigation smooth on Georgia rivers.

The State has plenty of power, too, to match the water supply. "In the past 10 years," a George Power Co. spokesman declares, "we have doubled our generating capacity to keep ahead of this boom."

Also serving industry are harbors that maintain a steady stream of materials for

men and machines. In 1946 the State organized the Georgia Ports Authority to deep dredge and develop further the existing Port of Savannah on the Atlantic seaboard. Pointing to a European freighter unloading Volkswagen automobiles from Germany, Dockworker Roy Gateson grinned: "We're getting foreign cars and just about everything else direct now."

Over 100 steamship lines load and discharge freight in Savannah. And the new inland port at Bainbridge hums with barge traffic bringing chemicals, oils, and fertilizers from as far away as Chicago. Spurred by the success of these operations, the ports authority has future plans for developing additional ports at Brunswick, Augusta, and Columbus.

Georgia's capital, Atlanta, ranks as the largest transportation center in the South, with 31 railroads, 6 major airlines and 500 bus departures daily.

Atlanta's central location has also made it a telephone communications hub, one of the largest long-distance switching centers in the world. It is also a major television control center, filtering cables for TV and radio transmission throughout the South.

Rich in natural resources, too, Georgia is harvesting its gifts from nature. Its lofty pine forests, largest in the South, yield reams of paper after processing and also furnish over half the world supply of resin and turpentine. Wastelands are rapidly being converted into timberland to supply pulpwood for companies like Union Bag-Camp Paper Corp., Owens-Illinois Glass Co., and Container Corporation of America. "We can hardly keep up with the new uses they find for pine," says a forester. "Good thing it grows fast."

Georgia's youthful government administrators—from Gov. Ernest Vandiver, 40, to Abit Massey, still in his early thirties—have pledged special emphasis on aiding the State's smaller communities to secure new industries. From Massey's department of commerce office in the Atlanta State Capitol Building, thick packets of brochures and surveys go out daily to manufacturers across the United States who want to investigate what Georgia has to offer.

Convinced that research will help open more industrial doors, the State department of commerce is at present conducting a study of the State's commercial potentials in plastics, air conditioners and coastal Bermuda grass.

"Now that we've seen what can be done," says Massey, "we won't relax until we make our State the industrial leader of the South." He and his fellow citizens mean business when they utter these familiar Georgia parting words: Come see us, now.

International Student Exchange

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 28, 1959

Mr. FULBRIGHT. Mr. President, 10 years ago the University of Arkansas formed a committee for Foreign Exchange Students. The results of the work of this committee in the last decade are summarized in an article in the Arkansas Alumnus magazine for March 1959.

This article furnishes a good explanation of how foreign students are received in a college community, and an indication of typical student reaction to their new educational environment. It also explains how local citizens have contributed so unselfishly of their time and money to support the students during their stay and make the program a success. I think that this example is typical of what has happened at hundreds of other colleges and universities throughout the country which participate in the exchange program.

I ask unanimous consent to have the article printed in the Appendix, and I recommend it for the reading of all Senators.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARKANSAS INTERNATIONAL STUDENT EXCHANGE

Foreign students brought to the University of Arkansas by the Foundation for the International Exchange of Students are goodwill ambassadors for our country and State when they return to their homes. Also, they enrich the lives and outlook of those with whom they come in contact both at the university and throughout the State.

NINETEEN HUNDRED AND FIFTY-NINE: TENTH ANNIVERSARY FOR FOREIGN STUDENTS

Exactly 10 years ago this month a group of faculty and students at the university got together to form the Committee for Foreign Exchange Students.

It was a movement that the charter members felt particularly appropriate, since it would bring foreign students to the alma mater of Senator J. W. FULBRIGHT, whose legislation was to make the whole thing possible. The Fulbright Act for educational exchange has since been described as the most fabulously profitable investment ever authorized by Congress.

The university has profited from it—and from the other exchange arrangements that have come in its wake—by acquiring a continuing group of international students. From all over the world they have come and gone, leaving behind a little more understanding of the world's peoples, and taking with them a little more understanding of the United States.

In the words of Gisela Gherri, a 1956–57 student from Switzerland, "One should never think 'Fayetteville is such a little place, what can I learn here?' Fayetteville is the United States just as well as are New York or Hollywood. Every minute should be lived full of consciousness. I mean that every minute one should be aware of what privilege it is to be able to study in the United States."

Since that first year, when two came from France and one from Germany, from 10 to 20 foreign students have been aided financially each year by the international foundation, and several hundred others have come to the campus through financial arrangements of their own. The Arkansas Foundation for the International Exchange of Students, to give the complete title, grew out of the original 1949 committee, and was incorporated under the laws of Arkansas in 1951 as an educational association.

At present there are about 50 international students on campus—all sponsored by the foundation—from the Latin American countries, the Far East, Europe, the Middle East, and Canada. Men outnumber women three to one.

This proportion of men to women is fairly typical of foreign students on American campuses. However, at most universities the largest percentage are from the Far East, while at Arkansas the largest number come from the Latin American countries. Many come from Panama to study agriculture.

Only last fall did the international foundation offer "sponsorship" to all foreign students meaning that through the foundation a member of the community serves as a friend who helps with any everyday living problems and a faculty advisor helps with academic guidance. These services are in addition to the foundation's scholarship aid for a smaller number of students.

Because the Fulbright Act, and some of the other programs of the United States or foreign governments, do not provide all the money necessary for a year's study at the University, the International Foundation must raise funds annually. The number of foundation students receiving financial aid thus varies with the amount of support given on the campus and in the State.

The international foundation usually must find funds for board and room, books, and tuition. Because it is a State institution, the university cannot give tuition scholarships to foreign students. It does give the foundation the right to award 15 waivers of out-of-State tuition, which amounts to $100 a semester.

Money has come from individuals, including the faculty and the undergraduates, and from groups over the State. The Arkansas Federation of Women's Clubs, for example, each year provides $600 for the room and board of one woman in a dormitory. The men's civic clubs—especially the Rotary Clubs of Springdale, Rogers, and Fayetteville, which contribute from $100 to $250—give continuing support.

The American Association of University Women has for many years sold tickets to a special film series, with proceeds going to the international foundation. Cookbooks containing recipes collected from foreign students were published by the World Affairs group in Fayetteville in 1955 and are still selling.

Several fraternities and sororities have participated in the program during the past 10 years by giving board and room to one foreign student in their houses, or meals only if there is no space to spare.

How much financial support the students will need is known before they arrive. Every foreign student who applies for a grant or scholarship in an American university is screened by the institute of international education of New York. Then the local foundation selects from the applications available the ones they think will work out in the University of Arkansas community.

They don't always work out. Although as a rule they are good scholars, one will occasionally have insurmountable language difficulties or cannot adjust to such a different culture, and return home before the year is over.

"Our lost foreign students are rare," according to Mrs. Jessie O'Kelly of the English department, who has worked with the program since its inception and who teaches a special English course for them each year. "But since we know it can happen, we plan ahead by providing sponsors and by arranging social activities that will help them get adjusted early."

SOCIAL EVENTS ARE VARIED

One social event last fall was a get-acquainted reception held in the Fine Arts Center for the international students and those who support the foundation.

The students are often guests in Fayetteville homes—alumnus Harmon Remmel (B.S., B.A., 1941) has entertained them frequently. Also, by personally contacting other alumni in different parts of the State, Harmon has made it possible for groups of foreign students to visit more of Arkansas than just Fayetteville.

It has been the custom for several to tour the State, usually at Easter, making speeches to civic clubs, church groups, or anybody else who would like to have them. In 1955 the

foreign students made more than 600 speeches in Arkansas communities.

Frequently University of Arkansas students will invite a foreign student home for Thanksgiving or Christmas. The foreign students who can manage it financially sometimes take advantage of the holidays to see New Orleans or Texas or St. Louis.

On the campus an activity available to all is the International Club, which also includes American students. The club usually starts the year with "orientation meetings" so that the newcomers can learn about dating customs, American money, or whatever is puzzling them.

Last year was an especially active one for the International Club, for they had folk dancing classes, and an international weekend in March. About 250 persons turned out for the supper of foreign dishes that was part of the weekend celebration; the students also held a dance and played a soccer match.

OPINIONS OF STUDENTS

Out of all this social activity, plus the contacts made in the classroom, comes a view common among foreign students. Americans are friendly. And apparently the more friends they make, the more likely they are to spend a happy year.

That year sometimes stretches into several, if the student has the means. Some go on to do graduate work elsewhere; some stay at the university. Take the case of Alex Poularikas, who appears on the cover of the Alumnus. He first came as a Fulbright scholar in 1956, expects to earn a degree in electrical engineering and then will work toward a master's. He has a job teaching physics labs, and works on nuclear research in connection with the ion accelerator.

"When I came, I did not expect so many good people to help me," Alex said. He believes that foreign students find such big differences in American life that it is difficult for them to evaluate their experience until after the first year or after they return home.

Scholastically, the exchange students notice a big difference, especially on the freshman and sophomore level. They often feel both the method of teaching and the subject matter are like high school or its equivalent abroad. They are accustomed to being responsible for independent study. But, as Alex has found, if they do advanced work they discover that the teaching and their fellow students are equal to what they can find in their own countries.

Socially, they often find American students too little concerned about getting an education, and too much concerned with dating and extracurricular activities. But with time even these criticisms fade.

The foundation has found this to be true generally. Mrs. Marie Lavallard, editor of agricultural publications, who puts out a newsletter twice yearly for former foundation students, often receives letters like the one from Eugenio Schieber. Eugenio, a 1953–54 student from Guatemala now at the University of Wisconsin, wrote about his experience in Fayetteville: "All of the wonderful memories of the place where I saw the first snow in my life * * * where I learned about American living, where I could get a better understanding of fellowship and organization through the fraternity Sigma Alpha Epsilon * * * where I gathered knowledge for my future life, and where I learned a new language after counting the steps of the monumental Old Main."

These "foreign alumni" who return to their countries all over the world are America's ambassadors—and Arkansas' ambassadors. The adverse publicity that Arkansas has received abroad caused some uneasiness among the students who came last fall. But many now have the attitude of Denmark's Annette Lendal Connaway (she added the last name in February when she married Jim Connaway, president of the Associated Students), who said, "I don't say I share it, but I now understand the southern point of view. The social problem is more complex than I had realized."

A large percentage of the alumni abroad have kept in touch with old friends on the campus and in the State. A few have kept in touch with each other; they have held four alumni reunions in Europe, three in Heidelberg, and one in Paris. Like all alumni at a reunion, they shared memories of the university.

Senator Humphrey, of Minnesota

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 28, 1959

Mr. MANSFIELD. Mr. President, in the April 25, 1959, issue of the Saturday Evening Post there appears an article about our distinguished colleague, the senior Senator from Minnesota [Mr. HUMPHREY]. The article draws a warm and interesting portrait of an outstanding leader of the Democratic Party. It shows the Senator from Minnesota as we know he is—as a man of exceptional and articulate intelligence, of great political creativeness, and of tremendous energy. It shows him as a man with a firm grasp of the international and domestic problems of the Nation and a deep understanding of the human needs of the American people.

I am delighted that the article on Senator HUMPHREY will make clear to millions of Americans what Members of the Senate have long known, and I ask unanimous consent, Mr. President, that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows.

HUSTLING HUBERT MAKES HIS BID

(By Walter T. Ridder)

If HUBERT HORATIO HUMPHREY were inclined to bitterness, he would broodingly remember the 1956 Democratic National Convention as ample demonstration of man's perfidiousness to man. The Minnesota Senator had sought nomination as Adlai E. Stevenson's vice presidential running mate. His attempt had been publicly and humiliatingly rebuffed. The convention chose ESTES KEFAUVER by the narrowest margin over JOHN F. KENNEDY. HUMPHREY, deserted by all on whom he had counted for support, viewed the wreckage of his candidacy and muttered, "They've stolen all my clothes."

Yet the man who then stood naked before his adversaries is today one of the four major contenders for the 1960 Democratic presidential nomination. Kennedy, Stevenson, Senator Stuart Symington, and Humphrey stand out most clearly on the Democratic political horizon. That HUMPHREY could so rapidly graduate from passed over vice presidential candidate to seriously considered presidential prospect is proof of his recuperative powers and ability to learn lessons from defeat.

In pursuit of the top nomination HUMPHREY will use his tongue, his imagination and his inexhaustible energy, all of which have been his most potent assets and at the same time his gravest handicaps. Particularly his tongue. Words come to HUMPHREY as easily as water flows over Niagara Falls. They come in staccato bursts, more like the chatter of a Gatling gun than the weighed pronouncements of a statesman. Many first-time listeners wonder whether they have been victims of a verbal shell game. His readiness to voice opinions and the speed with which the words cascade create an illusion of mere glibness. In reality, HUMPHREY's mind moves as rapidly as his tongue; behind the facade of words lies a brain continually in motion.

"That so-and-so," said a nonadmirer admiringly, "is always thinking." Ideas come to HUMPHREY in such profusion that his office staff is hard put to keep up with them. "He drives to work in the morning," explained a Humphrey aid, "and he has nothing to do for 25 minutes. When he gets here, he's had a thousand ideas and expects us to go to work on them immediately."

His interests are as varied as the work of the Senate. In the course of 10 days during the last session of Congress, HUMPHREY proposed legislation on such diverse matters as establishment of an international health year, creation of a Youth Conservation Corps, expansion of export of American dairy products, retention of the phrase "civil defense" in a new agency, loans for increased college and university construction, more aid for small business, denunciation of Russian barbarism in Hungary, and insistence that the United States give backing to international action on human rights.

He also offered a 4-point international works for peace program, a 6-point program to make disarmament inspection feasible, a 13-point program for an American trade fair in Moscow, a 5-point program for revitalizing northeastern Minnesota, and an 11-point program for challenging the Soviet economic offensive. He deplored the Russian lead in outer space and demanded more support for the Coast and Geodetic Survey because "we are badly lagging in our knowledge of the ocean depths."

The range and multiplicity of HUMPHREY's ideas have propelled him from pharmacist in Huron, S. Dak., to the Senate. As with his eloquence, the ideas themselves are not an unmixed blessing. He has been charged with mental shallowness and going off half-cocked. But those who have challenged him in debate have learned to their dismay that the Senator from Minnesota does his homework. Opponents may not agree with his conclusions, but they rarely best him on qustions of fact.

He does, too often, go off halfcocked. There are few topics on which he does not have immediate, readymade opinions—some of which he is later forced to change. For every problem, HUMPHREY proposes a multipoint solution which sometimes contains more points than practicality. His speeches are needlessy long. "You don't have to be eternal to be immortal, HUBERT," a dinner chairman once scribbled to him. Listening to him reel off a speech in which he was solving many of the world's ills, a friend remarked, "The trouble with HUBERT is that he should be an entertainer." For the sake of audience reaction, he tends to quip and sometimes sacrifices dignity for a laugh.

HUMPHREY's mind drives his body at a pace which men of lesser energy find intolerable. "Keeping up with HUBERT is impossible," another friend reported disconsolately after a tour. "Every morning we were up at four to shake farmers' hands and we were on the move until midnight. I'd flop into bed, but HUBERT invariably found friends and would stay up talking. The next morning he'd be out there as bright and fresh as ever." The man-killing schedule is not confined to campaigns. He tries to cram more activity into his Senate day than his time will permit. As a result he usually is seen racing from one appointment to another, which contrib-

utes to his reputation as a young man in a hurry.

He moves with grace and ease. Washington ladies rate him as one of the Capital's better dancers. His figure appears slight, but it is a solid 170 pounds. He seems smaller than his 5 feet 11 inches, an optical illusion created by his aura of frenzied activity. People reason that nothing large could move so fast. His face, though broadening, is essentially boyish. His features are extraordinarily mobile and seem to reflect the passage of his thoughts. This supports the belief that HUMPHREY "thinks too fast." The sum total of HUMPHREY's physical characteristics adds up to something quite different from the popular image of a President. He just doesn't look like a President. This is a public relations problem which will give HUMPHREY much concern in the months to come.

HUMPHREY is acutely aware of this problem. Much as Averell Harriman sought to overcome his public image as an inarticulate individual so HUMPHREY must erase from public mind the vision of a brash, young buttinsky. He will do this by pausing deliberately before answering a question, by limiting the number of topics per day on which he is willing to make a speech, by slowing the pace of his oratory and by directing his energy to topics of prime national and international import. There will be no "new" HUMPHREY; there will simply be a toned-down version of the old. For instance, when asked for his reaction to President Eisenhower's 1959 state of the Union message, HUMPHREY astonished reporters by replying, "No comment"—a phrase which has been conspicuously absent from his vocabulary in the past.

Ingratiating qualities of the gentleman from Minnesota are his ready sense of humor and his ability to laugh at himself. When it was suggested that HUMPHREY had made a mistake in a recent course of action, the Senator soberly agreed, "Yes." Then, rolling his eyes heavenward, HUMPHREY threw back his head and raucously laughed. "Mistakes? Man, I invented 'em." Humorous self-appraisal is a refreshing habit of HUMPHREY, just as it is of Adlai Stevenson.

HUMPHREY's humor is in the Mark Twain tradition—earthy, explosive, exaggerated, in the style of the American frontier. It contrasts sharply with Stevenson's urbane, intellectual wit. HUMPHREY makes use of the pungent phrase, the unexpected and incongruous. He astounded a staid diplomatic dinner at the British Embassy by suddenly blurting out, as he described a heated Senate debate, "Oh, boy, and then did the manure hit the fan." HUMPHREY since has learned that such colorful expressions are received in diplomatic circles with highly arched eyebrows. Today he undoubtedly would substitute, "We had a hot discussion."

The frontier molded HUMPHREY's personality in many ways and has strongly influenced his political thinking. In his philosophy, he is a direct descendant of Andrew Jackson and the later Populist movement. The mark of the frontier and of the Populist had not yet vanished from South Dakota, when HUMPHREY was a youth there. His liberalism is rooted in the troubled political soil of agricultural reform, fed and nurtured by Franklin D. Roosevelt's New Deal. He is a liberal in the classic American tradition. That liberalism calls for a man to help himself insofar as he is able, but for Government action to meet problems insoluble by the individual. It is the liberalism of Roosevelt, George W. Norris, and Bob La Follette.

Senator HUMPHREY's political thought is a natural outgrowth of his background. His father, a druggist by trade and a Wilsonian Democrat in politics, raised HUBERT on an intellectual diet of Thomas Jefferson and Thomas Paine. The elder Humphrey owned drugstores in several South Dakota towns before settling in Huron, and his arrival there raised no cheers among the druggists already established in the small city. In fact, they enlisted the local chamber of commerce in a fight against their new competitor. Druggist Humphrey won the ensuing brawl, but the fight made a deep impression on his son, who since that day has viewed chambers of commerce with a certain distrust. HUBERT was brought up in economic tranquillity until the twin calamities of the depression and the drought of the thirties overwhelmed South Dakota. HUBERT had to leave the University of Minnesota in his sophomore year. He helped his father in the drugstore, then compressed into 6 months a 2-year course at the Denver College of Pharmacy. Father and son working together weathered the storm, and by 1937 HUBERT was back at the University of Minnesota with a wife, Muriel Buck, of Huron, whom he had courted while filling prescriptions. He also took with him a lasting memory of leathery faces of farmers gazing hopelessly at the swirling dust storms which were carrying away their farms. He made top grades and was entitled to wear a Phi Beta Kappa key when he received his B.A. degree and diploma in 1939.

The studious HUMPHREY then took a teaching fellowship at Louisiana State University, where he made an enduring friendship with RUSSELL LONG, now the junior Senator from Louisiana. He hastened back to Minnesota to hold a multitude of jobs, many of them at the same time. He was variously an instructor in political science at the University of Minnesota, an official of the WPA program in his State, and assistant regional director of the War Manpower Commission.

In 1943 he sandwiched between other activities his first run for mayor of Minneapolis. In a field of 10, the unknown HUMPHREY ran second and lost the runoff by only 4,900 votes. This taught him that in Minnesota running as a Democrat wasn't enough. He needed the support of the Farmer-Laborites, then an independent party. He hammered together a Democratic-Farmer-Labor coalition and in 1945 was elected mayor of the city.

These political maneuvers were carried on during World War II. They stimulate his political opponents to ask: "Why wasn't HUMPHREY in the service?" HUMPHREY answers the question in considerable detail. "I was first classified 3-B," he says, "because I was married and had three children. I had a job with the Army Air Corps, teaching world politics and government. In the spring of 1944 I volunteered for the Navy, but was turned down because of physical disability. In 1945 I took an Army physical which showed a double hernia and calcification of the shoulder. I was reclassified 1-B (limited service). I offered to sign waivers, but the request was denied. Before further action was taken, the war ended." HUMPHREY heatedly denies that he used political influence to avoid induction. "I told the draft board that I was politically vulnerable and they should put my name at the head of the list. Ask them why they didn't do so."

As mayor of an industrial city in the heart of the farm belt, HUMPHREY had opportunity to woo the two constituencies which still form the bulk of his support—farmers and labor. His record as mayor was a good one. Both farm and labor interests encouraged him to run for the Minnesota Senate seat held by Joseph H. Ball, in the 1948 election.

HUMPHREY propelled himself into national prominence at the 1948 Democratic National Convention—at an incalculable price to the party, some of his enemies believe. It happened when the convention was debating a proposed civil-rights resolution. The night before, HUMPHREY had agreed to support a compromise civil-rights plank, but now he took the rostrum to oppose it. He blew the convention apart with the stirring climax to his oration: "It is now time for the Democratic Party to get out of the shadow of States rights and walk forthrightly in the bright sunshine of human rights." His action brought bitter remarks of "double-crosser" and "publicity seeker" from party chieftains who had so painstakingly constructed the compromise, but HUMPHREY asserted then, and still does, that grave political and philosophical doubts prompted his change of mind. At any rate, his propsed substitute plank passed over the vociferous opposition of the South, elements of which ultimately took a walk from the convention, mutterly darkly about "that radical mayor of Minneapolis."

There isn't any question that the civil rights speech helped HUMPHREY defeat Ball in the 1948 election. The farm revolt which toppled Thomas E. Dewey from his premature Presidency also aided HUMPHREY. The Taft-Hartley bill, which Ball favored, also figured heavily in a campaign noted for the number of eggs and tomatoes besplattering the Republican and for the number and variety of speeches given by HUMPHREY.

Early in his first term as Senator, HUMEHREY learned the hard way—but quickly—that speeches which go over big at the Minneapolis Labor Temple receive short shrift under the dome of the Capitol. Freshman Senators are expected to be seen, not heard. In definance of this unspoken edict, HUMPHREY challenged the essentiality of Senator HARRY F. BYRD's committee on nonessential Federal expenditures. In attacking BYRD, HUMPHREY was smiting a prominent member of the "the club," that informal, potent coterie of Senators who dominate the upper Chamber. While HUMPHREY made his speech aaginst the Byrd committee, other Senators on the floor turned their backs, then one by one retired to the Senate cloakrooms. The freshman Senator completed his speech in pointed isolation. He took the rebuke to heart and didn't repeat the offense; today he is an accepted and influential member of the club.

A capacity to understand and to learn has been HUMPHREY's sturdiest asset. His national fame may rest upon his gift for words, but his influence in the Senate stems from his grasp of complicated issues. "That mind of HUBERT's is so fast," said one colleague, "that you haven't begun to explain a problem to him before he has explored its ramifications and has suggested solutions to a problem you haven't stated." When the ex-freshman, on whom his associates once turned their backs, now speaks on farm or foreign policy, other Senators are inclined to listen. Before making up their minds, some of his colleagues now telephone him and ask, "HUBERT, what do you think?"

HUMPHREY has pursued assiduously his self-appointed role as spokesman for the embattled farmers. He has fought a protracted running battle with Secretary of Agriculture Ezra Taft Benson, whom he has called "the worst Agriculture Secretary in history." He regularly demands Benson's dismissal, a demand up to now unheeded by President Eisenhower. HUMPHREY's own proposed solutions for the farm-surplus problem have ranged from higher price supports to conversion of wheat into a ricelike gruel, as practiced in Old Testament days, for export to Asiatic countries.

His influence in foreign affairs is no accident. It is the result of methodical and determined self-schooling in international relations. A man of HUMPHREY's energy and mental capabilities was not likely to sit idly by while other men debated the all-important questions of foreign policy. By careful reading of the newspapers, by interviews with State Department officials, talks with foreign ambassadors and by studious

homework, HUMPHREY became one of the most effective of the Capitol's voices on foreign policy. The present administration has frequently requested the Minnesota Democrat to perform legislative chores in behalf of its diplomacy—tasks which HUMPHREY has willingly executed. However, his cooperation has not stilled his demands for the resignation of John Foster Dulles, demands as unheeded as his cries for removal of Benson.

Humphrey has parlayed his native intelligence, wide curiosity, astute political mind and power to learn into imposing credentials for the 1960 Democratic nomination. Whether he will win the nomination depends upon the political climate of the country, the future face of the Democratic Party, convention in-fighting, and the inexplicable roll of the dice, which so often determines a convention's choice.

He meets the tacit requirements which American politicians generally, but not always, seek in presidential candidates. His life has been free from scandal, he is a Protestant, and he possesses a photogenic family of four children, Nancy, 20, Hubert, Jr., 16, Robert, 14, and Douglas, 10. His wife, who regards her husband with bemused admiration, would do well as First Lady. His name is nationally known and, at 48, he has reached political maturity.

Among the paradoxes of HUMPHREY's candidacy is the undebatable fact that he is a politician. By instinct, training, and desire he is a political animal. When Nikita Khrushchev told HUMPHREY he had won a recent Kremlin battle, despite being outnumbered, he described his opponents as being good mathematicians, but bad politicians. He was talking HUMPHREY's language, for the man from Minnesota is constantly aware of the advantages accruing to those who know the art of politics. HUMPHREY's difficulty lies in the widely held view that he is too obviously a politician. In his personal relations he often has tried to be all things to all men. After the debacle in the 1956 convention, HUMPHREY uttered not one word of criticism of those who had abandoned him. He refrained partially because, as a politician, he recognized and was sympathetic to their motives. HUMPHREY knew that he might someday need them again. No need to antagonize through useless recrimination.

The cry of opportunism frequently has been raised against him. Despite HUMPHREY's long record of opposition to Wisconsin's Senator Joseph McCarthy, liberals declare he was riding the wave of McCarthyism when he introduced a bill to outlaw the Communist Party, a bill which, in greatly amended form, was overwhelmingly passed by the Congress. "Not at all," replied HUMPHREY. "The Communist Party is a conspiracy to overthrow the Government of the United States, and the people have a right to protect themselves against that conspiracy." Conservatives have likewise labeled him opportunistic in his civil rights program, pointing out that in HUMPHREY's Minnesota, civil rights are no problem at all. This charge is unfair, but the politicians' mantle—loud and ostentatious—which cloaks HUMPHREY, makes people suspicious of his sincerity. Such reactions will militate against his presidential try.

HUMPHREY is the spiritual heir of the New Deal-Fair Deal. With the outstanding exception of Stevenson, HUMPHREY is the natural candidate for the northern liberals who dominate the Democratic Party. In fact, many New Deal Democrats have already started beating the drums for the Minnesotan. Mrs. Eleanor Roosevelt, whose word is not without influence in the party, recently told a TV audience that HUMPHREY has within him "a spark of greatness." A number of wealthy eastern Democrats upon whom the party depends in some measure for financial support have quietly declared they are interested in HUMPHREY. The big labor organizations, a major strut in the Democratic edifice, look sympathetically upon him, while important segments of Democratic agriculture will give him enthusiastic support. Some of his Democratic colleagues favor him as the party's 1960 choice because, as one of them explained, "HUBERT is the only campaigner we've got who can put DICK NIXON through the meat grinder." However, the assumption that NIXON will necessarily be their opponent is no longer accepted by most Democrats.

Thus, HUMPHREY has a large reservoir of potential support. But he will have problems in the months ahead as he tries to solidify his strength and to prod favorable forces into open and partisan activity. In seeking to energize those forces, HUMPHREY will be kept off balance by the enigmatic role of Adlai Stevenson, for much of HUMPHREY's latent strength is what the politicians call second choice. Large numbers of those who might support HUMPHREY are committed, either by personal attachment, impersonal admiration or sheer force of habit, to Stevenson. Unless and until Adlai definitely removes himself from consideration, this potential HUMPHREY strength will lie inert.

HUMPHREY, too, has observed the traditional amenities by stating that 1960 will see him run only for reelection as Senator. Yet, HUMPHREY obviously is running for the presidential nomination and to reach his goal must indulge in some rather intricate political footwork. He must wean away strength from Stevenson. He must do this while maintaining a public mien of sober, reflective statesmanship—a facade at variance with the popular concept of HUBERT HUMPHREY.

It was no accident that HUMPHREY's footsteps led him last winter to the inner sanctum of the Kremlin, where he chatted for 8 hours with Nikita Khrushchev. He has deliberately chosen foreign affairs as a vehicle to establish his qualifications for the Presidency. In these days of summit conferences and personal diplomacy it does little harm to be seen in the presence of the international guests. HUMPHREY's decision to identify himself with foreign policy also was grounded in the hard realities of American politics.

He recognizes that the archenemy of the White House-bent Senator is the White House-bent governor. Usually the governor has won. The governors' triumphs have been due to a number of political factors, the most outstanding being the ability of the governors to take cover on many touchy national issues upon which the Senators must cast votes. The governors, too, can point to their administrative experience—a qualification thought to be of prime import to a would-be President. According to HUMPHREY's law, the Senator must seek to offset the governor's advantages by appearing preeminent in fields not available to a State executive. Foreign policy is a Senator's logical preserve. Thus, HUMPHREY has staked out claims on such vital foreign-policy matters as disarmament and Government operations abroad. One of his chief rivals for the nomination, Senator KENNEDY, is equally aware of the potentialities of the Senator as a statesman. KENNEDY regularly enunciates a program for Algeria or a program for India or a program for anything which is beyond the continental limits of the United States.

In assessing HUMPHREY's chances for the 1960 nomination, one must recall the events of the last, hectic 24 hours of the 1956 Democratic Convention. The story starts a month and a half earlier on a hot July evening in Washington, where the leading Democrats had gathered to honor Senator Walter F. George. After the speechmaking, HUMPHREY and Adlai Stevenson huddled in a hotel room. They talked of potential vice presidents, should Stevenson win the nomination. HUMPHREY, elated, left the room. He had the firm impression that Stevenson looked most favorably upon him as running mate—that if normal convention procedures were followed, Stevenson would designate him as first choice. The story told by Stevenson forces is slightly different. They maintain Stevenson declared his willingness to accept HUMPHREY, but deny that Adlai indicated a preference for the Minnesotan or that he pointed his finger and said, "You are my boy."

When the convention opened in Chicago, HUMPHREY was optimistic. He worked hard for Stevenson, in part to offset the defeat Stevenson had suffered in the Minnesota primary earlier that year. HUMPHREY had forgone a "favorite son" candidacy and had plunked for Stevenson. In a major political upset, KEFAUVER had won the primary. The failure of HUMPHREY's Minnesota organization had hurt his political prestige and was being used as an argument against his vice-presidential try.

As expected, the convention nominated Stevenson. HUMPHREY awaited the next step nervously; he was expecting Stevenson to tell Democratic leaders, in a series of hotel-room conferences, that HUMPHREY was his personal choice for the No. 2 spot on the ticket. In at least one meeting, Stevenson asked prominent Democrats a question: Should he designate his choice or leave it to the convention? The answer was a unanimous "Pick him yourself." This encouraged HUMPHREY to believe his hour was at hand.

HUMPHREY's flanks were well protected, he thought. His friendship with LYNDON JOHNSON, of Texas, had ripened over the years and seemed about to pay off. JOHNSON wielded great influence among Southern delegates; he could help HUMPHREY where the Minnesotan was weakest. HUMPHREY expected the heartiest endorsement from labor. He had every reason to count upon agriculture. It remained only for Stevenson to speak the word and the convention would swing behind HUMPHREY.

But Stevenson did not speak the word. Instead, the appalled HUMPHREY watched and listened at a television set while Stevenson told the delegates that they, not he, should pick the vice presidential candidate. It was every man for himself. Of all the major contenders, HUMPHREY was the least prepared for jungle warfare. KEFAUVER had the organization he had built during his presidential try; JACK KENNEDY had been standing ready should the opportunity come. HUMPHREY had staked his all on Stevenson's backing—and that had not materialized.

In the ensuing sleepless, phrenetic hours, HUMPHREY learned some of the most galling lessons of bigtime politics.

Lesson No. 1: Political leaders must oftimes follow, not lead. The southern votes, over which JOHNSON was to pass his magic wand, bolted. Waving HUMPHREY a limp and apologetic farewell, JOHNSON followed his flock into the KENNEDY camp.

Lesson No. 2: Never count on those you have supported. At a postmidnight press conference, HUMPHREY was asked if he expected the help of labor. "I certainly do," he answered with emphasis. "I don't know of anyone who deserves it more." But the votes don't always go to the deserving. Walter Reuther wished HUMPHREY well and delivered his votes to ESTES KEFAUVER.

Lesson No. 3: Bloc-voting groups hold together only when backing an apparent winner. Despite the efforts of some farm leaders to hold the line for HUMPHREY, the individual farm delegates split their votes between HUMPHREY's rivals. Within less than 24 hours the HUMPHREY structure crumbled. When the rollcall of States was completed, HUMPHREY finished a bad third.

The lessons will not be forgotten. "I know now," said HUMPHREY shortly after the defeat, "where the pressure points in a convention are." He emerged from the ordeal vowing that never again would he lose a convention fight. Better not to enter the fray than to be beaten under the watching eyes of delegates, newspapermen, and the millions of TV viewers.

During the next few months, HUMPHREY will roam the country taking political soundings. The ostensible excuse for the trips will be lecture tours. He makes speeches at fees ranging from $1,000 to nothing—a sliding scale somewhat associated with ability to pay and the political importance of the prospective audience. A man of modest means, HUMPHREY finds his speechmaking tours a source of substantial income. They have the corollary advantage of bringing the personality of HUBERT HUMPHREY to the attention of those who otherwise might never have heard of him. His travels around the country will help HUMPHREY decide how seriously he should go about the task of lining up 1960 convention delegates.

Although HUMPHREY may find that he can count on the active or tacit support of labor, agriculture, the eggheads, and northern liberals, he still faces his greatest problem in the South. Below the Mason-Dixon line his firm stand on civil rights is received with downright hostility. His civil-rights speech at the 1948 convention is still remembered. In 1952, he joined the "young Turks" of the Democratic Party in attempting to stuff a loyalty oath down the throat of a reluctant South. The young Turks lost their fight, but the name of HUBERT HUMPHREY had again been unfavorably impressed upon the collective mind of the South.

It is possible, of course, that HUMPHREY'S well-publicized forays into the civil rights field will work to his political advantage. With its eyes fastened on the large minority voting blocs of the industrial North, the Democratic Party might simply override the desires of the South. In such a case, HUMPHREY would be a logical candidate. If, however, the convention should try to compromise the differences between its widely divergent factions, the Minnesotan's chances will fade. Said a southern Senator recently, "The leaders of the South know that HUBERT has come a long way from his wild-eyed days, but do the southern people?"

Throughout his life HUBERT HUMPHREY has suffered from appearing too small for each job as he approached it. There were those who scoffed at his ability to be mayor of Minneapolis, but he made a good mayor. When he ran for the Senate, his opponents said he wasn't big enough for the job—but even his detractors admit he has performed well. Minnesota businessmen as a group do not admire and do not vote for HUMPHREY, but long ago they learned that if they need something done in Washington, HUBERT will do it.

At a Washington meeting of Minnesota chambers of commerce, the chairman introduced HUMPHREY, waggled a finger in warning and said, "Remember, if you speak for more than 5 minutes, you'll lose every vote in the room."

Casting his eyes at the assemblage, HUMPHREY replied, "I haven't got a vote in this room anyway," and proceeded to talk as long as he pleased, delighting his audience.

It is safe to assume that HUMPHREY delighted Khrushchev as easily as he did the businessmen. It probably was Khrushchev's first long exposure to an articulate, well-informed, assertive product of America's Main Street. Khrushchev may have been as saddened as was HUMPHREY that the talk produced such few areas of agreement. Even the bouncingly optimistic HUMPHREY came out of the shadows of the Kremlin mourning the vast gap which separates Russia from America on so many issues. But, as is the nature of the man, HUMPHREY found something at which to take heart. Khruschev had agreed to extend fuller cooperation in the mutual search for health improvement, and HUMPHREY immediately called for action to take advantage of Khruschev's offer.

In a way, that keys the man, HUMPHREY has an instinctive belief that any idea is better than no idea at all. He can always see a ray of light in an otherwise dark situation; he has a compulsive drive to use his imagination to seek solutions to problems.

There are certain predictions that are easy to make, should HUBERT HUMPHREY become President of the United States. His administration would be zestful, imaginative, politically oriented and intensely partisan. It would possess motion and flexibility. There would be little doubt on which side of an issue the White House stood. Friends would be rewarded; enemies punished. It would be an administration in which presidential ideas would be forcefully articulated and energetically pushed.

A woman who knows him well was asked what she thought about HUMPHREY as President. She mulled the question, then her face brightened and she replied, "I can tell you one thing. With HUBERT in the White House, living in this country would be a lot of fun."

Our Foreign Trade Policy

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. HENDERSON. Mr. Speaker, although there is no foreign trade bill actively under discussion before the Congress, a great deal of thinking is being done by Americans with regard to the consequences of our present trade policy. It is my understanding that the U.S. Chamber of Commerce has had this matter under consideration for some time.

I would like to point out that there are many thinking people who believe that a policy of dropping trade barriers is unwise, unsound and contrary to the best interests of many Americans. Such is the stand which has been taken by the Chamber of Commerce of Zanesville, Ohio, and I would like to present for the perusal of my colleagues a resolution of the Zanesville Chamber adopted several weeks ago. The resolution is as follows:

Whereas the U.S. Chamber of Commerce has announced to its membership and to the Zanesville Chamber of Commerce, its proposed policy declarations to be voted on at the 47th annual meeting to be held in Washington, D.C., April 26–29, 1959; and

Whereas said policy declarations covers the subject of foreign commerce on pages 16, 17, and 18 thereof and, in effect, supports the reciprocal trade agreements and the legislation in connection therewith; and

Whereas the Zanesville Chamber of Commerce deems such support by the U.S. Chamber to be unwise and unsound and contrary to the best interests of its members; and

Whereas the policy of reciprocal trade has done and will do further serious damage to the economy of the United States at large and to this geographical area in particular; and

Whereas said policy declaration ignores such facts as—

(a) That 73 percent of all our exports are paid for with dollars earned from tourists, GI's, transportation, and investment; furthermore, that of the remaining 22 percent many of these dollars come from agricultural exports and areas of trade where tariff is not even a factor; and

(b) That despite the Reciprocal Trade Acts which have been in effect since 1934 and despite our heavy economic military shipments abroad, American exports have only averaged 4.5 percent of our gross national product, whereas in the decade after World War I it equalled 5.4 percent of our national product; and

(c) That the dollar credits of foreign nations in the United States have risen to where they hold over $12 billion of the total of $22 billion gold bullion reserve of the United States and furthermore according to the U.S. Department of Commerce the current increase in the gold reserves of the foreign countries is at the rate of $1.7 billion annually, thereby demonstrating ample funds to purchase American products. This demonstrates that it is not the lack of funds that has reduced foreign purchases in the United States, but rather the fact that our inflationary policy and continuous wage increases have priced us out of large segments of the foreign market.

(d) That the strength of America is its free enterprise system. This system, however, can only work within the realm of its domestic market with manufacturers subject to the same minimum wage laws and other social costs. Even the wage differentials between New England and the Southern States has been the source of controversy and has thrown many American employees out of work when the plants have moved to the South. The Reciprocal Trade Act accomplishes the identical result only on an international scale. In American industry average rates exceed $2 an hour, and in foreign industries they are frequently less than $2 a day.

With American money and American know-how, foreign industries are becoming just as efficient as American industries and with the low wage scale can completely ruin the business enterprises upon which American workers depend for their employment. Since 1950, American productivity has risen 12 percent, Sweden 15 percent, Belgium 23 percent, Netherlands 24 percent, France 33 percent, West Germany 35 percent, and Italy 44 percent. This demonstrates that the gap between productivity of the U.S. worker and the worker abroad is closing much faster than the wage gap.

(e) That because of the foregoing situation, American industry is being seriously hurt. The mere mention of textiles, pottery, watches, and plywood paints a picture of dying industries. Now some of the giants are being hurt, such as General Electric, Pittsburgh Plate Glass, United States Steel. Already German barbed wire is being sold in Cleveland at jobber prices of $40 a spool less than wire made by United States Steel. This is even before completion of the St. Lawrence Seaway where it can be delivered in Cleveland by ship direct from Germany.

(f) That other nations continuously protect themselves with tariffs, import quotas and currency restrictions. Today the United States is one of the lowest tariff countries in the world; we rank eighth from the bottom among the 36 trading nations; only such small countries as the Netherlands, Norway, Sweden, Brazil, Benelux, Denmark, etc., have lower tariffs than the United States.

(g) That the impact of inflation and rising wages and additional costs in American industry as contrasted with the low wage costs in foreign countries, is an open invitation for American industry to build plants abroad. Many are already doing this, such

as IBM, Burroughs, Royal-McBee, Remington-Rand, Underwood, etc. It is gradually becoming a situation where American companies would be better off to close their American plants and sell them and throw the workmen out of jobs simultaneously making purchases from foreign countries of their product using their U.S. distributive system to sell and distribute these products.

(h) That for every dollar of foreign products purchased in the United States, the American people and its Government spend $14. This American market is dependent upon American wages to create American purchasing power; when American industries die their ability to pay taxes to the U.S. Treasury is lost; American employees lose their jobs and American purchasing power is thereby reduced. The foregoing recited facts clearly deter American industry from further expanding and spending money for new plants and capital improvements; yet this is what American industry is being urged to do by its Government. One of the great contributors to the economic periods of well being in American economy is when there is a great capital goods market. The policy of reciprocal trade and its consequences as outlined discourage the capital goods expansion of American industry.

Because of the foregoing, reciprocal trade is actually contrary to our basic national policy of supporting wage increases and supporting the labor unions who asked for them and on the productivity theory provide for the mass American purchasing power in the American market: Now, therefore, be it

Resolved, That it is the firm conviction of the Zanesville Chamber of Commerce and its membership that the basic provisions of the proposed policy declarations relating to foreign commerce should be opposed and that the U.S. Chamber of Commerce at its national meeting be urged to vote down any such policy declarations;

Resolved, further, That from said policy declarations the entire paragraph shown on page 17 immediately following "International Trade Policy" and entitled "Increased Import" and reading as follows should be deleted from said policy declaration:

"A consistent and continuous large export surplus, financed out of the tax revenue, is neither economic nor in keeping with the position of the United States as a creditor nation. Our industrial machine and our national security require raw and semimanufactured goods for production and stockpiling. These imports alone, however, are not sufficient to supply this Nation's foreign customers with sufficient dollars to maintain beneficial U.S. exports at a level commensurate with the importance of the export industry to the total U.S. economy. Therefore, for the benefit of the economy of the Nation as a whole, business and government should encourage increased imports into the United States."

Resolved further, That the statement on page 17 on "Trade agreements" be deleted and revoked and that in lieu thereof the following paragraph be inserted in said policy declaration as representing the policy of the U.S. Chamber of Commerce:

"Trade agreements: The chamber supports a trade agreements program for the selective adjustment of tariffs and the gradual reduction of other barriers to world trade, on the condition that the supporting legislation (1) provides safeguards for interested parties to be heard in support of, or in opposition to, contemplated and publicly announced negotiations, and (2) that it provides an effective escape clause permitting modification or withdrawal of concessions if imports seriously injure domestic producers, in accordance with findings of the U.S. Tariff Commission, and in conformity with the publicly avowed policy repeatedly affirmed during the past 25 years by the Chief Executive and the Secretaries of State that no domestic industry would be injured seriously by the trade agreements program."

Resolved further, That the following statement under "Governmental restrictions on international trade" appearing on page 17 of the policy declaration, be deleted:

"The continuance of legislative riders and other devices commonly called the buy-American legislation is opposed as contrary to public interest and as being relics of depression psychology."

The same being contrary to the best interests of the American economy. The ease with which foreign firms can underbid domestic firms because of the lower wages prevailing in other countries, gives such firms a tremendous advantage and only a buy American policy can be used to offset such an advantage. Foreign bidders are not subject to the Walsh-Healy Act, the Wage and Hour Act, and others that raised domestic costs of production.

Resolved further, That the first paragraph at the top of page 18 of the policy declarations should be amended by eliminating that part of the paragraph beginning with the words "and declare itself." This is merely a statement that the Government would carry out its own policy by its own special interpretation.

Resolved further, That the statements of policy with relation to unreasonable forms of trade discrimination, exchange controls, quotas, preferential discriminatory treatment, monopolies, bilateral trade and exchange agreements, express merely pious platitudes which the United States has been following, whereas all the foreign countries discourage and prohibit imports that compete with domestic industry. They only permit tariff reductions where the imports are complementary to their own domestic industry.

Resolved further, That the basic philosophy of the policy set forth in proposed policy declarations can only function when the entire world follows a free-trade policy without any barriers or restrictions and, furthermore, when the entire world has uni- from social security and minimum wage laws, etc.

Unanimously adopted by the board of directors of the Zanesville Chamber of Commerce, April 10, 1959.

The Late James G. Polk, of Ohio

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. ABERNETHY. Mr. Speaker, the passing of our friend and colleague, JAMES G. POLK, leaves us in a state of profound sadness.

JIM POLK was one of the most beloved Members of this body. He was possessed of an unusually sweet disposition. He was a man of tenderness. He was kind, courteous, and good. In the many years I have been privileged to serve here with JIM POLK, I never once heard him make an unkind or uncomplimentary remark of anyone; nor was such made of him. He was loved and respected by all on both sides of the aisle.

It was my good fortune to have been quite close to JIM. For years we served together on the same committee, the Committee on Agriculture. We also worked together on several subcommittees. To have been so closely associated with this fine man was a rewarding experience, one I shall always cherish and remember.

JIM POLK was a good Congressman. He was unbiased. He was loyal and conscientious. In his daily living he was always mindful of his duty as a public servant. He put the people first, himself second. In this connection I am reminded of something which happened about 10 days ago. Although a very sick man, something which he undoubtedly knew, he called from his hospital bed of pain and discussed with me a matter pending in our committee. He was thinking of a commitment he had made to some people about committee hearings on a pending legislation. He wanted us to know of his commitment and expressed the hope that some of us could pick up where he had been forced to leave off. Although the very sick man that he was, he was still thinking of his duties as a servant of man. As was typical of JIM, he was putting the people first, himself second.

This incident so clearly illustrates his devotion to duty and the way he lived. Yes, indeed, JIM POLK lived a good life, one that all who follow would do well to emulate.

I join with the distinguished delegation from the great State of Ohio in mouring the passing of our friend and colleague, JAMES G. POLK. And to he bereaved widow and family, I extend my profound sympathy.

Cold War in the Land of the Camel

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the first of three articles on Afghanistan written by the distinguished editor of the Nashville Tennessean, who is on a world tour.

In this article Mr. Coleman Harwell gives a background picture of the country, its political importance to both Russia and the western world, the economy, and the press. I believe you will find it of particular interest. It follows:

COLD WAR IN LAND OF THE CAMEL—IT'S VERY POLITE BUT VERY REAL IN "NEUTRAL" AFGHANISTAN

(By Coleman Harwell)

KABUL, AFGHANISTAN.—The cold war here is very polite but it is very, very real.

You see it often, hear it many times a day, feel its presence continuously.

If you look at the map as you approach the capital city of Kabul (pronounced Kahble, with accent on the first syllable) you see that the 1,400 mile long Afghan-Russian border is less than 200 miles away.

And you recognize that the spine-tingling, snow-clad peaks of the Hindu Kush mountains have lost the defensive value they had

back in 1220 A.D., when it took the genius of a man like bloody Genghis Khan to send his armies over them.

Today hundreds of Russians, maybe more, are in Afghanistan. Without firing a shot, they have won power, how much is anyone's guess, by becoming advisors to the Afghan army and by equipping it with Russian arms and planes.

When you eat bread here, you may be eating Russian wheat or American wheat, but you have the feeling it is Russian because the bakery is Russian-financed and the big white Russian silo dominates the skyline on the city's western border. Nearly everybody points it out as you drive by.

RUSSIAN CONTRIBUTION

When you drive your car or camel over one of the half dozen oil streets in Kabul, you are enjoying a Russian contribution. The major military road from the south, going near the spectacular Khyber Pass is Russian built.

The 100-bed hospital and the gasoline storage tanks—Russia, Russian.

And so, by the way, is more than $300 million in debt.

You ask, of course, why all this feverish activity in small, backward Afghanistan, on the part of huge Russia, which certainly could use the skill and equipment to improve the lot of its own people. The answer is readily available. There are more than 500 Americans in Afghanistan.

And these Americans are doing things. Such as helping create a school system, an airline, an agricultural program, an efficient fiscal setup, and a big reclamation project.

INTERESTED IN ALL

Why should the Russians be concerned about these things, 10,000 miles from America? Well, regardless of why, the Russians are interested in everything we do.

When Dean Kenneth Olson and I held a session with newspapermen in the U.S. Information Service auditorium, three Russians were present. One was the correspondent of Russia's Tass News Agency, the only foreign newsman in Afghanistan. The other two were from the Embassy staff. All three took copious notes.

I can't imagine what they noted that could be of interest in Moscow. We discussed press influence and the views we expressed are readily available in a number of places, including the Nashville Tennessean. It was interesting, however, that very few questions were asked that night, whereas in our subsequent meetings, the questions were many and well put. Actually, I don't think there's any connection in the Russian's presence. But, following the example of the Tass correspondent, I'll note the fact.

And, in an effort to see the picture as the Russians may see it, consider these things:

Afghanistan is a buffer between Russia and India, Pakistan, and Iran.

HATRED OF RUSSIA?

The Afghans do not trust Russia. Some people feel this amounts to hatred. Regardless, Afghans have reason to be wary of anyone from that region, from which marauders have invaded their land for centuries. If Russia should stand by idly, therefore, Afghanistan might become westernized, develop a strong economy and free institutions, and thus become a very embarrassing neighbor. Russia has not tolerated such a development elsewhere.

Now, looking from another direction, Afghanistan has its attraction for America, too.

And our policy is this: To keep the bear on the other side of the Oxus River, to encourage a neutral position by the Government, and to help develop an economy oriented toward the communized, she could be very bothersome to our friend, Pakistan, and to neutral India. Her rulers seem to welcome our friendship, whether because they'd like to become westernized or just to benefit from our aid.

So we have come out here west.

Can we make good on this policy? Take it by points:

1. Russia could take over Afghanistan any day. But she would gain world enmity and a police state over some rugged types who are unpleasant when they choose to be, and they often do so choose.

2. For us to be encouraging neutrality is rather amusing in view of some of the things our administration has said about neutrals. But that is beside the point now. The point is that we've decided neutrality is important to us, and, furthermore, we have reason to believe the Government wants just that. King Zahir Shah and his cousin, Prime Minister Daud, want to maintain their authority. To do so, they recognize they must provide progress, including more and better education in a country where illiteracy is at least 90 percent. Their chances to achieve these things would seem to be much greater with us.

3. Orienting the economy toward the West means creating some private enterprise where little exists today. In this field we have produced our best gimmicks, including the airline. More of that later.

And here are some things to consider in all of this:

GOVERNMENTAL PRESS

The press here is of course a strictly governmental operation. But the press department president and his assistants sound convincing when they say they are encouraging the three papers in Kabul and the smaller provincial ones to try their wings. They say further that when and if the papers become self-supporting, through advertising and circulation revenue, individuals, including present editors, will have an opportunity to buy them.

There is some solid, local reporting in them and occassionally a dig at governmental weakness, such as streets or schools. And there is a hint from time to time that social progress must be made, including removal of the veil from Afghan women.

We recognize that this may be just window dressing. We do know, however, that in a week of lectures and discussions, we plugged the free press as strongly as we would anywhere in the free world. And we heard the Russians complained of our presence. But here we were.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. ANFUSO. Mr. Speaker, May 3 of this year marks the 168th anniversary of the adoption of the Polish Constitution. On this anniversary of Poland's Constitution Day, as on similar anniversaries in past years, our minds and thoughts once again turn to the beleaguered Polish people suffering under Communist domination.

Today, as we express our feelings and our hopes for Poland's early liberation, we again underscore our warm friendship for the Polish people. That relationship between our two peoples is traditional and historical, and no efforts on the part of the Communists will erase it. The people of Poland have always manifested a strong attachment to the Western World, particularly to America, because our democratic way of life is also their way.

The American people have always supported the struggle for a free and independent Polish nation, and they will continue to do so in the future. For a time during and immediately after the Polish Revolution of October 1956 we had hoped that a new and promising era would ensue and that Poland would somehow succeed in breaking away from the grip of Soviet tyranny.

Unfortunately, it has not worked out that way. The promising new era was short lived. Freedom of religion is again being suppressed. The collective farms are being reinstated. There is no freedom of press or opinion. Basic human rights are being denied or violated. The whole pattern of communism in its worst phases has been reestablished as before.

Nevertheless, we must not be discouraged. We must continue to give the Polish people our fullest measure of moral support, as well as other aid and encouragement to show our solidarity with them. On this anniversary we pay our tribute to the gallant Polish people and express our fervent hope for the early realization of Poland's goal of national freedom and independence.

In connection with the anniversary of Polish Constitution Day, I wish to insert into the RECORD a very fine and timely article on the subject by Prof. Eugene Kusielewicz, of St. John's University in Brooklyn. Professor Kusielewicz is an executive member of the John Smolenski Democratic Organization in Greenpoint, Brooklyn, a part of my district which I am proud to represent in Congress. He is also an associate editor of the Polish-American World, a weekly newspaper printed in New York, which published Professor Kusielewicz' article in its current issue.

I share in the hope and prayers expressed by this esteemed scholar that Poland may again be a free country and that the Polish people will again enjoy the freedom enunciated in their hallowed constitution of May 3, 1791. The article by Professor Kusielewicz reads as follows:

THE MEANING OF THE 3D OF MAY

For almost 150 years the people of Poland have celebrated the 3d of May as their national holiday in much the same manner as we in America celebrate July the Fourth. In America we commemorate the Declaration of Independence, our determination to prevent England's interference in our affairs. The people of Poland commemorate the constitution of the 3d of May, which, in part, was an expression of their determination to be rid of Russia's interference in their affairs.

When Poland again fell under the tyranny of Russia's heel at the end of World War II, it became obvious that the celebration of the 3d of May would not be tolerated. This date recalled Russia's previous oppression of Poland. Today the Poles cannot celebrate this day as they would choose, for their Government has decreed that July 22d, Liberation Day, should now and henceforth be their national fete.

Who then will celebrate the 3d of May?

It will be celebrated, as it should be, and as it is, by those Poles and by those of Polish extraction living beyond the borders of

Poland in the lands where freedom still prevails. Actually we, and all those who are dedicated to the cause of freedom and justice will join in this celebration which the people of Poland can commemorate only in their hearts.

The constitution of the 3d of May, 1791, was an attempt on the part of Poland's leaders to give their people those rights and freedoms which the Americans had outlined in their Constitution and which the French then had recently stated in their "declaration of the rights of man." It abolished certain weaknesses which had until then paralyzed their state, particularly the liberum veto which permitted Catherine the Great of Russia to bribe one or two nobles and thus to prevent Poland from opposing the aggressive designs which have always characterized the history of Russia. It made the monarchy a hereditary one, subject to the will of a national legislative body, in this manner attempting to prevent the civil wars and foreign intrigues which often accompanied the royal elections. Religious freedom, the very marrow of Poland's historic tradition, was to be restored to all. So great was the import of this document that news of its promulgation spread like wildfire throughout the world. Upon hearing of its adoption the great English political philosopher Edmund Burke called it one of the foremost political achievements of his age.

Following are some excerpts from the constitution of May 3, 1791:

"Valuing above life and personal happiness the political existence, external independence and internal freedom of the Nation we have resolved upon the present Constitution. * * *

"We recognize all royal cities in the lands of the Commonwealth as free.

"We allow to the citizens of such cities the hereditary possession of the land in the cities inhabited by them, of their houses, villages and territories wherever such now legally belong to the cities.

"Guided by justice, humanity and Christian duties, as well as by our own best interests, we take the peasants, whose labor is the most abundant source of the national wealth, who constitute the largest segment of the population and therefore the country's greatest strength, under the protection of the law and of the national government, resolving that from now on any liberties, grants or contracts whatsoever authentically upon by the landlord with the peasants of his estates, whether these grants and contracts be made with the communities or with each village inhabitant individually, shall constitute a common and mutual obligation, in accordance with the true meaning of the terms and the description contained in such grants and contracts, and shall be protected by the national government. * * *

"In human society all authority originates from the will of the people. In order therefore that the integrity of the country, civil liberties and the order of society may be forever equally maintained, three posers should, and by virtue of the present law shall forever, constitute the government of the Polish nation: these are, the legislative power vested in the assembled estates, the supreme executive authority vested in the King and the Council of Ministers, and the judicial power vested in the jurisdictions established or to be established for that purpose.

"The happiness of people depends upon just laws; the effects of laws depend on their execution. * * * Having therefore insured to the free Polish nation the power of making laws for itself and watching over all executive power, as well as of electing officers to the magistracies, we entrust the supreme power of the enforcement of the laws to the King and his Council. * * *

"The judicial power shall be exercised neither by the legislative power nor by the King, but by the magistracies established and elected for that purpose. * * *

"The nation must act in its own defense and for the preservation of its integrity. Therefore all citizens are defenders of the integrity and liberties of the nation. The army is nothing but the defensive power selected and organized from the general strength of the nation. The nation owes to its army a debt of respect for its complete devotion to the defense of the nation. The army owes to the nation the defense of its frontiers and of the general peace; in a word it must be the nation's most powerful shield."

What then is the meaning of the 3d of May?

On the surface it would appear to be simply a political document embodying the noblest aspects of a republican government—a free people governed by a representative assembly, guaranteed by a system of checks and balances, not unlike our own, and defended by the army of its citizenry. This alone should be the cause of celebration and commemoration.

But the 3d of May means more. It means fulfillment. The fulfillment of the dream of a nation unified; united in the determination to overcome its own weaknesses and to rise by its own bootstraps to the defense of its ancient freedom. But it means a frustrated fulfillment. For no sooner did it achieve its century old ambition than the tyrannical despots who enslaved its neighbors determined to stamp out this outpost of freedom and enslave the Polish people. Kosciuszko fell and freedom shrieked. And Poland was no more.

Since then the 3d of May has meant hope; hope that the people of Poland could once again lift themselves by their own energies to achieve that freedom and fulfillment which they enjoyed on the 3d of May.

Today Poland hopes that once again it may be free. We share that hope. And in this small way we commemorate that hope, that 3d of May. We hope, indeed we pray, that Poland, and all the nations of the world might enjoy that freedom and liberty which was, and is, the spirit of that noble, hallowed day, the 3d of May.

CBR: A Power for Peace

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. SIKES. Mr. Speaker, I wish to call to the attention of my colleagues a speech delivered by Maj. Gen. Marshall Stubbs, Army chief chemical officer, before the Wilmington Chapter, Armed Forces Chemical Association, at Wilmington, Del., on April 14, 1959. I feel that this speech on the subject of "CBR: A Power for Peace" carries an important message for the Congress and for the public. I submit it for printing in the RECORD. The speech follows:

CBR: A POWER FOR PEACE

(Speech by Maj. Gen. Marshall Stubbs, Army chief chemical officer, before Wilmington Chapter, Armed Forces Chemical Association, Wilmington, Del., April 14, 1959)

In our justifiable concern with the increasing missile and nuclear threat that this Nation faces, I am deeply disturbed that we have been and are neglecting an equal risk in the possibility of the use by an enemy of chemical and biological warfare. The danger to this country from such an attack, while of the same order of magnitude as nuclear, generally has not been so recognized or appreciated. We have not taken full cognizance of the advantage to a potential enemy of the combined use of nuclear and chemical and biological weapons. We recognize the threat of intercontinental ballistic missiles armed with nuclear warheads. Those same missiles that can deliver nuclear weapons can in turn deliver on target chemical and biological agents.

The world today accepts atomic power as a weapon for the deterrence of war. Prior to World War II the American people or the world knew little or nothing about its capabilities or effects. The bomb that fell on Hiroshima fell on America too. It fell on no city, reduced no man to his atomic elements, but it fell and shook the land. Its repercussion jarred our Nation into the realization of the destructive might of atomic warfare. May we not have to have a chemical and biological Hiroshima on one of our own cities to shake us out of our apathy to chemical and biological warfare?

Since toxic chemical warfare has not been used since World War I, this generation is is not so well informed on its capabilities and consequently is apathetic as to its combat effectiveness. Coupled with this is the widespread belief left over from the first World War that its use is cruel and unethical. People fear what they do not understand. We can render a great service to our country by removing the cloak of doubt and suspicion surrounding the use of chemical and biological agents in war. We as a nation must realize that a potential enemy would not hesitate for a moment to employ these weapons if it would be to his advantage.

In his first annual address to Congress Washington said, "To be prepared for war is one of the most effectual means of preserving peace," a quotation that he had translated from Horace. That quotation holds as true today, but I should like to go one step further and add that not only must we be prepared for war, but we must know the state of preparedness of a possible enemy. For in that knowledge we can know how to best assemble our forces and utilize our strength.

Our greatest threat of another war, be it limited or general, lies in the rapidly growing threat of Communist aggression. A total of 18 examples of the use of force have arisen since 1945 varying in degree from guerrilla operations in Greece and Malaya to the North Korean aggression. There is no evidence that these will not continue to occur, and that the rate of occurrence may not increase. The Soviet Union has clearly demonstrated an increased belligerence in each succeeding crisis as in the recent Lebanon situation and the Taiwan Straits incident. The Soviet pressure on Berlin is the most recent example of that increased pressure. Since the Communists are well aware that both they and the free world have atomic capabilities, it is reasonable to assume that they will be prepared to use all weapons in any future war, including chemical and biological munitions.

We have good reason to believe that Russia's heavy concentration on increased military capability includes the field of chemical and biological warfare.

In May of last year NATO published a memorandum warning the West Foreign Ministers that the Soviet Union was ready for instant atomic warfare, backed by fully tested missiles and was growing militarily stronger daily. It went on further to state that the Soviet rulers may be tempted to use their expanding war machine if they feel that they are losing the cold war. The possibility included germ warfare and gas.

The newsletter said bluntly that the Soviet aim is to establish throughout the world Communist regimes directed from Moscow.

Progress 58, a recent Department of the Army report, devoted two pages to our assets and liabilities. It gives a balance sheet of Communist versus U.S. military strength. First item on the balance sheet is our 1958 Army of less than 900,000 men compared to 8 million in the Sino-Soviet bloc. In this Communist bloc are 400 ground divisions compared to our 15. We have about 37 combat divisions in reserve while the Soviets alone could expand their present force to 300 divisions in 30 days and 500 divisions within a year.

Within these Soviet divisions is an organization devoted to the field of chemical warfare. Chemical troops are assigned to all echelons down to battalion. Statements by Soviet military leaders on the role of chemical and biological warfare in any future war are positive and are indicative of Soviet preparation to use, if they see fit, all weapons including toxic munitions.

Soviet chemical weapons are modern and effective and probably include all types of chemical munitions known to the West, in addition to several dissemination devices peculiar to the Russians. Their ground forces are equipped with a variety of protective chemical equipment and they are prepared to participate in large scale gas warfare. They have a complete line of protective clothing which will provide protection in any gas situation and a large variety of decontaminating equipment.

Much of their hardware is relatively simple in design and operations are often multipurpose. For example, flamethrowers may be used for the dissemination of other incendiary materials or persistent agents. Converted artillery shells, incendiary bombs, and rotational scattering aircraft bombs are used for chemical warfare purposes.

We can assume from available knowledge that they are equally capable in biological warfare. The mass of medical and technical reports published recently by their scientists indicates increased activity in this area. Soviet microbiologists and military authorities have conducted biological warfare tests at an isolated location over a long period of time.

It is also known that the Communists have conducted research and development leading to the large scale production and storage of disease producing and toxic agents.

Maj. Gen. Yu. V. Drugov, of the Military Medical Service, Red Army, stated on the 40th anniversary of the great October revolution that their scientists regard research on the action of poisons and on the developments of antidotes to be their patriotic duty. He attached special interest to the so-called psychic poisons (mescaline, methedrine, lysergic acid derivatives), insecticides (organophosphorus compounds) and poisons of animal origin.

Along with the stepped-up military and scientific program it appears that the deep interest of the Soviets can mean only one thing, that they have the capability of initiating chemical and biological warfare. I cannot believe that they would expend their critical resources to produce quantities of chemical agents for any other purpose.

An intensive program of mass education in civil defense against chemical and biological warfare has been in progress since World War II, and has received continued emphasis in recent years. A quasi-military organization called DOSAAF (Voluntary Society for Cooperation with the Army, Navy, and Air Force) consisting of more than 30 million members, is the Soviet agency responsible for the widespread program. The organization extends to the smallest outlying village and insures adequate instruction in practical defense against chemical and biological agents.

While the picture I have painted you as to the preparedness of the Soviets in CBR is not a detailed one due to security limitations, I believe that I have given you enough to make you aware that they pose a threat to the free nations of the world. Coupled with that is the fact that their leaders have stated openly that future wars will be characterized by "various means of mass destruction, such as atomic, hydrogen, chemical and bacteriological weapons."

We are, and rightly so, spending large sums to provide a defense against surprise attacks by land, air, or sea, but at the same time we must guard against a covert chemical warfare-biological warfare attack that could so readily happen. Chemical warfare and biological warfare weapons are equally suited for unconventional warfare. We must expect such type of operation in substantial amounts, because of the greater ability of the enemy to infiltrate our dispersed positions in atomic warfare, as well as the ease with which these materials may be used in subversive activities. Enemy agents could simultaneously deliver crippling blows to our critical installations, virtually neutralizing us to an open full scale massive attack. Let us consider for a moment the possibilities open to an enemy using biological agents. He can preselect the results he desires to achieve. That is, he can choose from diseases ranging in effect from the mildly incapacitating, which would make one severely ill for several days, to prolonged incapacitation with few fatalities, up to those which result in high death rates.

Unlike some of the gases of World War I, germs can't be seen or tasted; they can't be felt and have no odor. The quantity required to produce results is exceedingly small, thus making it possible for effective attack of very large areas, with relatively small logistical effort.

Tests on a number of representative large-size office buildings have shown that many of our installations are critically vulnerable. The effort required, the equipment involved, and the training necessary for effective biological warfare attack are amazingly small.

One such test involved the use of a portable generator disguised in a brief case and placed near a ventilator in a building; another, a cloud of particles sent out from an apparently innocent-looking vehicle on a road several hundred yards from a building. If actual disease producing organisms had been used in these tests by an enemy agent most of the people in the buildings would have been casualties.

The proven effectiveness of biological warfare attack over large areas has also been confirmed by a number of field trials. Test attacks have been made both from ships lying offshore and from planes flying over the continental United States. These tests, in which a harmless tracer material was used, proved that coverage up to several thousand square miles could be achieved, with the population being wholly unaware that the attack had occurred. It should not require much imagination on your part for those of you who remember the influenza epidemics of World War I, and the recent incapacitating Asian flu epidemic, both of which were spread by natural means, to visualize the potential dangers from a deliberate enemy attack in this manner.

Thus far, I have devoted the major portion of my talk to the potentials of our possible enemy. Time and security will not permit me to go into detail as to our own strength and readiness position. You have been told many times of our mission and developments, but I do want to mention one program that I feel sure will be of interest to you. We know that the Soviets are showing a marked interest in the incapaciting agents. In order for us to be prepared to defend ourselves against their use, we must know the effects they produce on people and countermeasures that can be taken. The Chemical Corps has been studying these psychochemicals for some time.

These agents have the ability to upset the behavior pattern, thus reducing a soldier's will to fight. Let me give you a few examples of how an enemy might employ these against us. A well-organized enemy inspired effort, by use of these agents among our troops, could disrupt and slow down normal thought processes and make radical changes in behavior. For instance, combat-indoctrinated soldiers are trained to fight as a unit and obey orders in defense of a position. If subjected to one of these agents, they would lose the ability to work together and would probably think the entire situation hilariously funny.

An individual under the influence of one of these agents would become temporarily deranged and his reactions would probably be completely opposite from normal. In other words, an aggressive, outgoing person might want to run and hide even from his fellow soldiers. Courageous people are apt to become timid, timid people become belligerent.

We know that the degree of incapacitation can be varied. Some of these can cause temporary blindness, or other physical or motor abnormalities, while still others could cause mental stupefaction or irrationality. We know that an aggressor would have a choice of delivery of these agents by aerial bombs, artillery, and other means.

I would like to touch on some problem areas at this point which I feel you and groups such as you need to be made aware of and suggest ways in which you can help us. First, let's take a look at the thinking of the American people and, as a matter of fact, the entire free world. I want to discuss two phases of thinking—inaccurate thinking and creative thinking.

We must do all we can to set the minds of our people straight as to the possible use by an enemy of chemical and biological warfare. The hazy and incorrect attitudes toward the use of these weapons are a hangover from World War I. This generation has accepted them and passed them on much as old wives' tales have been handed down one generation to another. I believe that these fallacies can be corrected. Certainly the public must realize that other nations have a strong CBR capability and that we must be prepared to defend ourselves with any weapon they might choose to use. Surely an enemy would be unwise were he to rely on one weapons system alone or to ignore any chink that we might have in our armor.

The public must understand that a potential enemy would consider chemical and biological agents ideal for offensive use. They are ideal in that first, they are search weapons. They will seek out and reduce troops over a widely dispersed area, going deep into emplacements that standard munitions would not reach. Second, they are capable of achieving their mission without the destruction of property. An invader would want left intact the industries, buildings and equipment for his own occupational use. And last, chemical and biological weapons could be used to soften up an enemy prior to an all-out nuclear attack. Our Nation must be awakened to this threat. People must be taught how to quickly identify a CBR attack and how to protect themselves.

Recently within the Corps, we have accelerated our information program. I am determined that our Nation shall be told all that we can, within the limits of security. I have asked our personnel to contribute stories and articles about their work that would be of general interest. I am encouraging them to speak to groups about the Chemical Corps. There is much that we are doing through our research and development program that is contributing to the

health, safety and well being of our Nation. These are things people should know along with our military accomplishments. Each of you here has wide personal contacts among your friends and associates. Informed groups such as this can do much to contribute to a more realistic public attitude about CBR.

As to creative thinking, I believe that we have within our corps a team of military and civilian personnel who are outstanding in the amount and nature of the creative work they perform. However, we still need help from outside. As I mentioned earlier, scientists in Russia consider it their patriotic duty to do research that will benefit the military strength. While we certainly cannot advocate that in this country all research should be slanted toward the military, we do need the benefit of the most creative thinking by our scientists and engineers that can be applied to defense problems.

The present and probable increase in scientific advances of an aggressor country demands that we have the benefit of a constant flow of new ideas and concepts if we expect to keep ahead of them. Ideas that today may seem out of this world might be an actuality tomorrow. Space ships and guided missiles that a few years ago were seemingly only a figment of the imagination of the cartoon comic artist, today are becoming a reality.

We have had in the past, and still have, an active industrial liaison program with approximately 450 industries participating. Through them we receive ideas, and compounds for screening for possible use by us. Often civilian laboratories have discovered some formula or process that while it is of no value to them, it may have great military possibilities. Because of budget limitations, our working staff in this program is small. I feel that the number of participating industries can be increased. Perhaps you can help us. You are in daily contact with people whose ideas and concepts we want. No matter how far-fetched an idea or concept may seem we would like to know about them. The panel that we have appointed to screen these ideas does so with an open mind and all interests are fully protected. Your help can be invaluable to us in our search for more creative thinking in the area of chemical and biological warfare.

Let me give you an example of one of the ideas for which we are looking. Some of you may have run across a formula or a process that might help us arrive at a solution to this problem. We, in conjunction with the Quartermaster Corps and the Signal Corps are interested in designing an integrated combat suit that the soldier would wear constantly. We would like it to have the following qualities: it must be light in weight, and easy to wear. It must have its own built-in communications system; it must be flame and flash proof and must include some body armor, and most important to the Chemical Corps, it must be impervious to chemicals. Wars of tomorrow will require protection of this sort for our soldiers. You may think that my description sounds like a space suit of a man from Mars, and perhaps it does. I realize that it is a large order and I know that we won't accomplish this immediately. It is a project that I would like to ask you to give thought to, for I feel sure that with the help of people like you we can arrive at a solution to our problem much sooner. I will welcome your ideas.

To sum up, I have expressed my concern that national opinion has not recognized the threat that we face the possibility of a chemical and biological attack by an enemy. I have told you that the Soviets are not neglecting CBR warfare in their own military structure and that they have the capability to use it. I have cited examples of ways an aggressor might use chemical and biological warfare against us either covertly or openly. I hope that I have made you realize that we, as a nation, must overcome any impression that we can respond with a big bomb and little else. I have asked your help in creating a more informed public attitude toward the use of CBR and in stimulating creative thinking that will benefit our defense posture. For, to preserve the peace we must be prepared for war. In the words of General Taylor, "We must make crystal clear to both friend and foe alike that we can respond promptly with proper weapons and proper forces to any challenge."

Poison in Your Water—No. 68

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Florence (S.C.) News of June 22, 1958, entitled "Black Creek Pollution Deeper Problem Than Immediate Case":

BLACK CREEK POLLUTION DEEPER PROBLEM THAN IMMEDIATE CASE

For a good many years the pollution of Black Creek has been a concern of the residents of this area. This stream, one of ancient, unspoiled beauty, is close to the hearts of all who live along its run and all who have ever fished along its banks.

In recent days, the pollution question has come up again with the discovery of hundreds of dead fish, a reported scum along the banks where the water had fallen, reports from swimmers who said it was necessary to take a bath following a swim to remove an oily substance from their bodies, and general concern for the health of those who use the creek for swimming.

Following a confused start, responsible authorities, including the county health department and the State water pollution, are now acting to take such steps as are necessary to protect public health from the hazards of using the creek for swimming.

We think it wiser that necessary precautionary measures be taken pending ascertaining the facts. Certainly, the discovery of dead fish and the other reports coming from responsible persons are indication enough that the stream is polluted. Would it not be better to ban the stream for swimming first until such time as the necessary studies are made to determine what the answer is?

But there's a larger question to this matter than swimming and fishing. It concerns the source of the pollution and what can be done about it.

It's an old question that has become acute again. For a good many years, it has been generally agreed that releasing of chemicals in the stream by Hartsville manufacturing interests has been the chief trouble. It is known that the Sonoco people have been concerned about this matter and have gone to great expense in an effort to correct it. But an old-time resident of the Black Creek community yesterday reported that the condition is worse than he has ever known it in his 70 years of intimate knowledge of the stream.

This is a startling and disturbing statement. It suggests that all efforts and expense to date have not corrected a condition which is becoming intolerable to a great many people—so intolerable, in fact, that court relief is being considered.

We are neither capitalists nor chemists and don't know the answer. But we hope that present conditions will cause efforts to be redoubled to prevent pollution of this stream which represents so much wealth and pleasure to the people of this area.

Tragedy of the Steamship "Carl II Bradley"

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a letter of unusual interest from Harry E. O'Reilly, executive secretary of the maritime trades department of AFL–CIO, and a statement by O'Reilly on the tragedy of the steamship *Carl II Bradley*. The letter follows:

MR. O'REILLY'S LETTER

I am enclosing herewith a brief report entitled "Safety at Sea on the Great Lakes," which calls attention to a critical and desperate situation crying for remedy. The report points up the inadequacy of existing rescue personnel and facilities on the Great Lakes, notwithstanding that the seaway will open April 25, and thereby expand incalculably this segment of the maritime industry.

This is the story of the Bradley disaster, in which 33 seamens' lives were lost, of which 15 bodies remain unrecovered.

Let me call your attention to a unique situation: because the U.S. Coast Guard is unable to provide either equipment or personnel to make an underwater survey of the Bradley, the Great Lakes District of the Seafarers' International Union of the AFL–CIO has made a contract with Aquatic Development and Engineering Co. to find the ship, make an underwater survey, and endeavor to recover the lost bodies. The union is furnishing all necessary funds and experienced personnel. The search will be made by two catamans especially equipped for this particular survey for the location, salvage and recovering operations under the immediate supervision of Mr. James Sawtelle and the direction of Capt. Walter Blake, U.S. Navy, retired.

All discoveries, photographs, evidence and data of every kind revealed by the survey will be made available to any interested Government agency, including the Congress, interested parties and the public.

The union is underwriting this expedition in the hope that it will stimulate public and governmental interest in the hazards inherent in Great Lakes maritime operations, and that it will encourage the Government to provide the facilities and personnel which are so sorely needed to prevent and alleviate Great Lakes disasters and their immeasurable cost in human lives and property.

The heroism of the Bradley crew will have served a useful purpose if it has this desirable result, and if it can focus attention upon this almost forgotten segment of the maritime industry.

These 33 seamen then will not have given up their lives in vain.

SAFETY AT SEA ON THE GREAT LAKES

(By Harry E. O'Reilly)

On November 18, 1958, shortly after 5:30 p.m., the steamship *Carl D. Bradley*, while lying 12 miles west southwest of Gull Island, 8½ hours out of its home port at Rogers City, Mich., broke in two and sank. The *Bradley* was a bulk carrier, built in 1927, of 10,028 gross tons, 14,000 deadweight tons, with a speed of 14 knots, and a draft of 22 feet 6½ inches.[1] She was owned by Bradley Transportation Line, which in turn is owned by United States Steel Corp. She was a 639-foot limestone carrier, returning empty from Gary, Ind., travelling in the winter's worst storm: The U.S. Coast Guard was warning of whole gale winds, 60 miles an hour, with gusts reaching hurricane velocity. Her crew of 35 was completing its 45th trip of the year. She was sturdily riding 20-foot waves. At 5:31 p.m. her Captain Bryan and First Mate Elmer Fleming heard a thud. They saw the ship's aft section pull upward slightly. The captain stopped the engines. Twenty seconds later a second thud came, and the ship hogged upward slightly. The captain ordered the first mate to send distress signals. After a third thud, the ship sagged and the captain gave the abandonship signal. After a fourth thud, the ship sagged, and then suddenly split in half. Of the 35 crewmen, 33 died, and there were two survivors: Elmer Fleming, the first mate, and Frank Mays. Fifteen bodies were not recovered.

Seconds after the *Bradley* distress signal was sent, a frantic search commenced. Twelve miles away the German freighter steamship *Christian Sartori* started for Gull Island. Three other nearby steamers started for the disaster area. A Coast Guard cutter, *Hollyhock*, set out immediately from Sturgeon Bay, Wis., a distance of about 88 miles from the wreck; another Coast Guard cutter, the *Sundew*, set off from Charlevoix, Mich., a distance of about 44 miles. The *Hollyhock* is stationed at Milwaukee and assigned to buoy tender service. It is a 175-foot vessel, powered by a diesel-reduction gear engine of 1,350 horsepower, capable of a maximum speed of 12 knots an hour. It was constructed in 1937. The *Sundew* is stationed at Sturgeon Bay and is also assigned to buoy tender service. It is a 180-foot vessel, powered by a diesel-electric engine of 1,800 horsepower, capable of a maximum speed of 12 knots an hour. It was constructed in 1944. A Coast Guard plane took off from Traverse City, Mich., approximately 72 miles away. About an hour later the *Sartori* reached the area of the sinking, but found no survivors. The Coast Guard plane found the *Sartori*, dropped flares, but could see no survivors. It must have taken the *Hollyhock* between 7 and 8 hours, and the *Sundew* about 4 hours to reach the scene, and they searched through the night.

At dawn a Coast Guard helicopter spotted a lifeboat, but saw no survivors. A few minutes later, the helicopter spotted a raft with two men aboard. At 9:07 a.m., the *Sundew* sent word it had picked up two survivors on a raft 5.25 miles from Gull Island. Later, the survivors reported that, after they had reached the raft, they picked up Crewman Gary Strzelecki, and somewhat later another crew member, Dennis Meredith. About 75 minutes after the *Bradley* had sunk, they sighted the *Sartori*. The men had found five flares and a sea anchor. Four flares were used to try to attract the attention of the *Sartori*, but the fifth would not ignite, and the *Sartori* moved out of the area. In the course of the night, waves washed the men off the raft several times, and first Meredith, then Strzelecki, were lost. When light broke, Fleming thought he saw a plane. At 8 a.m., 14 hours after the sinking, the men saw High Island. An hour and 7 minutes later, as noted above, the *Sundew* found the two survivors. By then they had been in the icy water more than 15 hours.

The Coast Guard established a board of inquiry to ascertain the cause of the disaster. It is headed by Rear Adm. Joseph Kerrins, who is also commander of the Ninth Coast Guard District, with headquarters at Cleveland. The board of inquiry has not yet submitted its report, but it has been rumored that it will do so in the near future.

In order to ascertain the nature and scope of the investigation, Victor G. Hanson, general counsel of Seafarers' International Union, Great Lakes district, and Ray R. Murdock, Washington counsel, Seafarers' International Union, met with Coast Guard officials on March 10, 1959. The Coast Guard officials present were Capt. Claude H. Broach, Chief of the Merchant Vessel Inspection Division, Comdr. R. Y. Edwards, Assistant Chief of the Merchant Vessel Inspection Division, and Comdr. J. H. Hawley, Chief of the Casualty Review Section of the Merchant Vessel Inspection Division. The SIU spokesmen were particularly interested in learning whether or not the Coast Guard planned an underwater survey of the sunken ship, and any effort to recover the 15 bodies which are still lost.

The Coast Guard officials stated that the board of inquiry has made no recommendation that an underwater survey be undertaken or that the vessel itself be studied. Furthermore, if such recommendation were made, they stated that they had no equipment available in the area for such a survey. On being questioned as to the advisability of examining the wrecked ship, the Coast Guard officials stated that they had no funds available for such an examination, and had never felt the need to request appropriations for underwater surveys, or inspection of sunken ships. They also stated that they had neither the legal responsibility, authority, funds or equipment available for recovery of the lost bodies.

It should be noted that about an hour after the wreck, the *Sartori* was in the area, and was sighted by the survivors on the raft. At that time there were four men alive, two of whom were lost during the night. Presumably, the *Sartori* did not have men specially trained for rescue, nor special equipment for that purpose. It seems most probable that, if a Coast Guard cutter had reached the wreck area as soon as the *Sartori*, all four of the men could have been rescued, and undoubtedly others could have been found in the area.

The foregoing account points up two alarming facts: (1) At least on the Great Lakes, the U.S. Coast Guard does not have available adequate personnel or facilities for the accomplishment of rescue; and (2) a Coast Guard investigation of a disaster is not adequate to determine, with any degree of certainty, the approximate cause. In this connection, it should be remembered that in the case of airplane crashes, the Civil Aeronautics Authority makes every effort to locate the wrecked plane, and if successful examines it in minute detail to determine the cause of the crash. This is also true in connection with railroad wrecks, and even traffic accidents, when police officials examine the machines involved and take many photographs from many different angles to help establish the cause.

The St. Lawrence Seaway will be opened this spring. Even before the opening of the Seaway, maritime traffic on the Great Lakes has increased phenomenally. As of December 31, 1957,[2] there were 367 U.S.-flag ships of 1,000 gross tons and over operating on the Great Lakes. They represented a gross tonnage of approximately 2.4 million, and a deadweight tonnage of approximately 3.7 million. The fleet consisted of 5 combination passenger and cargo ships, 7 freighters, 329 bulk carriers, and 26 tankers. The Canadian-flag fleet on the Great Lakes consisted of 271 vessels of 1,000 gross tons and over, with 5 combination ships, 21 freighters, 204 bulk carriers, and 41 tankers. The Bradley Transportation Line, owned by United States Steel Corp., operates eight bulk carriers on the lakes, nine with the lost *Bradley*. The *John G. Munson*, which was built in 1952, and has a speed of 16 knots, is the newest ship. The oldest ship in the *Bradley* fleet is the *Calcite*, built in 1912, with a speed of 11 knots, and a gross tonnage of about 4,000 tons; and, prior to the launching of the *Munson*, the newest ship was the *Myron C. Taylor*, built in 1929, with a speed of 12 knots, and a gross tonnage of 8,233.[3]

In 1950, there were imported through Great Lakes ports 5.6 million short tons; in 1957 this figure had increased to 10.1 million tons. In 1950, exports from Great Lakes ports amounted to 23.4 million, and in 1957 to 24.2 million short tons.[4] In 1950, the gross tonnage received in the Duluth-Superior port, the largest on the Great Lakes, was about 10 million tons; in 1956, the tonnage had risen to 51.6 million tons, and in 1955 it had been 61.2 million tons.[5] By comparison, in 1956, the gross tonnage of imports in New York Harbor was 31.7 million tons, and the exports 9.2 million tons. Coastwise receipts in New York Harbor for the same year amounted to 44.9 million tons, and shipments to 11.4 million tons.[6] Thus, even before the opening of the seaway, Duluth-Superior is the second largest American port. In addition to the foregoing, in 1958, there were approximately 116 foreign-owned ships operating on the Great Lakes, and they made about 306 round trips. All of the ships, as above defined, operating on our inland waterways, in 1956, totaled 220 billion ton miles, of which the Great Lakes portion was slightly more than half, or 110.7 billion tons.[7] It is clear that the Great Lakes area promises, within a few years, to become the largest segment of our maritime industry. The *Bradley* disaster, and the condition of our merchant fleets on the Great Lakes, emphasize the inadequacy of our Coast Guard facilities in that area, for the present, and more particularly for the future. The Maritime Trades Department believes that the appropriate committee of Congress should make an investigation of our Coast Guard facilities in the Great Lakes area, with a view to preparing for the tremendous potential of that area in the maritime field.

HARRY E. O'REILLY,
Executive Secretary-Treasurer, Maritime Trades Department, AFL–CIO.

Mutual Security: Pro

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mrs. BOLTON. Mr. Speaker, the mutual security bill will soon be before the House. The Committee on Foreign Affairs has heard testimony from all areas of our economy, both pro and con. None has been more positive, interesting, and constructive than that of Gen. William H. Draper, Jr., Chairman of the President's Committee to Study the U.S. Military Assistance Program.

This morning, Mr. Speaker, General Draper addressed the Chamber of Commerce of the United States in convention in Washington. His dynamic speech in support of the mutual security program followed the remarks of Walter Harnischfeger, chairman of the Citizens Foreign Aid Committee. This latter committee has recommended a $2 billion reduction in this year's foreign aid appropriation with a liquidating period of the balance of foreign aid in 3 years.

In his speech, General Draper characterizes this so-called fortress-America concept as a hurried retreat back into our own hemisphere, or the idea that America's safety lies in isolation.

Believing General Draper's statement before the chamber of commerce will be helpful to us all. Under unanimous consent, I include his speech with my remarks in the Appendix of the RECORD.

MUTUAL SECURITY: PRO

(By William H. Draper, Jr., chairman of the board, Mexican Light & Power Co., Mexico City, and Chairman, the President's Committee To Study the United States Military Assistance Program)

You here this morning, and all of the American people, are being asked by the committee headed by your other speaker to "take our first stand in the last ditch."

You are being asked to embrace the fortress-America concept—the idea that America's safety lies in isolation, lies in a hurried retreat back into our own hemisphere.

This committee boldly tells us to take our troops out of Europe, to cut the aid program in half, to end it in 3 years.

They would coldbloodedly let our friends and allies fend for themselves against the Communist menace.

The Kremlin would be overjoyed, exultant, and would soon be on the march.

In fact, the Kremlin, which has demanded that our forces leave Taiwan and the Western Pacific and that our troops be pulled out of Berlin, would warmly endorse every recommendation made by this other committee.

But by posing starkly for you this policy of hurried retreat, this isolationist committee has performed a real public service.

It has highlighted dramatically the two alternatives before us:

Do we, the richest and most powerful Nation in the world, help to defend the free world and thus defend ourselves?

Or do we default our responsibility—default the leadership we have inherited—abandon the rest of the world to Communist conquest and in effect accept worldwide defeat?

Just suppose that this isolationist committee's recommendations were accepted, and it were announced that all foreign military and economic assistance were to be ended in 3 years.

How many countries of the free world would still remain free 3 years from now?

And just what do you think our own situation would be right here in America in 1962?

I speak today as the chairman of the nonpartisan committee appointed by the President of the United States to study the military and economic assistance programs.

Thus I speak in the light of the committee's unanimous findings and conclusions sent to the White House a few weeks ago.

We believe that the plain issue is whether our country intends to seek survival in isolation, a state of siege in fortress America, or whether we intend to combine our military and economic resources with those of other nations and together build a common defense against the common threat.

Nikita Khrushchev summarized the threat for us. He said: "We will bury you."

Khrushchev also repeated in Leipzig last month Lenin's prediction that communism some day would rule the world.

But he said that the world war that Lenin predicted to signal the death throes of capitalism might not occur. I quote Khrushchev's words:

"War is no longer inevitable. This is so not because the imperialists have become better, but because they have become weaker. The forces of peace are stronger than ever before."

Khrushchev's "forces of peace" obviously are the forces of communism, and, unfortunately, his statement is correct that they are stronger than ever before.

Russia's conventional forces of 175 active ground divisions and more than 20,000 combat planes now are being greatly strengthened with nuclear weapons and with intermediate and long-range ballistic missiles.

And to those forces the manpower of Communist China now is joined to face the free world with the greatest military threat in history.

At the same time, Russian industrial production has been forging ahead at a pace faster than our own.

And China's industrial surge, her so-called great leap forward, claims greatly increased agricultural production and a steel production that surpasses that of Great Britain.

Fortunately for us, the Soviet and Chinese factories are still far behind ours, but they are moving forward at a rate that does not allow us to relax—that has serious implications for our future.

The Kremlin already has put the increased production of these factories to work in the cold war—in the stepped-up distribution of arms, and of economic assistance and technicians to selected countries.

This is a relatively new weapon for the Kremlin, this economic offensive.

So it is with this background, and in the context of this growing military, political, and economic threat to the free world that we must view the approaching crisis in Berlin.

And it is in this same context of open threats of war and open threats of nuclear destruction over Berlin that we must consider the necessity and the scope of our mutual security program.

Last November President Eisenhower appointed our Committee to consider this necessity and this scope.

The Committee has 10 members, 3 of them retired professional military men:

Admiral Radford, former Chairman of the Joint Chiefs of Staff;

General Gruenther, former commander of NATO; and

General McNarney, former commander of the European theater.

It includes seven civilians, two of them former budget directors:

Joseph Dodge, a Republican who under General MacArthur balanced postwar Japan's budget and started that nation on the road to recovery; and

James Webb, a Democrat who served also as Under Secretary of State.

The others are:

John McCloy, Assistant Secretary of War during World War II and later high commissioner of Germany;

George McGhee, former Assistant Secretary of State and Ambassador to Turkey under President Truman;

Dillon Anderson, former Director of the National Security Council staff; and

Marx Leva, former Assistant Secretary of Defense.

The President asked our Committee to evaluate the military assistance program on an independent, objective, and nonpartisan basis.

And he asked us to study the relative emphasis which should be given to military and economic programs, particularly in the less developed areas, and to recommend the most suitable means whereby the free world's defenses may be insured.

We discussed these problems with the responsible and informed officials in Washington.

We studied the relevant national security policies of our Government, and the secret reports and policy papers of the Department of State and the Department of Defense.

We 10 formed into subcommittees, and then with small staffs visited all of the areas and most of the counties where important military and economic assistance has been strengthening our friends and allies. We were accompanied by senior retired military military advisers.

We consulted our unified commanders in Europe and in the Pacific.

We consulted our ambassadors and the economic and military officers assigned there—we visited with officials and private citizens of the countries concerned.

Several university groups and others expert on mutual assistance made special studies for our use.

After all of this, and after long committee discussions, our interim findings and recommendations were agreed and delivered to the President. They were unanimous. I can summarize them for you this way:

We are convinced that the Communist military, economic, and political threat is greater than ever.

We found that deliveries of weapons and military equipment to our friends and allies, averaging $2.4 billion annually, have been maintained at this necessary rate in recent years by heavy drawdowns on the large pipeline of unexpended appropriations built up during the Korean war. At one time it was over $8 billion.

This pipeline has been reduced to the point—it will be 2½ billion this June, barely enough for necessary contract and production lead time—where it cannot be counted on to supplement the current lower appropriations to any substantial degree.

Unless we start now appropriating funds each year about equal to the value of annual deliveries required, within a year or two the weapons we furnish our friends and allies will be reduced by about one-third.

Therefore, we recommend that an additional amount of about $400 million should be made available for the military assistance program for the coming year, primarily to supply advanced weapons to the NATO countries.

We believe that any other course would involve an unacceptable risk to our own security.

If this additional amount is appropriated to contract for the missiles, nuclear weap-

ons and modern planes needed to strengthen the NATO buildup, it will not significantly increase actual expenditures in 1960, because of the year or two needed to produce them.

We found that in view of the precarious economic situations in many of the less-developed and newly independent countries, and the need for sound progress in these countries for our own security, the requested level of economic assistance for 1960 is the minimum required, and that increased economic development assistance probably will be needed in the years ahead.

The free world's far-flung defense perimeter is manned jointly by allied and U.S. forces.

It extends through the NATO area in central Europe, through the Middle East and around the rim of Asia to the northern Pacific.

The weapons for the allied forces defending this perimeter have been furnished very largely by our military assistance program.

The economic support needed by many of the countries concerned has been supplied through the economic aid program.

It is a very wide area important to our security; the nations of this area cannot defend it without our help.

Together we do have the strength.

Within this perimeter are the homelands of our friends and allies and the means by which together we can maintain mutual bases, room for maneuver, defense in depth, and unrestricted use of the seas.

If strong and well-armed forces hold these perimeter positions, then in the event of local aggression our friends and allies and we ourselves gain time for reinforcement.

Equally important, we gain time for political action.

These forces in being give the free world advantages should war come.

But more importantly, they represent a major deterrent to aggression and an opportunity through negotiation to avoid war itself.

The capacity of these forward allied forces to meet limited attack, greatly strengthened by our weapons in their hands, provides another and much more acceptable alternative than surrender or resort to atomic warfare.

This was demonstrated for all of us recently at Quemoy.

I was impressed by certain things Ambassador Tran Van Chuong, of Vietnam, said in a recent speech. I quote excerpts:

"We have lulled ourselves into half-consciousness and half-action by calling it the cold war, but during these last 14 years this cold war has almost always been hot for some people or other of the free world.

"It was hot for the Chinese mainland for 4 years, from 1945 to 1949 during the Chinese civil war.

"It was hot for the Vietnamese and the French for 8 years, during the Indochinese war.

"It was hot for Korea, for the United Nations and the United States itself for 3 years, during the Korean war.

"It was hot for Hungary in 1956.

"It was hot for Quemoy, Matsu and Nationalist China yesterday.

"It is hot for Tibet now.

"It may be hot for all of us tomorrow."

He added, "Most of the time, all the Communists had to do was to divide and conquer, and the cold war has been cold only when the Reds were digesting their victims."

All of us realize that the military and economic assistance programs have been subject to criticisms.

We on the committee found that some of these criticisms were justified, and we propose in our final report to deal with the major mistakes of the past and to suggest some corrective measures and organizational improvements for the future.

Our committee concluded, however, that the mutual security program is and will continue to be an effective and essential tool to carry out our national security interests and to promote free world defense.

To abandon the program, for errors in execution or for any other reason, would be to abandon the free world and to lose the cold war.

We commented, and I quote:

"In our fascination with our own mistakes, and the constant use of foreign aid as a whipping boy, we may be gradually choking this vital feature of our national security to death."

Any fair-minded appraisal of the mutual security program cannot fail to conclude that the results have contributed immeasurably to our strength and security.

Had it not been for the Marshall plan, there is little doubt that the dramatic recovery of Western Europe would have been impossible.

Had it not been for the NATO alliance, there is little doubt that some of the free countries of Europe would, like Czechoslovakia, have long since been dragged behind the Iron Curtain.

Think about that for a moment—of even more of Western Europe blotted off the map of the free world.

I went to the Far East on the work of our committee.

I was in Taiwan shortly after the Republic of China forces had successfully repulsed the Red Chinese attempts to engulf Quemoy and Matsu.

Without our military and economic assistance, this victory of our Chinese allies would have been impossible.

We furnished the artillery and the ammunition that in the hands of Chinese gunners fought the Communists to a standstill.

We had furnished the F86's and trained the Chinese pilots who knocked 31 Communist MIG 17's out of the air with a loss of only 2 or 3 planes.

I saw the actual movies of these aerial dog fights, taken from the firing gun positions in the F86's.

They were terrific and at the same time inspiring.

For they illustrated graphically just how our military assistance prevents defeat for our allies and for ourselves, and at the same time it helps to prevent local conflicts from spreading—possibly to world war proportions.

Thus this Communist punch was thrown back by those directly attacked without involving America's own forces in battle, which would have dangerously threatened war between ourselves and Communist China, and perhaps with Russia as well.

Yesterday you heard President Eisenhower strongly support the mutual security program as an integral part of our own defense—of our own security.

You well remember the Truman doctrine which saved Greece and Turkey from communism. President Truman not only initiated the concept of mutual security—he gave it every support.

The Congress, whether controlled by Democrats or Republicans, has consistently approved this principle and voted the necessary funds.

The Joint Chiefs of Staff have given it unwavering support.

The National Security Council, at the very highest level, repeatedly has endorsed collective security, as vital to the United States.

Representatives of some 70 national private organizations from labor, from business, from industry, from agriculture, have regularly testified before congressional committees in support of some or all of our military and economic assistance programs.

It is not a sectional program.

It is not a partisan program.

It is a program on which all Americans can unite in the interest of our own security and that of the entire free world.

Our Committee is convinced that it is necessary and that we can afford it. What we cannot afford are the costs and the risks involved in abandoning or emasculating the mutual security program.

Our Committee is convinced that it should be recognized by the Congress and by the public alike as a long-range program that must continue so long as the Communist threat endangers our survival.

Your great organization, the Chamber of Commerce of the United States, for years has encouraged and supported the mutual security program as a firm plank in its policy of national security.

The chamber's support has been vitally important as an expression of the considered judgment of the business interests of the United States.

Today the people of Berlin are again bravely facing a direct Communist threat, just as they did 10 years ago.

The principle of collective security to which the NATO alliance is pledged, as well as its moral and physical strength, will save them today just as the airlift did a decade ago.

We must stand shoulder to shoulder.

We must keep the faith.

We must maintain the mutual security program.

The continued support of your great chamber is needed by the administration, by the Congress, by the American people, and by the entire free world.

I know you will not fail them.

Somebody's Kidding the Consumer

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Pittsfield (Mass.) Berkshire-Eagle on March 31 of this year.

That excellent newspaper sets forth some additional reasons why fair-trade legislation is not in the public interest and should be defeated.

It is extremely interesting to note that not a single piece of editorial comment outside of the trade publications of the proponents has had one good word to say for the principle of fair trade:

SOMEBODY'S KIDDING THE CONSUMER

When General Electric last year abandoned the attempt to enforce retail prices through fair trade agreements, the news was greated with huzzas by most believers in a free economy. Coming in the wake of many similar abandonments by lesser companies, not to mention a spate of anti-fair-trade decisions by State courts, the event was widely described as marking the virtual demise of legalized price fixing.

But apparently (to paraphrase Mr. Clemens) the reports of fair trade's death were greatly exaggerated. A bill to revive it in a

new and more virulent form is being vigorously pushed in Congress. And in the absence of any adequate consumers' lobby on Capitol Hill, the bill has at least an even chance for enactment.

The difference between the new approach and the old one requires some explaining. In the past, fair trade legislation has been left to the States, with Congress participating in the process only to the extent of giving such laws a blanket exemption from the provisions of the Sherman antitrust law, which specifically forbids price rigging. Armed with this special dispensation, 44 States have enacted fair trade laws in the past two decades; but because of adverse court decisions plus the difficulty of uniform policing policies, the laws have proved generally ineffective.

The bill now before Congress seeks to get around this difficulty by making fair trade a matter of Federal rather than State jurisdiction. It does this by providing that any manufacturer who does any interstate business can fix the retail prices of his products simply by so notifying his distributors. Anyone retailing his products below the fixed price would then become subject to legal action.

Perhaps the most annoying thing about this frontal assault on the principles of free competition is the fact that its proponents profess to be protecting the consumer. If price cutting is permitted to go unchecked, they argue, the big stores and the chains will force smaller competitors out of business. This supposedly, will further monopoly and hence will eventually produce higher prices to the consumer's detriment.

At hearings before the House Commerce Committee last week, a spokesman of the U.S. Justice Department pretty well demolished this sophistry by citing a recent Federal study of the effects of fair trade laws on prices. For a large group of fair traded items selected at random, the prices averaged 20 percent higher in cities that are covered by fair trade laws than in cities that are not.

Stripped of its pious claims, the real purpose of fair trade legislation, whether State or Federal, is to frustrate the price competition of a free marketplace—or, in the words of the Wall Street Journal, to "keep prices stable and high." It only adds insult to injury when the promoters of such legislation claim to be acting in the consumer's behalf.

Best Loved Ornaments Adorn Body of Chief

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. ULLMAN. Mr. Speaker, 104-year-old Tommy Kuni Thompson, last of the great Columbia River chiefs, recently passed away on the banks of the Columbia adjacent to the once mighty Celilo Falls he loved so much. The following article from the Portland Oregonian describing the last rites of Chief Tommy deserve a place in the CONGRESSIONAL RECORD:

BEST LOVED ORNAMENTS ADORN BODY OF CHIEF

CELILO FALLS.—Tired old Tommy Kuni Thompson, last of the great Columbia River chiefs, lay quiet in death on the earthen floor of his own Long House Wednesday and early Thursday before his burial in midmorning. Indian and white man alike gathered to pay homage to him throughout the day and the long night.

Silently they came, from Yakima and Portland, automobile load after automobile load, and up the steep railroad crossing to all that remains of the once bustling Celilo fishing village, drowned by the lake of The Dalles Dam.

The eastern Oregon wind whined through the wires and whipped the tattered scarlet and white of the American flag at half staff on Chief Tommy's own prayer pole.

POLE GIFT OF ENGINEERS

The pole, made from a flag pole which once marked The Dalles-Celilo Canal, was a gift to the centennarian chief from U.S. Army Engineers. It stands in front of the only entrance to the big Long House, a rickety building of unpainted boards which is approximately 50 to 100 feet.

The 104-year-old chief's body was kept in the house of his widow, Flora, about 60, Tuesday night. Wednesday morning it was swathed in a dozen brilliant wool blankets, vivid coloring of which was in marked contrast to the grayness of the earthen floor and the interior to the Long House.

It was then placed in the handmade coffin he had requested. The great cedar box came from Warm Springs Indian Reservation.

In attendance all night Wednesday were Flora, Tommy's wife of 10 years; his son Henry, the sub chief, who in respectful time will probably assume the chieftainship of the Wy-Ams; his daughter, Ida Wynookie; six grandchildren and many other assorted relatives and friends. It is believed that the chief was married three or four times in his long life.

Chief Tommy Thompson, loved patriarch of the Wy-Ams, in death wore the clothes and the ornaments he loved best Wednesday as he received the last homage of his people before starting up the long trail to join his forefathers.

The body of the old chief was dressed in plain, white, new buckskins. At his throat was an expensive and favorite old double necklace of wampum he had worn often on ceremonial occasions. On it was a large shell medallion, held by a thong in a hole at one side. In his hand was single eagle feather, symbol of his chieftainship.

Over his face, which lay head back, chin up, were two, new, silk scarves, topped by a soft square of white buckskin. The multilayers of blankets went over all this.

In the Long House the chief's oversized coffin was blocked upon a piece of 4 by 4 and assorted other pieces of wood, all placed on top of a tule mat. Chief Tommy's moccasin-clay feet pointed to the east. On the ground at the head of the coffin lay a simple floral piece of evergreen and flowering Oregon grape on which was mounted a large, golden bas relief of an eagle, wings outstretched.

Indian drums hung at the far end of the Long House, outer perimeter of which was lined by rugs, mats, blankets and mattresses.

As evening wore on it became more and more crowded with Indians as more arrived to pay ritualistic reverence to him throughout the long, cold night. The chants of men and women alike echoed mournfully, and the drums kept solemn cadence. Occasionally a small jingling bell frightened evil spirits.

Among the many persons who paid respects to the old chief during the day were a number of white men and women, some of whom delivered eulogies as they stood facing the east where the messenger bird, atop the prayer pole, could carry them to the beyond.

As new groups of Indians arrived, they walked slowly around the Long House, counter clockwise, softly touching right hand to right hand in respect and greeting to all those before them.

They later went counterclockwise, as they told their own words of appreciation for Kuni "he who is full of knowledge."

Heart of the Shrine

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, it is my pleasure to present for insertion in the RECORD the address by Imperial Sir George E. Stringfellow, imperial potentate, AAONMS, before the annual meeting of the Shrine Directors Association, held in Shreveport, La., April 9, 1959. Shreveport is my hometown and we were honored to have the imperial potentate and the directors of the Shrine as our guests.

Imperial Potentate Stringfellow, who was born in Virginia, is vice president of Thomas A. Edison Industries of the McGraw-Edison Co. This responsible position, however, has not prevented his working for the good of his fellow man and these endeavors have been recognized. He has received honorary degrees as doctor of fine arts, doctor of laws, and doctor of humanities from well-known colleges, has received the 1958 Academy of Medicine of New Jersey annual citizen's award and many other awards too numerous to outline here.

His speech needs no introduction. It will warm the hearts of all of us who are interested in the children of our Nation and the care and comfort given to them through the Shrine hospitals across the country. It is as follows:

Good morning directors, illustrious sirs, imperial sirs, and nobles, I bring you the greetings of the imperial divan of the Ancient Arabic Order of the Nobles of the Mystic Shrine, of the board of trustees of the Shriners Hospitals for Crippled Children, and of the 830,000 Shriners in North America.

I thank you for your generous introduction and I thank you for the warmth of your reception.

El Karubah Temple, her able and forthright illustrious potentate, Illustrious Sir Reginald Poe, his elective and appointive divans, past potentates, heads of units and presidents of Shrine clubs have entertained the Shrine Directors Association, I am sure as they have never been entertained before, and this association, I assure you, has experienced hospitality all over North America. However, the people of Louisiana, especially Shreveport, have created an atmosphere that's conducive to good will, gracious living and a successful convention. I am awfully glad you held this convention here and it is a source of satisfaction to be invited to attend.

Your directors have been defined as the heart of the Shrine and the hospitals as its soul. Our hearts circulate the blood that keeps our bodies alive. Directors inject new life into an otherwise drab ceremonial and thus keep our temples moving.

Director James McGee, the 26th Shriner in history said that the Shrine was formed by Dr. Walter M. Fleming as a sort of "re-

lax" from the more serious work of the advanced degrees of Masonry. And once those early Shriners began the presentation of the ritual, it was the director's section that created much of the interest. Your current directors are of course the result of that feeble beginning.

So far as I have been able to learn, the first presentation of the ritual was made by Damascus Temple in Rochester, N.Y. The records of that temple show that Damascus performed the ritual in the old Concert Hall in Rochester, on the afternoon of October 12, 1875 in the presence of Dr. Fleming, who wrote it and W. S. Paterson, the first recorder of Mecca Temple. There is some evidence that Billy Florence was present.

The Rochester performance was before the founding of the Imperial Council in 1876. It was before Fleming got around to equipping Mecca Temple with robes and other paraphernalia for presentation of the full ritual. Cleveland's Al Koran Temple did the second performance of the ritual and from that time each presentation became more elaborate.

The directors are important to the Shrine and its future. Therefore, to be a director is a personal tribute to any man. To be a good director one must have imagination, inventiveness and a willingness to labor long hours in bringing sunshine to the lives of his fellowmen.

Your directors would of course be the first to admit that the second section is not the only ray of sunshine in the Shrine. Here in Shreveport is where the first of 17 giant rays was provided for our crippled children.

It was here, almost 37 years ago, that our first hospital opened. That hospital, now refurbished in the most modern fashion, is still efficiently serving the little folk who need our love and help. I hope that everyone of you will visit this hospital while you are here.

Faces have changed in those 37 years, but each Shriner, doctor and nurse has contributed in a full measure their share of devotion which has brought us a heritage that is rich in tradition and service. It is a heritage of which each Shriner should be proud. It is a heritage that each of us will pass on to those who follow, improved by us as it has been by those who have gone before us.

The Shrine is a great organization. It enlivens our mind, improves our personality and enriches our soul.

Fair Trade by Fixing

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Cincinnati (Ohio) Post on March 24, 1959. That editorial calls fair trade precisely what it is, price fixing.

This, if no other reason, is a sufficient basis for defeat of H.R. 1253 and similar measures.

An additional reason for the defeat of these measures is the fact that they will not do one thing to save the small merchant and to the contrary will actually make it much more difficult for him to compete with his large opponents by marrying him to a series of fixed prices on most of the products on which he must rely for his sales.

He will be unable to compete with his competitors who are recipients of dumped and distressed goods and will be absolutely unable to compete with those who have their own private brand merchandise. The editorial follows:

FAIR TRADE BY FIXING

Washington fines adding up to $107,750 have been imposed on 27 auto and accessory dealers. The charge: Conspiring to fix prices.

At the same time, in the Nation's Capitol a few blocks from the courthouse the lobbies are busy trying to push through Congress the misnamed fair trade law—a bill to permit manufacturers to fix prices.

The Government has spent millions of taxpayer dollars fighting trust cases. It has blocked many a corporation merger on the ground that the consolidation would reduce competition and that the public subsequently would suffer—by paying higher prices.

Even as the House Commerce Committee has been holding hearings on the new fair trade measure, other committees of Congress have been busy checking enforcement of the antitrust laws.

Yet this new price-fixing bill is rated a fair chance to pass. And it goes further than any similar bill, passed by Congress or any State. If it should become law, the manufacturer of any product could fix the resale price simply by decree—without agreement from the retailer who bought the product.

In 17 States, fair trade laws have been declared unconstitutional by State courts. This bill certainly can be no less objectionable.

If the lobbies plugging for this bill suddenly were told by the Government that any of their products had to be sold at a specific price, no more and no less, the outraged screams would rock the Capitol dome. Price fixing by any other name is no less odious.

College Cooperative Housing Deserves and Needs Help

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. PORTER. Mr. Speaker, S. 57 as reported by the House Banking and Currency Committee has as one of its provisions the authorization of Government loans to student cooperatives. I intend to support the housing bill and believe this part to be an important feature.

I have had a number of letters from student cooperatives at the University of Oregon concerning this problem, and under a previous consent I include them here:

CO-ED HOUSING, INC.
UNIVERSITY OF OREGON,
UNIVERSITY HOUSE.
Eugene, Oreg., April 11, 1959.

Representative CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

DEAR MR. PORTER: It has been brought to our attention that there is currently a bill before the House, the Rains bill, H.R. 2357, which would authorize low interest Government loans to students cooperatives under the College Housing Act.

We would like to express our hope that you will give this bill your wholehearted support.

The women's cooperatives at the University of Oregon date from 1936. At present we number more than 80 girls in three living units. These houses are all old, and increasingly expensive to maintain, thus we face quite a problem in merely maintaining our current low cost housing. In addition to this, there are many more girls seeking cooperative housing each year than can be accommodated. The areas around the campus have been scoured each year for houses suitable for group living and none are to be had. Thus the only hope for expansion, or indeed, maintaining our current membership, is to build new units which could be run cooperatively. There have been tentative suggestions that the university would make land available to us if we were ever in a position to build.

We feel cooperatives have an important place on the Oregon campus. Our board and room fee this spring term is $124.50, approximately half of what it costs to live in university dormitories, and undergraduate women are not allowed to live off campus. A large percentage of our members are financing their own college education, working while attending school to do this. Many of us would be unable to attend college were it not for the low cost housing provided by the cooperatives.

In addition to furnishing low cost housing, the cooperatives practice open membership to all races and creeds, promote responsibility and high scholastic standards. You may be interested in knowing that University House had the highest scholastic standing of women's living organizations on campus fall term.

We know you will give this matter your careful consideration.

Respectfully,

Members, University House: M. Jill Hopkins, Kathryn B. Niece, Donna Horn, Ruby F. Wells, Janice Buhmann, Beverly Lloyd, Carol L. Porter, Maxine C. Ferris, Jeanette Buhmann, Mary Alice Letts, Marylin Thompson, Bernice Bigham, Sharon Ellison, Vida Jane Garrett, Margaret Lance, Elizabeth A. Merrill, Kay Anderson, Betty Lou Janes, Arleen An, Sonya Meyers, June H. Wastel, Janet Messal, June Kozanoglie, Janice Frampton, Susan Huk, Gloria Knaupp, Helena Uunila, Karen Bedl, Betty Lou Burt, Sherril Moody, Margaret Swan, Doreen Meaden, Glenda Kay Gibson.

CO-ED HOUSING, INC.,
Eugene, Oreg., April 13, 1959.

Representative PORTER,
Capitol Building, Washington, D.C.

MR. PORTER: Rebec House, a womens' cooperative living organization at the University of Oregon needs your support. We urge you to vote in favor of the College Housing Act, Rains 2357.

Sherrill Kronsteiner, Ellen Marie Bassett, Marilyn Tollefson, Terry Sylvester, Hidiko Lakiguchi, Arlene Mellin, Edith Nichols, Mary Bryant, June Spencer, Carol Sturtevant, Ann F. Templeton, Roberta Clemmens, Helene Yamashiro, Margie Woodhouse, Jill Hall, Lillian Krog, Janet McMaster, Darlene Attebery, Agnes Bryson, Susan Latta, Hester Wolgamott.

CO-ED HOUSING, INC.,
UNIVERSITY OF OREGON,
Eugene, Oreg.

Representative CHARLES PORTER,
Capitol Building, Washington, D.C.

DEAR SIR: In the past we have noted your vivid interest in the affairs of Oregonians, no matter how small, as far as bills before Congress are concerned. Again Oregonians solicit your aid, this time the representation being college students.

We noted in a recent cooperative housing national bulletin that the current session of Congress is again considering cooperative housing legislation (in the House this is known as the Rains bill, H.R. 2357). This would authorize Government loans to student cooperatives under the College Housing Act.

You are already probably aware that the purpose of cooperative living is to furnish room and board at such a reasonable rate that it enables students to attend college who could not otherwise afford the expense. The low-cost housing is achieved by buying food wholesale, hiring as little help as possible, and working together to maintain the houses in running order.

Here at the University of Oregon the women's co-ops yearly turn away enough students to fill another house and the present three houses are in need of much expensive repair. Much time has been spent considering building new houses (a dormitory-type system) since we do have a great need to expand and because of the poor condition of the now existing houses, but lack of finances prevent this. Also, the university has been cooperating beautifully but the plain truth is, we're at the point of either erecting a new building or having nothing; there just aren't any available houses near the campus to accommodate group living.

Therefore, if this bill were passed, we could plan in terms of a Government loan.

Thank you very much for your valuable time spent with this letter.

Respectfully,

Members of Highland House: President, Annelle Davenport; Vice President, Erna Wiessner; Secretary, Celeste Hennies; Treasurer, Lois Ashley; House Manager, Marie Longfellow; Social Chairman, Kathleen Quinn; Scholarship Chairman, Marlene Walker; Tiiu Sillamaa, Janice K. Lear, Alice Eugenio, Betty Brandt, Joyce Peterson, Hille Sillamaa, Billie Davis, Dolly Kominek, Jacqueline Hackett, Joan M. Gross, Virginia Wilson.

CO-ED HOUSING, INC.,
UNIVERSITY OF OREGON,
Eugene, Oregon, April 12, 1959.

Representative CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

DEAR MR. PORTER: As a member of a cooperative and as president of Co-Ed Housing, Inc., the organization of the women's cooperative living units on the University of Oregon campus, I wish to express concern for and interest in the Rains bill (H.R. 2357).

At the present time, provision for expansion is the greatest problem that confronts our cooperative movement here on this campus. We have three women's cooperatives that house approximately 80 coeds. At the time school began last fall, enough applications for cooperative housing were turned down to fill another house had it been available.

The buildings which house the three groups are all old single-family houses that have been made over for group living. The corporation owns one of the houses which was a donation, and the other two are university-owned and for which we pay rent. All of these houses are quite old buildings and are requiring more and more expensive repairs. The newest of the houses is located in that area that is planned for a new football stadium in the university's 10-year expansion plans. During the last few years, quite an extensive search has been made for large houses in the area that could be converted into accommodations for group living. Nothing satisfactory resulted. Inquiries into future plans for provision for expansion of the university as a whole, seem to show no provision for the student cooperatives.

We feel that the student cooperatives have a very definite place on the university campus; and, had it not been for them, many of us would not be able to attend college. We have been willing to do all that we can in an effort to provide for the continuation and expansion of cooperatives, but we feel that such a large project is very difficult for a group of students to accomplish. It seems that the only possibility is to build; and, unless we have some outside help, even this will be impossible.

I hope this has conveyed to you somewhat of the need on this campus for such a measure as is now before the House of Representatives. Any support that you can give this bill would be greatly appreciated.

Respectfully,

DONNA HORN, *President.*

The Rural Electrification Program in the United States

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. SANTANGELO. Mr. Speaker, the President's veto of S. 144, which would compel review of loan decisions made by the Administrator of the Rural Electrification Administration has stirred the Congress and may cause a breakdown of the administration of the rural electrification program.

During my recent trip to Puerto Rico with Representative H. CARL ANDERSEN, of Minnesota, we attended a seminar on rural electrification, at which the Administrator of the Rural Electrification Administration, Mr. David A. Hamil, spoke. I was very much impressed by Mr. Hamil's dedication, sense of judgment, and administration.

Mr. Hamil has been the Administrator since 1956. He was formerly a rancher engaged in the cattle-feeding business in Logan County, Colo. He and his brother operate two ranches consisting of 4,000 acres of land in the county.

At the time of his appointment Mr. Hamil was speaker of the Colorado House of Representatives, a position he had held since 1951. He was first elected to the Colorado General Assembly in 1938, and with exception of a 2-year term in 1948–49 had served in it continuously.

Mr. Hamil became active in the rural electrification program in 1939, when he helped sign up members and organize a section of the Highline Electric Association of Holyoke, Colo. He served as a director of the association for 5 years. When the cooperative started operation, it served about 180 consumer-members. Today it serves more than 4,200.

The REA Administrator is a graduate of Hastings College at Hastings, Nebr. He was graduated from that college in 1930 with a bachelor of arts degree.

He is the sixth Administrator of REA since the Agency was established in 1935.

The speech which Mr. Hamil delivered at the seminar held at La Parguera in Puerto Rico on April 14, 1959, I believe, will prove as informative to the readers as it was to me. The following are his remarks:

A generation is a brief span of time in the history of a national program. Yet in slightly more than a generation rural electrification in the United States has become a reality. It is indeed one of the outstanding social and economic developments in American agriculture of the 20th century. Together with farm mechanization employing tractors and other machines, and the agricultural sciences, rural electrification has brought about profound changes in farm living and in the productive capacity of the American farm.

Mechanization and electrification have come so swiftly that many do not realize how great a change has come about. It is by no means a stretch of the imagination to say that electricity and mechanization mean as much to rural areas as the assembly line, production control, and automation mean to industry.

A visitor to the United States is usually impressed by the distances between farms. These distances were for many years barriers to electrified farming, for they meant a correspondingly high investment in electric facilities. The size of that investment discouraged many existing power suppliers from extending service into the countryside.

Largely for this reason, most early rural electric lines in the United States were extensions of urban systems, reaching out for a few miles from the cities and larger towns. Consequently, as late as 1935, electricity had been brought to only about 1 farm in 10. This compared unfavorably with some other parts of the world, even after allowing for the great distances between our farms.

In the depression year of 1935, our Federal Government became interested in rural electrification as a means of stimulating employment and providing a useful public service. Unserved farmers and other rural people, of course, supplied the impetus. After much discussion of various ways of inaugurating such a program within the framework of our system of free enterprise, it was decided that a Federal loan program was the most acceptable and promised the best results. The decision was followed by an Executive order creating the Rural Electrification Administration in May 1935. The following year the Congress of the United States enacted the Rural Electrification Act, which gave statutory status to the new agency.

That act is the foundation of the rural electrification program of the United States as it is today. Under this act, the Federal Government, acting through the Rural Electrification Administration, makes long-term, self-liquidating loans available to farmer-owned cooperatives, to electric companies and to public agencies. They, in turn, construct and operate the rural distribution facilities.

When this program first began, it was believed that existing suppliers would outnumber other participants. However, as it turned out, farmer-owned cooperatives make up the bulk of REA electric borrowers. The cooperative emerged as a local answer to a tough local situation—the lack of electric power and the lack of interest on the part of existing power suppliers in providing it. Farmer joined with farmer specifically for the purpose of organizing a cooperative. They did this in the face of the fact that many power suppliers at that time deemed the risks too high to justify any considerable extensions of their lines into outlying rural regions.

Many people still believe that because the Federal Government is the lender, it also operates the rural electric facilities it finances. This may seem like a logical conclusion. However, it is not so in actual practice. Electric cooperatives are privately

owned enterprises organized under applicable State laws. So far as the Federal Government is concerned they are subject only to such controls as are designed to protect the security of the Government loan. The cooperatives make their own operating decisions and hire their own managers and other employees. The rural people taking part in this program point to their systems as examples of a highly successful combination of Federal activity and free private enterprise. Independence is a virtue of farmers everywhere. The American farmer is no exception. The farmers who organized and operate the REA-financed systems are proud of the independence of their systems. I can assure you that they want no undue interference in the affairs of their organizations.

This joint effort by private enterprise and the Government has proved to be highly successful. Whereas only 10.9 percent of our farms were electrified in 1935, about 96 percent are electrified today. REA-financed systems serve slightly more than 50 percent of these electrified farms. The electric companies serve the bulk of the remainder, and some are served by municipalities and other public bodies.

When REA was established, many predicted that the farmer would use electricity only sparingly—to light his home and barn and to run a few household appliances. How wrong they were. Farmers are using electricity in more than 400 different ways, and new uses are being discovered every day. Farm consumption has risen year by year. During the past decade it more than doubled. The average farm on REA-financed lines consumed about 318-kilowatt hours a month in 1958.

This high consumption did not occur overnight. Farm use of electricity rose slowly during the early years of the program. The American farmer and his family were not familiar with electric power. This early period served to introduce electricity to the farmer. They were feeling their way at first. Gradually, as they learned how to apply electricity to more and more farm tasks, their consumption of power began to rise. After this tryout period, the demand for power on the farm rose sharply year by year.

As a Colorado rancher, I am always interested in the stories of farmers all over the country, what they are doing with electricity on their farms, and what it means to them. Such stories come into the Rural Electrification Administration by the score.

An Iowa farmer tells us that electricity makes it possible for two men on his farm to do what four used to do—and with a reduction in operating costs. His corn averages around 100 bushels to the acre and requires a lot of handling. A 50-foot grain elevator powered by a five-horsepower motor gets it into the bin without manual labor. One day he moved 400 bushels of grain from one bin to another, cleaned the grain and filled the first bin. It took 20 minutes—and cost him a nickel.

With infrared heat lamps available for pig brooding, it is possible to have pigs farrowed earlier—while the weather is still cold—and to cut pig losses, which is another step toward greater efficiency and considerably lower per unit costs.

Electricity is an important ingredient in one Pennsylvania grower's production of certified seed. He uses 50 electric motors, ranging from 1/12 to 7½ horsepower, in drying, handling, cleaning, treating and bagging his valuable crop. During 1956 this farmer averaged 2,500 kilowatt-hours per month for farm and home jobs.

Electricity costing $56 enables a Kentucky farmer to pump irrigation water that increases his income from corn, tobacco, and beans by $1,000 a year.

The all-electric farmhouse also has made its appearance, in which the cooking is electric, the refrigeration is electric, and even heating is electric. You know, in most of the continental United States we do have to provide our own heat.

In some types of agriculture, notably stock feeding, dairying, and poultry raising, electricity has taken over so many manual chores that the operation has been called "push-button" farming by the magazine editors. We feel, however, that the application of electricity to farm chores has just begun.

Since 1935, REA has made loans to 1,050 organizations for the provision of electric service in rural areas. The loans amount to $3.8 billion. Of the borrowers, 950 are the farmer-owned type; 76 are the public-owned type; and 24 are electric power companies. The loans were made to finance service for more than 5 million consumers from 1.4 million miles of line. The typical REA electric borrower serves about 3,700 consumers and operates approximately 1,300 miles of line. It has received $2.9 million in loans.

REA makes loans for generating plants and transmission systems in instances where it can be shown that either a power shortage exists or a more economical operation will result. At present, 76 borrowers generate all or part of their power requirements. They operate 150 generating plants with a name-plate capacity of 1,013,115 kilowatts. However, borrowers generate only about 15 percent of their power needs. They buy 51 percent of their power from commercial utilities and the remainder is purchased from Federal and other public agencies.

Borrowers are paying an average price of 7.1 mills a kilowatt-hour for their power at wholesale. Rural consumers on REA-financed lines paid an average of 2.6 cents a kilowatt-hour. Both prices are the lowest since REA was established.

An important development of the past few years in connection with generation and transmission is the growth of interconnection and integration of various power systems involving various types of ownership.

For a number of years, the electric companies of the United States have been engaged in varying degrees in joint planning for interchange of power. All of these arrangements had as their objective to improve service and reduce costs for the consumer. This is brought about by several factors—reduced investment in generation and transmission facilities, including especially the smaller percentage invested instandby equipment; reduced operating costs by better utilization of more efficient units and cheaper fuel; and reduced demand requirements due to diversity of daily and seasonal peaks of rural and other loads.

To an ever-increasing extent, the REA-financed systems are participating in such arrangements—with each other, with the Federal hydroelectric facilities and with the electric companies. Through such arrangements, we get maximum value out of our hydro delevolpments because they are firmed up with the steam plants of the REA borrowers or the companies. Also, the rural systems have a market for their surplus power at off-peak times and can readily get peaking power through interchange.

Among requirements of the loan agreement between the Government and the systems are that loan funds be used for the purpose intended; that construction meet acceptable standards; that rates be such as to pay all costs of operation and provide funds to meet payments of principal and interest as they fall due; and that service be extended to all in the area who want it where it is economically feasible. This latter is the area coverage principle, one of the cornerstones of rural electrification in the United States. Under this principle, the test is not whether an individual line or section will be self-supporting but whether the entire system is feasible as a whole.

REA borrowers have established a repayment record that has few equals in the history of American banking. They have returned to the Government $1.1 billion in principal and interest, including over $140 million in advance of due dates. Only 1 of our 986 active electric borrowers is overdue more than 30 days in payments amounting to $91,102. This excellent record is a high tribute to the integrity and efficiency of the people who organized and operate the REA-financed systems.

The rural electrification program has passed through what can be called its first stage. The goal of this stage was to make electric power available to unserved rural persons. It is now available; the backbone of a vast electric system to serve rural America is constructed. The unelectrified farm is very much in the minority today in the United States—a minority of about 4 percent. We shall continue to make every effort to get electricity to these still unserved farms. Many of them are located in remote places and present a hard problem. I am confident, however, that farms of this type in areas served by REA borrowers will be reached.

The end of the pioneering stage brought about a sharp shift in emphasis. Today the big task facing our rural systems is to provide enough power to meet a constantly rising rural demand and to operate their facilities on an efficient basis. As a consequence, a larger portion of REA loan funds has, in recent years, been going to finance facilities to increase the capacity of existing systems and to provide new power sources. The year 1958 is a good example of this trend. In that year, more than 55 percent of our loans went to finance system improvements and new distribution facilities. About 43 percent went for new generation and transmission facilities. The remainder financed consumer facilities.

Characteristics of the rural electric system in the United States are changing. This is reflected in the increasing number of nonfarm consumers being connected. Although in numbers of consumers, the program is still a farm program, the percentage of nonfarm consumers is rising. Last year the rural systems served about 2.5 million farms and an estimated 2 million nonfarm establishments. The latter included nonfarm residences and commercial and industrial enterprises. The systems are adding new consumers at the rate of about 120,000 a year, and about 75 percent of these new consumers are nonfarm establishments. It is anticipated that the number of nonfarm consumers on REA-financed lines will outnumber farm consumers within the next 5 to 10 years. Already the nonfarm consumers account for more than half of the total powerload on the systems and they will undoubtedly account for a larger proportion of total power sales in the future.

In the United States many people are leaving the cities to live in the country. Modern highways have brought the rural countryside and the cities closer together. A new type of rural consumer, the wage earner who commutes daily to a job in a nearby town or city, has become a familiar figure in many areas served by REA borrowers.

The future of rural electrification gives promise of great opportunities ahead for REA borrowers, but it poses serious challenges, too. As the number of consumers climb and as they demand better and better service, rural utilities must supply the kind of professional management that a modern utility requires. Their engineering plans must look far into the future, for they must have the plant that it takes to supply consumers with all the electricity they want, no matter how high that demand climbs.

Based on their fine record of accomplishment over the past 24 years, we are confident that the REA borrowers will meet these challenges and make the most of the new opportunities for service.

Outlawing Competition

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Montgomery (Ala.) Advertiser on March 28, 1959. This excellent editorial sets out some of the many compelling reasons why the fair trade bill, H.R. 1253, now pending before the House Committee on Interstate and Foreign Commerce should be defeated:

OUTLAWING COMPETITION

Normally, we would consider the proposal to set up still another permanent congressional expense as just another case of duplication and bureaucracy. But Congressman ZABLOCKI, of Wisconsin, has an attractive idea: a permanent congressional committee on consumers' interests.

The people who testify before congressional committees (the congressman said) in the great majority of cases represent producers and distributors—the automobile manufacturers, the meatpackers, the various wholesalers and so on. The voice of the consumer—the people who buy those goods—is heard very seldom.

A good beginning for the consumer interests committee would be the proposed Federal fair trade bill, as raw an attempt to outlaw competition in this country as has been attempted in many a year.

Of course it's labeled as being in the public interest; such swindle bills always are. The National Association of Retail Druggists, one of the principal proponents of the price-fixing bill, has assured the public that "price-cutting" really costs the consumer money in the long run.

At the very worst, the association says, fair trade couldn't cost any more. As exhibit "A" in this absurd contention, the Association offers a survey alleging that consumers in non-fair trade areas paid just about the same prices as consumers in areas where fair trade prices were enforced.

In the first place this just isn't true, if it were, there wouldn't be any movement to pass a federal law. A Department of Justice survey, not subject to the same figure juggling as the Association's, found that of 119 items available in eight cities where there were no fair trade laws to keep prices jacked up, 77 sold below the prices fixed for other areas. If a consumer bought all 77, he would pay 27 percent less than the fair trade price. This was the average for the eight cities; in some, consumers would have saved almost one-third of the fair trade price.

The fair traders want a Federal law enforcing prices at a fixed high level. This is obviously a collusion of the sort that the antitrust laws were enacted to prevent. But the law, if enacted, would exempt the price fixers from antitrust prosecution.

State fair trade laws were enacted, for the most part, during the depression. Some States have subsequently repealed them and in more than a dozen others they have been declared unconstitutional. In still other States, retailers have simply refused to abide by them, aware that they are unworkable and that price flexibility is, after all, the retailer's best friend. Faced with this situation, many of the larger manufacturers abandoned price fixing. Thus the effort to pass a Federal law covering the whole country.

The fair traders, whatever their public argument, are really just lazy and greedy. They want an assured markup without sweat and without competition. Edward Wimmer, of the National Federation of Independent Business, confesses that if the law is passed, as he hopes it will be, "There will not be any price competition and there should not be."

In the absence of a consumers' interest committee to dispute this, America's breadwinners can only hope Congress will listen to Chairman John Gwynne of the Federal Trade Commission, who has said of the proposed law: "The fixing of retail prices is inconsistent with the American system of free competitive enterprise and is contrary to the public interest as expressed in the antitrust laws since 1890."

The Chemical Corps' Role in National Defense

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. SIKES. Mr. Speaker, I wish to call to the attention of my colleagues a speech delivered by Maj. Gen. Marshall Stubbs, Army chief chemical officer, before the Midwest Chapter, Armed Forces Chemical Association, in Chicago, Ill., on April 23, 1959. General Stubbs' speech on the subject of "The Chemical Corps' Role in National Defense," I feel, carries an important message for the Congress and for the public and I submit it for printing in the RECORD. The speech follows:

THE CHEMICAL CORPS ROLE IN NATIONAL DEFENSE

(Speech by Maj. Gen. Marshall Stubbs, Army Chief Chemical Officer, before the Midwest Chapter, Armed Forces Chemical Association, Chicago, Ill., April 23, 1959)

The following is a direct quote from a Russian publication written by Col. Prof. Dr. Adam Milkovitch. While I do not agree with these statements, nevertheless the Russian viewpoint emphasizes the need for us to be alert to what they have in mind. I quote:

"Since biological weapons are regarded today as more dangerous not only than conventional weapons but also more dangerous than chemical and atomic weapons, we believe that at least the same attention should be given to this question as to chemical and atomic weapons. From results of comparative studies of losses of life from conventional weapons, war poisons, and atomic energy, on one side, and losses from biological weapons on the other side, it is believed today that a biological war would have the greatest effect of all.

"Those who favor the view that biological warfare can be employed with complete success base their opinion on the fact that for war purposes all fields of science are used today, including, therefore, those pertaining to various types of biological agents. Moreover, the experience from recent wars showed that one can hardly give any significance to international resolutions outlawing certain types of weapons, especially when these decisions could be by-passed in biological warfare, when the preparation of biological agents can always be covered by humanitarian purposes so that it can be put under control."

Not only has the Soviet government indicated interest in biologicals, but recent statements by its officials show that it has a marked interest in the field of chemicals as well. Maj. Gen. Yu V. Drugov of the Military Medical Service, Red army, stated on the 49th anniversary of the great October revolution: "Special interest attaches to the so-called psychic poisons (mescaline, methedrine, lysergic acid derivatives) which are now used for simulation of mental diseases." He further stated, that "In response to state demands * * * considerable efforts were directed toward studies of military poisons."

It appears that the deep interest of the Soviets can mean only one thing, that they will take the initiative in waging chemical and biological warfare if they deem it to their military advantage. It has been reported that they are devoting a substantial percentage of their military spending to chemical warfare and biological warfare. I cannot believe that they would expend this amount of money and large quantities of resources to produce these agents if they did not fully recognize the potency of such a weapons system.

I will limit my discussion to three points, first, evidences of increased Soviet emphasis on chemical warfare, biological warfare; second, examples of how chemical and biological attacks could be employed against us by an aggressor nation and last, the defensive posture of this country against such an attack.

The Sino-Soviet bloc now has a military force of over 8 million men including about 400 ground divisions and the Soviets alone could expand their present force by 300 divisions in 30 days and 500 divisions within a year, according to reports.

Within these Soviet divisions is a specific organization devoted to the field of chemical warfare. Chemical troops are assigned to all echelons down to battalion.

Soviet chemical weapons are modern and effective and probably include all types of chemical munitions known to the West, as well as devices exclusive to themselves. They have an excellent variety of protective equipment and are prepared to participate in large-scale gas warfare.

Much of their hardware is multi-purpose and the conventional artillery shells, incendiary bombs and rotational scattering aircraft bombs can be readily converted for chemical warfare purposes.

Medical and technical reports which have been published indicate that they are equally well versed in biological warfare. Soviet microbiologists have conducted biological warfare tests at an isolated location over a long period of time.

Based on my opening remarks concerning the Soviet interest in chemicals and biologicals, it is evident that they are not overlooking this weapons system. This being true, we certainly cannot close our eyes to the possibility that we may be confronted with these weapons, lest we, like Achilles, have a vulnerable spot.

I am firmly convinced that a strong deterrent force which includes chemicals and biologicals can be a strong defense. For surely, an enemy convinced that our chemical warfare and biological warfare capability is as effective as the rest of our weapons systems, would hesitate to launch a chemical warfare and biological warfare attack.

Let us look for a moment at means with which an enemy might employ chemicals and biologicals against us, both conventionally or unconventionally so that we may better know how to marshal our chemical warfare, biological warfare defenses.

Based on their reported capabilities, we can assume that they not only have the toxic munitions, but the hardware for their delivery. They have a flexible choice of delivery. In an all-out or general war chemi-

cal warfare and biological warfare might well be used in conjunction with a nuclear attack with the hopes of destroying our ability to retaliate.

Recently, there have been news reports on the apparently stepped-up Soviet submarine activities. It is possible that chemical warfare-biological warfare attacks could be launched against our coastlines with missiles fired from submarines.

Raymond Gorthoff, who for the past 10 years has made an intensive study of Soviet strategy, says in his book "Soviet Strategy in the Nuclear Age" that: "A fourth element of strategic deterrance will probably be advanced 'ABC weapons'. Such (Soviet) weapons exist today, but will surely be more potent and more readily deliverable in military significant doses by 1970. They can, for example, also be released from suboceanic containers in the Pacific to 'ride' the prevailing winds covering the United States."

An enemy might also launch an attack of chemicals or biologicals from the air. Since it is difficult to detect and rapidly identify an airborne biological attack, an off-target attack with subsequent cloud travel to cover the target is a possibility to be guarded against. It would be most difficult to distinguish such an attack from a naturally occurring epidemic.

Defensive studies in which a harmless tracer material was used, have shown that coverage up to several thousand square miles could be achieved by aircraft without the population being aware that an attack had occurred.

We must not neglect the possibility of the covert use by an enemy of chemicals or biologicals against both military and civilian personnel. It has been said many times and it bears repeating, that a future war will not be fought on the battlefield alone but will involve civilians working in industries and other defense establishments. An enemy is wise enough to know that if the resistance of the mass of civilians that are necessary to maintain our fighting forces is broken down, so will our line of defense suffer.

The importance of food, especially during wartime, needs no emphasis. In all wars military efforts have been devoted to the destruction of an enemy's food supplies; the scorched earth policy of Napoleon, for instance.

Even though this country is in a favorable defensive position due to our diversified crop programs, we must not overlook the possibility of an attempt to destroy our crops by the use of chemical and biological agents, as for example, against our vast wheatlands of the Midwest. While we probably could maintain an adequate supply for our own consumption, our export of grain would be curtailed, thereby depriving our allies of this kind of assistance from us.

Food processing plants in this country have not generally been considered war targets, and therefore are not usually protected against trespassers who might wish to use CBR agents. If a saboteur had access to a food plant with wide distribution of its products, he could easily conceal a sufficient quantity of the toxic material upon his person to poison enough food in 1 day's work to seriously incapacitate half a million people.

Our architectural wonders present a vulnerable target in their air-conditioning and ventilating systems. A small portable generator placed in a briefcase could effectively contaminate a large office building or factory with a chemical warfare-biological warfare aerosol.

Were I to end my discussion here, you would probably go away with the thought in mind that we have little or nothing in the way of defense against the covert or overt use of CBR against us. For, thus far, the picture I have painted you as to the possibility of a chemical warfare-biological warfare attack against us and our vulnerability to it has not been an encouraging one. I have not, in my estimation, overemphasized the seriousness of this nor have I credited an aggressor with capabilities it does not now possess.

I have given you these facts for two reasons: First, because there are many who believe that should war come, there is nothing they can do about it. They are not facing the problem realistically and preparing themselves to minimize the hazards of war. Second, because there is a widespread lack of awareness of the seriousness of a CBR attack. The public must be brought to realize that other nations have a strong CBR capability and that we must be prepared to defend ourselves against any type of weapon they might choose to use. It must also be aware that chemical and biological agents are not the cruel weapons of total destruction as they have been branded by many writers. I must add—that nothing about war is pleasant. The U.S.S.R. has been the strongest in branding C and B horrible, as for example, during Korea. Nothing would suit them better than for us to consider them bad to the point of doing nothing about them, thereby making ourselves vulnerable to their attack.

What then would be our best line of defense for the protection of our national community against a CBR attack? There appear to be three possibilities, first, elimination of the risk of an attack by way of effective international agreements. This solution seems highly remote in the light of current world tensions. Second, effective interception of attacking forces by means of early warning systems and a strong retaliatory position. In view of the highly clandestine potential of CBR weapons, this can only be accomplished through the joint efforts of all military services both within this country and among our allies. Third, we must maintain a strong civil defense capability. Civil defense measures designed to control or limit the results of a CBR attack must protect man and his living resources. In this connection we must constantly pursue an information program designed to reduce fear and to provide instruction on first aid and personal defense.

The Chemical Corps in conjunction with other military and civilian agencies has the job of establishing a CBR defensive which will be second to none. However, in this age of increasing momentum in world tensions and rapid technological advances, time is a controlling factor. We must constantly forge ahead in all our research and development if we wish to maintain world leadership.

Our basic problem is to provide the individual fighting man with adequate protection against chemicals and biologicals without overburdening him to the point that his combat capability is severely affected. In line with this I am pleased to report that our new canisterless protective mask has been fully field tested and standardized and should soon be in production. It will provide the soldier with a more effective and comfortable means of protection. A civilian counterpart has been developed and turned over to civil defense.

We, in conjunction with the Army Quartermaster are giving high priority to developing a three-way permeable system which will make general issue clothing self-indicating to the presence of chemical agents and self-decontaminating and at the same time prevent the penetration of them through the fabric.

Defense against infectious disease is a well-known and age-old endeavor by the medical profession. The problem here is not of preparing to meet something new, but to meet a familiar enemy in overwhelming numbers as could occur in a biological warfare attack. The current immunization program for the military personnel will assist in protecting the soldier from biological warfare. Effective use of newly developed vaccines promises useful protection for military personnel, but the immunization of the entire population of our country against all the diseases which might conceivably be used for a biological warfare attack would not be so easy to perform.

For the great majority of known infectious diseases which are strong candidates for use as enemy biological agents, intensive treatment with one of the broad spectrum antibiotics such as terramycin and aureomycin may abort the infection or limit the illness to 1 or 2 days of mild incapacitation with rapid return to duty. This is with the provision, of course, that such antibiotics are available in sufficient quantities to take care of large numbers of people.

The area of early warning and rapid detection of an approaching CBR attack is of vital importance. Though our coastlines are vast, the Armed Forces are constantly maintaining surveillance against approaching enemy aircraft or ships. The same planes and ships that could carry atomic weapons would also have the ability to dispatch CBR weapons.

In regard to the vulnerability of the food industries to chemical, biological, and radiological warfare agents, a meeting between representatives of the Government and representatives of the Institute of Food Technologists was held in January of this year. It was agreed that though the threat of nuclear weapons is serious, the threat of chemical and biological agents must not be overlooked. The Department of Health, Education, and Welfare has requested additional funds for further research, training, and educational material. This group reiterated that the defense of the United States depends on three major elements: diplomacy, military defense, and nonmilitary defense.

Some of you here are associated with the food industry in some capacity. I am sure you are aware of the great distrust that can be caused when contaminated foods get on the market and illness and death occur. As an illustration, recently a small lot of contaminated fish was shipped out of Philadelphia. A number of people became ill and three died. The alarm went out to cities on the east coast and for the next few days the market was glutted with fish because people were afraid to buy it. This happened, incidentally, in the height of the Lenten season. Imagine the havoc that would be created if saboteurs deliberately contaminated packaged goods and caused a full-scale epidemic. At present, no feasible method is available to rapidly measure and identify chemical warfare and biological warfare contaminants in foodstuffs. Chemical poisons can be detected in approximately 24 hours by injecting the substance in mice. In the case of biological warfare agents, the vast majority of these would not be revealed in the mouse test. The research being done in your laboratories in early detection of contaminants in foods would be of great value to us in developing a more rapid system of detecting chemicals or biologicals. We must pool our resources so that we can make the most rapid gains possible. I ask you to give this special consideration. I am confident that you have the technological know-how to assist us in developing a more rapid early detection of chemical and biological agents. You will be doing a great service, not only to the Chemical Corps, but to the entire national defense program.

I have touched only a few phases of our chemical and biological defenses and some of the problem areas in which I feel you can be of assistance. Our problems are your problems.

The greatest deterrent to war is to have such a capability that an enemy would refrain from attacking for fear of our retalia-

tory measures. We, in the Chemical Corps, are not neglecting this area.

Time will not permit me to go into detail about our most recent developments. Rather, I would like to show you a film that will soon be released over nationwide television that will give you a good idea of the overall work of the Chemical Corps.

Meyer London

EXTENSION OF REMARKS
OF

HON. LEONARD FARBSTEIN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. FARBSTEIN. Mr. Speaker, I am pleased to have recorded the event that took place in my congressional district the other night in connection with the dedication of the Meyer London Public School and request the following news item that appeared in the Jewish Daily Forward for March 10, 1959, together with the statements made at the dedication by a distinguished labor leader of my State, David Dubinsky, president of the International Ladies Garment Workers Union, and the Honorable Charles H. Silver, president of the Board of Education of the City of New York, be included in the RECORD:

[From the Jewish Daily Forward, Mar. 10, 1959]

A GREAT MEYER LONDON HOLIDAY THIS EVENING ON THE EAST SIDE

This evening a special holiday will be celebrated in New York on the East Side: a new public school, which was until now identified only with a number "Public School No. 2" will be crowned with the name "Meyer London School," in memory of the beloved, unforgettable socialist leader of workers, Meyer London.

The name "Meyer London" is bound up with the finest traditions of the Jewish East Side, with the Jewish immigration of the '90's and later, which made its home on the East Side, with the young Jewish socialist and trade union movement, which conducted its ideological and economic battles on the East Side. Here were built the first unions; here the great strikes were led; and in all those movements and struggles the great figure of Meyer London shone as leader, teacher, shining orator, and lawyer. Meyer London was the lawyer of the Cloakmakers' Union and of the ILGWU, for which he laid a healthy basis till the present day.

His great accomplishments as a popular leader and the boundless love that he inspired in the hearts of the Jewish masses are seen most clearly in the fact that he was elected as Congressman (three terms) and was the first Socialist Congressman from the East Side. From Congress in Washington his name became well known throughout the entire country. And when Meyer London lost his life in a tragic way, New York turned out for one of the largest funerals that the city had ever seen.

Today, 30 years later, the city of New York agreed to commemorate the memory of one of her greatest sons by naming a children's school after him, in order to educate and inspire the new generations with the ideals of peace, social progress and general progress, to which he dedicated his life and his talents.

But by honoring the name of Meyer London, not only Meyer London himself is being honored but the whole Jewish East Side for which he was such a shining representative. And everybody is therefore invited to come tonight to the celebration and increase the significance of the holiday.

First of all should come the members of the Cloakmakers' Union and of the International, everybody who knew Meyer London personally, and also all who even just heard of his name, because today there is no one in New York, Jew or non-Jew, who does not benefit from the accomplishments and advances which Meyer London devoted his life to achieve.

ADDRESS BY DAVID DUBINSKY

In the early days of our union, we were blessed with such leaders as Meyer London—men whose hearts were with the workers in the dark and disease-ridden sweatshops, men who put their own hearts and minds to work fighting the industrial evils of their day.

It is a measure of their success, though they themselves didn't live to see it, that for the most part those evils have been wiped out.

It is a measure of how far the world can be moved by men with ideals that we are gathered here to honor a leader of workers who, in his time, put their hopes, their dreams, their great hunger for a life of dignity and security into ringing words, words that stirred this very same East Side so that out of its poverty and dirt, its hunger and its hopes, they build their unions and turned those dreams into living reality.

Now we are gathered here, in the heart of his East Side, to participate in the naming of a public school for him; on the East Side where he imbued the immigrant with the spirit and true meaning of being an American; where he implored them not only to get from this country all it had to offer but also to give it the best of themselves.

He would have loved such a fitting tribute.

Meyer London was our lawyer—but he was more than a professional adviser. He was a guide and a counselor to us. He shared not only our problems, our headaches and heartaches; he shared our pain and our suffering in those grueling days when we first fought for the elementary right to have a union, when we fought to get rid of the firetraps and the sweatshops.

He was one of those rare, selfless spirits who lived mainly for the ideas in which he deeply believed. Instead of sending the union bills for his services he sent it contributions out of his own meager funds to help meet its expenses in those days when our union was struggling to stay alive.

He was tireless in advising us in our negotiations with employers, in mapping our strategy, in formulating our policies, in coping with legal problems. At the same time, he had the great gift of the orator. He could arouse the masses of the garment workers at a great rally with his passionate voice and win their confidence.

He was elected to Congress on the ticket of the Socialist Party in 1914, in 1916, and in 1920 from a district on the eastside populated with refugees from Czarism. There he regarded himself not merely as a spokesman for a party but as a champion of all the working people in the Nation.

What a strange kind of Congressman he made. He rose in the Congress to plead for laws to limit the length of the work day, to put a floor under wages, to provide unemployment insurance, to pay pensions to aged workers.

To his colleagues in the Congress these were strange, disturbing demands—bound to be defeated. Impractical. Utopian. Impossible. Dreams.

Yes, Meyer London, in his day, was the great champion of lost causes. Thanks to him, thanks to his vision, thanks to his refusal to believe that America could not provide these humane benefits, his lost causes are now, 46 years later, the very blood and bones of our American way of life.

He had a particular identification with newcomers to this country. The east side of his day was the landing point for millions of immigrants:

I think he would have found a warm satisfaction in the fact that it still is. The poor and the puzzled, the disfranchised and the newcomer—these were his constituents.

Were he still with us, this same east side—with its new people, the new faces, the sounds other than Yiddish—could still be home to him.

More than 40 years ago, he rose in Congress to make an eloquent, impassioned, although hopeless defense of the people of Puerto Rico. He pleaded for the full right of every Puerto Rican to vote because, as he said in words that have not lost their full meaning: "Where men are deprived of the opportunity to give expression to their views through the use of the ballot, they have to use other means."

For 2 weeks of debate, he refused to back down—even when the Congressman from Tennessee cried out: "I wish I could make a motion to expel him from this House."

He argued for the right of Puerto Rican workers to organize.

He asked for serious limitation of Puerto Rican child labor.

He condemned a proposed $3 vote tax which would disenfranchise most of the islanders.

"I challenge your right," he cried to the Congress, "to endow property with the franchise which you deny to man."

On every single amendment that he offered, he lost. But he was not defeated.

Today, Puerto Rico is a Commonwealth within the framework of our United States and we are proud of our efforts to help raise the living standards of our fellow citizens on that island. However, how many people today realize that it was Congressman Meyer London who, about 40 years ago, was among the first to speak up on behalf of the then downtrodden and oppressed people of Puerto Rico. Today, many of the children of those people will be attending the public school named for Meyer London.

There was really no injustice in our country or anywhere in the world which Meyer London did not make his own cause, for his cause was the cause of the plain people everywhere.

When, on June 6, 1926, he was struck down on the streets of New York by a passing car, a great and noble life came to an end.

His service to the garment workers, to working people, to mankind, to democracy is his monument.

His memory lives today not only in his works and as an inscription on this school. It will always live in the hearts of the garment workers, the members of our union who love and revere him. We will always remain grateful to him for his imperishable contribution, in making our ILGWU what it has become today. If it is esteemed and respected today for its accomplishments, this is in no small measure because it was fortunate to come under the influence in its early years of men of the stature of Meyer London.

This school which bears his name will be physical evidence and a constant reminder to all of us today and those who are to come after us tomorrow, of Meyer London's great work. The young people who come here for their schooling are bound to ask who this man was and to learn of his noble life and work right here on the East Side and to take inspiration from his example.

The board of education is to be congratulated for recognizing the meaning and importance of Meyer London and particularly the special meaning which his name bears in

the locality of this very school. Therefore, its choice of name is singularly appropriate.

By giving this school the name of such a great idealist, a champion of justice, and an outstanding American, the board of education has breathed into the brick and mortar of this fine edifice a deep spiritual meaning.

ADDRESS BY HON. CHARLES H. SILVER

Some of you may have heard a fairly popular piece of music known as the "Tenement Symphony"—and, if you lived on the lower East Side, as I once did, you were struck by the title even more than the melody.

For this is a section of our vast city rich in sights and sounds. It is a tremendous orchestra of human emotions, a melting pot of many colors, creeds, and racial strains, a symphony, indeed, that sings of the greatness of America.

Out of these crowded streets rose a multitude of voices that spoke for mankind's conscience, for human dignity, for liberty, and equality: Lillian Wald, Jacob Riis, Al Smith, and so many more.

And a voice that soared as high as any in its devotion to struggling, downtrodden, impoverished humanity belonged to the great social leader and champion of the rights of the people whose memory we celebrate tonight.

I knew Meyer London. I heard him speak on street corners not far from here when he made his bid for a seat in Congress and became the first member of the Socialist Party to serve in the House of Representatives. Children paused in their play; mothers sat on their stoops feeding their babies; tired men on their way home from work stopped to listen and had their hearts lifted by his words.

"My friends," he would begin, "for a little while, forget the things you have come from. Think only of those things we are doing now or what we plan to do in the future. Put the problems of yesterday and the troubles of even an hour ago out of your mind. For, if they remain in your mind, you may leave too little room for the more important thoughts of the present—and of the better future we can build together."

That is where the hopes and vision of Meyer London were fixed; not on the past, but—even then—on today and tomorrow. He was a socialist, burning with a resolve to improve the lot of the working classes, to wipe out the steaming sweatshops and shameful slums. He was a socialist, but his brand of socialism and the reforms he fought for have been woven into the fabric of our democracy.

He had come to this country at the age of 20. His father was a rabbi who earned his living by publishing a small Yiddish newspaper on an old-fashioned hand printing press. Meyer earned his own living by teaching—tutoring children in their cramped homes and lecturing at the old Hebrew Institute, which later became the educational alliance. He worked all day and studied law, like an East Side Lincoln, late into the night.

And all the while he looked around him at the people of this new land of promise who had not found the streets paved with the gold they had come to seek.

And he listened to the heartbreak of the toilers at the sewing machines and cutting tables, the peddlers and small store keepers, whose daily striving for existence began before sunrise and continued until long after dark.

Meyer London did not like what he saw and heard. His heart bled for the child whose hours were spent in a factory instead of a classroom. His sense of justice smarted at the plight of the stalwart immigrant who earned $2 for a day and a half of backbreaking, nerve-racking labor. His soul was sick at the sight of a dozen men, women, and children working in a single, airless loft to the light of a small gas mantle. I know, I was one of them.

Then because he did not like what he saw and heard, because he was angry and determined to do something about it, Meyer London lifted his great voice in the Halls of Congress. He changed the face of the East Side. He changed the thinking of the Nation. He altered the attitude of the world, and won a new respect for the importance and dignity of labor.

In his wake came the Dubinskys and the Stolbergs, the Potofskys and the Naglers. In his image were the Hillmans, the Gompers, the Zangwills—children of the ghetto, they showed the way to a life without ghettos, to labor without degradation.

The legacy of Meyer London has been realized in wide, sunlit factories, in sensibly planned housing projects, and in bright, gleaming, inspiring schools like this one.

Meyer London would have loved this school. He would have proudly inspected its magnificent auditorium, its impressive classrooms and spacious recreational areas—and he would have been proud that it bore his name.

I don't think he would have listened to the penny-pinching advocates of four bare walls and a blackboard. He would not have condoned any corner-cutting cutrate school construction. Rather, I feel certain he would have championed the cause of the best possible educational facilities for the children of New York. And he would not have hesitated to point out that the only schools good enough for those children are the very best we can build, and they are worth every cent they cost.

For that is the philosophy of our distinguished mayor, the best friend that the children of New York ever had. I am proud and grateful that he is here on this platform to participate in this dedication as he has in so many others over the years.

However, he is not only on hand when a school is completed and in use but frequently in the course of its construction. I have known him to accompany me many times in the early hours of the coldest mornings on inspection tours of schools.

I salute you, Mr. Mayor, for talking of bigger and better schools, and knowing the need from first-hand dedicated observation.

I know that I can make the same expression of appreciation for our energetic president of Manhattan, Hulan Jack, a tireless champion of education and a man dedicated to the best interests of the people of Manhattan.

This beautiful school is a symbol of the enlightened age for which Meyer London worked and fought. Fine labor organizations have followed in the footsteps of his crusade. Our workers of today know the fruits of leisure as well as toil. The doors have been flung wide to education and culture. The windows of a better world are open to health and happiness, not only here on the East Side, but wherever people strive together for the improvement of their community.

This is the heritage of those fortunate young people who will study within these walls. May they be spurred on by the memory of his courage and foresight.

As I dedicate this school, on behalf of our entire board of education, in reverent memory of this beloved man of the East Side, I feel that his great spirit is among us, an invisible guest of honor at these ceremonies. Words are too feeble to express what is in our hearts as we recall this man who walked these streets, upright and without reproach. His name is cherished not only by those of us who walked here with him, but by generations yet unborn—the people he served so well, the multitudes he freed from slavery of mind and body.

Educator, emancipator, champion of the least of men, he spoke with the voice of a prophet:

"Put the problems of yesterday out of your mind. Leave room for the better future we can build together."

That is the credo I give to the parents and the teachers and the children of this school who must guard the glory of its name—because it is named for Meyer London.

The Lawyer and the New Dimension of Space

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a significant address on the international control of outer space, delivered on April 14, 1959, at the Inter-American Bar Conference in Miami, Fla., by a distinguished Washington attorney, Ralph E. Becker. I also wish to include an editorial on Mr. Becker's speech, published in the St. Petersburg (Fla.) Times.

Mr. Becker suggests that agreement on the use of outer space among the nations of the Western Hemisphere may serve to remind world opinion that the peace of the world demands Soviet cooperation and would give the free world the advantage of bargaining from prior established positions.

Mr. Becker brings to this subject the experience of his service on the space law committee of the American Bar Association and as chairman of the interplanetary space committee of the Inter-American Bar Association. I commend his analysis and proposals to all who are interested in the resolution of these difficult problems:

THE LAWYER AND THE NEW DIMENSION OF SPACE

(By Ralph E. Becker)

Unskilled in the physical sciences, the lawyer stands in awe and wonder at the recent extensions of man beyond this terrestrial globe. Largely unfamiliar with the principles and applications of astronautics and missilery we lawyers are, in a sense, mere spectators of the scientific wonders now evolving as outer space is conquered.

However, appreciating that new physical achievements cannot serve man's best interest until circumscribed and directed by sensible rules and regulations, the lawyer has for some time realized the need for applying his specialized talents to the problem of space exploration and control. Many astute lawyers have already grappled with various facets of this task. The names of John Cobb Cooper, Charles S. Rhyne, David F. Maxwell, Andrew G. Haley, Rear Adm. Chester C. Ward, Arnold Knauth, Myres S. McDougal, Leon Lipson, Eugene Pepin, Loftus Becker, Spencer Beresford, George Feldman, and John Johnson come readily to mind. The International Law Association, the American Bar Association, the American Society of International Law, the Federal Bar Association—our own Inter-American Bar Association—and several State bars have either established permanent committees or are

undertaking special projects for the study of space law. In the educational field, the Universities of Oklahoma, Virginia, Georgetown, and McGill have initiated, or are initiating space law departments. My associate, Prof. Leo A. Huard, of Georgetown University Law Center, is one of the pioneering academicians in this movement. To all, and in particular to the U.S. lawyers, I commend Professor Huard's recent speech before the March conference of the American Rocket Society in New York, entitled "The Impact of Space Exploration on the American Lawyer." Therein Professor Huard dealt with some very practical aspects of the relationship of space to domestic U.S. law as opposed to the international problems.

It is into this latter more explored field of multinational space problems that I dare to tread again today.[1] While the focus of attention has been on the actions and attitudes of the two countries in the avant garde of space exploration, the United States and the Soviet Union, all nations should have a present interest, and most will have a practical part, in the harnessing of outer space movement. You cannot judge your own nation's prospects of contributions to space conquest by its size, military importance, or relative material well-being. A recent report by the Select Committee on Astronautics and Space Exploration of the U.S. House of Representatives states that a great number of nations are likely to acquire the capability of using space at an early date. The report goes on to indicate that although many of these nations would be numbered along the less substantial military powers, their contribution might make possible a balance in the power politics of the major nations. As a parallel by which to gage the probability of a country's participation in space, we need only recall that the two-nation monopoly of the atom, which at first seemed unbreakable, is now shared by an ever-increasing number of countries.

Independent of any consideration of national participation in space exploration, there are overall problems which demand the consideration of all lawyers and of the organized bar of the Western Hemisphere. For example, every country should be immediately concerned with the problems of liability attending the return to earth of "hardware" sent into outer space. There are solid indications that the heavier pieces of hardware which reportedly burned up in space did not entirely disintegrate and that some chunks are still in orbit. Of more practical significance, we can recall the documented incident in which an Air Force Snark missile fired from Cape Canaveral went out of control and was lost somewhere over the interior of Brazil. As ever increasing launchings are made, we must face not only the problem of regulating traffic but of fixing liability for accidental injury. This legal problem is compounded by the divergent systems of jurisprudence existing in the various nations of the world. Not only does the Anglo-American concept of liability differ from that of the Communist countries, but under the Napoleonic Code, which has exerted a strong influence on Germanic and Latin American jurisprudence, liability without direct fault is not, as in the United States, looked on favorably. These are but a few indications that legal control of outer space is of immediate concern to every country represented here. Further evidence is shown by the fact that the United Nations ad hoc committee on the peaceful uses of space, consists of representatives of four countries in this hemisphere, namely Argentina, Brazil, Mexico, and the United States.

I would like to applaud the action of the officers and membership of this association for their initiative in establishing a special committee devoted solely to the study of space law. The remainder of my remarks will be directed to suggesting possible areas of space law and regulation which the special committee and the entire membership of this association might wish to study.

Underlying the entire problem is the question of whether or not it is now timely to attempt the establishment of a meaningful and comprehensive plan for space control. Many experts oppose the hasty creation of rules of space control because they believe that we do not as yet have sufficient knowledge of the physical nature of space to draft intelligent and meaningful norms. These men believe that uninformed rule making could prove more injurious to international peace than no rules at all. Their belief is predicated on the assumption that more sophisticated means of space exploration might outdistance and make obsolete regulations formulated too early to anticipate later developments. The contrary school of thought argues that any movement is more susceptible to control and compromise in its infancy than at a later date when accepted modes of operation have become entrenched in the policy of any given country. As an analogy we need only to view the controversy in the Antarctic where, because of long standing claims and physical encampment, we have reached an impasse in resolving conflicting contentions.

I am a proponent of the view that to delay the establishment of international rules will make later efforts to draft such rules more difficult. Particularly do I believe this a sound position when we consider that, as in so many other areas, the resolution of this problem demands an accord not so much between individual countries, but between the two major forces of the world, the free nations and the Communist bloc. We have learned, all too well, that it is impossible to strike a bargain with the Communists unless it is done before they can negotiate from a position of established strength. If the Soviets believe that, at this point in time, they cannot completely control their own destiny in space, they may be willing to join in concerted action with other countries. By so doing, the Soviets could perhaps proceed in an unimpeded manner to advance their own knowledge and operations in space without interference from competing powers. However, such rules and regulations drafted by many nations in concert might well provide safeguards against the Soviet use of space for other than peaceful purposes. If a complete safeguard could not be arrived at because of Soviet objection, still a warning and identification system to mitigate any military advantage of space flight might well be agreed upon. If the Soviet then outstrips the compass of early space rules, the free world would have the advantage of bargaining from prior established agreements. If such bargaining proved unsuccessful, we would still have the weight of world public opinion as a lever to ensure that the Reds continue to honor a pact implying an agreement to agree to multinational space control.

This problem of achieving space control accord with the Communists has direct bearing on our uppermost consideration, the security of the Western Hemisphere. There does exist a possibility of nuclear ballistic warfare in the immediate future during a period when it is admitted that neither the United States nor the Communists are in complete control of the hardware they launch. Even if missiles are directed at the United States only over the top of the world, it is not inconceivable that one or more could find its final resting place in the Caribbean or South America. In a higher order of probability is the firing of missiles from submarines to the east, west, or south of the United States. Any miscalculation from these areas could very well result in damage to Central and South American countries. Of course it hardly needs to be said that even without physical damage to your own countries, any injury which seriously incapacitated the productivity of the United States would greatly reduce the security of this entire hemisphere.

Military implications aside, there is the very immediate danger of reconnaissance satellites invading our sovereign privacy. It appears certain that both the United States and the Soviet Union will very shortly launch satellites with effective electronic and photographic means of surveillance. We do not want nor can we afford to expose our countries to the prying Soviet eye. Another immediate threat is the Soviet use of communications satellites. As recently as last week, a Soviet Ministry of Communications proposed the development of a television-relay satellite as part of the 7-year plan. While we must certainly welcome Soviet utilization of space for such peaceful purposes, I note that in the early sputniks the Soviets utilized radio frequencies which had for many years been in use by commercial radio around the world and by the U.S. weather broadcasts. Indiscriminate and uncontrolled use of radio frequencies might not only prove irritating but could possibly jeopardize our early warning alert system.

An interesting variation on this theme—one which all Western Hemisphere lawyers should note—is provided by the recent U.S. Project Argus tests. In those tests nuclear bombs exploded at 300-mile altitudes seriously interfered with radio communicattions over a substantial segment of the world.

Consideration of the dangers to us of communist use of space at once brings to mind the benefits to the Western Hemisphere which can result from close inter-American cooperation on space. Our so-called talking satellite demonstrated the feasibility of using space vehicles for the furtherance of communicattion. Not only may satellites increase the efficiency of radio, television, and telephone transmission, but it has even been suggested that a "space pony express" system will be devised. The latter project envisages the coding of letters and their relay through a satellite to a decoding and printing station on another continent. This system would not only result in a 1- or 2-day mail system anywhere in the world but would relieve a great deal of the burden on the international airlines which carry most of the mail.

The development of a satellite communication system focuses attention on an important role which the countries of the Western Hemisphere can play in the development of space exploration and utilization. In order to have an effective communications system the orbiting vehicle is but one element necessary for such a project. Regardless of whether your own countries will soon possess the means of orbiting a space vehicle, it will be necessary to construct sending and receiving earth stations as the other essentials ingredients. As I have already noted, space communications have both military and civilian applications. Satellite stations can serve to relay not only defensive alerts but can shrink the time involved in disseminating valuable commercial information. Perhaps, even more importantly, they may serve to acquaint all of our countries with the mores and cultures of their neighbors through the dissemination of live television programs. Every country of the Western Hemisphere must contribute to this mutually advantageous aspect of the space age. It is our duty, as members of a responsible profession, to see to it that action to that

[1] "The Impact of the Atom and the Satellite on the Law and the Lawyer"; speech by Ralph E. Becker at the Inter-American Bar Conference, Buenos Aires, Nov. 15, 1957.

end is quickly undertaken in our respective nations.

We have made an intelligent start toward the exchange of ideas and programs representative of each country's social and cultural achievements. Imagine the great strides to mutual understanding in this hemisphere which would result from being able to view live television transmissions between the various countries of the Americas. There is no more effective media capable of reaching a mass audience than the live television broadcast. We, in the United States, could enjoy the wide panorama of Latin life from the bullfights in Mexico to the opera in Buenos Aires. Similarly, the peoples of Latin America might have a better understanding of the United States from day-to-day exposure to such programs as Meet the Press, the World Series, Wyatt Earp, the Jack Parr Show, the Metropolitan Opera, and the New York Ballet.

Another space development of very practical and immediate consequence is the, soon to be realized, use of satellites for weather information and, perhaps, weather control. If as successful as anticipated, accurate weather information acquired in this way and applied to commercial and agricultural uses might be one of the great economic boons of the 20th century. Accurate, long-range weather forecasts would also be a material aid to aerial and sea navigation and the scheduling of air and sea travel. Needless to say, it would provide ample time to take precautionary measures in advance of a storm so as to minimize damage.

I believe that in thus reducing our thoughts of imaginative space exploits to the day-to-day problem of weather and communications, we come to realize not only the importance and value of international cooperation in this field but also find an answer to those critics who condemn the great expenditures necessary to conquer space. Sir Clement Atlee, former Prime Minister of Great Britain, had an article in the American press last week urging that we divert the great funds now being expended for space exploration to humanistic projects for the betterment of mankind on earth. Sir Clement's praiseworthy argument cites the great poverty which prevails in many parts of the world and urges that economic help to underdeveloped countries will win us more friends than will our most dramatic space exploits. I would like to offer a refutation of that contention by stating that we have pursued, and will continue to pursue, an extensive program of economic and other assistance—a program which far outstrips in scope and magnitude all similar efforts by any other nation, even the efforts of the Soviet Union. We must remember, also, that in this hemisphere the most important thing is not aid but cooperation. We must work together since the security of each nation is dependent on the security of all. Large or small, the primary interest of each nation of the Western Hemisphere in space developments is the security of the whole hemisphere. No nation can guarantee this security alone.

The former Prime Minister seems to overlook the threat posed by Soviet control of outer space and the real benefits to mankind resulting from the peaceful uses of space. I have alluded before to some of the ways in which a conquest of space can aid all mankind. We must always remember that not only does Soviet space activity pose a military threat to the free world, but also that their accomplishments have captured, and are likely to continue to capture, the imagination of the entire world. Inasmuch as we are in an ideological struggle with the Communists, we cannot afford to allow them to steal another march on us in space and thereby leave the impression that the Communist system is more apt to spawn new and imaginative scientific accomplishments. Space advances through inter-American and world cooperation afford the free world an excellent opportunity to devise a means of defense against present and future Soviet military capabilities. Such cooperation also provides a realistic means of breaking down the barriers of misunderstanding between peoples of every degree of political and sociological conviction.

I would like to sound a warning and pose a challenge to the lawyers of this association. The scientific communities of our countries are bursting with new ideas and realizing new scientific breakthroughs weekly and monthly rather than once a decade, or a century, as was the case in the past. Regrettably, only a handful of our lawyers have taken steps to educate themselves in the rapid scientific advances in the area now under discussion. We are catching up, but there is still a great deal of work to be done before space law and space science stand on an equal footing. I caution you gentlemen again that the scientists of your own countries, even without all of the funds available in the United States, may through international exchange of ideas and methods leave the law and the lawyer far behind. Your nations possess daring and resourceful scientists who, I predict, will bring Latin America very soon to an active and meaningful role in the development of outer space. While our major problem, security against Communist threats, demands full cooperation, there will inevitably develop, as in every field of human endeavor, differences between the countries in this hemisphere in the execution of our cooperative space program. We must take care that such differences do not cause the collapse of these cooperative efforts to develop a sensible plan for space control and regulation. It is our obligation as the draftsmen of laws and regulations to ensure that wherever the scientists lead us in space, we shall be prepared to direct their physical achievements to the best interests of our national and international aspirations and welfare. There is today a great deal being done on every frontier of human endeavor to further mutual economic advancement and common understanding. This is a part of the overall effort which we, in the Americas, have always made to preserve human rights and maintain the dignity of man. Cooperation among our countries in space activities should be considered merely as the newest path to this ultimate goal. An intelligent and coordinated approach to the problems of space law promises to further these ends and to advance our cause of real and understanding interdependence among the nations of this hemisphere.

[From the St. Petersburg (Fla.) Times, Apr. 19, 1959]

DAWN OF TOTALLY NEW LEGAL CODE

So far as history records, man has been sufficiently civilized to have some sort of social structure for something like 10,000 years.

In those earliest days, this was merely a simple family tribe, slowly expanding into what historians call a gentile system.

Even in those most primitive organizations there existed law. At first this was nothing more than the rules prescribed and enforced by the patriarch of the tribe. As time passed, however, the rules took on the force of custom, being handed down from generation to generation. And from being simply the dictate of a single leader, new rules were formulated by tribal councils.

These were true law, even though it was many centuries before they were written down, codified, and became a legal system.

Followed then Babylon's Code of Hammurabi, the Mosaic laws of the Hebrews, the Laws of Manu in India. Next came the laws of Solon and Lycurgus of ancient Rome and, in Justinian's time, the great Corpus Juris Civilis.

When our own Anglo-American law began to develop, it stemmed not only from the rules of the "witenagemot," which were the councils of wise men of the tribes of Angles and Saxons, but also, from the Roman invasion of Britain and the triumph of William the Conqueror, it acquired all the great body of law which had sprung up through thousands of years of civilization in the Mediterranean basin.

It is out of this vast warehouse that came the laws we live with today. Our own Constitution of 1789 stemmed directly from these sources.

William Bennet Munro wrote of the delegates at that constitutional convention that "they would no more have dreamed of trying to create a new law than they would have tried to create new skins for themselves." Our Constitution, he said, "was woven on the roaring loom of time."

Therefore, in a very real sense, no man, no group of men who lived at the same time, ever created law. All that Hammurabi did, or Solon—whose name we today use as a common noun in referring to the "solons" of Congress or the legislature—was to clarify and organize the body of law that already existed.

So today it is astonishing and exciting to find that man at last does have an opportunity to create a whole new body of law, for the first time in all history.

The occasion and opportunity? Nothing more than the age of space.

Here, at last, is a field in which absolutely no precedents exist. Here is a physical area, a "piece of geography," where man has never lived, never owned property, never had any rights.

The lawyers of the world—and it must be of the world and not of any nation or group of nations, if utter chaos is to be avoided—have an absolutely blank statute book into which they can start writing.

This challenge has not been overlooked by members of the bar. In last week's Inter-American Bar Conference at Miami this topic was subject of a paper delivered by a Washington attorney, Ralph E. Becker.

Mr. Becker faced the reality of the world as it exists today—and the difficulties which the free West has in dealing with the communistic East—and urged that the bar of our half of the world lose no time in creating a set of international rules governing space so that we shall have something with which to bargain with the Soviet.

There is an infinitude of problems to be considered and dealt with in establishing a body of space law, Mr. Becker pointed out. Even as modest a beginning in the conquest of space as we have already achieved makes some of those problems immediate.

We agree with the assertion of Mr. Becker it is the bar's "obligation as the draftsmen of laws and regulations to insure that wherever the scientists lead us in space, we should be prepared to direct their physical achievements to the best interests of our national and international aspirations and welfare."

Likewise we think it fitting for the lawyers of the Western Hemisphere, as the geographically largest repository of human freedom, to assume the leadership in this vital exploratory work.

But in the long run—and not too long, at that—this is a task that only United Nations is large enough to deal with. There must be only one law for space.

If the members of the Inter-American Bar Association, working through the Organization of American States, which is an arm of United Nations, can lead the way to world-wide agreement in this new concept of law, it will have made a priceless contribution to mankind.

Nixon Champions the Rule of Law

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. FULTON. Mr. Speaker, Vice President NIXON has advocated a world rule of law to replace the rule of force. This idea is of such importance to my colleagues in the Congress and to the American people that I recommend the following editorial of April 27, 1959, in Life magazine to them:

NIXON CHAMPIONS THE RULE OF LAW

An idea championed by Vice President NIXON last week can give new strength to U.S. foreign policy and change the fate of nations. To the Academy of Political Science, NIXON said, "The time has now come to take the initiative in * * * establishment of the rule of law in the world to replace the rule of force." He made two specific recommendations. One, already promised by the President in January, would revitalize the World Court by widening our official view of its jurisdiction. The other would name the Court as umpire of any future agreements between East and West (as for example over Berlin).

These two proposals are signs of a major new administration campaign. Its aim is to hasten the day foreseen by the late Senator Taft, whom NIXON quoted. "I do not see how we can hope to secure permanent peace in the world," said Bob Taft, "except by establishing law between nations and equal justice under law * * * the time will come when public opinion will support the decision of any reasonably impartial tribunal based on justice."

The World Court is certainly a reasonably impartial tribunal, but unfortunately also the idlest bench in the world. It has decided only 10 cases in the last 13 years. A primary reason for its scandalous neglect lies right on the doorstep of the United States.

This reason is the Connally amendent, a reservation to the terms by which we accepted the court's jurisdiction in 1946. The court neither has nor wants jurisdiction over essentially domestic disputes; but the Connally amendment makes the United States sole judge of what is domestic and what is not. This is not only bad law (the American Bar Association has long opposed the Connally amendment) but bad foreign policy, with a built-in boomerang effect against U.S. interests. One example: Panama recently decided that its territorial waters extend 12 miles from shore, thus blanketing the Canal Zone's 3-mile limit. Our natural refusal to recognize this claim should be accompanied by a prompt move to court. But although Panama has no Connally amendment, it can invoke ours if if we are a party to the suit, call the 12-mile limit an internal matter and leave us no legal answer. Until the Connally amendment is changed, as NIXON urges, our bad example will keep the court in idleness and frustrate any U.S. claim to be a champion of law in world affairs.

The State Department has a very long list of cases in which the Communists have violated treaties and agreements. Many of these (one flagrant example: the Polish elections of 1947) would have made good law suits had the legal channels been usable. NIXON's second suggestion would make such channels usable in future agreements. Under it the court would decide cases of legitimate disagreement over the meaning of a treaty; and in cases where the Soviet violation was intentional, it could at least keep the legal record clean.

In his last public speech as Secretary, John Foster Dulles said: "Those nations which do have common standards should, by their conduct and example, advance the rule of law by submitting their disputes" to international tribunals. The cause of law among the nations, like the earlier cause of law on our western frontier, is one which it lies deep in American beliefs and traditions to extend. It is a natural cause for U.S. foreign policy and should have become a bold and prominent part of that policy long ago.

One of the most tireless workers for the cause of law has been Charles Rhyne, past president of the American Bar Association. Said Rhyne last week: "The whole world clearly understands that the Communist peace plan is to make the world 100 percent Communist. But few people can give you a clear statement of the objectives of the free world's peace plan." Arms race, deterrence, NATO, SEATO, mutual aid, etc.—all these defensive necessities are no substitute for a clear and universally shared world goal. The rule of law is such a goal; and NIXON'S timely championship should bring it closer.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Air Force and the Space Age

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, April 29, 1959

Mr. JACKSON. Mr. President, I am pleased that last week the Senate confirmed the nomination of Maj. Gen. Bernard A. Schriever, USAF, to the rank of lieutenant general. I have watched the progress of this brilliant and much-decorated officer of the U.S. Air Force. General Schriever's work, his capability, and his understanding of the complex problems which have faced the Air Force during a time of vast progress, have impressed me.

Early this month, General Schriever spoke before the Seattle Advertising and Sales Club at Seattle, Wash., the State I have the honor to represent in part. He discussed "Your Air Force in the Space Age." Because of the significance and timeliness of the subject, I feel his speech should be brought to the attention of a wide audience. Accordingly, Mr. President, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

YOUR AIR FORCE IN THE SPACE AGE

(Address by Maj. Gen. B. A. Schriever, commander, Air Force Ballistic Missile Division (ARDC), to the Seattle Advertising and Sales Club, Seattle, Wash., April 10, 1959)

It is a pleasure to have this opportunity to talk to you tonight about the Air Force ballistic missile and space program. I have some very fond personal recollections of Seattle, not the least of which is of the wonderful welcome I received here last year when I had the privilege of taking part in your independence day celebration.

In today's tense world situation, it is the obligation of every American citizen to inform himself in depth about the great issues of international relations, economics, and military strategy that confront us. In a democratic society such as ours, we are all participants in the events that shape our national character. We help determine not only our own future, but the future of the entire free world as well.

The cold war, with all its agonizing decisions, is not just the concern of the military alone. It is everybody's business. You who are in the communications profession well know the truth that in our country it is opinions and attitudes, conceptions, and misconceptions, the energy or the apathy of the people that, in the long run, determine how a new idea or method or product will fare in the great American marketplace.

In the field of national defense we are literally involved in a life or death struggle. It is our job—yours and mine—to do everything in our power to place the facts of the cold war squarely before the public. In order to participate intelligently in the events of our challenging times, the American people have an urgent need to know—to know not just isolated facts, but facts with meaning, facts in context.

The people of Seattle have for some time been deeply involved in the development of the Nation's deterrent force. Boeing Aircraft Co., makers of the B–47 medium range jet bomber, the B–52 long-range jet bomber, and the KC–135 jet tanker, is one of the "blue chip" organizations on which the Air Force has come to rely.

Boeing—and all of Seattle, too—entered the missile age a few years ago with their Bomarc interceptor air defense missile. Last year we in the Ballistic Missile Division were pleased to welcome Boeing—and Seattle—into our family of contractors as a member of the Minuteman ICBM team.

The State of Washington is also making valuable contributions to the weapons development program of the Navy at the Bremerton Shipyards and at the Applied Physics Laboratory, and to the atomic energy program at Hanford.

So, in all sincerity, I salute the people of the great Northwest and especially tonight the vital community of Seattle for their contributions to our national security. Now I would like to give you a bird's-eye view of the Air Force ballistic missile and space program.

The development of the Air Force's long-range ballistic missiles—Atlas, Titan, Thor and Minuteman—is the largest technical development program in the Nation's history, exceeding even the Manhattan project of World War II. Expenditures for fiscal year 1960 will approach $2 billion.

Thirty prime contractors are involved in the program along with over 200 major subcontractors and about 200,000 suppliers and vendors. The Nation's leading scientists have served as advisers on technical problems. These elements, along with the military management agencies, constitute the unique government-industry-science team that was organized to develop the long-range ballistic missile from scientific theories to operational weapon systems.

In the past few months, the 4½ years of planning and testing and building have begun to pay off. Here is a brief report on the present status of our major projects:

The ICBM Atlas successfully flew the full 6,000-mile distance several months ahead of its original schedule, it will be ready for operational use at Vandenberg Air Force Base in California this summer. Atlas, an intercontinental range ballistic missile, is one of the so-called heavy class. It is capable of delivering very large warheads at very long ranges.

A second and more advanced heavy-class ICBM, the Titan, has begun its flight test phase at Cape Canaveral, Fla., with three 100 percent successful flights.

These three successful first flights establish a new record in missile testing. They are testimony to the ever-growing confidence we have in our designs and our procedures.

The Titan was designed at the outset to be stationed in underground sites, where it will be able to survive a savage nuclear attack.

I want to emphasize at this point that both of these heavy-class ICBM's, Atlas and Titan, have a tremendous growth potential. Their range can be greatly extended beyond the nominal 6,300 miles that is usually quoted.

What all of these future improvements add up to—and again I stress that they are already scheduled into our program—is the fact that our heavy-class ICBM's can have a long and extremely valuable life in the arsenal of the Strategic Air Command. Probably throughout the 1960's this would be much longer than any modern weapon system to my knowledge.

Our third ICBM project is the Minuteman. The Minuteman will enjoy certain unique advantages: It will use solid propellants. It will be simpler than its forerunners. It will be operated by fewer personnel. Minuteman missiles will be placed in underground shelters and left unattended for long periods of time, but ready to be fired from remote control centers on a moment's notice. As alternate means, Minuteman missiles can be floated on barges or towed on trailers or railroad cars to create a constantly moving, widely dispersed striking force that would be virtually impossible for an enemy to locate.

The Minuteman, moreover, gives promise of being a major economic breakthrough. This missile, we believe, will mark the first case where a more effective weapon will be produced at a lower cost than its immediate predecessors. Good news for taxpayers.

The Thor, an IRBM, is capable of delivering a heavy warhead to intermediate ranges of 350 to over 1,700 miles. The first squadron has already been deployed in the United Kingdom.

Well, there you have a brief status report. Now let me go back and say a few words about our management.

Undoubtedly one of the most challenging aspects of the assignment that was handed to the Ballistic Missile Division when it was formed in 1954 was the conquest of what we call lead-time.

We all know that a central characteristic of new science and technology is the speed with which it makes obsolete both commercial products and military weapons. We often see them becoming obsolete, even while the ink is drying on their design blueprints. This means that we have to find ways and means to shorten drastically the length of time between the idea for a new product or weapon and its delivery to the user. This interval between conception and execution is what we call lead-time. We are learning that the ability to compress or shorten this lead-time today determines, in large measure, the very ability to survive. This applies to a company in the conduct of its business, or to a government in the conduct of its national defense.

This ever increasing importance of lead-time was emphasized in the 1958 Rockefeller Report on National Security from which I quote:

"A nation can achieve a basic advantage if it is able either to develop or to produce weapons more rapidly than its opponents. One of the major weaknesses in our strategic posture has been our exceptionally long lead-time."

To beat the clock, we know we would have to proceed with all aspects of the program concurrently; that is, to move forward simultaneously with research, development, testing, production, the building of missile bases, crew training, and everything else.

Second, we would have to streamline our administrative and control procedures, cut

redtape, and establish a new organization which could centralize and draw upon military, scientific, and technical resources for the analysis and solution of unprecedented problems.

Third, we had to project and build the missile as a whole, not around shelf hardware as it existed in 1954, but as it could be expected to be in 1958. We see, then, that we were everywhere confronted with the necessity to go far beyond the experience of the time.

The more traditional way of developing a new weapon has been to build it piece by piece, in a series of consecutive time-consuming steps. To give you some idea of the complexity and scope of the task facing the Air Force in carrying out its ballistic missile program let me drawn an analogy between our management process of concurrency and the manufacture of an automobile.

Now all of us know how complex the job of an automobile manufacturer is in the design, the production, and the distribution of a new model. This takes a tremendous amount of planning, not just for a year ahead, but for several years. Now just imagine for a moment how much more complex the automobile manufacturer's task would be if, at the same time he was designing and producing his automobile, he also had to lay out and build a network of roads, gas stations, garages, automotive supply houses, and train all mechanics and drivers. Yet, this is just what he would have to do if they did not already exist, i.e., if he wanted to sell cars.

Now this is exactly what we had to do in the ballistic missile program; for, in 1954, nothing existed except the desire.

Our management concept of concurrency—together with management techniques for identifying any delays in the program before they happen—have enabled us to cut in half the time previously required for the development and production of weapon systems far less complicated than the ballistic missile.

In other words, if we had followed the more customary step-by-step sequence of weapon system development and production, it would have taken us some 10 years or more, rather than 5 years, to have our Atlas ICBM where it is now; namely, on the threshold of operational readiness.

Now a word about space. The billions of dollars, about $2 billion per year now, which have gone into the ballistic missile program since 1954 provide the springboard to space. Without it we would be at least a decade behind the Soviets.

Looking to the future, we can safely predict that space vehicles, for both military and civilian purposes, will exert an ever-growing influence upon our lives. The hundreds of millions of dollars appropriated by our Government for the conquest of space since the first sputnik was launched just 18 months ago, dramatically illustrate the revolutionary effect of an onrushing science and technology upon national security and business enterprise.

Within the next 10 years, outer space is going to be a multibillion dollar market. The rewards will go to those managements who prepare themselves to cope with the challenges of the new science and technology in terms of time and of space. Already in prospect are weather satellites, communications satellites, planetary rockets, and manned space ships—all of which will see the rise of entire new industries, and the rise of new lines of defense for freedom against the competitive challenges of communism.

Earth satellites, space probes, and interplanetary vehicles are no longer comic-strip fantasies, but actual hardware. The foundation has already been laid for future developments. The scientific and technical know-how, the facilities, the test stands, and, just as important, the management organizations are in being today to build upon that foundation.

As we move to meet new tests of our national strength and stamina, we should keep in mind the point of view recently voiced by Secretary of Defense McElroy when he said, and I quote:

"We know you can't spend deficit time and you can't borrow minutes. Our potential enemies have exactly the same amount of time we have. He who uses his moments most wisely will be the winner in the cold or hot war of the future."

We can use those moments most wisely only when we constantly reaffirm our faith in freedom. It is the spirit of freedom which has enabled us as a people to have the courage and resourcefulness to constantly adapt ourselves to changing conditions economically, politically, militarily, and psychologically at home and abroad. In terms of the new impact of science and technology, the spirit of freedom demands that we constantly reassess the status and prospects not only of our commercial products and military weapons, but also of our policies, plans, and procedures in business and Government alike.

Now as a final word—our standard of living tends to make us complacent. I can assure you we have a tough adversary. He doesn't sleep and he works and works hard, so did our forefathers. His standard of living is much lower than ours, but it is improving and quite rapidly. Don't sell him short. To win this struggle cold or hot—and individual freedom is at stake, we must not only be prepared to work as hard as they do—we must actually work as hard and we must be prepared to sacrifice. Being both an optimist and a patriot—I am confident that the American people will rise to the challenge.

Splendid Soil Conservation Program in Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 29, 1959

Mr. WILEY. Mr. President, today I am happy to invite attention to the splendid progress in planning and installing soil and water conservation measures in Wisconsin.

During 1958, our Badger farmers set a new annual State record for conservation practices. Our 375 soil conservation district supervisors have reported splendid cooperation by the farmers and the agencies administering these programs.

Today, I received a letter from Mr. M. F. Schweers, State conservationist, Soil Conservation Service, in Madison, pointing out highlights of the outstanding accomplishment in soil and water conservation practices in Wisconsin.

Recognizing that the improvement and further expansion of such practices is necessary to conserve our natural resources, I ask unanimous consent to have excerpts of Mr. Schweers' letter highlighting the fine program in Wisconsin, printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Madison, Wis., April 27, 1959.

Hon. ALEXANDER WILEY,
U.S. Senate.

DEAR SENATOR WILEY: • • • Wisconsin farmers set another new annual State record last year in planning and installing soil and water conservation measures through their locally organized and locally operated soil conservation districts. • • •

All district annual reports praised the excellent interagency relationships that exist in Wisconsin. This is a major factor in achieving the fine record made in the State, so they say. The agencies cited were the State soil conservation committee, Agricultural Extension Service, Soil Conservation Service, Wisconsin Conservation Department, Agricultural Stabilization and Conservation Service, and the Farmers Home Administration.

Nearly $190,000 of Agricultural Conservation Program Service funds was transferred to the SCS by county ASC committee to reimburse the service for technical assistance in connection with the ACP. Nearly 20,000 referrals were handled by the service under last year's program.

Up to April 15, 1959, five Public Law 566 watershed protection and flood prevention projects were approved for operation. During the past calendar year the first four major structures were installed under this program. These are of the water detention type. About another 14 applications are either approved for planning, are pending action by the State soil conservation committee, or are in the development stage. By the way, all of the projects are located within the two tiers of counties bordering the Mississippi River from Ellsworth on the north to the Wisconsin River on the south.

District supervisors and employees of all agencies recognize that the key conservationists are our progressive, fine farm families. They make the decisions, they determine the rate in which they are going to proceed with the establishment of conservation measures, and they then actually install the planned practices.

The Printed Word: Its Value for Today and Tomorrow

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, April 29, 1959

Mr. DODD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, some excerpts from the speech "The Printed Word: Its Value for Today and Tomorrow," which was delivered Thursday, April 23, 1959 by Arthur B. Langlie, president of McCall Corp., at the Hotel Pierre, New York City.

The occasion was the annual Newcomen Society dinner which this year honored McCall Corp. and its 89 years of leadership.

Mr. President, the Newcomen Society of North America is an offshoot of a British historical organization founded many years ago to pay tribute to pioneer leaders in industry, invention, communications and utilities. Its 77 regional groups in North America comprise a membership of 16,000 men, who regu-

larly hold dinner meetings in various cities throughout the country honoring leaders of industry.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

The tremendous torrent of human technology is sweeping all our civilization to an undefined goal.

I am deeply honored by your invitation to address this famous, international association and to ask you to join with me in tribute to the printed word—which inspires, controls and will yet save us from our ever-growing and fantastic powers.

On the printed word depends our entire system of education, government, law and religion. I am proud to be associated with the modern development of print and to render you an account of the stewardship of the publishing venture with which I am associated.

McCall is a family name is every meaning of the word. It is a family of enterprises serving American families. For almost 90 years it paralleled and reflected the creative changes and the healthy growth that so clearly characterize America. McCall's story is a history of machines and distribution, of service and know-how, and of the achievement of mass production while maintaining the highest standards of quality. But most of all, it is a story of dedicated men and women and the living ideas they created.

I do not need to detail for you the growth of McCall's since the turn of the century. It is sufficient to say that from these small beginnings, McCall's has grown to a business doing about $75 million a year and employing 4,631 men and women. The name McCall's has become a symbol of service that is recognized throughout the world. Only six monthly magazines in America sell more than a million copies on the newsstands, and two of these are McCall's and its sister publication Redbook. In total average monthly circulation, McCall's in 1958 topped 5,300,000 and Redbook's exceeded 2,700,000.

Always expanding and keeping step with the latest technological developments, McCall's in 1923 broke ground for its new plant in Dayton, Ohio. After many additions, this is now the largest and finest magazine printing plant in the world. Our presses, and related equipment, now serve our own needs and those of over 40 other magazines.

The built-in strength of the printed word is its permanence. This is time for free and independent thought and we can choose that time as we see fit.

The writer of the printed word must have courage. When the writer finishes his job, he offers something in permanent form. He invites the reader to take a good look and says: "Look as often as you wish. * * * This is what I say and mean, once and for all. * * * Use your own intelligence, your own judgment, your own imagination, and form your own conclusions." Yes, the reading of the printed page is the act of a thinking man. Where else but in our contact with the printed word do we have the time to be our most private, reflective selves? We have time to read and to believe. Yes, the printed word stays with us. When it speaks with courage and skill, with nobility and beauty, it becomes part of our innermost thoughts in a unique way.

The printed word has been employed to propagate religions. It has been used to popularize new political theories. It has been the fleeting thoughts of the poet and scientist, of the philosopher and theologian. The printed word has unlocked the door to adventures, to information, to deep satisfaction.

It is the best vehicle ever conceived by the mind of man for transporting man to areas where he has never before trespassed, for introducing him to the unfading personalities of past and present, for exposing him to experiences infinite and varied, for inspiring him to think.

Dual State Taxation

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, April 29, 1959

Mr. CASE of New Jersey. Mr. President, several hundred thousand New Jersey residents who work in New York have been suffering for many years under a burden of dual taxation. These people are required to pay income taxes to the State of New York, and at the same time the New Jersey residents must pay their full share of New Jersey's State and local governments. The same situation holds true for residents of southern New Jersey who are employed in the city of Philadelphia.

Earlier this month, I wrote to Governor Meyner of New Jersey, proposing that New Jersey levy against nonresidents a tax upon the income earned in New Jersey. I suggested that the new law provide for reciprocal exemptions for residents of those States which provide similar exemptions for residents of New Jersey who work in their States.

So long as New York requires New Jerseyites who work there to pay for the services rendered them by New York, surely it is fair that the 50,000 New York residents who work in New Jersey pay for the services which they receive from New Jersey. The end result of enactment of the law which I have suggested might well be attainment of the desirable situation where each State would limit its taxation to its own residents. Even if this did not occur, the State of New Jersey would at least be better off by the amount of income taxes its collects from New York residents. All New Jerseyites would therefore benefit in the reduction of the amount they would otherwise have to pay for the cost of their State and local governments.

While Governor Meyner has indicated his opposition to my proposal, it is interesting to note that several outstanding newspapers of the State have found merit in my suggestion and have urged its consideration. Since this problem of dual taxation affects other States in addition to my own, I should like to place in the RECORD the full text of three editorials commenting on my proposal.

There being no objection, the editorials were ordered to be printed in the RECORD as follows:

[From the Asbury Park (N.J.) Press, Apr. 14, 1959]

FIGHTING TAX INJUSTICE

The income tax imposed by New York State against New Jersey residents working on the other side of the Hudson River has long been a source of irritation. Even worse than the fact that they must pay the tax is the policy under which residents of this State are not allowed deductions available to residents of New York State.

For years the only relief from this injustice seemed to be the adoption of an income tax in New Jersey, applicable against residents of New York working in the State. With such a levy a reciprocal agreement might be developed that would exempt residents of each State from the tax imposed by the other. But New Jersey does not want a personal income tax even were it to collect tax revenue from New Yorkers partly to offset taxes paid by New Jersey residents to New York.

The situation has produced a quandary that has prodded New Jersey leaders into suggesting myriad solutions, some of which are obviously borne of desperation. Senator CASE has proposed a special income tax in this State to apply only against New York residents. Governor Meyner and Senator Dumont, chairman of the New Jersey commission on out-of-State taxation, fear that Senator CASE's proposal would be unconstitutional although it would substitute justice for the present unfair situation.

Now there is also a proposal for a constitutional amendment to restrict a State's income tax to its own residents. Governor Meyner plans to testify in favor of such an amendment before a U.S. Senate committee tomorrow. It is doubtful whether it would be ratified, however, because 33 States now tax workers who live in other States, and that is close to the three-quarters of the States needed to ratify a constitutional amendment.

Faced with a mounting need for additional revenue, New Jersey cannot with equanimity view millions of dollars being collected from its residents in New York State income taxes. And good neighbor that it may try to be, New York is hardly likely voluntarily to forgo this lucrative source of revenue, especially in view of the fact that it is paid by persons who do not vote in New York.

No one has yet offered a satisfactory solution to the problem and we do not presume to pull one out of a hat. But the interest being demonstrated in it should be encouraged. Such proposals as Senator CASE's even though it might be judged unconstitutional as a special tax, are worth considering. For they may lead to a program that would erase the injustice to which New Jersey is being subjected. It would be frivolous at this point to resign ourselves to a situation that needs correction.

[From the Union City (N.J.) Hudson Dispatch, Apr. 17, 1958]

WHY NOT RETALIATORY TAXATION?

Appeals to Congress for the passage of a proposed constitutional amendment to prevent one State taxing the citizens of another, it seems to us, is a waste of time.

We think the more direct way to impress New York State and Philadelphia would be for New Jersey Legislature to pass an income tax bill that would impose levies on New Yorkers and Philadelphians who earn their living in New Jersey.

Even though this procedure suggested by U.S. Senator CLIFFORD P. CASE and turned down by Gov. Robert B. Meyner, would not make New York and Philadelphia stop taxing Jerseyites who work there, it would at least bring in that extra revenue which, apparently, is needed to increase State aid to school districts.

In the Meyner budget for the next fiscal year not a dollar was added for aid to school districts. With the rising costs and increased salaries, it will cost every school district in Hudson and Bergen Counties more to operate their schools systems for the fiscal year beginning July 1 than for this fiscal year ending June 30.

Since the Governor in his "model balanced budget" has allowed no more for school aid, the local taxpayers must pick up the tab in shouldering the difference.

Let's try the retaliatory income tax plan suggested by Senator CASE. It might not only bring in needed revenue, but should make New York and Philadelphia more cautious about increasing the income taxes on New Jersey citizens earning their livelihood in New York State and in the city of "brotherly love."

[From the Bayonne (N.J.) Times, Apr. 17, 1959]

GETTING THE WRONG ALTERNATIVE

There is a parallel between Governor Meyner's singular coldness to a plan proposed by Senator CASE to sting New Yorkers with a dose of their own medicine and the Bayonne City Commission's handling of unified health service. Senator CASE has suggested that New Jersey is entitled to charge New Yorkers who work in this State in exactly the same way that New York charges residents of New Jersey who work in New York. Governor Meyner replies that such a tax would be discriminatory and probably unconstitutional. The Governor instead advocates an amendment to the U.S. Constitution which would restrain States from taxing nonresidents unreasonably.

This is just about as watery as the Bayonne approach to centralizing all health services along lines suggested by a citizens committee that studied the problem long and seriously. The objection is that Bayonne is a commission-governed city, and such cities may not delegate to a board of health responsibilities that ought to be in the board of commissioners. Uh huh. There are two fast answers. One is that health services could be unified within a department of the existing city government. The other is that the city could go ahead and a create a board of health and leave questions of legality and constitutionality to appellate courts which quite commonly split in an unpredictable way on such matters. Bayonne solves the problem by doing nothing.

Similarly with Senator CASE's proposal. The amendment proposed by Governor Meyner hasn't a chance of adoption, since too many States make a good thing of taxing nonresidents. Even if the amendment did have a chance, it would not be a part of the Constitution until Congress and three-quarters of the States acted, or a long time. But New Jersey could levy taxes on New Yorkers at once, and leave it to New York to prove such taxation discriminatory and unconstitutional. Governor Meyner's way leaves New York having everything its own way while New Jersey residents pay. Senator CASE's way puts the heat on New York while New Jersey collects. The citizens committee's way would give Bayonne centralized health services while questions of law were determined—if they ever were raised. The commission's way leaves us in the unsatisfactory situation deplored by the citizens committee.

We sometimes suspect these matters are not being handled in the best possible way.

Hazards of Stream Pollution

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 29, 1959

Mr. NEUBERGER. Mr. President, the Astorian Budget is published in a city of my State of Oregon which is the leading commercial fishing center of the Pacific Northwest. This is the historic community of Astoria at the mouth of the Columbia River. Therefore, the editors of the Budget have a special stake in the elimination of sewage from our rivers, because water pollution is perilous to migratory fish. The Budget for April 25, 1959, published an excellent editorial entitled "Federal Aid for Pollution Control," in support of the efforts of my distinguished senior colleague [Mr. MORSE] and the able Representative from Minnesota, Hon. JOHN BLATNIK, to bring about an expanded program of Federal aid to States and localities with which to build treatment plants to dispose of sewage.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL AID FOR POLLUTION CONTROL

Senator WAYNE MORSE and Representative JOHN BLATNIK, of Minnesota, are calling for an increased program of Federal aid to the States to help cities sewage treatment plants.

This newspaper usually finds more cause to criticize than commend MORSE, and usually also finds itself alined against extensions of Federal aid, but in this case MORSE's proposal seems entitled to serious consideration.

Water pollution is more than a local problem; it is more than an internal problem for a State. Rivers flow from city to city and State to State, carrying pollution along with them.

Construction of sewage treatment plants, at present the responsibility of individual cities, is financially burdensome and the city that must build such a plant derives no benefit therefrom.

This problem may provide a proper field for extension of Federal aid. Certainly it is a growing problem that must be solved somehow.

Extra Long Staple Cotton

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. WHITENER. Mr. Speaker, on April 28, 1959, I appeared before the U.S. Tariff Commission in connection with the investigation now being conducted by that agency in regard to the importation of extra long staple cotton.

Several of the New England States, as well as the southern textile manufacturing States, are vitally interested in this matter. Under leave to extend my remarks, I include my statement before the Tariff Commission in the Appendix of the RECORD:

STATEMENT OF HON. BASIL L. WHITENER BEFORE THE U.S. TARIFF COMMISSION ON APRIL 28, 1959, REGARDING EXTRA LONG STAPLE COTTON QUOTA

Mr. Chairman and members of the Commission, my name is BASIL L. WHITENER, Member of Congress from the 11th Congressional District of North Carolina. I am appearing before you to voice my strong opposition to any action that might be taken to reduce our present import quota on extra long staple cotton.

I have the honor and privilege to represent in the Congress a district that contains more operating textile plants than any other district in the United States. Thousands of my constituents earn their living in these mills. In addition, my constituents have millions of dollars invested in textile plants and machinery.

The manufacture of textiles is vital to the economy and well-being of my district and to the State of North Carolina. If the cotton mills in North Carolina were to cease operation today there would be wide-spread suffering and economic distress throughout the State. It would result in economic disaster for our people.

Over 227,000 North Carolinians are employed in textile mills. This represents more than half of all persons enployed in manufacturing in North Carolina.

It is generally recognized by those who are familiar with the day-to-day problems of textile manufacturing that the industry is fighting for survival, not only in North Carolina but in other parts of the South and New England. The industry is suffering from inroads being made by foreign textile imports and an unrealistic international trade policy on the part of the Federal Government.

Aside from tariffs and other foreign trade complications, the industry is confronted with numerous other handicaps which affect business substantially but over which it has little or no control. As an example, I might point out that so long as foreign mills can buy American cotton cheaper than American mills and have their machinery and plants financed, in large part, with American dollars, our domestic textile industry will remain in a depressed condition.

I have pointed these factors out in order that we might have a background against which to view the problem before us this morning.

The Presidential proclamation of July 7, 1958, established an import quota on cotton beginning August 1, 1959. From all that I have been able to learn the quota, as originally set up, was generally approved by all of those in the cotton textile trade.

Operating conditions within the textile industry make it almost mandatory that contracts for cotton purchases be made months, and in some cases even a year, in advance of the date the cotton is to be used. In an industry that uses millions of bales of cotton and whose contracts for the sale of finished products must be made well in advance of the manufacturing date, it is apparent that considerable time must be allowed between the purchase and delivery dates of raw cotton.

The information I have indicates that the textile mills in my district, and I am sure the same situation prevails in other parts of the country where mills are located, acted under the Presidential proclamation of July 7, 1958, and purchased considerable amounts of foreign extra long staple cotton. A large part of this cotton was purchased during October, November, and December of last year and during January of this year.

In anticipation of the delivery of the cotton, mills have entered into contracts for the future sale of textile products. It will be apparent, therefore, to everyone that any quota reduction at the present time will bring about a serious condition for the mills and result in economic hardship for all concerned.

One of the most prominent textile manufacturers in my district informed me recently that he has purchased 1,500 bales of foreign extra long staple cotton against which he already has sold goods. It was his opinion, and I certainly share it, that if the quota already approved by the administration can be repudiated in part it will be,

in effect, a repudiation of people like himself holding contracts.

A number of other textile manufacturers advised me to the same effect. In nearly every instance they already have sold textile products against the foreign cotton bought under present quota conditions. There is a feeling that if the quota is reduced it will mean a loss of confidence in Presidential proclamations on the part of the public in general and the business world in particular.

The textile industry, caught as it is between the squeeze of dwindling profits and soaring manufacturing costs, should be permitted to purchase cotton in foreign markets under reasonable and realistic quotas. At least, the industry should not be subjected to the uncertainty involved in arbitrary quota reductions.

We hear so much in Congress these days from responsible Government sources how vital it is to the economy of the United States that we engage in foreign trade, especially with the underdeveloped and highly sensitive nations of north Africa and South America. I cannot understand how it would be in the best interests of the United States to antagonize Peru, the Sudan, and Egypt by further reducing the importation of cotton from these countries.

These nations desperately need American dollars to bolster their economies. We should be anxious to supply these dollars through the accepted avenues of commerce rather than through some of our more unrealistic programs of foreign aid.

The matter before this Commission has far-reaching implications to the people of North Carolina and the textile industry in general. It is my hope that the Tariff Commission will take into consideration and give very careful study to all the statements that will be presented by officials of the textile industry and the cotton trade.

A number of the people who will present these statements are from my congressional district. They are responsible and successful manufacturers and cottonmen and have many years of experience in the textile industry. They are familiar with the conditions confronting their industry and are dedicated American citizens.

I know the information they will give to this Commission will represent their very best judgment of the matter under consideration, and their recommendations deserve the most careful study, as I believe they are the best qualified people in the country with respect to textile problems.

In conclusion I would like to impress upon the Commission the great importance of the matter before us to the economy of my district and North Carolina. It is my hope that the Commission will make no recommendations to the President calling for a reduction in the present import quota of extra long staple cotton.

Resolution in Support of the Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the California Democratic Club at its Fresno convention voted to abolish the Un-American Activities Committee; and

Whereas they used the name "The Democratic Party" and falsely attempted to be heard as the mouthpiece of the party, while we, in the harbor area, AFL–CIO, and Teamster's Unions, through the Save our State Committee at the last election, did the work of registering the public, door to door canvassing and getting the vote to defeat proposition 18 and support Pat Brown, while the CDC did next to nothing; and

Whereas labor unions desiring to be free of Communist infiltration and Communist domination have no fear of being exposed by the committee, and the only union member so far mentioned was the ILWU and their attorney, and the chairman of the 68th district, CDC, is a member of that union, and we feel he used the club as a retaliation measure: Therefore, be it

Resolved, That the Maritime Trades Department, Port Council of Southern California, go on record to seek continuation of the Un-American Activities Committee and render it full support; and be it further

Resolved, We notify the Los Angeles County Federation of Labor, AFL–CIO, of our actions; and be it finally

Resolved, A Copy of this resolution be presented to the House Un-American Activities Committee in Washington, D.C., and also a copy be submitted to Pat Brown, Governor of the State of California.

Respectfully submitted.

THOMAS E. IVEY,
President, Cannery Workers Union of the Pacific, SIU–International, AFL–CIO.

Legal Maze Confuses Employment of Retired Military Personnel

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. BALDWIN. Mr. Speaker, at least 35 dual-employment and dual-compensation statutes are now in effect. It is a practical impossibility to administer them, let alone avoid repeated cases of inadvertent hardship and injustice. Legislation, introduced by my colleague, Representative CRAIG HOSMER, California, after careful research and analysis of the legal maze of conflict-of-interest laws, would remove the 1894 bafrier by updating our dual employment and dual-compensation laws, thus taking them out of the "horse and buggy" days and bringing them in line with our jet age.

I call to your attention the following lead editorial concerning Mr. HOSMER's bill appearing in the April 5, 1959, issue of the Army-Navy-Air Force Journal:

ONEROUS RESTRICTIONS DEMAND CONGRESSIONAL ACTION

The firm defense presented by Secretary of Defense McElroy against attacks upon retired officers employed in industry recalls the entire network of onerous restrictions placed upon this group by the existing maze of numerous and ancient laws.

The restrictions upon retired officers employed by firms doing business with the Government is one phase of these laws which seriously hampers the utilization of skilled and experienced personnel. In addition there are more than 35 laws in the so-called dual employment and dual compensation categories which bar the Government itself from making use of this vast pool of valuable manpower.

Representative CRAIG HOSMER, of California, has sought vigorously in the 84th, 85th, and now again in the 86th Congress, to repeal the dual employment statutes and amend the dual compensation laws. Despite strong support from the public and many Government agencies, Mr. HOSMER's bills have never been acted upon by the House Committee on Post Office and Civil Service, to which they have been referred by the Speaker. In the last Congress, Representative TOM MURRAY, chairman of this committee, was quoted as saying that this problem has been before his group for the past 10 years, a strong reason, it seems to us, why it should be given prompt consideration.

Fortunately, there are some indications that the Post Office and Civil Service Committee may act. We are told that its staff is reviewing and studying these ancient laws and that their conclusions may be presented to the committee. Certainly, all the work that Congressman HOSMER has done in this field (in 1957 he presented an analysis that consumed 18 pages of the CONGRESSIONAL RECORD) would supply ample background.

We urge that the Post Office and Civil Service Committee put Mr. HOSMER's bill, H.R. 522, on its calendar for early hearings and consideration.

Inflation: Can It Be Stopped and, if So, How?

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include a speech delivered before the Public Forum of Spokane and the Inland Empire on April 19 by Mr. Frank Lilly, research statistician of Spokane. I think this speech is thought provoking. A sound currency, based on intrinsic value, is worthy of real study on the part of all of us.

INFLATION: CAN IT BE STOPPED AND, IF SO, HOW?

Ladies and gentlemen of the Spokane public forum, as a base-line, so to speak, for my remarks today, I quote the opening sentence of Abraham Lincoln's address on his nomination to the U.S. Senate:

"If we could first know where we are, and whither we are tending we could better judge what to do and how to do it."

Where we are: Inflation has reduced the purchasing power of our inconvertible currency paper dollar nearly two-thirds, to 34.3 cents, since the gold standard was put on the shelf in 1933. We, the United States, the States and the people, have been and are overspending with the result that our debt is now more than twice the combined total of the rest of the world.

Whither we are tending: Indications are that overspending on national, State, and personal levels will continue because inflation through debt-spending is a narcotic that soothes and exhilarates the average man and woman. Incidentally, a few self-styled economists have contended that a little inflation is a good thing and others who hold that a little socialism is good

despite the fact that socialism is the first step toward communism.

What to do: The The First National City Bank of New York in its current letter concludes its article on "How To Beat Inflation" with this sentence: "The only way to beat inflation is to prevent it and have money people can trust." In other words, the "What to do" is to provide a dollar of 100 cents intrinsic value that people can trust.

How to do it: President Ulysses S. Grant stopped inflation by combining vetoes of proposed overspending bills and the legislation that established gold specie resumption.

"When inflation, at the height of its popularity and frenzy, had swept both Houses of Congress, it was the veto of Grant, which, single and alone overthrew expansion and cleared the way for specie resumption. To him, immeasurably more than to any other man, is due the fact that every paper dollar is at last as good as gold." (Roscoe Conkling.)

Both Democrats and Republicans are committed to provide a full value dollar. President Roosevelt promised such a dollar of unchanging value and the Republicans in their 1952 platform adopted a monetary plank authored by the present Secretary of State, Christian A. Herter, that pledged to provide a dollar fully convertible on a gold basis.

It is to say the least significant that within 10 years after the restoration of gold convertibility in 1879 the national debt was cut in half. And in this connection it is noteworthy that deficits resulting from the War of 1812 and World War I and the panics of 1840 to 1843, 1893 and 1907, during which gold convertibility was maintained, were followed by periods of debt reduction and surpluses that quickly restored fiscal order. In contrast consider what has happened since gold convertibility of the paper currency dollar was shelved in 1933: inflation, debt, taxes, waste, and crime.

It was not by accident that our Founding Fathers, who authored the Constitution, specified that this country's money should have full intrinsic value in giving Congress the power "to coin money". They realized then as we should now that no financial theory and no law can create money with intrinsic value, for it must be dug from the treasure vaults of the earth.

When the money of the Constitution is restored in this country, and not until that time, can inflation and its related evils be overcome. Incidentally, a U.S. paper currency dollar in the hands of a foreigner is fully convertible into U.S. gold, which gives the foreigner's U.S. dollar a purchasing power, in his own and other foreign markets, of 3 to 5 times and upward as much as a similar, but inconvertible dollar, has in this country.

It has been generally overlooked that former Secretary of State Dulles forecast for 1959:

"That as part of the Soviet trade drive, the U.S. expects the U.S.S.R. to announce shortly that the ruble will be backed with gold, moving it into the hard-currency channels of international trade."

In the economic war that the U.S.S.R. has openly declared it will "bury the U.S. economy" the value given to gold in international trade will be the decisive weapon in such a trade war for it goes without saying that the nation that will give the most raw materials and/or manufactured goods per ounce of gold will have the big advantage in trade.

The unexpected leadership that the U.S.S.R. got in space with its sputnik is of little or no real importance but the advantage of the U.S.S.R. would get by giving gold a higher value in world trade than the U.S. pegged price of $35 an ounce could be disastrous to the free-enterprise way of American life. The nation that leads, and that should be the United States, does not wait for some other nation, either friend or foe, to act.

The responsibility for inflation must be shared by the American people who for the most part have been lured into the debt habit and away from the thrift, frugality and efficiency that stifle inflation. The people have also been too complacement about the Government's failure to provide a dollar of 100 cents intrinsic value, which is the only thing along with the elimination of debt-spending that can stop inflation and restore national and personal solvency. And in this connection may I emphasize that time is of the essence.

Will Science Ever Replace God?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Times Leader of Saturday, April 25, 1959, written by Mr. Thomas E. Murray, former member of the Atomic Energy Commission and presently a consultant to the Joint Committee on Atomic Energy of the U.S. Congress:

WILL SCIENCE EVER REPLACE GOD?

(By Thomas E. Murray)

As a former member of the Atomic Energy Commission, I have had the time to ponder about God and the atom, and how society and our individual lives ought to be ordered in this atomic age.

Science has made magnificent contributions to our way of living. The list of its achievements is endless; and its progress has just begun.

Yet life and culture are larger than this expanding universe of science. This is no reflection on science. It is another way of saying: science is for man, not man for science.

Science can give man mastery over matter. It can fail to give man control over himself. Science has its distinctive method: it involves experiment—with tools, machines, and chemicals. But you cannot, without a kind of sacrilege, experiment with souls, lives, and honor.

However useful science is to investigate the privacy of tiny chambers called atoms, it is all but useless to investigate the inner and higher life of men. You cannot examine free will in a test tube. Yet, much of what man does for good or evil springs from this inner life of free choice. Nuclear energy can explode with uncontrollable force. But the occasion for its explosion is controlled by men—either by evil men or by good men.

Science cannot save men from themselves, any more than society can. Rather, it is individual men who must save science, society, and themselves. If men will not live by virtue, they may have to die by power.

All things are made by God, and so man's attention must never be focused on science so as to neglect religion and philosophy which bring us to God. Only religion and philosophy can direct our lives according to right reason and charity.

EDITOR'S NOTE.—Mr. Murray is consultant to the Joint Committee on Atomic Energy.

To the Hills, REA

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. SANTANGELO. Mr. Speaker, we, who live in cities, are wont to forget the fact that many people lack the facilities which city folk enjoy. Mountains are normally resorts where we repair in the summertime. However, hundreds of thousands of people live in the hills, in the mountains, and on the farms throughout the year. Electricity in some of these places is lacking and the concomitant services are practically unknown.

The rural electrification program which was commenced in 1935 has furnished electrification and a better way of life to the people on the farms and in the mountains throughout the United States. A similar program bringing electricity and electrical facilities to the hill folks in Puerto Rico and on the farms is making tremendous strides.

Recently, my colleague, H. CARL ANDERSEN and I, as Members of the Agricultural Subcommittee of the Appropriations Committee, interested in rural electrification, visited Puerto Rico and saw the tremendous improvement taking place in that beautiful island. While in Puerto Rico, we attended a seminar on rural electrification, where Mr. S. L. Descartes, the executive director of the Puerto Rico Water Resources Authority, which is carrying on a rural electrification program, delivered a talk on this interesting subject.

An economist, Mr. Descartes served as head of the division of agricultural economics of the University of Puerto Rico from 1934 until 1942 when he was appointed chief of the Planning Division of the Land Authority of Puerto Rico. He was head of the Office of Statistics, Office of the Governor of Puerto Rico, from 1942 until 1944; served in the U.S. Army in 1944–45, and then served on the Puerto Rico Planning Board until 1948. He served as Secretary of the Treasury of Puerto Rico from 1949 until 1955 when he assumed his present job. Mr. Descartes received his bachelor's degree from the University of Puerto Rico and his master's degree from Cornell University, where he conducted additional graduate study.

His remarks follow:

It is indeed gratifying to be here to exchange views with those responsible for the development and continued expansion of rural electrification in the United States, Latin America, and Puerto Rico.

The Government of the United States, many years ago, recognized the necessity for an intensified development of rural electrification. During the course of this seminar we will have the privilege to hear the Administrator of the Rural Electrification Administration, the chairman of the National Rural Electrification Cooperatives Association, and other officials who administer or promote rural electrification in the United States. They will explain the law which

created the Rural Electrification Administration, how the Government contributes to this development, the administration of rural electrification and the growth of electric service in the rural areas throughout the United States.

The U.S. Government was one of the first to realize the necessity to provide help for the extension of electric service to the farms and to rural families throughout the Nation as an essential factor to the continued growth of the economy. The results of this foresight are self-evident—with electricity available to over 90 percent of all farms—and the people of the United States have been rewarded manifold.

Puerto Rico also recognized very early the need for electric service in the rural areas. As a matter of fact, the first venture of the Government of this island in the field of electric power generation, distribution and sale, was practically one of rural electrification. One of my predecessors in the office of executive director of the Puerto Rico Water Resources Authority—Mr. Antonio Lucchetti, its first executive director—so classed it in a paper read by him at the Third World Power Conference held in Washington, DC., in 1936.

In 1915 the insular government first appeared on the scene as a producer of electricity. A small hydroelectric plant was built to take advantage of the pressure of the water falling from an irrigation dam built high in the mountains on the southeastern part of the island.

"The earnings derived from the business," Mr. Lucchetti stated in his paper, "made possible a gradual extension of the lines into the poor sections of the rural area," and further on he stated: "A characteristic aspect of the electrification work developed during the last 20 years—this was in 1936—by the insular government is that it has catered principally to rural service and differing from the line of development generally followed by other public service systems which usually grow from densely populated urban centers as a nucleus of business out to the rural areas as a side activity, the Puerto Rican Government's work has accomplished the task of giving birth to and developing an electrical business entirely within a rural environment and to supply rural needs." And he added, "It has been a system entirely given to rural electrification purposes."

Continued emphasis was placed on rural electrification by the Authority since its creation in 1941 and a special 5-year plan was developed in 1947 which at its termination in 1952 had provided electric service for some 18,000 families in rural areas.

In the year 1952, a method was devised which permitted an acceleration of rural electrification and its continuous expansion until final electrification of the whole island is achieved. The program includes financing by the Federal Government for rural electrification expansion through the Rural Electrification Administration and legislative action by the Commonwealth government to guarantee the minimum consumption of electricity needed to economically justify the investment when electric power is sold in the rural areas at the same rates as in the cities.

We believe that this program, well tested and proven, may be of interest to areas trying to promote rural electrification. We wanted to bring down our friends and associates in this venture from the United States so as to make them better acquainted with the program and also to benefit from their observations.

To understand the importance of rural electrification in Puerto Rico it is necessary to review briefly some facts about the island, its population, and its economy.

Puerto Rico is an island in the Caribbean, 35 miles wide and 100 miles long, about 1,000 air miles southeast of Miami and approximately 1,600 air miles from New York City.

The relations between the Commonwealth of Puerto Rico and the Federal Government are defined by an act of Congress known as the Puerto Rico Federal Relations Act; Public Law 600. The Commonwealth has virtually the same control over its internal affairs as each of the 49 States has over its own. The currency, postal and military services of Puerto Rico are those of the United States.

The island is densely populated with about 2,300,000 inhabitants equivalent to a population density of about 657 persons per square mile. Since the year 1911 to the last census in 1950, its population had been increasing at the rate of approximately 18 percent every 10 years; 40 percent live in the urban zones comprised by 76 cities, towns and small villages, and 60 percent in the rural zones. Since 1950 the population has remained relatively stable or grown at a very low rate due not only to a movement of the population to the mainland, but also basically aided by a reduction in the birth rate from a long range average of 40/1,000 to about 31/1,000.

The island is today at a mixed agricultural-industrial stage. Last year, for the first time, industrial income equaled half the total income of Puerto Rico.

Electric power is produced, distributed and sold throughout the island by the Puerto Rico Water Resources Authority, a public corporation created by law in the year 1941 of which I am its executive director.

As I have already stated, the Government started operations in the electric utility field in the year 1915, when the south coast irrigation system constructed the Carite hydroelectric plant to supply electric power for pumping irrigation waters because no electric service was available from the then existing privately owned electric systems. The excess power from the Carite hydroelectric plant was sold in the rural areas surrounding the irrigation system and soon the power lines extended rapidly along the south coast.

The clamor from the public for low-priced electric service made the Commonwealth government recognize the necessity of creating an agency for the purpose of producing, distributing and selling electric power to those areas not served by the existing utilities. The Utilization of the Water Resources was created in 1925, to develop the water resources available for the production of electric power and to supply electric service to areas where none was available.

In the year 1941, preceded by a historical background of continuous growth and of service at low cost, the Puerto Rico Water Resources Authority was created to own and operate the electric properties of its predecessor agency and to distribute electric power to the entire Island of Puerto Ricq.

The authority now owns and operates 19 hydroelectric stations and 4 steam-electric stations with a total dependable capacity of about 410,000 kilowatts. The generating units are solidly integrated through a 38 kilovolt and 115 kilovolt transmission network of over 1,100 miles of transmission lines which extend throughout the island from which about 225 distribution substations are energized.

The authority now serves about 1,400 million kilowatthours yearly to over 378,000 customers, a consumption which has grown during the last 3 years at an average yearly rate of 18 percent.

Of 328,000 residential customers, 145,000, equivalent to 44.1 percent, are served in the rural zones.

It is the heavy concentration of population in the rural zones and the essentially agricultural economy which makes expansion of electric service throughout the rural areas essential to the welfare of the Commonwealth. The policy of the authority has been to develop rural electrification as fast as financial resources have permitted.

During its initial stages, the authority selected carefully for electrification rural areas with a heavy concentration of population requiring short-line extensions, so as to justify economically the investment made for the extension of rural lines. Construction of such lines was undertaken with this utility's own construction funds. To date the authority has served about 90,000 rural customers financed from the authority's own construction funds. Although substantial progress in rural electrification was achieved, it was foreseen that this method of expansion had its limitations since it had to select rural areas near existing electric lines with sufficient homes to justify the investment in the expansion of the rural lines.

During the depression, part of the funds allocated by the Puerto Rico Reconstruction Administration were utilized in the construction of 4 kilovolt trunk feeders along the rural areas from which many additional rural consumers were served and which brought distribution lines much closer to other rural families, thus facilitating additioal expansion in the future with short-line extensions. In other cases an economic study was made to determine the minimum electric consumption required to justify the investment in rural line extensions and electricity was immediately served to those consumers who could afford to pay the established minimum during a period of 5 years.

During fiscal years 1946–47, the Commonwealth legislature, in its continuous effort to accelerate rural electrification, assigned $400,000 yearly for the construction of rural lines in rural sections, where the revenue derived from the sale of electric power did not economically justify the investment, and with these funds matched with $100,000 yearly of the authority's own funds 18,300 customers were served up to 1952–53.

It was not, however, until 1952 that a plan was finally outlined to carry on a rural electrification program designed for continuous expansion until the whole island is covered. In summary, the program is as follows:

(a) The authority will continue to extend its service to rural customers for whom the investment made in line extensions is economically justified; to those who can afford to guarantee a minimum monthly consumption to justify the investment and to those who contribute the proportional part necessary toward construction to make the project economically justified.

(b) Those low income families in the rural areas who are by nature low consumption customers and who cannot afford to pay a guaranteed minimum bill are served by the special rural electrification program. Financing for this group has been obtained since 1952 from the Rural Electrification Administration. For this group, in addition, in order to completely justify the investment, the Commonwealth government guarantees to the authority annual payments equivalent in amount to the difference between the revenue derived from the sale of electric power to these customers and the cost of constructing the lines to serve them.

An accumulation of rural projects to serve at least 30,000 low income rural families a year is always available which makes possible to have a well planned program ahead of time.

The list of projects available is submitted to the Puerto Rico Planning Board who carefully select those to be constructed during each fiscal year.

Since the year 1952 three loans have been obtained from the Rural Electrification Administration for distribution line extensions, in the amount of $22,400,000. The first loan in the amount of $6,376,000 provided funds for the development of the program from 1952–53 to 1954–55, with which about 24,000 rural customers were served. A second loan in the amount of $6,624,000 was made in 1955 to continue the program up to 1957–58. It contemplates serving about 29,000 additional customers. Last year a $9,400,000 loan commitment was obtained to continue the program up to 1961–62.

To June 30, 1958, rural lines had been extended, capable of serving 47,000 rural customers, of which 43,328 were connected.

In the year 1957–58 the Rural Electrification Administration granted a loan to the authority in the amount of $10,900,000 to provide the generation, transmission and distribution substation facilities needed to serve REA beneficiaries. This week we will celebrate the starting up of commercial operations by the 40,000 kilowatt steam-electric unit financed by REA for the 53,000 rural customers served through the first 2 REA loans.

To date, through the special rural electrification program, we have constructed 2,517.4 miles of primary and secondary lines which serve 48,500 rural customers. The existing loan commitments are expected to provide sufficient funds to serve 93,000 rural customers up to 1961–62, essentially low income rural families which could not have otherwise been served.

A survey made last year revealed that there were about 120,000 families in the rural areas without electric service, of which about 100,000 may be served. At the rate of about 16,000 rural customers a year, the authority may essentially complete the rural electrification program in the year 1964.

This has been and is the challenge and the way we are meeting it; the people of Puerto Rico and the authority must recognize that what has been achieved would have not been possible without the effective help of the Rural Electrification Administration of the United States.

The Late Honorable James G. Polk

SPEECH
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. DAGUE. Mr. Speaker, it is with a heavy heart that I join with my colleagues in this testimonial to the fine character of our late friend JAMES G. POLK who has been taken from us after a life that was lived to the fullest in the public service.

It was my privilege to serve with JIM POLK in the Committee on Agriculture and while he was undoubtedly among the best qualified to speak on agricultural subjects by reason of his farming experience he rarely raised his voice to criticize the proposals of his less-informed associates. In the 12 years of our association together I came to appreciate his even temperament and sunny disposition, and the highest accolade I can bestow upon him is to state that I never saw him angry nor do I recall ever meeting him when he did not greet me with a smile.

In my opinion we are too prone to judge a man by his eloquence or his involvement with public matters. The real test, as I see it, is how we handle ourselves in our relationships with those we meet along life's way, and whether we accept the divine suggestion that we are our brother's keeper. A great public servant, a stanch party man, our late lamented colleague was also a Christian gentleman and our faith tells us that he rests from his labors in scenes serene beyond the river. To this bereaved family go our heart-felt condolences and our prayerful solicitation that the Master will have them in His care and keeping.

American Versus Soviet Foreign Aid

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 29, 1959

Mr. NEUBERGER. Mr. President, the President of the United States recently addressed the U.S. Chamber of Commerce in support of the foreign-aid program. While I do not agree with President Eisenhower on all issues, I think he is correct in emphasizing that foreign aid is often actually a defense of the United States and our own free way of life. The Astorian Budget, of Astoria, Oreg., on April 25, 1959, published a most effective editorial emphasizing that foreign aid by the United States should be continued because, among other reasons, the Soviet Union has embarked upon its own foreign-aid program in some of the backward and underdeveloped nations.

I ask unanimous consent that this editorial, entitled "United States Versus Russian Foreign Aid," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES VERSUS RUSSIAN FOREIGN AID

Senator RICHARD NEUBERGER has sent along some figures gleaned for the New York Times, which compare United States and Russian foreign aid to various nations.

We are spending more in many countries—$431 to $13 million in Turkey, $954 to $304 million in India, $14 to $13 million in Nepal, $58 to $34 million in Burma. But Russia is ahead of us in several others—$195 million to nothing in Syria, $116 to $62 million in Afghanistan, $58 to $32 million in Ceylon, $184 to $134 million in Indonesia, $137 to $10 million in Iraq.

NEUBERGER points out that this list "should refute for all time the notion that Russia is not committing its financial resources in order to raise living standards and arouse gratitude to the Soviet Union in many of the backward nations of the earth."

Apparently many people are unaware that Russia has a foreign-aid program at all, although we all ought to remember the Aswan Dam in Egypt where Communist aid was accepted after we had come to deadlock with the Nasser government over extension of aid.

Testimony of Hon. Chester Bowles, Member of Congress, Before Subcommittee on Public Works of the House Appropriations Committee, April 28, 1959

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my testimony given yesterday before the Subcommittee on Public Works of the House Appropriations Committee concerning several projects of vital significance to my district. My testimony follows:

TESTIMONY OF HON. CHESTER BOWLES, MEMBER OF CONGRESS, BEFORE SUBCOMMITTEE ON PUBLIC WORKS OF THE HOUSE APPROPRIATIONS COMMITTEE, APRIL 28, 1959

First of all, I would like to thank the committee for this opportunity to appear in connection with several navigation and flood-control projects of special importance to eastern Connecticut.

There are three navigation study projects which have been authorized by Congress and are now awaiting appropriations in order for surveys to begin. I would like to call these to the committee's attention at this time.

1. The first navigation study, at an estimated cost of $10,000, involves the Poquonnock River at Groton. The problem here is one of shoaling. Over a period of years the mouth of the river has filled in to such an extent that it is difficult to enter the river even with a small boat. As a result, the recreational development of the shoreline in the area has been curtailed, and commercial use of the river has been prevented. The opening of the river mouth, in addition to providing a new area of recreational navigation, would also supplement the attraction of a projected State park to be located in this area.

2. The second navigation study, at an estimated cost of $9,500, involves the Thames River between Norwich and New London. This study would determine the feasibility of providing greater depths in the harbor for commercial navigation. In 1957 commercial river traffic amounted to nearly 1,000,000 tons, 96% of which was in coal, petroleum and allied products. If greater depth were provided in the harbor and channel, larger and more efficient fuel transport could be utilized.

3. The third navigation study, at an estimated cost of $7,500, involves the Connecticut River mouth at Essex. The problem here is again one of shoaling. Since the original establishment of the ship channel in the Connecticut River in the early 1930's, constant shoaling of the western shore near my home town of Essex has taken place. The problem now is of immediate concern to the people of Essex, since action on requests to the State for construction of new docks and wharves is being held up pending agreement on a specific plan to correct the deteriorating navigational conditions. In time, the shoaling condition at Essex will affect all river commerce on the Connecticut River. The study of the situation at Essex, if approved and funded, will permit the Corps of Engineers to indicate the basic needs of future navigation in this area.

Mr. Chairman, I urge this committee to include funds for these three study projects as an investment in the commercial and rec-

reational navigation in Eastern Connecticut. According to the Corps of Engineers estimates, the total cost of the three projects is a modest $27,000. These studies are worth it, many times over, in terms of their probable impact on the continued economic growth of this area.

Let us move on, Mr. Chairman, to my second subject—flood control. No one who witnessed the terrible devastation in Connecticut wrought by the tragic floods of August and October 1955, will deny that our Connecticut citizens are entitled to swift completion of the necessary safeguards against any possible repetition of these disasters. Quite frankly, Mr. Chairman, I had hoped that action would have been taken in sufficient time by the Corps of Engineers so that the matter of actual appropriations for flood control dams at Baltic and at West Thompson would be squarely before this committee at this time. Unfortunately, this is not the case. I would like to go on record once more, this time before this committee, on the urgent necessity for these two critically needed flood-control projects. Understandably, I think, the people whose homes and businesses were swept away in 1955 cannot understand the long delay in providing adequate protection against a recurrence of this catastrophe. They feel, and I agree, that 3½ years is long enough to wait.

My distinguished colleague from Massachusetts, Mr. PHILBIN, who spoke to you yesterday on the need for the Westville Dam, has my wholehearted support for that project, as well. Here is another example of discouraging delays in a badly needed project.

The Westville Dam, a key link in an integrated system of flood control for the Quinebaug and French River Valleys in Connecticut and Massachusetts, was originally planned in 1945—14 years ago. Now funds for its construction are denied by the administration on the basis that it is new construction.

Mr. Chairman, to deny funds for the construction of flood control dams at Baltic, West Thompson and Westville is to deny the citizens of eastern Connecticut and Massachusetts adequate flood protection from the only source capable of providing it—the Federal Government. The economy of our region has never fully recovered from the disastrous floods of 1955, with the $581 million in property damage. The loss of 107 lives is irreplaceable. Another such calamity would be catastrophic. I urge the committee to pursue, with every appropriate means at its disposal, the reasons for the redtape, the delays and the administrative technicalities holding up an integrated flood control system for this area. The people of eastern Connecticut and their neighbors clearly need and deserve prompt, constructive action on these projects.

Finally, Mr. Chairman, the last matter I would like to call to the committee's attention is one of hurricane protection.

On April 2, 1959, the Corps of Engineers published an interim report of a hurricane survey of the Pawcatuck River area. This report, now being studied by the appropriate State agencies and the Department of the Interior prior to submission to the Congress, recommends improvements for the prevention of hurricane damages in the Pawcatuck area.

Since 1770, 53 hurricanes have struck this area, 30 of them causing tidal flooding. Studies of the Corps of Engineers indicate that if a repetition of the maximum hurricane tide of 1938 were to occur under present conditions, the resulting damage to the area would amount to $2.6 million. While this project is not now before this committee, there is hope that the final report will be transmitted to the Congress before the end of the session.

The estimated cost to the Government of this project is $409,000. I would like the committee to know of my firm belief in the necessity for this project. I have asked the appropriate State and Federal agencies for speedy action in transmitting this project to the Congress for action, and I would appreciate an opportunity to appear in support of the project when hearings are held on the appropriation for it.

Harry Bridges Hits U.S. Policy

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the April 22, 1959, issue of the Spokesman-Review, Spokane, Wash.:

HARRY BRIDGES HITS U.S. POLICY

During its check into the need for new legislation governing the issuance of U.S. passports to suspected subversives, the House Committee on Un-American Activities heard the testimony of Harry Bridges yesterday.

Bridges is head of the International Longshoremen's and Warehousemen's Union, which was expelled by the Congress of Industrial Organizations several years ago on charges of being communist dominated. He returned recently from Europe and was the star performer early this month at the union's convention in Seattle.

Bolstered by the support he received there, Bridges attacked U.S. policy on Red China, and incidentally gave the house committee several reasons why the committee should press for passport law revision.

Among his present aims, Bridges hopes to prevent further American aid going to the Chinese nationalist government on Formosa. He said that our present help there is outrageous.

In this respect it is interesting to note an official policy statement under which our Government is operating its mutual security program during the current fiscal year. This declaration, issued on authority of the Department of State, the Department of Defense, and the International Cooperation Administration, states:

"The continued existence of an independent government of the Republic of China is important to the United States and the free world because that government provides a source of hope to the people of the communist-controlled mainland and a challenge to Communist influence among the 12 million overseas Chinese in southeast Asia.

"The conquest of Formosa by an unfriendly power would * * * adversely affect the security of the United States. Significant military and economic achievements have been made possible in Formosa with U.S. assistance."

Bridges favors aid to Red China rather than Nationalist China. Bridges favors the issuance of American passports to men like himself, so that they can go around the world criticizing the United States and giving aid and comfort to various communistic causes.

The House Committee on Un-American Activities has performed another public service in having Bridges testify and in letting the American people know one continuing source of the undermining still taking place in this country.

Joe Snyder's Tribute to His Father

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. HULL. Mr. Speaker, one of the finest weekly newspapers it has been my pleasure to read is the Gallatin Democrat, published in Daviess County, Mo., by Joseph R. Snyder. Joe Snyder recently published a unique and touching tribute to his father and under leave to extend my remarks I wish to include this interesting editorial:

Last week was quit an event for my dad, Ralph J. Snyder, of Kansas City. He didn't want to—but plagued by eye trouble and a heart condition, he joined the growing ranks of those whose are retiring on social security.

Dad had been eligible for social security for well over a year and had talked about it quite a lot. Had he been qualified for the maximum payment I rather imagine he would have retired long ago, but his monthly check will not be large and, since mother is younger than he, she will not get an allowance for several years.

That last day at work must be pretty terrifying. We haven't seen Dad since last Tuesday—the last day—but I feel certain that it wasn't too happy an occasion. A few days before, the employees and management of the Burton-Dixie Corp., where he worked, presented him with a fine watch as a gesture of appreciation for his past service. What tickled him even more was the greeting card that accompanied the watch. It had been signed by all his bosses and fellow employees and this meant so much to him. He will treasure it.

Of course I'm prejudiced but I want to say here for the record that they just don't make many workers like my dad any more. As early as I can remember, he was getting up early in the morning to go to work and at the end of the day he would come home all tired out. He was one of those old-fashioned citizens who believed that if the company was paying him for 8 hours—they deserved 8 hours of work—and he worked every minute of every hour.

When I was a little boy Mom and I would often go downtown to meet Dad at work on Saturday when he got off at noon. We would get there a little early and I would get to go up on Dad's floor. He made circus tents and other canvas products in those days and I was quite impressed. After all, I told the kids in the neighborhood, if my dad didn't make the big top, how in the world could you have a circus?

As it turned out, my early philosophy was correct. After they tried to modernize the circus and take the big top away, what they tried to pass off as a circus just didn't click. That's progress for you.

At the plant where Dad worked there was a big circular chute that was used to deliver the tents, traps, and awnings to the shipping dock. As long as I remained small enough for him to lift easy, he would set me in this chute and let me slide down and around a few feet. That was a big thing for me in those days.

Dad had a working career of almost half a century. I hate to think now of the aches and pains, the bruised and mashed fingers—or of the times when he'd run one of the big canvas sewing needles through his hand. I remember, too, the bouts he had with blood poisoning as a result of infection picked up at work. There wasn't any hospitalization

plan to help out then—or any fringe benefits.

The depression hit us hard. Mom and dad lost their new home they had built just 2 or 3 years before. This was a blow from which my folks never fully recovered. I was going to school with peanut butter sandwiches every day. It all seems incredible now. How mom and dad got me through school on so little I'll never know. I hope.

Dad had chances for advancement in his work from time to time. He was well liked but he never felt the urge to push himself forward. He was usually pushing some other guy along. He was content to do the best job he could for his company and to take the best care he could of mom and me. And I guess that's pretty much the story of an average American citizen who works hard, pays their taxes, raises their family and now—thanks to Franklin Roosevelt—can retire on social security before they drop dead. It isn't going to be enough to live on in dad's case—but we'll all manage somehow.

Dad and I haven't been able to do many things together for a long time. I left home when the war came in 1941 and never went back, having set up a home of my own in the meantime. I hope now that he doesn't have to punch a timeclock every day that maybe we can get together more often.

We hope to take a vacation together this summer—the first such trip in many, many years. I have been planning for a long time to take mom and dad on a trip to Colorado. They have never seen the Rockies but they will do so in June as my special guests. I do not intend that they will have to lift a finger or spend one penny on that trip—just devote all their energy soaking up the wonderful mountain scenery and having a good time.

I can't begin, of course, to pay them for all they've done for me, but I can sure make a downpayment on it.

Deferred Maintenance and Repair in Veterans' Administration Hospitals

EXTENSION OF REMARKS
OF
HON. ERWIN MITCHELL
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. MITCHELL. Mr. Speaker, on behalf of the Committee on Veterans' Affairs, I would like to insert in the RECORD the following report made by the Subcommittee on Hospitals to the full committee. The report cites the need for additional funds for the protection of the Government's investment of some $2.8 billion in Veterans' Administration hospital facilities and also for the comfort and welfare of our hospitalized veterans:

REPORT OF SUBCOMMITTEE ON HOSPITALS, COMMITTEE ON VETERANS' AFFAIRS

Re deferred maintenance and repair in Veterans' Administration hospitals.

Report by the Honorable JAMES A. HALEY, acting chairman of the Subcommittee on Hospitals, on hearing held April 21, 1959.

The hearing was devoted exclusively to the consideration of deferred maintenance in Veterans' Administration hospitals. In the absence of the Honorable ELIZABETH KEE, chairman of the Subcommittee on Hospitals, Mr. HALEY presided as chairman. Witnesses for the Veterans' Administration were Dr. H. B. Cupp, Deputy Director for Operations; Mr. J. B. Baker, Controller, Department of Medicine and Surgery; Mr. Glen R. Stevens, Director of Engineering.

The Veterans' Administration witnesses testified that the budget for fiscal year 1960 includes $38 million for current and deferred maintenance and repair, $3 million of this is to be earmarked for deferred maintenance items accumulating from previous years, and the remaining $35 million is for current maintenance and repair of the stations during fiscal year 1960.

Summary of deferred maintenance and repair in VA hospitals

VA consolidated list of deferred maintenance and repair compiled for fiscal year 1959 budget	$15,000,000
List reduced by VA Central Office by reclassification and elimination of items to	11,500,000
Included in fiscal year 1959 budget for deferred maintenance and repair items	3,100,000
Carryover of deferred maintenance items to fiscal year 1960	8,400,000
Included in fiscal year 1960 budget for deferred maintenance and repair items	3,100,000
Deferred maintenance and repair items to be carried over to fiscal year 1961 from fiscal year 1959	5,300,000
Deferred maintenance and repair items accumulated each year over and above appropriations for current and deferred maintenance and repair	$3–4 million
Predicted deferred maintenance and repair items at end of fiscal year 1960, if appropriation for fiscal year 1960 for deferred maintenance and repair fund is not increased	$8–9 million

It was the conclusion of the Subcommittee that the Veterans' Administration budget does not contain sufficient funds to take care of the $8 million of deferred maintenance obligation which will exist on July 1, 1959. Continuing delay in making the necessary repairs to the deferred items will result in increased costs. Unless the 1960 budget is substantially increased for deferred maintenance items, the investment of the taxpayers of $2.8 billion in Veterans' Administration hospital facilities will be further depreciated.

The subcommittee voted to make this report to the full committee with the recommendation that the chairman of the full committee present this matter to the chairman of the Subcommittee on Independent Offices of the House Appropriations Committee, recommending that an additional sum be included in the Veterans Administration appropriation for fiscal year 1960 to clean up the backlog of deferred maintenance. In the event this recommendation is not favorably received by the Independent Offices Appropriations Subcommittee, it is recommended that the chairman offer an amendment to the appropriation bill on the floor to increase the Veterans' Administration appropriation for deferred maintenance and repair items.

The Late Honorable James G. Polk

SPEECH
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 28, 1959

Mr. MOELLER. Mr. Speaker, I, too, join my colleagues from Ohio in paying a few words of tribute to a man whom I have learned to know but a brief time, but a man whom I have learned to know to be a very great man. As a freshman Congressman, I called at his office shortly after my arrival here to have a brief chat with him. The kindly counsel and advice that he gave was the kind that a freshman will want to carry with him and which he so sorely needs. Not only the advice that he had given me caused me to have such great admiration for JIM POLK, but likewise the comments that one would hear from people within his district, which is a neighboring district to mine. People of both Democratic and Republican persuasion would speak words of highest praise of JIM POLK, and primarily because they felt in him they had a man whom they could fully trust. What a wonderful thing it is to hear such fine tributes being paid here on the floor by Members speaking about this man in the vein they do. He was an honorable man, a dedicated man, and I am sure his widow and his survivors will well understand our admiration for him, and to them go our most profound sympathies.

American Bar Association Proposal To Improve Agency Proceedings

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. HARRIS. Mr. Speaker, today I introduced a bill based upon recommendations of the American Bar Association which have for their purpose to establish standards of conduct for agency hearings proceedings of record. This proposal was submited to me by the Honorable Donald C. Beelar, chairman of the special committee on Federal Administrative Practice Act of the American Bar Association.

Earlier during this session I introduced a bill, H.R. 4800, which was prepared to carry out the recommendations contained in the final report of the Legislative Oversight Subcommitee of the Committee on Interstate and Foreign Commerce submitted to the Congress on January 3, 1959. The proposal recommended by the American Bar Association deals with some but not all of the problems with which H.R. 4800 is intended to deal, and the recommendations of the American Bar Association differ in some respect from the recommendations made by the Legislative Oversight Subcommittee as incorporated in H.R. 4800.

I have introduced the proposal of the American Bar Association in order to afford members of Congress and the American public generally, an opportunity to study the proposals of the American Bar Association and to compare them with the proposals contained in H.R. 4800.

It is my hope that by introducing this bill witnesses interested in this subject

will take occasion to study and compare the two bills so that when hearings are held by this committee on both bills they wil be in a better position to testify with regard to the recommendations contained in these bills.

One Hundred and Thirty-seventh Anniversary of the Birth of Gen. Ulysses S. Grant

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. SCHWENGEL. Mr. Speaker, on Monday, the 27th, at 12 it was my pleasure and honor to attend the memorial observance commemorating the 137th anniversary of the birth of Gen. Ulysses S. Grant at the Grant Memorial, First Street and the Mall, Washington, D.C.

This program was sponsored by the Ladies of the Grand Army of the Republic, the Lincoln Group of the District of Columbia, and friends. It was our honor to have on the platform the grandson of Gen. U. S. Grant, Maj. Gen. U. S. Grant III, and Madam Julia Cantacuzene, the granddaughter of Gen. U. S. Grant; and in addition, the granddaughter of Madame Julia Cantacuzene who is a visitor from England and a guest in the homes of Madam Cantacuzene and Gen. U. S. Grant III. Also present were Mrs. Eloise Whitmer, president, the Ladies of the Grand Army of the Republic, and Mrs. Anna Hausman, national registrar of the Ladies of the Grand Army of the Republic, and chairman of the program.

In addition there were leaders and representatives of several patriotic and veterans' groups present. The committee arranged to have the U.S. Army Band, under the direction of Major Curry, present and they presented an excellent program of appropriate music.

The master of ceremonies of the occasion was Col. Randle Bond Truett, Chief, National Memorials and Historic Sites, National Capital Park Service. He presented the Dr. C. Percy Powell, Research Director, the Lincoln Sesquicentennial Commission, who gave a very appropriate invocation. The pledge of allegiance was led by Mrs. Martha Purchase, Dept. Pat. Inst., Ladies of the Grand Army of the Republic.

Maj. Gen. U. S. Grant III spoke briefly and made some very suitable observations about the occasion. Then, speaking as president of the Lincoln group, he extended greetings and best wishes of that organization. A very appropriate and erudite address was given by Comdr. John E. Allen, Assistant Director of the Lincoln Sesquicentennial Commission. His subject was "The Determination and Will Power of Ulysses Simpson Grant."

Among things he stated so well he pointed out that Ulysses Simpson Grant's great opportunity came after the outbreak of the Civil War. On June 17, 1861, the War Department in Washington appointed him colonel of the 21st Illinois. His advancement to higher rank was natural in view of his military ability. His efforts, which were marked by dogged determination and strong willpower, had become evident and recognized by the summer of 1863 when Vicksburg was captured. His utilization of techniques of joint operations was successfully demonstrated. Naval forces, when required, were integrated with the usual assault forces, and certain of General Grant's plans of overall operations have become recognized as classic examples of joint planning. His will to win, by concentrating on dividing and destroying opposing forces, became a hallmark of his genius. He may be said, also, to have been a pioneer in the successful development of overall strategy in extensive military campaigns.

General Grant was accused of being taciturn or not given to extended conversations. It is noted, however, that President Lincoln had insisted that he was looking for winning generals; that in his view too much talk and too little action had occurred in certain instances. Of General Grant, Lincoln said, "I can't spare him, he fights." Throughout a series of victories which were to occur in the eastern theater, Grant's plan and strategy—in which he was supported by President Lincoln—was often to attack, when others might not have done so. Fortunate it is that he was doggedly determined to obtain victory in the cause of preservation of the American Union.

It is worthy of emphasis that General Grant as 18th President of the United States was twice chosen to lead the Nation in the highest office in the land. It was said of him during his Presidency that he unreasonably favored his friends. The facts do show that he was intensely loyal to his friends, to those who had worked with him and supported him over the years. In July 1849 Abraham Lincoln wrote that—

> The better part of one's life consists of his friendships.

Are we to deny that General Grant was faithful to his friends? I would not deny that, but I believe that you may agree with Lincoln's estimate of the value of one's friendships.

As President, Ulysses S. Grant's tenure extended from March 4, 1869, to March 4, 1877. One of his notable achievements was in the field of foreign affairs; it was in 1871 that he settled the controversy with Great Britain by the Treaty of London. He was ably assisted in that endeavor by his Secretary of State, Hon. Hamilton Fish, of New York. In June 1885 he moved to Mount McGregor, near Saratoga, N.Y. After completing the writing of his memoirs—they are recognized as a historical classic—he died July 23. He was with highest honors buried in the Grant Mausoleum, built by public donations, located on Riverside Drive in New York City.

What were the attributes that enabled this good and great man to achieve tremendous goals? It is my conviction that his dogged determination and strong willpower enabled him to achieve the very highest of aspirations.

Thank you for your kind and thoughtful attention.

Mr. Speaker, I recall how great was what President Lincoln once said of Grant:

> When Grant once gets possession of a place he holds on to it as if he had inherited it.

Then in a telegram to General Grant, Lincoln said:

> I have seen your dispatch expressing your unwillingness to break your hold where you are. Neither am I willing. Hold on with a bulldog grip and chew and choke as much as possible.

Mr. Speaker, this indicates President Lincoln's attitude about Grant. History, of course, records that he was very satisfied with Grant. He had finally found a leader who would fight and had the determination and earnest desire to win and whenever possible he has indicated in the quote above, he encouraged his dogged determination and desire to win. It could well be said just as these were excellent characteristics in that hour of crisis, they are still good for Americans today and let us learn from this example, let us hold on to those great ideals we are pleased to call American and let us do our part individually and collectively to share these ideals with other freedom-loving people and encourage them in their fight to obtain the goals of liberty, freedom, and equality that our forefathers knew so well.

Promoting Industrial Uses of Corn Products

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. HOEVEN. Mr. Speaker, as my colleagues all know, corn is grown in every State in the Union. Approximately 85 million acres or a fifth of the cropland is devoted to the production of corn. The value of the crop is almost $5 billion per year. Corn is grown on about 4 million farms or about two-thirds of all farms in the United States.

The income from corn exceeds that of the combined value of the next two most valuable crops which are cotton and wheat. More farmers raise corn than any other crop. Corn directly and indirectly constitutes a larger part of the diet of American people than any other single agricultural crop. This includes corn consumed directly, as milled-corn products, and indirectly in the form of meat, milk, and eggs. Corn is vital to

the basic economy of the United States. Whatever influences corn affects all Americans.

I wish to devote my remarks to the cornstarch research of the Department of Agriculture. This research is being carried out by the Agricultural Research Service at the Northern Utilization Research and Development Division laboratories at Peoria, Ill.

From firsthand knowledge, I can tell you that northern laboratory scientists have been working for some years on several derivatives of cornstarch with important potential industrial uses. They are enthusiastic about their work—for the simple reason they considered it to be promising research important to agriculture.

The continuing research on cornstarch came in for special attention and intensification beginning July 1, 1957. In the following year scientific teams of 30 to 35 members were assigned to this research, requiring an expenditure of about $700,000. In addition, four research contracts, totaling $180,000, were let to bring in the work of industrial scientists.

The Department has advanced this research on cornstarch by a reassignment of regular funds, and with increased allotments for such research provided by the Congress in 1958 and 1959.

They have made startling progress. They have come up with at least two cornstarch derivatives that offer considerable promise for expanding the use of corn in papermaking, and in many industrial areas.

Let me tell you about these two particular products of corn. One of them is called dialdehyde starch. The other is high-amylose starch.

Dialdehyde starch from corn not only may find a substantial market in paper manufacture, but also as a tanning agent, and in the manufacture of plastics. High-amylose starch offers several industrial prospects: As an important component of transparent packaging films, water soluble films, edible films; as a permanent finish on fabrics, and as a constituent of plastics, lacquers—and of paper.

Dialdehyde starch will be available on a semicommercial scale from one industrial company this month. Another company is not far behind in its plans for this same starch.

The first commercial scale farm production of high-amylose corn occurred last year. It has been an essential part of this research program to develop corn hybrids that contain a high percentage of amylose. Two wet corn milling companies harvested 7,000 bushels of corn containing 55 percent amylose starch. From this they have produced 200,000 pounds of high-amylose starch for industrial evaluation.

This should be good news to every one. It is just one more case that supports the Department's broad research approach to agricultural problems.

All of our citizens benefit from these kinds of results. This is the kind of research that is going to help us whip our farm surpluses.

Long Island Railroad, Pioneer

EXTENSION OF REMARKS
OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. DEROUNIAN. Mr. Speaker, on April 24 the Long Island Railroad celebrated its 125th anniversary.

Long Island's phenomenal growth and development have been inseparably linked with the growth and development of the Long Island Railroad, the third oldest railroad in the Nation still operating under its original name.

The Long Island Railroad has been expanding and improving its service and its rehabilitation program, which sets a new pattern of realistic cooperation between Government and railroads to preserve a vital community service, is being held up as a model for other suburban areas that may have transportation problems.

The following article, which appeared in the New York Times on Monday, April 20, is a most interesting history of Long Island's "main line to the mainland":

THE LONG ISLAND RAILROAD IS A SPRIGHTLY 125—BIGGEST COMMUTER LINE IN UNITED STATES SPARKLES AFTER LONG PERIOD IN THE DOLDRUMS—EQUIPMENT IS IMPROVED—EFFICIENCY AND SAFETY HAVE REPLACED ACCIDENTS, BAD JOKES, AND BANKRUPTCY

(By Clarence Dean)

The Long Island Railroad, hardier than changing times, bankruptcy and a generation of bad jokes, will be 125 years old Friday.

People laughed in 1834 when the founders advanced their spectacular plan for running a line to Greenport on the northeasterly tip of the island, carrying passengers to Stonington, Conn., by ferryboat, and thence to Boston on the Old Colony Railroad. The laughter proved justified.

But the prophets of 10 years ago who said the Long Island's woes could never be solved were wrong.

At a time when most railroads are trying to unload their commuters, the Long Island is carrying on the largest rail commuter operation in the country with unmatched efficiency and safety.

LIVELY SYMBOL ABOARD

It is doing the job with a singular appearance of verve. There is nothing moribund about Dashing Dan, and Commuting Man, whose figure in yellow and blue decalcomania rides the battleship-gray passenger coaches.

Throughout the island, the railroad is involved in more civic projects than a chamber of commerce, and the commuters, for their part, speak up in the railroad's affairs about the same way the Parent-Teachers' Association does in school affairs.

Not all this happy state of affairs is the result of management skill. The railroad has the very great advantage that it is operated as a redevelopment corporation, with a moratorium on its heavy debts to the Pennsylvania Railroad and substantial tax foregiveness by State and local governments. Revenue can be—and is being—put back into equipment improvement.

But there is management skill and there is also an incalculable factor—the island's long-established family feeling toward its railroad. This really never quite disappeared, even in the bankruptcy years with all the bad jokes, or at the time of two tragic wrecks in 1950.

Chance injected the railroad into the island's life to a degree that the founders never contemplated.

The grandiose plan for competing with the Long Island steamboats by providing a rail and ferryboat service to Boston lasted for 6 years. From 1844 to 1850, business flourished; the 16-hour running time of the steamboats had been cut in half.

But in 1850 engineers performed the "impossible" feat of extending the Old Colony's trackage along the Connecticut shore to New York, and the Long Island's reason for being vanished.

In the face of this disaster, management ingenuity did not flag. Reasoning that there would be business if the eastern end of the island, then primarily woods and farmland, could be built up, the railroad expanded.

New lines and new stations were built. Resort hotels and other vacation facilities were encouraged. Reduced fares were offered to the more distant points.

The railroad even took to transporting farmers' produce wagons to market on flatcars, with special cars for the horses and men. It was a forerunner of the pickaback transportation now offered by railroads for trailer trucks.

This was the heyday of railroad building. Competitive lines sprang up, some of them in the western part of the island. At one time more than 30 roads were operating. But gradually they were absorbed by the Long Island, and shortly before the turn of the century the railroad's present system had been developed. In 1900 control of the line was acquired by the Pennsylvania Railroad.

The railroad builders were more foresighted than they knew. They had provided the means for the great population surge to the island that began after World War I. And as it came, the nature of the service changed from conventional railroading to rapid mass transit.

FARES FROZEN IN 1918

Business increased steadily, but a series of afflictions came, too. Commutation fares were frozen by the New York Public Service Commission in 1918 and remained static until 1947. Competition came from the expanding subways. Taxes rose—from about $1,500,000 in 1921 to $5,400,000 in 1951.

The Long Island went into the red in 1935 and stayed there, except for 4 years during World War II. The railroad entered bankruptcy in 1949.

During all these financial troubles equipment and service suffered. Late and overcrowded trains became a commonplace. Anything could, and did, happen on the Long Island, the saying went.

It happened in a spectacular way on December 26, 1947, when an expected light snowfall turned into the "big snow," and the Long Island completely broke down. Passengers were stranded in unheated cars for as long as 12 hours.

Then in February 1950 32 passengers were killed in a wreck at Rockville Center. And in November of the same year, another wreck killed 77 persons at Richmond Hill.

A State investigation of the railroad was ordered. Out of it grew the Long Island's present status. It was discharged from bankruptcy and set up as a railroad redevelopment corporation in August 1954. The plan provided for a 12-year $60,300,000 rehabilitation program.

GOODFELLOW BROUGHT IN

To direct the operation, the line imported Thomas M. Goodfellow, a professional third-generation railroader, from the Pennsylva-

nia. With him came James A. Schultz, a former newspaperman and former airline public-relations executive.

Their achievement in these first 4 years is perhaps best indicated by the fact that last year, 98.1 percent of the trains were on time, and jokes about the Long Island were scarce.

Even the chestnuts like this were dying out:

A section hand found a man standing between the tracks with a loaf of bread in his hands. "How come?" the section hand asked.

"Oh," said the man, "my wife has died, I've lost my home, I've lost my money; I want to die."

"But why the loaf of bread?"

"Well," said the man, "the way this railroad runs I might starve to death before a train comes along."

The on-time record, better than that of any other railroad in the metropolitan area, is no small feat in view of the fact that the Long Island is the Nation's busiest passenger railroad. It averages 260,000 passengers a day. Of these, 170,000 are commuters; 85,000 persons making two trips a day each.

Nor is the Long Island unusual in number of passengers alone. It shuffles 680 of its 770 scheduled trains each day through the country's most complex transfer terminal, at Jamaica.

This is necessary, because the railroad has three westerly terminals, Manhattan (Pennsylvania station), Long Island City, and Brooklyn. Eastward from Jamaica, the railroad fans out in eight branches. It would be impractical to send trains to all destinations from each of the three terminals.

TWO HUNDRED AND TWENTY NEW COACHES ADDED

Not only has the railroad's on-time performance improved, but so has its equipment. There are 220 new air-conditioned coaches, and more than 400 of the 700 older cars have been so extensively renovated that they look new.

Safeguarding the Long Island's exceptionally heavy traffic—trains run through Jamaica an average of 30 seconds apart during the rush hours—are some of the most elaborate controls known to railroading.

Seventy-five percent of the trains operate under automatic speed control, a system that halts a train if its engineer fails to conform to speed restrictions. On much of the heavily traveled right-of-way, automatic signal devices make it practically impossible for trains to collide.

All of these happier circumstances have cast some reflection. Long Island's traditional affection toward its railroad seems to have been reinforced.

The stranger is conscious of it as he rides in one of the gleaming new air-conditioned coaches or even in one of the older ones, with the unusual loping gait they derive from the short wheelbase. There is a geniality, an informality not characteristic of most railroads.

"Nice car you got here, Harry," says a passenger to the trainman. "Rides real good. How long you going to keep it?"

Trainmen stand in vestibules as passengers alight. "You better button up that coat," says one to an elderly woman. "It's breezy out there today."

There is a long history of this kind of thing on the Long Island—stories of how trainmen, at the end of their run, have driven home passengers who had taken the wrong train; how they have put out automobile lights left on by mistake in station parking lots.

Once a trainman stamped and mailed a batch of addressed Christmas cards that had been left on a seat. On another occasion, the crew backed up a train to rescue a lady passenger's hat from the tracks. (Such courtesies, however, are not encouraged by the management.)

ON-THE-CUFF SERVICE

The most common incident involves the passenger who has forgotten his wallet. The railroad has a blank form for this, amounting to an emergency charge account. But the practice is for the trainman to pay for the ticket out of his own pocket and advance subway fare. Almost invariably he gets it back the next day—usually with a cigar or two.

Some of this may be attributed to the railroad's unusually high percentage of long-time employees. One-third have at least 25 years of service, and it is not uncommon to find railroaders whose families have been with the Long Island for 3 or 4 generations.

Remarkable things happen on the Long Island during the Christmas season. Communities decorate their stations—the railroad offers prizes for the most impressive results. Local Santa Clauses (through arrangement) step down from the cabs of Long Island locomotives. Train crews deck their coaches.

In one instance, a crew worked late into the night, after the run had been completed, etching reindeer and other jolly symbols into a wax cleaning compound that had been applied to the outside of the car windows.

ALL FOR NAUGHT

In the thin light of early dawn, a cleaning crew spotted the cars with the dirty windows, and—full of the holiday spirit—worked a little overtime to hose them down.

All year long, however, there is something special going on. Two thousand engineers for a day have ridden the cabs. Communities have been invited to select colors when stations were to be repainted. (Bethpage came up with a tie vote, so the railroad put on both colors, half off-white with a black spatter and half brick-red with a gray spatter.

In Hicksville, where 1,000 take the 7:36 each morning, a civic group worked out a queue system to speed the loading, and the 1,000 now get aboard in less than 3 minutes.

The Long Island marks its 125th anniversary with every appearance of vitality. Mr. Goodfellow is confident about the future.

A lean, slightly graying 6-footer, whose father and grandfather were railroad men, he directs the operations from a spacious corner office on the third floor of the Jamaica station. Mr. Goodfellow was trained as a civil engineer, and he talks with the detachment of an engineer.

NO END IN SIGHT

Mr. Goodfellow has no hope that the Long Island, or any commuter railroad, can become a profitable venture. But, he says, "the Long Island is here to stay."

He thinks that, with some lessening of its tax burden and assistance in the form of governmental credit, the railroad's status could be further improved.

He would like to run faster trains. He would like to rebuild the Flatbush Avenue station in Brooklyn, which is not large enough to accommodate the new 85-foot cars. With more signaling equipment the number of expresses could be increased. Diesel locomotives could be adapted to run through the East River tunnels on third-rail power.

Mr. Goodfellow would especially like to increase the number of riders in the nonrush hours. "That's where the money is," he points out.

And this is one of the goals that keep the lights burning late in Mr. Schultz' public relations office next door to Mr. Goodfellow's. The railroad has fostered Ladies Day, with half-price fares; weekend excursions to New York and a profusion of school children's pilgramages to the city. But Mr. Schultz believes the mine has hardly been tapped.

As a matter of fact, he arranged for the railroad to celebrate its birthday next Friday by running a special off-hours train to Riverhead for a house-warming at the new Suffolk County courthouse.

Frederick, Md., and Fort Detrick an Example of Exceptional Civil-Military Cohesiveness

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. FOLEY. Mr. Speaker, during my recent visit to the historic and progressive city of Frederick, Md., I was extremely and pleasantly impressed with the outstanding relationship that exists between the community and the U.S. Army Chemical Corps Biological Warfare Laboratories, Fort Detrick.

Normally, I would have noticed that there might be some sort of a friendly relationship between the citizens and the civilian and military personnel of this important defense installation; however, as I talked to many of the folks in town, I became immediately aware that Fort Detrick and the Federal employees, including the military, are vitally interested and participate in all facets of community life. This to me is important. It was wonderful news, news that caused me to inquire about how such relationships came about. Usually, we hear only unfavorable news.

The answer was given to me very simply. I was told by Fort Detrick people that "we live right and tell others about it." However, it goes deeper than that—and when I learned that the Fort Detrick community relations program prefaced a Department of the Army and U.S. Civil Service pamphlet for use by all Federal agencies, I thought it might be well for the executives in our Government organizations located here in Washington to visit Fort Detrick and see how the commanding officer, Col. Donald G. Grothaus, and his assistant for information and public affairs, Mr. Joseph Schwimer, plan and execute this outstanding program. I congratulate them on their achievements.

On the other side of the fence, I found that the Frederick Chamber of Commerce and the elected and appointed officials of the county and city, work hand in hand with Fort Detrick people—who by the way, do not single themselves out as "Detrick people." They are known as Frederick people. And the two-way communications system operates in top flight fashion—that can only mean one thing—that our Federal employees in the Frederick area have assumed their civic responsibilities. Mr. Joseph F. Rhoderick, executive manager of the chamber of commerce, outlined to me just how the people at Fort Detrick help out in the community. Not only are they generous contributors and workers for all charity and civic drives or campaigns, but Mr. Rhoderick pointed

out that many of the scientific and professional employees from the laboratories pitch in to assist in the scientific and technical courses presented in the county high schools. The commanding officer encourages this and only recently, two scientists substituted for science teachers who were attending a teachers' convention—at no expense to the county. The substitute teachers were given administrative leave.

Mr. Rhoderick strongly emphasized the valuable assistance he receives from the commanding officer and his assistant for public affairs in the preparation of material for use in the community, that is, information material for local consumption. Every quarter, Fort Detrick tells the people, the taxpayers, how much this installation spends within the community for local purchases and services. It amounts to more than a million dollars a year, or about 6 percent of the total operating budget of the post. This is most laudible and I again congratulate the commanding officer for his foresight and resourcefulness.

I was highly pleased when I was shown the Meritorious Civil Service Award which the Frederick Chamber of Commerce was given by the U.S. Civil Service Commission in January, for outstanding cooperation with Federal employees. This award as made as the Commission was concluding its Diamond Jubilee observance, and unless my information is incorrect, the Frederick Chamber of Commerce became the first such organization to be so recognized. I congratulate Mr. Rhoderick and the chamber of commerce for developing this warmth of climate.

It is my pleasure to insert in the CONGRESSIONAL RECORD two congratulatory letters, one sent to the Frederick Chamber of Commerce by the Secretary of the Army, the Honorable Wilber M. Brucker, and the other to the Chief Chemical Officer, Department of the Army, by Maj. Gen. H. P. Storke, Chief of Public Information, Department of the Army. In each instance, the diamond anniversary award by the U.S. Civil Service Commission to the Frederick Chamber of Commerce, was cited as another example of the continuing excellent relationship existing between the chamber and the people of Fort Detrick—in fact, this was the basis of the award. I know the letters are self-explanatory and submit them herewith:

FEBRUARY 11, 1959.

Mr. JAMES H. GROVE, Jr.,
President, the Frederick Chamber of Commerce, Winchester Hall, Frederick, Md.

DEAR MR. GROVE: It is gratifying to have the word that the Frederick Chamber of Commerce has been awarded the U.S. Civil Service Commission's Diamond Anniversary Meritorious Award. I hasten to express to you and your entire membership my personal congratulations, and those of the members of the U.S. Army.

I am especially proud that the fine relationship between the citizens of Frederick and the Army people at Fort Detrick—as exemplified in the Detrick Appreciation Week of October 1956 and the Diamond Jubilee length of service ceremony of August 1958—afforded the warmth of climate prerequisite to the Civil Service Commission's bestowal of the honor.

At the same time, we particularly appreciate the modesty and thoughtfulness of Mr. Lemuel D. Keller, your retiring president, and Mr. Joseph F. Rhoderick, your executive manager, in graciously deferring to Fort Detrick civilians and military as indispensable partners without whom this distinction could not have been achieved.

I well remember my luncheon with Mr. Keller and Mr. Rhoderick and the members of your official family at the Pentagon in March 1957, and was delighted to confer on the Frederick community the Army's certificate of appreciation. Thus, I am additionally indebted to these spokesmen for their complimentary recollections of this event during the course of your recent anniversary dinner.

Sincerely,

WILBER M. BRUCKER,
Secretary of the Army.

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF
OF PUBLIC INFORMATION,
Washington, D.C., February 5, 1959.

Memorandum for the Chief Chemical Officer.
Subject: Diamond Anniversary Award, Frederick, Md.

1. On January 29, the U.S. Civil Service Commission conferred its Diamond Anniversary Meritorious Award on the chamber of commerce of Frederick, Md. Attended by a large assembly of notables and guests and widely publicized through press and radio media, the ceremony focused much attention on a deserving community and its business and official leadership.

2. I am very impressed by the fact that the Civil Service Commission cited the excellent relationship between the chamber and the people of Fort Detrick as a basis for the award. Further, I am told the recipients repeatedly acknowledged the civilian and military of Detrick as their coworkers and partners in achieving the distinction. Whatever the criteria, great credit was reflected on the Army for its official participation in chamber of commerce sponsored Fort Detrick Appreciation Week of October 1956, and the joint Frederick-Detrick-Civil Service Commission Diamond Jubilee ceremonies of August 1958.

3. I am mindful, in this connection, of those on the military side of the fence in Frederick whose efforts have brought about such a warmth of climate and mutual understanding, notably Col. Donald G. Grothaus, the Fort Detrick commander, and his special assistant for public affairs, Mr. Joseph Schwimer. These men are obviously working as a team in rounding out a splendid community-relations balance sheet and recent events in Frederick bespeak their many accomplishments.

4. The Secretary of the Army is expressing his congratulations on the meritorious award in a letter to officials of the Frederick Chamber of Commerce. May I, in turn, express our own compliments to Colonel Grothaus, Mr. Schwimer, and all of the personnel at Fort Detrick. They are doing a fine job in many different ways and they deserve the Army's sincere appreciation.

H. P. STORKE,
Major General, GS, Chief of Public Information.

William A. Hughes, Outstanding Citizen

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. WALLHAUSER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an editorial which appeared in the Newark Evening News, Newark, N.J., on April 27, and it is a real privilege for me to call the attention of my colleagues to an honor that has been conferred upon William A. Hughes, chairman of the board of the New Jersey Bell Telephone Co., in being chosen the outstanding citizen of New Jersey for 1958. The sponsoring organization is the Advertising Club of New Jersey.

This is an honor that is very well deserved and those of us who have had the privilege of knowing Mr. Hughes personally can testify to his extraordinary dedication to public service. His partner in life, Mrs. Hughes, in my humble opinion, deserves some of the credit for his great success because of her willingness to allow him to devote himself to the affairs of others and because of her encouragement in the many worthwhile endeavors that he has pursued during his lifetime.

It is good news for me to know that Mr. and Mrs. Hughes have decided to live in the congressional district that I have the honor to represent.

On behalf of all of their friends and admirers I wish for them long life and continued success:

OUTSTANDING CITIZEN

The Advertising Club of New Jersey has chosen William A. Hughes, chairman of the board of the New Jersey Bell Telephone Co. as the State's outstanding citizen for 1958.

It is a happy choice. While carrying for 10 years the burdens of the presidency of a rapidly expanding telephone company, Mr. Hughes took on a host of civic responsibilities. In none of these tasks has he been a letterhead committeeman. To each he has given a full measure of time and effort.

The Advertising Club award is not the climax of a business career which will end with his retirement from the Bell system on September 30. It is, rather, a recognition of public services which will continue. There is no rocking chair in Mr. Hughes' future, no slippered ease or fading into obscurity. He and Mrs. Hughes spent recent vacations exploring the Nation's popular retirement havens. They were impressed by none and Mr. Hughes was appalled by Florida—"shuffleboard 6 hours a day." For retirement they have decided there is no place like New Jersey and are building a new home in Short Hills.

It is the community's good fortune that Mr. Hughes has both physical vigor and civic interest in abundance. He is this year's general chairman of the United Appeals drive. He is chairman of the Founders Fund Committee of Seton Hall's College of Medicine and Dentistry. He plans to widen his activities as a trustee of Drew University, the Newark Museum, and the New Jersey Historical Society.

He expects to be busier than ever, and the community is going to benefit.

Soldiers of the South

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 29, 1959

Mr. SPARKMAN. Mr. President, the past Sunday, April 26, was Confederate Memorial Day, a legal holiday in Ala-

bama and all the other States of the Old South.

One of the leading judges of the Alabama circuit courts, Judge Walter B. Jones, of Montgomery, writes a regular column in the Montgomery Advertiser. On Monday morning of this week, April 27, he had published a very interesting article entitled "Soldiers of the South." The article pays tribute to the memory of the soldiers of the South, only one of whom is left, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFF THE BENCH

(By Judge Walter B. Jones)

SOLDIERS OF THE SOUTH

Yesterday was Confederate Memorial Day—a legal holiday in Alabama and all the States of the Old South. For nearly a century we have hallowed this day to honor the memories of the men of the South, who in the trying and tragic days of the sixties wore the gray, fighting long years defending their States and homes from base attack and cruel invasion.

The Confederate soldier has long ago gone down in history as one of the great warriors of all time. The captains courageous who led him in battle rank with the noble and fearless soldiers of the ages. Robert E. Lee, Stonewall Jackson, John B. Gordon, Albert Sidney Johnston, James Longstreet, Nathan Bedford Forrest, Jeb Stuart, Pat Cleburne, Robert E. Rodes, John Pelham, P. G. T. Beauregard and A. P. Hill, to mention a dozen only among hundreds, are names which will never be forgotten.

When I reflect upon the meaning of Confederate Memorial Day there comes to mind the poem written years ago by a loyal son of Alabama and the South, Gustave F. Mertins, "March of the Mystic Men":

"Comes a lilting song of bugles down the
balmy winds of spring,
As my heart calls back its heroes to the
world's bright flowering.
Treading roseate clouds of glory, march
these mystic men in gray,
While I kneel with all the Southland, for today's Memorial Day.
These men sleep no more in valleys, no more
hillsides claim their dust;
No more death and no more anguish;—gone
the canker and the rust.
And the living men, their comrades, lift we
also to those skies,
Where now march the white-souled warriors
in a love that never dies.
All are Lee and all are Jackson, as our brimming eyes behold;
For in love all are commissioned, wearing
each the gray and gold.
Marching, marching, ever marching, come
these heroes without stain
And the Stars and Bar precedes them, never
to be furled again.
Not for wars and not for battles does that
silken banner float;
Not for signal to wild combat comes that
silvery bugle note!
But as symbols of a glory that shall never
fade away.
O my Soul! be at attention! for they pass—
the men in gray."

The characteristics which distinguished the Confederate soldier were love of home, of wife, mother, sister. He loved his community. He respected authority. He was trained both to obey and to command. In the army his company was the representative of his community, and he of his home. He would not sully his own name nor that of his company by any unsoldierly conduct. He would not degrade his wife and mother by insulting the wives and mothers of other men.

He was modest and seldom wrote to the papers of his achievements. He was devoted to his battle flag. Courage, honor, and patience accompanied him in all the hours of the bitter struggle. Small wonder that the Confederate soldier wrote with his sword his name upon that page of glory's deathless muster-roll, gathered from every age.

So, today we remember with all the love and gratitude of our hearts the soldiers of the Southern Cross, those who fought neither for fame nor reward; who sought neither place nor rank; who were not lured by ambition nor goaded by necessity, but who simply obeying the duty that was inbred in them by generations of patriots and fighters, suffered all, sacrificed all they had, dared all—and died for home and people, for the sacred rights of their sovereign States.

May we people of the South, the South that was theirs, be ever worthy of the heritage which is ours and ever emulate the example of that dauntless generation of southerners who stood true and steadfast for the ancient and honorable landmarks of their race. And so we say, as we look upon their quiet graves and recall their glorious deeds:

"Soldier, rest! thy warfare o'er
Dream of fighting fields no more;
Sleep the sleep that knows not breaking,
Morn of toil, nor night of waking.

Strength and Weakness in the Asian Littoral

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks, I include a condensed version of an article "Strength and Weakness in the Asian Littoral" by Capt. Phillip Barry Brannen, U.S. Naval Reserve and appearing in the December 1958 issue of the U.S. Naval Institute Proceedings. In these times when the Orient looms so large in the East-West conflict, when Asian communism is thrusting outward from its land mass base toward the rimland and fringing islands of the Asian Continent, I consider Captain Brannen's strategic analysis to be one of the most informative yet published on this subject.

Captain Brannen is peculiarly qualified to make such a study and prepare such an article. He is a graduate of the University of California and Harvard Law School and has been an active and distinguished member of the bar in California for over 25 years. After important assignments at sea during World War II, he served as U.S. naval representative on the Allied Control Commission for Rumania. In that position he had a unique opportunity to observe the versatile and ruthless methods of Communist aggression. Subsequently, while still on active duty, he saw duty on assignments by the Office of Naval Intelligence in Egypt, Palestine, India, Indochina, Siam, Malaya, China, and Japan. He is a resident of Beverley Hills and Santa Monica.

Captain Brannen's well-organized analysis of each major area in Pacific Asia is of particular value in that it considers the historic, military, geographic, and socialogical aspects of the problems in each such area. I commend "Strength and Weakness in the Asian Littoral" to the attention of Members of the House of Representatives:

STRENGTH AND WEAKNESS IN THE ASIAN LITTORAL

(By Capt. Phillip Barry Brannen, USNR)

At the end of World War II, we had in the Chinese Government a friend and ally, for whom President Roosevelt felt he could speak with confidence at Yalta. American warships had come to anchor in the river at Shanghai and naval units were being established ashore. China had taken her seat in the Security Council, as one of the great powers, and, under the benign influence of the United Nations sought to reestablish peace and order throughout the Far East. But, in the past 12 years, the Chinese people have been cut off entirely from the West. Their lines of supply reach the Soviet Union and they profess a political philosophy hateful to the free world and alien to themselves. The posture their government presents to the United States is grim and full of menace.

Seaward of China and to the south are the military bastions of the free world. An American Army stands in Korea, supported by highly trained South Korean troops. The 3d Division of U.S. Marines is based on Okinawa. Chiang Kai-shek trains the Nationalist Army, Navy, and Air Force in Taiwan. And protecting that island's communications, the U.S. 7th Fleet patrols the Formosa Strait.

Of course, we know that along the Asian periphery China will attack without warning, whenever the exigencies of her military or political situation require. It is quite possible that her requirements will be met by a limited war, fought in a limited area for limited objectives. In that event, even ordinary prudence will require us to assess beforehand the military and economic capacities of our Asian friends.[1]

I

The year 1956 was the best in Japan's recent economic history. The nation experienced almost unprecedented national prosperity and the high level of exports raised the standard of living throughout the country. All of this was reflected in a new level of investment in industrial plants, equipment, and inventories. Modern techniques were introduced after the war and increased productivity was observed on every hand.

Major business enterprises showed great profits and paid higher dividends to their stockholders. Large year-end bonuses were declared and paid to employees. Unemployment fell sharply, and in October of 1956 it was less than half what it was in the previous March. Stock market prices rose to a new postwar peak and seemed to be justified by higher earnings and dividends. Consumers' income and expenditures increased sharply and so did savings. The output and sale of retail goods reached a record level. Meanwhile, Japan experienced a phenomenal increase in her foreign trade.[2]

---

[1] We have in Asia our SEATO allies: Thailand, New Zealand, Australia, and the Philippines. And we have strong ties with the nations SEATO is pledged to protect: Cambodia, Laos, and South Vietnam. But the emphasis in this paper is on the other countries along the Far East perimeter.

[2] Exports in 1956 were 24.4 percent higher, and imports were 30.7 percent higher, than in 1955.

Nevertheless, by June of 1957, all signs pointed to a flattening out of the curve of business activity. In an attempt to remedy an unfavorable trade balance, the Government took steps to curb excessive investment and reduce the demand for imports. There was little doubt that Japan was influenced, at this stage, by a number of unfavorable trends in the world economy, particularly by a worldwide increase of stockpiles of raw materials and a steady decline in wholesale prices. In the fall, mining and manufacturing production dropped from their postwar peaks and both imports and exports declined. There was a slackening of demand for producers' goods but consumption levels and consumers' prices did not seem to be affected. Since that time, although the trade balance continues unfavorable, the general level of business and industrial activity remains high.

In summary, we may assume that the continuing rise in Japanese economic expansion was checked in 1957. Nevertheless, consumption levels and consumer prices throughout the country have not been affected. Thus, the people of Japan have never been better fed, housed, and clothed than they are today; and they have more of the modern conveniences of life than they ever had before. Nevertheless, there has been a decided disinclination on the part of Japan to channel its industrial efforts into the production of weapons for military purposes. Two reasons may exist for this. The first has to do with the evident apathy, and even distrust, of the Japanese public for all things military, including even the provision of the necessary means of self defense. The second may derive from the dire straits to which Japanese industry was reduced by the war. After the cessation of hostilities, the Japanese economy had to use up virtually everthing it produced, merely to survive. To rebuild their plants, businessmen were required to borrow to the hilt. Inflationary processes were set in motion and high interest rates drove prices up still further. Thus, there seemed to be no place for any industrial effort that did not contribute directly to the economic welfare of the Nation. Accordingly, the Japanese made every effort to direct their economic effort into strictly productive channels.

Of course, this is all to the good as far as it goes; for the United States needs an economically strong ally in the East. But the Japanese economy, as it strengthens, will need protection and prestige and it is difficult to see how either can be provided by a nation without modern weapons or effective military capability.

There may be the feeling in Japan that the military defense of the country is primarily the problem of the United States. And it should be a major policy of our Government to disabuse the minds of the Japanese of any such conceptions. The industrial recovery confirms the fact that Japanese productive capacity, once of a demonstrably high order, is fully restored. And as the economy tends to stabilize itself on its present high level, it may be expected that the protection of their own industrial well-being will become a matter of first importance and urgency for the Japanese. They can provide this protection, in the first instance, by a buildup in the Japanese self-defense forces, of which the nuclei already exist. They can provide it also by utilizing Japan's renascent industrial capacity, to the fullest possible extent, in the support and maintenance of the American Armed Forces in the east.

II

No one can approach a solution of the South Korean dilemma except along the road of paradox. On the one hand, the civil and military leaders appear forceful and determined and the troops, courageous, eager, and well trained. On the other, the Korean Government may not be democratic in its origin or entirely democratic in its practices. The economy presents a picture of sharpest contrasts: there are the extremely rich and the extremely poor; there has been great economic recovery in the large cities since the end of hostilities, but the impression remains that large masses of the people are below the poverty line; there is evidence of the almost $1 billion of aid given the country by the American Government, but there is also such evidence of economic insufficiency as to suggest that the recovery problem is almost insoluble.

Any attempt to understand these difficulties must start with the extraordinary division of the country upon the cessation of hostilities in World War II.

Economically, the aftermath was disastrous. On the one hand, North Korea needed badly the food grown in South Korea. This fact, among many others, has caused the exodus of North Koreans to the crowded cities of Seoul and Pusan. On the other, South Korea needed the coal, iron, and hydroelectric resources of North Korea. It needs them today to support the industries which it has hoped to establish with American aid. To some observers, these economic consequences of the division of Korea are the determinative factors and doom to failure any attempt to assist South Korea, economically, to its feet.

However, no one who knew South Korea at the time of the Armistice can say that the Korean economy has not improved. In Seoul, the hordes of little children have disappeared from the streets. There is still great destitution in the refugee camps outside the city but there has been considerable amelioration of conditions. In Pusan, so much cannot be said. The city's population has increased to well over a million. Included are 150,000 able-bodied men who are seeking work and finding none.

It has been proposed that the efforts of all men and agencies interested in the future welfare of the Korean people should be directed to the eventual reunification of the country. But in the present circumstances country-wide free elections are a dream. And pursuit of this proposal leads, necessarily, to the threshold of the vexed question of force. The redoubtable President of Korea has expressed himself, repeatedly, as favoring a march to the north. Understandably, he does not recognize even that the government of North Korea exists. It is conceivable (although not probable) that he would order the Republic of Korea forces to attack. But the logistical limitations of the Republic of Korea army are many and critical. And if the order were given, and obeyed, it is doubtful that the Republic of Korea forces could support even a limited offensive, without American transport, ammunition and other logistical support.

Conversely, in the present stalemate, there is little expectation that the North Korean forces will attack, although any change in the balance of power in Korea, or any critical Communist development in world politics would present this as an immediate possibility. The North Koreans on the one hand, and the Republic of Korea and American forces on the other, are in approximately equal strength. Under these circumstances, from the tactical point of view, an attack ordinarily would not be expected. However, the Chinese have troops beyond the Yalu which, if employed in conjunction with the North Koreans, would give the attacking army overwhelming force. The Chinese could arrive at the front lines long before comparable U.S. forces could be assembled from Okinawa, or elsewhere. It has been already noted that there are presently no U.S. ground forces in Japan.

I know of no one who pretends to have a clear solution of the many and complex Korean problems. No one can foresee the end because no one can foretell the possible eventualities. It is conceivable that the existing Korean Government will be followed by a Government whose policy will be orientated toward an adjustment of all outstanding problems with the Japanese. It is possible also that either the North or South Koreans may initiate military action. Moreover, the improvement in the economic conditions in South Korea, particularly noticeable during the last 2 years, may continue and it may be hoped that many of the evils of the current period will disappear. For many reasons—some strategic and some moral—a free and united country is a vital issue for South Korea and of vital importance to the Free World. Accordingly, we must expect that Syngman Rhee, and many other devoted South Koreans, will not rest until unification is brought about. To most informed Western observers, the stars that will chart Korea's future have not yet come into view.

III

All Chinese Nationalists in Taiwan hope to return by force of arms to the mainland. But do they actually expect to? On the one hand, the economy of Taiwan is sound and the island can easily maintain them. On the other, the Nationalist government has committed its political existence to a return. One finds this issue debated not only in Taiwan but in all quarters of the free world. The most authoritative answer would seem to be conditional: it depends on what incidents develop in Communist China which the Nationalists are able to exploit. If, for example, rioting should break out in Canton and local authorities should lose control, then the opportunity for armed intervention in the area may be presented.

The problem is not only military but political. Successful intervention would require a lodgment of troops on the continent. But it would also depend on the development of a favorable political consensus among the Chinese people. For in the absence of events which are politically exploitable, the road back to China, however much it beckons, is strewn with fearful blocks and hazards. Not least of these is the fact that Red China has an army of over 2 million and the third largest air force in the world.

The military expectations of the Nationalist Government depends upon the possibility of a swift landing on the continent in division strength. But in any such operation it will need minesweepers, with modern equipment, to clear the approach channels. And it will need escort craft with radar fire control and guns having a range comparable to the range of opposing shore batteries on the mainland. The Nationalists will also need LST's or like transport for use in amphibious operations. Trained Chinese and Taiwanese personnel are already available to man the additional ships. Many of the old Japanese vessels now being operated by the Nationalist Navy are obsolete and should be scrapped; and this in turn would provide additional manpower for the new vessels the navy hopes some day to obtain.

The Nationalist Government will not require, or desire, American soldiers in any adventure it may undertake. Politically, the Nationalists believe that any attack on the Chinese mainland by foreign troops would react against them. But they do hope for both logistical and air support from the United States.

It it not likely that the Communists could effect a successful coup d'etat in Taiwan. The Nationalist police are omnipresent and the possibility of infiltration is fully recog-

nized and guarded against. Currently the Communist threat is directed against the offshore islands of Matsu and Kinmen. For these islands have become a matter of face or prestige for the Nationalist Government and a very considerable part of the Nationalist forces has been committed to their defense. The government has stated that it will not retreat further, or cede additional territory. If it abandoned the islands in the face of a Communist attack, there is a strong feeling in Taipei, that the government itself would fall.

Strategically, the islands do not seem to have the importance given them politically. It is true enough that Nationalist gun emplacements on the islands command Communist air strips on the opposite shore. But it is quite evident that Taiwan is within easy bombing range, in any event, of airfields located far in the interior of China.

Presumably a conflict could develop in the Taiwan area in a number of ways. It could develop if the Chinese Communists made an amphibious attack on the offshore islands. It could also occur if the Communists attempted in Taipei a coup d'etat. The presence of the U.S. 7th Fleet would seem sufficient to rule out the possibility of an amphibious assault on Taiwan itself. But should the fleet be withdrawn, the Nationalist Government would have to prepare for an all-out attack on their positions.

If a condition resembling the spontaneous outbreak in Budapest should occur anywhere on the mainland, the attention of the free world would be focused immediately on China. For the Nationalists have the will and the force to intervene. Their task would be greatly facilitated by the naval craft they hope to secure from the United States; otherwise they are prepared to do with what they have. In the absence of suitable amphibious craft the Chinese will load their troops on merchantmen and junks and cargo craft of every type and kind. They will be greatly outnumbered by the Red military but they will look to the Chinese people for support. And they will hope that it will not be numbers or equipment, but the imponderable factors of esprit de crops and morale that will, in the end, decide the issue.

IV

The returning traveler to Hong Kong receives a number of striking impressions: The extraordinary growth in population during the last 10 years, the extensive modernization of the streets and urban areas, the increased activity, bustle and confusion of the free port and, above all, the amazing complacency of the Hong Kong residents in the face of the towering Communist threat at their borders. The people of Hong Kong have convinced themselves (or else they seek to convince others) that a free Hong Kong is of more importance and benefit to Communist China than a captive and, therefore, that the possibility of Communist occupation of the area is nil.

It is also possible that the Chinese may attempt to infiltrate Hong Kong in large numbers and attempt to subvert the civil administration. But the British seem fully alert to the possibilities in this regard. They react with the greatest rigor to the slightest evidence of espionage or subversion. Suspected fifth columnists are taken into custody and promptly deported across the border. There is presently no requirement that they be brought before a magistrate and nothing about the police action appears in the daily press. It is not unlikely that the British tap telephones, open mail, and otherwise proceed with the greatest vigor. Their police system is experienced and efficient. In an emergency they are able to call upon British troops in the area for support.

Nevertheless, if subversion is difficult, there is little doubt that the Communists have the military means to occupy Hong Kong, and its related areas, whenever their own necessities or related political considerations require. Their huge Army and large Air Force are strategically placed. The question is whether any real attempt to defend the city will be made. For many months the warships in Hong Kong Harbor have been American, not British. And the English Government has recently announced its intention to deactivate its traditional and once most formidable base of the Royal Navy.

In any event, it is clear that if a general war should break out, Hong Kong would be immediately attacked. Short of a general war, Red China may not move in that direction. But China will maintain the capability of doing so and meanwhile, it must be assumed that Great Britain's jurisdiction and control are tenuous. What is lost sight of in Hong Kong is that the considerations prompting Red China to move against the city may have nothing to do with China's economic interests or for that matter with Hong Kong itself but may derive from pressing, and little understood, necessities originating in the remote and labyrinthine passages of the Communist world elsewhere.

V

What has occurred this winter in Indonesia is not a political controversy but a conflict. It is the result of grievances which have been long developing in the provincial regions, against the central administration in Jakarta. To the feeling of the people in the Provinces that they have been neglected and ignored by the Government has been added the fear that renascent Communist influence in the administration poses a threat to their new and hard won liberties. The strong reaction came as no surprise.

In the disaffected outer regions, called daerahs, have been formed dissident councils or dewans. Through the media of the dewans, Indonesians living in the outer islands sought greater representation in the central government and a more equitable allocation of government revenues. Particularly, they sought greater economy in the conduct of public affairs. They contended that broad educational and social changes were called for and that tedious and futile administrative procedures in the central government stultified all attempts at progress. Much more could be accomplished they believed, if greater autonomy were given the provincial regions in the conduct and administration of their own affairs.

What started out as a political movement, with economic implications, developed in intensity as the economic and financial situation of the country deteriorated. It became evident that the provincial regions were losing confidence in the capacity of the central government to solve the country's pressing problems. President Sukarno had returned from a lengthy trip abroad to publicly announce, as a remedy, his concept of a guided democracy. But the people were quick to note that in this democracy the President advocated Communist participation.

The anti-Communist feeling in the daerahs has remained strong. Many of the military commanders in the provinces were participants in the struggle for Indonesian independence. In central and south Sumatra and in eastern Indonesia, these commanders have been accustomed to share with the civil authorities responsibility for the administration of the regions. And they are particularly alive to the nature and compass of the Communist threat.

Sukarno left the country in January of 1958 and was absent for a period of 41 days. Meanwhile the anti-Communist military commanders and civilian leaders met in central Sumatra at Padang. In due course they delivered an ultimatum to acting President Sartono, demanding that a new national government of anti-Communists be formed with Mohammed Hatta at its head and including the much respected Sultan of Djokjakarta. When their ultimatum was ignored the dissidents proclaimed a new revolutionary government and claimed full sovereign rights over all Indonesia. Sjafruddin Prawidanegara, former governor of the Bank of Indonesia, was designated Prime Minister.

Thus the issue was joined. The central administration had a small navy and some tactical aircraft but the revolutionary government did not feel that it was entirely without retaliatory power. For Sumatra is a large exporter of coffee and rubber and in ordinary times would provide almost three quarters of Indonesia's revenues. Java with its teeming population of 54 million must import a part of its food. The new government at once forbade exports of oil to Java or the payment of tax revenues to the central government. In return the central government bombed Padang and landed troops on the east coast of Sumatra. The Communist leader Aidit called for the most repressive measures and, from the north, the Soviet fishermen looked expectantly at the troubled waters.

VI

Modern war is waged without scruple and without compassion. It poses a great number of highly important questions, one of which may be: Where shall we expect to meet the enemy? Those who expect an all-out atomic, or thermonuclear, war tell us he must strike us in our homeland. But there are others who say we will engage him in Korea, in Taiwan, in Indonesia, or, it may be, in Japan. The answer lies in the field of grand strategy and a mistake could be decisive of our lives and liberties and the very existence of our State.

Now there is much sound military judgment that no allout nuclear war impends. It is true that if one belligerent has a thermonuclear weapon (and can deliver it accurately) and the other has not, it is reasonable to assume that the weapon will be put to use. But where both belligerents can deliver so destructive a weapon, the possibility of its use is affected by a number of other considerations. It becomes important to deliver it, not only, but to defend against it. The concept of massive retaliation is not so much a defense as a threat of punishment. So far as this country is concerned, it implies that a strike with special weapons has been made, involving the total destruction of one or more of our cities. But the complete destruction of one of our great industrial centers is hardly an acceptable loss in modern war. Conversely, the retaliatory destruction of one or more of his largest cities could not be an acceptable loss to the enemy. And, where the tactic involves unacceptable consequences as to costs, all military strategy operates to prevent its employment.[2]

We know, of course, that the Soviet Union is controlled by men of no political or moral compunction. But this does not mean they would disregard necessarily all strategical doctrine. And if they would not, we would

[2] In the last war there is no question that Germany during the Battle of Britain, could have killed hundreds of thousands of civilians by using gas as a tactical weapon, i.e., by delivering air-to-surface gas bombs. But there is no question either that, from the beginning, Great Britain possessed a like retaliatory power. It was evident that mass destruction of the civilian population could only be a two-way street. Accordingly, consideration of the consequences as to costs, made the employment of gas a weapon strategically unsound.

then be faced with the possibility of peripherical wars, fought for limited objectives.

In such a war, it would be necessary to formulate our strategy in conjunction with our allies on the perimeter. For we could not expect to employ our own resources only. It is a sound principle of war to know (that is, to recognize and evaluate) your enemy. It is also necessary to know the resources and capabilities of your friends.

The Pitfalls of the Disengagement Concept

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Brutus Coste, secretary general, Assembly of Captive European Nations, New York City, and two articles on the pitfalls of the disengagement concept by Mr. Willy Bretscher, editor in chief, Neue Zürcher Zeitung, Zurich, Switzerland:

ASSEMBLY OF CAPTIVE EUROPEAN NATIONS,
New York, N.Y., March 26, 1959.

The Honorable DANIEL J. FLOOD,
U.S. House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE FLOOD: May I express to you, in the name of the Assembly of Captive European Nations, our sincere gratitude for the friendly reception you extended to me and to my colleagues, Dr. Petr Zenkl, and Dr. Laszlo Bartok, during our visit to you last week.

It was gratifying to see that your interest in our part of the world is as active as ever and that our peoples can count on you as a stanch friend in need. We are quite confident that your voice will be raised in behalf of Western proposals for a European peace settlement which would embrace the whole continent and not only the Western part. We are indeed convinced of this, not only because of your interest in Eastern Europe but, above all, because of your awareness that Western Europe will live in perpetual insecurity so long as Soviet power extends as far as the center of the old continent.

In the light of the disturbing press reports concerning the efforts of the British Prime Minister to persuade the U.S. Government that the present Soviet control over central and Eastern Europe should be formally sanctioned, it would seem that your active support is more than ever necessary.

According to the press, the arguments used in favor of a policy of abandonment of Eastern Europe was that, in sanctioning past Soviet conquests, the West can persuade the Soviet Union to halt or even to give up its drive for world domination. This sounds—to say the least—unconvincing. The record proves the very opposite, namely, that every concession the Soviets have been able to wrest from the free world has only served to whet their appetite.

We are, of course, happy to see that the United States has so far reiterated its position and has declined to accept the alleged British thinking on that subject. We are equally glad to note that the French and German Governments remain firmly opposed to the recognition of the status quo. And we are confident that, with the backing of the U.S. Congress the position of your Government, strongly supported by the French and the Germans, will prevail.

I would also like to express to you our appreciation for your kindness in so promptly inserting in the CONGRESSIONAL RECORD our memorandum of February 17. We were also gratified at your reaction to our maps on Russian and Soviet expansion, and we hope the Department of State will respond favorably to your suggestion. We can, of course, supply them with as many copies as they would need for distribution among Members of Congress.

We are currently working on the draft of a resolution against the spheres-of-influence concept and attempts to revive it, as recommended by you. I hope to be able to forward it to you within the next few days.

Meanwhile, I take the liberty of enclosing herewith for your information photo-offset copies of two articles by Mr. Willy Bretscher, editor in chief of the Neue Zürcher Zeitung, which I consider to be the best newspaper in Europe. The first of these articles was written recently—in January of this year—while the second was written as long ago as September 1957. Both articles deal with the pitfalls of the disengagement concept. I am certain that these forceful expressions of the views held by a very distinguished European writer will be of interest to you.

With my renewed thanks, and with best regards, I am

Very sincerely yours,

BRUTUS COSTE,
Secretary General.

[From the Neue Zürcher Zeitung, Jan. 1959]

THE GORDIAN KNOT

(By Willy Bretscher, Neue Zürcher Zeitung editor in chief)

The Council of the Liberal World Union, meeting for the second time last year, has concluded the examination of the various proposals for disengagement in Eastern and Central Europe by carrying a resolution which takes an unequivocal stand in this highly controversial matter. Although at the special meeting of the council held in London on December 13 and 14, some spokesmen of the German and Danish liberals and of the Polish exiles persisted in a favorable attitude toward the idea of disengagement, without, however, committing themselves to any definite plan, the great majority of the attendants did not hesitate to express the conviction "that the disengagements proposals so far produced, if implemented would weaken the defense of the West, undermining NATO, and at the same time strengthen the domination of the Soviet Union over the peoples of Eastern Europe and of the Soviet-occupied zone of Germany."

The clear-cut decision of the liberal council was determined by a careful evaluation of the basic elements of the present international situation. Any kind of disengagement which does not take into account the manifest need for an effective provision against surprise attack and for a general agreement on the controlled limitation of all armaments, both nuclear and conventional, is unlikely to contribute to an easing of international tensions. It would imply the creation of new zones of insecurity, be they "disatomized," "demilitarized," or "neutralized," in which the possibilities for incidents, explosions, brush-fire wars and, therefore, the risk of a general conflict following the powder-train of such uncontrollable happenings would be greatly increased. While some people still cling to the belief that disengagement might become the first step toward a change of the frozen status quo in favor of the West by loosening the ties binding the satellite countries to Moscow, this rosy optimism is continually and conclusively refuted by the pertinent facts of the overall political situation, showing clearly the extent to which the Soviet Union is committed to the undiminished preservation of Communist rule—and that means the Kremlin's rule—over the satellite countries. If the precarious balance of military strength in Europe were changed by some kind of disengagement, the change of the status quo thus set in motion would be apt to work in reverse, namely in favor of the Soviet Union, ever ready and eager to step in wherever and whenever a power vacuum occurs, and to fill it with the horrors of a totalitarian system.

In this context the critics and opponents of disengagement pointed to Berlin where just now, according to Khrushchev's plan, some kind of disengagement should take place which would leave West Berlin to the tender or not so tender mercy of the Soviets. As a matter of fact, the Soviet proposal for a withdrawal of both the Western and Russian forces from the city of Berlin is a beautiful illustration of the deeper meaning and far-reaching intentions underlying the Russian concept of disengagement. In this case public opinion in the West for once has been able to penetrate easily the thin disguise of the Soviet trap. It is all the more surprising that in the very moment when the West has to prepare itself for a trial of strength, courage and endurance, the inane talk about the "Maginot line" thinking of Western policy still goes on in some German circles which have not yet become aware of the ludicrous inconsistency of their own attitude, expecting from Mr. Dulles meek surrender in Quemoy and heroic resistance in Berlin.

It was the newly elected president of the Liberal World Union, Giovanni Malagodi, who seized the opportunity of the discussion in London to reveal the fallacy of the distinction between "military" and "political" thinking which has lately become fashionable among Western intellectuals. While it is certainly true that the conflict between East and West has not only a military aspect, but is a moral and spiritual, a political and economic issue as well, the tendency to take military security for granted, to ignore or to depise the intense efforts which have been and which are still necessary to insure the protection of the free world from the heavily armed colossus in the East, is very dangerous and might have the most harmful consequences, if public opinion in the West should thus be misled to assume that any serious preoccupation with the problems of defense had become obsolete. A fair measure of military security is indeed an indispensable factor of success in the fight waged against communism on the other fronts. No amount of profound "political" thinking nor the most impressive economic and social achievements would be of any use, if the West, and especially Western Europe, were to find itself one day in a situation where military threats from Moscow, which have become rather abundant in the recent past, could no longer be disregarded by the peoples up to now protected by the "shield" and "sword" of the Anglo-American powers. Malagodi, supported by Salvador de Madariaga, paid a well-deserved tribute to the United States and to Great Britain for taking such a large share in the defense of Western Europe and of the free world at the cost of sacrifices which are not yet matched by some nations of continental Europe.

As to the maneuver directed against Berlin, island and beacon of freedom in the vast sea of Communist power, the liberal council felt entitled to recall many former exhortations for firmness in negotiation and resistance to threats, when it proclaimed its "wholehearted support of the United States, Great Britain and France in their refusal to submit to Soviet intimidation and to the Soviet Government's repudiation of all engagements regarding free access to West Berlin." If Berlin were to fall before the brutal

and insidious onslaught of the new occupant of Stalin's throne, the moral and political repercussions of a Western defeat of this purport and magnitude would be tremendous and possibly even fatal. Then and then only might the hour for disengagement strike—a disengagement rather different from anything the clever advocates of the various schemes of this kind in the West have imagined, a panicky disengagement of large masses in Germany and elsewhere from the cause of the tottering West, from the cause of European unity and common defense, from the cause of mankind's struggle for the survival of liberty.

An English saying seems to apply in a particularly apt way to the situation in the East-West conflict:

"Faced with the Gordian knot,
Cut it, if you dare,
Undo it, if you can,
If you can do neither, don't despair:
The rope will rot."

There is no doubt that in the time of thermonuclear stalemate the West does not dare to cut the Gordian knot. The big powers may try again and again to undo it, but in these attempts they must never be so foolish as to jeopardize the essential requirements for the security of the free world. If the knot cannot be undone, the West will have to arm itself with the one virtue which is all too rare in modern democracy: patience. This patience, not to be understood as a negative, passive attitude, but as an active, alert willingness to face and to endure all the vicissitudes of a protracted worldwide conflict, may well be sustained by the experience, recurrently and validly demonstrated by the eventual downfall of tyrannies in the course of universal history. The rope will rot.

[From the Neue Zürcher Zeitung, September 1957]

THE DEFENSE OF THE WEST

(By Willy Bretscher)

It is of the utmost importance that we realize one thing clearly: the day of thermonuclear stalemate is drawing near. The moment America's relative invulnerability ends—because not only her advanced air bases will be endangered, but the strategic Air Force of Soviet Russia will also be in a position to reach as far as the cities of America—the nuclear threat will be a reciprocal rather than a unilateral one. Already in the first phase of approaching thermo-nuclear parity in armament, the United States of America will become increasingly cautious in threatening the Soviet Union with atomic retaliation in order to arrest a local conflict. This means—as Raymond Aron has put it in an article in the review "Western World/Occident"—that some vital positions in Western Europe, as for instance, Berlin, will no longer be protected against aggression by the certainty of American reprisals, but rather by the Kremlins' own uncertainty as to what, under certain circumstances, might be the nature of America's reactions.

But the consequences of a thermo-nuclear stalemate between the United States of America or, let us rather say, between the Anglo-Saxon powers and Soviet Russia—whenever it becomes materially or merely psychologically effective—will be more far-reaching still, and will affect the position of all the countries of Western Europe and of Western Europe as a whole. Once thermo-nuclear stalemate is achieved, it may and probably will act as the most powerful "deterrent" to a general war which would amount to mass suicide. But when the thermo-nuclear threat will have ceased to be unilateral it will also cease to act as a "deterrent" to small wars; that is to say, Western Europe will no longer be protected by the atomic shield of America. The former certainty of American reprisal or retaliation in the event of a communist aggression in Western Europe, will first be transformed into uncertainty as to what might be the nature of America's reactions, and at a later stage, into the certainty that there can be no American reprisals because such reprisals would mean mutual annihilation. Soviet Russia, having maintained her superiority in manpower and conventional weapons, will be tempted to advance her positions by exerting to the fullest extent the pressure of her political and military power and by resorting to all the various means, the guises and disguises of aggression at her disposal. Not only the most vulnerable Western positions, such as Berlin, but also the small states immediately bordering on Russia and, finally, all Continental European countries would find themselves exposed to this relentless pressure; as a matter of fact, all these countries may at some time or other find themselves in a situation comparable to that of Eastern Europe from 1946 to 1948, a situation which led to the loss of freedom and independence of the nations now belonging to the satellite empire of Soviet Russia.

Can NATO prevent such a development by replacing the American atomic shield which is gradually becoming less effective? The answer to this question depends on whether NATO will be capable, not only of fighting the opening round of another major European war, but also of taking effective action in the case of local wars, aggressions by proxy, etc., or to put it more explicitly, to act in such a way that the brush fire will be stamped out, the aggression repulsed and the aggressor discouraged from further ventures, without the development of a large, general war from a "small" war. In reference to these cases of "small wars," that is to say, a repetition of Korea, we must clearly recognize the fact that the possibilities of NATO for such effective action are extremely limited as long as it continues to be inferior to Russia in manpower and is, in consequence, forced to depend on the use of atomic weapons to counterbalance this inferiority. These tactical atomic weapons are, of course, highly destructive; the weapons in question are full-grown atom bombs with an effect, varying from one-tenth to ten times the force of the bomb which destroyed Hiroshima; but precisely for this reason it is doubtful, whether and to what extent their use in a local conflict is possible and advisable. Above all it must be remembered that the employment of these tactical atomic weapons against an opponent who has attacked and invaded a NATO state would inevitably be of the gravest consequence to the civilian population; in many cases it will, therefore, be impossible to use this weapon because this kind of "liberation" would defeat its own purpose, as judged by political and humane standards. How, for example, is one to use the atom bomb if West Berlin should suddenly be occupied by troops of the East German People's Army? Furthermore, the use of tactical nuclear weapons automatically includes the danger of causing the development of a local conflict into general war. To be sure, both military experts and statesmen have affirmed that it is perfectly possible to draw a distinction between general atomic warfare including thermo-nuclear arms and the limited use of atomic weapons of a tactical nature. We should like to believe that they are right, but we may be allowed to wonder whether the troops on which atomic bombs of a tactical nature would be dropped, would also be inclined to make this fine distinction. At any rate, there can be no certainty in this matter, for the outcome depends on the enemy's actual reaction to the use of tactical atomic weapons. One cannot ignore the danger that tactics might become strategy and local war might degenerate into general war and mass suicide. The conclusion seems inevitable: NATO in its present state and with its present equipment is ill-fitted if not downright incapable of coping adequately and effectively with a great number of the situations which may arise in a near future, when thermonuclear stalemate has been reached.

A dispassionate analysis of these problems leads to the conclusion that the breathtaking development of the techniques of war and the corresponding changes in strategy considered or already carried out by governments and general staffs, tend to create a situation in which the free world or parts of the free world may sooner or later be faced with the terrible choice between political capitulation and general atomic apocalypse. Is there an answer to this dilemma?

Such an answer is certainly not to be found in the disarmament talks which we have witnessed in the last months. Although, between the thermonuclear powers of today, there should and could be to render this threat 100 percent effective. They would in this way reduce to a minimum the danger of having to make actual use of such arms and would strengthen the possibility of attaining the desired end of security and peace. One may leave the question open as to what practical measures such a policy of rendering the thermonuclear threat 100 percent effective might entail at a given moment, but the possibility and even the necessity should now be envisaged that Western Europe would have to acquire the "deterrent" herself, if and when the United States of America can no longer be expected to risk the destruction of New York and Chicago in order to save a small European country from invasion and occupation.

Secondly—and this is the most important point—NATO will have to make a serious effort to achieve such a measure of military strength in manpower with equipped conventional weapons, as is considered indispensable to the security of Western Europe against all kinds of aggression. According to the latest reports on SHAPE, the Supreme Commander now has instantly available to him a sufficient and even overwhelming nuclear striking force in the U.S. 3d Air Force and in the 6th Fleet, but what he sorely needs are the 15 to 18 divisions which would make up the contingent of the 30 divisions required to cover the central front. In view of the situation which may arise in Western Europe, once nuclear stalemate has been achieved or even before then, especially in regard to the possibility of small wars, aggressions by proxy, new uprisings in the satellite countries, and so forth, it is not surprising that General Norstad is expected to put forward in his next report to the NATO Council the view that sufficient ground forces are needed to counterbalance Russia's superiority in conventional armies and weapons, and that the stopgap measures consisting in the replacement of men by gadgets, as well as the subterfuge of pretending that by changes in organization two men can be as effective as three, must be discarded.

There is no doubt that the demand for a substantial increase in ground forces, such as is needed for the strengthening of the defense of Western Europe, means onerous burdens for all the countries concerned—burdens which the warworn and war-weary peoples will not easily accept and which some statesmen and politicians may not be prepared to advocate as eloquently and unflinchingly as certain other schemes for the fostering of the economic welfare and social progress of the masses. There are indeed

formidable psychological and political obstacles barring the way to a rapid and effective rearmament of Western Europe. Recognition of this fact does not detract from our duty, but makes it still more imperative to tell the unpalatable truth and to disperse the fog of illusions and delusions which veils the vitally important issues in the matter of defense. The truth is this, that materially, such effective action is extremely limited as long as it continues to be inferior to Russia in manpower and is, in consequence, forced to depend on the use of atomic weapons to counterbalance this inferiority. These tactical atomic weapons are, of course, highly destructive; the weapons in question are full-grown atom bombs with an effect, varying from one tenth to ten times the force of the bomb which destroyed Hiroshima; but precisely for this reason it is doubtful, whether and to what extent their use in a local conflict is possible and advisable. Above all it must be remembered that the employment of these tactical atomic weapons against an opponent who has attacked and invaded a NATO state would inevitably be of the gravest consequence to the civilian population; in many cases it will, therefore, be impossible to use this weapon because this kind of "liberation" would defeat its own purpose, as judged by political and humane standards. How, for example, is one to use the atom bomb if West Berlin should suddenly be occupied by troops of the East German People's Army? Furthermore, the use of tactical nuclear weapons automatically includes the danger of causing the development of a local conflict into general war. To be sure, Western Europe would be perfectly able to have a classical armament sufficiently strong to counterbalance the classical armament of the opposing forces of the Eastern bloc, that it has the potential in population, in technology, in industrial output and economic power to match the industrial strength of 200 millions of Russians, who have in their immense empire to care for the defense of a frontier extending three to four times the length of the present frontier of Western Europe from the North Cape to the Maritime Alps. The truth is, too, that not a general economic mobilization, but only a reasonable and reasonably limited effort would be needed to achieve a state of defense in Western Europe which would relieve its peoples of the anxieties and nightmares induced by the present deplorable situation. The truth is, finally, that if Western Europe is satisfied to rely and continues to rely exclusively and indefinitely on the "deterrent" of the thermonuclear threat, she may discover one day, when it is too late to do anything about it, that the "deterrent" has become ineffective and that she is doomed to suffer the fate of beleaguered Byzantium 500 years ago.

Oil Imports and Gravy Trains

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. McDOWELL. Mr. Speaker, at the time of the Executive order which restricted the importation oil by the mandatory import program, I issued a press release voicing my concern for the effect of the program upon the eastern seaboard consumers. Soon after the printing of this release, I was pleased to receive from Mr. Harry B. Hilts, secretary of the Empire State Petroleum Association, a letter with some pertinent data which vindicates my position. Mr. Hilts' letter contained an enclosure—a copy of a statement to its shareholders by American Petrofina, Inc., a Belgian controlled corporation which started operation in the U.S. market in October of 1956.

Because I feel, as does Mr. Hilts, that "the eastern seaboard consumers will be required to foot the bill involved in this gravy-train operation," I feel it necessary to bring to the attention of my colleagues, a description of my position, and the information conveyed to me supporting my stand. Consequently, I under unanimous consent, introduce the following material as an extension of remarks in the CONGRESSIONAL RECORD.

First. My press release of March 26, 1959.

Second. Mr. Hilts' letter of April 13, 1959, describing the position of the Empire State Petroleum Association which Mr. Hilts represents.

Third. A statement of March 30, 1959, issued to its stockholders by American Petrofina, Inc.

Fourth. My reply of April 17, 1959, to Mr. Hilts.

Fifth. Mr. Hilts latest communication of April 20, 1959.

McDOWELL ATTACKS PRESIDENT'S DECISION TO CUT OIL IMPORTS

Congressman HARRIS B. McDOWELL, JR. Democrat, of Delaware, in a strong indictment of President Eisenhower's move to protect large American oil corporations, made the following statement:

"We have been hearing a lot of talk lately about inflation from the administration. Prevention of inflation seems to have been the main thing on Mr. Eisenhower's mind as we have seen from his policy of a balanced budget and tight money. He has insinuated that the Democratic Congress is composed of nothing but spendthrifts and budget busters who are bent on destroying the economy by producing inflationary conditions.

"And yet, this same President has seen fit to cut the amount of oil which this country can import. This will definitely cause more inflation than any move the Congress could make if it were bent upon producing inflation, and of course, the Congress is not." McDOWELL went on, saying:

"While the Presdeint's order cuts crude oil imports about 25 percent, it slashes the import of gasoline and other refined oil products more drastically. To the ordinary consumer, this means the price of gasoline will go up since with less gasoline on the market, more money is required to buy it. It means the consumer's heating bill will become larger if he heats his home with oil or any oil product.

"To the businessman, this decision means a rise in the cost of manufacturing since he must pay a greater price for oil which he consumes in large quantities. By increasing the cost of doing business, this will increase the cost of buying every article that American business manufactures. Then too, when products of American industry must be sold at a higher price, our domestic manufacturers will be at a disadvantage on the world market since they cannot sell their products as cheaply as other nations with whom they are competing.

"We can easily see that the President's decision is totally inconsistent with his previous demand to eliminate inflationary tendencies from the economy. It is also inconsistent with the President's expressed desire to aid foreign countries and increase our prestige in the international arena. As a member of the House Foreign Affairs Committee, I am deeply concerned with the effect the oil import cut will have upon our relations wtih friendly producer nations. Our good trade relations with Canada essentially will be destroyed, and the damage this decision will do to our already strained relationships with South America and the Middle East will be irreparable. The economic stability of these countries, whose friendship we need so badly, depends to a great extent upon the money they receive from selling oil to the United States. The President's action can do nothing but cause a loss of friendship, and a weakening of these countries' economy, making them even more susceptible to Communist influence and infiltration. This we absolutely cannot afford.

"The President has attempted to give reasons for the decision. He stated that we must cut oil imports and develop America's ability to produce oil so that in the event of a major war, the United States would not have to depend upon foreign markets. This argument is so ill advised that it becomes ridiculous."

Congressman McDOWELL pointed to its weaknesses by stating:

"First of all by cutting off oil imports we may be increasing the American oil industry's capacity to produce more oil by increasing its employees and the size of its production plants, but along with this we are depleting the available supply of domestic oil. Secondly, the United States has sufficient oil-producing capacity right now to fight a big war. Our worry is not whether we have enough oil for war * * * we have that. The real problem is whether or not we have an adequate amount of defense to prevent a major war from starting. Thirdly, in case of a limited war, the United States would not be severed from all foreign oil sources. Oil from Canada is is piped into this country, and consequently would be free from enemy action on the high seas. Fourthly, it is true that some of our foreign sources of oil would be cut off in time of war, but, with this in mind, should we not allow at least part of America's oil to lie underground and should we not take advantage of the opportunity, which may not always be with us, to bring in oil from the Middle East and South America?"

Congressman McDOWELL went on to say: "The President's decision is harmful to every State in this Union which depends upon oil imports. This means that his decision is harmful to all but a handful of western oil-producing States. It is a devastating blow to every consumer in this country, especially those east of the Mississippi River, for both business and consumers in this area depend heavily upon imported oil.

"The only people to benefit from the President's decision are those running our large oil companies and, I might add, it is not only the Democrats who are saying that the President is looking out for the oil interests which are financially well off to start with Senator GEORGE AIKEN, Republican, of Vermont, delivered a scorching criticism of the President's plan."

McDOWELL said, in conclusion: "Although politics is not the reason for criticism of the decision, politics can be the only reason for the President's order. It looks as if there is collusion between certain people in both political parties to protect the oil producers in exchange for their political support. I, for one, however, will voice my disgust when I see politics played to this extent. This decision, by annihilating a major source of oil, the lifeblood of our Nation, can do nothing but cause unjustified hardship to the consumer, weaken our defenses, and decrease our stature in the field of international relations."

EMPIRE STATE PETROLEUM ASSOCIATION, INC.,
New York, N.Y., April 13, 1959.

The Honorable HARRIS B. MCDOWELL, Jr.,
House of Representatives,
Washington, D.C.

MY DEAR MR. MCDOWELL: We are enclosing herewith a copy of a letter sent recently to its shareholders by American Petrofina, Inc., a Belgian-controlled concern which began operating in the U.S. market on October 1, 1956.

We call your attention to the following quotation which we have underlined in the attached letter—

"* * * upon the basis of negotiations just concluded, should result in a substantial improvement in earnings."

Since the refineries owned by this company are located at inland sites, far removed from ports of entry used by oversea tankers, they cannot readily use imported oil in their operations. Thus, we assume that the substantial improvement referred to above will result from the sale of American Petrofina's oil imports under the quota system to refiners whose locations permit them to process imported oil.

So that you may more fully understand the gravy-train aspect of the situation referred to above, we estimate the windfall profit to this company as follows: Based on the going market price for foreign oil brought in under the quota system, when transferred from the quota holder to another refiner in need of the oil, we assume the additional sums accuring to American Petrofina, Inc., will total between $1 and $1.5 million this year.

We have, of course, no bone to pick with American Petrofina per se. We submit their letter only as a typical illustration of how former nonimporting refiners stand to benefit from current import restrictions.

This type of transaction is legal under the quota restrictions, but is assuming all the aspects of a "black market" operation. To substantiate this, the McGraw-Hill Publishing Co.'s daily Oilgram on March 20 pointed out that this traffic will add approximately $30 million to the coffers of formerly nonimporting refiners this year, thereby creating an inflationary impact on consumer oil prices.

We call your attention to the fact that eastern seaboard consumers will be required to foot most of the bill involved in this gravy-train operation.

Sincerely,

HARRY B. HILTS,
Secretary.

AMERICAN PETROFINA, INC.,
New York, N.Y., March 30, 1959.

To the Shareholders:

The mandatory import program recently approved by President Eisenhower, and to which reference was made in the company's 1958 annual report, extends long-awaited benefits to American Petrofino, Inc.

Under the license just received from the Department of the Interior, dated March 11, 1959, the company is authorized to import 4,050 barrels of foreign crude oil per day during the initial quota period. The effect to the company of this allocation is of real significance and, upon the basis of negotiations just concluded, should result in a substantial improvement in earnings.

During 1958, refinery realizations on manufactured products were severely depressed as a result of the availability of low-cost foreign crudes and products to various authorized companies operating under the voluntary import program, as well as to others who elected to ignore the requirements of that plan.

The controls established under the mandatory program should now prevent many of the costly abuses of the past and contribute thereby to an improvement in market conditions.

The prospects for your company for the remainder of the year are brightened by the Government's action, and I thought the information would be interesting and welcome to you.

HARRY A. JACKSON, *President.*

APRIL 17, 1959.

Mr. HARRY B. HILTS
Secretary, Empire State
Petroleum Association, Inc.
New York, N.Y.

DEAR MR. HILTS: I appreciate your letter and enclosure of April 13 for it gives factual information backing my objections to the mandatory import program. Any further information of this nature, dealing particularly with the effects of this program on the eastern seaboard consumer would be most helpful to me.

It is my feeling that your letter is the type which would be extremely effective as an extension of my remarks in the CONGRESSIONAL RECORD, and I would like to introduce it with its enclosure as such. I will, however, be guided by your feelings on this proposal and I would appreciate your expressing them to me as quickly as possible.

I truly hope that I may be of assistance to you in finding a remedy to this situation.

Sincerely,

HARRIS B. MCDOWELL, Jr.,
Member of Congress.

EMPIRE STATE PETROLEUM ASSOCIATION,
NEW YORK, N.Y., *April 20, 1959.*

Hon. HARRIS B. MCDOWELL, Jr.
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MCDOWELL: Thank you for your letter of April 17 in which you acknowledge my letter to you of April 13 and its enclosure concerning our objection to the mandatory restrictions on petroleum imports.

I note your suggestion concerning the extension of this letter and its enclosure to your remarks in the CONGRESSIONAL RECORD and would be very happy to have you use my letter and its enclosure in this way.

Sincerely,

HARRY B. HILTS, *Secretary.*

Crusade Against Obscenity

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. MURRAY. Mr. Speaker, under House Resolution 78 the Committee on Post Office and Civil Service is authorized to conduct full and complete investigations and studies with respect to the mailability of articles and printed matters generally, including, among other things, the mailing of obscene matter.

I am most pleased with the efforts put forth by our Subcommittee on Postal Operations under the able chairmanship of Mrs. KATHRYN E. GRANAHAN. I wish to commend Mrs. GRANAHAN and the entire subcommittee for the prompt action they have taken in highlighting the need to eradicate obscene matter from the mail.

At a recent subcommittee hearing, the Postmaster General described mail order obscenity as a $500 million a year business. The Postmaster General and Mrs. GRANAHAN's subcommittee have pointed the way of best combating these merchants of filth by calling for an aroused community to take action. Every community should enlist the support of their newspapers and radio and television stations in a joint crusade to help dry up the flow of obscene matter into the hands of our youth.

As an example of what can be done in such a crusade, I would like to insert in the RECORD an editorial from the April 25, 1959, edition of the Philadelphia Inquirer entitled "Mailed Filth Must Be Wiped Out":

MAILED FILTH MUST BE WIPED OUT

We are in full agreement with Philadelphia Representative KATHRYN E. GRANAHAN that local communities should make every effort to help wipe out the growing traffic in pornography and filth.

Postmaster General Summerfield has described mail order obscenity as a $500-million-a-year business that is increasing in volume because of the tremendous profits involved from little investment and the many slack obscenity laws, loosely interpreted in many courts.

It is obvious that no post office has the men or the facilities to check every piece of mail for questionable content. Nor can the police devote much of their time to thumbing through every magazine, paperback, or doubtful advertisement for potential offerings of filth.

But an aroused community, working with law-enforcement agencies, can accomplish much to stamp out this vile business.

At the heart of the matter is a twofold need: tougher postal laws concerning the mailing of lewd material and stiffer fines and prison sentences for convicted purveyors.

In addition to a promise to work with Congress in writing tighter postal laws, Mr. Summerfield has also wisely suggested that State and local authorities draft legislation along the lines of Federal statutes to make local enforcement against obscenity stronger and more effective.

In dumping unordered, lewd material into mailboxes across the country; in putting into the hands of our children samples of objectionable pictures, films, and related filth, these mail-order merchants of obscenity have not only created one of the Nation's most serious moral and social problems, but also have undoubtedly contributed to the alarming growth of juvenile delinquency.

Present laws on the books are obviously inadequate to prevent or even slow down the trade in pornography. A liberal Supreme Court ruling on the differences between art and obscenity has provided a virtual sanctuary in which sellers of filth can operate almost with impunity in defiance of postal regulations.

Persons convicted under today's obscenity laws generally receive minute fines and short prison sentences which are not in any way commensurate with the enormity of their crime. Of what importance or harm is a $1,000 fine to a convicted purveyor when he can make that much in a day selling filth? Or a 60- to 90-day jail sentence for his damage in kindling an unhealthy pruriency in children?

It is at the local level, in addition to Federal and State enforcement, that much can be done to smash this evil racket. The 50,000-odd complaints a year received by the Post Office Department from outraged parents, religious and civic groups probably represent only a small percent of the total number of people receiving unordered pornography through the mail.

In addition to the efforts of postal authorities to stop this type of mail at the source, citizens everywhere who get notices offering to sell dirty pictures, lewd stories and films or other pornographic material should give prompt notification to the Post Office.

If such filth is offered locally, the police should be informed.

Since these dealers in obscenity aim their wares at children, theirs is more than a wicked crime. They must be caught and punished to the fullest extent of the law. And where the law is weak and ineffective, it must be changed and strengthened.

Every person interested in the welfare and decency of our children can help stop this vicious racket by concerted, vigilant action.

The Man Who Meant It

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. WIDNALL. Mr. Speaker, on Monday, April 20, Herbert W. Voorhees, of Hopewell, N.J., was killed when his car crashed into the rear of a bus.

Herb Voorhees was president of the New Jersey Farm Bureau and for many years had been a leader in the agricultural activities of our State. The evening of his untimely death, he was returning from an executive board meeting of the Farm Family and Life Insurance Co. in Albany. He had been named president of this company only 3 months ago.

Herb Voorhees was not a theorist—he was a practical farmer who actually ran a farm. He was articulate, courageous, a leader in every true sense of the word and his death deprives our State of one of its most dedicated citizens.

The New Jersey delegation in the Congress has met during recent years at breakfasts with representatives of the New Jersey Farm Bureau. The meetings led by Mr. Voorhees were to the point, no words were minced, and we all benefited from a clear understanding of the positive, constructive program offered by the bureau. It was a real tribute to his leadership that the views of the New Jersey Farm Bureau received full attention and major support from New Jersey Representatives in the Congress.

Herb Voorhees was a good friend. His council and advice will be missed and his place in the community will be difficult to fill.

I am closing my remarks by inserting in the Appendix an editorial from the Bergen Evening Record of Hackensack, N.J., published on April 25, 1959:

THE MAN WHO MEANT IT

There are few enough outspoken rugged individualists left. To see one of them struck down in the prime of his usefulness is doubly shocking.

Herbert W. Voorhees was killed in an automobile accident a few days ago. This State lost one of its most intelligent and devoted citizens. Mr. Voorhees for 17 years was president of the New Jersey Farm Bureau. But he was more. He himself was something of an institution. Whether or not one agreed with him (and it was rare that every one did), every one listened. He made hard sense.

Mr. Voorhees was a farm-bureau official who ran a farm. He knew farmers and farming, and he knew their problems, and he spoke his mind on them. "Professional do-gooders" was his scornful description of those who opposed his plans to liberalize child-labor laws. He was as vehement in his demands for a sales tax as he was in his denunciation of the farmer's dependence on Government. As head of the Highway Users Conference he was a leader in the fight to stop diversion of highway funds.

It is not often these days that a man fights bluntly, intelligently, hard for all of that in which he believes. Every level of government and society would be better off for such fighters. New Jersey is poorer in the loss of Herbert Voorhees.

Inactive Duty Pay for Reserve Officers and Enlisted Men

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. SCHWENGEL. Mr. Speaker, because I feel that there has been an oversight in adequately providing for the pay of Reserve officers and enlisted men while on inactive duty, I wish to take this opportunity, under leave to extend my remarks, to place in the Appendix of the RECORD, a copy of a resolution which was approved at the 31st annual convention of the Iowa Department of the Reserve Officers Association. Congressional action on this resolution would correct the present inequity.

The resolution follows:

"RESOLUTION RELATING TO PAY OF THE ARMED FORCES

"Whereas inactive-duty pay for Reserve training has been, is, and always will be the most effective incentive for increased participation in Reserve training programs; and

"Whereas constructive Reserve training programs in the future will require increased participation by reservists in all categories and classes; and

"Whereas paid training assignments for some individuals and not for others in the same category and class results in unwarranted discrimination, creates a morale factor, detracts from the desirability of continued participation in Reserve training year after year, and contributes to a lowering of training standards and practices: Therefore be it

"*Resolved*, That the Congress of the United States be asked to enact into law under the title 'Pay for the Armed Forces' a provision which shall be applicable under all past, present, and future statutes pertaining to pay for the Armed Forces, and which, in effect, shall read:

"'Every Reserve officer and enlisted man on inactive duty who under proper authority participates in an authorized Reserve training program will be paid not less than 1 day's base pay for attendance at each and every authorized training period.'"

The above resolution was approved and adopted on April 18, 1959, by the unanimous vote of the delegates to the 31st annual convention of the Iowa Department, Reserve Officers Association, in convention assembled.

BOB A. JESSUP,
Lieutenant Colonel, Armed Forces
Reserves National Councilman
(For the Department President).

Anti-Inflation Letters Shock Congressmen

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of my colleagues and other interested persons an article which appeared in the Chicago Tribune on April 26, 1959.

As most Members know, particularly those from the Middle West, the Tribune is conducting a campaign to limit Federal spending and curb inflation. This effort has resulted in a great flood of mail demanding that Congress pursue sound fiscal policies. I doubt that those who have received the bulk of these messages need to be reminded that our people recognize the danger of inflation. My hope is, however, that the results of this campaign will not be lost on the rest of us. It is clear to me that the overwhelming majority of Americans favor a halt in excessive spending. They have seen the purchasing power of their dollars shrink in half over the past two decades and are demanding the maintenance of a stable currency. Surely, we who have the responsibiilty of formulating Federal policies will wish to comply with their wishes.

The article reporting on the campaign and written by Chicago Tribune Correspondent Willard Edwards follows:

[Chicago Sunday Tribune, Apr. 26, 1959]

ANTI-INFLATION LETTERS SHOCK CONGRESSMEN—PRESIDENT PLEASED WITH TRIBUNE CAMPAIGN

(By Willard Edwards)

WASHINGTON, April 25.—In the last 10 days, Congress has been given its greatest shock in many years. It has been shelled with a sudden and unexpected bombardment of mail from protesting citizens.

Although the main targets of fire thus far have been Midwest representatives, the range is gradually being broadened to strike lawmakers from the South, North, East, and Far West. Capitol Hill can talk about nothing else.

The cannonading began without warning the morning of April 15. The two Senators from Illinois, EVERETT DIRKSEN, Republican, and PAUL H. DOUGLAS, Democrat, found passage to their offices blocked by bulging sacks of letters. The count on these messages was to rise to more than 60,000 in a week.

OTHERS RECEIVE SACKS

Eight Senators from the neighboring States of Indiana, Iowa, Wisconsin, and Michigan found their office staffs contemplating with awe thousands of letters from constituents.

In the following week, 72 Representatives from the same 5 States had the same experience; as of this morning, an estimated 120,000 pieces of mail had been delivered in 10 days to the 82 officeholders who represent the 25 million men, women, and children in the Chicagoland area.

Many Members were delighted as they read the contents of this vast outpouring. Others were bewildered. All were deeply impressed. This massive demonstration of public sentiment could not be ignored.

The letters stressed a single theme. They carried the worries and alarms of citizens over inflation and further depreciation in the value of the dollar. They begged the lawmakers to cut down spending.

A THEORY IS UPSET

The phenomenal feature of this tide of protests was not so much its overpowering volume; its singular aspect was the nature of the written complaints. The writers were asking for less, not more. In doing so, they were undermining a theory popular among many Members of Congress that the people have grown accustomed to a welfare state and will not tolerate any lessening of Federal spending which might lose them its benefits.

The letters appealed to Congressmen to vote only for essential expenditures, to oppose waste, and keep the dollar sound.

This was confusing, not to say alarming, to those lawmakers who thought they had received a mandate in last November's elections to spend more money than ever before.

One newspaper was responsible for this public uprising. The Chicago Tribune on April 12 and April 19 called upon its readers to let their Congressmen know how they felt about inflation and printed forms to facilitate the process.

WRITERS TELL OF WOES

A majority of the readers who responded to the appeal used the blanks but about 20 percent added letters in which they noted the personal injuries they had suffered in the form of deflated savings, insurance, pensions, income, and social security.

One of the most interested observers of the anti-inflation campaign was Dwight D. Eisenhower.

The President looked at the Tribune spread with its bold black inquiry at the top: "Are you worried about inflation?" He scanned the display with its printed coupons for mailing protests to Congress and exclaimed:

"I wish every newspaper in the country would do this."

As the days passed, Mr. Eisenhower was kept informed of the response to the campaign and his interest grew as he learned of the swelling tide of letters which poured in upon the Midwest Senators and Representatives.

Last Wednesday, the White House authorized a tribute to a newspaper which has sometimes differed rather strongly with his policies. This was a virtually unprecedented endorsement which stirred the journalistic world. The President of the United States rather rigidly refrains from singling out for praise any individual newspaper in a bitterly competitive business.

James C. Hagerty, White House press secretary, publicly announced the President's delight about the campaign and the public demonstration of support for reduced spending and a balanced budget which he had been urging against heavy pressures in Congress.

PRESIDENT GETS ALLY

"President Eisenhower is watching with great interest the Chicago Tribune's campaign against excessive Government spending and inflation," Hagerty said. "He is delighted with the response and wishes more newspapers would do the same."

The reason for President Eisenhower's happiness over the anti-inflation mail pouring in upon Congress is only too evident. Now he has reason to believe that the public has been alerted and is letting Congress know how it feels.

Up to now, the President has been armed only with a veto power to stop inflationary pressures in Congress. He does not want to use it. No President likes to set up his opinion against that of a majority of Congress.

He may not have to exercise the veto. An aroused public is speeding to Washington tens of thousands of vetoes.

No Politics in REA

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. SANTANGELO. Mr. Speaker, the subject of rural electrification program presently is being widely discussed in view of the President's veto of S. 144. Many people feel that the wonderful accomplishments of rural electrification should not be interfered with and that there is no place for politics in the administration of the rural electrification program for the folks and the people in the hills.

One of the persons who believes that the rural electrification program should be disassociated from politics is Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association. Mr. Ellis has held this position since 1942. He practiced law in Garfield and Bentonville after admission to the Arkansas bar in 1933. His legislative career started with the election to the Arkansas Assembly at the age of 23 and election to the State senate 2 years later. In 1938 he was elected to the U.S. House of Representatives where he served until 1943 when he entered the Navy. While in Congress he was a strong advocate of the rural electrification program and the transmission program necessary to get the power of the dams out to the load centers. Rural electrification and the full development of the country's hydroelectric resources have been his lifetime hobbies.

At a recent seminar at La Parguera, P.R., I listened with interest to a talk delivered by Mr. Ellis, who has an intimate knowledge of the workings of this valuable electrification program. His remarks are pertinent and will prove interesting reading:

I want to thank you, first of all, for the honor you do the National Rural Electric Cooperative Association and me by inviting me to participate in this seminar. We at NRECA have a genuine admiration for the Puerto Rico Water Resources Authority, including the imaginative way you have approached the task of rural electrification. My daughter, Mary, and the NRECA president, Mr. Walter Harrison, join me in thanking you for your wonderful hospitality. It is very inspiring for us to be here and see at first hand, for the first time, the beauty of your island and the great work you are doing.

Mr. Descartes suggested that I tell you something about the National Rural Electric Cooperative Association and its role in the rural electrification program in the United States. This I am happy to do, because I think our organization mirrors the accomplishments, hopes, and objectives of the rural electric cooperatives, public-power districts, and public-utility districts—indeed of all rural people. The growth of NRECA has paralleled the growth of rural electrification itself. Today, our organization represents about 95 percent of the REA borrowers, providing them with services and efficiencies that are available only through their own united efforts.

As I go along, I want to touch on some of these services, because I think they will be of interest to you. Everything we do at NRECA is in response to the needs and requests of our members. Through their own national association, the systems have worked out answers to many of their most vexing problems. In doing so, they have developed some rather ingenious approaches to the broad area of rural electric management.

I do not believe I am presumptuous in saying that the work we do at NRECA has real meaning and value for you here in the Commonwealth. I think we are united with you in the great common goal of producing and delivering an abundance of electric power at the lowest possible cost to the consumer. When a blow is struck anywhere in the country for that cause, I believe the results are beneficial to us all. I know that we on the mainland benefit from your inspired demonstration of how the wise utilization of electric energy can uplift an entire economy. The rural electrification program of the States, I believe, is stronger because you have found a method of electrifying your rural areas here.

And I think it worthy of note that both you and we found the financial help we needed in the Rural Electrification Act of 1936. Had it not been for that act, a large part of rural America would be in darkness tonight—including, no doubt, much of rural Puerto Rico.

THE GREAT SOCIAL INSTRUMENT

So this great social instrument is a sort of rural lifeline that ties our people together in a common quest for a better rural life. But the act itself did not put light in the darkness. The act was a tool, a dream, an inspiration. It remained for men to use the tool, to believe in it and care for it and guard it from privateers, speculators, and exploiters.

Our people have used the act—and used it wisely. On a thousand rural electric systems in every part of the country, men have sweated and sworn and prayed and somehow, almost incredibly, they have built the network of lines that form a power skeleton in rural America. Rural people did this gigantic job themselves. And now that the lines are up, they are learning that an equally difficult task lies ahead. Now they must rebuild and heavy up, and constantly build or find new sources of wholesale supply to meet a power demand that doubles every 5 to 7 years. Now they must master the complex techniques of management so necessary to the successful operation of such dynamic enterprises.

The task of guarding the act, of protecting it and sometimes improving it, has also been performed by the rural electric systems. This is one of the important things they do through NRECA. Every year, it seems, efforts are made in the Congress to cripple the act or destroy the REA borrowers. It used to be that these efforts were made indirectly. Bills would be introduced, for example, to kill off the Federal wholesale power program of the river basins, which is the lifeblood of so many rural electric systems. About half of our systems buy all or part of their wholesale supply from Federal multipurpose dam projects; and a great many systems would not be feasible at all without this source of supply. So our enemies used to think if they could kill off the Federal wholesale power projects, they could do by indirection what they had no chance of doing directly.

THE DIRECT ATTACKS

They're still using that approach, of course, but in the past few years something new has been added. Now the total REA loan program is under direct attack. It is a matter of record that the administration in Washington is dedicated to increasing the interest rate and sending our systems to private lenders for much of their future loan needs. Bills to that effect were sponsored last year by the administration, and

the President has assured everyone that new efforts will be made this year. This is fact, and I would be less than candid if I did not mention it to you this morning. The success of the administration campaign in this effort could, I believe, have a real effect on your own plans here for expanded rural electrification. We do not believe an increased interest rate is justified for this program, and we do not believe our loan needs could be met—at a price we could afford to pay—by the open money market.

We are committed and intend to fight these efforts with every resource at our command; we are convinced we will win, because we believe truth is more powerful than propaganda slogans—and we will find a way to take our case to the people.

In saying these things, I am in no sense attacking the administration. This is the course they have chartered, and they have a right to their own policies and programs. But I promise you that this particular voyage will not be calm and undisturbed. The delegates to our NRECA regional and national meetings have firmly and unanimously gone on record in opposition to these policies, and this opposition will be forcefully expressed—in many ways.

LEGISLATION WE NEED

Now, let us turn briefly to some legislation we need. There are a number of bills in this Congress that we aggressively support. One of them, I think, will be of especial interest to you, because the Puerto Rico Water Resources Authority has been prominently mentioned in hearings this year and last.

HUMPHREY-PRICE BILL

This is the Humphrey-Price bill to restore the full loan-making authority of the REA Administrator. As you may know, early in 1957, the Administrator was ordered to submit loans of more than $500,000, and all applications from new borrowers, to an Agriculture Department official for review, before he signed the loan. The REA Administrator, as you know, is appointed by the President and confirmed by the Senate. He serves a 10-year term, which means his tenure is not concurrent with any Secretary of Agriculture or any administration. These provisions, of course, were written into the act to remove REA from any hint of political control or influence.

Well, we thought the able REA Administrator thoroughly capable of making loans himself, as the act intended. We did not think he should have to have them "reviewed" by a political appointee in the Department of Agriculture who was not appointed by the President, was not confirmed by the Senate, and had no term of office at all.

So we sponsored the Humphrey-Price bill to remedy this situation. Here's the part I think you will find interesting. During the hearings on the bill last year, and again just recently, the REA loan to finance your new generating unit was discussed at some length. It seems that your loan was one of those which the political appointee—Mr. Kenneth Scott—did not want the Administrator to make. The hearings made it perfectly clear that the only reason you got that loan was because Mr. Hamil went to bat for you.

Let me read you an excerpt from the official record of the Senate hearings last year. I think it clearly demonstrates the philosophical test to which REA loans are now subjected.

This is a colloquy between Senator LAUSCHE of Ohio and Kenneth Scott of Secretary Benson's office.

"Senator LAUSCHE. I put this question to you. In the Puerto Rican loan, if you had been convinced that it was a bad loan and dangerous as a credit risk, would you have considered it your obligation to inform Mr. Benson, the man who was ultimately responsible?

"Mr. SCOTT. Yes, sir.

"Senator LAUSCHE. Why did you not inform him of this loan about which you had a doubt—the Puerto Rican loan?

"Mr. SCOTT. I had no question, Senator, about the repayment of that loan. And I had no question about it having been determined legally that it was within the act. The question that I had and that I discussed with Mr. Hamil was whether or not it was really within the full intent of the law. As I stated here earlier, Senator, it was based upon, first, the very strong financial condition of that borrowing organization, and the fact that they had in the past been able and always had used private money.

"It was a change of purpose, a major change of purpose of their borrowing from REA at a time when money rates were high.

"Senator LAUSCHE. That is, it was finally your conclusion that they were trying to get some cheap money at 2 percent when you believed that with their fiscal standing they probably could have borrowed in the private market.

"Mr. SCOTT. That was my impression, Senator."

What do we have revealed in this colloquy? We have a political appointee, Mr. Scott, arguing against making a loan because he thinks possibly you could have gotten the money from a private lender. He admits that the loan is justified, and meets all the requirements of law. He does not question the competency of the REA staff which has certified that the loan should be made. What he has done is add his own philosophical test, and his own interpretation of the intent of the law.

I think Mr. Scott did not know, or care, about your great struggle here to electrify your rural areas. He did not care that private funds, had they been available at all for this purpose, would have been at a much higher interest rate, and might possibly have doomed this part of your rural electrification expansion.

Our people throughout the United States were shocked by this testimony. They knew it could happen to them if it could happen to you. They wondered if it had happened already.

You got your loan. You got it because Dave Hamil fought for it. But why should these things happen? What if a lesser man were Administrator of REA, a weaker man? What would happen to the loan program then when all the political philosophers were through?

We have high hopes for the Humphrey-Price bill. We've worked awfully hard for it. Extensive hearings have been held on it by the appropriate committees of the Senate and House. Both committees have recommended its passage. The Senate passed it last week. The House, we hope, will act soon. If we succeed, the Administrator will no longer be burdened by this sort of thing.

OUR ATOMIC FUTURE

We're interested in a wide variety of other legislative matters, of course. I won't go into them in detail, except to say again that we're working for an abundance of power at the lowest possible cost. This objective leads us to aggressively support the comprehensive development of our rivers for the benefit of all the people. It leads us to support Federal projects, including Government transmission lines to deliver the power out to major loan centers for sale at wholesale. And it leads us to support a strong forward-looking program for the development of atomic energy.

Sometime in the future, the power of the atom will either destroy mankind or help liberate him. At this moment, for the first time in history, man holds in his hand the power to destroy a civilization. But he also holds the key to an almost undreamed-of plenty. I do not believe that man will destroy himself. With our prayers and our determination, he will find a way to live with himself and his fellows. As dark as some of the days are, I think that never before have so many people worked so desperately for peace.

Less dramatic and threatening, but almost as important, it seems to me, are our policies for developing the atom to serve the peaceful aspirations of mankind. Admiral Lewis Strauss, former Chairman of the Atomic Energy Commission, once said this, in discussing our atomic future:

"It is not too much to expect that our children will enjoy in their homes electrical energy too cheap to meter; will know of great periodic regional famines in the world today only as matters of history; will travel effortlessly over the seas and under them and through the air with a minimum of danger and at great speed; and will experience a lifespan far longer than ours, as disease yields and man comes to understand what causes him to age. This is the forecast for an age of peace."

In my own opinion, I do not think Admiral Strauss chose to adopt policies that would have led to the achievement of the idea he expressed so well. Before we can make significant progress in these areas, it seems to me that our officials will have to begin thinking more in terms of people than of companies.

One thing is certain: If we allow the commercial power companies to grab a monopoly on atomic power now, while it is in its infancy, electricity will never, in Admiral Strauss' words, be "too cheap to meter." Maybe it won't ever be that cheap anyway—but the people whose taxes in the amount of billions on billions of dollars have been invested in developing atomic science deserve to share in its benefits. For our part, we consider the atom a natural resource that belongs to the people—not to a company or an industry. We believe the Federal Government should build prototype reactors. And we think the power should be marketed in the same manner other Federal power is marketed. i.e., with preference to consumer-owned electric systems. Certainly private industry should be encouraged to participate, and it has been encouraged to do so for many years now under an ultra-generous give-away subsidy program. But surely it is incomprehensible to give the utility companies a monopoly status over the atom.

The atom, then, is another area in which NRECA has a deep legislative interest.

STRENGTH THROUGH UNITY

I would like to tell you briefly about some of our other NRECA services, all of which we consider important in the overall rural electrification picture.

At the national level, our systems have been cooperating in several important activities for some time. Many of these coordinated efforts have been carried on long enough to prove conclusively their efficacy.

First, I should like to mention briefly some of the pooling services that have been organized by NRECA at the request of and for the benefit of our rural electric systems. Then, I will point out some of the activities which are engaged in jointly by the American Public Power Association, NRECA and other organizations.

COOPERATION AMONG RURAL ELECTRIC SYSTEMS

In NRECA we have long recognized that each rural electric system must go beyond the area of internal management to achieve our objective of low-cost service. We recognize the efficiencies of centralized service in those matters that can be handled better by two or more systems, and we have made available to our systems the services of the State and national associations to assist in coordinating those activities.

We have come close to establishing the principle or policy that any group of mem-

bers in more than one State may use the national association—the members and/or the Board concurring—as a vehicle through which to set up and operate any worthwhile service on a self-supporting, cost basis.

Examples of this type of cooperative service include our insurance pool, our retirement and group health programs, our fleet auto purchase program, and other types of purchasing pools. At our national meeting in February in Washington, we launched a centrally-coordinated public relations program.

Management training courses and institutes which are provided the various systems on a pay-as-you-use basis have proved to be invaluable in improving internal management. Our budget for this self-supporting service alone exceeds a quarter million dollars a year.

Safety training courses and power use demonstrations also have been well received by our member systems.

As helpful as these activities are, I feel that we have only scratched the surface of benefits that can be obtained through cooperative effort. Every year, our systems call on us for assistance in setting into motion programs which are too expensive for a single system to launch by itself, or, which, if done piecemeal, lack the efficiency and resultant impact necessary for full effectiveness. Public relations is an example of the latter type of activity.

COOPERATION BETWEEN NRECA, APPA, AND OTHER GROUPS

Coming closer to the area of our present concern, permit me to review some of the ways NRECA and APPA work together for mutual understanding and benefit.

I want to tell you today what I have said many times in the past—that we in NRECA are pleased to have the opportunity of working with the American Public Power Association and its outstanding general manager, Alex Radin, and his able staff.

While the almost constant contact between these two associations in Washington is important to our mutual understanding of public affairs and technical problems, I firmly believe that the combined influence that we exert in the legislation field is of vital importance to all of us here today. Because, in the final analysis, it is on the legislative front where the day-to-day skirmishes culminate in the showdowns that affect the very existence of public power and, therefore, the future of all consumer-owned and operated utilities.

Although the NRECA and the APPA may differ at times on certain points, you can be sure that on the major issues—when the chips are down—we are standing shoulder to shoulder slugging it out with the well-organized private profit power monopolies who have more seemingly unlimited resources at their disposal.

With the struggle continuing unabated, and with victory hanging in the balance, it is imperative that we close ranks on a united front until victory is assured.

A united front means just one thing—it means all of us.

ELECTRIC CONSUMERS INFORMATION COMMITTEE

Cooperation on a broad front is achieved largely through the Electric Consumers Information Committee which has headquarters in Washington. The ECIC, as we call this committee, is sponsored by 23 State and national organizations, including APPA, NRECA, the Tennessee Valley Public Power Association, many labor unions, including the AFL–CIO itself, the National Farmers' Union, the Cooperative League and other consumer groups; among the many services ECLC provides, one of the most important is that which deals with Federal legislation.

Besides cooperating in legislative matters, NRECA and APPA have worked together in other important ways. The ECIC and NRECA and APPA serving as the prime movers organized the research group known as Energy Research Associates, directed by Leland Olds, former Chairman of the Federal Power Commission. This small group, on a limited budget, is providing extremely valuable research on public power that is used by everyone in the field of publicly owned power generation, transmission and distribution.

In 1957, we joined in the sponsorship of management institutes which resulted in untold benefits to participants from both organizations. We have jointly used the consulting services of a sympathetic top New York consulting firm. Several of you officials and key employees of the Puerto Rico Water Resources Authority have attended these institutes. Bob Kabat, who heads up our management training program, said to me when he heard I was coming down here: "That's a fine group. They are very able fellows, well educated and experienced. No group has created a better impression at the management institutes than they." I regard this a high compliment indeed.

In another area, a joint committee of APPA and NRECA has been set up to try to arrive at some formula for resolving territorial disputes.

The Washington staffs of these organizations have joined together in a Credit Union.

NRECA subscribes to APPA's Atomic News Letter for its member systems.

One of the most important features of this kind of cooperation is that the benefits are large and the costs are small. I must admit it has required time and work. But the results make the effort worthwhile.

CONCLUSION

I have attempted to touch on a few of the things which we consider important to the present and future success of the rural electrification program. The key ingredients, it seems to me, are these:

First. The act itself is all-important. It must be kept intact, and it must have sympathetic administration.

Second. The Government must continue to develop to the maximum extent all of our natural resources, including atomic energy.

Third. The rural electric systems must join together to provide themselves with whatever common services can cut their costs or otherwise improve their efficiency and security. Each one is small by itself, but together they are a big industry, and to a degree they can achieve the efficiencies of scale through common services.

Fourth. The rural electric systems must work closely with their natural allies, with other consumer-owned utility systems and consumer-oriented organizations of various kinds. We need, and must have, all the friends we can muster.

If we are successful in holding on to our program, and pushing it forward, the entire Nation will benefit. You will benefit here in Puerto Rico—because I believe in the long run the fate of your rural electrification program on this beautiful island Commonwealth is entwined inevitably with that of the U.S. mainland.

We, who are privileged to participate in this great consumers' power crusade are fortunate, indeed. With perhaps few exceptions, in what nobler cause could we work—work not only for ourselves and those of our time, but for generations to come; for, as poet Will Allen Dromgoole said:

"The traveler raised his old gray head,
'Good friend, in the path I have come,' he said.
There followeth after me today
A youth whose feet must pass this way.
This stream which has been naught to me
To this fair-haired boy may a pitfall be,
He, too, must cross in the twilight dim,
Good friend, I am building this bridge for him."

—*Will Allen Dromgoole.*

DAV Services in Virginia

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. BROYHILL. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Virginia citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veterans' organizations, which have State departments and local chapters in Virginia, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

DAV SETUP

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have very substantially benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams of Concord, Mass. Its national adjutant is John E. Feighner of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at the DAV National Service Headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veterans' organizations. Nevertheless, since shortly after its formation in 1920, the DAV National Headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veterans' organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C.

They there have ready access to the official claim records of those claimants

who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert to the problems of other less well-informed claimants.

DAV SERVICES IN VIRGINIA

The DAV maintains a fulltime national service officer in Virginia. He is Mr. Richard Frazee and his office is located in the VA Regional Office, 211 West Campbell Avenue, Roanoke. The department commander is Charles M. Nightingale, 4301 South Eighth Street, Arlington, and the department adjutant is Arnold H. Sells, 819 South Irving Street, Arlington.

There are three VA hospitals in Virginia in each of which the DAV has a nationally authorized VA voluntary service representative. They are as follows: Dr. Peter Leginus at the 2,000 bed neuropsychiatric hospital at Roanoke; Mr. Garland H. Branch of Ellerson, Va., at the 1,100 bed general and medical hospital at Richmond; and, Mr. Tyler Hatchell of Portsmouth, Va., at the 2,225 bed VA center at Kecoughtan.

During the last fiscal year, the VA paid out $95,396,000 for its veteran program in Virginia, including $24,270,430 disability compensation to its 26,687 service disabled veterans. These Federal expenditure in Virginia furnish substantial purchasing power in all communities. Only about 8 percent, 1,935, are members of the 36 DAV chapters in Virginia.

SERVICE ACCOMPLISHMENTS OF THE DAV

This 8 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Virginia veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	40,793
Claims folders reviewed	33,994
Appearances before rating boards	15,671
Compensation increases obtained	1,894
Service connections obtained	694
Nonservice pensions	457
Death benefits obtained	69
Total monetary benefits obtained	$984,997.17

The above figures do not include the accomplishments of other national service officers on duty in the Central Office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Virginia veterans, their dependents and their survivors.

SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranty loans for homes, farms and businesses, etc. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—Civil Service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult—too many times impossible.

A VA Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claims may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer, will, of course, advise him as to its possible improvement, before presenting same to the ajudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, Regulations and Schedule of Disability Ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

LOSSES BY REVIEWS

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per pear. About 1 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Virginia with a consequent loss of about $28,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudication will occur as to an additional equal number or more during the next 3 years before such review is completed. I urge every disabled veteran in Virginia to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent and expert national service officer.

COST OF DAV SERVICES

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income of its Idento-Tag—miniature autombile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously made a donation, more than 1,400,000 owners of set of lost keys have received them back from the DAV's Idento-Tag department, 6,571 of whom during the last 8 years were Virginia residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much

more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having thus been nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all "serviced" claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of $1,000 with the DAV Service Foundation to which it recently added another $100. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member—an excellent objective for all other States. Benefactors from 27 States have, up to this time, become enrolled on the memorial honor roll.

Inasmuch as only the interest earnings from special donations will be available for appropriation to the DAV for its use in maintaining its National Service Officer program in the State of residence of each such benefactor, this is an excellent objective also for Virginia. Each such special benefactor is enrolled on a permanent memorial honor roll which, updated, is then included in the annual report of the DAV and of its incorporated trustee, the DAV Service Foundation, to the U.S. Congress.

Each claimant who has received any such free rehabilitation service can help to make it possible for the DAV to continue this excellent rehabilitation service for other distressed disabled veterans and their dependents in Virginia by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veterans' organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV. I consider it a privilege and an honor to belong to the Disabled American Veterans.

Development Loan Fund

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. BOLAND. Mr. Speaker, I was one of the Members of this House who pleaded in the Deficiency Appropriations Subcommittee, the full Appropriations Committee, and on the floor of the House before Easter for at least $100 million appropriation for Development Loan Fund commitments during fiscal 1959. President Eisenhower had requested a $225 million deficiency appropriation and I am pleased to note that the Senate Appropriations Committee has increased the Development Loan Fund item to $200 million for the remainder of this fiscal year.

MILITARY ASSISTANCE SHOULD BE DEEMPHASIZED

However, I am more than pleased to know that the distinguished chairman of the Senate Foreign Relations Committee, Senator FULBRIGHT, of Arkansas, has offered an amendment that would establish a capital fund for the Development Loan Fund totaling $7.5 billion, or $1.5 billion annually for 5 years. The President has asked for only $700 million for the Development Loan Fund for fiscal 1960. Senator FULBRIGHT pointed out that the emphasis should be on economic foreign aid, rather than military assistance and I agree with him wholeheartedly. The U.S. Government cannot eliminate military assistance and it should not, but it should be deemphasized.

BOLAND COMMENDS SENATOR FULBRIGHT AND CONGRESSMAN BOWLES

My colleague from Connecticut, Congressman CHESTER BOWLES, the former Ambassador to India who served with distinction, made similar observations with respect to our foreign aid program on the floor of this House last week. Both Senator FULBRIGHT and Congressman BOWLES are to be commended for their profound thinking in this very vital field.

The distinguished newspaper columnist, Walter Lippmann, devoted his article of today to the foreign aid program, which, he so truthfully calls, the annual headache of Congress. He then tells why it has become such a headache. Mr. Speaker, I had submitted the Lippmann column with my above remarks yesterday for the RECORD, but the entire text was returned to my office this morning because Senator WAYNE MORSE of Oregon has asked that the Lippmann article be printed with his remarks in the Senate. It was printed on page 6199 of yesterday's RECORD. I now ask that my commentary be included, without Mr. Lippmann's column, of course.

Hiring the Handicapped in Our Town

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to insert a most interesting essay authored by Miss Elizabeth O'Brien, of 416 Washington Street, Somerville, Mass.

Miss O'Brien, a student at St. Joseph High School in Somerville, was the first-place winner of the essay contest conducted by the Governor of the Commonwealth of Massachusetts and went on to take second prize in the national essay contest sponsored by the President's Committee on Employment of the Physically Handicapped.

The subject upon which she speaks is one in which I have always been deeply interested, and I feel that her presentation is both vividly and eloquently expressed. As the Representative in Congress of the district in which Miss O'Brien resides, I am proud and happy to commend the following to the attention of my colleagues:

HIRING THE HANDICAPPED IN OUR TOWN
(By Elizabeth O'Brien)

Welcome to Our Town, United States of America. It is a thriving community with long, wide peaceful streets which are lined with neat ranch-style homes. In the center of the city are the department stores and other retail businesses. In the morning, the streets of Our Town are crowded with cars and people hurrying to work, to the factories along the outskirts of town where walls loom high into the sky. All types of people enter these buildings, shoulder to shoulder; the normal and the handicapped, regardless of race, color or creed, all enter together and work together. This is due to the wisdom of the owners and managers of these industries, who after studying all phases of the question of hiring the handicapped, have found the advantages far outweigh the disadvantages. Let us take a tour through these factories. I will be your guide and as we go I will explain the advantageous features.

Here is a watch factory where the greatest number of handicapped are hired. Many of these employees have suffered leg injuries, but as they work in a sitting position, such an impairment does not interfere with their work. One time in this factory many good workmen were wasted by being assigned unimportant jobs because of their disability. Employers believe them unable to compete with normal workers. But a handicap seemed to have increased their capacity and desire for learning. Managers have found it to their advantage to train handicapped personnel for special jobs because the percent of turnover has been far less than among normal workers. Disabled workers have not felt it a charity job, nor their standing lowered among normal fellow workers in such cases.

Actually, everyone is handicapped in a sense, when it comes to performing a job for which he is neither mentally nor emotionally equipped. So it is that the physically handicapped worker is not really handicapped in a job in which his mind and skill can exercise perfect workmanship.

A few steps away is the factory where our world-famous furniture is produced, and another place where many "handicapped" people are employed. Why, the

head of the furniture design department lost his leg in an accident and many of the workers are partially or completely deaf. But after looking at the furniture produced here, it is easy to believe that when one sense is impaired the other senses are sharpened, for such extremely fine work could only be produced by acute vision. This factory also has a low rate of absenteeism, which shatters the common misconception that disabled workers are frail and will prove a constant drain on the company's compensation and sick pay. Another common error in regard to hiring the handicapped is that it will lead to higher accident insurance rates. This is disproved, first, by the fact that the insurance companies do not require the employer to specify whether or not he hires handicapped workers, and secondly, because of the low rate of accidents among disabled workers. This is because their physical defects make them more cautious than normal workers.

Here, during the slack season, many disabled workers are just as able as normal workers to perform jobs other than their own, but in the same job family. The job family is a group of related jobs which require the same general skill, knowledge and physical activities. This alone shows that the disabled workers are just as able to compete in industry as the normal ones. In fact, this is how all wish to be treated.

Today, because of the numerous rehabilitation centers, many handicapped people redevelop independence and self-reliance. At first, it is true the disabled worker, as the able one, will need help to become acquainted with new ways and new faces. This should be done as unobtrusively as possible.

This plant has solved this problem by having a nonhandicapped, experienced worker act as a sponsor or "Big Brother" to the disabled worker. The handicapped person is more likely to confide his difficulties in another fellow-worker rather than complain to a supervisor. The "Big Brother" will see to it that the difficulties are straightened out so that the handicapped worker will be as comfortable as possible, and also a more efficient worker. The disabled person's dislike of complaining to the supervisor is due to the fact that he feels insecure because of his physical defect. To put the disabled worker more at ease, the foreman notes any good work and is quick to praise the disabled worker, but when criticism is due, the foreman uses a great deal of tact. Some of the foremen here, handicapped themselves, know what it is like and are well able to handle the situation.

Next comes our electrical appliance industry. Here are many handicapped people. Some are mute, others are deaf, and some more have lost a limb. Yet these disabilities do not cut down their productivity rate. The handicapped have great capacities for being valuable workers provided someone is willing to give them a chance to exercise their capabilities. The general public is not aware of this and is incredulous of the fact that at times the productivity rate of a disabled person not only equals, but often surpasses that of normal workers. You may ask just why this happens. Well, psychologists claim that normal people use only about 10 percent of their bodies' potential physical power. Disabled workers are stimulated by their physical defects and so will put forth more effort to show the world that there is not such a wide abyss between them and normal workers.

It is a pity that for centuries society has looked upon the disabled as "chairty cases." even now, in modern times, with careful study and analysis and definite proof such as I have just shown you in these factories, society remains prejudiced about handicapped workers. It has been proven that the disabled are just as able to compete in industry as normal workers. The only only reason that society is sensitive to the physically handicapped is because the handicap is usually noticeable.

There are many people classified as normal workers who labor under more crippling but less noticeable defects. A man's working capacity and ability cannot be judged by the number of limbs he possesses or whether he can see or hear. It depends upon the man's own determination to do his job and to do it well. It depends on a man's character whether or not he will live with his handicap, whatever it may be, and do his best to succeed. It dependts on his personality, his warmth, his ingenuity, his friendliness, and his education. Let us not close our minds to the valuable advantages which hiring the handicapped will give us. Let us not think in terms of charity, because the disabled worker will give back work well done.

In Our Town this system has worked well and has reaped rich harvests for all concerned: for the employer, because he has received excellent work; for the disabled worker, because he has found a rank among normal men; for his fellow workers who have been encouraged by his courage.

So, whoever you are, in whatever part of Our Town, United States of America, you live, follow our pattern and hire the handicapped.

Air Force Firsts

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 15, 1959

Mr. FULTON. Mr. Speaker, on February 18, 1959, I submitted an article for the CONGRESSIONAL RECORD outlining the work of the U.S. Army in the fields of astronautics and missiles. Since our space program is a joint Army, Navy, Air Force, and civilian venture, I am pleased to submit for my colleagues in Congress and the American people an article describing the outstanding work of the U.S. Air Force in this field.

The article follows:

Now that the House Committee on Science and Astronautics has under consideration the fiscal 1960 budget for the National Aeronautics and Space Administration, I feel that it might be well to take a brief look at where this country stands in its national space program. Since the passage of the National Aeronautics Space Act of 1959, and the establishment of NASA in the fall of last year, many important programs have been initiated and many outstanding achievements have been realized. We have sent the first talking satellite into orbit, the Discoverer satellite has achieved a polar orbit and has proven our ability to stabilize a satellite in orbit and we have made increasingly deeper probes into outer space. Obviously a great deal remains to be done and we must maintain a strong sense of urgency in our efforts to explore and ultimately utilize the potential of space. The House Committee on Science and Astronautics in its present consideration of the NASA fiscal 1960 budget and on various other aspects of the national space program is giving careful consideration to what I feel to be the most urgent requirement of our national defense, that of utilizing space to maintain the security of this country. Clearly space offers us the opportunity of performing fundamental military missions in a more effective and efficient manner. I have noticed with great interest the recent hearings conducted by the Subcommittee on Governmental Organization for Space Activities, Committee on Aeronautical and Space Sciences, chaired by the Honorable STUART SYMINGTON. These hearings have brought to light much important testimony which tends to focus the important roles the military departments must play in developing our Nation's capabilities in space. In this connection I would like to briefly review some considerations which are now strongly affecting our military space program.

The last Congress passed the National Aeronautics and Space Act of 1958 with one of the objectives being to preserve the role of the United States as a leader in aeronautical and space science and technology, and in the application thereof to the conduct of peaceful activities within and outside the atmosphere. This objective would, of course, add to our capability for national survival. We knew that by improving our technology we would simultaneously improve our capability to preserve world peace.

Our announced policy is that activities in space should be directed to peaceful purposes for the benefit of all mankind. However, there is no international agreement on this point. The United States, therefore, must prepare its overall defensive plan to include defense against enemy space systems. At the same time we must improve our retaliatory capability and extend this capability into space if the job can be done there in a more effective manner.

Over a year and a half has passed since the world focused its attention on space when the first Russian sputnik was launched. Even with our emphasis on advanced technology, the appointment of a scientific advisor to the President, the organization of the Advanced Research Projects Agency in the Department of Defense and the organization of the National Aeronautics and Space Administration, we have not yet placed a larger payload in orbit than the U.S.S.R. We are still behind in this technological race with Russia.

Our only face saving in this race with Russia was the foresight and ingenuity of the military services which provided us with a limited space capability on short notice. Following the organization of the Advanced Research Projects Agency, the Department of Defense stripped the military services of the ability to operate in space. Under the auspices of the Director of ARPA, space developments are assigned to low echelons of the services. But this is for development only. He does not have the authority to designate which service will be the eventual operating agency. The result of these actions is not yet evident as there is a lag of several years between the time of the start of a development to operational use.

In the interim there are problems being generated that may take several more years to correct. The services, not having clear space mission and support assignments, cannot plan for the use and integration of the forthcoming systems into the operational units. Under the present plan when the development is complete ARPA will ask the Joint Chiefs of Staff to assign the system to a service for operation. If the service is other than the developing agency complications will undoubtedly arise which may delay the use of the system for several years. Even under the present concept the services, not knowing if they have the responsibility and authority, will not be prepared to integrate the system at the earliest date. The end result is that the operational system will likely be 1 or 2 years toward obsolescence by the time it is ready for employment.

If the roles and missions for space operations were assigned by the Secretary of Defense along the traditional lines there would be no requirement for the existence of ARPA. The Director of Defense Research and Engineering could then supervise the service's activities in the normal manner.

All services can make use of space. Space is another place for operations. Some missions such as communications, weather observation, and navigation aids will benefit all services and the civilian community. There will be other civilian-military uses of space as developments progress. As long as there is a global military threat our greatest effort in space will be for the development of military systems for many years to come. We must, therefore, apply the greatest amount of our national space budget to the Department of Defense. We must aim our space research to meet the threat from space. We cannot sit back complacently and expect potential enemies to ignore the values of space systems for military offensive and defensive purposes. Global peace and our own national survival is based on our present retaliatory capability. This capability must be extended into space. A strong nation can maintain the peace and if space systems are required we must have them to meet the future threats.

Poison in Your Water—No. 64

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD an article appearing in the Seattle (Wash.) Times on September 2, 1958, entitled "Bacterial Counts Show Strong Need for Beach Clean-ups":

BACTERIAL COUNTS SHOW STRONG NEED FOR BEACH CLEANUPS

(By E. B. Fussell)

How badly polluted are Puget Sound and lake bathing beaches in the Seattle area? Are they safe or unsafe for wading and swimming?

These are questions more easily asked than answered. It depends upon what the questioner means by safe.

What can be said without fear of contradiction is that safe or unsafe beaches show a high degree of sewage contamination.

Part of the answer as to safety may be found in the fact that a number of beaches definitely are closed. Eight others are listed by the Seattle-King County health department as "not recommended." Still others are reported by that agency as "generally poor" or "fair to poor."

NOTATIONS MADE

Frequently, the healthy department's notation is that raw sewage is being discharged in the vicinity, that bacterial count is high or that "excessive sickness" among bathers has been reported.

The standard measurement for bacterial contamination of water is the coliform count. Over the past several years, a number of agencies have made such counts in water samples taken from Puget Sound and lake beaches in the Seattle area. Most of the counts have been unduly high, in the view of health authorities.

The State pollution control commission has established, as an objective, an average of not more than 240 coliform bacilli in 100 milliliters of water (3.3 ounces, or about two jiggers).

PLANNING SOUGHT

This does not mean that a beach is to be condemned if it shows a count of 250 or even 500 bacilli. The commission believes, however, that sewage disposal should be planned so that the average sample of beach water will show a count within the 240 limit.

Some health authorities believe the 240-count standard is unduly stringent. A 1,000-count is more generally accepted in other parts of the country.

The most comprehensive bacterial study of Seattle area bathing beaches was conducted by the Seattle-King County Health Department in the years 1952 through 1956.

In this study, conditions were checked at 78 public and semipublic beaches and 3,250 samples were taken and analyzed.

These findings, in general, confirmed bacteriological studies made by other investigators in the 1941–52 period.

Physicians and health authorities do not like to draw a hard-and-fast line and say a small degree of contamination is safe and anything above that is unsafe.

Individuals differ in their resistance to disease. A few bacteria might bring on illness in one case. In other cases, a high degree of pollution might have no discernible effect.

A high coliform count, however, is evidence of sewage contamination. And when to that fact is added the presence of intestinal ailments which have been unusually prevalent in the Seattle area this summer, a strong case is made for a general cleanup of lake and sound beach pollution.

DIFFICULT TO PROVE

It should be added that in most cases it is difficult to prove a direct connection between bathing in polluted water and a subsequent illness.

In the case of at least two Seattle area beaches, however, illnesses among swimmers have followed their exposure so quickly that health authorities believe a definite connection has been established.

In other cases, physicians believe a swimmer may have been only slightly affected, but may have transmitted the bacterial or viral infection to another person who became severely ill.

In any event, the health authorities say, bathing in sewage-contaminated water is hardly to be recommended.

The Late Honorable James G. Polk, of Ohio

SPEECH

OF

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. COAD. Mr. Speaker, it was certainly a loss to the entire Nation to lose our colleague JAMES POLK, of Ohio, in death. It was my pleasure to know JIM through our many conversations together and the mutual projects on which we worked. I not only liked JIM POLK but I respected his knowledge. He was possessed with a sense of understanding and courage.

I wish to take this opportunity to express my deep sympathy to the members of Mr. POLK's family in this time of sorrow.

The Economy of Waste

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appearing in yesterday's Wall Street Journal, April 28, brings us once more face to face with the fact that many of our people seem to be under the illusion that in order to defeat Russia we must imitate them.

Fortunately, these people are a minority. The vast majority of our people want to survive as Americans, in the American way, and there is good reason to believe they will do just that. To survive any other way would be nothing but a living death:

THE ECONOMY OF WASTE

A notion gaining increasing currency in this country goes like this: We may have to tighten our belts, do without some of our accustomed comforts, in order not to lose out to Russia in both the military and economic production races.

You hear this reasoning in a variety of guises. Some speak disparagingly of our economy of waste. At least a couple of U.S. Senators say we are spending too much money and resources turning out fancy cars instead of on nobler pursuits. Even Defense Secretary McElroy warned, in a speech the other night, that as defense spending rises over the years we may have to learn to get along with less in current consumption. Otherwise we may come out second best in a competition for which there is no second prize.

Now there is a certain surface plausibility in all this. People look at the Soviet Union and they see a military colossus, second in total power only to the United States. How has it been built? Out of the hides of the people. And it can go on building by the same device of depriving the consumer. So what could be more reasonable than to conclude that we too must have austerity in order to keep ahead?

The trouble with the reasoning, it seems to us, is that it misreads the nature of both the Soviet and the American economic systems.

The remarkable thing is not that the Soviets have been able to build a big industrial-military machine. Any dictator can construct impressive works, given natural resources, slaves, and enough contempt for human life. That's how the Pharaohs built pyramids and obelisks, how Hitler built autobahns and a seemingly invincible military bulldozer. And how the Soviets have been creating their industrial and military power.

Rather, the remarkable thing is the United States, operating in exactly the opposite ways from those of the Pharoahs, the Nazis, and the Soviets. The United States has demonstrated what has been called the utility of freedom. Free men made a society of unrivaled abundance for all, and on top of that they were able to wield the strongest military power on earth.

Indeed, one can go further. The great military strength of the United States de-

rives not just from weapons, but from this so-called economy of waste. The wasteful auto factories of pesce can be war's additional assembly lines for weapons.

The Soviet economy of scarcity is unbalanced, full of serious distortions and dislocations; ours is balanced, abundant, infinitely varied and infinitely adaptable. It shouldn't take too much thought to decide which is better prepared, in the ways that count, for either war or economic competition.

Still, we agree with the voices of austerity on one point. If, as Mr. McElroy suggests, defense spending may have to increase substantially over the years, then there should be belt tightening in nonmilitary areas of Government. For it is Government, either through inflation, exorbitant taxation, excessive economic regulations, or all combined, that keeps the economy from growing as rapidly and fully as it otherwise could, and from which potential growth still greater defense outlays could be safely borne.

And there is plenty of room for austerity in the multitudes of extravagant Federal civilian projects whose cost has been mushrooming in recent years. Here, and not in the productive economic activities of private citizens, is the real economy of waste, the nonproductive activities that add nothing to economic growth but in fact stunt it.

If we misunderstand this, and think we must starve the consumer in order to beat the Russians, we will not merely be imitating the Soviets. We will be in fact denying the all-important difference between the two economic systems and ignoring the plain lessons of each.

And that could be the biggest military mistake we ever made.

High Voltage Veto

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. NELSEN. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald dated Wednesday, April 29, 1959, dealing with the Presidential veto of the rural electrification bill:

HIGH VOLTAGE VETO

It is doubtful whether there is as much political mileage in baiting Agriculture Secretary Benson as some Senators seem to think. The 64–29 vote of the Senate to override President Eisenhower's veto of the rural electrification bill was very largely a partisan effort to punish Mr. Benson by taking away his authority to review loans approved by the Rural Electrification Administration. We hope that the House will see the mischief of an effort to legislate in terms of personality instead of long-range principle.

The REA program belongs under the Secretary of Agriculture, as Mr. Eisenhower noted in his veto message. The present administrative arrangement dates from 1953 and is based on recommendations of the Hoover Commission as well as on a 1939 governmental reorganization plan. Despite the allegations made by spokesmen for the REA cooperatives that Mr. Benson is trying to short-circuit the REA program, the co-ops seem to be prospering. The REA has loaned the co-ops over $1 billion in the last 6 years and their power sales have more than doubled since 1952. Mr. Benson has not vetoed a single loan approved by the REA administrator and there is no real evidence that the Secretary has misused his authority over the agency.

The Difficult Position of the West

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. COHELAN. Mr. Speaker, I have noted a lucid statement by C. L. Sulzberger in today's edition of the New York Times with reference to the preliminaries to the forthcoming summit conference.

I request that his remarks be reprinted in the RECORD and invite my colleagues in Congress to reflect on the problems they raise, for example, to what extent have allied disagreements already curtailed our ability to negotiate effectively?

FOREIGN AFFAIRS—THE DIFFICULT POSITION OF THE WEST

(By C. L. Sulzberger)

PARIS, April 28.—Perhaps the weakest and most divided team of Western diplomats since the start of the cold war begin meetings here today in an effort to devise common approaches to a new negotiation with Russia. The atmosphere was not cheerful.

Almost a year has elapsed since similar preparations were made for what was scheduled to be a summit conference, the kind of conference supposedly lying at the end of the present diplomatic road. That summit conference was not held. And, during intervening months, the Allied position has split wide open.

Despite bromidic statements about harmony in viewpoint and a determination to bargain toughly with the Kremlin, the West has yielded in advance of East-West talks one position after another in the face of implacable Soviet diplomacy.

Inside our alliance there is a wide chasm between London's ideas and those of Paris and Bonn. Washington has so far lacked the leadership to bridge the gap. Bonn, whose future is the main matter at hand, is confused by the uncertain status of Chancellor Adenauer. And NATO, the symbol of solidarity, is riven, with Washington hovering between two blocs.

Here in Paris it is hoped that a strong attitude can yet be composed with which to confront the Russians at Geneva. But there is no apparent diplomatic leader to accomplish this necessary process. In each case the foreign minister discussing vital problems is overshadowed by a chief of government absent from these talks. What should have been a Western summit meeting is a conference of puppets. And the puppet masters seem to disagree.

The type of leadership with which we have been familiar is now missing. There is no Marshall, Acheson or Dulles; and Herter has scarcely had the type of sendoff to inspire his partners' confidence. There is no Bevan or Bidault to fill the gap. And the Adenauer who was once his own Talleyrand is playing bowls in Italy.

Indications tonight are that the Western powers are preparing to make an illusory agreement with Russia on Berlin, at the coming Geneva talks, in exchange for concessions on still more vital matters, positions that have not already been given up in advance.

A year ago, before the summit talks that weren't held, we talked of restricting veto powers in the U.N. This has been pigeonholed. A year ago we talked about reunifying Germany by free elections. Now we propose a committee from the Eastern and Western halves to discuss a voting plan. A year ago we were hoping to place on the agenda the Eastern European situation. This has been shelved.

A year ago we were requesting that all manufacture of fissile materials be ceased, concurrently with the ending of nuclear tests. Now, as a result of Moscow's insistence and a void between the British and United States stands, we have abandoned this vital link.

These points have been granted ahead of talks as a consequence of Allied disagreements and the dynamism of Soviet diplomacy. Announcement of a time-bomb ultimatum on Berlin has brought us to the council table at a time of maximum inconvenience.

Dulles made many policy decisions that have been sharply criticized; but at least he led in an alliance looking for leadership from its greatest power. Since his sad illness this leadership has been absent. It will be difficult for Herter to provide a substitute this week.

The chances today appear that for the sake of any face-saving device the Russians may allow us to retain, for the present, seeming to reassure our difficult posture in Berlin, we may concede on other major issues: de facto recognition of East Germany, which would undermine our credit in Bonn; the whole framework of disarmament and disengagement; and the question of all-German unification, which, rightly or wrongly, we chose to make a major stake in the balance of power contest.

And if we yield, the balance of power will change. We may be able to claim for months to come that we kept West Berlin. But surely and predictably Moscow will again turn tight the screws on that essentially untenable position. The best the West can hope for now is that the discordant Allies may at the eleventh hour harmonize their divided views, go to Geneva outwardly united, and postpone the big bargaining until the inevitable summit meeting.

Caribbeans and Castro

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mrs. ST. GEORGE. Mr. Speaker, after the highly hysterical reception given Mr. Fidel Castro in the United States, a reception that confirms many of our friends in Europe and Latin America in the belief that we are not quite dry behind the ears, it is interesting to read the following article which appeared in the Wall Street Journal of April 28.

Here is an article written in a cool and logical manner, bringing out a few known facts, and they are few indeed, and making the thoughtful citizen realize that we actually know very little about what is going on behind the beard:

CARIBBEANS AND CASTRO—LATINS, BOTH ADMIRING AND FEARFUL, SAY CUBAN IS ANTI-UNITED STATES AND LEFTWARD BOUND

(By Henry Gemmill)

CARACAS.—Fidel Castro has cast a spell on all Latin lands ringing the Caribbean. With mounting excitment they've watched him play the roles of liberator, of executioner, of anticolonialist and most recently of turbulent tourist in the United States.

Nowhere is there much inclination to take seriously his milder attitudes in the United States as an admirer of Thomas Jefferson and a promoter of tourism and trade. He is for these Latins the very symbol of anti-Americanism; it is taken for granted he is headed far to the left in economics and politics; it is accepted his personal ambitions extend well beyond running the island of Cuba.

Nevertheless the Castro spell takes strikingly different forms in these extremely diverse nations—and in some, notably Venezuela, it may be more subtle and serious than is generally understood.

In a number of banana, sugar and coffee republics, of course, the ruling reaction is fear. Fidel, despite protestations about not exporting revolution, is considered overwilling that Cuba be used as a base for revolutionary forces eager to upturn the aging Trujillo tyranny in the Dominican Republic, the prolonged Somoza family rule in Nicaragua, the recent rickety government of Haiti and the De La Guardia regime in Panama. Just this week Panama was rounding up what it said was an armed invasion force of Panamanians and Cubans, and blaming its activities on Castro.

In Colombia, which believes it has reason to understand Castro better than any other of his neighbors, the reaction is disgust.

For Castro, as Colombian newspapers keep repeating, was a revolutionist in Bogota before he ever launched a revolution in his homeland. Almost exactly 11 years ago, but remembered as if it were yesterday, occurred an incident known as the "Bogotazo"—an uprising which began with the assassination of political leader Dr. Jorge Eliecer Gaitan and ended with more killing and the looting and burning of much of the capital.

Still under public investigation is the precise role of Castro. Certain it is he was collared by cops for throwing inflammatory leaflets from the balcony of the opera house. Suggestions have been publicized but not proved that his actions may have been much more sinister. At any rate his reputation in Bogota was unsavory long before he seized power in Havana, and both houses of the Colombian Congress have voted down resolutions of congratulations on his Cuban victory.

CYNICAL COLOMBIANS

Cynical comments on Castro's recent postures in the United States fill the Colombian press. "We are glad he's going to hold elections after he has taught all Cubans how to read and write," comments one leading paper sarcastically. Colombians, more strictly religious than most Latin Americans, scorn continuing executions in Cuba. They pride themselves on having overthrown their own dictator, Gustavo Rojas Pinella nearly 2 years ago, without such reprisals; they've even let him return to the country and done no more than strip away his honors and pensions after an elaborately legal senatorial trial for graft in office. In recent days Colombia's President Alberto Lleras Camargo has pointedly rejected the idea that Latin America has any collective responsibility to oust regimes which Castro dislikes.

It is an entirely different spell which Castro casts here in Venezuela, a nation which, though only half as populous as Colombia, assumes perhaps the most vital significance of any in this region by virtue of its oil and ore.

Certainly Venezuela entertains no fear of invasion from Cuba nor is its vision of Castro one of repugnance. Instead, here is found remarkable popular acceptance of the Cuban as the hero of the Caribbean and increasing impatience to follow in his footsteps.

"Fidel could be elected President of Venezuela tomorrow," is the only slightly exaggerated remark of one foreigner who has studied politics here for years. In another part of town a businessman inclines his head toward a fresh-faced secretary outside his office and tells the visitor, "She worships Castro. To her, he's the greatest of democrats and it doesn't bother her pretty head that he holds no elections. To her, he's the greatest of humanitarians, and she doesn't care that he's bumped off hundreds of people."

Why the difference?

To an important degree Communists are responsible. All over Latin America the Reds have decided to plump 100 percent for Castro. This does not prove the Cuban is a Communist, of course; it is simply that with his anti-imperialist message he has become—as Egypt's Nasser was—a man deemed traveling fast on exactly the road the Reds desire. In Colombia, Communists are as yet few and ineffectual, but here in Venezuela they are numerous and spectacularly influential.

They have eloquent spokesmen in the national legislature and can call out mobs to demonstrate. Even more important, however, is the fact Castro has been one pacesetter for the non-Communist multitudes in Venezuela who are intolerant of the moderation—economic, political, diplomatic—displayed by their own new revolutionary President Romulo Betancourt.

Once Betancourt was as wild a young man as Castro is today; indeed, he is reported to have provided letters of introduction when Fidel went on that mischief-making expedition to Bogota. But Betancourt with the years has changed greatly. When inaugurated as the first elected President since the overthrow early last year of brutal Marcos Perez Jiminez, he attempted to move in calm, majestic statemanship. He established a planning commission which not until July of next year is due to propose a program of fundamental economic improvement for the nation. He shot no political enemies; he even proclaimed himself a firm friend of Americans.

COOL GAZES

The result is that masses of the population now gaze coolly on this bespectacled, middle-aged and rather stout gentleman, wondering how they could have chosen so mild a man. Their hearts go out to that dashing young Cuban whose oratory turns blood to fire and whose actions speak even more eloquently.

Castro fans include many young leaders such as Jose Rafael Munoz within Betancourt's own Democratic Action Party. Other youthful pro-Castro politicians such as Jose Vincente Rangel, are even more powerful in the Union Republica Democracia (URD) Party which now participates in the coalition government but is moving leftward and may soon swing into outright opposition.

Venezuela is a country with little experience in democracy in this century with an adult illiteracy rate that climbed above 50 percent during the Jimenez regime and with much poverty. It is no surprise to find Castro sentiment among the thousands who've poured into Caracas and built squatter shanty towns up the mountainsides, nor to spot a Castro-style beard on a port worker at remote Puerto Ordaz on the wild Orinoco River.

Yet Castroism is by no means confined to the submerged classes. It is rife in flashy University City, where students are ecstatically trying to collect a million Bolivars (1 Bolivar equals about 30 cents) to help finance the overthrow of Trujillo. It is found in the professions; the Caracas Medical Association has invited an appearance by Maj. "Che" Guevara, the Argentinian adventurer who served with Communist militia in Guatemala and later became a top Castro comrade.

And Castro's declaration of independence from the United States has struck a responsive chord among much of the Venezuelan business community. One powerful organization, Asociacion Pro-Venezuela, headed by businessman Alejandro Hernandez, is hounding the government to stop buying supplies abroad and to boost tariffs for protection of domestic industry.

Venezuela's mood of impatience is aggravated by events in which Yankees have played a part—notably Washington's curbs on oil imports, and oil price cuts initiated by British Petroleum in the Middle East but followed by U.S. companies here. But the mood is also irritated by a hundred other matters in which America has played no part—for instance, improvidence in developing water supplies which has left Caracas drought stricken. Thus Venezuela's agitation springs really from its domestic plight; Castro is a lens which brings it into focus.

BOTHERSOME FACTS

A few days ago one of the most important of 40,000 U.S. business folks living in Venezuela, having drawn up a contract to buy a handsome new house, decided not to sign it after all, but to wait and see. More than a dozen American corporations which were planning to open factories or expand existing ones in Venezuela have similarly decided to mark time.

Some veteran observers think Betancourt, if not unsaddled, will sooner or later be forced to move in the direction of Castroism.

One bothersome fact: He has begun deporting political opponents without trial. Others expect that forces of conservatism which have been little heard from will assert themselves. (The Venezuelan armed forces, gravely concerned by Castro's pattern of substituting irregular militia for traditional military services, have reportedly promised to back Betancourt for at least 2 years.)

It may be that men like Jose Figueres, the Costa Rican political leader who turned from friend of Castro to foe, can organize on a regional scale an effective and democratic opposition to the Cuban.

But whether viewed with fear, disdain, or admiration, Fidel Castro at this moment is by far the most colorful figure of the Caribbean, equipped not merely with eloquence but with ruthless willingness on occasion to attempt rather more ambitious ventures than he seemed equipped for.

Custard Stands at Gettysburg

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. QUIGLEY. Mr. Speaker, once again I would call attention of the Members to the editorial approval of a restoration of funds to the National Park Service for its land acquisition program at Civil War battlefields.

I do not think it necessary to belabor the point, but I am anxious to point out the virtually universal approval that exists in favor of keeping the foot of commercialism off the hallowed ground at Gettysburg. With that in mind I

would ask the Members to read the following editorial from the St. Louis Post-Dispatch of April 27, 1959:

CUSTARD STANDS AT GETTYSBURG

President Eisenhower's Representative in Congress, JAMES M. QUIGLEY, of the 19th Pennsylvania District, has appealed to the White House to join in efforts to acquire ground which ought to be added to the National Park Service holdings in the Gettysburg Battlefield area. Congressman QUIGLEY says that unless protective steps are taken, custard stands and beer parlors will soon outnumber the grave markers and the monuments to the men of both the Blue and the Gray who struggled there in early July 1863.

The Representative from the Gettysburg district does not want the land acquired for withdrawal from productive use. On the contrary, he and others who are concerned about the future of the Gettysburg area are eager for the National Park Service to own the land but to lease it for approved cultivation. This is true of much of the area now owned. The famous peach orchard of military history is again a peach orchard. But those who own privately adjacent battlefield areas cannot be expected to decline attractive offers from would-be commercializers. That is why the National Park Service holdings should be increased.

In barely 2 years, the Nation will begin its 4-year observance of the 100th anniversary of the Civil War. Between now and then historic battlefields—Gettysburg, Antietam, Wilson's Creek and others—ought to receive friendly interest and wherever possible increased protection. It would be strange indeed for the centennial to find the foot of the commercial trespasser marring what Lincoln called hallowed ground.

Could This Be Politics?

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. DEROUNIAN. Mr. Speaker, I submit for the information of my colleagues an article that appeared in the Washington Post on Tuesday, April 28:

THE STRAUSS MATTER

(By George E. Sokolsky)

Senator MAGNUSON, of Washington, says that it is not unusual to hold up a Presidential nomination for a Cabinet post a long time. President Eisenhower appointed Adm. Lewis L. Strauss to be Secretary of Commerce on October 24, 1958. It is now 6 months since that day. It might be interesting if Senator MAGNUSON, who presides over the Committee on Interstate and Foreign Commerce, which has to pass on Secretary Strauss' nomination, would have his staff do a research job to show how many Cabinet officers' appointments have been held up for such a long period. Secretary of State Christian Herter was confirmed in 4 hours.

Furthermore, Senator MAGNUSON says that he does all this holding up to give Senator ESTES KEFAUVER and Senator CLINTON ANDERSON, who are not members of this committee, an opportunity to question Secretary Strauss, which they have the right to do, but should that privilege be used to hold up a Presidential nomination as long as they please? I hope that such questioning is in public, on television, so that the entire country can listen to the badgering of a public servant of fine qualifications and a great record of service.

Also, Senator MAGNUSON wants some scientists to have an opportunity to object to Secretary Strauss. It is reported that some scientists object to the way Strauss handled matters involving fallout, clean bombs, weapon testing, and security regulations when he was Chairman of the Atomic Energy Commission.

Of course, Admiral Strauss has been pretty tough on such scientists as were pro-Communist or pro-Russian, who while working for the Government of the United States chose to put their private wisdom ahead of the adopted policies of our Government. Do Senators KEFAUVER and ANDERSON want the reputation of running interference for such persons?

It all started with the Oppenheimer case concerning which Strauss took a rather strong stand and Oppenheimer was required to end his work with the Atomic Energy Commission. It was unfortunate that we lost the services of Oppenheimer who has a fine scientific mind but his own testimony convicted him of past Communist associations, of being a blabbermouth and at times, untruthful. Of Oppenheimer it can correctly be said that he convicted himself, that no witness did him in and that Strauss would have been derelict in his duty had he defended Oppenheimer.

The committee hearings to confirm Strauss started on March 17 and nothing has come of them up to the moment of writing this sentence. Meanwhile Strauss acts as Secretary of Commerce without senatorial confirmation.

The scientists, incidentally, ought to have nothing to say except as citizens testifying before a congressional committee under oath on pertinent matters. The question is not whether Admiral Strauss pleased the physicists but where his experience, knowledge, and wisdom justify his appointment as Secretary of Commerce.

We have here a confusion of authority. Although the Constitution provides that a Federal official shall be nominated by the President and confirmed by the Senate, it never intended that the Senate should use its confirming power to embarass the President for political reasons, to try to rake up ancient and settled issues, to seek out unfriendly witnesses and to delay action in an outrageous manner. This is precisely what Senator MAGNUSON is doing and it is intolerable from the standpoint of efficient Government.

Political Field Day

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. NELSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington, D.C., Evening Star dated Wednesday, April 29, 1959, dealing with the Presidential veto of the Humphrey-Price bill:

POLITICAL FIELD DAY

The Senate, bowing at the altar of petty politics, has overridden an Eisenhower veto. And there wasn't even a semblance of good reason for doing it.

Mr. Eisenhower vetoed a bill which would have stripped the Secretary of Agriculture of control over Rural Electrification Administration loans—a control first vested in the Secretary 20 years ago pursuant to a Hoover Commission recommendation. The effect is to leave Mr. Benson with overall responsibility for REA operations, but with no control over its lending activities.

Why did 6 Republicans join 58 Democrats in voting to override the veto of this unsound bill? Here is the answer, as given by Senatr JOHNSTON of South Carolina: "The administration knows the only way it can destroy REA is by turning its purse strings over to the Secretary of Agriculture, who is no friend of the farmers and rural people."

This is a ridiculous statement, and the record proves it. When REA was established only a few farmers enjoyed the benefits of central station electric service. Today about 96 percent of the farmers enjoy this service, and about half of the increase has been provided by REA-financed facilities. Loans of more than a billion dollars have been made during the past 6 years, under Mr. Benson. This is nearly half as much as was loaned by the agency during the previous 17 years of its existence. Furthermore, Mr. Benson has never turned down a loan recommended by the REA Administrator.

This, then, is the record of the manner in which Mr. Benson has sought to destroy REA. Obviously, to explain the Senate vote, one must look deeper than the preposterous explanation offered by the Senator from South Carolina.

The real explanation, one may be sure, is rooted in politics. Mr. Benson has become the whipping boy of the politicians, and few Senators are averse to laying on the lash. Beyond this, the Senate Democrats think, with reason, that they are faced with a series of vetoes if they are going to lock horns with the President. They presumably looked upon the REA veto as a good vehicle for a show of strength. After all, they are not likely to lose votes in the rural areas by baiting Mr. Benson on such an issue as REA loans.

The principle, however, is important. For an element of sound Government is at stake, and the principle will become much more important if the overriding of this veto is a preview of things to come. We hope that the House will refuse to go along with the Senate's game.

Justice Department Opposes Federal Fair Trade Law

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Houston (Tex.) Chronicle on March 27, 1959.

This editorial joins unanimous editorial opinion in opposing the various fair trade bills now pending before the House Committee on Interstate and Foreign Commerce.

An additional reason why the bill should be defeated appears in the estimate of Mr. Robert A. Bicks, Assistant Attorney General, that such legislation would cost the consumer a minimum of $1 billion a year and possibly much more quoted in the editorial:

JUSTICE DEPARTMENT OPPOSES FEDERAL FAIR TRADE LAW

Fair trade proponents, who have been losing ground rapidly in recent years as State price-fixing laws have been batted down in the courts, are trying to put their program on the Federal level.

And the administration is resisting them in a manner not only to comfort the consumer but also to warm the heart of believers in States' rights.

The first assistant in the Justice Department's Antitrust Division told the House Commerce Committee Monday that the fair trade proposals now before Congress would undercut the antitrust laws and would be an unwarranted invasion of States' rights.

Under present law retail price fixing by manufacturers is permissible only where individual States sanction the practice through legislation.

A few years ago the fair traders had almost put their program over throughout the country. Only Texas and two other States, and the District of Columbia were holdouts against the scheme under which every retailer has to sell articles at the price dictated by their makers.

Some of the hardest-fought battles in the Texas Legislature year after year have been over fair trade.

In recent years price fixing has been losing out. No less than 16 State supreme courts have ruled such laws unconstitutional.

Hence the new effort to put the plan over on a national basis through Federal law. The Justice Department's strong opposition is good news, particularly since it is based upon States' rights as well as the desire to uphold the antitrust laws.

Robert A. Bicks, the Department's spokesman, told the committee that studies have indicated Federal fair-trade legislation would cost consumers a minimum of $1 billion a year, and possibly much more.

Lewis L. Strauss

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. HOSMER. Mr. Speaker, Columnist Gould Lincoln had some nice things to say about the distinguished career of a patriotic and stalwart American in his column in last night's Washington Star. It is as follows:

POLITICS DELAYS STRAUSS CONFIRMATION

(By Gould Lincoln)

A showdown on the nomination of Adm. Lewis L. Strauss to be Secretary of Commerce apparently has been promised. Senator MAGNUSON of Washington, chairman of the Senate Interstate and Foreign Commerce Committee which has had jurisdiction over the nomination since it was sent to the Senate by President Eisenhower on January 17, insists that he and his colleagues are not "stalling" consideration and action. There are some assurances, too, that the Democratic leadership of the Senate is not sympathetic to delay for delay's sake on the Strauss nomination. The committee has set 3 days of hearings this week. So, the word "apparently" is used advisedly when it comes to predicting final action. No one seems willing to predict there will be no further hearings next week or next month, or the month after that.

Politics, plus a fishing expedition to dig up something detrimental to Admiral Strauss and through him to blacken the eye of the Eisenhower administration, has been responsible for this long delay. The record shows that the nomination for Secretary of Commerce has been at the Capitol for 102 days. There have been 13 Secretaries of Commerce since the Department was created, and the total time required for confirmation of them all was 109 days. No nomination for Secretary of Commerce—Democratic or Republican—has ever been rejected. Furthermore, since the days of President Andrew Johnson, only two appointees to a President's Cabinet have been rejected by the Senate—Henry Stanbery, appointed Attorney General by President Johnson and Charles B. Warren, appointed Attorney General by President Coolidge.

The right of a President to select the members of his Cabinet—his intimate official family upon whom he must rely for adivce and administration of the Departments of the Federal Government—has been widely recognized.

APPOINTED LAST FALL

Admiral Strauss has been serving as Secretary of Commerce under a recess appointment which President Eisenhower gave him last fall, soon after the resignation of former Secretary of Commerce Sinclair Weeks. Prior to becoming Secretary of Commerce, Admiral Strauss served as Chairman of the Atomic Energy Commission. It was during his chairmanship of the Commission that Admiral Strauss aroused the enmity of two Democratic Senators—Senator CLINTON P. ANDERSON, of New Mexico, and Senator ESTES KEFAUVER, of Tennessee, both of whom now oppose his confirmation as Secretary of Commerce.

He clashed with Senator ANDERSON, chairman of the Joint Congressional Committee on Atomic Energy, over policy. His readiness to seek privately produced power for the use of the Atomic Energy Commission, instead of getting it from a proposed new plant of the Tennessee Valley Authority brought him into open conflict with Senator KEFAUVER. The Dixon-Yates contract for private power, which later was voided, was assailed as corrupt, and an attempt to place blame on Admiral Strauss was made. The Department of Justice and other Government agencies found no blame attached to Admiral Strauss, despite this effort.

DISTINGUISHED CAREER

Admiral Strauss has a long and distinguished record of public service, dating back to the days of President Woodrow Wilson, when he was secretary and assistant to Herbert Hoover prior to our entry into World War I. He had 32 years as an officer of the U.S. Naval Reserve and was called up for active duty 10 months before Pearl Harbor, had 5 years on active duty and retired with the rank of rear admiral.

In 1946, Admiral Strauss was appointed to the first Atomic Energy Commission by President Truman, serving until 1950. During that period, he proposed and procured the establishment of the system of long-range detection which enabled this country to learn in August 1949, that the Soviet Union had achieved atomic weapon capability. Immediately afterward, Admiral Strauss began the movement for the development of the H-bomb. He had opposition in the Commission, but he had the backing of President Truman, and the early production of that weapon followed. He believes today that this has been responsible for peace in the world.

The Secretary of Commerce—still to be confirmed—was highly successful in the business world, too. When he was appointed by President Truman to the Atomic Energy Commission, he gave up all his business connections and sold his interests.

While it has been denied, a story gained circulation that Admiral Strauss' opponents in the Senate had determined to filibuster in committee and to delay any action on his appointment as Secretary of Commerce until this session of Congress expired. In that event, the President could not again give him a recess appointment and he would be "out." That the Senate will confirm his appointment if and when it gets the chance has been confidently reported. He has many friends and admirers among the Democrats as well as the Republicans in that body.

Admiral Strauss' opponents, by their delaying tactics, are doing the Department of Commerce no good, nor their country either. A shameful operation.

Mr. Dulles' Departure

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of the House to an editorial written in the Arizona Daily Star on Tuesday, April 14, 1959. This editorial, entitled "Mr. Dulles' Departure" recounts the service Mr. Dulles has rendered to his country and to the free world. It is interesting to note that this editorial was written before Mr. Dulles' resignation. The editorial follows:

MR. DULLES' DEPARTURE

The news from Washington that Secretary Dulles appears to be losing his battle against a persistent cancer is sad to recount, yet his very absence makes his prior service to the Nation more valuable than ever before. He provided an indispensable leadership not only for his own country but for its allies, too. This fact has come to light as many of his former critics at home and abroad now lament his absence.

His record as Secretary of State under President Eisenhower is a notable one marked by continuously striving to carry out the original NATO program, and holding the line in the Far East. For this work he had prepared himself well by his services under the Truman and Roosevelt administrations. Thus, before he became Secretary of State, he had had much first-hand experience not only with the vagaries of our allies but with the undependability of the Soviets.

When he assumed his job under President Eisenhower in January 1953, his first task was to bring hostilities in Korea to end, which was a much more difficult job than most people realized. He had to deal with President Rhee of Korea, who was quite willing to continue fighting to the last American and last American dollar. Later he participated and helped prepare the first summit conference, although he was skeptical of its producing any results.

He had to meet the great crisis in Indochina, and, much to his credit, salvaged from French misrule a compromise that seems to be working. It was his heavy task to advise the President to intervene against the Anglo-French-Israel attack on Egypt, yet out of that unpleasant affair he

appears to have brought our allies closer together than before.

His work can be criticized justifiably, but he rates an exceptionally high batting average. What so few people realize is that international relations are highly complicated. There is rarely a clear-cut or simple solution. The best that any Secretary of State can do is do his best under the circumstances. That quality has constantly characterized Mr. Dulles' official work, as well as the vigor with which he carried it out.

He has served his Nation and its allies ably and with distinction. Time will undoubtedly honor his name. He has been one of the few great Secretaries of State. As he lays down his official work, the words of St. Paul to Timothy come to mind:

"For I am now ready to be offered, and the time of my departure is at hand.

"I have fought a good fight, I have finished my course, I have kept the faith."

A Fine Science Plan, With LSU as a Part

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, I present herewith an editorial from a recent issue of the Shreveport Times, Shreveport, La., which praises the program of the National Science Foundation providing special science training for high school students. I feel the editorial and the program are commendable. It is as follows:

A FINE SCIENCE PLAN, WITH LSU AS A PART

The National Science Foundation has taken an excellent step in putting up the money for special science training for high school students starting at the junior year, and it is especially gratifying to find that Louisiana State University has been selected as a sponsor for the program in this State.

The Foundation is supplying $1,600,000 for 112 such programs under direction of 105 colleges, universities, and nonprofit research organizations.

Each operating organization will provide means—through the Foundation's money—for high-ability high school students interested in majoring in science in college to associate with college-level summer programs in science, math, and engineering designed especially for them.

The LSU program specifically will embrace four phases: Instruction in the research areas of science; seminars by leading scientists from both LSU and industry; field trips to research organizations and industries; laboratory experience in actual scientific research.

In this way, students in the upper IQ categories and with genuine interest in science will have instruction in connection with their junior and senior years in high school that will enable them to be certain that they want to go on into science education, and will enable colleges and universities to determine whether such students are capable of handling such courses in college.

In Louisiana, 22 students will be selected for the program by an LSU faculty committee following application by students—with not more than one student from any one high school. The method of selection also is excellent, for it leaves the decision as to college ability of the high schoolers in the hands of college people.

Tribute to Max Abelman by the Honorable A. David Benjamin, Justice of the Supreme Court, State of New York

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mrs. KELLY. Mr. Speaker, 55 years is a short time in the light of history, but appraised in the life of man, it is his entire life span. Thus, when one man has given his talents and efforts for 55 years to community work, he should be given true recognition in a special niche in history. It is for this reason that I desire to pay special tribute to one of the great men of the Borough of Brooklyn, Max Abelman. I submit the following tribute to him by another of Brooklyn's great men, the Honorable A. David Benjamin, Justice of the Supreme Court, of the State of New York:

MAX ABELMAN, BY HON. A. DAVID BENJAMIN, JUSTICE OF SUPREME COURT, SECOND DIVISION

The sociological structure of our economy of free enterprise is dependent upon the social conscience and consciousness of our citizens and their willingness to create and maintain social institutions necessary in a civilized community. We in America are proud of our institutions for the orphans, for the aged, for the sick, our services to our youth, our agencies coping with the problems of delinquency, mental breakdowns, adequate recreational facilities for the young and for the aged, child guidance clinics, family welfare societies, marital guidance and counseling services and the vast totality of services which the complexity of our society makes necessary for the well-being of our citizens. We have the choice in America whether these services shall be provided for by the State, as under a totalitarian system, or by the voluntary participation of the citizens, as we do in our free society. We have elected the choice and through tax structure and the established mores of the community encouraged the creation, development and furtherance of our socio-economy through the financial aid and the personal guidance of free citizens.

For more than 50 years one person has been foremost in the wakening understanding of this social responsibility of all the citizens and in bringing them together so that their personal resources and financial resources might be marshaled in the furtherance of the social needs of the community, as a result of his direction, guidance breath of vision, insight, understanding, and ability to envision far horizons. The petty concepts of charity as known a century ago have given way to the proper concepts of social responsibilities to the full extent of the community's ability to give, which is the pattern of our social agencies of today. No longer do we envision social services as a "dole" or a "handout". Rather today do we envision it as the enlightened acceptance of the golden rule in the implementation of the moral responsibility of all to provide for the needs of all.

Max Abelman is approaching his 72d year of a wonderful life in which he pioneered and led in the furtherance of this philosophy and way of life. Five years ago Governor Dewey, on the occasion of Max Abelman's retirement from the Board of the Jewish Hospital of Brooklyn, said of him: "You unquestionably have earned the title of Doctor of Humanity." For 55 years Max Abelman has given of his great talents and appreciation of humanitarian values so that our city, State, and Nation of the world at large might become a finer place in which to live. It is people such as he who insure the peace of the future. The philosophy which he has engendered is the only antidote to either cold or hot wars and through the spread of this doctrine of peace on earth, goodwill to all men, and acceptance of our responsibility to recognize all children of God as brethren can we hope that our children will have a worthwhile world in which to live.

And so we the Senate, of the State of New York, together with the U.S. Congress, take this occasion to honor and felicitate Max Abelman upon this rich and fruitful life which he has spent in the public interest.

We wish for him many, many more years of good health so that he may continue to serve as an exemplar and bearer of the torch of justice for all mankind to see. His motto: "I shall pass this world but once; any good or kindness I can do, do it now. I may not pass this way again."

Cut Down on Regulation

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. FISHER. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the April 27 issue of Railway Age:

CUT DOWN ON REGULATION

The ICC has asked the eastern railroads to consent to a further suspension for 60 days of these railroads' reduced rates on paint. Naturally, the railroads have agreed.

This is a simple case. The railroads are handling almost no finished paint. They proposed some rates which they proved would be amply profitable; and which, shippers testified, would put a lot of paint traffic on the rails. The truckers objected. The ICC suspended the rates, pending investigation.

That was almost 7 months ago, and the ICC wants 2 more months to ponder the issue.

It seems a safe assumption that the ICC is weighing two questions: Does it any longer have the legal right to force railroads to hold a rate umbrella over the trucks? If it believes it still has this right, should it be exercised in the present case?

No industry except the railroads is made to suffer the delay and expense of a protracted lawsuit practically every time it wants to make important price changes to attract customers. If the aluminum industry wants to reduce its prices to complete with steel and plastics—these competitors have no right to hail the aluminum people into court and have their price changes nullified.

There is constant price competition going on between industries and the customers benefit—from constantly improved products and by having prices held within reason. Only the railroads are restricted in engaging in this economically healthy practice.

The ICC is certainly not deliberately antirailroad. What is wrong is that its regulatory power is so devised that it can operate only against the railroads, never effectively in their favor. The reason is that only one-third of truck traffic and only 10 percent of inland waterway traffic are subjected to regulation—while railroads are 100 percent subjected to it.

The ICC occasionally suspends proposed rates of common carrier trucks and barges—

just as it does proposed railroad rates. But such suspension of truck or barge rates affords the railroads practically no protection. If common carrier truck or barge rates are held by regulation at a level substantially higher than operating costs, the traffic simply moves over to the unregulated carriers by barge and truck.

It is no wonder, given such one-sided treatment, that railroad traffic in 12 years, 1946–57, declined from 66 percent of total ton-miles to 46 percent. And that truck ton-miles rose from 9 percent to 19 percent; and inland waterway ton-miles from 14 percent to 17 percent in the same period. These figures plainly show that barge and truck operators need no protection against the railroads.

Where is the sense in this setup, from the standpoint of the public interest? Why does the practice persist? There are three discernible reasons—none of them good: (1) Barge and truck operators have a vested interest in keeping the railroads impotent in competition, and the regulatory law, as interpreted up to now by the ICC, is often definitely helpful to them; (2) elaborate regulation provides a lot of employment; (3) railroaders and industrial traffic men grew up under regulation and have never known anything else—they are too accustomed to being bossed around to be moved to loud complaint.

Some of the regulatory functions of the ICC serve a useful public purpose—e.g., supervision of accounts accident reporting and finance, prevention of arbitrary discrimination, acting as an arbiter in intra-agency issues. But there is certainly no economic justification for regulation of inter-agency competitive minimum rates, so long as direct costs are covered.

END REGULATION RACKETS

The overelaborate machinery for regulation of interagency competitive rates, in essence, is little better than a legitimized antirailroad racket. It is kept alive through inertia and because it serves a lot of vested interests. It is a reflection on the economic statesmanship of the traffic fraternity that it does not raise more of a clamor than it does to trim rate regulation down to size. If the burden isn't eased soon, a large fraction of the railroad industry is likely to go broke and be nationalized.

Skip the Price Fixing

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Fort (Ark.) Times-Record on March 24, 1959. This fine editorial recognizes the fair trade bill, H.R. 1253, and other similar measures as being precisely what they are, price-rigging legislation which would cost consumers countless millions of dollars a year.

Not one editorial comment have I been able to see outside of the trade press of the proponents favors this price-gouging legislation.

The editorial follows:

SKIP THE PRICE FIXING

A Justice Department spokesman was on solid ground, we think, when he declared Monday that so-called fair trade laws—which permit certain groups to set the retail minimum price of an article—would encroach on the spirit of the antitrust laws and probably would cost consumers countless millions of dollars a year.

Certainly, if a Federal law prohibits one group from getting together, we can see no justification for another Federal law permitting another group to do that very thing.

And, we think, all price-fixing laws eventually result in increased costs to the public. So we think there's no doubt that the consumer would suffer tremendously from any such law.

Also, we think a merchant has a basic right to decide his own business policies, including his prices.

And we think every Congressman who believes in a free nation and a free people should be opposed to any such proposal as that for a national fair trade price-setting law.

Monorail Transportation for Seattle's Century 21 Exposition

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. MAGNUSON. Mr. Speaker, the Seattle Transit Co. announced today that it has signed a contract with the Lockheed Aircraft Corp. to build a $5 million monorail system to serve the Century 21 Exposition in 1961. This is an historic step forward in the field of mass transportation. We are hopeful that this pilot model will prove to be the key to solving the growing problem of commuting to large metropolitan areas for work or shopping.

The first operational monorail line ever installed within a city to help solve mass transportation problems, the Seattle system will whisk exposition visitors from the downtown area to the exposition site a mile away in slightly more than 1 minute. Its radically designed aircars will carry 96 passengers at a time over the top of congested surface traffic.

An estimated 18 million persons are expected to visit the exposition during its 18-month run starting May 10, 1961. This revolutionary new transportation system will help handle this crowd. But of longer lasting importance and of interest to my colleagues is the fact that this system may be the answer to the Nation's commuting problems. I am sure my colleagues from metropolitan centers can visualize how similar systems could be used in their own areas to carry passengers from airports to business districts or from residential areas to shopping centers.

I hope that many of my colleagues will have an opportunity to visit Seattle during the Century 21 Exposition to see this monorail in operation as well as the many scientific and cultural exhibits which are being planned.

Oregon's Centennial Birthday

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. ULLMAN. Mr. Speaker, it is my pleasure to again call to the attention of my colleagues that this is Oregon's centennial birthday. In recognition of this fact, I include in the CONGRESSIONAL RECORD the following article from the Record-Courier of Baker, Oreg., which I am sure will be of interest to the Members:

EXPOSITION, LOCAL SHOWS MARK CENTENNIAL

Oregon, representing the last frontier, is fittingly conducting its 100th birthday party on a grand scale. Observing a century of statehood, residents from the sunny ocean beaches to the snowcapped mountains of the interior are giving a regional atmosphere to every type of celebration.

In Portland, an attendance of 6 to 8 million is forecast for the Centennial Exposition and International Trade Fair which will start June 10 and continue until September 17. The exposition site covers 65 acres, with an 11-acre pavilion as its heart. A 100-acre parking lot is being prepared for 20,000 cars, and 18 acres of the site is being turned into Adventureland, combining historical displays with glimpses into the future.

ATOMIC ENERGY EXHIBIT

An exhibit of atomic energy never before seen in its entirety will share attention with a pioneer village in operation and a re-creation of the village in which Lewis and Clark wintered on the Oregon coast. A logging train salvaged from pioneer equipment will carry visitors around the area while a stagecoach rolls again and a sawmill cuts timber into lumber.

Another 10 acres has been set aside for the International Garden of Tomorrow, with newly developed flowers from all over the world. A floral clock, 30 feet in diameter, will tick off the minutes, and a candle 25 feet tall will burn throughout the 100 days of the exposition, symbolizing hope and prayer for international good will.

DISPLAYS IN GREAT VARIETY

Exhibits and features of the Exposition will provide variety of interests. Among them will be a $250,000 Oregon Forest Products pavilion unlike any building in the world. The structure will demonstrate new uses for wood architecture. Attracting the homeowner will be the Cameo House of Tomorrow, projecting the viewer 10 years into the future with newly developed construction, gadgets, and furnishings.

Many national firms have arranged for exhibits, including General Motors, Westinghouse, Standard Oil, Carter Oil, General Petroleum, The Texas Co., Reynolds Metals, Coca-Cola, New York Life Insurance, and Pacific Telephone & Telegraph.

Among Portland area manufacturers with displays will be the Hyster Co., White Stag, Pendleton Woolen Mills, Jantzen, Inc., Electric Steel Foundry Co., Gunderson Brothers, Tektronix, Mixermobile and Sawyers. In the noncommercial field, 13 Oregon State agencies are cooperating in a $75,000 exhibit. There will also be atomic energy, fine arts, education, fish and wildlife displays.

Spectacular professional entertainment of every type is being billed for the Exposition as well as productions with an authentic

Western flavor. Among attractions will be the Ice Capades and the Art Linkletter show.

TWENTY NATIONS AT TRADE FAIR

More than 20 nations are planning to show and sell their products to Centennial visitors at the International Trade Fair.

Many distinguished foreign visitors and members of the legation staffs from Washington, D.C., will attend. To enhance the foreign exhibits, there will be an international theater for film showings related to handicrafts on display.

Significant as a first in international trade fairs is the collective exhibit being arranged by West Germany, Great Britain, Italy, France, The Netherlands, Belgium, and Luxembourg. This will include displays of everything from industrial products to winter ski equipment.

Also represented in the Fair will be India, Israel, Japan, Austria, China, Dominican Republic, Finland, Ghana, Hong Kong, Korea, Malaya, Mexico, Morocco, Norway, Sweden, Philippine Islands, and the Virgin Islands.

Every city, town, and hamlet in the State is planning special attractions for Oregon's guests. Tourist booths will make available information concerning square dances, fish fries, cattle drives, gold panning, historical pageants, boat trips, scenic drives, fishing excursions and a host of other activities typical of the State's varied interests.

TWO THOUSAND INDIANS IN CAMP

A unique event will be a National Indian encampment at Pendleton July 18–26. More than 2,000 Indians, representing every tribe in the Nation, are expected for the encampment. It will commemorate the signing of a treaty in 1855 between the United States and the Walla Walla and Umatilla Tribes. Visitors will see authentic Indian dances and games and witness tribal customs.

Pony express riders will begin carrying mail June 7 on two trunklines across the State throughout the summer with feeder lines connecting all parts of Oregon. It will be possible to mail a letter anywhere in Oregon and have it actually carried by horsemen to any destination in the State or to the edge of the State for transfer to trains.

Touring the State and stopping at every town of 2,000 or more population is the Centennial Van of History. It carries historical displays that even include the tomahawk that killed Marcus Whitman, early-day missionary.

Oregon's seashores, mountains, inland waters and woods are expected to lure centennial visitors into prolonging their vacations.

Industry, too, as it developed from the fledgling of yesterday into the giant of today, will be graphically depicted.

COVERED WAGONS TO ROLL

To help publicize the centennial celebration throughout the country, a group of space age pioneers in 5 covered wagons will make the 2,000-mile crossing on the old Oregon Trail, starting April 19 from Independence, Mo., and reenacting the 20-mile-a-day trek of their forebears. Gordon (Tex) Serpa, Ashland, Oreg., rancher and movie stunt rider, has been named wagonmaster and former President Harry Truman will be on hand to start off the cavalcade.

Members of the Oregon Ad Club have set out to reclaim the northern part of the old Oregon Territory. Claim signs are being erected at various boundaries and in such strategic spots as Seattle newspapers, the city limits of Yakima, the lobby of the Davenport Hotel in Spokane, and the Canadian border.

How a Spanish-Language Newspaper in New York Helps Its Readers

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a very interesting article which appeared in Editor and Publisher, in its issue of April 18, 1959. The article is entitled "El Diario Assists Spanish Readers," and the author of it is Ray Erwin.

This article presents not only an insight into some of the problems encountered by the Spanish-speaking community of New York, numbering a million people, but tells us what the Spanish-language newspaper El Diario de Nueva York is doing to help these people overcome some of their problems. This newspaper is more than just a newspaper, it is a community guide and a human relations agency combined.

I feel that in reading this article we are better able to understand the Spanish-speaking people and their problems of adjustment under trying circumstances. It is for this reason that I am inserting it into the RECORD:

EL DIARIO ASSISTS SPANISH READERS

(By Ray Erwin)

As many as 700 of the 1 million Spanish-speaking residents of New York City may visit the human relations department of El Diario de Nueva York, Spanish-language morning tabloid newspaper, in a single day to seek and receive advice on personal problems.

The department averages 250 interviews daily and from 600 to 700 on Saturdays. It receives an average of 1,000 letters a day, two employees being required to handle this mail, entirely separate from the newspaper's regular mail.

The heartwarming work of the human relations department is credited in large measure with the rehabilitation of the El Diario.

RAPID GROWTH

When Stanley Ross became editor in chief and associate publisher of El Diario 3 years ago, the paper verged on bankruptcy and had been suspended for 5 weeks by a strike. Mr. Ross and the publisher, Dr. Porfirio Dominici, borrowed 2 weeks' payroll, settled the strike and within 14 hours had the paper back on the streets. The circulation was 21,000. It is now 60,000.

There are only two persons on the circulation staff in New York, as there are only about 550 home subscribers. The remainder of the papers are picked up at the plant at 164 Duane Street, where PM was published before its suspension, by the Metropolitan News Co., which distributes all foreign-language newspapers in New York. Metropolitan makes delivery to 4,000 newsstands daily. The paper maintains one circulation man in Philadelphia and another in Chicago.

The human relations department was modeled on a smaller scale after the extensive public service programs promoted for many years by La Prensa in Buenos Aires, Argentina.

The head of the department, the Reverend Fernando Rivera, assigned to the work by the New York Council of Protestant Churches, asked the visitor to step out into the marble-lined foyer of the building to witness a wedding. A dark-eyed young couple, in Sunday best, nervously made their holy vows. An average of 10 couples are married there each week without charge of any kind. Catholic couples are sent to their respective parish churches.

Two Catholic priests assigned to the work of the department are away, one in Colombia and the other in Central America, but they will return. Miss Felicita Berrios, a Catholic charities trained social worker, works in the human relations department and is paid by the paper.

Housing, welfare, and employment problems constitute the bulk of the work. Hundreds of cases involving installment buying are referred to the State attorney general's office, which has requested a large increase in staff to handle these matters. El Diario formerly had its own clinica legal to provide volunteer lawyers to advise readers but now all such cases are referred to the Legal Aid Society.

One of the workers in the department, Harry Soloway, was on the staff of former Gov. Herbert H. Lehman.

A number of reporters devote almost full-time to the human relations department and its work, much of which produces news pictures and stories. For instance, Jose Lumen Roman, a reporter, gets up at 4 a.m. to televise over NBC channel 4 at 6 a.m. "Aque se Habla Ingles"—"English Is Spoken Here." Then, after his TV English lesson, he goes to the office to devote most of his time to human relations problems.

MISCARRIAGE OF JUSTICE

Another reporter, John I. Ortiz, Jr., has just returned from Poughkeepsie, N.Y., where he helped to rectify an apparent miscarriage of justice involving two young Puerto Rican migrant farm workers.

A man complained to the police that two "dark" men asked him for two cigarettes and when he refused and cursed them, they struck him in the mouth and took two cigarettes, leaving the rest of the pack and his money.

The police found out the two Puerto Ricans had been in town and arrested them. The plaintiff identified them. No interpreter was provided the Spanish-speaking defendants but the court appointed a lawyer. The youths were convicted and sentenced to from 10 to 30 years in the penitentiary.

El Diario found witnesses to back the defendants' story that they were home when the affair occurred, paid for a transcript of the court testimony and got the pair out on $20,000 bail, pending an appeal.

At a Puerto Rican parade on Fifth Avenue last Sunday, Mr. Ross said Gov. Nelson A. Rockefeller mentioned to him the possibility of a pardon. The editor told him they did not want a pardon but complete vindication in the courts.

In addition to the reporters, there are a number of volunteer workers in the department, such as Pedro Delgado, president of the Yauco Social Club.

POLITICALLY POWERFUL

El Diario packs a political punch. Its readers, many of whom speak little English, look to it not only to help them solve their many personal problems but to suggest their political preferences.

Even in health matters, many of the newcomers from Latin America hesitate to go to health clinics or hospitals until they are so referred by the newspaper that is quick to champion their rights or advise them. Many

declined to take their children to receive Salk inoculations gainst polio until El Diario began having the shots given at its office. Then they flocked in.

SPORTS SPONSORED

Manolo Rodriguez, sports editor and former Minister of War and police chief in Costa Rica, is commissioner of 30 baseball leagues with 96 teams and approximately 2,000 players, sponsored by the newspaper. His staff also oversees Guants Hispanos, El Diario's golden gloves, for which 2,400 Spanish-speaking boys train for boxing.

Often a visitor to the human relations department has been shunted around to seven or eight city offices about some matter. The newspaper workers send them with a note in English to the correct official.

Many persons sought by the police for questioning surrender to the newspaper. Dr. Dominici, the publisher, is a physician and gives men surrendering a physical examination and tells the police this has been done. This reassures the men that they will not be given third-degree treatment.

A special citation, with high praise from high police officials, recently was made to El Diario by the Schaefer Brewing Co. for its help to the police in recovering a kidnaped baby.

The newspaper boasts of its readers' loyalty to advertisers. The A.&P. stores ran an experimental series of ads in Spanish in the paper and then decided to remain out a few weeks. Mr. Ross advised readers who wished to see the grocery ads continue in their newspaper to write the advertising director of the company and tell him so. Within 2 days, he telephoned El Diario he had received 6,000 letters. The company has run one full page of advertising once a week ever since.

The paper carries about four pages of classified advertising each day, with a big volume of help-wanted ads.

Editor Ross, an ex-Associated Press correspondent, once was editor of El Diario de Puerto Rico, owned by Gov. Muñoz Marin. City Editor Sergio Santelices was in charge of Latin American news for INS for 11 years.

Publisher Dominici, who also owns El Universal, Caracas, Venezuela, and Editor Ross have announced enlargement of the weekend edition (published Saturday with dateline) of El Diario, which has contracted with King Features Syndicate for 8 pages of colored comics. With the issue of April 19, the paper adds two photographers to its staff, bringing the total to 7, and a feature writer, Mrs. Lazara Vega, of Cuba. The paper has sent Ismael Fernandez to Puerto Rico to double its fulltime staff there. The paper has a leased wire to Puerto Rico.

Philip Malkin, director of advertising, says 1 million Spanish-speaking people live in New York, and 675,000 are from Puerto Rico.

Tribute to Rear Admiral Mumma

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. HOSMER. Mr. Speaker, Adm. A. G. Mumma's 4-year tour as Chief of the Bureau of the Ships has been marked by spectacular technological advances in the design and construction of new surface combatant ships and submarines, by the development of improved electronics detection and communications equipment and by the application of effective methods of reducing costs. Four *Forrestal*-type attack aircraft carriers have joined the fleet and the nuclear-powered attack carrier *Enterprise* is taking shape on the building ways. A new fleet of atomic-powered missile-armed ships has come closer to reality. Numerous guided missile frigates and destroyers have been placed under construction. The first of these have already been launched.

The Bureau of Ships, under the guidance of Admiral Mumma, quickly designed a new type of nuclear-powered submarine to carry and launch the fleet ballistic missile, Polaris. Six Polaris submarines are now under construction and three of them are expected to be launched later this year. During the past year a project which Admiral Mumma helped to initiate and foster from the very beginning, the marriage of nuclear power with the revolutionary whale-shaped hull form of the experimental submarine *Albacore*, came into being with phenomenally successful results. The latest Navy submarine to be commissioned, *Skipjack*, is faster and more maneuverable than any other submarine ever built.

With the retirement of Admiral Mumma tomorrow, the Navy will lose an extremely capable and devoted officer. Admiral Mumma has frequently testified before Congress concerning the affairs of the Bureau of Ships. I am sure that his many friends in Congress will miss him and will wish him the best of success in his chosen field of endeavor.

Preserve, Protect, and Defend the Constitution

EXTENSION OF REMARKS

OF

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. MOELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article prepared by Mr. J. Keller Kirn, Sr., a respected retired banker from my hometown of Lancaster, Ohio. Mr. Kirn is a widely known and valuable member of our community. I am pleased to submit his article, not as an expression of my own views, but to give others an opportunity to be acquainted with Mr. Kirn's thinking:

PRESERVE, PROTECT, AND DEFEND THE CONSTITUTION

Our Constitution was the answer to our forefather's prayer for divine guidance. Abraham Lincoln, said: "The Constitution was adopted to preserve our government, not to act as a protecting screen for those who while claiming its privileges seek to destroy it." William Penn, said: "Men will be governed by God or ruled by tyrants."

According to our Constitution consisting of 3 branches—legislative, judicial and executive, we are governed by those whom we elect.

There is no fourth branch for government ownership or operation of private business, to rule us with rules made by bureaucrat rulers whom we did not elect.

According to our Constitution, government spending is carefully restricted to "the common defense and general welfare of the United States"—not of any other nation or the world at large.

Our Constitution gives power to Congress (1) "to coin money," and (2) "to borrow money on the credit of the United States"—but not to lend money, or to give it away, either at home or abroad.

CONGRESSIONAL RECORD, March 21, 1955, page A1919, "42 years ago we did not have a single government lending agency, now 104 with $244 billion of loans."

CONGRESSIONAL RECORD, May 12, 1958, page 7535, Congressman William E. McVey, said: "The pursuance of our present policies must eventually lead to insolvency of our country and the strangulation of our free-enterprise system." Then he listed loans made by our government to 23 other countries, and grants-in-aid, which don't require that they be paid back, to 100 other countries, July 1, 1954, June 30, 1957.

Thailand received $593,205,000 grants-in-aid, and will get $20 million more. We can't buy loyalty, love, or respect. Listen to Fulton Lewis, Jr., and D. Manion.

Instead of government loans and grants-in-aid to other countries, allow other countries to sell their bonds to our citizens without guarantee by our Government.

Allow our citizens to form corporations to take over private businesses operated unconstitutionally by our government bureaucrats. Government employees can be employed by such corporations, invest in them, and be free from fear of changes in administrations. This will reduce our government debt and tax expenses and increase government tax income from such corporations.

President George Washington adopted neutrality by proclamation April 22, 1793 when war broke out between France on the one side and Great Britain, the United Netherlands, Austria, Prussia and Sardinia on the other side.

Emulate Switzerland, at peace with golden rule neutrality instead of war by "lets you and him fight" U.N. interventionists, and prosperous with currency payable in gold coins, since 1815. Restore the gold coin standard, now.

When Congress regulated commerce with foreign nations according to our Constitution, we were protected from the cheap labor of Europe, and the slave labor of Russia. Demand that Congress again regulate commerce with foreign nations.

Financing Communists

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oakland Tribune, of Oakland, Calif.:

FINANCING COMMUNISTS

For some years, a sturdy piece of legislation known as the Battle Act has stood against those who would scatter the U.S. taxpayer's dollars around the world with indiscriminate judgment in promotion of their role of global dogooders.

Now a new attack has been made upon that barrier which was designed to prevent the funneling of any large share of the American economy into any country that classes our economic system as an enemy to be overcome.

Under a bill offered by Senator JOHN KENNEDY and Senator GEORGE D. AIKEN, American economic aid could be sent into Communist satellite countries as a wedge to pry loose Moscow control.

The Battle Act, which specifically forbids aid to any nation controlled or dominated by Communists unless there is a Presidential decision that such aid is merited and can be beneficial to the United States, would be practically destroyed by the Kennedy-Aiken measure.

A similar attempt was defeated in the Senate last year by the slim margin of 43 to 42.

The best argument Senator KENNEDY could bring up in introducing the second attempt Tuesday was that "there is a real opportunity for giving our foreign policy a flexibility which might exploit cracks in the Iron Curtain."

That is as flimsy as it is unrealistic. Hungary stands as an outstanding example of what comes when the people of any satellite state shows opposition to Moscow. Poland is an example of a satellite state that has received U.S. assistance, showing in return only a still closer subjugation to Moscow.

And what have we received in return for the hundreds of millions of dollars sent to Yugoslavia? There has been no evidence of a desire to align foreign policy with that of the West. There has been no departure from communism. There has been nothing at all from Marshal Tito that serves the interests of the United States.

It is particularly unwise at this time to earmark our dollars for any Communist country. Rather than contribute to the economy of any red state now is the time to draw tighter, not loosen, the Treasury.

Democratic Victory in 1960

EXTENSION OF REMARKS
OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. QUIGLEY. Mr. Speaker, last Saturday evening the Young Men's Democratic Society of York County, Pa., held its 67th annual Jefferson-Jackson Day dinner at the Valencia Ballroom in the city of York. The speaker on this occasion was our distinguished colleague from the Fourth District of Alabama, Hon. KENNETH A. ROBERTS. It is a pleasure for me to bring to your attention the speech which Mr. Roberts delivered to his York audience:

It is a great pleasure for me to be here tonight, as I always get a high sense of pleasure in gathering with Democrats anywhere.

I feel at home with Democrats wherever I am, even though I may be in Yankee territory. I'm glad that I am here on friendly terms, because I understand that when I crossed over into York County today I also crossed over what some southerners have called the Smith & Wesson line. I think you call it the Mason-Dixon line.

It is a privilege to be in the 19th Pennsylvania District, which is served so ably by my good friend and your distinguished Congressman, the Honorable JAMES M. QUIGLEY. I could not have said that if I had come before you last year, and I know you share the pride I have in being able to salute your Democratic Congressman tonight.

There may be another reason why I feel at home here tonight. In Washington, you know things can get pretty hot sometimes. I think it should be a source of pride to you to know that when things get heated in the Capitol Building, York air conditioning is helping cool things off.

We are here tonight in a common bond, the Democratic Party.

Through a century and a half of American history, there has been a Democratic Party. And all that time our party has had one guiding principle: the ideal of government for the common man.

Ours is the oldest political party in the world. The exact date of the party's founding is not clear. But it is certain that it gained lifebreath in the fight of Thomas Jefferson for the Bill of Rights. The battle then was what it has always been for the Democratic Party: to preserve individual liberty. In that great fight which put the Democratic Party into the forefront, Thomas Jefferson declared: "A bill of rights is what the people are entitled to against every government on earth, and what no just government should refuse."

Jefferson's party first sought office opposing the aristocratic Federalists of Alexander Hamilton. Jefferson fought the party which believed that the Government could not last unless the wealthy people of the country were given preferential treatment.

Government for the benefit of the privileged few, the autocrats of privilege, has ever been the spirit of the Republican Party.

When the Eisenhower Republican administration came into power in 1953, there was great rejoicing by the men of big business, big finance, and big law. One of General Eisenhower's first actions was to take care of his rich friends. And, right off, he named to his Cabinet nine millionaires and a plumber. The plumber, needless to say, is no longer with him. Under Eisenhower, the Republican Party has run true to form. It has followed the party spirit enunciated by Alexander Hamilton. Hamilton's scheme was to create a permanent class to run the Government of those who held the wealth and capital of the country. It was built for the autocrats of privilege and there was no humanity in it.

Our great Speaker of the House, SAM RAYBURN, has often said that the Democratic Party is the party with humanity in it. Ours is the party with a heart. It was our party that created the ideal of humane government.

You know, the Democratic Party's early role in protecting the immigrant settlers almost has been forgotten. Back in the 1850's, some 600,000 European immigrants were entering this country each year. The Know-Nothing Party came into being for the sole purpose of ending this immigration. Members of the bigoted Know-Nothing movement burned churches and beat up immigrants on the streets. They ran almost unchecked until the Democratic National Convention of 1856 took a strong stand which broke the back of the Know-Nothings. The Democratic belief was put forth in a resolution which showed the common people of Europe that America welcomed them to a new life. Our western lands, then being settled, would have of little use without people to fill them. The Democratic ideal of humane government quickened the movement that built the West.

Thomas Jefferson believed in the fullest possible life for all the people. He believed in the inherent worth of the common man. He was certain that, given the facts, the people would use the right of self-government properly.

Down through 150 years, this has been the line of the Democratic Party. Of course, we have had our ups and our downs. But there have always been men, men of good faith, young men, men ready to fight for good government.

What men we have had.

Thomas Jefferson at 33 drafting the Declaration of Independence.

James Madison at 26 the father of our Constitution.

James Monroe, who formed the basis of American foreign policy which would stand for more than a century.

Andrew Jackson, who after leading the American forces brilliantly in the Battle of New Orleans, went on to become a great President.

One of the finest assertions of basic Democratic principles on record is one delivered by Andrew Jackson while he was President. I would like to quote the words which express clearly our party's beliefs: "Every man is equally entitled to protection by law; but, when the laws undertake to add to those natural and just advantages artificial distinctions, to grant titles, gratuities and exclusive privileges, to make the rich richer and the powerful more potent, the humble members of society—the farmers, mechanics and laborers—who have neither the time nor the means to secure like favors to themselves, have a right to complain of the injustice of their government."

And from here in Pennsylvania there came a man. His name was James Buchanan. As Secretary of State, he wrote the peace treaty with Mexico. As President, he lowered the tariff, and his words on government economy still live in the Democratic 86th Congress. He said, "We ought never to forget that true public economy consists not in withholding the means necessary to accomplish important national objects, but in taking care that the money appropriated for these purposes shall be faithfully and frugally expended."

The Republican Party leadership today delights in calling the Democrats the big spenders. The Republican solution is to ignore crying domestic needs and hang onto a paper budget. They could take a great lesson from James Buchanan of Pennsylvania.

You know, that balanced budget that President Eisenhower has tossed to us in the Congress is one of the big hoaxes of the century. When you try to test the budget by comparing expenditure with revenue, it does not balance. It anticipates revenue which will not be forthcoming. When you try to test the budget by measuring it against the needs of the country, against the suffering of the unemployed, against the demands for better schools, hospitals, and housing, it is far from being a balanced budget.

It is a deficit budget. Deficit in reality and humane ideals.

The Democratic Party is and always has been the party of financial responsibility. The Democratic Party believes, as Grover Cleveland so succinctly put it, "A public office is a public trust."

In the last 4 years of Democratic Congresses, for instance, we have cut $8 billion out of the Republican President's budget. We have done it wisely, responsibly, and we have carried American progress ahead with it.

The Democratic Party has always provided leadership when the country has needed it. In time of crisis, the people historically have turned to the Democratic Party.

During World War I, America looked to Woodrow Wilson. He carried us through, and did not stop there. He devoted his life to a search for peace. Peace among men and among nations.

Woodrow Wilson was a living example of the precept of the Democratic Party which he himself enunciated with these words: "The Democratic Party, and only the Democratic Party, has carried out the policies which the progressive people of this country have desired. * * * I thank God that those who believe in America, who try to serve her people, are likely to be also what America herself from the first hoped and meant to be—the servant of mankind."

In 1929, the people of America had had Republican leadership, or lack of it, for 8 years. They were on the verge of a terrible economic crisis. And it came down like a burst bubble. The great depression. The stock market was at the bottom. There were breadlines in the streets. Thirteen million people were out of work. The Republican President gave them empty words. He said he was opposed to squandering ourselves into prosperity. He said the worst was over, and recovery was assured.

Well, you know the story. In time of crisis, the people turned to the Democratic Party for salvation. They found it in a man named Franklin Delano Roosevelt. F.D.R. told the people there was nothing to fear but fear itself. The people trusted him, and he led them through.

The people grew strong under the Democrats during the next two decades. Roosevelt and Harry S. Truman guided America through a great global conflict and made us sound and prosperous.

In 1952, the Hoover years were dimmed in American memories. America thought it wanted a change. I do not have to tell you here tonight that America got a change.

We have had many changes while President Eisenhower was sometimes at the Augusta, Ga., Country Club, sometimes at Camp David, sometimes at the Burning Tree golf course, and sometimes on a fancy farm over in Adams County, Pa.

Our allies have been antagonized, our alliances weakened, our strength weakened, our world prestige undermined.

On the home front, the Republican administration gave America more changes. It gave us the worst recession since World War II, with 5 million unemployed workers, the highest prices and taxes in history, a soaring cost of living.

The great change of 1952 brought to America a rededication to the precepts of Alexander Hamilton, where the rich get richer and the poor get poorer. We have felt the pinch of the high interest rates for the benefit of the bankers and the money lenders. We have seen small business squeezed out, while Republican shoulders shrugged at the big steel and auto manufacturers, food producers and chainstores putting through price increases far out of proportion to labor wage increases. Tax cuts have been reserved for corporations and rich taxpayers.

The workers, consumers, small businessmen, and farmers were neglected while the administration shadow-boxed with inflation.

You are located here in the heart of a great agricultural region. Did you know that the Republicans have driven 4 million people off the farms in 5 years?

Under the great change of 1952, there has come about a heartless and callous slashing of programs vital to the health of the people. There have been giveaways, exploitation of natural resources, minerals, water, power, forestry, and land.

The Republican administration let the Russians get the jump on us in the space race. Down in Alabama, at Redstone Arsenal, we have the world's ablest space scientists. These scientists had a rocket ready to go long before the Russian sputnik zoomed into outer space. America could have beaten sputnik and strengthened its leadership and prestige if President Eisenhower and Charlie Wilson could have made up their minds and given Redstone Arsenal the go-ahead.

Last November, the people of America realized as never before what the great change of 1952 had brought them.

They saw that once again America is facing a time of crisis. Only this time, it is not one crisis, but multiple crises. There is the farm crisis. The arms research and development crisis. The business crisis. The unemployment crisis.

In November, the people once again showed they were ready to let the Democratic Party take over. They showed it in the only way they could. Had it been a presidential election, we would have a Democrat sitting in the White House right now.

But the people will have to wait until 1960 for that.

Last fall, they could only elect Democrats to governorships, to mayorships, to Congress. And they did it overwhelmingly. In all parts of this great land, Democrats were returned to office or sent there for the first time.

Right here in Pennsylvania, in the 19th Congressional District, after he had been on the sidelines for 2 years, you sent a Democrat back to Washington and I congratulate you for it.

Well, what did that great victory in 1958 for the Democratic Party mean? One thing it most certainly meant was that the people do not want more of what they have been getting. Tired of the weak Republican administration, they are concerned over the unanswered needs on the homefront and abroad.

In short, the people are tired of the great change. They want the Democratic Party, the responsible party, the humane party, to make their laws and to give them leadership.

We Democrats feel very strongly the burden of responsibility that has been placed upon us. In the 86th Congress, where the Democratic majority is larger than at any time in the last 20 years, we know that ours is a solemn obligation to continue to fulfill the expectations of the people who have put us there.

In the 86th Congress, we are going to continue in the spirit of the 85th Congress, which the people so loudly have endorsed.

The job has already started. The Hawaiian and Alaskan statehood bills already has passed, and we have extended unemployment benefits. We are on the verge of passing a new airport aid bill, to help us meet the growing demands of safety and necessity in the jet age. We will soon pass an omnibus housing bill, to provide homes for the homeless.

We will enact health legislation and safety legislation. We will enact labor reform legislation, and we will see that adequate funds are provided for home development and defense.

The list will be long when we are through. It will be done for the ideal of government for the comman man, just as it was in the days of Thomas Jefferson. It will be done at times against heavy opposition from the Republican administration.

The voters of America will be watching the 86th Congress. They want to know that their 1958 endorsement of the Democratic Party was justified. I want to tell you that they will not be disappointed. They will be sure in 1960 that the Democratic Party is the party of responsibility.

They will be able to vote in good conscience for the Democratic presidential nominee, confident that their ballot will mean a return to responsible leadership.

America today as never before has need of the Democratic Party. She has need of its spirit of dedication and devotion. She has the need of each of you here tonight, your courage, and devotion, your determination, and vision, your faith in the future.

Monopoly in Milk

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an article by Sherwood Ross in the May number of the Progressive Magazine. Mr. Ross, a constituent of mine, is a distinguished Chicago publicist now serving under Commissioner Jardine in the administration of Mayor Daley, of Chicago. The article follows:

MONOPOLY IN THE MILKSHED
(by Sherwood Ross)

"If, as is sometimes said, the past is prolog, this record, to those who believe that traditional American liberty even yet holds a place in its competitive structure for the individual enterpriser, forewarns of the annihilation of the small businessman in a field of competitive endeavor historically local in nature. The rise of the giant, Foremost Dairies, Inc., characterized by acquisition * * * seemingly without end, is one of the prime examples of the revision of the competitive structure of the dairy products industry in the last quarter century."

This eloquent plea of the public counsel before the hearing examiner of the Federal Trade Commission in the still undecided case against the Foremost Dairies Corp. supplies, in capsule, the reason behind the FTC's bid to prove that Foremost, along with three other corporate giants, has come to dominate the dairy industry. This domination has been achieved by methods allegedly in violation of the Clayton Act, which prohibits corporation mergers that "lessen competition, or tend to create a monopoly," and the Federal Trade Commission Act, which prohibits unfair competitive practices. The results of these FTC complaints, in addition to the probe by an aggressive House Committee on Small Business, has been to keep the big four of dairyland—National Dairy Products (Sealtest), the Borden Co., Foremost, and Beatrice Foods (Meadowgold)—almost constantly on the witness stand.

Much more is at stake than appears on the surface in this legal battle between the Government and the dairy corporations over who controls the American milkshed, and how it is controlled. The congressional investigation and the decisions of the hearing examiner will affect the welfare of our 1,500,000 dairy farmers, the future of hundreds of small, independent milk producers, thousands of small grocers, and the pocketbooks of 170 million Americans.

As a result of the acquisition of small milk producers, virtually in wholesale lots, the Big Four now control 20 percent of all fluid milk sales in the United States. Accordingly, since 1954, the FTC has cited the four for merger practices which "tend to create a monopoly" or "lessen competition." Some idea of the wealth, power, and resources at the disposal of these giant organizations may be gained from examining their corporate records:

National Dairy operates more than 400 concerns, many of which, like Kraft Foods, control subsidiaries of their own. In a pending complaint, the FTC charges that National's sales have increased 39 percent—from $906 million in 1950, to $1,260 million in 1955—as a result of its 40 acquisitions.

Borden's, with hundreds of satellites producing in 48 States and numerous markets overseas, has increased its sales from $613 million in 1950, to $810 million in 1955,

because of its pattern, the FTC claims, of "steady encroachment" in eliminating competitors.

Foremost, which holds the distinction of having led all U.S. corporations in total mergers for the years 1948 through 1954, increased its sales sevenfold during the 1950–54 period because of them, the FTC contends. Foremost sales rose from $52 million to $375 million in that time. The growth of its corporate assets—like those of the other dairy leaders—directly paralleled the rise of its sales. Foremost's assets soared 797 percent between 1950 and 1954.

Beatrice Foods, which operates some 300 enterprises in 29 States, increased its net sales by 58 percent—from $205 million to $325 million—in the 1950–55 period, a consequence of mergers that violate the Clayton Act, the FTC has charged.

As these huge dairy corporations, in their apparently ceaseless cycle of merger, growth, and merger, have enjoyed record sales and profits while farm prices have declined and consumer prices have advanced, it is little short of amazing that so little public outcry has been heard. Editors seem indifferent to the fact that one-third of all American families are dificient in calcium; 2 families in 10 will not purchase a quart of milk this month; and the world's wealthiest Nation languishes in 15th place on the list of world dairy-product consumers.

Some of the reasons for this poor showing are not hard to find. Florida provides a fairly typical example of why dairy products pile up. There, three of the big four—Foremost, Borden's, and National—control 36 percent of milk sales in Miami, 59 percent in Jacksonville, and 60 percent in Tampa, according to figures supplied by the FTC. The housewife has to pay the milkman 28 cents a quart in Miami and Tampa, and 30 cents a quart in Jacksonville. The result has been a surplus of milk on the farms while people in the cities who need it have to go without milk. "Now what could have caused a surplus of milk in Florida?" chided the Dairy Record magazine last summer. "Could it possibly have been prices which, month after month and year after year, with only an occasional exception, are the highest in the Nation?"

But if the breadwinner's wife has been paying gold rush prices for milk, the dairy farmer has seen only the dust and not the nuggets. Representative Department of Agriculture figures for the sale of half-gallon containers (February 1958) prove this rather conclusively:

[In cents]

	Housewife pays	Middleman takes	Farmer gets
New York	49	23	26
Oklahoma City	49	27	22
Louisville	41	22	19
Chicago	41	23	18
Dayton	40	21	19

New York World-Telegram and Sun Reporter Joseph Alvarez, viewing "The Milk Muddle," in September 1957, observed, "Right now, the farmer gets about 9 cents a quart. It retails for 25½ cents. Some economists maintain that the higher prices the farmer needs and the cheaper milk the housewife wants must come out of the 16½ cents in the middle." This is a point of view enthusiastically supported by dairy farmers, many of whom have been driven to desperation by sliding receipts and skyrocketing costs. A few months earlier, 9,000 mid-Atlantic region farmers resorted to milk-dumping, dynamiting, and gunplay in an effort to wring 3 cents more from the middlemen. One spokesman for 3,000 insurgent dairy farmers in that area complained bitterly, "We're losing money on every drop of milk we sell. We can't meet production costs. We'd rather ruin ourselves than have somebody else do it for us." On the highways, milk schooners were flagged down—their tires slashed, headlights broken, cargoes dumped—and the supply of milk to New York City jeopardized.

National farm spokesmen mince no words in pinning the blame for low milk receipts on the middleman. William Waldorf, president of the Dairy Farmers of America, has declared, "We will be orderly but our needs are great. We are an action group. We are in revolt against the domination of the big milk trusts. They must pay more for our milk." It can hardly be maintained that the big milk trusts are incapable of paying more. The net profits of the Big Four—spurred by sales which the FTC says have been the result of mergers—have grown like this:

Net profits

[In millions of dollars]

	1952	1956	1957	1958
National	$27.8	41.7	44.1	45.5
Borden's	17.7	23.6	24.0	24.6
Foremost	1.9	10.1	10.5	------
Beatrice	3.9	6.3	7.5	8.6

It should be noted that the most recent recession, which depleted the ranks of dairy farmers, put no great dent in Big Four profit margins. There are several reasons for this. The business magazine, Barron's, pointed out one of them last year in an article titled "National Dairy—It Manages To Thrive in Good and Bad Times Alike." Explaining why National's profits rose during three recessions, it observed, "Since raw materials are much more sensitive to business conditions than the prices of finished goods, dairy firms such as National usually are able to widen profit margins in times of general economic slackness." Or, to take it out of Wall Street parlance, consumer prices remained high even though farm prices fell and millions of workers were laid off.

A second reason for the sizable profit margins of the Big Four has been the invaluable assistance tendered them by Secretary of Agriculture Ezra Taft Benson. In February 1958, in the darkest hours of the farmers' general economic slackness, Benson cut dairy supports the full legal limit, to 75 percent. But as one Michigan dairyman told a Farm Journal reporter, "Lowering price supports won't help use up milk. The consumer will never see any of the cut. The processor will just fatten up." It took no Cassandra to make such a prediction. When the Government depressed the market price for the farmer, the dairy giants saw no reason to make any such commensurate reduction of their price at retail. The consumer—wholly unorganized, unprotected, and uninformed—made no protest.

According to the National Milk Producers Federation, the voice of some 30,000 U.S. dairy farmers, consumer prices rose 9.3 percent between April 1954 and January 1958, although the administration cut price supports 13.1 percent. The unkindest cut of all was dealt not by Benson but by President Eisenhower, the campaigner who promised 100 percent parity in 1952. He vetoed a bill sparked by Midwest Democrats which would have frozen dairy supports at 1957 levels—and hundreds of dairy farmers began auctioning their herds. Hugh Moore, professor of agricultural economics at the University of Wisconsin, told the New York Times, "The veto will cost Wisconsin dairy farmers $35 million, and that reduced purchasing power will be reflected in lower income for the people who do business with them."

The plight of the dairy farmer is perhaps equaled only by the death agonies of the small milk manufacturer. Twenty years ago, he knew each farmer who trucked his milk cans to his Main Street door in the early morning hours, and he generally gave him the best price he could and still made a profit. Now, systematically, according to the FTC—this small milk manufacturer is being bought out, sometimes forced to sell his business. The new proprietors are absentee landlords, operating the dairy in Ashtabula or Gainesville from corporate towers in New York and Chicago.

How the small dairy dealer has been driven from the field first came to the attention of Congress several years ago with a flood of protests over price wars and discriminatory practices. The investigation headed by Representtaive WRIGHT PATMAN, chairman of the House Committee on Small Business, produced a fairly comprehensive picture of some of the methods used by the Big Four in pocketing $3.1 billion of the total $8.9 billion spent annually by U.S. housewives on all dairy products.

In Dallas, where a price war had been crushing independent distributors, a Foremost dairy chain official testified that his company was going into the red some three or four thousand dollars each day by selling below cost. Foremost, like the other members of the Big Four, could easily subsidize such operations. It could write off its losses in its battle against the Texas independents with the help of profits siphoned off from its Florida operations.

Another device used by the national chains to undersell the independents is to purchase milk in an area where the price paid to farmers is especially low and then to resell it in an area where the independents buy their milk at higher prices.

The Dairy Record has lashed out at the national dairy chain sales of products below cost as "loss leaders" to draw crowds in the big supermarts. Said the Record: "If permitted to exist, this canker will result in the liquidation of many of our independent dairy concerns. National dairy chains are far from being guiltless and too often are active participants, probably with the idea of weakening or eliminating competition." Of course, while a price war lasts, the housewife is content, but experience shows—and again Florida provides the classic example—that once the independents are bought or knocked out, the dairy captains will raise their prices to whatever the traffic will bear.

The Patman committee also heard evidence which indicated that the dairy chains and the supermarket chains have opened a double-barreled attack against the independent dairyman and the independent grocer. While investigating an unusual price war in Kansas City, where the price of home-delivered milk remained high, committee probers heard a cogent explanation for this phenomenon from Fred Lambert, of the Independent Processors of Missouri: "I believe the large dairies are forcing the price of home-delivered milk up in order that housewives buy all their milk needs at chainstores where the milk of the large dairies is sold. I believe that grocery chainstores do not permit small local dairies to compete with the large dairies on an equal basis. I believe there is a conspiracy between the large grocery chainstores to monopolize the distribution of milk, and that the so-called milk price wars are financed by the large dairies and the large chainstores for this purpose."

Evidently the Government agrees. A recent FTC complaint cites National Dairies for "paying promotional allowances to selected customers, principally to large chains" in violation of the Clayton Act. Practices such as those said to exist by the FTC can only

hasten the mercurial disappearance of the small independent grocers, as well as the dairy independents. The number of independents has already shrunk from 2,427 in 1920 to fewer than 1,500 today; according to Alabama Senator JOHN SPARKMAN, "They are the last of the Mohicans"—the last outpost of free enterprise among small industrialists in this country.

Whether the FTC has made haste to spare our "Mohicans" from an economic massacre is the subject of some controversy. As PATMAN charged, "The great wave of corporate mergers taking place during the past 3 years, and continuing now, has elicited from the Department of Justice and the FTC not even a wholehearted pretense at enforcing the law."

Even if the FTC—which has put only nine lawyers to work on the dairy cases—should overcome the battery of legal talent the Big Four have assembled against it, there is little likelihood that, after years of delay in the merger hearings, the Big Four can now be divested of the hundreds of concerns they have bought out. To divest them of these assets, long since woven into their corporate cloth, would be like unscrambling eggs. Thus, even if the Federal case is upheld, the value of the merger hearings—short of giving the public a breather from further corporate pressure in this field—is rather dubious. If past is prologue, as the FTC thinks, the public may expect more Federal consent decrees, more settlements, more status quo.

Perhaps the most conspicuous administration failure has been on the part of Agriculture Secretary Benson. In addition to his ill-timed slash of price supports, in the throes of recession, he has only once used the authority granted him under the Packers and Stockyards Act to prosecute corporations involved in unfair, unjustly discriminatory practice in commerce. (It has long been established that dairy manufacturers, in the language of this law, are construed to be packers.)

Obviously, the great crusade has bogged down in the milkshed. It now appears that any relief for farmers, housewives, small dairy entrepreneurs and grocer independents will have to wait for a change of administration in 1960. A vigilant Secretary of Agriculture could make the Packers and Stockyards Act a potent weapon for safeguarding the rights of small businessmen. By the same token, an administration with effective leadership could get action from the Attorney General and results from the FTC.

The ground for such an administration can be broken now. This session of Congress should enact new legislation calculated to bring economic justice to the dairy industry. High on the must list is the Page proposal—a suggestion which gets its name from Walter Page, manager of an organization of small dairy processors in Syracuse, N.Y., and a Patman committee witness. His proposal would compel the FTC, if it found substantial cause to issue a discriminatory price complaint after a preliminary hearing, to order the suspected offender to cease and desist from the discriminatory practice pending the final judgment of the hearing examiner.

Congress, if it hopes to reduce growing farm surpluses, should require the big milk trusts to pay farmers a fair price for their milk and keep retail consumption up by ordering retail prices down. America would not lag in fifteenth place on the list of dairy-product consuming nations today if the housewife was not the victim of prices that remained high both in good times and bad. Toward this end, a Department of Consumers—such as the one proposed by Senator ESTES KEFAUVER in the January Progressive—might prove of inestimable value. Unless Congress acts now to restore economic justice, farmers will continue to go broke; farm surpluses will continue to pile up; the "Mohicans" will continue to vanish; the Big Four will continue to extend their domination and influence over the dairy industry; and the housewife may, one day, look back wistfully to the time when the price of milk was only 30 cents a quart.

Statement by Hon. Cornelius E. Gallagher, of New Jersey, in the House of Representatives, Wednesday, April, 29, 1959

EXTENSION OF REMARKS
OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. GALLAGHER. Mr. Speaker, under leave, I would like to insert in the RECORD the testimony which I gave today before the House Judiciary Committee on my bill H.R. 4193, which would authorize compacts between States, such as New York and New Jersey, to grant uniform tax treatment of out-of-State residents employed in a State:

STATEMENT BY HON. CORNELIUS E. GALLAGHER, OF NEW JERSEY, BEFORE JUDICIARY COMMITTEE OF HOUSE OF REPRESENTATIVES, APRIL 29, 1959

Mr. Chairman and members of the committee, the district which I am privileged to represent lies just across the Hudson River from New York City. Every working day thousands of the residents of this district and many more thousands in the northern New Jersey area cross under the river into Manhattan where they are employed. A lesser number of New York residents commute from their homes in New York to jobs in New Jersey.

The income of the New Jersey residents employed in New York is taxed by that State, and taxed, it might be noted, at rates somewhat higher than are imposed on the citizens of New York. The income of the New York residents which is derived from their employment in New Jersey is not taxed. And therein lies an inequity which works an increasing economic hardship on the New Jersey residents involved.

It is important to note that this situation exists not only in the northern New Jersey and Metropolitan New York area, but in many other area of New Jersey and in other States, where there is interstate movement of workers.

It is true that a New Jersey resident working in New York benefits from certain community services, such as police and fire protection, in the area of his employment. It may be argued that he should, in all fairness, be taxed, just as the State's own citizens are taxed, for these services. There is grave doubt, however, of the fairness of taxation of the income of an out-of-State employee at the same, or higher rates at which the citizen of the State concerned is taxed. The latter receives the full benefit of all services of his State and community on a 24-hour, 365-days-a-year basis.

The out-of-State employees, on the other hand, receive limited services, certainly nothing so extensive as the schooling of his children, for which he must pay heavily in his own State, and receives these services for only the length of a normal working day—8 hours.

I am aware that this committee is giving most serious attention to the broad aspects of the levy by one State on income earned therein by the resident of another State, and has before it for consideration several proposals. I am, certainly, in agreement with the objectives of the various proposals, for the inequity of such practice is recognized even by those States which derive benefit from it. The Governor of New York, for example, has noted that the taxation of nonresident employees is a matter to which the legislature of that State should give attention.

It is only realistic, and I am sure you will agree, that relief can hardly be expected from the governing body of a State hard-pressed for public funds, and such is the case in most States. If there is to be relief in the foreseeable future, it will come as the result of action by the Congress.

H.R. 4193, which I have introduced and which is cosponsored by other New Jersey Members of the Congress, is designed to grant the consent of the Congress to any two or more States to enter into compacts to grant uniform tax treatment of nonresidents through agreements not to discriminate between residents and nonresidents in the levy and collection of taxes. Such compacts would be subject to ratification by the States involved and approval by the Congress.

The objective of my bill is an immediate solution to the problem in a manner less difficult than seeking a constitutional amendment such as is sought in other proposals. I am confident that the passage of H.R. 4193 will spark action between New York and New Jersey leading to a compact, and that such compact would give relief to the nonresident employees of business firms in that State. This would apply not only to New Jersey residents but to those of other States. I am hopeful that such a compact might be an example for other States concerned with the problem of unfair taxation of nonresident employees.

The complex of the commerce of this Nation is such that there is bound to be an increase in instances where the residents of one State are, of necessity, employed in an adjoining State. Interstate boundaries were never intended to be barriers to employment. Should they become barriers, certainly the development of the Nation's commerce would be impeded.

The bill for which I speak today is merely an authorization for two or more States to act in this matter, to reach agreements which would resolve a tax situation which is generally agreed to be grossly unfair. I urge the favorable consideration of the committee. Thank you.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Importance of the Family-Size Farm

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. JOHNSON of Texas. Mr. President, there are many ways to approach the problem of farm commodity surplus. A good case can be made, in fact, for raising the question of whether we actually do produce a surplus of food and fiber, so long as there are in the world people who are cold and hungry.

Current farm programs have caused the small farmers of our Nation to ask such questions. Sometimes the small farmer feels that current policies are aimed, not so much at eliminating surpluses, as at eliminating small farms.

I do not think there can be too many small farmers. The family-size farm represents a way of life that has been fundamental to the development of our country. I do not want to see that way of life destroyed.

Two recent editorials in the Hallettsville (Tex.) Tribune make good sense in this connection. The editor of the Tribune, my good friend Walter Malec, feels that our current problems began when so many of the small operators were driven off the land. I ask unanimous consent to have these editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

A WAY OF LIFE

John Strohm in the current Reader's Digest does not think much of the small farmers. Thirty million of the farm people were driven out in less than 30 years and 2 million farmers more should be helped to find better opportunity on or off the farm.

Strohm is quoting several college authorities fully agreeing with his low opinion of the small farmers. Actually they all show themselves to be victims of blind, but no less destructive fallacies.

Above all, they completely forget the old lesson of history that farm people cannot be driven into the cities without wrecking the whole country.

They also ignore the clear warning of the present depression and unemployment of worse things to come if this revolution in the land goes on.

As to the inefficiency of the small farmers, didn't our small farmers survive even the 5-cent cotton far better than did those efficient ones?

Does not the past prove, there is a no more efficient farm unit then a small farmer with his family doing all the farming?

And were not our communities, towns, and country built up until the land was settled by the small family farmers? Don't they stand or fall with them?

Is there now and any substitute for these farmers?

Can they be driven out without the most serious upheaval in our country, as this depression and unemployment clearly indicates?

Who made them now so inefficient? Was it not the allotments so small that so many could not make a living?

Small farmers never produced any surpluses; yet are they not the chief victims?

Didn't the program intended to help the forgotten men actually make them not only more forgotten, but destroyed millions of them?

Were not these same inefficient farmers reduced far more than the efficient ones since the small farmers needed every acre taken from them?

Wasn't the big farm program right along slanted so as to only help the big farmers who just made a farce of it?

And is not this depression and unemployment a direct result of just such fallacies as presented by John Strohm?

Blame it on the mechanization? Did the machines dictate the farm policies?

Would we have these troubles if the farmers were left free, with subsidy in direct payments?

"Cost to the Government would go up"—would it? Even if $50 per bale would be paid in direct payment and this on 15 million bales. Would it not cost only $750 million—far less than the present cost of storage and price support? Such a plan is already proposed by Senator HERMAN TALMADGE in the Senate, and Congressman W. R. POAGE in the House.

If industry and labor have their tariff, what's wrong with direct payments for the farmers? Or must farmers be doomed to selling cheap and buying at protected prices?

Would not the farmers sell more at the market price, and also be able to produce more? Would not the people buy more at cheaper prices? And is there any more effective and cheaper way to reduce the cost of living and inflation?

Must not the future be restored for the small farmers, or the future of all of us will be threatened? This also with the direct payments limited to so much per farm, for why subsidize the surplus producing commercial farms?

Did not the ruling classes go down under communism chiefly because of too many forgotten people? And does not this idea of no small farmers come from the same source as communism itself?

Could Communists wish anything better on us than this piling up our people in the cities only for more labor and other troubles?

All this because too many like John Strohm in the Reader's Digest, in farming don't think of the farmers—as though the land would be here for machines, not the people, and the farming would be only "agribusiness" not also a way of life.

AN APPEAL FOR LIBERATION

A century ago, it was the slaves that needed liberation.

Today, it's the small farmer.

But in spite of their slavery, the colored people multiplied and many lived long.

In contrast, most of the small farmers are gone, the rest of them are declared as doomed and very few young people stay on the farms—in spite of the 4–H and the Future Farmers Clubs. All in the name of efficiency.

A century ago, it produced a civil war—such was the revolt against slavery. Where is any such aroused feeling about this national disaster of the small farmers?

But this contrast is only on the side of the farmers and the rest of us. Only we lack the interest and action.

Those responsible for this disaster mean exactly what has been going on. It all comes from the communistic idea that the people simply do not count.

The small farmers never have been producing any surpluses. Yet it's argued, there are still too many of them and so at least 2 million more of them should go—beside all those already driven out.

Only the big farms are responsible for our surpluses. Yet they are favored, prospering and multiplying while the small farmers are being destroyed.

This will never be understood unless it is fully realized and felt that this driving of farm people out has been deliberate and inevitable under the plans in force. And the total doom of the small farmers will follow unless this is faced with action in time.

As the slaves a century ago, so the small farmers today need a liberation—this time from the disastrous fallacies—of allotments denying them the right to exist, and of parity prices losing our markets.

The small farmers need to be free again to farm as they want to—free as other people are in making their living.

They also need free markets to sell at the market price to sell more and so our cotton could also compete with other cotton and survive.

So long as industry has tariff and labor its minimum wage law, are not farmers entitled to a subsidy in direct payments on their principal crops?

And should not these payments be limited to so many bales per family farm? Even if 100 bales is a limit and the subsidy 10 cents per pound, would it not be cheaper than the present waste in money and people?

Not some domestic allotment, or a two-price plan—for both of them spell also the allotments, which cannot have any better effect in the future than they did in the past.

Only a complete liberation from the past policies can restore the future to our small farmers—our real strength and safety as free people.

This appeal is not coming from an aroused country. It rises mainly from this national disaster itself. It can be ignored but its consequences cannot be escaped from.

Moving Forces in the History of Mankind

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an address which I delivered before the Sixth National Conference on International Economic and Social Development, at Washington, D.C., on April 30, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR HUBERT H. HUMPHREY BEFORE SIXTH NATIONAL CONFERENCE ON INTERNATIONAL ECONOMIC AND SOCIAL DEVELOPMENT, WASHINGTON, D.C., APRIL 30, 1959

What are the moving forces in the history of mankind? Philosophers and historians have long debated this question.

There was a time—and not so very long ago—when history was written in terms of famous men—generals, emperors and presidents. In Shakespeare's plays, for example the common people take the stage only as prosy clowns and buffons; the timeless poetry comes from royal or noble lips.

But more recently history has been written in terms of the changes in methods of production—or even of destruction. The progress from the stone axe to the automated factory—the progress, if one can call it that, from the caveman's club to the intercontinental ballistic missile—each has had great effect.

We are met today to pay tribute to one of those truly great ideas which transforms history—the proposal, put forward in President Truman's inaugural address 10 years ago, that America and the other industrialized nations should, in his words:

"Help the free peoples of the world, through their own efforts, to produce more food, more clothing, more materials for housing, and more mechanical power to lighten their burdens."

This bold new program was the fourth point in President Truman's list of foreign policy objectives for the United States. It is important to note that point 4 was designed to be an integral part of a much broader program. The point 4 program is not a substitute for adequate military defense. It is not a substitute for sound trade policies. It is not a substitute for any other necesary element in our overall foreign policy. But it is a valuable, and, indeed, indispensable, element to any effective foreign policy, specially in the less-developed areas of the world whose future may determine the destiny of all mankind.

Mr. Truman's point 4 captured the minds and hearts of men everywhere, both because it was new and bold and yet drew its inspiration from our heritage. Like all great ideas in history, it did not spring full-grown from the brow of one man. Great ideas emerge from the accumulated wisdom, experience, and aspirations of men, and they have their greatest force when their time has come.

The point 4 idea is rooted in the humanitarian imperative of all great religions—the strong should help the weak, the rich should help the poor—"Do unto others as you would have them do unto you."

Point 4 was really the projection of our unique historical experience—the international application of the lessons that we learned in the development of the American frontier.

In developing the American West, we formulated a new approach to training and education—land-grant colleges, vocational education, the county agents, all the many practices and institutions that were the prototypes for the point 4 projects of recent years.

At the same time, there was strengthened in the American character the qualities of optimism, of confidence, of initiative, and of impatience with obstacles that make up one of our greatest strengths as a nation.

What is needed in our foreign policy more than anything else today is that we draw on this great heritage of ours, this well of national strength, to carry through admittedly difficult and discouraging undertakings.

Much of the force of the point 4 idea was its timeliness. President Truman understood the mighty struggle between totalitarianism and freedom. It was he who launched the Truman doctrine which saved Greece and Turkey from communism. He knew then, as we all know now, that in the many-faceted world struggle the economically underdeveloped and politically unalined nations may well hold the balance of power.

We should be proud of the humanitarian roots of the point 4 idea. We should not be apologetic about the fact that rightly used it can be an instrument of greater peace and stability in the struggle between freedom and totalitarianism. Let us be grateful that there is a program which is humanitarian and politically relevant at the same time—a happy and fortunate combination.

And, speaking of humanitarian values, what is more humanitarian than helping to prevent "darkness at noon" from spreading over areas where new freedom and new hope have just been born?

In retrospect, we can see that "point 4" was long foreshadowed—indeed, was implicit—in the United Nations Relief and Rehabilitation Administration and in the Marshall plan. Yet, when President Truman put it forward, it caught even some of his own officials unprepared. As one of them has recalled:

"Messages of surprise and delight poured in from all over the world, and a hurried meeting of department representatives was held to consider the practical problems in meeting the expectations which the President's words had produced overnight. As we gathered in the State Department's conference room, the atmosphere was a curious mixture of excitement and perplexity.

"A senior official of the Department was the first to speak. 'Well, fellows,' he said with a smile, 'what do you suppose he meant?'"

Such was the sweep and the dynamism of the President's idea that even today, after 10 years of living with it and working with it, we are still discovering in it fresh meanings and fresh dimensions.

But an idea is a dazzling, even a blinding, thing—and there is every human tendency to dim it down a bit, so that it is more comfortable to live with.

So, for a while, too many of us put on heavily tinted glasses before we dared look this idea in the face.

First, there was a tendency to "sell it cheap." All we had to do, we assured ourselves, was to pass on to other peoples our so-called know-how and then leave them to their own resources. It was the easiest kind of virtue, costing us little more than words.

Second, when we began to realize that know-how is paralyzed without some material backing—be it something as simple as fertilizer or as elaborate as a hydroelectric project—we felt a need to avoid even the appearance of generosity. So we began calling much of our economic aid "defense support" and applying the label "mutual security program" to the whole enterprise.

Overseas aid suffered—and still suffers—from these heavy military overtones. Too often, we give the impression that our main interest is to "buy allies in the cold war."

Third, we seemed fearful that we might not get full credit for the element of genuine generosity which remained in the program. We wanted the tag, "Made in America," fastened firmly to it.

Although we did join in the U.N. expanded technical assistance program and more recently in the U.N. special fund, we have preferred to keep most of our aid in our own hands.

Unfortunately, this is a game that two can play. Khrushchev does not hesitate to pick up a good idea when he sees one—even from the capitalists he professes to despise. The Russians, it's true were "Ivans-comelately" in this field, but they are catching up fast. Their loans and their technicians are already at work in many crucial areas of the world.

It is a real measure of the basic soundness of the point 4 concept that it has survived 10 years of cold war and worldwide turmoil.

A curious attitude has developed about this whole oversea aid program—a sort of national inferiority complex. We seem to think of Uncle Sam as Uncle Sap, constantly being sold a bill of goods by European, African, and Asian leaders of dubious loyalty to our side. As the Draper report puts it:

"In our fascination with our own mistakes, and the constant use of foreign aid as a whipping boy, we may be gradually choking this vital feature of our national security to death."

Mistakes will be made in any great enterprise, but what bothers me more than the mistakes is the way we dwell upon them—rather than taking them as lessons to be learned while we move forward.

Too often our aid programs have been sold to the American people on the basis of being against communism, rather than being for humanity. They have been considered painful expedients—hopefully short-term—rather than the heart of a constructive American foreign policy designed to build a stable and enduring peace through the conquests of poverty, disease, and suffering.

The motivation for these important and valuable programs should not come from the fear of communism, but rather from the requirements of our political and religious heritage. We must never forget that our true strength lies in the moral and political principles upon which our society is based—the principles of human dignity, equality, and brotherhood. Our own revolution was based upon a belief in the God-given rights of life, liberty, and the pursuit of happiness. It is these thoughts and these ideals which should motivate us today.

We are indeed our brother's keeper and we must act in that capacity. We are blessed with abundance and we have a moral duty to share it.

Programs and policies that are designed only to resist the evil forces of communism are never as effective as efforts that are made to help humanity. As President Truman said almost 8 years ago: "The only kind of a war we seek is the good old fight against man's ancient enemies—poverty, disease, hunger, and illiteracy."

President Truman knew, as we know, that words, however eloquent, are not enough; nor do good intentions, however generous, suffice. Deeds, not words, are needed. We must be for peace and progress—and not simply against the evil threat of communism.

The real trouble is not so much what the Communists are attempting to do in the world, but how much less we are doing than we can and should do. We can be sure that the Communists will be glad to fill in any gaps we leave.

And we need to recapture the enlightened enthusiasm that guided American policy in the great days of innovation and daring under the Marshall plan and the point 4 programs of President Truman. These early programs were characterized by imagination, vision, substance, and long-term planning.

It is not enough to merely perform the ritual in foreign aid—there must be faith—a faith in the importance and soundness of our policies. We need more than the form—

we need the spirit, if our programs of assistance are going to be genuinely constructive and effective.

And we must recognize the task of helping other nations to help themselves is a continuing task. It will not be finished next year or the year after. Therefore, let us plan ahead. Our struggle against communism and against man's ancient enemies of poverty, disease, and hunger will be a long-drawn out battle.

So let us prepare ourselves accordingly. To be effective our foreign aid programs should be established on a longer term basis, so that both we and those we seek to help can plan ahead and can rely on a sustained effort.

Therefore, we must make at least three major efforts to strengthen the economic and technical assistance programs of the United States:

1. Place our aid programs on a long-term planning basis, in order to provide the assurance of continuity to the leadership of developing nations, and to avoid the tremendous waste of stop-and-go, hot-and-cold programing.

2. Seek to supplement bilateral programs at every opportunity with multilateral approaches, using existing instrumentalities such as the United Nations and its associated agencies.

3. Design the aid programs not in terms of defensive stopgaps, but rather as the affirmative, constructive building blocks of a world free of poverty and suffering.

To carry out this program I have proposed what I like to call the works of peace.

I have recently proposed a food for peace program, which will put to use the God-given abundance of our farms—not haphazardly, not as a veiled device for dumping surpluses, not on a hand-to-mouth, year-to-year basis, but as an integral part of our total foreign policy effort, planned for 5 years ahead.

Together with Senator LISTER HILL, I have proposed a health for peace program, designed to mobilize the medical and scientific resources of America and of all nations for a concerted attack upon the dread diseases which weaken, cripple, and kill millions of persons throughout the world.

I have called, also, for an eduaction for peace program of worldwide educational development and expanded East-West exchanges of scholars—to be financed largely out of the several billion dollars of "soft currencies" or "counterpart funds" being accumulated by the United States in exchange for food shipments or as repayment of loans. We must wage war on illiteracy.

I can evisage a science for peace program, which, among other things, would seek breakthroughs in economic development—such as a practical process for the de-salting of sea water which would make many of earth's deserts bloom.

And, last week, I was happy to join with two esteemed colleagues—Senator FULBRIGHT and Senator KENNEDY—in sponsoring amendments to the Mutual Security Act which will transform it into something much more like the development for peace program we all want.

First, and most important, we are proposing that the Development Loan Fund be financed to the extent of $1.5 billion a year for a period of 5 years—$7.5 billion in all. And we are proposing—as the administration, indeed, proposed 2 years ago—that the Fund be empowered to borrow this money from the Treasury, as the Export-Import Bank already does, so that it will not have to seek fresh appropriations—and risk fresh curtailments—each and every year.

Second, we are proposing to rewrite the preamble and statement of purposes of the act, to brush away the cobwebs that have gathered on it over the years, and put it in language worthy of our best traditions as a liberal and democratic Nation—with emphasis on economic progress and political freedom.

Third, as a step toward decreasing the present heavily military character of the program, we are proposing increased authority for the President to transfer funds originally allocated for "military hardware" to economic purposes. And, for the same reason, we propose increased authority for our Ambassadors to coordinate military aid with economic and political objectives.

We seek to make a clean break with the argument so often used in Congress, that the mere fact that the funds available for a given year are not fully used is a reason for curtailing next year's effort.

N great business enterprise is conducted upon such a hand-to-mouth, ever-bare-cupboard basis.

Instead, we wish to use the availability of adequate funds—and I emphasize the word "availability"—as an inspiration to our friends throughout the world to prepare sound, well-considered programs of economic development—in effect, to set their own national goals.

We are now nearing the end of the era of Western colonialism, and (I wish I could say the same about the new imperialism of the Soviet Union and Red China). The great struggles for independence which have characterized our generation have been, for the peoples involved, a challenging and inspiring experience. They have written a heroic chapter in the world's history.

But, after the fireworks, after the celebrations of independence, there comes the letdown. We knew it ourselves, after the triumph of our own revolution. Then came the equally difficult task of establishing orderly and free government.

Nationalism is a steed you can ride to independence—but, by itself, it does not carry people further than the first Fourth of July. The plain truth is that some of the new nations are floundering badly, and most of them are feeling the chill gray dawn of the morning after.

Political independence must be related to economic interdependence. The passion of nationalism must be translated into hard national goals.

And these goals are incomplete without timetables for achieving them. When I participated as an American delegate at the United Nations, I had occasion to observe how insistent—and rightly so—our Asian and African friends were on timetables for the achievement of political independence.

We need goals for tomorrow's kind of independence—independence from poverty—and we need timetables by which the progress toward these goals can be assessed.

These will vary from country to country. Some countries, like India, have formulated their national purposes, set their goals, and are well on the way to achieving them. We—and I include other industrialized nations such as Britain, France, Canada, Western Germany, and Japan—can and do sit down with the Indian leaders and see how we can move toward these goals in a great partnership of nations.

In other countries, what is needed are the preconditions for establishing such goals. The U.N. Special Fund, under Paul Hoffman's able leadership, is already busy laying the groundwork, making the basic surveys of resources and potentialities which are too often lacking. In many countries it should be possible, after this essential preliminary work has been done, to set both short-term and long-term goals.

There is every reason why some of these goals should be projected on a regional basis. We could take the lead in the Organization of American States, for example, in mounting a 5- or 7-year development plan for Latin America—spelling it out in terms of miles of roads, kilowatts of electricity, and tons of steel. We could do the same with the Colombo plan nations, in cooperation with Japan, and in the Middle East, with its tremendous oil resources—and in emergent Africa, too.

In all these undertakings, we would, of course, look to private investment to do its full share, and I might say that by "full share" I mean substantially more than it is doing now. The conditions suitable for private investment must often be created by public funds. And public-financed projects usually cannot achieve their full potential without private investment. There is no essential conflict between those two complementary sources of development capital.

Thus, we would be building upon the experience of the Marshall plan—the most spectacularly successful example of our postwar economic policy—which succeeded because it had a goal, and because the participating nations, with wise leadership from the United States, set targets for themselves and mobilized their resources to meet them.

I would go further. There will be a summit conference this summer, and I hope that President DeGaulle will have the opportunity to repeat—with his grand command of language—what he said last month:

"In our time, the only quarrel worth while is that of mankind. * * * Why should we not put together a percentage of our raw materials, our manufactured goods, our food products, some of our scientists, technologists, economists, some of our trucks, ships, aircraft, to defeat poverty, develop resources, and help the work of the less developed peoples?

"Let us do this—not that they should be the pawns of our policies, but to improve the chances of life and peace."

Let us always remember, however, what King Hussein of Jordan so wisely said—that the United Nations is the summit conference of the small nations. If only the Big Four could go forward from their own summit to mankind's summit at the United Nations—and could come prepared to work together for the welfare of all humanity. What clouds of frustration and fear would be cleared from our human horizons.

The United Nations represents one of our great hopes for a just and lasting peace. It should be made a more effective instrument. As a step in that direction I have introduced a resolution in this Congress to strengthen the United Nations' International Court of Justice by deleting the so-called Connally amendment from our declaration of acceptance of the Court's jurisdiction. It is for this reason also that I have joined with Senator CLARK and others in sponsoring a resolution recommending that the Charter of the United Nations be reviewed to determine what changes should be made in it to promote peace through the development of enforceable world law.

At the United Nations, the great goals could be formulated—let us call them targets—for the 20th century. And, each year, its proceedings would be dominated, not by bitter harangues, but by sober assessment of the progress of its member nations toward these goals.

This is a bold idea—but no bolder than President Truman's was 10 years ago. For, all too often, we forget this vital passage in his inaugural address:

"We invite other countries to pool their technological resources in this undertaking. Their contributions will be warmly welcomed. This should be a cooperative enterprise in which all nations work together through the United Nations and its specialized agencies, wherever practicable. It must be a worldwide effort for the achievement of peace, plenty, and freedom."

Reviewing U.S. Role on World Stage—Interview With Senator Fulbright

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent that a capital interview with Senator J. WILLIAM FULBRIGHT, chairman of the Senate Foreign Relations Committee, conducted by Courtney Sheldon, and published in the Christian Science Monitor of April 29, 1959, be printed in the Appendix of the RECORD. I think Mr. Sheldon has done a distinct service in conducting this interview, and that, in turn, the Senator from Arkansas has rendered a service in expressing his views relative to the foreign policy of this country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REVIEWING U.S. ROLE ON WORLD STAGE—A CAPITAL INTERVIEW WITH SENATOR FULBRIGHT

(By Courtney Sheldon)

WASHINGTON.—Senator JAMES WILLIAM FULBRIGHT, of Arkansas, a thoroughgoing scholar on foreign affairs, a persistent critic of the Eisenhower foreign policies, and now in a strategic position as chairman of the influential Senate Foreign Relations Committee, says:

"The more dangerous area to us is in the nonmilitary (when it is a question of the relative importance of military and economic aid).

"The President's requests for foreign aid are very modest relative to the need.

"Our international manners are often atrocious.

"Our whole country has not recognized our proper role.

"I have felt in the past that we [Secretary Herter and I] * * * judge the world and many of our problems in a somewhat similar manner.

"I rather regret the size of the United Nations now. It grew too fast."

Of the numerous East-West differences, Senator FULBRIGHT, are there any you feel could be discussed now at a summit meeting with some hope of accord?

"Well, Mr. Sheldon, I am not particularly optimistic about reaching any solutions in the first, or even the second meeting. My approach is rather that these matters need to be solved, and that we should start talking about them and find out if there is any hope for an adjustment of our differences.

"I would prefer emphasis upon the established diplomatic channels, but the Russians seem disinclined to do that and therefore they wish this procedure. I'm perfectly willing to go along with that."

By regular diplomatic channels you are referring to ambassadorial relations?

"Yes, I would hope that our ambassadors could carry on constant negotiations with the Russians.

"For some reason or other the Russians seem to be extremely reluctant to enter into serious negotiations over the settlement of such things as the Berlin business or the Middle East. It leads one to suspect their motives. And I have grave doubt whether the Russians really want to compose these differences.

"But those doubts, in my opinion, do not justify refusing to enter into summit discussions. Now it may be they only want to make propaganda, but I don't know why we cannot make propaganda the same as they do. On the other hand, they are peculiar people and maybe they will gradually consent to serious negotiations. All I am saying is that we ought to find out what they are doing and pursue opportunities to find out."

When you mentioned regular diplomatic channels were you referring at all to the U.N.?

"Well, it can be used in certain circumstances, but it is a rather awkward organization. It has so many members now. I think it has really gotten too large. I rather regret the size of the U.N. now. It grew too fast in size before we had perfected its procedures and established traditions that would support orderly procedure. I won't wish to abandon it, of course. I think it is still a hopeful organization."

Would you cite some of the specific differences that you feel could be usefully negotiated now?

"Well, the most immediate ones, of course, are the status of West Berlin and Germany and the so-called nuclear ban, at least on the restricted basis that has recently been brought forward as a kind of salvage operation, the one which does not require extensive monitoring within the adversary's country."

The Western proposal for a ban on atmospheric tests only?

"That certainly is a possibility, and the discussion of the Middle East is a possibility. I see no reason to exclude any of our differences. These are discussions in the first instance. I don't think we should expect solutions growing out of a meeting immediately. I think it is more of an exploratory discussion to feel one another out."

You are not at all opposed to what is called an open agenda then?

"No, I think it should be an open agenda. They waste more time trying to decide an agenda than anything else. If they don't wish to talk about anything seriously or relevant, why adjourn. We have at least proved that we are not afraid to sit down and talk. I think this reluctance to have a talk has created the impression we're afraid of them, and that we have no ideas and no policy.

"I realize there has been a very persuasive argument made that they are adept at propaganda, and that they will use a meeting merely to embarrass us. Well that is another way of saying we are so stupid we don't know how to make propaganda or how to combat it. If we are, we had better learn. I think it is that kind of world and we have to accept it."

What do you regard, Senator FULBRIGHT, as the notable successes and failures of the administration on foreign policy in the last 7 years?

"Well, I think the highly unsatisfactory state of our international relations and the tension that exists throughout certainly the Middle East at the moment, and existed only recently in the Far East, would indicate that the successes have not been very great or notable.

"I don't mean to leave the implication that the administration is entirely to blame. I think the people, our whole country, has not recognized our proper role and we have not applied ourselves.

"But to be more specific, as you know I took serious issue with the so-called Eisenhower doctrine. I opposed it, spoke against it, worked against it. I was also highly critical of the decision of the Secretary [Dulles] on the Aswan Dam proposal, that is our relations with Nasser. I think it was poorly handled, and I think his judgment at the time of Russian strength and activity was not based upon realities.

"I suppose you could say our most satisfactory relations at the moment have been with Germany. The preservation, at least, of a fairly high degree of unity among the NATO partners, I believe, would be regarded as the most successful area of activity. The preservation of reasonably good relations with Japan is also a successful area.

"Of course, I think the deterioration of our Latin American relations is another example of failure, largely of neglect. I don't know anything positive that we have done that has alienated them. We just haven't done anything affirmative to conciliate them and make them feel we are interested in them. In this case I think it is not such a material matter. It is an attitude, a matter of good manners. Regarding them as important people, and being courteous to them is very essential. Our international manners are often atrocious."

What would you say has been the trend of American prestige and influence in the world recently?

"I think it has clearly declined. We have presented an image, a picture of indecision, I think, of inconsistency. We talk one way and we act another in many instances, notably in the field of trade and tariffs. I think very often our statements have not been realistic. We have not been able to live up to them. I think we have talked too much and been too brash in some of our statements."

Do you feel that the appointment of Mr. Herter as Secretary of State is going to change this trend?

"I have great respect for Mr. Herter's integrity and his capacity. He has had long experience and I am very pleased with his appointment. I look forward to working with him as closely as I can, and I hope that we continue to agree on many of the basic factors that afflict us. I have felt in the past that we have a good deal in common, that is in our attitudes, that we judge the world and many of our problems in a somewhat similar manner."

On the question of the mutual security program, do you favor giving the President the full amount asked for the program?

"My amendments request a good deal more for the development loan fund than he asked. I think his requests are very modest relative to the need."

This is economic aid you are talking about?

"Yes."

If there were to be a cutback in mutual security, you would prefer it to be in the military rather than the economic?

"I would as a matter of relative threat to our security in coming years, if you have to make a choice. The more dangerous area to us is in the nonmilitary."

Excerpts From Speech of D. Tennant Bryan, President, American Newspaper Publishers Association

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have

printed in the Appendix of the RECORD, excerpts from an exceedingly able speech made by Mr. D. Tennant Bryan, president, American Newspaper Publishers Association.

Mr. Bryan is one of the outstanding newspaper publishers of Virginia and the Nation; I regard his speech as being so noteworthy as to justify its inclusion in the CONGRESSIONAL RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM THE ADDRESS OF D. TENNANT BRYAN, PRESIDENT, AMERICAN NEWSPAPER PUBLISHERS ASSOCIATION, APRIL 22, 1959, NEW YORK CITY

Ladies and gentlemen, fellow members of ANPA, welcome to the 73d annual convention of our association—and a special welcome to those who have joined us since our last convention.

* * * * *

All of us know that ANPA is a trade association, comprising 846 daily newspapers in the United States and Canada which, among them, have more than 90 percent of the daily and Sunday newspaper circulation on this continent. As a trade association we interest ourselves primarily in the business aspects of newspaper publishing. We are concerned with the assurance of an adequate supply of newsprint, with the continuing struggle against restrictive laws, and regulations having the effect of law, at all levels of government, with the unhappily unrewarding effort to free newspapers from the make-work and featherbedding practices which we as individual publishers have allowed, over the years, to creep into our labor contracts, and the running fight with bureaucracy for access to the news—these are the daily concerns of ANPA because they are the daily concern of ANPA members.

At the several sessions on Monday and yesterday, we have discussed many of the problems that plague us today. Most of these are continuing in nature. There is no easing of the cost-price pressure and its correlated evils. We must defend ourselves against insidious attacks by bureaucracy, attacks designed to strangle our revenues and impede our operations. We must constantly fight to open the doors closed by government if we are to get the facts that should be reported to the people.

But rather than to dwell on these challenges, which are well known to all of us, I think it may be more important to reexamine the underlying significance of our work, and the philosophy on which it is predicated. It is in this fundamental area, in which understanding is most vitally needed, that newspapers are most often misunderstood.

An analogy may help to focus this discussion. For nearly 25 centuries the scientific world has built its equations around only three dimensions of physical space. Only in our lifetimes have scientists discovered the need to include in their equations still another dimension—the dimension of time.

Now, there have always been three obvious dimensions in every newspaper: manpower, tools and newsprint. But there is also a fourth dimension, intangible but essential, which we may call ethical purpose. No newspaper worthy of the name can operate without it.

Just as it is impossible to understand the physical universe without the fourth dimension, it is impossible to understand the free newspapers of America without first having a knowledge of their underlying ethical purpose.

This is what makes the newspaper business unlike any other. While newspapers must have profit in order to stay alive and strong, profit is not and cannot be their primary goal.

This paradox bewilders both our friends and foes. To require profit on the one hand, but not to work primarily for profit on the other, is as confusing to the average man as Einstein's famous but cryptical theory.

As practicing members of the profession, we see no inconsistency in this doctrine. In order to do the job that we should do, we must be independent and self-supporting. Profit is our strength; without it, we cannot survive—but profit is not our primary purpose. In the language of the logician, profit is a necessary but not a sufficient condition.

Even if this be understood, both our friends and our enemies are confused about our primary purpose. They look upon the newspaper as a tool—and assume that the owners and managers will, or should, use this tool to achieve their own specific and selfish goals.

Our friends take for granted that we should use our newspaper for the objectives they deem worthy. Our enemies are convinced that we do use it for unworthy purposes. The fact is that both are equally wrong.

This misunderstanding is largely due to the existence of the editorial page on which the publisher and editor do attempt to persuade their readers to their own views in various matters. Many readers simply do not understand the sharp distinction between opinions expressed on the editorial page and news reported in the news columns. They are convinced that the one conditions the other.

We know that they believe this from a survey of our own readers in Virginia. About half of them, both men and women, are quite certain that the newspapers' editorial position influences the presentation of the news. We found this belief rather shocking—but even more shocking was the further fact that the readers didn't seem to care very much one way or the other about what they assumed to be our practice. It had very little effect on their overall image of the newspaper.

In other words, not only do a great many of our readers assume that we color our news to suit our editorial position or the whims of our advertisers, but they consider this a perfectly normal and natural thing for us to do and they see no particular harm in the process.

Our closest friends are often dismayed when we print news which they think should have been suppressed. These are fine people with honorable motives and they find it exceedingly difficult to understand why we are unwilling to implement those motives. For example, some prominent person commits suicide. Doctors and friends urge that the fact of suicide be omitted to spare unnecessary pain to the family and to avoid any encouragement to others who may also be tempted to take their own lives.

Others complain to us about crime reporting in general. They deplore, on sociological grounds, the reporting of gruesome details, insisting that the effect is evil because it may stimulate others to commit similar crimes.

A group of merchants may suggest that we should not accept the advertising of some competitor whom, for reasons of price cutting or the handling of some brand for which he is not the authorized dealer, they regard as a malefactor.

Still others deplore movie advertisements because they are too sexy. Some even object to our church advertising because they consider it to be sectarian. And so on throughout a nearly infinite list.

Our friends who complain about these things usually assume that we are simply guilty of negligence or, at the best, lack of understanding. Our enemies, on the other hand, are convinced that we print such things for reasons of malice, or in order to gain circulation, or advertising revenue.

Both again are equally wrong. They mistake our basic purpose, and the single-minded ethic that must be our guide in all such matters. Both are wrong in thinking of the power of the press as something that can be used by someone, for good or evil, when actually it derives its real power from the fact that it is not used in this fashion. Any such use, in essence, is misuse and will eventually destroy the newspaper that practices it.

The primary purpose of the newspaper is to hold up to the eyes of its readers a mirror of their life and the world in which they live. Our single-minded ethic must be to make that mirror as true and undistorted as black ink on white newsprint will permit.

Whether the reader likes or dislikes, approves or disapproves of what he reads in his newspaper is unimportant. The essential requirement is that he be informed, correctly informed, and fully informed.

In a republic such as that in which we live, the final voice on what sort of life we will have, and what sort of government we will live under, must necessarily be the voice of the people themselves. They and they alone must make the basic decisions. Whether their decisions will be right or wrong, we cannot know. But if we believe that the individual has the basic right of self-determination, in his governmental and social environment, then we must insist that he has an equal right to a full knowledge of that environment, as it exists and as it changes.

To give a man the right of choice, but to withhold knowledge of the alternatives wherein he may choose, is to convert freedom into a meaningless masquerade.

Thus the newspaperman must take as his talisman the right of his readers to know—to know all about their environment, their community and their world—the evil as well as the good. He must remember the words recorded in the Gospel according to St. John, "And ye shall know the truth, and the truth shall make you free."

It is not the function of the newspaper to decide what news is good and what is bad, to publish the one and withhold the other, to attempt in effect to superimpose its own or any other system of ethics on its readers.

Its sole news function is to inform, to give the reader the raw materials of life from which he may fashion his own system of ethics and resolve, as best he can, the basic issues of the society in which he lives.

This is the philosophy, simple to state yet hard to practice, that must be followed by the custodians of America's free press. We are human, and as humans we sometimes fail. But taken as a whole, it is my opinion that the newspapers of this Nation are discharging their basic responsibility to their readers, and to this Republic, in commendable and adequate measure.

We are penetrating the boundaries of space, but we have not yet overcome our greatest barrier, the boundaries of the human mind and spirit. For this there is but one way to travel, and that is the highway of truth, along which our newspapers must continue to serve as the principal means of transport.

The Late Honorable James G. Polk

SPEECH

OF

HON. ROBERT E. COOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 28, 1959

Mr. COOK. Mr. Speaker, I take this opportunity to join with the other members of the Ohio delegation and the membership of the House in expressing my personal deep-felt sorrow at the pass-

ing of JIM POLK. I, too, am a freshman Member of this House, and as such I have not had the opportunity that many of the other Members have had to have worked with JIM POLK over the years. On the other hand, as a new Member meeting Mr. POLK for the first time, I believe that I really found one of his true qualities, and that was that it was so easy to know JIM POLK. JIM was the type of man that you could meet the first time and feel that you had made at the very beginning a true and trusted friend. Certainly, I shall personally always look back upon the past 3½ months in the sense of a true friendship with a wonderful man. I am sure that the people of his district have lost a great Representative; this House has lost a valuable Member, and each of us has lost a trusted friend. I also extend my deep sympathy to his wife and family.

Will Our Lawyers Make the Supreme Court Behave?

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Miss Edith Kermit Roosevelt, which appeared in the Saturday, March 14, 1959, issue of the Tulsa Daily World, entitled "Will Our Lawyers Make the Supreme Court Behave?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL OUR LAWYERS MAKE THE SUPREME COURT BEHAVE?

(By Edith Kermit Roosevelt)

Will the American people at last get the legislation they need to protect them from agents of the Soviet government? In its recent meeting in Chicago, it looked as though they had a powerful ally in the American Bar Association, but any rejoicing may be premature.

An American Bar Association committee report, presented to Bar Association delegates, rapped 24 of the Supreme Court decisions coddling Communists and recommended that Congress correct their effect by appropriate legislation. Yet although the publication of the report has been hailed as a victory, overlooked has been the danger posed by a hard corps of leftist lawyers who are bound that Reds must continue to hide under the cloak of civil liberties.

These men are doing their best in the press releases and on television to nullify the effect of the Bar Association report on Congress and on the public. They are trying to get their local bar associations to pass resolutions condemning the report. They are quick to point out that in truth the bar association delegates never did actually approve the report made by the American Bar Association's Special Committee on Communist tactics, strategy, and objectives. The delegates only approved the recommendations submitted with the report.

Mr. Albert E. Jenner of Chicago, a former president of the Illinois Bar Association, led the fight against approval of the report which is a comprehensive and authoritative exposure of how communism is sapping the strength of our Nation.

Attorneys opposing Mr. Jenner's influence note that the Chicago attorney was a former member of the Lawyers Guild termed by the House Un-American Activities Committee "the foremost bulwark of the Communist Party * * *." The Lawyers Guild has worked actively to force repeal of the statutes protecting us against Communist subversion.

It is strange that while lawyers of Mr. Jenner's sort are forever crying "civil liberties" everytime someone wants to catch a Red, they appear to lack a scrupulous respect for our judicial traditions when it serves their purpose.

Three years ago it was this same Mr. Jenner who gave a letter to the Senate Internal Security Subcommittee in support of a project directed by Edward H. Levi, dean of the Chicago Law School, to make recordings in jury rooms unbeknownst to the jurors. These shenanigans were so shocking to the majority of fair-minded lawyers that Congress passed a law barring jury tapping.

Leftist lawyers in the American Bar Association continue to be successful in suppressing any information which does not promote their views. For instance, thus far they have succeeded in blocking publication in the American Bar Association Journal of a report by State supreme court justices that warned out security was threatened by the Supreme Court decisions. One wouldn't have to be an editor of that legal magazine to know that this report critical of the highest Court in our land was certainly as newsworthy to lawyers as it was to the American people at large.

Last year, of course, the report of the Special Committee on Communist Tactics, Strategy, and Objectives was mysteriously sidetracked. The 1957 report also warned that Supreme Court decisions affecting Communists were endangering our internal security. It seems likely that New York City Attorney Whitney North Seymour, a member of the American Bar Association's board of governors (chosen American Bar Association president elect at the Chicago meeting) was among the lawyers responsible for quashing the report.

If Mr. Seymour's record over the years is any indication, it is likely that he will oppose any action by the American Bar Association to promote effective laws against subversion. Mr. Seymour has a long record of affiliation with Communist groups.

A radical even in his mature years, the new Bar Association president elect was a director of the American-Russian Institute when he was 37. The American-Russian Institute was twice cited as Communist by Attorney General Tom Clark. Mr. Seymour's fellow directors at that time included Mrs. Kathleen (Mrs. Joseph F.) Barnes, identified in sworn testimony as a Soviet agent, and Mr. Edward C. Carter, who was tied with the Amerasia Soviet spy scandal.

When asked to comment on his record, Mr. Seymour always insists that he has "always been a Republican with fairly conservative views."

The future will tell whether lawyers in the American Bar Assolcation will defer to the fairly conservative views of the Albert Jenners and Whiteney North Seymours or the type of conservatism which means conserving our liberties now threatened by a Supreme Court that allows commies to get off scot-free.

Report on H.R. 2729, a Bill To Amend the Federal Trade Commission Act

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. BENTLEY. Mr. Speaker, in further reference to my bill, H.R. 2729, which would make it unlawful for a manufacturer to sell his products to consumers or to his own consumer outlets at prices consistently lower than the general level of prices charged by other retail outlets or charged other retail outlets, I would like to bring to the attention of the House a copy of the report the chairman of the House Interstate and Foreign Commerce Committee received from the Federal Trade Commission. I would also like to include an analysis of this report as made by Mr. George J. Burger, vice president of the National Federation of Independent Business:

FEDERAL TRADE COMMISSION,
Washington, D.C., April 20, 1959.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in reply to your letter of February 9, 1959, requesting a report upon H.R. 2729, 86th Congress, 1st session, a bill to amend the Federal Trade Commission Act so as to prohibit certain practices in commerce by any manufacturer or producer who distributes his products in commerce through his own retail outlets, direct to consumers and also through other retail outlets.

The bill would amend the Federal Trade Commission Act to declare two types of pricing practices unlawful and unfair methods of competition in commerce and unfair and deceptive acts or practices in commerce within the meaning of section 5 of that act. These practices would be stated in two proposed subsections to a revised section 17 of the Federal Trade Commission Act. In substance, they are:

A. The delivery of a product by a manufacturer or producer to its own retail outlets at a price which consistently is lower than the general level of prices charged by it for such product on direct sales to other retail outlets in the same general market.

B. The delivery of a product on sales directly to consumers by a manufacturer or a producer at a price consistently lower than the general level of prices charged for such product by the manufacturer's or producer's own retail outlets and by other retail outlets in the same general market which acquire such product from said manufacturer or producer.

The proposed legislation would have limited applicability. Only manufacturers or producers may be held to violate its provisions and to do so, under subsection A, they must not only have their own retail outlets, but must also sell directly to other retail outlets. This latter requirement appears manifest in the following language of the bill: "other retail outlets in the same general market which acquire such product from such manufacturer or producer." Under subsection B, the manufacturers or producers must either have their own retail outlets or sell directly to other retail outlets and, in

addition, must sell directly to consumers. Large distributors not engaged in manufacturing would not be covered although engaged in identical practices as here condemned.

There are relatively few manufacturers or producers who maintain their own retail outlets in addition to distributing directly to independent retail outlets. There are even fewer which, in addition, sell directly to consumers other than through retail stores. Some instances of such means of distribution are to be found in the tire, oil, and dairy industries.

An area in which the proposed legislation would be particularly applicable is where there are large commercial consumers for the product involved. For example, in the tire and oil industries direct sales are made to taxicab and trucking companies, usually termed "fleet accounts." To the extent that the purpose behind the bill may be to require this particular market to be serviced by independent retail outlets, the proposal would depart from the principles of our free enterprise system by dictating channels of distribution. The means of forcing the particular channel of distribtuion is inconsistent with the principles of the Clayton Act which permits price discriminations which are cost justified (inasmuch as the present proposal would require a manufacturer or distributor to sell at the same price as a retailer, thus ignoring the economies or cost savings of direct distribution.

This forcing of channels of distribution would, for example, in a situation where a manufacturer of building supplies sells directly to hardware stores and to construction firms, require a large construction firm to buy many of the items used in its construction work from hardware stores which carry small supplies of such products for do-it-yourself customers or to pay the manufacturer the same price charged by hardware stores on their relatively small sales.

H.R. 2729, by allowing retailers to dictate a retail price to manufacturers who sell directly to consumers, would go even further than so-called "fair trade" legislation which would allow resale price maintenance by manufacturers. This bill would prohibit a manufacturer from basing his price upon the economics of the situation, and instead would require him to relate his price to factors outside of his control.

If the bill were enacted, a manufacturer or producer who wished to preserve his right to sell directly to large customers, at a price which he could freely determine, could eliminate direct sales to retail outlets and restrict his sales of products ultimately intended for retailers to his warehouse distributors or wholesalers. Thus, instead of inuring to the benefit of independent retailers, the proposal could have a very detrimental effect by eliminating any cost saving which might presently be available to them by means of their direct purchases.

An essential element upon which enforcement of subsection A depends is the price at which a manufacturer or producer delivers a product to his own retail outlets. As a practical matter, one does not sell to himself. Accordingly, the price at which a manufacturer or producer delivers to his own retail outlets may be an arbitrary or bookkeeping matter and need not control the price at which those outlets resell to the consuming public. Consequently, manufacturers could deliver to their own retail outlets at the same price at which deliveries are made to other retailers, but the manufacturer-owned retail outlets could resell at a low markup which no independent retailer could meet. Indeed, the manufacturer-owned retail outlets could sell at cost or at a loss with respect to the price at which products were delivered to them.

An additional determination essential to be made in ascertaining whether there would be a violation is whether the lower price "consistently is lower than the general level of prices." The phrases "consistently is lower than" and "general level of prices" are so indefinite that much litigation as to their meaning is to be anticipated. But whatever its ultimate interpretation, the phrase "general level of prices" would appear to preclude a manufacturer selling directly to consumers from meeting the price competition of a retailer of his product who consistently sells below the general level of prices in a market area. On the other hand, the phrase "consistently lower than" would apparently allow a manufacturer to alter the price to its own retail outlets on particular shipments earmarked for favored customers, or to sell directly to favored consumers at prices lower than the usual direct price to

Subsection B contains what we think is a conflict in practical concepts. We have reference to sales "direct to consumers" and sales by a manufacturer's "own retail outlets." In our opinion, retail sales by a manufacturer's own retail store are, at law, sales direct to consumers. The distinction contained in the proposed bill casts some doubt in this area and could possibly affect the administration of the Federal Trade Commission Act as well as the Clayton Act.

Subsections A and B differ with respect to their interstate commerce coverage. Subsection A is in terms of a manufacturer or producer who distributes his product in commerce through his own and other retail outlets. Subsection B is in more general terms of a manufacturer or producer who distributes his products in commerce. In addition to this inconsistency between subsections A and B, the bill is not clear as to the interstate coverage intended. It is not certain whether it would be necessary to show that the chalelnged transactions were themselves in commerce, that the transactions took place with respect to products which had been in commerce, or merely that the manufacturer or producer was engaged in commerce in the distribution of products.

For all the reasons stated above, the Commission is of the opinion that enactment of H.R. 2729 would not be in the public interest.

By direction of the Commission.

JOHN W. GWYNNE,
Chairman.

N.B.—Pursuant to regulations, this report was submitted to the Bureau of the Budget on March 27, 1959, and on April 29, 1959, the Commission was advised that there would be no objection to the submission of the report to the committee.

ROBERT M. PARRISH,
Secretary.

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Washington, DC., April 24, 1959.

Hon. ALVIN BENTLEY,
New House Office Building,
Washington, DC.

DEAR MR. BENTLEY: I have just finished reading the April 20, 1959, letter written by Federal Trade Commission Chairman John W. Gwynne to the Honorable OREN HARRIS, chairman, Committee on Interstate and Foreign Commerce, House of Representatives, in opposition to H.R. 2729.

I feel that the reasoning of the Commission, as expressed in opposition to H.R. 2729 in this letter, is very faulty, and that it presents no real argument against the measure. I must say that since so much of the objection voiced is in terms of generalities, it is a little difficult to come to grips with it. However, within the foregoing limits, here are my observations:

1. The point about limited applicability (p. 2, pars. 1 and 2) does not seem particularly valid as an argument against H.R. 2729. In the first place, in its letter the Commission specifies the tire, oil, and dairy industries as those which would be affected. The Commission ignores the paint and glass industries. It ignores also the fact that the type of distribution covered in H.R. 2729 is an expanding threat in the foregoing industries, and that it promises to become a dangerous factor in others. In the second place, the Commission ignores the fact that in one important respect H.R. 2729 is limited because of its very aim: the closing of a loophole in our laws which curb unfair price competition, the use of which is permitting manufacturers engaged in dual distribution to get by with economic murder.

2. The point made about large distributors (p. 2, par. 1) does not seem a valid argument against H.R. 2729, because the bill directs itself toward manufacturer practices, not toward large distributor retailers. This, however, does not give the large distributors any advantage over manufacturers, because as retailers, these large distributors are already subject to the laws which restrain unfair price competition among competing businessmen, while the manufacturers are free of the restraints of these laws, insofar as their factory-direct or factory-store competition with their independent retailers is concerned.

3. The point made about forcing channels of distribution (p. 2, par. 3) is not valid, for reason that H.R. 2729 merely requires manufacturers who compete with their retail dealers to do so on fair price competition basis. There has never been anything beyond this in the minds of the authors of this legislation, and it is, to say the least, ill-advised for the Commission to suggest otherwise. As to the point made in this paragraph that the present proposal would require a manufacturer or distributor to sell at the same price as a retailer, thus ignoring the economies or cost savings of direct distribution, let me make two points:

(a) Subparagraphs A and B of H.R. 2729 both recognize, if only by implication, flexibility in pricing. Both very carefully make it illegal only for a manufacturer to sell at consistently lower prices. This does not imply the rigidity in pricing which the Commission suggests at this point, and in avoiding this implication leaves the way open for some flexibility.

(b) It would seem that the Commission itself recognizes the foregoing fact, because it argues, on page 4, in paragraph 1, that use of the word "consistently" would apparently allow a manufacturer to alter the price to its own retail outlets on particular shipments earmarked for favored customers, or to sell directly to favored consumers at prices lower than the usual direct price to other direct-account consumers.

My only comment on this is that it would seem reasonable for the Commission to have this argument one way or the other, but certainly not both ways.

In this connection, it might be well to think over the possibility of inserting, at the ends of subparagraphs A and B, a repetition of the Robinson-Patman Act cost justification proviso (allowing differences in prices due to savings made possible in the costs of manufacture, sale, or delivery), if this is needed.

4. The point made about dictating a retail price to manufacturers (p. 3, par. 2) is not valid, except if it is argued at the same time that all the antiprice discrimination statutes permit some businessmen to dictate the prices at which other businessmen may sell. For instance, all that H.R. 2729 seeks is to outlaw unfairly discriminatory prices offered by manufacturers to their factory stores and in direct sales to consumers, in

competition with their independent dealers. The bill does not tell manufacturers the prices at which they must sell, and it does allow price flexibility. However, it does forbid them from selling at unfairly discriminatory prices. In somewhat the same way, the Robinson-Patman proviso of the Clayton Act forbids some businessmen from selling at unfairly discriminatory prices. If the former dictates, then the latter must also dictate. If, because of this alleged dictation in H.R. 2729, the Commission opposes this bill, then it would seem logical for the Commission necessarily to oppose the Robinson-Patman Act, which it is sworn to uphold and enforce.

5. The point made on page 3, paragraph 3, is not quite clear. However, allowing, for purposes of discussion, that enactment of H.R. 2729 might, as alleged, prevent some retailers from buying direct from manufacturer, this is in the realm of speculation. It could be equally valid to speculate that there's a distinct possibility that said retailers might be only too happy to trade this particular good for a greater good involved in having on our statute books a law that would prohibit the same manufacturers from coming in to their markets and selling to their own customers at prices below those at which they are able to buy.

6. As to the point made on page 3, paragraph 4: the implication here is that if H.R. 2729 were enacted into law, and if manufacturers affected by this bill were to obey its strictures, it might still be possible for their factory-owned stores to sell at or below cost, since they are part of the manufacturer, and the manufacturer might be content to take only a manufacturer's profit on these sales. This, of course, would be a possibility. How probable it would be would remain for experience to show. But, the fact that a proposed law, any law—take the Harris fair-trade bill, or the quality stabilization bill, or many other bills that become law—might fail is no argument against that law. Perfection is not within the grasp of human beings in their mortal frame.

7. As to the amount of litigation that might be necessary to define the meaning of certain phrases in H.R. 2729 (p. 4, par. 3), beyond doubt considerable litigation could be necessary. However, this bill does not stand alone in this respect. The record shows that considerable litigation is still necessary to interpret laws that have been on the books, and charged to the Commission for enforcement for upwards of 42 years. Certainly I do not contend that the fact that litigation is necessary in connection with laws now on the books is an argument in favor of enactment of other laws that will involve litigation. But at the same time, I do think that it proves that the question of the amount of litigation that might become involved in enforcing H.R. 2729 is not, in itself, a valid argument against the bill.

As to the remark about meeting of competition, it must be remembered that the stricture in H.R. 2729 concerning sales "consistently * * * lower than the general level of prices" refers only to the prices offered to those in any market who are handling or buying direct the manufacturer's products, not to the general level of prices offered by all sellers in that market. If this concern is over a manufacturer's ability to meet the prices offered by one of his own independent outlets, then I point out that there is nothing in H.R. 2729 to prevent a manufacturer from pricing to his stores as low as to his dealers. If this concern is over a manufacturer's inability to meet the prices of some seller of a competitive brand, then it would seem that there's no point to this objection, for lower prices are permitted from time to time.

8. As to the distinction made in H.R. 2729 between direct-to-consumer sales and sales by a manufacturer's own retail outlets, there is no question but that such sales are identical, from the standpoint of both being made to consumers without the intrusion of any independent jobber, wholesaler, or retailer. However, the practical fact is that manufacturers do sell both ways, and the bill recognizes this fact. The Commission takes issue with H.R. 2729 on this basis. In all fairness it should be recognized that even if the bill were to specify only manufacturer sales direct to consumers, someone could ask, with equal justification, whether this meant factory direct sales or factory sales through factory-owned retail stores. The bill attempts to cover both types of sales specifically, to avoid any such later questions.

9. As to the points made on page 4, paragraph 3, subsections A and B do differ with respect to interstate commerce coverage. But, as indicated in my paragraph 8, they differ only in that one complements the other. This type of difference should be no bar to H.R. 2729. As to the charge that the bill is not clear as to the interstate coverage intended, all I ask is whether all legislation now on the books is clear insofar as its exact interstate commerce coverage is concerned. The fact that many such laws are not clear in this respect has not barred them from becoming law. It should not be considered a factor in barring H.R. 2729 from becoming law.

10. I cannot stress too much the danger in the error by the Commission in comparing H.R. 2729 with the various fair-trade bills (p. 3, par. 2). This is about as sound as comparing apples with oranges. The fair-trade bills would permit a manufacturer to set a minimum resale price on his products, which all his retailers would be compelled to observe. On the other hand, all that H.R. 2729 seeks to do is to stop manufacturers from discriminating unfairly in their sales prices to their retailers, who in turn are free to charge whatever resale price they choose to their customers. It is true that H.R. 2729 does contain strictures regarding differentials involved in factory direct sales, but all these strictures do is to prohibit a manufacturer from selling consistently to ultimate consumers at prices below those he charges on sales to his independent retailers. In short, even on these, it allows the manufacturer flexibility, the power to raise or lower these prices from time to time.

Summing up, it does not seem to me that the objections voiced against H.R. 2729 by the Commission in its April 20 letter are, except by stretching the imagination, valid arguments against the bill. In my estimation, these arguments do nothing but reflect the Commission's 18-year-old adamant stand against any course of action, or any law, which might interfere in any way with any manufacturer's power to price as he desires through his stores or in direct to consumer sales, in competition with his independent outlets, no matter the damage this pricing may do from time to time to his independent outlets, no matter how unfair this might be. Effectively, the Commission's position has been, and continues to be, that direct selling manufacturers should be beyond the reach of any and all law that requires fairness in price competition.

Believe me, Congressman BENTLEY, I have the greatest of respect for members of the Federal Trade Commission, today and in years past. They are, and have been, able and sincere men. They have a full right to their own opinions, and must be expected to speak out on the basis of these opinions. However, I have held all along that they have had a blind spot on this problem of manufacturer unfair competition with the manufacturer's independent outlets. And I see nothing to indicate today that this blind spot has disappeared.

Frankly, I feel that the record of independent business experience, as indicated by the testimony before the House Commerce Committee, as indicated in earlier Senate Small Business Committee hearings in the glass industry, and House Small Business Committee in the oil and dairy industries, as well as by the hearings of the Senate Judiciary Committee, the Senate Banking and Currency Committee, and Senate Small Business Committee in the tire industry, all show the need for H.R. 2729. Speaking for our nationwide independent business membership, I hope it secures approval of the House Committee on Interstate and Foreign Commerce.

Sincerely,

GEORGE J. BURGER,
Vice President.

Robbing Paul To Pay Paul

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. BRIDGES. Mr. President, on Thursday, April 23, 1959, the Manchester Union Leader, published in my home State of New Hampshire, had a very enlightening editorial entitled "Robbing Paul To Pay Paul," based on a speech which I recently made in the Senate.

I think this editorial deserves the attention of the Members of Congress and the general public, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROBBING PAUL TO PAY PAUL

The danger to the Nation inherent in continued profligate spending and unbalanced budgets was never more effectively portrayed than when Senator BRIDGES recently gave his Senate colleagues several poignant illustrations of what this ominous trend means to his home State.

Pointing out that the Granite State is a "persistent loser in this futile process of robbing Peter to pay Paul" and then "robbing Paul to pay Paul," Senator BRIDGES gave specific examples: "Under one important education proposal, New Hampshire would, in effect, be taxed by about $531,000 per year more than the amount of Federal benefits we would receive.

"Under the depressed areas proposal, we would pay for subsidies designed to lure away our own industries to other areas. * * *

"We have little at stake in urban renewal, slum clearance, or public housing. But with all our sister States we would have to help foot the bill of Federal programs in these and other fields."

Stressing the importance of meeting local problems locally, BRIDGES decried the theory that "the existence of a need automatically produces a responsibility of the Federal Government. * * * The Federal Treasury has no mysterious pipeline to some inexhaustible flow of funds from the moon." BRIDGES might also have stressed the inflationary effect of Federal matching funds on local budgets.

Senator BRIDGES then presented some statistics that should thoroughly alarm even the most complacent of our citizens: In 1935, Federal outlays for welfare programs

amounted to only $2 billion. At the end of World War II, in 1945, annual welfare expenditures amounted to only $2,272 million.

Now, hold onto your hat. By 1950, the welfare budget had soared to nearly $7 billion—nearly tripling in the short space of 5 years. By 1955, we were spending $12 billion on social welfare programs. In the past year, the total rocketed to $18 billion. And, said Senator BRIDGES, "in 1960, according to budget estimates, Federal social welfare spending will top $21 billion."

The tragedy of it all, as BRIDGES so correctly observed, is that this rising tide of social welfare expenditures has occurred in the full prosperity of these postwar years.

Alarming as these statistics are, however, they become even more so in the light of Senator BRIDGES' concluding comments: "If $10 million had been paid out each year from the birth of Christ down through the ages to 1960, less money would have been paid out than will be paid out this year alone. In 1 year, we are spending more on Federal welfare programs than on the purchase of aircraft, missiles, ships, and other military equipment for the Defense Department. We are spending four times as much on the Federal welfare program as we are spending for research and development so vital to our national security and strength."

And this orgy of self-indulgence is occurring at the most crucial period in the history of our Nation, at a time when we should be tightening our belts instead of enlarging the welfare state.

Sever Relations With Soviet Union

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. SCHERER. Mr. Speaker, the Hamilton County Council of the American Legion at its April 2, 1959, meeting unanimously adopted a resolution entitled "A National Defense Resolution To Sever All Relations With the Soviet Union." This resolution was presented by a special committee consisting of Rabbi Michael Aaronsohn, Michael Golato, and Neil Wetterman, appointed by the Hamilton County commander, Carl C. Hoerth, Jr. The resolution was drafted by one of Cincinnati's leading citizens; a man who lost his sight in one of the great battles of the First World War; a great American, Rabbi Michael Aaronsohn. This resolution documents so well the treachery and perfidy of the conspirators of the Kremlin and makes such a strong case for the severance of our relations with the Soviet Union, that I feel every Member of the Congress should be apprised of its contents.

A NATIONAL DEFENSE RESOLUTION TO SEVER ALL RELATIONS WITH THE SOVIET UNION

Whereas Scriptures reveal: "The wicked are estranged from the womb; they go astray as soon as they are born, speaking lies. Their poison is like the poison of a serpent: they are like the deaf adder that stoppeth her ear; which will not hearken to the voice of charmers, charming never so wisely"; and

Whereas after 41 years, following the violent and bloody overthrow on November 7, 1917, of the first democratic government in Russian history, it has been demonstrated beyond the shadow of a doubt that the Communist program of the ruling circles of both the Soviet Union and Red China is neither a civilized political institution nor a rational economic system, but a foul, criminal conspiracy designed to reduce men, women, and children everywhere throughout the world to the level of barbarous and total slavery; and

Whereas during this period of 41 years, three Presidents of the United States and six United States Secretaries of State have engaged in 19 high level talks with their opposite numbers in the Soviet Government, and out of these conferences have emerged some 40 agreements involving specific Soviet promises, 37 of which have been cynically violated; and

Whereas in the spring of 1955, when a fully documented study of nearly 1,000 Soviet treaties was made public by the United States Senate Subcommittee on Internal Security, it was revealed that the Soviet Union had broken its word to virtually every country to which it ever gave a promise; and

Whereas the pledges of the Soviet Union have been dishonored on an all-embracing scale, and the Soviet Union has aggrandized itself at the expense of entire nations and parts of nations in contempt of the wishes of the peoples concerned, and has imposed governments and social systems of its own choice upon hundreds of millions of Europeans and Asians, and in all the history of humankind it is not easy to find an example of broken promises so immense in scale and so catastrophic in consequences; and

Whereas for almost 40 years the American Legion has never abandoned its absolute abhorrence of the lethal Communist exploitation of man's noblest ideals of democracy, fredom, peace, and prosperity; and

Whereas for 40 years the American Legion has never deviated from its original policy of nonrecognition of Soviet Russia, and on April 18, 1934, at a mass meeting in Washington, D.C., the national commander of the American Legion called upon the people of the United States to voice opposition to President Franklin Delano Roosevelt's shocking and Presidential-shattering precedent of formal recognition of Soviet Russia 5 five months before; and

Whereas when on December 7, 1941, the United States was so nakedly sucked into the maelstrom of war, the American Legion accepted the baleful alliance of the United States with the Soviet Union with grave misgivings; and

Whereas during World War II, while the U.S. Government was pouring billions of dollars of military and nonmilitary supplies into the Soviet Union, the Government of the Soviet Union, in gross violation of all previous agreements with the American military mission in Moscow, subjected American prisoners of war to treatment so barbaric as to provoke stern protest from the President of the United States; and

Whereas while the United States was engaged in a mortal struggle for survival across the world and on the side of an almost vanquished Soviet Union, agents of the Soviet Union in the United States, under the double cloak of diplomatic immunity and war alliance, carried on espionage and conspiratorial activities with startling audacity, penetrating almost every sphere of American life, even into the highest branches of our National Government in the National Capital—all for the unconcealed purpose of national subversion and the eventual violent overthrow of our Republic; and

Whereas since the conclusion of World War II, the diabolic double role taken by the Soviet Union in the United Nations' honorable defense of South Korea; the interminable, unbridled propaganda assaults on the part of the Soviet Union on the United States by forgeries and other sinister methods; the perpetual war of nerves; the corresponding colossal drain and strain on our national resources toward the maintenance of our Armed Forces throughout the world in a time of peace; the kidnapping of American soldiers and civilians; the attack in Venezuela on the person and life of the Vice President of the United States; the destruction on September 2, 1958, of an unarmed American transport plane with its crew of 17 men; the incitement to vandalism on American property in every part of the world; the instigation to riot in various cities of our own country; the fomenting of racial, religious, and class warfare; the relentless, ruthless corrosive campaigns engineered by the Soviet Union and its American tools and dupes against true American patriots and illustrious public servants; the startling victories of the Soviet Union in the decisions handed down by the United States Supreme Court; the stunning warnings so frequently broadcast by the Senate and the House committees on internal security; the travesty of the Geneva Summit Conference of July 1955; and the endless threat by the Soviet Union of the destruction of the American civilization—dispel all hope for honorable, peaceful coexistence with the Soviet Union; and

Whereas since November 16, 1933, the United States Government has extended diplomatic, commercial and cultural privileges to the Soviet Union, the masses of the people of the Soviet Union have never accepted the Communist despotism; civil war still haunts the Soviet Union; and agonized reign of terror still prevails over all Russia and her satellite peoples; and power has been maintainted only through unending mass purges, liquidation, duplicity and assassination on a horrendous scale; and

Whereas about 5 million anarchy-trained followers of Lenin and Stalin have thus enslaved one-third of the world's population and territory; and while few of their own free will have sought residence in the Soviet Union, millions have risked life and torture to escape the Communist tyranny; and

Whereas by the recent Khrushchev confessions, the Soviet Union's grisly record of violence and bloodshed proves that the Soviet Union is unworthy of a seat among the assemblies of civilized nations; that the Soviet Union has sunk to the lowest levels of barbarism and savagery and that its lust for world domination as currently exhibited in the invasion of Iraq and Tibet is as insatiable as the bottomless pit of Hades; and

Whereas at this crucial moment in the history of our country and of the world, 5 days before your special committee was authorized to draw up this solemn resolution, our Nation's ablest political analyst, David Lawrence, in his syndicated column in the Cincinnati Enquirer of March 9, 1959, wrote: "There are steps short of war which can be taken by the West. These could be far more effective than actual threats of war * * * the action could be the cutting off of all diplomatic relations between the West and the East * * * followed by simultaneous discontinuance of all commercial intercourse, as well as other forms of communication by air or by sea": Therefore be it

Resolved, That as a primary measure of national defense, we, the duly appointed delegates of the 50 posts of Hamilton County, Department of Ohio, the American Legion, regularly convened in Cincinnati, Ohio, on April 1, 1959, call upon the American Legion through its national, department, district, county, and local branches, to utilize every available means of communication to urge all patriotic fellow citizens to petition Dwight D. Eisenhower, President of the United States of America, solemnly to consider this resolution, and in the discharge of the

powers and duties of his office, as a vital part of the Nation's comprehensive defense program, to implement the spirit and purpose of this resolution by an immediate severance of all diplomatic, commercial and cultural relations with the Soviet Union and with all the captive satellite countries of the Soviet Union; and be it further

Resolved, That a copy of this resolution be mailed at once by special delivery to Dwight D. Eisenhower, President of the United States; to the national commander of the American Legion; the department commander of the Ohio American Legion; the editors of the Cincinnati Enquirer, the Cincinnati Post-Times-Star, the Catholic Telegraph Register, the American Israelite; and to Messrs. David Lawrence, George E. Sokolsky, Forrest Davis, Dean Clarence Manion, Fulton J. Lewis, Jr., and also to U. S. Senators Frank J. Lausche and Stephen M. Young and U.S. Representatives William E. Hess and Gordon H. Scherer.

Respectfully submitted.

MICHAEL AARONSOHN, *Chairman*,
MICHAEL GOLATO,
NEIL WETTERMAN,
Committee.

Rural Development and the New South

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. THURMOND. Mr. President, the April issue of Southern Planter, one of the South's most respected farm journals, contains an informative and enlightening article entitled, "Rural Development and the New South." This analysis of the rural development program, now going forward in 30 States, makes it very clear that the Southern States especially have a big stake in the success of this new program. As the Southern Planter observes, rural development is right in line with the South's drive to diversify output and promote new crops, new industries, and renewed towns.

I am sure all my coleagues will be interested in this lucid article, and I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RURAL DEVELOPMENT AND THE NEW SOUTH—LOW-INCOME COMMUNITIES IN THE SOUTH ARE DEVELOPING PROGRAMS TO BUILD INCOME AND EMPLOYMENT THROUGH SELF-HELP

Ask a group of southeastern farmers or businessmen what the rural development program is all about and you're likely to get several different answers.

Yet this new program is tailor made for those rural towns and communities in the South needing more opportunities, both on and off the farm. It's right in line with the South's drive to diversify output and promote new crops, new industries, and renewed towns.

At present, some 30 States in all sections of the country have rural development programs underway. The Southeast is heavily represented, with West Virginia, Maryland, Virginia, North and South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Arkansas and Louisiana participating in the program.

AIM OF THE PROGRAM

Rural development has a simple, straightforward aim: To help folks in rural towns and communities find better ways of meeting the big problems that hobble progress.

The program tries to answer questions like these: How do we put on a drive for more industries? What can we do to help our farmers do a better job of marketing? How can the older folks live better on their small farms? Why are so many of our young people drifting into unskilled work?

State colleges and universities, through the cooperative extension service, plus agencies of the U.S. Department of Agriculture and others back up local rural development programs with specialists and full-time workers. The big responsibility, however, falls squarely on the shoulders of local people, like the farm organization leader, hardware store owner, bank official, school principal, women's club leader.

Agency personnel offer advice, counsel and expert know-how. But local people make the day-to-day decisions.

ACTUAL CASES CITED

How does this new setup work at the grassroots? The best way to answer this is to take a look at a few local programs in South Carolina, North Carolina and Virginia.

Many communities in Berkley County, S.C., suffer from lack of proper drainage. During the rainy season, water covers roads, swamps farmland, and often undermines farm and other buildings.

Berkley's 50-man county rural development committee selected one of the hardest hit communities—dubbed the "41 community" because it's 41 miles from Charleston—and went to work. They contacted farm families in the community, obtaining agreement to cooperate in the project.

The county agent's staff, supplemented by special rural development workers, secured rights-of-way from property owners to permit building road improvements and drainage structures on farmers' property. Soil Conservation Service engineered the structures. South Carolina's Highway Department helped on the project by building special culverts, along with a new road. And the ASC committee upped their payment rate for one-farm drainage.

As a result of the "41" project, drainage has been improved on some 900 acres of land in the community. Farmers can get into the fields earlier this spring, and save crops formerly washed out. A 3-mile, all-weather road now ties the community to the rest of the county.

Rural development isn't all conservation and improved farming, important as these are. New marketing and manufacturing enterprises to build up employment in the area and get more income also have a big place in the program.

THE CASE OF BERTIE COUNTY

Leaders in Bertie County, N.C., proved this by setting up a new produce market, locally financed, expertly managed, and growing every day.

Here's how they did it: Cooperating with businessmen interested in building a market, the Bertie Rural Development Committee sponsored promotional meetings throughout the county attended by about 700 farmers and town businessmen.

Specialists of North Carolina State College and extension agents assigned to rural development worked on technical and marketing details. Businessmen got the enterprise financed by forming a corporation and selling stock.

In its first year of operation, the Bertie Produce Co. handled $170,000 worth of watermelons and yams. This year and thereafter, its managers plan to market a whole range of produce, helping turn Bertie County into a vast garden area.

CUMBERLAND COUNTY ACTIVE

Virginia's Cumberland County, like so many southeastern areas, hasn't enough good opportunities on farms to take care of all its people. As a result, many of the men commute long distances every day to other jobs.

Cumberland County's rural development group, with the assistance of the Virginia Electric & Power Co., are now putting together a long-range plan for industry development.

They've surveyed industrial sites, and interviewed rural workers willing to take jobs. They're publicizing county resources through attractive new brochures, and a 70-page economic study for use of prospective plant locators.

Rural development areas all over the country are showing this kind of stirring about, as program leaders put similar projects into operation.

Of course, this kind of town-country development has been going forward a long time in the South. It's always a tough complex job. And nobody would suggest that the rural development program has suddenly made area improvement an easy job. Far from it.

There's still plenty of "kinks" in the program—as with anything new: Finding able local leaders to keep working at the program. Getting agencies outside the agricultural field to put in resources. Gaining, then holding, the interest of people in the communities.

Anyone working in one of the 100 or so program counties or areas around the country could give you a list of tough problems like these they haven't yet solved.

But the Rural Development Program has already had surprising impact on the thinking and work of leaders in rural areas. And it's produced some solid, concrete results.

What's more important, the program has succeeded in focusing attention on low-income rural families as people needing jobs, or more farm know-how, or better educational opportunities, rather than as economic units producing "X" number of bales or bushels.

A couple of months ago, South Carolina's Governor Ernest F. Hollings, writing in one of the State's papers, discussed "the New South."

He described the vast industrial and power developments that have taken place in South Carolina. "To complement these developments," he said, "our farmers are building a better balanced agriculture with year-round rather than seasonal aspects."

What the Governor was writing about was "rural development." For the South has been rural developing many, many years. National efforts like the new Rural Development Program are a recognition of this. They attempt to get behind the States in pushing forward balanced economic progress, along paths already charted by the States themselves.

Pricing Ourselves Out of Markets

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. SCHERER. Mr. Speaker, on last Friday I addressed the State convention

of the Ohio Private Employment Agency Association in Cincinnati, Ohio. This speech discusses the factors which are causing us to price ourselves out of both foreign and domestic markets as a result of the inflationary spiral and our trade policies.

My remarks follow:

They say that one of the ingredients of a successful speech is if the speaker is in a position to discuss a current issue of mutual interest and concern.

Your business is to find jobs and people with the necessary skills to fill those jobs. You are meeting here this week in Cincinnati to discuss new and improved techniques in order that you may do a better job. But no matter how hard you try, your business will not be successful and prosper unless in this country we have a sound and growing economy to provide the generally broad basis for jobs.

We have heard a great deal in the last year about recession and unemployment. Just 3 weeks ago the labor leaders arranged for a march on Washington by the unemployed for the purpose of demonstrating to the Congress and to the President the seriousness of the unemployment situation in this country. So you can see why I say that you and I have something in common.

I along with my colleagues in the Congress have been challenged to provide jobs for the unemployed. However, our task, I am told, is comparatively simple.

All we have to do is to authorize the spending of additional billions and billions of dollars for new and expanded activities of the Federal Government and—presto—the unemployment problem, whatever it might be, is solved. The lobbies and pressure groups behind all of these new-fangled spending programs will then say I am a fine fellow and a good Congressman who is alerted to the needs of the common man.

Furthermore, I will be a much better Joe if I don't even suggest raising taxes to pay for this new spending spree and just quietly pass this bill on to your and my children, as we have been doing regularly during the last two decades.

Of yes, it is the easy and popular way out. Just have Uncle Sam borrow the money, for which he will sign a few more billion I.O.U.'s This will give the employment situation a temporary and exhilarating shot in the arm, and the politicians and labor bosses a chance to take a bow and perhaps win an election or two.

While we are on this lost weekend binge, we can conveniently forget that in doing this we have given the devastating enemy of inflation a potent and permanent upsurge which accelerates pricing ourselves out of our foreign and domestic markets.

You know the result. Instead of more things for more people at lower prices, the cost of everything we buy soars. The American dollar is further eroded not only here but all over the world. Production necessarily declines, and we are again on the toboggon slide of unemployment. The unemployment agencies become unemployed.

Of course, the politicians who took the easy and popular way out should crawl under the table. But they will not worry too much. Some will solve their personal unemployment problems by squeezing relatives on the pubic payroll.

It should not be inferred from anything I have said that I am insensible or unconcerned about the unemployment that exists in the United States. I don't believe, however, that the unemployment situation generally is as bad as represented by some groups.

No one will deny that there are pockets of serious unemployment in the United States, the causes for which I will discuss later. However, these pockets of unemployment in a generally prosperous economy are being used as an excuse and a weapon for the promotion of some harebrained, socialistic, astronomical spending programs.

LYNDON JOHNSON'S Special Commission on Unemployment Problems will soon conduct hearings in these bad areas and, with the help of certain people who have an ax to grind, will exploit before television these truly bad unemployment areas, to make it appear as if the whole country is in a terrible state.

Certain labor bosses and pressure groups will use this cleverly aroused public opinion to clobber Congress into passing these high-cost, ill-conceived, socialistic measures which otherwise would not have a ghost of a chance of adoption. This maneuvering will, of course, distract attention from some of the practices and basic causes of this novel, spotty unemployment dilemma in which we find ourselves.

Of course, government, along with labor and management, should adopt all sound and reasonable measures to wipe out the causes and practices which lead to this unique unemployment situation. The trouble is that today here in America we have developed a mania that the mere spending of more dollars can solve all of our problems.

Let's see if what I have said is not true. We have been trying to buy friends and allies for many years. After Sputnik the answer to curing the deficiencies in our educational system was more money. The current upsurge in juvenile delinquency is attributed to our unwillingness to spend money on a whole variety of programs and panaceas.

I know someone will say—and justifiably so: "Scherer, what do you suggest if you're so smart?"

I am convinced that more profligate, deficit spending by the Federal Government will eventually worsen the situation rather than better it.

I know that at a time when the American dollar is eroding and depreciating all over the world—when credit of the United States is being pushed to the breaking point—when our national debt is $50 billion greater than the total combined debt of all the other nations of the world, such spending is courting disaster, bankruptcy, and the destruction of the economy of the United States. This is exactly what the Soviets want us to do. This is what they have planned for our internal deterioration.

General Claire Chennault, who died last August of cancer, was one of the truly great soldiers of our time. He was the leader of the famous Flying Tigers and later commanded the U.S. Air Force in the Far East. He was a man who understood the Communists because he had fought them for more than 20 years. The Committee on Un-American Activities wanted the American people to have the benefit of his experience and expert knowledge before he died.

General Chennault said in his testimony just a few weeks before he died, and I quote:

"You know that communism is depending on ruining the United States financially, more so than on any military action against the United States * * * Lenin and Stalin both talked about not engaging in war if it can be avoided. Their plan for many years was to ruin the financial structure of the United States.

"I believe that if things go on as they are now, eventually they will achieve that purpose of ruining the United States financially."

In another part of his testimony, he said:

"I believe the Communists will not take over a lot of Asia where they could. They want us to continue pouring aid into those areas * * * year after year, until our currency is no longer of any value. Then they will be ready to take the United States in turn."

For years before I went to Congress, I complained and campaigned against the ever-increasing bureaucracy of the New Deal, the astronomical expenditures of the Federal Government, and the ever-increasing taxload on the American people and American business.

I did not go to Washington to support programs and legislation which augment those evils. I did not go to Washington to participate in the dissolution of the economy or fiscal stability of the United States.

Just remember that we are never going to get tax reductions that are justified and do not adversely affect the economy of the United States until we put a stop to unbridled spending. Tax cuts without spending cuts lead to greater debt, move us closer to fiscal collapse, and, of course, fan the fires of ruinous and uncontrollable inflation.

I have on occasion opposed new and expanded activities for the Federal Government which have merit and are desirable. There are two principal reasons, however, for my opposition:

First, because we cannot afford them. Because these programs would further increase the indebtedness of the Federal Government, the tax burden on our people, and weaken the fiscal structure of the United States.

Second, because I felt that the project or program was one that should be carried on by local or State government.

Let me give you an example:

Those who have opposed various Federal-aid programs for education have been charged with being insensible to the welfare of the children of the country, benefits for teachers, and education generally. Just the opposite, however, is true.

Everyone with a grain of sense knows that eventually any type of Federal-aid program results in Federal interference, domination, and control. To argue differently is to disregard the record completely.

Whenever you pour Federal money into local government, Federal control eventually follows as night follows day. Education is one of the last major activities that we have kept in the hands of the local authorities.

If the Federal Government takes over—and I predict that it will if the present trend continues—you are going to have a department of education filled with thousands of new bureaucrats that will dwarf all other departments of Government with the exception of Defense. Your schools, your children, your teachers, and your curriculums will eventually operate under mandate from Washington.

I believe our school boards, our school administrators, our teachers, and our PTA's can do a better job for our schools with our own tax dollars than can some bureaucrat in Washington, just as I believe that our city councils, our planning commissions, and our citizens' development committees can do better and more economical jobs at urban redevelopment, free from the redtape and dictation of Washington bureaucrats. You know that for every educational and urban redevelopment dollar Ohio sends to the Potomac, it will be lucky if it gets 50 cents back.

I realize that the States and local governments would have an easier time meeting their financial obligations if the Federal Government did not siphon off so much of the tax dollar. That is one reason why the handful of conservatives in the Congress continue to oppose the ever-expanding activities and programs of the Federal Government—so that the Federal Government will not continue to siphon off more and more tax dollars to the detriment of local government.

But let's get back for a few minutes to unemployment. Oh yes, I can hear those who are calling for more Government spending as the panacea to aid unemployment saying that Scherer is unconcerned. That is not true. I am looking for basic causes of unemployment and the employment of measures to remove these causes.

As I have pointed out, the unemployment situation which we are facing at the present time is different and unusual. In most of the country employment is good; in many places it is above average. But there are pockets of unemployment where admittedly the situation is bad. This is an unusual and unique situation, different from what we have ever faced.

I certainly am not an expert in this field. Far from it. But from what I have been able to learn, the problem is acute in those industries and areas where we have priced ourselves out of markets and where we are no longer able to compete with the products of foreign manufacturers.

Charles Lucey, the able writer for Scripps-Howard newspapers, deals with this subject in a recent series of articles. He said: "Evidence grows that domestic United States inflation is shoving up our costs so that overseas nations can undersell us."

There is no question but that he is right. This inflationary spiral in the United States has not only priced us out of foreign markets but out of our domestic markets as well. It is a basic economic fact that every time you raise the price of a television set, a washing machine, a refrigerator, or an automobile by $50, there are thousands fewer families who are able to buy one or more of these items.

Excessive Government spending, especially deficit spending where the Government spends money it has to borrow, as sure as night follows day, lessens the purchasing power of each dollar, and consequently is one of the major factors in the inflationary spiral.

Also making major contributions to the inflationary spiral, the ever increasing cost of living or the declining purchasing power of the dollar are men like Reuther and McDonald and some of the big industrialists who produce basic raw materials.

Over the past decade certain labor leaders in order to maintain their own positions of power within their unions have consistently pushed and pushed for wages that far exceeded the increased cost of living. The industrialists to whom I have referred have readily granted excessive and unwarranted wage increases because these increases offered them an opportunity and an excuse for a price increase which included not only the wage differential but also a substantial and often unjustified profit margin.

As a result, the man on a fixed income, the pensioner, the schoolteacher, and the white-collar worker, whose increases, if any, lag behind have suffered most. In turn, industry loses these people as customers.

Remember our economy today is at a high point largely because of the tremendous expenditure of defense dollars. Markets or production caused by defense spending can in a sense be said to be artifically created. If this cold war should end, and we all pray that it will, defense spending and production will come to a grinding halt. You can readily see how the United States will then need badly every possible market or outlet for its industrial program. One can see how vital it is that we preserve our markets for tomorrow.

As a result of high taxes caused by the Government spending I have been talking about and high production costs, industry after industry in the United States today is establishing plants in foreign countries to take advantage of low labor costs and tax concessions. Now I believe we should invest private American capital abroad, but for other reasons than to avoid taxes and to take advantage of low labor costs.

If we continue to invest capital, as we have in the past few years, at an accelerated rate, for building plants all over the world that would have otherwise been spent for normal plant expansion in the cities of the United States, we are headed for a real hair-curling unemployment one of these days.

We have lost many world markets today simply because we can no longer compete. We are going to continue to lose more and more of these markets, in industry after industry, because daily foreign countries, with our technical help and our money, are entering new fields and are manufacturing commodities with the most advanced mass production machinery available. They are doing it without paying astronomical taxes and with labor costs that are only a fraction of ours.

A Ford assembly-line worker gets a wage, including fringe benefits, of approximately $2.94 per hour, compared with 69 cents in Cologne, Germany. Yet a few weeks ago we reduced tariffs on German cars.

It does not take a genius to see why we are not only losing our European markets but our domestic markets as well.

Some industrialists who 6 years ago, when I first came to Congress, urged me as vehemently as they dared to vote against liberalization of our trade policies, have today reversed their position. They want no tariff barriers or quotas. Why this change? Simply because during these 6 years they have built plants abroad and now want to import their low-cost, foreign-made products into this country without quotas or tariff barriers.

What happens if this flow of American capital abroad for the establishment of plants all over the world continues at the expense of industrial expansion at home? What happens to small business and industry—the backbone of this country—which cannot establish plants in Europe, which, in order to maintain our high standard of living, must continue to pay high labor costs, the 52 percent corporate tax, and even higher personal taxes to sustain this orgy of spending in which we are engaged?

Keeping in mind our unprecedented population growth, what happens to American labor and small business when it will be compelled in the next 2, 5, and 10 years to compete with goods made abroad at an increasing rate and produced at a fraction of the cost of those made here?

President Eisenhower, in his latest economic report to the Congress, said:

"While imports were well maintained, exports declined sharply after 1957. From the first half of 1957 to the first half of 1958, the value of U.S. merchandise exports fell more—in relative as well as in absolute terms—than those of all other countries combined."

In last Sunday's Washington Post the well-known business writer, Bernard D. Nossiter, said this:

"But imports and other purchases abroad ran ahead of exports by $900 million, and in national income bookkeeping this is on the minus side of the ledger."

As I said, we recently reduced the tariff on foreign cars coming into this country by about 8.5 percent. Today most European countries fix quotas on American cars. Only a handful are admitted, and the tariffs are exorbitant. The cheapest kind of Chevrolet or Ford costs $6,500 in France, approximately $8,000 in England, and $10,000 in South America. Is this reciprocal trade?

Automobile imports have increased almost 15 times in the past 5 years—from 29,505 in 1953 to 431,608 in 1958. Export of U.S. cars has decreased from 186,262 in 1953 to 125,834 in 1958.

Let's go from automobiles to a little thing like nails. Imports of nails supply more than one-third of the U.S. market. Imports are more than 50 times as great as exports of nails.

Barbed wire, an American invention, a few years ago came almost solely from U.S. concerns, both big and small. Today more than one out of every two rolls of barbed wire sold in this country is made in foreign mills, using foreign steel.

Imports of barbed wire amount to more than 50 times our exports. Why? Simply because a Dayton, Ohio, jobber can buy a ton of barbed wire made in Germany for $40 less than the same product made in nearby Cleveland, where steel wages are three times as high.

The industry estimates that the excess of imports over exports, in terms of man-hours required to produce the barbed wire, equals about 650 full-time jobs. There is no tariff on imports of barbed wire.

Most of the sewing machine business has gone to foreign factories. The White Co., which was No. 2 in this field, gave up in late 1957 after 80 years of business and now has its machines made in Japan.

In 1956 and 1957 we shipped abroad only 80,000 sewing machines. We imported 2 million.

There are steady increases in imports of portable typewriters and calculating and other types of business machines. One company with an oversea plant makes identical machines in the United States and in Germany. It pays an average of $2.25 per hour to workers in its American plant, less than 60 cents an hour to its workers in Germany. An official of this company recently said: "We are being forced into setting up oversea plants, where labor costs are lower, in order to compete with foreign companies."

In 1957 we exported about 100,000 typewriters and imported 337,000. From January to September of 1958, we shipped only 42,000 typewriters overseas and brought in 280,000.

Last year 800,000 bicycles arrived. Our exports were negligible.

We find that we have similar situations existing with reference to such items as fishing tackle, jeweled watches, clocks, clothespins, woolen gloves, plywood, dinnerware, woolen fabrics, cameras, cotton cloth, and transistor radios.

Insofar as transistor radios are concerned, some U.S. manufacturers, in order to stay in business, have arranged to bring in transistor portables from Japan to sell as part of their own line. Other companies in this field are considering importing sets or parts from Japan.

Now such an arrangement may overcome the companies' current problem of competition, but what happens to the rank and file of American labor that has been making these transistors and parts in U.S. factories?

If one thinks that this problem is confined to small items only, he is sadly mistaken. The Tennessee Valley Authority, after quite a hassle, recently decided to buy a huge steam turbine generator from a British company that underbid U.S. firms by several million dollars.

Let's see how this one purchase affected workers in four cities of the United States. It was Westinghouse and General Electric which were outbid. They have plants which manufacture turbines and turbine parts in East Pittsburgh, Lester, Pa.; Schenectady, N.Y.; and Fitchburg, Mass. All four of these cities are in depressed areas where unemployment is high.

The loss of this contract meant the loss of about 350 full-time jobs for 2 years on direct production and 700 or more other jobs indirectly connected with the project. Again, British wage rates are only 37 percent of those in the United States for similar work.

Here is a headline from Monday's Wall Street Journal: "Producers Spur Imports From Own Oversea Plants, Cite Savings—Harvester Gets First Units."

The news story said: "This week International Harvester Co., the largest manufacturer of farm equipment in the world, imported into the United States the first farm tractors made in Harvester factories overseas."

This week's issue of U.S. News & World Report, in discussing this very subject, says:

"U.S. producers trying to meet this kind of competition have two alternatives if they want to stay in business: Turn to more automation, using fewer people, or shift production overseas."

It has been going overseas at an alarming rate.

As foreign countries take on the manufacture of more and more items which they formerly purchased in this country, they will be able to do some real bargaining under our present trade policies. The prices for commodities made in this country will be so high that under no condition will we be able to compete with their domestic products. They will then be able without fear to remove all tariffs on American-made products because we cannot possibly compete with them in their markets. They will grant tariff concessions to us gladly for similar ones on their products coming into the United States.

So you can readily see what I say is true; namely, that we are losing our European markets and soon, under our present trade policies, will be well on our way to losing our own American markets to foreign-made commodities shipped into this country.

Let me give you an example: The manufacturers of sporting equipment laid on my desk the highest quality baseball gloves, basketballs, footballs, etc., manufactured in this country for many, many years. They placed beside this equipment similar items of exactly the same quality made by the Japanese. It was pointed out that under our foreign-aid program we gave to the Japanese the most modern, scientific, mass-production, leather goods machinery.

The American labor that went into these products averaged $2.50 an hour compared to Japanese labor at 40 cents an hour. Japanese taxes, both business and personal, are considerably lower than ours.

The old argument that American know-how, ingenuity, and mass-production methods can overcome the differential in taxes and labor costs no longer applies. The machinery which the Japanese were given was a later model and more efficient than much of the machinery still used in American plants.

Furthermore, as we all know, the Japanese are a smart and industrious people. Need I point out to you that under these circumstances it is impossible for our manufacturers to compete in our own markets with the Japanese products?

Of course, the free traders will tell you that we must allow a certain number of industries to go by the boards in this country because liberalized trade policies are advantageous to our American exporters. True it is that over the years, the United States being a great industrial country, its exports have exceeded its imports. If they had not, the United States would have been in a bad way. That is what we are complaining about now. The gap between our exports and our imports is closing fast; in fact, too fast.

I am well aware of the Biblical injunction that we must be our brother's keeper, but we can fulfill that injunction only so long as we are able to keep ourselves.

Moravian Missionary Aided the Establishment of Fort Pitt Two Centuries Ago

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following historical article from the National News, official newspaper of the National Slovak Society of Pittsburgh, Pa. This article was written by Mr. John C. Sciranka, an editor from Passaic, N.J.:

MORAVIAN MISSIONARY AIDED THE ESTABLISHMENT OF FORT PITT TWO CENTURIES AGO

(By John C. Sciranka)

The Americans of Slavonic extraction of Pittsburgh, Pa., should be doubly preparing for the bicentennial celebration of their city. They have something to boast about because it was one of their own Slavonic pioneers—a simple Moravian missionary—who has contributed very much to the erection of Fort Pitt two centuries ago.

Yes, it was Christian Frederick Post, born in the year of 1710 in Polish Prussia, who as a Moravian missionary and official interpreter of the State of Pennsylvania risked his life to win over the Indian tribes to the British.

Historians tell us that the first settlement of Pittsburgh was a stockade erected in 1753. However, it fell into the hands of the French, who gave it the name of Fort Duquesne. The French abandoned it in 1759. The same year the British erected Fort Pitt whence the city took its name.

Though it sounds simple, yet it needed a lot of scheming and personal sacrifices at the risk of many lives to get rid of the French.

Let's look at the history and the part our humble, nonetheless distinguished compatriot, Christian Frederick Post played two centuries ago.

Post, according to Early Western Travels, 1748–1846, also Journals of Con. Weiser, etc., had prepared two journals on his western travels. One, to the neighborhood of Fort Duquesne, July to September, 1758, the other to the State of Ohio, October 1758, January 1759, which are registered in the Proud's History of Pennsylvania, Philadelphia, 1798.

Christian Fred. Post was a simple uneducated missionary of the Moravian Church, according to historians, who say that his chief qualities for the perilous journeys — was his intimate acquaintance with Indian life and character. Further, the belief of the tribesmen in his truthfulness and honesty and his steadfast courage and trust in the protection of a higher power.

Post was born in Polish Prussia in 1710 and came in his early youth under the influence of Moravians, whose missionary movement was just beginning to germinate in his homeland.

The Moravians, or the United Brethren, are the descendants of Bohemian (Czech) Hussites, with episcopal succession from the Waldenses. They were expelled from Bohemia in the Thirty Years' War and found refuge in Moravia, which is now a part of Czechoslovakia. Greater Moravia was at one time an empire, where the apostles Saints Cyril and Methodius brought Christianity in 863.

From Moravia, the Moravians moved in 1722 to Saxony where they found refuge, building Hernnhut (The Lord's Refuge), on the estate of their protector, Count Zinzendorf, who became a bishop.

Their communities spread into Germany, Russia, Scandinavia, Holland, Switzerland and the United States. They were distinguished all over for devotion, education, and good works. Originally they had a communal organization, which in later years was abandoned.

FIRST SETTLED IN GEORGIA

They began mission work in America in 1730, starting first in Georgia to Christianize the American Indians. This is where Christian Post came to about 1735. But because of Spanish hostility, their mission failed in Georgia, and they moved into Pennsylvania in 1739. The city of Bethlehem was established on Christmas Eve. Post came to Bethlehem in 1742 eager to evangelize the Indians. The following year he was sent to assist Missionary Henry Rauch in his mission to the Mohegans and Wampamoags. This mission was established in 1740 by Count Zinzendorf, the great Moravian bishop, who visited the site. Shekomeko (Pine Plains, Dutchess County, N.Y.), where he baptized three Indians as its first fruits. The work spread to the neighboring Indian villages in Connecticut. Post was assigned to work in the Sharon Township (Litchfield County), which consisted of the Indian villages of Pachgatgotch and Wechaaudnach. He married in zeal a converted Indian named Rachel in 1743. Here persecution began of brethren and converts, who were accused of being papists.

It is related that Post on his journey to Iroquois County in 1745 was arrested in Albany and sent to New York City, where he was imprisoned for 7 weeks on trumped-up charges of abetting Indian raids. In 1746 the Shekomeko and Connecticut settlements were broken up. Post and the Indians left New York and Connecticut for Pennsylvania. They were entertained kindly in Bethlehem and built a Gnadenhutten (huts of Grace) at Weisport, Carbon County. While in Bethlehem, Pa., Rachel, Post's wife, died, 1747. Two years later he married a Delaware convert Agnes, who lived only until 1751.

Post as a missionary assistant was sent to Shamokin in 1747 to help a missionary blacksmith established there and to clear and plant more ground.

In 1749 he visited and helped David Bruce to reestablish mission to Pachgotgoch.

SUMMONED TO LABRADOR

Post was summoned 2 years later (1751) to Labrador, where four Moravians were sent out as missionaries to the Eskimos. It is to be noted that the Moravians were the first of all denominations to begin mission work, as stated before, in Georgia. Later they sent missionaries to Greenland, Labrador, Alaska, also among the North American Indians. Also to Nicaragua, Guiana, Cape Colony, East Africa, and Thibet.

Their missionary zeal inspired great missionaries like the famous Bishop Frederick Baraga (1797–1868), a Slovene missionary; Roman Catholic Bishop of Marquette, Mich., educator among the Chippewa Indians, who labored in Michigan and Wisconsin. Baraga was a distinguished lawyer in Vienna, who was attracted to the new world very likely by the missionary zeal of the Moravians. Also, the late Msgr. William Heinen, who labored at Mauch Chunk (Jim Thorpe, Pa.) and who is known as the "Apostle of the Slovaks" in the Philadelphia Archdiocese,

where he mastered their language and founded 16 parishes, confessed that he was attracted to come to work to America among the Indians by the writing of Moravians in the German newspapers, while he was hospitalized as a wounded soldier. Over a century and a quarter ago after Post and the Moravians left Georgia, several Catholic Slovak priests from Pennsylvania and eastern States attempted to colonize their people in Georgia. No doubt, they too were inspired to choose Georgia by the Moravian pioneers.

Post's mission to Labrador was unsuccessful. Owing to an accident, the captain decided to turn the ship back to England. Post returned to Pennsylvania.

HIRED BY QUAKERS

Post was hired by the Friendly Association of Quakers, who admired him for his ways with the Indians. Moravians were familiar with the Quakers, who were established in Slovakia, near the city of Bratislava (Pozsony in Hungarian and Pressburg in German) where the society was known as Habans (Habani). The writer traced some 30 years ago that the Habans, known as Quakers of Slovakia, had families named Hubers and Huvers, who were later assicated with the name of President Herbert Hoover, also a Quaker. The Habans of Slovakia were known for being excellent artisans. The family of Pullmans also originated there. Post was familiar with the Quaker society even in Europe.

After his successful mission for the Quakers, he was hired by the authorities of Pennsylvania to assist them in public affairs. This assignment was to bring him all the way to Pittsburgh. In June 1758 he wrote his report on his journey. He had a shrewd knowledge of Indian customs.

His mission and confidence of Indians in him made the advance of Forbes so much less hazardous than that of Braddock. Post went to Reading, Pa., with two militia officers named Capt. John Bull and Lt. William Hays.

In the opinion of H. H. Whitehead, of McKeesport, Pa., a great admirer of Post, who expressed it recently in the Pittsburgh Post-Gazette "at the insistence of Forbes, in July 1758, Post set out from Wyoming, Pa., and with the exception of a few weeks, spent the next 4 months in alienating the Indian allies from their French leaders. For over 3 year, the Indians, chiefly Mingoe-Delaware and Shawnees, were allies of the French, and with them the French had little from the English. Post, at the risk of his life, succeeded in winning the Indians to the side of the English with the result it was Post, who more than all others, made possible the fall of Fort Duquesne and the end of French rule in Pittsburgh."

Post lived among the Indians for over 17 years.

Whitehead proposes the erection of a statue for Christian Frederick Post during the Pittsburgh bicentennial.

Post after accomplishing his mission in Pittsburgh, built a home on the border of Ohio, which was the first home built by a white man there. For 2 years after his adventurous journey, he served as an official messenger and interpreter for the authorities of Pennsylvania. During that period he begged often to be allowed to go to Ohio to preach to the Indians.

The last official act of Governor Denny was the affixing of his signature to a passport for Christian Frederick Post, of whose loyalty, integrity, and prudence he testifies to have had good experience.

In further substantiation of his zeal to evangelize the Indians in 1761 he again showed his desire to begin a mission for the western Indians.

On another occasion he went with his assistant John Heckewelder to Fort Pitt, where he was given a courteous reception by Boquet. Warnings against the storm of fire and blood which was so soon to break over the frontier, placed Post in a most dangerous situation and he barely saved himself during the hostilities. Post was also friendly with Daniel Shamokin, after whom the city was named in Pennsylvania.

We have also learned that the Honorable Charles Thomson, prominent Philadelphia Quaker, later Secretary of the Continental Congress, held Post in high esteem.

Slovaks and Slavs of Wyoming Valley, which embraces Luzerne and Lackawanna Counties in Pennsylvania, will be happy to learn that Post was a frequent visitor and guest among the Indians there. We know that Wyoming Valley was a bone of contention between the Pennsylvania and Connecticut Colonies. Post was active there as a Moravian missionary among the tribe of Nanticoke. Who would have imagined that 175 years later the city of Nanticoke, Pa., would have a mayor, John Paulus; John T. Kmetz, Assistant Secretary of Labor in President Truman's Cabinet; Vice Adm. John Greytak, and other officials, all Americans of Slovakian extraction. Kmetz was born in Lopuchov, Saris County, Slovakia, and was a delegate to the United Nations (International Labor Organization) convention in Geneva in 1947, when he visited his native Slovakia, which he left at the age of 6. He is known as a capable leader in the United Mine Workers of America, and a right hand of John L. Lewis.

Post, toward the end of his life, entered the Protestant Episcopal Church. He died in Germantown, Pa., in 1785.

Post has shown great work among the people of New York, Connecticut, Ohio, but especially among the people in various sections of Pennsylvania. However, Pittsburgh owes him the most for his unselfish services and countless sacrifices, when he risked his life for the establishment of Pittsburgh, where in 1890 the National Slovak Society was founded.

Post was a Slav by birth and a true Christian by deeds with great love for America. Let us cherish and perpetuate his memory.

A Fair Day's Pay for a Fair Day's Work—Gone With the Wind

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio news analysis given by CBS Chief Washington Correspondent Eric Sevareid on April 27, 1959:

Good evening, the Senate has passed its highly controverted labor bill; it is designed to eliminate some of the abuses in some labor unions and to protect and extend what ought to be the rights of union members as individuals in a free society. Much as this bill may accomplish to right wrongs from both the social and the union points of view, it is not apt to solve the creeping difficulty that haunts those interested in preserving the numbers and variety of enterprise establishments. That is the problem of costs associated with labor—not merely pay scales to union members for the work they actually do but the added costs of not being able to save money in other directions through work or innovations that unions will not permit to be done or to be fully utilized.

This is by no means a universal difficulty—after all, many institutions have been automated or semiautomated, causing net losses in jobs available. But it is a difficulty now very real and alarming to people who do not wish to see further contraction in the institutions of human communication. In daily newspapers, for example, the cost structure is now so high that new papers are rarely started and existing papers frequently merge or go under. It took only a 19-day strike of deliverymen—and a strike caused chiefly by the union's internal politics—to wipe out last year's profits for some New York newspapers and to bring even the vastly prosperous New York Times to the edge of the red ink column.

Printers now set many fewer lines of type per day for many times more dollars per day than they did a generation ago; the pay has gone 'way up while the production has gone 'way down. Government censorship is by no means the only threat to press freedom as we have know it in this country.

Communication in the form of broadcasting sees something of the same handwriting on its wall; television has had a good deal of margin to work in, because of its newness and its accretion of capital values as the number of television sets rapidly mounted. But if its cost structure continues to climb, real trouble is ahead. In this industry, those who produce the product have been hacking their way through a veritable jungle of union jurisdiction and rules. The jurisdictional dispute that kept some NBC programs off the air today is an example of the gradual shift of the union claim to its inherent right in pay for work done to the claim of inherent right in the total amount of work to be done. The introduction of the miraculous video tape process was regarded as a cost reducing innovation. With tape, for example, programs could be done from and/or about foreign countries without sending American technical crews abroad. But the union at NBC today refused to permit such a program to be put on the air in this country. One great reason more programs have not been done about foreign lands and problems is the great cost of sending crews abroad. If the argument of the union balking today is generally accepted, the advantage of the tape invention is no advantage at all for this kind of purpose.

The principle of overtime pay was originally conceived to be extra compensation for extra effort. But the use of television tape to make late night or weekend programs during the normal working week also meets union objections; union leaders have insisted on continuing the overtime pay even when overtime work is not performed; these are two examples, in one industry, and in the case of one cost-reducing invention, where the promise of the invention fades away under the union claim to vested interest in the pay total and the production total.

In the shipping industry, a new technique for loading cargo was developed in the use of light-metal casings; cargo could be packed in these in, say Indiana, trucked to a New York pier and loaded on a ship in a package. Dock workers unions have objected to this cost-saving development. Their claim is, in effect, that they have an inherent right to compensation for the loading of ships, no mattter who loads them or how they are loaded, whether by their own hands on the dock or by a distant team of men in an inland city. For what others did in Indiana, they want to be paid, themselves.

We have come a very long way from the principle of a fair day's pay for a fair day's

work; and the line between the rights of management and the rights of labor has become a very fine line, almost too fine, at times, to be detected with the naked eye.

This is Eric Sevareid in Washington.

Challenge to American Business

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I made before the chamber of commerce luncheon on April 27, 1959, entitled "Challenge to American Business."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CHALLENGE TO AMERICAN BUSINESS

(Remarks of Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, chamber of commerce luncheon, Washington, D.C., April 27, 1959)

I am grateful for this opportunity to address the business leaders of America and to discuss with you a problem that concerns me deeply.

I refer to a declaration of war Mr. Khrushchev has issued against us—a declaration of economic war.

I need not remind you gentlemen of the all too painful fact of the American recession. I share your rejoicing that we are again on the upgrade; but none of us should ever forget that there is still far too much slack in our economy.

Millions are still jobless. Too many plants are working short workweeks. America is far from hitting on all cylinders.

As you may know, I have recently visited Russia, and I can tell you that the Soviets are pulling out all of the production stops, pressing hard against their full economic capacity, and making great sacrifices to increase that capacity.

Russia is a part of the world where optimism rivals that of America's boldest optimists.

Premier Khrushchev has said that he has declared economic war on us. His aim: to "catch up and surpass America."

The Soviet countryside is strewn with signs bearing these words.

Khrushchev is looking ahead 10 to 20 years. He is using the vast powers of Russia's state machinery to plan and program the great resources of his empire. He has called his first 7-year plan, "Russia's Offensive Opens," and under this plan he has programed vast increases in the capacity of Russia's heavy industries.

By 1965, he aims at adding nearly 30 millions tons of steel capacity; more than 100 million tons of oil production; nearly 300 billion kilowatt-hours of electricity.

And while the emphasis is clearly on capital goods to add to Soviet military and economic power, there are also important planned increases in consumer goods. Meat production is to more than double by 1965; butter production, already almost equal to ours, is to increase by almost 400,000 tons. There are to be more shoes and clothes and the gadgets of life for the Russian people, who, you must remember, know nothing of the rich material life we live here.

We would be foolish indeed to discount these plans and programs, ambitious as they may seem. For the Soviets have made ambitious plans before—and they have made them a reality.

Not only have they achieved economic goals; they have taken giant steps in science and technology as well.

The first man-made earth satellite bears a stamp, "Made in Russia."

The first artificial planet to be placed in our solar system likewise is labeled, "Made in Russia."

And to the struggling nations of the world, this label says more. It says, "Made in Russia—only 40 years ago a primitive, uneducated, rural nation, a nation without science, without technology."

To the Indian or the Egyptian, the Burmese or the Syrian, Russia's meteoric rise from laggard to leader in the world of science and invention has the same inspiration as the rags-to-riches rise of the self-made man of America.

If Russia can do it, they say, why can't we?

And so we would be ill advised to underestimate Russia's progress. More important, we would be foolish to ignore the potent effect of Russia's progress on the rest of the world.

Khrushchev's 7-year plan is not just an economic document; it is a political and psychological document, too. The Russians are using it as a major weapon of foreign policy, and they are getting an interested audience in all those teeming underdeveloped countries of Asia, the Middle East, Africa and even Latin America where people are searching desperately for an escape from a life of abject poverty.

Many leaders in India, Burma, Indonesia, Egypt, Iraq, and elsewhere are fascinated with what is going on in Russia, and it is hardly surprising. Those leaders are not blind to the hideous cost to humanity which the industrial revolution under communism has entailed; but they hope to avoid paying this cost.

At the same time, they know their people will have to make sacrifices if they are to grow in economic strength.

Before these people, the Russian flaunt their 7-year plan, and they get an interested audience.

For what alternative is offered in its place? What is the experience of the prosperous West that seems relevant to their dire problems?

What, they ask us, do you have to offer?

You and I know that we have plenty to offer. But have we been offering it? Have we been sharing our best qualities, our greatest talents as fully as we might have?

I do not think so—and I would like to suggest a way in which American business and American businessmen can help export to other countries one of the most precious commodities we have: managerial know-how.

For it is this talent which has contributed so greatly to America's unprecedented wealth and standard of living.

We need to export this talent because the real determinant of a country's economic progress is people.

Certainly a country with vast natural resources can develop more readily than a country with no natural resources—all other factors being the same. However, there are many examples of countries, like Indonesia, rich in natural resources, which suffer the pangs of abject poverty. Yet other countries, like Switzerland and Belgium, with extremely limited resources, have become highly industrialized and highly productive and their people enjoy high living standards.

Israel and Puerto Rico are dramatic examples of what can be done by energetic people with limited resources.

The key to economic progress is in the know-how, in the talents, in the abilities, in the training, in the experience of the people. But in most of the underdeveloped countries, especially those that have become newly-independent, there is a tragic lack of managers and operators—people who know how to do things, how to get results, how to perform.

It is not that the people of these countries lack inherent ability. There is no country in the world where one cannot find outstanding individuals. The trouble is there are so very few of them.

Training and experience take time. The process of developing know-how is tragically slow.

Under our Point Four program and other public and private efforts, tens of thousands of loyal and dedicated Americans have been living and working as advisors and consultants and teachers overseas, trying to provide the technical assistance which the underdeveloped countries so desperately need.

To these soldiers in the front line of the war against poverty, we all owe a great debt of gratitude.

Where we have failed is in making available in substantial measure America's managerial talents, America's capacity to do, to perform, to get things done.

The greatest reservoir of management talent in the entire world is in American industry. Our corporations have the men and women who know how to organize and get results, how to operate and how to manage. Far too little of this talent has been made available to the underdeveloped countries.

Here lies the greatest challenge to American business in the war against poverty—in the war for free enterprise.

As you well know, managment is not produced by any simple formula. Managers and enterpreneurs are not created ready-made by our universities. No one knows better than you that there is no substitute for practical experience.

It isn't enough for us to send advisors and consultants and experts overseas. Yes, they are tremendously valuable and make a marked contribution, but even more important is the need to make available managerial talent. In this area, only American business can meet the challenge.

Will you meet the challenge and meet it in time?

Many have said that private investment abroad can do the entire job. A combination of American capital and American know-how through private investment is highly desirable and must be given every possible encouragement. But for the long-run good of the underdeveloped countries, is this enough?

The best way to encourage free enterprise is to help build local industries, not merely branches of American firms.

In the long run, the underdeveloped countries will become developed only if their own businesses grow and expand and become stronger.

Only American business can determine whether the United States will help the underdeveloped countries secure the management they need for rapid progress. It would be well if every American corporation were to think seriously how it can contribute to meeting this challenge.

We could achieve spectacular results if we could make available hundreds or thousands of management technician teams who go abroad from 2 to 5 years under management contracts for the purpose of actually running locally owned business. Such a program could result in increasing output, in raising living standards, in brightening American prestige and in thwarting expansion of communism.

Who can doubt that American business can beat the Communists in helping the underdeveloped countries, if it is willing to make the effort?

By making the effort, I do not mean sending only retired people, and adventurous youngsters who have the zeal but not the experience and maturity to be effective. We must make available some of our best people in their most productive years, and they must stay on the scene long enough to show the local business community how to manage and how to run enterprises.

Simultaneously, people from the developing countries must be brought to America and given opportunities to work within our corporations, alongside good management personnel.

Our Government can help induce individuals and companies to participate in such a program. We now provide tax exemption up to $20,000 a year for Americans who are abroad 18 months or more. To lift this upper earnings limit, would be a small price to pay for the certain fruits of lending our managerial talents to those who need them most.

There are other ways our Government might join hands with business in a joint endeavor. Government might make up the difference between what a local enterprise could pay an American executive and the salary he has been getting. Government might also provide technical assistance funds to dollar-starved countries to facilitate the exporting of executives.

Many countries might be induced to provide local tax exemption for such management teams so that there would be opportunities for large personal savings, thus affording attractive financial rewards.

Of course, in order for American corporations to induce their best people to take these assignments, the companies would have to protect seniority rights. But there is nothing novel about this. We did it for the men who went to fight in the hot war after Pearl Harbor. Why shouldn't we do the same for those who are willing to fight in the front lines of a war just as urgent and just as important to our survival: the cold war against communism?

You should not overlook the possibility that your own management people might learn something from working abroad, and be all the more valuable when they return. After all, we do not have all the knowledge, and we can learn as well as teach.

What I am suggesting is that American business create its own point 4 program.

What I am suggesting is that American business get into the business of exporting free enterprise to other countries—in the form of that greatest of American geniuses—our managerial talent.

And I can think of no more fitting organization than your own to take the leadership in implementing this point 4 program for American business.

What I am suggesting makes good humanitarian sense—and that alone is a good reason for undertaking it.

But it also makes good business sense, in the long run, for America.

You, as businessmen, know that good customers mean good business. Our own economy has grown in large measure because we have had expanded purchasing power and larger markets for our goods.

The same is true of the world markets. As we help underdeveloped countries to grow and prosper, they will become not competitors, but customers for American products.

Of course, there will be some added competition. But when world trade expands, America and her business community are bound to benefit. And our world trade will expand as the poor countries, with our help, grow more prosperous.

The matter of lending management to other countries will not be easy. There will be many headaches and heartaches and frustrations. But who here does not know that nothing worthwhile was ever won without sweat, hard work, and frustration?

The fight against poverty and against Communism is not going to be easy in any of its phases. But surely, in America, there are enough companies, and enough individuals, who will be willing to join in a crusade of commercial missionaries.

America must become recognized throughout the world as the leading force in this Twentieth Century war against poverty. This is a popular war. It is a moral war. It is a war that we can win.

And in winning that war for humanity, we increase the chances of winning peace and survival for ourselves, as well as for men and women and children everywhere.

Space and the Radiation Belt: A Tribute to Physicist James Van Allen

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. SCHWENGEL. Mr. Speaker, in this week's issue of Time magazine, which reached my desk yesterday, there is an excellent cover article on Dr. James Van Allen, of the State University of Iowa, and his outstanding contribution to our knowledge of outer space.

Because Dr. Van Allen is a constituent of mine and because he serves the country from his headquarters at the State University of Iowa which is noted for its development of research in many fields, I take great pride in calling this article to the attention of all Members.

I am sure that in reading it, you will be impressed with the caliber of the men who are giving as leadership in the great race of the century, and through such men as these, be assured that the outcome of this race is weighed heavily in our favor.

Under unanimous consent, I ask that the entire article be printed in the Appendix of the RECORD:

REACH INTO SPACE

At 6:45 a.m. as usual, 3-year-old Tommy, with whoops and cries of good fellowship, climbed into the bed and began to jump up and down on his father's waking form. "I like to get up early anyway," said Dr. James Alfred Van Allen philosophically, and got up. By 8:30 Dr. Van Allen, a sturdy (5 feet 8 inches, 175 pounds) figure in a sober grey suit, was climbing the steps of the limestone building that houses the physics department of the State University of Iowa in Iowa City. The janitor waved casually, called "Hi, Van." The United State's foremost space scientist waved back and went on to his office and its clutter of models—rockets, satellites, nose cones and other esoteric objects. "I'm here now; you can start paying me," he grinned at his secretary, Agnes Costello, and disappeared into his inner office to prepare for his regular 10:30 lecture.

On his way, he glanced with brief distaste at a specially installed Teletype; at any moment it might clatter out an urgent message—from the Pentagon, summoning him to a conference in Washington; from the National Aeronautics and Space Adminisration, asking his views on the instrumentation of a new moon shoot. But this morning he was not molested; he emerged 2 hours later, notes in hand, and headed for his classroom. For 50 minutes Van Allen lectured to Iowa undergraduates on the theory of transformers, then quipped: "All this is very good in theory, but in practice, you take a piece of iron, wind a wire around it, then plug the wire in. The core gets hot, the wires smoke, and the fuse blows. So you see, there are practical limitations to theory."

TAPES AND PINK SOAP

First chance that offered, Van Allen ducked down to the basement. There, in an area that was originally used for storage, is the most famed space-instrument laboratory in the United States. The walls have turned a dingy yellow; the ceilings and walls are laced with pipes and conduits. In one room were stacks upon stacks of tape recordings of satellite data, neatly sorted according to tracking station—Singapore, Ibadan, Lima, Heidelberg. In another, students pored over the squiggly lines that are man's first clues to the geography of outer space. Other students tested electrical components no bigger than grains of rice, soldering them together with hair-thin wires, and carefully fitting them into assemblies.

In a cluttered room that was once a hallway, Van Allen checked over a tangle of small, glittering electrical parts weighing a pound or so, which might be a transmitter designed to broadcast its voice over thousands of miles of empty space. Near it was what looked like a cylinder of dirty pink soap. It was plastic foam, encasing apparatus that might be destined to orbit the sun until the end of the solar system. Puffing on a battered pipe, Van Allen peered, commented, sketched an idea for a new circuit, then was summoned to take a long-distance call from the Army's rocket lab in Huntsville, Ala. So the day began.

MAJESTIC FEATURE

In the race into space, the Russians can claim bigger satellites and more powerful rockets. If the United States can retort that it has a big lead in scientific achievement, the man most responsible is James Van Allen, whose instruments, designed and largely constructed in his basement laboratory, brought back from space discoveries the Russians never made.

But Van Allen never expected to find himself, at 44, a key figure in the cold war's competition for prestige. He is and always has been, by inclination and intent, a "pure" scientist. His real interest is in cosmic rays. He started being curious about cosmic rays back in the prewar days when they were considered as wildly abstruse and impractical as a study of the mating habits of sea horses or the inner structure of a grasshopper's brain. But today he can tip back his head and look at the sky. Beyond its outermost blue are the world-encompassing belts of fierce radiation that bear his name. No human name has ever been given to a more majectic feature of the planet Earth.

LIFE WITH FATHER

While tops in a science that is thick with foreign accents, Jim Van Allen is about as American as a man can be. Born in 1914 at Mount Pleasant, a county-seat town in southeastern Iowa, he was the second son of a successful lawyer, Alfred Van Allen, whose Dutch ancestors came to the United States soon after the Revolution. His mother was raised on an Iowa farm.

Father Alfred did not believe in play or leisure. He thought that everyone should be

doing something useful every waking hour. Jim was sent to school when he was 4 years old. When not at school, he and his three brothers were set to chopping wood and household chores.

Mealtime conversation was expected to be serious. On winter evenings, Father often read to the family from "The Book of Knowledge." The boys were sometimes allowed to play baseball or football in their own yard, but their father banned their participation in school athletics—"Circus games," snorted Father. After the boys suffered a long series of illnesses, Father took steps. Winter or summer, the windows of the family car were always kept shut to exclude drafts.

Jim was smaller than most boys of his age, and his early sicknesses made him weak and shy. Unable to compete in any physical way, he threw himself into schoolwork with burning enthusiasm, getting top marks in all his subjects. Not eager to let him get too far away, his parents sent him to Iowa Wesleyan, a small college right in Mount Pleasant. There he quickly attracted the attention of Prof. Thomas Poulter, a first-class physicist.

Working eargerly with Professor Poulter, Jim tracked meteors, made a magnetic survey of Mount Pleasant, and measured cosmic rays at ground level. He moved on to the State University of Iowa in nearby Iowa City, to do postgraduate work in nuclear physics. In 1939 he got a job with the Carnegie Institution of Washington.

RADIO FOR CANNON

For a while, he did basic physical research on terrestial magnetism, which influences cosmic rays. But World War II had begun, and weapons came first. Van Allen was put to work on the development of proximity fuses, which called for something almost inconceivable in 1940: a radio transmitter-receiver that could stand being fired out of a cannon in the nose of a shell. At the Johns Hopkins Applied Physics Laboratory in Silver Spring, Md., just outside Washington, Van Allen was a junior scientist in the proximity fuse business, but it made him an expert on how to pack complex circuitry into a small space and make it rugged enough to survive abuse. Working closely with the Navy, Van Allen was commissioned as a lieutenant, junior grade, made two trips to the Pacific to instruct gunnery officers in the use of proximity fuses.

DIRTY LOOKS

Back at Silver Spring he was driving to work one morning when he stopped at a traffic light behind a young woman driver. The light turned green; her car went unexpectedly into reverse. Bumpers met with a small crash. Jim, a noncombative man, pulled around the flustered girl and gave her a slightly disdainful look. A few minutes later, walking into the laboratory, he met the same girl.

"Who do you think you are?" she demanded. "Giving me dirty looks."

Jim blushed and retreated without a word, but he soon found out that her name was Abigail Fithian Halsey II. She worked as a mathematician at the laboratory, lived in Bethesda with four Navy WAVE'S, and would be delighted to go bicycling with him.

"When he came to see me," Abbie Van Allen says now, "he dreaded having to talk to my roommates while he waited for me. He would walk in, look wildly around for a magazine, and bury his face in it just to avoid making small talk. When we finally decided to get married, the girls thought I was crazy. They asked: "How can you marry a guy like that?"

WHITE SANDS

Jim and Abbie were married in the fall of 1945 and settled down in suburban Silver Spring. With war's end, Van Allen had no further interest in fuses or weapons. He wanted to get back to studying cosmic rays. He learned that the U.S. Army had captured nearly 100 German V–2s and was planning to fire them at White Sands Proving Ground, N. Mex., with sand instead of explosives in their warheads. Van Allen, along with several other scientists, was offered the privilege of substituting instruments for the sand.

Until then, cosmic rays had been measured only to 80,000 feet by balloon. The V–2s carried cosmic-ray instruments up 100 miles, measuring cosmic rays and making Van Allen, incidentally, an authority on instrumentation of rockets. They also brought him into close contact with nearly all of the pioneer U.S. rocketmen, especially William Pickering, soon to head the Army's Jet Propulsion Laboratory at Pasadena.

By this time, the sky scientist from Iowa had taken on a deceptive skill in threading his way through Washington's bureaucratic jungles. When the supply of captured V–2s was about to run out, Van Allen proposed and drew specifications for a cheaper rocket—the Aerobee—and headed the committee that talked the Government into getting it produced. Next, he got the Navy to provide him a ship from which he shot Aerobees at cosmic rays from the Magnetic Equator off Peru to the Gulf of Alaska.

PEDIGREED BULL

In 1950 came an event that began small but was to affect the future of Van Allen and all his countrymen. In March, British physicist Sidney Chapman dropped in on Van Allen, remarked that he would like to meet other scientists in the Washington area. Van Allen got on the phone, soon gathered eight or ten top scientists in the living room of his small brick house. "It was what you might call a pedigreed bull session," he says.

The talk turned to geophysics and the two international polar years that had enlisted the world's leading nations to study the Arctice and Antarctic regions in 1882 and 1932. Someone suggested that with the development of new tools such as rockets, radar, and computers, the time was ripe for a worldwide geophysical year. The other men were enthusiastic, and their enthusiasm spread around the world from Washington.

The International Geophysical Year (1957–58) stimulated the U.S. Government to promise earth satellites as geophysical tools. The Soviet Government countered by rushing its sputniks into orbit. The race into space may be said to have started in Van Allen's living room that evening in 1950.

Almost simultaneously, the Applied Physics Laboratory tried to assign Van Allen to something more practical than cosmic rays—such as heading a program to develop a better proximity fuse. Van Allen was not interested. The State University of Iowa offered him a job as head of the physics department. He accepted.

BALLOONS OVER THE STADIUM

Back in Iowa with his wife and two young children, Van Allen was also back on a slim academic budget. With a tiny $4,000 grant from the Research Corp., he set students to launching cheap plastic balloons from the running track in the stadium. After V–2s and Aerobees, it was a sad comedown.

Then he remembered a remark made by Lt. Comdr. Lee Lewis during an Aerobee firing off the coast of Peru. "Wouldn't it be easier," Lewis had asked, "to lift a rocket on a balloon above most of the atmosphere and then fire it?" No one had ever tried it, but after a little figuring, Van Allen decided that the trick should work. He wrangled small, cheap rockets through his friend Pickering at the Jet Propulsion Lab; a balloon-rocket combination to carry an 8-pound payload of instruments 75 miles up was put together for a mere $750.

Van Allen's Rockoons could not be fired in Iowa for fear that the spent rockets would spike an Iowan or his house. Turning his oldtime mesmerism on official Washington, Van Allen found that it still had not lost its effectiveness. The Coast agreed to put him and his Rockoons aboard the icebreaker *Eastwind* bound for Greenland, where cosmic rays are deflected toward the magnetic pole by the earth's magnetic field.

ORANGE-JUICE VICTORY

The first balloon rose properly to 70,000 feet, but the rocket hanging under it did not fire. The second Rockoon behaved in the same maddening way. On the theory that extreme cold at high altitude might have stopped the clockwork supposed to ignite the rockets, Van Allen heated cans of orange juice, snuggled them into the third Rockoon's gondola, and wrapped the whole business in insulation. The rocket fired.

In 1953, Van Allen was temporarily diverted from Rockoons to a project at Princeton University to develop thermonuclear power. But his Iowa graduate students carried on the Rockoon firings off the coast of Newfoundland. One day the students put in an excited call to Van Allen in Princeton. The cosmic rays near Newfoundland, the students reported, seemed to rise to incredibly high intensity above 30 miles.

Obviously, concluded Van Allen, "there was something wild and woolly going on." The aurora borealis is most intense at latitudes north of Newfoundland. It was believed to be caused by charged particles of some sort raining down from space and concentrated around the magnetic North Pole by the earth's magnetic field. Though Van Allen could not guess it then, the cosmic rays detected by his Rockoons were directly related to the northern lights, and were really a fringe of the worldwide radiation belt that he was to discover 5 years later.

SATELLITES NEXT

Rockoons had carried him as high as they could go. Van Allen began to take an interest in satellites. Since his White Sands days, he had kept an eye on U.S. rocketry. His association with the Navy had been long and pleasant, but he became an outspoken advocate of the Army's Jupiter-C, whose high-speed stages had been designed by Pickering's Jet Propulsion Laboratory. "I made rather a pest of myself around Washington about Jupiter," he admits. But the Pentagon shunted Jupiter aside in favor of the Navy's Vanguard.

Despite his candid partisanship, Van Allen's status as the best instrumentator of space was so indisputable by this time that he found himself commissioned to provide Vanguard's instrumentation. He dutifully set to work. But he took the precaution of finding out just what the Army had planned for its banned Explorer I satellite. The Army informed him that it had in mind a cylinder 6 inches in diameter. By no coincidence at all, the instrument package Van Allen produced for the 21-inch Vanguard sphere proved to be cylindrical, and just 5½ inches in diameter.

Actual production was in the hands of husky young (31) George Ludwig, a graduate student who has proved himself a mechanical genius in the painstaking new art of space instrumentation. Each ounce counts, because it costs many thousands of dollars to put each ounce into orbit. The tiny, buglike components must stand enormous "g" forces, vibration and spin, survive violent changes of temperature.

Ludwig sets up a rough, breadboard model of the circuitry with real transistors, resistors, and other components. When the circuits check out, the components are mounted on plastic disks. A typical package may contain several hundred diodes, transistors and resistors. All open space among the spidery components is usually filled with

foamed plastic. Then the whole apparatus is dropped, shaken, bounced, heated, and cooled.

FIRST BEEP

With this work well underway and no satellite launching expected for some time, Van Allen was not a man to sit around idly. He got aboard the Navy icebreaker *Glacier* and headed for Antarctica to measure cosmic rays near the South Magnetic Pole. On October 4, when the *Glacier* was wallowing southward across the Pacific, a report that the Russians had launched a satellite came over the ship's radio. Van Allen went to work on the *Glacier's* 20-mc. receiver, and within half an hour it yielded vigorous beeping sounds. That was Sputnik I. The Russians had won the first heat in the race into space.

The free world was crying for U.S. satellite action. But the Vanguard program still sputtered and faltered. Suddenly, Van Allen got a radio message from Pickering. The Army had at last got permission to try its satellite. He asked if Van Allen would approve transfer of his instruments to Jupiter-C.

Van Allen instantly cabled his approval, wired Ludwig to pack up all his apparatus and rush it to the Jet Propulsion Laboratory at Pasadena. Then he flew back from New Zealand. In Pasadena, he and Pickering decided that the payload—basically a Geiger counter to detect cosmic rays in space and two incredibly light but powerful radio transmitters—would have to be modified in one respect. It contained a miniature tape recorder to record the cosmic-ray data during a trip around the earth and then transmit it quickly when triggered by a coded signal sent up from the ground. Designed for Vanguard, this elegant apparatus would not work in Explorer I, which would spin too fast. So it was removed, requiring Explorer I to broadcast continuously.

MYSTERIOUS SILENCE

On January 31, 1958, a Jupiter-C, fired from Cape Canaveral, put Explorer I into a fine orbit. With two massive sputniks to compete with, the United States pinned its hopes for outdoing the Russians on the superiority of Van Allen's instruments.

Van Allen waited in Iowa City. In a few days, long, wide paper tapes with wiggly red pen lines began to arrive from monitoring stations in the United States. The cosmic-ray count that they showed was not unusual. But after 2 or 3 weeks, tapes begand to dribble in from stations in South America. "As soon as we started looking at them, we saw the most remarkable situation." Over the United States, where the satellite swooped low, the rate was about 40 counts a second. But over the equatorial region, where the satellite was rising to its highest point, the counting rates were much smaller. During some 2-minute stretches there were no counts at all. Says Van Allen: "My first thought was, 'Great guns. Something's gone wrong with the apparatus.' But then we got later North American tapes and everything seemed normal again."

All sorts of suggestions were made to explain the Explorer's peculiar behavior over the equatorial region. Perhaps a weird magnetic field was shunting all cosmic rays away from the equator. Maybe the alternation of sunlight and shade was affecting the Geiger counter. No explanation really worked.

Explorer II splashed into the Atlantic early in March, but Explorer III was launched successfully on March 26. It contained a modified version of Ludwig's tape recorder—an amazing little instrument full of tiny, glittering parts that weighed only 8 ounces. If it worked, it would gush out in 5 seconds all the cosmic-ray data from an entire orbit.

On March 28 Van Allen got the first tape and sat up all night poring over it. The cosmic-ray count seemed reasonable as long as the bird was at low altitude. When it climbed upward, the rate increased rapidly. Then, for some unaccountable reason, the count fell to nothing, stayed at nothing until the bird was back at lower altitude again.

SULKING TUBE

Mystified, Van Allen hurried back to Iowa, where his assistants, Drs. Carl McIlwain and Ernest Ray, were puzzling over a copy of the same tape. The three almost simultaneously hit a solution. The high-flying Geiger tube was being swamped by too heavy a dose of some kind of radiation. This is a weakness of Geiger tubes. If required to count too many times a second, they sulk and do not count at all.

The amazing conclusion: the earth was surrounded by a belt of intense radiation, apparently trapped by earth's magnetic field. It might be deadly enough to interfere seriously with man's attempt to fly out into space.

The announcement caused an embarrassed flurry in high Washington circles. Van Allen learned that, at the suggestion of Physicist Nicholas Christofilos, of Livermore Laboratory, the Department of Defense was planning to launch Project Argus, in which three atom bombs would be rocketed above the atmosphere and exploded (Time, Mar. 30). The high-speed electrons' release were expected to be shunted around the earth by the earth's magnetic field. Van Allen's discovery that nature had already provided such electrons was a considerable shock.

With his fine-honed skill in maneuvering, Van Allen took advantage of Project Argus to advance his own studies. He proposed the launching of a new satellite in a more north-and-south orbit than any of its predecessors. Moving in this way, he explained, it would better observe the results of Project Argus. Incidentally, it would also give him coverage of the natural radiation belt in latitudes that earlier satellites had not reached.

Explorer IV went into a 51° orbit on July 26. It carried sophisticated instruments that Van Allen's laboratory had provided to distinguish between "hard" and "soft" radiation, and shielded Geiger counters designed to count radiation intensity at extremely high levels without blacking out. On August 27 the first Argus shot sent man-made electrons zigzagging around the earth. The satellite cut through them back and forth, making about 250 passes before its batteries were exhausted on September 20.

BEHIND THE NORTHERN LIGHTS

When Van Allen made his first open report on Explorer IV, he had to avoid all mention of Argus because of military security. But he had plenty to tell about the natural radiation. He could say with assurance that a human satellite crew exposed to maximum Van Allen radiation for a few days would surely die. It looked as if the fierce particles, which slam close to the earth in the auroral regions, were the explanation of the ancient mystery of the northern lights.

None of the Russians' three massive sputniks had reported the Van Allen radiation. One theory is that the Russians outsmarted themselves by refusing to tell the outside world how to interpret signals from their satellites. Since only the low parts of the sputnik orbits were over Soviet territory, Russian scientists never got reports from high altitudes. If any of the sputniks carried tape recorders, they apparently did not work.

Another theory is that the sputniks' Geiger tubes were blacked out near apogee by Van Allen radiation, and that the Russian scientists did not know how to interpret this odd behavior. The live dog carried in Sputnik II died in about a week, but the Russians have not told whether it was affected by radiation sickness. Very likely they do not know.

THE SLOT

Van Allen still knew only the lower parts of the overhead radiation. He yearned to go higher still. He began negotiating to get his instruments into the projected moon probes. When in the fall of 1958 Pioneer I rose to 71,000 miles and fell back, Van Allen had his instruments aboard. But for once, they did not work well. Pioneer II flopped, but in December Pioneer III carried his instruments up to 63,000 miles, broadcasting all the way.

From Pioneer III, Van Allen discovered that there are not one but two radiation belts, with a low-intensity slot between them. Studying the tapes, he concluded that the outer belt is made of weaker particles, presumably protons and electrons that come from the sun. At its outer edges, it curves downward in "horns" that hit the atmosphere near the magnetic poles. These horns were what produced the northern lights.

Van Allen's conclusions were confirmed when Pioneer IV soared past the moon and into orbit around the sun. Its tiny, 1-pound radio transmitter, which was followed by Jet Projulsion Laboratory's receiving stations for 400,000 miles, reported that the outer radiation belt does not die off evenly. Beyond it are irregular bursts of radiation that may be clouds of electrons and protons arriving fresh from the sun. Such invisible clouds in space may prove serious hazards for future deep-space voyagers.

Van Allen summed up his conclusions: "Apparently, something happens on the sun. It sends out a burst of gases. The reservoirs above our earth shake like a bowl of jelly. The radiation droozles out at the ends and makes the auroral displays at the North and South Poles."

HOLE IN SPACE

Widely popular in a profession full of jealousies, Van Allen has a cheerful scorn for his new-found importance. Recently, he told a solemn gathering of scientists, he had been asked for a definition of space. "After a vast research program, which depended very heavily upon the use of a number of highspeed computers, I am pleased to offer you the result: 'Space is that in which everything else is.' In other words, 'Space is the hole that we are in.'"

During recurring times of crisis he may reduce his lunch to an apple or skip it altogether, but he still finds time to fly kites with his four children ("a little high-altitude research," he calls it) likes to work in his basement workshop. His most recent achievement: a model covered wagon big enough to hold his 9-year-old daughter and friends. For the brilliant assistants and students who have gathered around him he has full appreciation. "I am a sort of scoutmaster around here," he says mildly.

Among Van Allen's immediate interests is a 20-pound satellite scheduled for launching next fall. If all goes well, it will settle into a slim, elliptical orbit, soaring out 6 earth radii (24,000 miles) at apogee. It should stay up for hundreds of years, and it will have solar batteries to keep its radio voices alive for a long time. Its duty will be to report continuously on the radiation belt, study how it is affected by sunspots and other solar eruptions. Its fluctuations may have important effects on the earth's weather.

NEXT: VENUS

Like most other scientists, Van Allen is in no hurry to put a man into space. "A man is a fabulous nuisance in space right now," he says. "He's not worth all the cost of putting him up there and keeping him comfortable and working. Instruments are lighter, tougher, and less demanding, are senstive to many things that human senses ignore. They

already have memories (tape recorders) and they can carry computers that will permit them to make judgments. An instrument-manned Venus probe should be able to make observations and adjust its course by firing small rockets when it nears its goal. Perhaps it will round Venus and then put itself into a back-to-earth trajectory.

Such a vehicle would have important military connotations. But James Van Allen, a pure scientist turned spaceman, sees such projects in simpler terms. Say he: "The satellite is a natural extension of rockets, which are natural extensions of planes and balloons, which are natural extensions of man's climbing trees and mountains in order to get up higher and thus have a better view."

Liberia Speaks on African Freedom Day

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast statement of Dr. William V. S. Tubman, President of Liberia, and the speech of the Honorable J. Rudolph Grimes, Acting Secretary of State, on the first African Freedom Day celebration:

BROADCAST STATEMENT BY PRESIDENT WILLIAM V. S. TUBMAN, OF LIBERIA

Fellow citizens, fellow Africans, 25 years ago there were only two independent countries, run entirely by Africans, on this vast continent of 11,600,000 square miles. Today we heartily rejoice that that number has increased to nine with the happy assurance that still more are coming into independence.

Africa is in the deep agony of travail; for its 220 million indigenous peoples are on the great march toward independence and self-determination. Confident of their native abilities and rich traditions, they are smashing the theory of some early historians that they were created to be the hewers of wood and drawers of water for a more favored race; or the servant of servants to the descendants of Shem and Japheth because they are of the line of Ham, the cursed son of Noah.

The history of this continent contains some dark and dismal chapters. It is basically a history of conquest and exploitation. For centuries its territories were plundered and raided. Its peoples were plucked from their homes, taken in chains to ports of departure, caged like wild animals, carried aboard ships and transported abroad where they were sold as chattels in the slave markets of the world. Meanwhile, here at home, almost our entire continent with its rich, virgin lands and its vast natural resources, was partitioned among the colonizing powers.

Despite these facts, it cannot be denied that Africa is still the home of some of the greatest engineering feats of our time; or that Africa, in all probability, is the cradle of humanity. Its civilization and culture have had an enduring influence on many nations and peoples and its lands are still laden with an astounding portion of the riches of nature. These are some of the powerful factors that have sustained and strengthened us and our brethren in our determined quest for freedom and independence to develop ourselves and our resources for the purpose of contributing substantially toward the peace and prosperity of the world.

To our great delight a new epoch has dawned on this continent. The old concept of divide and rule is rapidly vanishing in the face of the floodtide of nationalism and freedom. New nations are emerging throughout this great and beloved continent. This is indeed gratifying; for we of Liberia are convinced that if world peace and prosperity and brotherhood are to be built upon a solid foundation, Africa cannot continue to remain half slave and half free. Africa must be totally free.

It was because of this firm conviction that Liberia wholeheartedly participated in and fully supported the declaration of the eight independent African states which met in Accra last April to set aside and celebrate April 15 of each year as Africa Freedom Day. In these three words are embodied the history, the aspirations, and the soul of the peoples of this continent. Africa Freedom Day is therefore a glorious day for Africa and Africans everywhere—a day of freedom from the miseries and indignities of the past, a day of blessing for the present, and hope for the future.

Among our people there is concrete evidence of the awareness of our obligations to our fellow Africans who are still laboring under the yoke of social, political, and economic servitude. We are called upon to utilize our finest efforts to relieve them of this unpleasant situation, preferably not by dint of force, but by an insistent and persistent appeal to reason, justice, and decency—an appeal to the god of democracy and human dignity.

Liberia's contributions to the liberation of Africa have been made in numerous forms. Long before the Conference of Independent African States, even in the teeth of bitter opposition by more powerful nations, we upheld the inalienable rights of the peoples of this continent to be free and independent. Even before the present upsurge of African nationalism, Liberia, as a charter member state of the United Nations, supported and in some instances spearheaded every movement to free the whole of Africa from the bond of servitude and the state of dependency.

We have consistently voted for the admission into the United Nations of every independent African state, including Morocco, Tunisia, Libya, The Sudan, Ghana, and Guinea. And we are proud to mention that we have never for one split second regretted our action, because we are now all marking together in one grand phalanx of brotherhood carrying the banner of freedom, justice, and equality to our other African brethren.

On this historic occasion I strongly call upon our sister independent nations of Africa, I call upon those colonial powers still holding possessions on this continent; I call upon those nations and peoples who are ardent advocates and believers in the sacred principles of democracy, freedom, and self-determination to come together around a conference table for the purpose of discussing and ending, once and for all time, the bloodshed, mass destruction, and inhumane practices now being perpetrated in some parts of Africa. I wish to register the following slogan upon the minds of us all: "Let there be no strife between us for we be brethren."

Finally, I revere old mother Africa, long the land of oppression, murder, and enslavement. I salute and glorify her peoples for their undaunted courage, perspicacity, tenacity and endurance; for their onward and courageous march toward freedom and nationhood which is gaining more and more momentum as time marches on. I feel confident that the march of freedom will continue in ever-increasing velocity until, like the other continents and peoples of the earth, we shall enjoy the great blessings of freedom, independence and equality.

SPEECH OF THE HONORABLE J. RUDOLPH GRIMES, ACTING SECRETARY OF STATE, ON THE OCCASION OF THE FIRST AFRICA FREEDOM DAY CELEBRATION

Mr. President, distinguished guests, fellow citizens, fellow Africans, 1 year ago today the Conference of Independent African States was convened in Accra, Ghana. It was the first such conference held in Africa. The occurrence was memorable.

The importance which we, Liberians, and our Government attached to such a significant occasion was evidenced by the fact that the head of state of Liberia was the only head of state among the eight countries which participated to be present at such an auspicious conference.

Many were the subjects of mutual interest which were discussed. One of them was the future of the dependent territories of Africa.

The Conference recognized that the existence of colonialism in any shape or form was a threat to the security and independence of the African States that the problems and future of the dependent territories in Africa are the responsibility of all members of the United Nations and in particular of the Independent African States and the exclusive concern of the Colonial powers and decided, among other things, that the 15th of April every year be celebrated as Africa Freedom Day thereby enabling us to focus the conscience of the world on the plight of our brothers who have not yet been permitted to breathe the air of freedom.

Significantly enough we began the observance of this day with a service of prayer and thanksgiving last Sunday to the God of our fathers, prayer for the condition and the eventual freedom of all Africans, and thanksgiving for Africans who now enjoy the benefits of freedom as well as those who will soon enjoy those benefits. Thus we adhered to the example set for us by our forefathers for, when they declared the independence of Liberia, they made an appeal to the nations of christendom "in the name of the great God, our common creator and our common judge."

Liberia has always maintained that all men have the inherent and natural right to conduct their own affairs. On July 26, 1847, we said in our declaration of independence:

"We recognize in all men certain natural and inalienable rights; among these are life, liberty, and the right to acquire, possess, enjoy, and defend property. By the practice and consent of men in all ages, some system or form of government is proven to be necessary to exercise, enjoy, and secure these rights and every people has a right to institute a government and to choose and adopt that system or form of it, which, in their opinion, will most effectually accomplish these objects, and secure their happiness, which does not interfere with the just rights of others. The right, therefore, to institute government and all the powers necessary to conduct it is an inalienable right, and cannot be resisted without the grossest injustice."

This principle has been a guidepost of Liberian policy until now. On January 7, 1952, it was reaffirmed by President William V. S. Tubman in these words:

"With the firm belief and steadfast faith in the axiom that all men are created free and independent, and therefore entitled to the benefits and privileges of self-determination and the natural right to conduct their own political affairs, we shall seek to cooperate with all democratic and freedom-loving peoples and nations, through the aegis of the United Nations Organization, to adopt and speedily prosecute such adequate and

effective measures whereby the teeming millions of mankind, inhabiting most of the underdeveloped areas of the world may be able to do so in common with us in the shortest possible period of time."

Liberia's position in Africa is unique and peculiar. For over a hundred years it was the only Republic in Africa. It is the only country in Africa that has not had the experience of tutelage. We have preferred the difficult but honorable path of freedom and independence to the advantages of enforced tutelage.

A century ago our forefathers kindled a flame of freedom. Since then we have tried to keep it burning. It is with a great deal of pride and humility that we have watched this flame spread and we feel certain that it cannot now, nor ever will be extinguished on this continent.

During that century we passed through the predatory expansionist period of colonialism inexperienced in Government when we started, lacking the capital necessary to develop our country, unable to provide for all our necessities, we nevertheless stood boldly, preserved courageously and overcame the malicious propaganda and other indignities to which we have been subjected mainly because our very existence was interpreted as a threat to the continued colonial domination of our brethren.

We were deprived of our territories and our race was stigmatized as being incapable of self-government. All over the continent European Powers were seizing various portions of territory and it appeared as if there would not remain a foot of land in Africa that Africans could call their own.

There was then no tribunal nor forum to which we could appeal for redress of our grievances or for the justice of our cause. As a matter of fact when we did make an appeal to the civilized nations of the world on the basis of international justice and morality our appeal fell on deaf ears.

In spite of all these difficulties Liberia dauntlessly maintained her flame of freedom in Africa. The success of our efforts—call it a wonder if you wish—is a great credit to our race and an irrefutable attestation of the fact that the African is capable of governing himself.

Today Africa stands on the verge of a new day. Africa is in labor and free nations are being born.

Liberia, which for more than a century stood alone, which for a long period has borne the brunt of the malicious and slanderous propaganda in the attempt for others to justify the subjugation and domination of our brethren and which has been the popular object of ridicule and villification, is happy that she no longer stands alone. Liberia is pleased that she has kept faith by maintaining and upholding the torch of freedom. She is certain that the new nations of Africa have been given birth in a new age where they can tackle their immediate problems, and declares that she bears no rancor to her former detractors.

Liberia has always been interested in the welfare and well-being of other countries in Africa. Our record speaks for itself. But we have also advocated reasonableness and tolerance to achieve the total liberation of this continent.

This approach, which has sometimes been misunderstood and misinterpreted, is probably due to the fact that during the period of our development, our continued existence has depended not on the strength or potential of our armed might, but on our reliance on divine providence, the justice of our cause and the ingenuity and tact which we used to avoid the pitfalls and traps which were set to carry us into servitude.

The diplomacy of might makes right has not yet become a concept of the past, although we wish that this was so.

In this new day our success in Africa lies in the justice and reasonableness of our cause, in mutual trust and confidence, in mutual respect for each other, in tolerance, in close cooperation with each other and with the most developed peoples and nations in order that our human and natural resources might be developed not only to our own advantage but also to the advantage of the rest of the world.

It is because of our desire to pursue these objectives in an atmosphere of equality that on January 26, 1959, the President announced his views on the manner in which unity in Africa can be created—the Associated States of Africa.

That policy statement indicated a positive approach to the problem of African unity and does not show, as some critics have alleged, that Liberia is dragging its feet on African problems.

Moreover, it is not negative and does not mean that Liberia is opposed to federation. What Liberia says is let us get together and cooperate immediately in those fields where cooperation can be assured now and after this has been accomplished it will be possible to determine whether any other form of union is easily attainable or absolutely necessary.

In addition, we have indicated that we welcome other views on this all important subject and then we will be prepared to discuss all views on African unity and join in developing that in which there is the greater measure of agreement.

But let us turn for a moment to freedom. What is it? It has been defined as absence of restraint and intent to control the means of individual or group advancement. Used in a private context it means an individual right to go to bed when you wish, to get up when you like, to eat and drink and read what you choose, to say across your port or your tea whatever occurs to you at the moment, and to earn your living as best you may. Used in its political context it means liberty—the right of a group of individuals to choose that form of government which they desire, to be free from political servitude or domination by alien groups.

That is the freedom which led Patrick Henry on March 28, 1775, to say before the Virginia Convention of Delegates, "Is life so dear, or peace so sweet as to be purchased at the price of chains and slavery? Forbid it, Almighty God. I know not what course others may take; but as for me, give me liberty or give me death."

That is the spirit which has now gripped the Africans and nothing can stop all Africa from becoming free.

The restraint which has been placed on the African in his own home has been unjust. We have been told that this was for the purpose of training the African. All of the schools we have attended have prescribed courses of study which permit entrants to graduate and to go out on their own. But the period of political tutelage has seemed to be endless.

The restraint which was placed on the African has led to the strange form of racism—a racism which cuts deeply into human relations and creates prejudices that make political outlaws of minorities. This is bad enough. But as developed in Africa, it has become even more invidious and iniquitous for the racism in Africa has tended to make political outlaws of the African majorities.

Are Africans in their own homes to be denied the right and privilege of using their own land or of doing the things that they wish, or of having the governments they desire to choose?

It will not be possible for Africans to establish an African state in Europe, America, or Asia, nor will it be possible for Europeans, Americans, or Asians to establish European, American, or Asian states in Africa. This we should bear in mind. Cooperation between all of us is desirable and necessary, but domination by alien minorities in Africa cannot be expected to continue unchallenged.

On the subject of the interdependence of nations, President Tubman, in his acceptance speech before the True Whig Party Convention in Monrovia on January 23, 1959, said the following:

"We need to think and act with calm and poise; not in excitement, anger, hatred, and revenge because Africa and Africans need the friendship, good will, assistance, and help of the peoples of America, Europe, Asia, and of all the isles of the seas. If we are observant we would note from the attitude of the peoples of the other continents that they seem to be seeking our friendship not because they need it any more than we do theirs but because they realize the interdependence of all nations, races, and peoples."

On a day such as this the first celebration of Africa Freedom Day in the history of the world we should seize the occasion to reflect on the blessings and benefits of freedom, resolve to see that they are extended to all Africa as quickly as possible, and pledge ourselves to mutual cooperation with all African states and all states of the world for the promotion of peace and prosperity and better understanding.

Let us, therefore, look to the future of Africa in total freedom with faith, with hope, and with courage. Let us work together to solve the problems which beset us. Let us assume the reponsibilities which are ours. Let us rededicate ourselves to the great and just cause of freedom in Africa.

Tax Reform

EXTENSION OF REMARKS
OF
HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. KEITH. Mr. Speaker, through the efforts of the Greater New Bedford Junior Chamber of Commerce, more than 12,000 persons residing in the Ninth Massachusetts District have spoken with singleness of voice and purpose in an urgent appeal to the Congress to effect a program of tax reform that would stimulate and stabilize the economy of the Nation.

The petition signed by these 12,000 citizens, and the public spirit this monumental task represents, are most laudable, and deserve immediate attention and action. I resolutely endorse the objectives set forth in this petition, and call upon my colleagues on both sides of the aisle to dedicate or rededicate themselves to these objectives.

In order that the Jaycees' case be accurately stated and clearly understood, may I quote the text of this petition:

We, the undersigned, citizens • • • of Massachusetts do hereby petition and recommend to the Congress of the United States and to other appropriate legislative bodies that they recognize the necessity for reducing or removing present obstacles to the expansion and growth of the economy so that new businesses and more jobs will be created which will result in an even higher standard of living and ever greater national abundance. To this end, the burden of Government expenditures should be reduced to the lowest practicable level and a program of tax reform should be instituted which would

result, over a reasonable period of time and on an orderly basis, in a tax rate structure—particularly in regard to the Federal income tax—which would be moderate at all levels and permit the maximum development of the Nation's economic potential.

Mr. Speaker, I recognize that the United States is carrying heavy and necessary commitments in this crucial cold war period, and that we are deep in national debt. It is vitally essential that we continue to meet these obligations and take a more responsible approach to reducing and finally eliminating our national debt.

Nevertheless, there is soundness in the junior chamber of commerce point of view that tax reduction would spur the economy. I salute the Jaycees with the assurance of my continuing support of every reduction and reform in our tax structure that will not impair the economic health of the country. And I would like to single out for special commendation Mr. Charles E. Sharek, a member of the New Bedford Junior Chamber of Commerce, for having been selected Massachusetts' representative to the Jaycees' recent Washington conference on tax reduction. With 12,031 names on the above-quoted petition against wasteful Federal spending, collected in greater New Bedford, Mr. Sharek, chairman of the drive in that area, obtained more signatures than anyone else in the country.

As a prize he won a 3-day expense-paid trip to Washington. If we here heed the Jaycees' message, everybody will be a winner.

Mr. Speaker, this determination of my constituents to move into the arena on the side of a sound fiscal policy against irresponsible and unjustifiable waste in Federal spending is not confined to only one area. At the extreme other end of my district some 240 members of the Women's Republican Club of Norwell, Mass., which this year is celebrating its 35th anniversary, have signed a letter calling on me and other members of the legislative and executive branches of our Government to work with President Eisenhower toward achieving a balanced budget.

These appeals are not idle and meaningless gestures. They are not mere formalities. The citizens, whose chief means of being heard is through their duly elected representatives, are aroused over the trend toward further spending beyond our means. They are, as they have every right to be, insistent that we in Congress run the business of this country on a sound, businesslike basis. We are obligated not to do less.

The Fair Trade Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Columbia (Mo.) Tribune of March 31, 1959. That editorial, like all other editorial comment in the United States, describes fair trade as price-fixing legislation.

It sets forth that if this legislation is enacted the cost of living for the American people will rise as a result.

H.R. 1253 and other similar measures are not in the public interest.

If any of these measures become law citizens of the State of Missouri who have at all times refused through their State legislatures to enact such price gouging legislation will find that they will have to submit to a Federal law raising prices and fixing prices within the borders of their State, regardless of their wishes, and often in defiance of the wishes of the people of that State.

THE FAIR TRADE BILL

Missourians, especially, should welcome the stands which two Federal agencies, the Department of Justice and the Federal Trade Commission, have taken against the proposed so-called Federal fair trade law. A fair trade law, of course, is a statute which permits the manufacturer to fix the retail price at which his product may be sold and makes it a crime for any merchant to sell that product for less than the manufacturer specifies. Many States, but not Missouri, have enacted such statutes, but in at least 16 States the courts have held them unconstitutional, and the whole effort seemed for a while to have collapsed under its own weight. Many big manufacturers, who for years fought valiantly to keep consumer prices high, abandoned the cause, and free competition was restored. Then the drug store organizations and other lobby groups turned to the Congress with the idea of obtaining national legislation upon the subject. That would impose the price regulation not only on the States which have enacted it, but also upon such States as Missouri, which have clung to the free enterprise-free competition doctrine.

Amazingly there seems to be a chance that the legislation, which would stifle competition and assure high prices for the consumer to pay, may pass. It is said to have a good chance at least in the House of Representatives. It seems to be another illustration of the old adage that there are lobbies for everybody but the people, and it would seem to be a good time for Missouri residents who would like to continue doing their buying at competitive prices to tell their Representatives and Senators in Congress how they feel.

The Department of Justice has told the Congress that there is a serious question that such a law would be held constitutional, and it has pointed out the tremendous difficulties of enforcement and the further incursion of government into the control of private business. The Federal Trade Commission calls the proposal inconsistent with the free enterprise system. It would also be another step for the Federal Government into a field traditionally under State jurisdiction. Like the sales tax, the price increases which it would foster would hit the low income groups hardest. Robert A. Bicks, first assistant in the Justice Department's antitrust division, told the House Commerce committee that the proposed legislation would mean a large portion of the country's commerce would be devoid of price competition, "and price competition is the core of that competition essential to a free enterprise economy."

Proponents of the fair trade legislation have insisted that prices are not lower in free trade areas than they are in fair trade areas, but the Justice Department has conducted a survey which punctures that bit of fiddle-faddle. It studied the prices of 119 items which were available in 8 cities not covered by fair trade laws, and found that 77 of the 119, on the average, sold for prices below those imposed in fair trade cities. On those items, the survey said, consumers could effect savings of 27 percent below fair trade values. Kansas City, for instance, had 73 items available at 31 percent below fair trade prices and Dallas had 99 items at savings of 24 percent. When we liken fair trade to the sales tax, the rates of the levy seem pretty high.

The fair trade bill, incidentally, is sponsored by Representative HARRIS of Arkansas. He is the same Representative who is working so tirelessly to keep pay television from getting a trial.

Amending Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act

SPEECH
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5610) to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to provide increases in benefits, and for other purposes.

Mr. MACDONALD. Actually, Mr. Chairman, I asked for this time to direct a question to the gentleman from Indiana [Mr. HALLECK], who spoke of there being no politics in this matter. I see the gentleman from Illinois [Mr. ARENDS], who represents the Republican policy committee, at this moment leaving. May I direct a question to the gentleman from Illinois [Mr. ARENDS]? Does the gentleman support the position of his leader who states that there is no politics involved in Republican support of this bill?

Mr. ARENDS. Will the gentleman repeat his question?

Mr. MACDONALD. I shall be happy to. I ask if you support the gentleman from Indiana in his statement which he made here in the well of the House that there is no political implication, there are no political overtones, to either the defeat or passage of this bill?

Mr. ARENDS. I did not hear the gentleman from Indiana make the statement, but I would support him in that statement if he made it.

Mr. MACDONALD. Then may I ask you this question: Has the Republican policy committee put out any order about support or passage of this bill?

Mr. ARENDS. No; unfortunately, we cannot order our people around.

Mr. MACDONALD. May I rephrase that and ask if you put out a "quote—confidential—unquote" report which purportedly puts forward the position of the policy committee made on April 22, 1959?

Mr. ARENDS. I do not know if that was put out or not. I did not get one if it was, but if it was an official report, then that is that.

Mr. MACDONALD. Will the gentleman inquire of Mr. HALLECK——

Mr. ARENDS. As I said a moment ago, I will ask him when he comes back.

Mr. MACDONALD. This information is in what purports to be a confidential report dated April 22, 1959.

Mr. ARENDS. Where did the gentleman get it?

Mr. MACDONALD. That I will be happy to tell you. Labeled "Confidential report," dated April 23, 1959, it says:

Policy committee meeting, April 22, 1959.
(1) Report on White House leadership meeting of April 22, 1959:
(2) Railroad retirement and unemployment insurance, H.R. 5610.
Action taken by policy committee:
(1) Railroad retirement and unemployment insurance: Favors H.R. 5610 as reported by committee.

I see the gentleman from Wisconsin [Mr. BYRNES] is on his feet, and as his name appears on the heading of this document along with the gentleman from Indiana [Mr. HALLECK], he probably can furnish me the information.

Mr. ARENDS. We will let the gentleman from Wisconsin answer it, then. Will you tell me just where you got the letter?

Mr. MACDONALD. I will be happy to tell you. Obviously it came from a member of the Republican Party to whom it was sent, and incidentally not a member of the Interstate and Foreign Commerce Committee.

James McConville, Essay Winner

EXTENSION OF REMARKS
OF
HON. ROBERT E. COOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. COOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of the House to an essay written by one of my young constituents, Mr. James McConville, an 11th grade student at the Ravenna High School. Mr. McConville was a winner of this year's essay contest sponsored by the American Legion.

It is edifying to know that young people realize the responsibilities of citizens to our country. The subject of the winning essay written by James McConville is: "Our Liberties Versus Responsibilities in a Free Society", and the content of the essay is as follows:

OUR LIBERTIES VERSUS RESPONSIBILITIES IN A FREE SOCIETY

(By James McConville, Ravenna, Ohio, grade 10)

A free society is one which is created not only for the benefit and well-being of its members, but also for the purpose of bettering all mankind. The foundation of such a society is based on the principles of liberty and responsibility, without which there can can be no free society.

In order for the society to thrive, all its members must make a supreme effort toward the ultimate goal and perfection of the society, by accepting and performing certain responsibilities. As long as man accepts these responsibilities and performs them to the best of his ability, greater is the assurance that he and his descendants will enjoy the freedoms created by the free society.

There have been many free societies in world history, some better than others, but there is no doubt that the United States is the most perfect free society in the world today. This is proven by the fact that we have more liberties than any other civilized people. As a result of having so many liberties, as granted by our early freedom documents, we also have more responsibilities, for the more liberties man has, the more he must work to safeguard them.

Unfortunately, we citizens do not always carry our share of duties. In order for our Nation to continue to be the great Nation she is today, each one of us must perform his duties in his own particular way, i.e. according to the part he plays as a member of the society.

The first and most important duty which looms before us is to our own free society, the United States of America. This does not only mean to our National Government, but to our State and municipal governments as well. We do this by obeying the laws set down by the men whom we choose by our freedom to vote. This, in itself, is good, but it is not enough. Not only must we obey laws, but we must also go beyond this and do things which help our government. Voting is one of these things which all of us, if we are good citizens, will do. We should participate in communal affairs as much as we can, expressing our opinion and making suggestions for the betterment of society.

Another duty which goes hand and hand with our duty to our Government is the duty we have to promote world peace and the organization of other free societies as best we can. The very existence of our Nation depends upon our relation with the rest of the world. By promoting peace we also insure our greatest liberty: freedom from oppression, for this will prevent totalitarianism with its corruption and oppressions from spreading throughout the world.

The third responsibility we have is our duty to God and to man. This Nation was created with the principle that all men are created equal, and are given certain rights which came to man from God himself. Each citizen must always think of each man as being created equal, whether he be rich or poor, black or white. Such mutual respect among all citizens will keep this Nation closely knitted together and intact for as long as it exists.

All citizens should make use of their freedom of religion, to worship a Supreme Being when and where they choose. A Supreme Being created this society, and this same Supreme Being can destroy this society. We therefore should acknowledge His power by giving Him worship and respect, for He is our strongest ally in our continuous struggle over tyranny and atheistic totalitarianism.

Federal School Support Act of 1959

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. MURRAY. Mr. President, during the discussion of the Federal School Support Act of 1959, many of its opponents have argued that Federal aid is not really desired by those responsible for education at the local level. We have heard testimony from many State and local officials disputing this contention. Recently I received a letter from a school superintendent expressing hearty approval by the board of trustees of his district of the provisions of S. 2.

I feel that this letter is indicative of the attitude many local school officials have regarding the need and feasibility of Federal aid as a means of improving current problems of school finance. I ask unanimous consent to have this letter printed in the Appendix of the RECORD as an example of this attitude.

There being no objection, the letter was ordered to be printed in the RECORD as follows:

HILMAR UNIFIED SCHOOLS,
Hilmar, Calif., April 6, 1959.

Senator JAMES E. MURRAY,
Senate Headquarters,
Washington, D.C.

DEAR SENATOR MURRAY: The board of trustees of the Hilmer Unified School District have gone through your School Support Act of 1959 bill. They are heartily in favor of the passage of this bill and we have so notified Senator ENGLE, who is cosponsor of the bill, Senator KUCHEL, and Representative SISK.

We are very hopeful that a bill of this kind will receive passage because we feel that it is quite possibly the answer to many of our problems. We certainly appreciate the fact that you as a Senator have seen fit to place this bill before the Congress of the United States for consideration. We hope that you will continue to do all in your power for passage of this bill.

We would like to know what we might be able to do that would help to insure the passage of the bill.

Sincerely,

EUGENE R. MCSWEENEY,
Superintendent, Hilmar Unified Schools.

Poison in Your Water—No. 69

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Wichita (Kans.) Eagle of September 4, 1957, entitled "Lack of Adequate Sewage Plant Endangers Health of Wichitans and Nearby Communities:

LACK OF ADEQUATE SEWAGE PLANT ENDANGERS HEALTH OF WICHITANS AND NEARBY COMMUNITIES

Why does Wichita need a secondary sewage treatment plant?

Wichita's citizens will vote September 10 on a proposal to issue $6,660,000 in bonds to build a plant at Grove and 57th Streets South to provide secondary treatment of sewage from Wichita's sewer system—which now receives only primary treatment.

The immediate reasons for this action are:

The State board of health has embarked on a "clean streams for Kansas" policy and has determined that pollution of the Big

Arkansas River by treated sewage from the Wichita plant is in excess of what it should be by recognized health standards.

The board has now ordered Wichita to do something about it. This order of April 19, 1957, blocks the city from building any more main sewers and will levy a fine of $50 a day (or more) if something isn't done by next April 19.

This latter action came after the voters of Wichita on April 2 turned down a proposal to build a secondary sewage plant.

The city commission, after a thorough investigation and study during which some doubting members became convinced of the necessity for action, has unanimously placed the issue again on the ballot.

But aside from these legal and governmental aspects, there are three major reasons why responsible city officials and civic leaders affirm that the sewage treatment plant bonds must be aproved by the electorate:

1. To provide more usable water for cities, industries, and agriculture in the Big Arkansas River Basin.

2. To safeguard the health of cities downstream from Wichita.

3. To safeguard the health of the citizens of Wichita itself and of its surrounding metropolitan area.

No one who has lived in this part of Kansas has to be told that the problem of obtaining sufficient water here is a continuing one.

Water can't be created in the sense that electricity can. You can't just build another plant to forestall a regional water shortage.

But even with water in short supply as it is, literally millions of gallons of water in this watershed are unusable because of pollution. Part of this is natural pollution, where water runs through salty soil.

Much of it, however, is industrial and municipal pollution.

Yet this problem could become a major asset if it were solved. Depollution of the running rivers and creeks in this river basin could add millions of gallons to the available water supply.

Wichita is only one of a number of polluters along the Big and Little Arkansas Rivers. But Wichita is by far the biggest.

And the other polluters—such as Hutchinson and its salt plants on the Big Arkansas and McPherson and its refinery outlets on the Little River—can see no reason why they should go to the expense of cleaning up when Wichita won't.

Until Wichita stops polluting the river for its downstream neighbors, our upstream neighbors are not likely to act.

Water department officials say that if upstream pollution could be curbed it would make more water available to us and cut the cost of treating water before piping it into city water mains.

In short, this region has little enough water without wasting any of it in any way. If Wichita builds a secondary sewage plant to stop its share of the polluting, then the State board of health will be able to gain compliance from other polluters.

And millions of gallons of water will be added to the usable supply.

Wichita's untreated wastes damage the water supply and endanger the health of our neighbor towns downstream.

Oaklawn, Jayhawk Improvement District, Derby, Mulvane, Arkansas City, Oxford, all are affected by our negligence.

(Wichita currently is defending a $389,000 suit in Federal court brought by residents of Oaklawn who say their homes have been damaged by hydrogen sulfide fumes from sewage put into the river by Wichita.)

Not all of this is from the pollution of the river itself, as this tends to diminish considerably the farther the polluted water has flowed. But, as is well known, the Arkansas River Valley is like a big sponge with far more water flowing through underground sands and rock strata than ever appears in the surface stream.

Many of our neighbors tap this underground flow with wells, leaving themselves open to the possibility of withdrawing polluted water from the underground water table.

As a good neighbor and as a natural leader of this trade region, Wichita cannot afford to continue such a practice.

U.S. Surplus Said To Aid the Soviet

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. MARTIN. Mr. President, for many years I have expressed my concern toward the trend to displace free markets within international commodity agreements and similar devices. I was particularly disturbed by Russian dumping of aluminum and tin which have distorted the world price structure.

Recently Mr. Charles B. Shuman, a longtime friend of the American farmer and president of the American Farm Bureau Federation, presented evidence that the Soviet Union was using wheat, some of which originated on U.S. farms, to continue its destructive economic warfare.

I think these charges are important.

The recent use of agricultural commodities to distort world markets and price levels parallels the procedures that Russia followed in depressing world markets for aluminum and tin.

I believe Mr. Shuman's comments, which appeared in a dispatch to the New York Times from Chicago on March 28, 1959, by Austin C. Wehrwein are of sufficient interest to all of my colleagues, that I ask unanimous consent that this article may be printed in the Appendix of the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. SURPLUS SAID TO AID THE SOVIET—FARM BUREAU CHIEF SAYS RUSSIANS ARE USING IT IN DRIVE TO WIN MARKETS

(By Austin C. Wehrwein)

CHICAGO, MARCH 28.—The president of the American Farm Bureau Federation said this week that he had evidence that the Soviet Union was using cut-price wheat—including some that had originated on U.S. farms—as an economic warfare weapon.

The president, Charles B. Shuman, expressed the fear that the Soviet Union would replace the United States in the western European market. He added that the Russians were using soybeans and cotton for the same purpose, but to a lesser extent.

[In Washington, Department of Agriculture officials said that they had heard similar reports since the surplus disposal law took effect in 1954, but they said that they had been unable to pin down any specific cases of shipments of surplus U.S. commodities having crossed back and forth through the Iron Curtain.]

Mr. Shuman, in an interview in the headquarters of the farm bureau here, said the information had come to him from the farm bureau's new office in Rotterdam.

TO PROMOTE TRADE

The Rotterdam office is designed primarily to promote international trade in American farm products.

Mr. Shuman said that there was the danger of a "flood of Ukrainian wheat into European markets." He also said that already much of the European bakery industry had converted to the flour made from the wheat mixture typical of Soviet exports.

Mr. Shuman also said that there was evidence that American wheat was being used in the mixture.

"I am confident," he said, "that some of the discount sales abroad are coming back to haunt us."

He was referring to wheat sold under the surplus disposal law. Such wheat is drawn from surplus stocks held by the Commodity Credit Corporation. It is sold at bargain prices for local currencies. Under agreements the wheat is not to be resold to the Soviet Union or its satellites.

Mr. Shuman said it was difficult to pinpoint the transactions because wheat arrives as a bulk cargo and becomes impossible to trace after it passes through the hands of the first consignee.

He said that after the Russians had imported wheat they sold it not only below the world market price but also below the Commodity Credit Corporation's offering price.

The Russians, according to Mr. Shuman's account, import with one hand and export with the other for involved economic motives.

"Russia had a good wheat crop, but not a surplus except as they 'short' their own people or bring in wheat from other sources," he said.

[In Washington, however, information available at the Department of Agriculture, suggested that the U.S.S.R. did have a cushion for export. It also showed that Soviet wheat exports have been growing in recent years, both to Western Europe and to other countries.]

Mr. Shuman, in expressing faith in the reports he had received, said that surplus butter sold 3 or 4 years ago to Dutch traders in pails had been put up in packages and had eventually found its way into Communist front countries.

Many of the deals involving wheat were "tie-in" sales, involving elaborate barter arrangements or multilateral arrangements calling for shipments of various goods to third or fourth countries, Mr. Shuman said.

Mr. Shuman is pessimistic about the changes for stopping the reshipments of surplus wheat because its internatoinal trade is largely in Government hands. But he has high hopes for the new Farm Bureau office in Rotterdam. It is under the direction of George J. Dietz, a former Government official with long experience overseas.

The Rotterdam office was set up to capitalize on the European common market and the opening of the St. Lawrence seaway. It does not sell or buy, but "bird dogs" opportunities, he explained.

It will also enable the Farm Bureau to keep in touch with European farm organizations filling a gap left when the Farm Bureau this week pulled out of the International Federation of Agricultural Producers.

Fidel Castro's Contrasting Statements

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following excerpts from the current issue of Newsweek magazine which places in sharp perspective the contrast between what Fidel Castro tells the Cuban people and the statements he made on his recent goodwill tour of this country:

WHAT CASTRO TOLD AMERICANS

In the United States, Fidel Castro is anti-neutralist. He is flatly against communism; he is warmly pro-American. In the United States, Castro says this:

On neutralism: Cuba regards herself as a member of the community of nations of the Western Hemisphere; Cuba is "pledged to honor" her international agreements. "There is no neutrality in Cuba."

On communism: "I know that you are worried about whether we are Communist, and I have said very clearly that we are not Communist. We are against all kinds of dictators, whether of a man, or a country, or a class, or an oligarchy, or by the military. That is why we are against communism. I do not agree with it."

On the United States: "I think the citizens of the United States are very nice and noble people. I see in Cuba, I see here, your boys and girls, newspaper reporters, doctors, everybody—really nice people. Why am I going to hate the people of the United States? I don't hate anybody, including even my enemies. * * * I don't hate anybody. * * * I believe that here in the United States the people, everybody, the Government, are going to understand us better. It is good not only for Cuba, it is good for the United States."

WHAT CASTRO TELLS THE CUBANS

In Cuba, Fidel Castro is a neutralist. He also is consistently anti-American, and—at the very least—tolerant of communism. In Cuba, Castro says this:

On neutralism: "Why should Latin America be with either side [in the cold war between the free world and the Communists]? * * * They [the Americans] have shelters against atomic attack; we do not even have a miserable hole in which to hide. Why not say these truths? Why not say that Cuba has participated in all the wars and when the wars were over, its [United States] sugar quota was taken away?" [1]

On communism: "Why should we persecute the Communists?"

On the United States: "Why did not the United States [during the Batista regime] raise its voice against the murdering of thousands of Cuban youths, the raping of Cuban women, and the robbing of millions of dollars from the Cuban treasury?" When David Salvador, secretary-general of the Confederation of Cuban Workers, asserted vehemently that "we cannot be with the Americans who today are oppressing us," Castro publicly supported him.

[1] In actual fact, Cuba contributed no troops in either World War; it made vast profits by the sale of sugar, and after the Second World War received a slightly higher quota.

The Greatest Invention of Them All

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. MARTIN. Mr. President, my service on the Aeronautical and Space Sciences Committee has reemphasized the importance of technology and research for our national survival. Fortunately, science not only provides the basis for our security, but it also underlies America's high living standards.

On April 15, Mr. Henry B. Du Pont, vice president of E. I. du Pont de Nemours & Co., delivered the annual Edward G. Budd lecture before the Franklin Institute in Philadelphia, Pa. He showed that:

When the history of our era is written, the birth and development of the modern corporation must be recorded as a vital factor in our technological progress. Indeed, the corporation may well prove to be the greatest invention of them all.

* * * * *

The industrial corporation, as we know it today, is a creature of technology just as certainly as the flying machine or the cotton gin, and it has proved the most effective device for extending technology which man has ever known. Its contributions have been unique.

* * * * *

Large corporations consolidate information from many disciplines of science and engineering and bring to scientific development a breadth of vision extending far beyond any one man's capacities. The individual scientist is stimulated and encouraged. His discoveries no longer are left to languish on the laboratory shelf while their creator goes out to search for a sponsor.

* * * * *

Development of the industrial organization as we now recognize it came too late to aid the earlier inventors. * * * In this century, it has changed the world. It has provided a focal point for the development of technology, taking it out of the sideline class and making it a full-time profession.

* * * * *

The size of the institutions furthering technology has become an important element in our progress. With its engineering and production resources, the large, modern industrial organization can direct * * * projects no individual technologists could undertake. It is possible to produce penicillin in a one-man laboratory in quantities sufficient to save a few lives. Produced in major pharmaceutical plants, penicillin has saved the lives of millions.

* * * * *

Technology, as I see it, is the sum total of man's work in developing the tools and techniques which lend leverage to human effort.

Benjamin Franklin, who played such an important role in our early history, was also a distinguished scientist and inventor. Mr. du Pont's statement contains so much wisdom for all of us in meeting the challenge of these perilous times, that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE GREATEST INVENTION OF THEM ALL

(A speech by Henry B. du Pont)

There is, I suppose, no more appropriate place than the Franklin Institute for a discussion of technology. The Philadelphia story is rich in technological history, for much of it was enacted—at least in its early stages—within a relatively short distance of this room.

I am thinking not only of Dr. Franklin's work. His contributions would be remarkable anywhere, any time. I am thinking, as well, of the astonishing number of other scientists and inventors who worked in or near Philadelphia in the early days of the country.

There was the naturalist John Bartram and, a little later, John Audubon, whose interest in ornithology began while he was living in Mill Grove, near Mount Carmel. There was Benjamin Rush, the physician. There was David Rittenhouse with his planetarium, and Owen Biddle with his telescope at Cape Henlopen. There was John Fitch, a transplanted Connecticut Yankee, puffing along the Schuylkill and the Delaware in a fire-breathing contraption called a steamboat. A few miles downstream, on Brandywine Creek, there was Oliver Evans who built a flour mill which operated almost without human attention. Among his neighbors was E. I. du Pont, recently arrived from France, who went into the powder business at the urging of Jefferson and made important contributions to the manufacture of explosives then badly needed to clear the forest lands, build the roads and defend the Nation.

HOME OF INVENTIVENESS

There was Thomas Paine, remembered as the pamphleteer of the Revolution, but due equal honors for his engineering contributions. One of Paine's more imaginative schemes was an engine driven by a continuous series of tiny gunpowder explosions, actually a sort of internal combustion engine. Unfortunately, the internal explosion engine did not work out. I say unfortunately because the Du Pont Co. was mighty close to bankruptcy for many of its early years, and a large-scale development in this field would have created a welcome new market. However, let us not criticize Citizen Paine for his mistakes. He also developed the iron bridge and had some worthy thoughts about planing machines, cranes, and carriage-wheel construction.

The list of Philadelphia contributors could be extended indefinitely, for in the 18th and 19th centuries this small sector of the American geography was the home of dozens who were instrumental to the progress of technology.

It could be argued that technology is not the word to use for the scientific contributions of a Franklin or a Bartram, so let me define my terms. Technology is much more than engineering. It is much more than invention, much more than the nuts and bolts, as is sometimes said. Technology, as I see it, is the sum total of man's work in developing the tools and techniques which lend leverage to human effort. Whether a man be a research scientist, or engineer, or an inspired tinkerer, as some were called, he contributes to and is an integral part of the technology which has shaped this Nation.

THIS WAS A HAVE-NOT NATION

America in 1800, despite its vast potential wealth, was one of the poorest of the have-not nations, although few nations of that day were well off. The natural resources which we know today were undeveloped and many of them were unsuspected. In 1800, standards of living, even for the well-to-do, were crude, and for the mass of the population, they approached the hand-to-mouth level. Farming occupied the attention of more than 90 percent of the population, and the primitive equipment used would have been recognized by any farmer from the time of Julius Caesar. Manufacture had hardly reached a level where it deserved the title "industry." In 1814, in a report prepared for the U.S. Senate, a Philadelphian named Tench Coxe estimated that the output of manufacturing in the United States came to a value of something less than $175 million a year. That meant an average of $35 worth of manufactured goods for each man, woman, and child in the population, hardly an impressive amount.

The real poverty of the Nation, however, lay in the inadequacy of its human resources

to met growing needs. Tench Coxe was among those who saw that technology held bold possibilities of enriching the Nation, and he pleaded for the development of labor-saving machines to lift human burdens and increase output. Men simply could not be spared from the fields. Manpower was so scarce that in a textile mill, for example, Mr. Coxe said that not more than one employee in eight could be an adult male; the rest of the work had to be done by women and children. Before we send Mr. Coxe to the pillory for suggestions which would shock us today, let me add that no less noble a man than Jefferson shared these views. Coxe was simply stating facts. Men were needed to raise food and could not be spared for manufacture.

In such a restricted economy there was obviously little money and little time to expend in research and development. The men whose enthusiasm carried them into science or engineering did so, for the most part, on their own initiative, just as we today might take music lessons or write poetry. But, for the necessities of life, they had to turn to other fields. Some of the most significant work done in America came about as a result of the two-job practice we would now describe as moonlighting.

PART-TIME JOB

Samuel Morse, for example, was a portrait painter by day and a scientist by night. John Fitch sold maps as he traveled the eastern seaboard looking for someone, anyone, to invest in his fire-breathing boat. Eli Whitney earned his living as a school master before he earned a nickel from his inventions.

Joseph Henry, another part-time scientist, deplored the fact that his experiments had to be confined to the summer months when the school in which he taught was closed.

Oliver Evans got along by operating a store and an iron foundry, and Paine, who first had plied his trade as a staymaker, later eked out a living by his writing and political work.

Few scientists were as well situated as Franklin whose early successes in publishing enabled him to live amid comforts while indulging his interest in such diverse subjects as the Gulf Stream, electricity, and bifocal spectacles. Most were obliged to expend so much of their energies to earning a livelihood that their most memorable achievements were made on borrowed time. The strain told. Fitch died poor, by his own hand, broken by years of frustration and want. Elias Howe, while enduring hunger and privation, was worn out by toil and died at the age of 48.

COSTLY NATIONAL FUN

To add to the difficulties of these early technologists, poor communication led to frequent duplication of effort, with the result that many things were invented several times by different people who were ignorant of each other's work. When Eli Whitney set up his factory to make guns with interchangeable parts, he spent a large amount of time working out machine tools which already had been developed, or at least anticipated, in other countries. He had no way of knowing that they even existed. Fitch worked for years on a double-acting steam engine, apparently ignorant of the fact that James Watt and Matthew Boulton had already solved many of the problems he faced. Oliver Evans started from scratch, and had no access to technical books, although many had been written in the fields in which he worked. Henry worked for 6 years on magnetism and electric currents before discovering that Faraday, an ocean away, was doing the same research.

Inevitably, when two or more men brought forth the same discovery at approximately the same time, there were conflicting patent claims. This produced some of the stormiest and most extended legal battles in history. No doubt, it provided amusement for many interested spectators. But it was costly national fun because it dissipated the creative energies of men who could not easily be replaced or duplicated. Genius is too rare a commodity to be squandered lavishly or used inefficiently.

Looking back to the conditions of the 18th and 19th centuries, it should cause little wonder that technical progress came slowly. The marvel is that anything was accomplished at all, and our respect and admiration for the talents and persistence of the men involved grows as we come to appreciate their handicaps. They earned every tribute we pay them. I cannot help but wonder how different our history might have been if these extraordinary minds had been unleashed for full-time experiment and invention.

FLOODTIDE OF ACHIEVEMENT

If we were asked to construct a list of the technological developments most fundamental to America's progress, it would be difficult indeed to single out any group upon which we could present a clear case. The nominations most meaningful would be those representative of broad application, spanning all categories of human need.

For, the most notable thing about the technical development of America is that its industrial revolution was not confined mainly to manufacturing, as was the case in Europe. Instead, American technical development was spread broadly against the entire economic and scientific field. The growth of our industrial technology was accompanied by parallel gains in agriculture, in communications, and in transportation. There was no single stream of technological advance. Instead, America's progress resulted from the converging of many streams, uniting to produce a floodtide of inventive achievement. In this great creative outpouring, it is difficult to identify any small group of inventions which would be judged outstanding in importance.

Everyone has his own list of "greatest inventions," and every invention has, I suppose, its partisans. My own list has three virtues to commend it. First, it is brief; second, most of my selections are simple; and third, it is based not on scientific preeminence, but on the universal importance to our economic revolution.

LIFTED MAN ABOVE SUBSISTENCE

I would include, for example, the steel plow. A humble device, perhaps—John Deere simply hammered it out of an old circular saw blade. But it speded the work of the farmer and was the predecessor of a host of other labor-saving farm equipment—the reaper, the binder, the tractor, the combine. Some might argue that these were more significant and, in a way, they would be right. But the important thing about the steel plow is that it was the first in a long line of major advances which lifted man from the subsistence level of agriculture, thus freeing increasing numbers of people for other occupations. Improved farm tools, supplemented by insecticides, weed killers, fertilizers, and better planting and irrigation techniqeus, have multiplied the efficiency of the farmer by a factor of 25.

Second, I include Oliver Evans' wonderful flour mill, the precursor of automatic control. In terms of scientific merits, it was a modest accomplishment. But it showed the world how a whole series of production operations could be linked together, driven by machinery, and tended by one or two men. All of the technologists who followed Evans, and the millions of consumers who use mass-produced goods, are eternally indebted to this extraordinary man.

The steam locomotive, of course, put power on wheels and gave man a wholly new mobility of special significance in a Nation spanning such great distances. The locomotive was not unique to America, and it was more a compendium than an invention, but it should not be ruled out on that score. After all, no nation can claim many major inventions which are all its own, created without outside help. Technology is a cumulative force. To credit all of the people who made the locomotive possible, we would have to track down the inventors of the level, the wheel, and the inclined plane, not to mention the steam engine and similarly modern developments. Incidentally, some of the most important contributions to railroad development came from this area. George Westinghouse, the inventor of the air brake, was a Pennsylvanian by adoption if not by birth. Matthias Baldwin, the locomotive builder and one of the men who helped found the Franklin Institute, was a Philadelphian. John Edgar Thompson, who did as much as any man to build the Pennsylvania Railroad, was born and raised in Delaware County. In the hands of men like these, the railroad reached a high level of development in the United States and, with the vast distances of the continent falling beneath its iron wheels, the locomotive counts more heavily in our history than many inventions we like to think of as 100-percent homegrown.

MOST EFFECTIVE DEVICE

Fourth on the list is the telegraph which presaged the telephone and did more to speed communication than any device since the printing press and movable type.

I have mentioned here four basic inventions covering each of the major fields. There is a fifth which pertains to all. I think in any list of inventions, we should include this one which, strictly speaking, is not an invention at all, but a legal fiction. Yet it seems to me to equal in importance any specific invention in history. This is the development of the modern corporation.

The industrial corporation, as we know it today, is a creature of technology just as certainly as the flying machine or the cotton gin, and it has proved the most effective device for extending technology which man has ever known. Its contributions have been unique.

IT HAS CHANGED THE WORLD

For the modern industrial establishment is the agency which made the pursuit of technology a full-time job, and not for a few men, but for hundreds of thousands. Industry employs today more than 550,000 scientists and engineers, a majority of the Nation's technical work force. Such figures amaze few today. But, in contrast to the struggling little band of amateurs of the early days, it is a vast army.

Development of the industrial organization as we now recognize it came too late to aid the earlier inventors. In some ways, the "corporate" form of organization dates from medieval times, but it was not until the 20th century that the corporation came into wide usage as the structural form of large-scale organization. In this century, it has changed the world. It has provided a focal point for the development of technology, taking it out of the side-line class and making it a full-time profession. The corporation has brought to the support of technology an extraordinary number and variety of services and resources. In our own company, as an example, we have about 2,400 technically trained employees in research and development, assisted by more than 3,500 specialists and technicians. We spent $90 million last year to underwrite their work

All the facilities which can be mustered are employed to assist the research worker and make his effort more productive. No longer does he work in ignorance of what others are doing: Today, few developments throughout

the world escape notice, for there is a constant interchange of information and scientists have major reference publications at their fingertips. Our own technical libraries stock over 800 different periodicals, and we have one divisional group whose sole function is to keep track of research discoveries elsewhere and pass on pertinent information. Whether new ideas originate in our own laboratories or elsewhere, they are eagerly studied and their applicability is appraised quickly. If one man's experience is insufficent to evaluate the work, another's frequently will prove to be, offering, as it does, a different background and perspective.

PROJECTS NO INDIVIDUAL CAN UNDERTAKE

What is true in Du Pont is true in many other companies today. Large corporations consolidate information from many disciplines of science and engineering and bring to scientific development a breadth of vision extending far beyond any one man's capacities. The individual scientist is stimulated and encouraged. His discoveries no longer are left to languish on the laboratory shelf while their creator goes out to search for a sponsor.

In addition, the development of the modern corporation has created the national resources which support technology in many other types of institutions. The research efforts of universities, private foundations, and Government laboratories contribute importantly to the advancement of American science and engineering, but these institutions could not exist were it not for the wealth generated by American industry.

The size of the institutions furthering technology has become an important element in our progress. With its engineering and production resources, the modern industrial organization can direct large groups of technologists—people skilled in many areas of science—to projects no one individual technologist could undertake. For example, it is possible to produce penicillin in a one-man laboratory in quantities sufficient to save a few lives. Produced in major pharmaceutical plants, penicillin has saved the lives of millions. I remember from my early interest in flying that a number of enterprising individuals built airplanes in backyard garages. Perhaps some still do. They would be the first to admit, however, that their efforts, in scale or in volume, are not quite comparable to the accomplishments of North American or Boeing.

TEAM OF SMALL AND LARGE UNITS

Some of my colleagues at Du Pont, given a few days' notice and a small set of laboratory apparatus, could formulate a kind of nylon and spin a bobbin or two of yarn. But, to supply a national market, this would be like trying to feed an army with the grain you could raise in a flower pot. Moreover, the factor of size also has an important value to national defense. During World War II, for example, the Government asked Du Pont to build the atomic materials plant at Hanford, Wash. More recently, we were asked to undertake the construction of the Savannah River hydrogen-materials plant. These were perhaps the most ambitious engineering projects in history; they could not have been completed without the services of a large institution employing thousands of specialists in dozens of fields.

Quite obviously, all of the technological efforts of companies like Du Pont are not of this magnitude. And, obviously, not all of the technological jobs required for the Nation's advancement require large institutions. Some of the most significant accomplishments have come, and will continue to come, from smaller organizations. In technology, as in other facets of American life, there is a need for business units of every size. Small firms supply companies like Du Pont with tools, materials, and special services which are basic to large-scale research and production efforts. At the same time, the small are important customers of the large, buying products which only the large firms can produce in a volume sufficient to meet national needs. Very often, the small firm makes its contribution to technology and finds its route to commercial success by developing and marketing a product created in the research laboratories of a large company. Thus, small and large business units work as a team to expand America's technology, with each contributing its special talents.

A WHOLE NEW DIMENSION

Four years ago, the Swiss economist, William Rappard, set down his views on the causes of America's prosperity. Most important of all, he wrote, were the application of science to production, the passion for efficiency in industry, mass production to bring large quantities of goods to people at low cost, and the spirit of competition. It is worth noting that the development of large industrial units is a factor in each of Professor Rappard's considerations. These organizations, consolidating many talents, have provided to technology and the technologist a whole new dimension of performance and potential. They have elevated the horizons of science and engineering, and they have literally extended man's reach into the boundless areas of outer space.

When the history of our era is written, the birth and development of the modern corporation must be recorded as a vital factor in our technological progress. Indeed, the corporation may well prove to be the greatest invention of them all.

Henry Cabot Lodge: He Fights for Peace

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in Parade magazine of April 26, 1959, regarding Henry Cabot Lodge, which is entitled "He Fights for Peace."

We in Massachusetts are very proud that there are two such distinguished Massachusetts citizens serving as the Secretary of State and the Ambassador to the United Nations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HENRY CABOT LODGE: HE FIGHTS FOR PEACE

(By Marylin Bender)

UNITED NATIONS, N.Y.—All through spring, Russia and the West have jockeyed for showdown positions over Berlin. Far from the danger site itself, a major part of the battle to avoid war has fallen on a particularly tough-minded American. He is a 56-year-old grandfather of seven—a six-foot-three-inch, broad-shouldered, long-limbed, lean-hipped patriarch with the physical magnetism of a patrician youth.

As representatives of the big powers have maneuvered out in the open, Henry Cabot Lodge, U.S. Ambassador to the United Nations, has been operating behind the headlines. His job: to talk and listen to the representatives of the western allies, and to prepare for all eventualities against a constantly shifting scene. One possibility, advanced by both sides in different forms, has been that the Berlin crisis would be appealed to the United Nations.

This month Lodge is president of the U.N. Security Council, the body primarily responsible for maintaining world peace. This administrative post rotates monthly among the 11 member states (U.N. members with permanent seats on the Security Council are China, France, the U.S.S.R., the United Kingdom, and the United States. Nonpermanent members this year are Canada, Japan, Panama, Argentina, Italy and Tunisia.)

Lodge's performance over the last 6 years as chief U.S. delegate—the first in this job to have Cabinet rank—can be rated by the fact that Americans increasingly look to the U.N. as the world's fire brigade.

Lodge says: "The U.N. is the greatest single engine in the world for influencing world opinion." To keep world opinion on our side—or, at least, not against us—he has used a courageous political intelligence, a facile tongue and a newspaperman's training. Whenever his Soviet opposite number attacks, Lodge makes sure to deliver his rebuttal immediately so that it appears in the world's newspapers on the same day.

In some respects the job of chief U.S. representative to the U.N. would appear to hamstring a dynamic, self-assured political veteran like Lodge. It is a job of stating U.S. policy without formulating it. He takes instructions from the State Department, specifically from the Bureau of International Organization Affairs, headed by Assistant Secretary Francis O. Wilcox.

But Lodge sometimes must move too fast to wait for word from Washington. No mere errand boy for the State Department, Lodge in New York often relays his opinions to Washington, where they then influence the shaping of U.S. policy. He has President Eisenhower's respectful ear, and his cordial relations with Secretary of State John Foster Dulles date back a decade to the latter's brief service as an interim appointee in the Senate at a time when Lodge was representing his native Massachusetts.

ON THE FIRING LINE

Lodge views himself as being on the firing line. As the target of Soviet attacks, and with nations that only recently got independence now thinking for themselves, Lodge's job is more than that of talking back in public. He must scurry diplomatically behind scenes for support. More and more this means working out compromises among the so-called uncommitted nations, particularly of the Asian-African bloc, one of whose luminaries has been India's Krishna Menon.

A curious friendship was forged over Suez between Boston Brahmin and the middle-class, left-wing Indian with a reputation for bitter anti-Americanism. In February 1957, Menon and Lodge joined forces to push through the resolution authorizing the placing of a U.N. Emergency Force in Gaza. Last year, when Lodge visited India, Menon acted as his host and guide. Ironically, Menon's domestic foes charged that Lodge was aiding him by making it look as though he were not the most disliked diplomat in America.

POPULARITY CONTESTS

Around U.N. headquarters in New York, Lodge sometimes takes a beating in the popularity contests. Although he scores high on ability—his detractors concede he is a shrewd, skillful, and successful performer—many accuse him of being undemocratic, snobbish, and cold.

There seems to be a "public" Lodge whose blue eyes can be as frosty as the North Atlantic, who doesn't say hello indiscriminately in the halls and who occasionally fends off questions calculated to embarrass his diplomatic position in frankly snippy

tones. But, protests Mrs. Oswald B. Lord, an alternate delegate, "There is a difference between being cool and aloof and being businesslike. He is an approachable person from whom one can always get a sympathetic ear."

Another friend of 30 years' standing, who maintains that the real Lodge is a fiercely loyal man with a genuine feeling for people, says, "Cabot has outgrown and shed the arrogance of his younger days."

Lodge's family tree sinks deep into the soil of American aristocracy. His father, George, was a poet and a charmer. He died when Lodge was 7. His mother took Cabot, sister Helena, and bother John (the present U.S. Ambassador to Spain) abroad in 1912 and 1914. At Harvard, Cabot was voluble and combative. He majored in romance languages (he speaks fluent French, shoots a mild breeze in Spanish and German), went to debutante parties—at one he met his future wife, Emily Sears—acted, sang, rowed and was graduated cum laude in 1924.

His grandfather, the old Senator Henry Cabot Lodge, was his mentor. "The old man adored him," recalls John Mason Brown, the writer lecturer and friend from those days. "He would never admit Cabot could do anything wrong. He treated him not as a grandson but as an adult." It was the Senator who advised him to seek a career in newspaper work.

After Harvard, Lodge became a newspaper reporter. In 1932 he wrote a book, "The Cult of Weakness," which pointed out the dangers of national unpreparedness. "No more book writing for me," he says today. "Politicians shouldn't write. When I did, I didn't know I was going to be a politician."

Then followed 4 years in the Massachusetts Legislature, 13 in the U.S. Senate. Lodge was the first Senator since the Civil War to withdraw for active duty in the Armed Forces. He served in the African and European theaters during World War II and was heavily decorated, and is now a brigadier general in the Reserve. Lodge at first had shown isolationist spots. He returned from the wars an internationalist.

LONE WOLF IN THE SENATE

In the Senate he was a lone wolf, never penetrating the GOP inner circle of that era. He was Senator Arthur H. Vandenberg's chief associate on the Foreign Relations Committee during the Republican-dominated 80th Congress of the Truman administration.

In 1950 Lodge went up to Columbia University to persuade General Eisenhower, whom he had met only three times before, that it might be his duty to run for the Presidency. He ran Ike's campaign with wholeheartedness—meanwhile losing his own senatorial seat to JOHN F. KENNEDY. President-elect Eisenhower nominated Lodge to head the U.S. Mission to the U.N.

The post pays $27,500 a year in salary, up to $17,000 for entertainment expenses. With it goes a 23d floor office in an unpretentious building that overlooks an armory and 33d Street truck traffic. The U.S. Embassy (the Ambassador's residence) is on the 42d floor of the Waldorf Towers.

Here, in the white-and-cerise living room, Lodge plays the engaging host. When the U.N. General Assembly is in session he manages to entertain virtually all the delegates from the other countries. His invitation list is larded with writers and other interesting non-U.N. types. Lodge acts as musical talent sleuth among his guests. One popular feature of these soirees is the forthright Lodge baritone, raised in song and accompanied on the guitar by Deputy Representative James J. Wadsworth, a cheerful bear of a man who radiates warmth like a sunray lamp.

Around the office Lodge is a cool taskmaster. He usually arrives in the morning on foot. He and his wife are avid walkers, crisscrossing the side streets of New York by day and even after dark, to the consternation of friends. He scribbles notes to himself on backs of envelopes and on a 5 by 7 pad on his desk. Unstinting in praise, he hits the ceiling when angry. He is a fresh-air fiend, sitting in shirtsleeves behind his closed door with the radiator off in midwinter.

Lodge doesn't diet but he drinks moderately, smokes not at all, eats plain, hearty food. For relaxation he talks—stretching his lengthy body on a couch in a friend's home or his own—and jokes ("in several languages and he doesn't blush easily," remarks an associate). His reading is all shop. Week-ends when he can manage it, and in the summer, the Lodges head for their home at Beverly, Mass., where "Jam," their 8-year-old black poodle, lives the year round.

CAPTAIN AND CREW

Sailing is his great release. On a typical voyage, his 36-foot Florida fishing boat sails off Salem Bay looking for cod and flounder. On board with the Lodges are their son, George Cabot, who is U.S. Assistant Secretary of Labor, his wife and three daughters. (Another son, Henry Sears, works for a New England electronics firm.) The Ambassador is captain and crew, staying out of the galley except for occasional forays to heat up canned roast beef hash. Emmy Lodge, a tall blonde with a girlish frame and a personality as radiant as a June afternoon, is his purser.

"Cabot has been blessed by a very happy family life," says John Mason Brown. "Emily Lodge should marry every man in politics. She has relaxed Cabot without always letting him know she is doing it. Emily never falls down on anything. She and Cabot should be sandwich men for the institution of marriage."

George says of his father, "He never tried to tell me what to do, never tried to dominate my future. Dad gave me a long tether." When the boys were children, Lodge ruled that weekends were to be devoted to them. "It was always so much fun playing with Dad that I didn't have too many other friends."

AFTER THE U.N., WHAT?

After the U.N., whither Lodge? Not back to politics, he insists. He speaks of being attracted by his old love, journalism, or by a university, where he might teach young people with an aptitude for public service. Are these outlets enough for a man who says that two legislatures and the U.N. have made him an optimist? "The people who are going to be the operators as against the contemplators in this world," says Lodge, "have to be optimists."

Among the areas where he finds cause for optimism is the Soviet Union. "An evolution is going on in Russia. Even though it's an ironfisted dictatorship, they can't go back to 10 years ago." One day, without naming the date, the Russians will get out of Hungary, he believes. "I have a general feeling that when people are oppressed, it just doesn't last forever. The day comes when people are free."

With his amicable relations with congressional leaders of both parties, his ready access to the White House, and his vast experience, Lodge looms as a figure of strength in the trying months ahead. Above all, there is what he brought home from the wars. His friend John Mason Brown describes it thus: "Peace is a passion with Cabot Lodge."

Justice for Army Chaplains

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. PHILBIN. Mr. Speaker, I have offered an amendment to the Reserve Officers Personnel Act of 1954 as it applies to the service of Army chaplains in order to eliminate the present disadvantages and discriminations against clergymen serving in the Army.

We all recognize the great importance of qualified, ecclesiastically endorsed clergy to serve as chaplains in the Armed Forces. Up to this time we have had a particularly favorable experience in securing highly qualified, splendid chaplain to carry out the spiritual duties in our armed services.

It has been pointed out that the Reserve Officers Personnel Act of 1954, when it becomes fully implemented in July 1960 as applied to the Army, will possibly completely cripple the ability of denominational endorsing agencies to provide chaplains for the Army in the future.

This handicap and anticipated difficulty in arises from the fact that the average age for the appointment of Infantry officers, as distinguished from chaplains, in the Army is 23 years. Since most officers retire in the rank of lieutenant colonel, it is therefore possible for the average Infantry officer to complete 30 years of service at the age of 53 as provided by the above law presently applicable to the Army. No one would question the desirability of the Army and all the services for younger officers and that is not an issue in this matter.

In the case of clergymen, the average age at entrance into the Army is 30 years according to a study made by the office of the Chief of Chaplains of the Army. The usual college graduation age is 22. Seminary studies may continue for an additional period of 3 years or 6 years in some major denominations.

In addition, some denominations require that a graduate clergyman must serve a period of 1 or 2 years before he can receive ordination. Some require a year of successful assistant pastorship after the second year in the seminary before the student is permitted to enter the third year. Other denominations require an ordained clergyman to serve a minimum of three years in civilian parishes before he can be granted ecclesiastical endorsement to serve in a chaplaincy.

While all of the practices referred to above insure a professionally well-qualified clergyman prepared to cope with the difficult problems of the chaplaincy, the fact is that chaplains enter the Army at a considerably greater age, and it is stated by competent officials that the average age entrance of 30 for chap-

lains is essential to conduct a successful ministry for service personnel.

The way the Reserve Officers Personnel Act of 1954 works out, if a clergyman comes on duty as chaplain during his 30th year then he can only complete 23 years of duty as compared with 30 years of possible duty for other officers.

In the event that a clergyman wishes to spend additional time in professional study looking toward a masters or doctors degree he may well pass the maximum entrance age of 34 and not be able to complete even 20 years of service. Thus, chaplains entering the service under these circumstances, that is, at a later age, must under present law, face the prospect of being separated from the service at age 53 with a maximum benefit of only 50 percent retirement, or in many cases with no retirement at all. Hence there is a justifiable reluctance on their part to volunteer for spiritual duties with the Army. Of course, the same situation applies to Army Reserve chaplains not on active duty and National Guard chaplains.

The purpose of the amendment which I am offering to exempt Army chaplains from the current age provision of the Reserve Officers Personnel Act of 1954 and place them in the same status as chaplains in the Air Force and the Navy seems to me to be highly meritorious and necessary in order to insure the proper flow of qualified chaplains into the Army. There would seem to be no justification for present unequal treatment of Army chaplains.

This amendment is endorsed by accredited officials of all basic denominations serving the armed services, and I hope and urge that the committee and Congress will approve it. To my mind, it is the least we can do for those who are rendering such valuable and vital service to our national defense. Spiritual ministrations in the armed services is of great consequence and importance not only to service personnel, but to their parents, families and friends who are naturally concerned that our service boys and girls shall have available to them at all times the counsel, advice and help of their own spiritual leaders. The value of such service to the personnel and to the Nation could not possibly be adequately measured in concrete terms. It is a must for all the Armed Forces.

Spirit of Taft Lives On

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial published in the April 16 edition of the Standard Times, New Bedford, Mass., concerning the recent dedication of the memorial structure in honor of our late colleague, Robert Taft.

This editorial sets forth in few words the full meaning of the tribute to a great American. I commend it to the reading of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPIRIT OF TAFT LIVES ON

What the people did not give Robert A. Taft in life they have given him in far larger measure after his death—a place among the all-time American greats and an influence on generations to come that may know no bounds.

Dedication of the graceful Taft Memorial in Washington, by President Eisenhower, former President Hoover, and other outstanding leaders of both political parties, was a magnificent tribute to Taft's incomparable service to the Nation.

As several of the distinguished speakers said in eulogy, Taft paid a high price for his uncompromising principle and for his forthright expression of opinion, always. He endured much for championing what Senator BRIDGES well described as "the ageless virtues of our country."

The shafts of his detractors often wounded this man who was, himself, incapable of grudge, but they can make little impression on the ageless marble of the memorial or the mighty spirit protected for all time within it.

Whether on policy or principle, Senator Taft "invariably was vindicated," said his friend and colleague, Senator BYRD.

The memorial will make more certain the greatest vindication of all, recognition by mankind that peace and liberty can be built only on the bedrock of principle.

"When these great bells ring out," said former President Hoover, speaking of the memorial's carillon, "it will be a summons to integrity and courage."

This is the message that peals from the newest and most unusual of memorials in the National Capital. No man could aspire to higher honor after death.

Americans may rejoice that they have given existence to the Taft Memorial. They have memorialized virtue and character. They have honored, as a great public servant of all the pepole, a man who fought under the banner of one party. And they have set the standards high for those who would lead in government.

James Todd of Claude, Tex., Richly Deserves "Pastor of the Year" Title

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. YARBOROUGH. Mr. President, at the 72d annual assembly of the Texas Convention of Christian Churches in Austin recently, James Todd of Claude, Tex., was named Town and Country Minister of the Year.

Reverend Todd richly deserves this honor. He has helped a number of small churches during the past 34 years in which he has served as a minister in west Texas. He is a well-known writer, speaker and civic leader as well.

Mr. President, as a salute to the accomplishments of this outstanding Texan and American, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Claude News for Thursday, April 16, 1959 entitled "Texas Town and Country Pastor of the Year."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS TOWN AND COUNTRY PASTOR OF THE YEAR

AUSTIN, April 10.—James Todd, pastor of the First Christian Church of Claude, was presented to the 72d annual assembly of the Texas Convention of Christian Churches here as Town and Country Minister of the Year.

He was cited at municipal auditorium for seeking pastorates in small struggling churches and for leading them to financial self-support.

Todd, a minister in west Texas congregations for the past 34 years, was presented to the convention by R. Bruce Harper, of Tyler, chairman of the town and country church committee of the Texas Board of Christian Churches. "Many of our most thriving west Texas congregations are the direct result of his zeal," the citation declared.

Todd was praised for serving congregations other ministers avoided.

During his long ministry in the Panhandle-South Plains area, he has served four congregations that were receiving aid through the State church development program of the State of Texas.

Three of these congregations have outgrown their need for aid, and the other one is expected to be on its own soon.

As minister of the self-supporting Claude Church, Todd unselfishly gives the State church development fund the honoraria he receives and the money he earns as a writer.

The church development program supplements the salaries of pastors serving the small mission churches. The Claude Church has always been self-supporting and contributes monthly to the church development program.

Under Todd's leadership the Claude Church has, for the first time in its history been, organized on a functional committee basis.

He also has led the congregation in increasing its support of out-reach (missionary) causes.

He edits a monthly newsletter for his parish.

Todd has served congregations at Pampa, Spearman, Panhandle, Stinnett, Muleshoe, and Plains as well as Claude.

Besides his regular church work at Claude, Todd is also active in civic affairs, the school, the Lions Club, and the Masonic Lodge as well as assists other ministers in the community with their church programs when needed.

Outlook for Shipbuilding

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, April 30, 1959

Mr. COTTON. Mr. President, I have recently read with considerable interest in the New York Journal of Commerce for March of this year, an article by Mr. E. M. Hood, vice president of the Ship-

builders Council of America, entitled "Outlook for Shipbuilding," which appeared under the headline "Shipbuilding Future Held 'Not Bright.'"

In order to provide as full a dissemination as possible of this timely subject, I ask unanimous consent to have a copy of Mr. Hood's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUTLOOK FOR SHIPBUILDING

(Article by E. M. Hood, vice president, Shipbuilders Council of America, for the New York Journal of Commerce, March 1959)

That the future outlook for the American shipbuilding industry, at this writing, is not bright, there can be little question. Ask the workers in the yards or the sales contact men throughout the world. Ask management officials charged with the full operation of their company facilities. Or, for that matter, ask the officials of the Federal Government who confidentially do not subscribe to, or endorse, the present drift of maritime policies. The answers, almost universally, will expose a paradox which has brought the affairs of the American merchant navy to the crossroads. This is indeed a time for decision and action.

Last month the Secretary of the National Security Council—that high-level esoteric body which advises the President on matters of national security and national defense—had this to say: "An adequate merchant marine is essential for defense purposes, and under current planning concepts there is a continuing need for a modern, adequate, and well-balanced U.S. merchant marine fleet."

To put these remarks in proper focus, one need only recall General Eisenhower's words from London in 1944: "We were caught flat-footed in both world wars because we relied too much upon foreign owned and operated shipping. * * * America's industrial prosperity and military security both demand that we maintain a privately operated merchant marine adequate in size and of modern design to insure that our lines of supply for either peace or war will be safe."

More recently, the Chairman of the Joint Chiefs of Staff, Gen. Nathan F. Twining, whose opinions always carry great weight, observed that, from his vantage point, "it seems incredible to me that anyone could argue seriously or with justification that new concepts of warfare obviate the necessity of further fostering a merchant navy."

Despite these admonitions, the American merchant marine is being permitted to deteriorate from both a quantitative and qualitative standpoint. The continued depreciation of the vast majority of our sea transportation resources increases the seriousness of this problem. And, therein lies the plight of the shipbuilding industry. To paraphrase an old adage—as the merchant marine goes, so goes the shipbuilding industry.

The slow rate of progress made in the replacement of obsolescent vessels clearly indicates that greater emphasis must be placed upon orderly shipbuilding programs adequate to the need. Indeed, this industry so important to our economy and defense posture must be upgraded. Most of the subsidized shipping companies have entered into long-range contracts for the replacement of their aging ships, but the fulfillment of these agreements hinges upon a willingness of the administration and the Congress to approve and provide the funds for the Government's share in this essential Government-private enterprise partnership. If maritime funds were treated with the same vigor as funds for foreign aid or aid for school construction, the threat of atrophy for the American merchant marine would be nonexistent.

Though the so-called Murray report in 1954, advocated a minimum shipbuilding program of 60 oceangoing ships per year to meet normal trade and defense mobilization requirements, this goal has never been attained. Appropriation requests for fiscal 1960, if approved by the Congress, will permit the construction, at most, of 14 new vessels. A carryover of funds from fiscal 1959 for 8 more ships could bring the total to 22 in the next fiscal year, but, even so, this would fall far short of the minimum necessary to sustain the defense mobilization of the industry.

In facing up to the initial phases of a general war, the Department of Defense tells us that we are short between 100 and 200 dry cargo vessels, 30 reefer cargo ships, 4 heavy lift ships and some tankers. Only minimum needs for troop transport could be met. However, these estimates are good solely from a quantitative basis, and Defense authorities imperatively proclaim that qualitative deficiencies leave much to be desired.

The Navy has requested $574 million to build 18 new ships, including 1 *Forrestal*-class carrier, 6 guided-missile destroyers and frigates, 3 nuclear-powered attack submarines and 8 other vessels in the coming year. As in the past, this work will be apportioned between Navy and private yards. With the near or approaching obsolescence of many naval vessels, the problems with respect to the need for increased Federal appropriations are identical with those confronting the merchant navy.

Shipbuilding, by its very nature, is a long-term proposition, and contracts for delivery in 1960 have been extremely limited because of the conditions above cited, because of the world economic picture, and because of the continuing oil import controversy. Thus, we find an industry having a good volume in 1958 and 1959 due to previously booked contracts, but very lean prospects for 1960.

However, on the plus side, the opening of the St. Lawrence Seaway should point the way to some new ship construction in future years. Likewise, proposals for a nuclear-powered tanker are being seriously advocated. And, the same can be said for roll-on roll-off ships and other container-type ships.

Someday Poland Will Exist Again as a Free and Independent Nation

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. BROOMFIELD. Mr. Speaker, some 168 years ago, Poland adopted its first constitution establishing the rights of its people to enjoy the fruits of liberty and justice. It is well for us to pause for a moment to take note of what has happened to that valiant nation and its people since that time.

Today we find Poland swallowed up in the depths of the Soviet Union's plans for world domination. The freedoms which the people of Poland were guaranteed have been lost in the meaningless mouthings of her Red puppet leaders. Her claim to an independent nation is in doubt because of the string pulling of her Soviet masters housed in the Kremlin.

The people of Poland have suffered terribly in the past generation. Atrocities by both the Russians and the Germans cut down her brave young men and even her women and children in wholesale, senseless slaughter. Her people were sent both eastward and westward to provide the backbreaking work force for factories, mines, and farms. Families were split asunder, never again to be reunited.

After World War II came the bitter enslavement of the Communists, of Russian troops on Polish soil, of heartless suppression of freedom and individuality. Finally, the Poles revolted and won the promise of an end to religious persecution and collective farms. But the Red masters had no intention of carrying out their promises. Since the revolt in 1956, the newly won freedoms are being spirited away, one at a time, until now Poland is once again completely under the heel of a brutal police stae.

It is the hope of all of us that someday Poland will exist again as a free and independent nation, free to determine her own destiny.

On this day, it is wise for us to contemplate the fate of those who were forced to deal with the Communists, and who now find themselves under their subjugation.

Tackle Unemployment Now

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. PHILBIN. Mr. Speaker, many of us have been greatly concerned about the continuance of rather startling unemployment rates in various communities and areas throughout the country, notwithstanding the current prosperity boom which the country is enjoying as a whole.

I will not go into some of the reasons for these trouble spots of unemployment because they are numerous and complex. Undoubtedly, extremely injudicious monetary policies played their part, and there are other factors as well that I cannot deal with here. However, it is very clear that in the interest of the Nation, not to speak of the several million unemployed workers and their families who are involved, that the Congress must do something constructive and substantial about this problem at a very early date.

I think that we have seriously lagged in coping with this substantial unemployment which in some States and communities reaches alarming percentages and is causing stagnation, paralysis, and privation in many historically prosperous areas.

The situation constitutes a real challenge to the Government and we have no choice in my opinion but to give the problem urgent consideration and work it out so as to alleviate the unemployment and restore the afflicted communities to a condition of prosperity and industrial good health and well-being.

This is an American problem. It cannot in these days be swept under the table and overlooked. We all must recognize that State and local authorities alone cannot solve this problem. The Federal Government must take action. And it must be taken now.

Factors for Distribution by REA

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 23, 1959

Mr. SANTANGELO. Mr. Speaker, the rural electrification program has been a tremendous source of pleasure to farmers and has opened up a new world for people who have had to struggle to obtain the necessities of life. This program has stimulated not only production on the farms, but also in the industrial areas of our country. A great deal of the success is due to the foresight of those who enacted the statute in creating the rural electrification program and the criteria set forth in the statute. The standards which have been adopted provided for safeguards and did not impose onerous terms. Another factor contributing to the success of this program has been the dedicated leadership of the administrators on top level and in the lower echelons.

I have had occasion to meet several of the officials of the rural electrification program during a recent trip to Puerto Rico where I attended a seminar on rural electrification. W. E. Eastman, director of the southeast area of the United States, made a very interesting talk on the factors considered by the Rural Electrification Administration for distribution loans, which I am certain will prove informative.

Mr. Eastman, who started working for the REA in 1938, received his bachelor of science degree in civil engineering in 1937 from the University of New Hampshire. Except for a period during the war, he worked as engineer of one of the eight regions in the United States on electric distribution engineering until 1949 when he was made regional engineer. In 1952 he was assigned as regional engineer in the REA telephone program until September 1953 when he became assistant chief, staff planning, in Telephone Engineering Division. He was reassigned to the electric program in 1955 to the position which he now holds.

Mr. Eastman's remarks follow:

DETERMINATION OF MARKET

First of all, there must be established a definite need for electricity, or a market. In order to determine what this market is, first requires a survey in the field. This survey will determine the people that do want service, those that might, their location, and the classification of service they want—residence, farm, commercial, etc.

To convert this information into the quantity of energy required comes next. The objective here is to obtain realistic estimates of kilowatt-hour consumption, by class, and at a time 3 to 5 years in the future. Initially this was quite an unknown quantity to REA. Only about 10 percent of the rural establishments had electricity; therefore, we had no records available and there was very limited experience. It was therefore necessary to estimate kilowatt-hour consumption by class. Our experience proved us to be very conservative in our estimate. Actual usage far exceeded our estimates. At the present time, with more than 20 years of operational experience, there are ample records from which usage can be estimated and projected into the future. As a matter of interest, we have found that the average monthly kilowatt-hour usage by rural consumers doubles about every 7 years. If no records or experience are available, it may be necessary to interview a representative portion of potential consumers and determine the extent to which they expect to use electricity.

Now that we have located the people that want service, have classified them according to type of service, and have estimated what quantity of electricity they will use, we are interested in still one more factor; that is, the economic stability of the area.

This is accomplished through a field appraisal, the purpose of which is to collect data, economic in nature that can be used as a basis for consideration of the feasibility of any particular loan or system. Information from agricultural leaders, local businessmen and bankers in the area is sought in order to shed as much light as possible on the economic potential of the area. Marketing and transportation facilities are observed and noted. Opportunities for off-farm employment are appraised. Trends in population and farm units are also sought. Trends in income, population shifts, and other significant economic trends which can be established for the service area are compared with comparable trends for county or State as a whole. REA as a part of assuring the security of the loan makes such an appraisal when considering the first loan to serve an area and at such other times as changing conditions warrant.

PLANNING PHYSICAL FACILITIES

The need for electricity, or the market has been determined. Next we need to know what facilities will be required to serve this market. The borrowing organization employs an engineering firm to design the most economical distribution system for this purpose.

The engineer in his design would adhere to certain standards that have been established by REA. For reasons of economy through standardization, we have settled on a multigrounded wye system; 7,200 volts phase to ground; 12,500 volts phase to phase. In a few instances where density is low and long distribution lines are required a 14.4/24.9 grounded wye system is used.

Voltage drop at the end of primary line is to be held to 7 percent. The use of regulators to accomplish this is permitted.

At this point the engineer is not yet ready to design the distribution system. You will recall my mentioning earlier, that the early estimates of consumption were far too conservative. This resulted in a good many components of the system, having a normal life expectancy of from 30 to 40 or 50 years, becoming obsolete early in its usage because of inadequacy.

To minimize the possibility of this premature obsolescence we recommend that the engineer make a long-range engineering study. This study is predicated on a kilowatt-hour consumption far in excess of what present consumption is, or is estimated to be. For example, one area that now has an average consumption of 400 kilowatt-hours per month has a long-range study based on 2,500 kilowatt-hours per month. This study will show what substations, what feeders and lines and what wire size will be needed when consumption reaches 2,500 kilowatt-hours per month. Of course this system will not be built now because of the excessive investment in capacity that will not be needed for several years. It does establish a goal or objective and it does provide a guide for the engineer in designing the system that is to be constructed now. Using the consumer and consumption data for the 3- to 5-year period as outlined in the market survey the engineer designs the distribution system. The facilities he will provide for in this initial system will be sufficient only for the 3- to 5-year load requirements of the market survey but will be selected so that they will fit into the requirements of the long-range engineering design. By so doing he provides for continuing growth and expansion of plant with a minimum of change in the facilities initially installed; thereby minimizing loss due to premature obsolescence.

Quality of service is a factor that is important to all. The engineer incorporates the basic elements of high quality service in his design by holding the voltage drop at the end of all lines to 7 percent or less. Continuity of service is enhanced by providing adequate protective equipment for isolating a minimum of system lines when fault conditions occur.

Once the physical facilities required for serving the area have been determined, the engineer prepares a cost estimate for constructing those facilities.

At this point the engineer has completed the project design. It shows the number of substations that will be needed, their location, capacity, and voltage. The miles of pole line required along with wire size necessary to provide adequate service has been determined, as well as distribution transformer services and meters. In addition he has determined what the cost of the system will be.

POWER SOURCE

So far we have not mentioned the availability of power to feed this system. While the engineer when designing the system would like to assume that power will be available at the substation locations his design shows to be most suitable, he is always cognizant of the possibility that this may not be the case.

A source of power is necessary and has been considered by the engineer long before his design is completed.

As to a source of power, there are two possible solutions open to the engineer. One is to provide the necessary power through generation and transmission facilities. For small rural distribution systems the costs in connection with self-generation are normally so high that the consumer would not want to pay the resulting high rates. But this is a subject that will be discussed later in this program by Mr. Chase.

The other alternative of a power source is to purchase from some operating utility.

Where power is purchased, the engineer is concerned with the point at which this power will be made available to feed the system. Negotiations are entered into to have power delivered at the load centers or substation locations called for in the engineering study. If this is not possible the engineer must determine the economics of relocating the substations and increasing the capacity of distribution feeder lines versus including in his design the necessary transmission lines from the point power is available to the substation locations.

The cost of power represents a large percent of the annual cost of operating a distribution system. We have found that the cost of power is very close to 50 percent of annual cash expenses. Because of this we

require as a prerequisite to making a loan that the borrower negotiate a contract with the power supplier, which assures the borrower of sufficient power to meet the needs of its consumers and which sets forth the terms, conditions, and cost of supplying that power.

FINANCING

The utility organization now has a plan of what it wants to build and knows the approximate cost. It also has a contract to provide the needed power. Its next step is to obtain financing and while there are other sources of borrowing, we are assuming now only REA financing.

The organization makes known its desire to borrow money from REA by preparing and submitting an application. The application states the amount of money it wants to borrow; the facilities it proposes to build and the purpose of these facilities.

The application is reviewed in REA; first from a legal or eligibility viewpoint to establish that the applicant is legally one to which we can make a loan and that the purposes of the proposed construction are consistent with the Rural Electrification Act.

From an engineering viewpoint, we review the engineer's system design to insure it is adequate to meet the 3- to 5-year load requirements and yet not overdesigned. The cost estimates are reviewed to see that they are reasonable.

Following this an economic or feasibility study is made. This study determines the annual expenses that will be incurred in the operation of the system, and includes the cost of; purchased power, operations, maintenance, general administration, replacement, taxes, insurance, and in addition, the cost of debt repayment and interest.

In the event of a new organization we would design recommended retail rate schedules for the various classes of consumers, when applied to the kilowatt-hours consumptions for which the system was designed, would produce sufficient revenues to meet these expenses and also provide reasonable operating reserves. If the applicant is already an operating utility we would determine that existing retail rate schedules would produce sufficient revenues.

Assuming that the application is satisfactory in all respects, the loan is made. REA makes 100 percent loans that are repaid with interest in 35 years. As security for this loan REA, in most instances, holds a first mortgage on all of the facilities.

Up to this point we have covered the main factors considered by REA in making a distribution loan. But, as mentioned previously, we must determine with all reasonable assurance that the loan will be repaid, therefore, this same interest of course continues throughout the period during which any outstanding indebtedness remains.

As a matter of assisting the borrower and to provide REA with a continuing method of evaluating the financial position or solvency of the borrower, we work closely with them in the various phases of their operations after a loan has been made; such as in the following:

CONSTRUCTION

REA has developed standard forms of construction contract, construction specifications, and construction assembly unit designs. Through the Electric Engineering Division we have gathered test and performance data on the items of materials required for pole line construction from which has been developed a list of materials that are acceptable for use on the borrowers' system.

We strongly urge the borrower to have his project constructed by taking competitive bids and using the standard contract forms. By so doing he stands to benefit financially where competition for the contract is keen and also by the protection afforded under the contract against faulty workmanship and materials. Upon completion of construction REA makes an inspection prior to its being accepted.

OPERATIONS

High quality service, which is a factor the engineer made possible through his design, can deteriorate rapidly and is a factor that can adversely affect the financial soundness of the organization when it is neglected. At intervals of from 1 to 3 years REA will make an inspection to evaluate the effectiveness of the borrowers' operations and maintenance programs. Some of the factors considered in these surveys are: pole inspection, right-of-way clearing, transformer and recloser maintenance, voltage regulation, and others.

MANAGEMENT

During operations we get from the borrower each quarter an operating report showing financial data as well as operational data. In addition we receive annually a copy of an independently performed audit report.

Through analysis of these documents we can frequently determine and advise the borrower of possible trouble areas that might be avoided with prompt attention.

CONCLUSION

This has necessarily been a brief discussion covering a broad field of activities. The points that have been brought out are those we believe are significant. I would like to emphasize that they are not factors to be considered once, then forgotten. The electric utility business, once started, becomes increasingly more demanding in terms of load, quality of service, management, and financing.

The American

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. MARTIN. Mr. President, we enjoy so many priceless liberties that some of us forget how they were won. Michel Guillaume Jean de Crevecoeur in "Letters of an American Farmer," written in 1782, had the vision to portray our future strength. The New York Times in the Treasure Chest column of its book review section for April 12, 1959, summarized the unusual characteristics of our people which provide our national strength and unity from his writings.

I ask unanimous consent that this editorial based on the letters of an American farmer may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TREASURE CHEST

THE AMERICAN

What then is the American, this new man? He is either a European, or the descendant of a European, hence that strange mixture of blood, which you will find in no other country. I could point out to you a family whose grandfather was an Englishman, whose wife was Dutch, whose son married a Frenchwoman, and whose present four sons now have four wives of different nations. He is an American, who leaving behind him all his ancient prejudices and manners, received new ones from the new mode of life he has embraced, the new government he obeys, and the new rank he holds. He became an American by being received in the broad lap of our great alma mater. Here individuals of all nations are melted into a new race of men, whose labor and posterity will one day cause great changes in the world. Americans are the western pilgrims, who are carrying along with them that great mass of arts, sciences, vigor and industry which began long since in the east; they will finish the great circle. The Americans were once scattered all over Europe; here they are incorporated into one of the finest systems of population which has ever appeared, and which will hereafter become distinct by the power of the different climates they inhabit. The American ought, therefore, to love his country much better than that wherein he or his forefathers were born. Here the rewards of his industry follow with equal steps the progress of his labor; his labor is founded on the basis of nature, self-interest; can it want a stronger allurement? Wives and children, who before in vain demanded of him a morsel of bread, now, fat and frolicsome, gladly help their father to clear those fields whence exuberant crops are to arise to feed and clothe them all; without any part being claimed, either by a despotic prince, a rich abbot, or a mighty lord. (Michel Guillaume Jean de Crevecoeur in "Letters of an American Farmer, 1782.")

Business News Is Important

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. PORTER. Mr. Speaker, the importance of each small business in our Nation is becoming better known. As that business develops through the farsighted efforts of its owner or owners so does the economy of the area.

The Roseburg, Oreg., News-Review has wisely recognized the numerous news stories connected with the firms in Douglas County. Earlier this year Editor Charles V. Stanton reorganized his news department and named as business news department editor, Mr. Leroy B. Inman.

I have watched the coverage of business in Douglas County develop. The stories point up the constant campaign by the businessman to meet the challenges of tomorrow before they become insurmountable.

One such firm in this particular county is the Paul B. Hult Lumber Co. owned and operated by Paul B. Hult and W. O. (Bun) Kelsay. The story of the development of this operation was written by Mr. Inman on April 25, 1959.

Under leave to extend my remarks in the RECORD, I include that story:

DILLARD PLANT PROGRESSIVE DOUGLAS COUNTY INDUSTRY

(By Leroy B. Inman)

An example of a little industry that has grown with the years through sound investment and careful management is the Paul B. Hult Lumber Co. at Dillard, which now supplies employment for 125 persons.

Starting as a small stud operation in 1945, the plant now produces 100,000 board feet of

timber per shift and operates two shifts. What's more the operation has been almost continuous since that date. Only one shift was lost for about a 2-week period last Christmas when logs ran low.

The mill weathered the depressed lumber market last year without a day's lost production, and, Hult, principal owner in the business, said he is very optimistic about future timber market.

"The men are even getting some overtime," he said.

Douglas County Representative W. O. (Bun) Kelsay is the other owner in the business, acquiring a third interest in about 1949.

THIRD MILL BUILT

The plant being operated now is known as Mill No. 3. The first plant, a stud operation, was built between the railroad track and the highway at Dillard in 1945. It was operated up until 2 years ago, when it was discontinued. The grounds and buildings now are used for storing lumber for shipment.

The No. 2 mill, also a stud plant, was built over near the South Umpqua River in Dillard, adjacent to the present Mill No. 3 site. It was discontinued last fall, but the small pond is still used for some log storage.

Mill No. 3 was built 4 years ago and completely remodeled and enlarged 2 years later to its present capacity. Three dry kilns, each 35 by 60 feet in size and with 80,000 board-feet drying capacity, have been erected since last fall. The third kiln went into operation only last week. The precut kilns were built by Diamond Lumber Co. at Tillamook and assembled at the Dillard plant.

TO BUILD DRYING SHEDS

Hult said he plans to erect additional drying sheds this summer. The old Dillard railroad station is used as the company office.

Mill No. 3 is a complete milling and planing operation, producing all dimensions. Fir lumber is shipped green, but hemlock is kiln dried. The company does not do any logging on its own, but contracts its logging and buys a good many logs on the open market.

Hult was born into the lumber business, so has come by it naturally. He said he was born 50 years ago but a stone's throw from a sawmill his father operated in Lane County Sawmilling is all he knows, but he likes it, he says. His uncle and a cousin operate a large mill near Junction City.

Hult said he built and operated three sawmills at Eugene, then put up one at Tyee, before coming to Roseburg. He has had interests in other Douglas County mills, but said he has disposed of these and is concentrating in his one operation.

Kelsay, his partner, has also had long associations with sawmilling in the Dexter area, where he grew up. He was president of the Willlamette Valley Council, Lumber & Sawmill Workers, AFL, for several years, before joining Hult.

While not considered a big operation, the Hult company is a heavy producer for its investment, and has introduced new innovations to improve efficiency.

On order and soon to be installed is a push-button edger control system. This system has been perfected by the C & D Lumber Co. at Riddle and is being supplied on order to the lumber industry. Hult hopes to have his remote control installed sometime in May.

While not the first with remote control for an edger, he was a "guinea pig" for remote control use with the log carriage in his old stud operation, and uses the device in his new mill. It permits the sawyer to turn the log on the carriage, formerly an operation of a ratchet setter who rode the carriage. He said he pioneered this method several years back, and it has proved very effective.

LOGS STRAPPED TOGETHER

Another system which he uses involves unloading of logs at his pond log dump. Instead of letting the logs roll off the truck into the pond, a metal strap is placed around the center of the load of logs. Cables from an overhead crane are placed around either end of the load and the logs are lifted as a unit and set into the pond lightly.

This has several advantages, the first being, that by keeping the logs strapped together, the capacity of the mill pond can be increased about 2½ times. The log bundle can be easily maneuvered. The strap is not released until the logs are ready for the saw.

There is less breakage of the logs and there is also less chance for damage to the truck in the dumping process.

Hult handles a lot of hemlock, sawing upwards of a million feet a month. The butt end of hemlock trees will not float and have to be stored in cold decks about the mill. They are carted to the mill by means of a Hyster, then are placed into the mill by a crane. The cranes is used only for dry logging. Pond logs are hauled up a ramp.

Wood waste from the mill is burned except for planer shavings which are sold to Pacific Plywood for use in hardboard making.

Forced Retirement of Persons at Age 65 Wastes Many Talents and Productive Man-Hours

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. YARBOROUGH. Mr. President, although employment in all younger age groups has climbed in recent years, less than 36 percent of our citizens above 65 are now employed.

Quite often these people were involuntarily retired because of a company policy which required that they be retired at a certain age. And, because of their age, they find it impossible to find another position. For many people this is disastrous financially, economically, and mentally. Many older people, used to earning their own way and living in vigorous health would like to continue their active lives.

And the trend seems to be extending now to such an extent that persons above 40 encounter difficulty in finding new positions. This is a shameful waste of talents, many good minds, and innumerable productive man-hours.

Mr. President, in support of S. 1172, of which I am a cosponsor, and to underline my remarks, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was printed in the Corpus Christi Caller-Times for Sunday, April 26, 1959, under the heading, "Forced Retirement."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FORCED RETIREMENT

Industrialization is the force responsible for discarding workers over age 65, a study by the International Labor Organization has revealed. The United Nations' special agency has found those relatively few countries remaining which still depend almost entirely upon farming, ranching and related non-industrial enterprises for their economy have a much higher percentage of older workers than do their manufacturing neighbors.

Specifically among industrial innovations, the pension and higher productivity are blamed for the demise of workers above 65. It is significantly demonstrated that in Germany, which founded the social security system and which has had an arbitrary retirement age of 65 for almost 70 years, one of the lowest percentages in the world of people above this age gainfully employed is found. Slightly more than one of four Germans above the magic age are helping their nation's productivity.

Germany's 26.8 percent of oldsters employed contrasts with the 75 percent employed in many South American agricultural countries. The United States—despite appeals from public and industrial officials—is headed swiftly toward Germany's low level. In the 7 years from 1950 to 1957, the percentage of older workers employed dropped from 41 to 36 percent. This result was achieved in spite of increased employment in all other age groups.

Greater acceptance by employers of private pension plans to supplement social security obviously creates a great inducement to employees to retire when eligible. No one, certainly, can find fault with a person who voluntarily inactivates himself from the daily grind when he feels he can afford to do so, or when a retirement income is offered to him. If voluntary retirement were the reason, no one would object if the percentage of older persons employed dropped to nothing.

Unfortunately, that utopia has not been reached. There is a large segment of retired employees—very likely a majority—to which no choice was offered. Many of these people have needed talents to offer industry, many did not wish to loaf after a lifetime of work, and many others could provide efficient output on a reduced work schedule.

But all had one obstacle in common—they had reached the age at which their employers automatically open the doors.

Automated assembly lines, recordkeeping and business procedures may create mechanical efficiency, but the same is not true of human beings. There is no age at which human productivity automatically expires. Those who advocate such an age are merely asking for the privilege of supporting more and more individuals in retirement—persons who would rather be earning their own way.

Free Enterprise and National Defense

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, April 30, 1959

Mr. MARTIN. Mr. President, ever since 1955, when the Senate embarked on an extensive investigation of our antitrust laws, I have been concerned that rather than perfecting our charter of economic freedom, some antibusiness groups have attempted to use this investigation as a vehicle to attack bigness per se.

An examination of the records of the United Nations Economic and Social Council clearly shows that those countries who would destroy America's freedom would like nothing better than to attack the economic base upon which our security must rest.

During recent weeks, as a member of the Aeronautical and Space Sciences Committee, I have had the opportunity to visit many defense and contractor installations which demonstrate the great progress our country is making in this new field. The one outstanding conclusion which is left with any objective student in this area is that big business is destined to play an important role in America's efforts in the space age.

On July 6, 1955, before the Senate Antitrust and Monopoly Subcommittee commenced its hearings, I said:

It is quite apparent that the Communists read the American newspapers and the CONGRESSIONAL RECORD. They are aware of what President Truman said in the 1952 campaign.

Mr. President, too many of our own Members have used the term "monopoly" indiscriminately. They have applied it loosely to any big business. Hence, it is not surprising that the Russians feel justified in quoting them and in taking the same course of action. Committees of the Congress are presently holding hearings to determine whether our antitrust laws should be revised. This is an important subject, which merits careful and deliberative study. My concern is to be sure that in making these studies we refrain from any actions which can damage our own internal unity and which will provide additional ammunition for those who wish to discredit the American free enterprise system which I am proud to call capitalism. I have no hestiancy in taking a forthright position in support of capitalism.

On July 7 last year it was my great privilege to include in the body of the RECORD the Independence Day address of former President Herbert Hoover at the Brussels Fair. I take pardonable pride in the fact that he was born and raised in West Branch, Iowa. He said:

We are often depicted as living under the control of wicked men who exploit our economic life through gigantic trusts and huge corporations. They are supposed to grind the faces of the poor and to exploit other nations. All this ignores the fact that our laws for nearly 70 years have prohibited the existence of trusts and cartels. In few other nations have the fundamentals of fair and open competition been so zealously maintained.

This competition has spurred our industries to adopt every labor-saving device. And to create them, there are more than 5,000 industrial research laboratories that pour out new ideas which become open to all the world.

Insofar as large corporations are concerned, they are the property of millions of our people. The largest of them has more than 1,500,000 individual stockholders, not one of whom owns more than one-thirtieth of 1 percent of the corporation.

The distinguished minority leader, the junior Senator from Illinois [Mr. DIRKSEN], in his individual views on administered prices in the steel industry, Senate Report No. 1387, said:

The minority has long observed that at international conferences, the Soviet Union and its satellites have used documents produced by our own Government to embarrass U.S. representatives. A review of the debates in the United Nations Economic and Social Council amply documents this statement.

Many American firms have encountered unwarranted difficulties in their operations abroad, because the Communist bloc was successful in labeling large American firms as cartels and American monopolies, even though there is no justification for such a characterization.

Every Member of Congress has a responsibility in terms of our national welfare to avoid exaggeration, partisan statements, and criticism not supported by the evidence developed in committee hearings or otherwise in the preparaton of congressional reports. Every congressional report may become an official Government document.

The minority regrets that the majority has accepted the unwarranted and prejudiced assumptions of the staff in the preparation of its views. It is satisfied that they have unwittingly provided propaganda which may be used to our national detriment.

Subsequently, in his individual views on administered prices in the automobile industry, he further amplified this statement and commented on President Hoover's address as follows:

It is regrettable that the majority has permitted the longstanding prejudices and biases of its staff to influence the preparation of its views. They may tend to negate Mr. Hoover's great efforts to show that never before in the history of mankind has any economic system produced so many benefits which were so widely shared. Free enterprise capitalism as it has developed in this country is the only economic system which at all times reflects the wishes of consumers through their purchases in free markets. It has provided incentives to producers. In fact, it has literally remade civilization. Attacks which reflect on its performance, while not attributing guilt to anyone and providing no suggestions for legislative remedies, are a great disservice to the American people.

More recently these self-evident truths are becoming apparent to informed Americans everywhere. Look magazine, in its issue of March 31, 1959, had a feature editorial entitled "The Russians Are Trying To Turn Our Best Weapon Against Us." I ask unanimous consent that this editorial be printed in the RECORD.

Again, one of our most distinguished weeklies, U.S. News & World Report, has recently raised the question whether our big business organizations are in fact large enough to meet the challenge of the Soviets. I ask unanimous consent that an article entitled "Big Business Not Big Enough?" which appeared in the March 30, 1959, issue of the U.S. News & World Report may be printed in the RECORD.

Mr. President, during my 20 years of service in the Congress, the defense of our country has always been one of my principal concerns. In World War II, during the Korean emergency and during the present cold war, I have learned that we need big business with its research skills, its trained manpower, and its facilities to protect the welfare of all of us. This statement is in no way incompatible with the philosophy I share with every other Member of this body that small business has a vital role to play in the advancement of America's future. I am unwilling, however, to identify bigness with badness. I am opposed to monopoly in any form, but an examination of the record shows that in most areas large firms are meeting keen competition from other firms equally endowed with capital, resources, and management skills.

As we approach the time where our leaders must meet with the Soviets at a summit conference, we must close ranks and stop these senseless attacks on the business community which if continued may destroy one of our greatest assets.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From Look magazine, Mar. 31, 1959]

THE RUSSIANS ARE TRYING TO TURN OUR BEST WEAPON AGAINST US

What is that weapon? It is mass production by big integrated industries—fast, efficient, economical. This is our greatest asset in a cold war which has become an economic struggle. It is the source of our strength and the basis of our position as a world power.

But other countries, especially the Russians, are imitating our great integrated productive industries as completely as possible. For our big corporations they substitute gigantic trusts and combines.

It would be one of the ironies of history if, while the Russians integrate their industries to achieve lower production costs, we turned in the other direction and weakened the ability of our industries to compete in world markets by making them smaller and less integrated.

No longer do our big producers find most of their competition among other American companies. Increasingly, American industries derive more and more of their business from overseas. Of the largest, several now obtain from 40 to 70 percent of their income from operations in other countries.

ELECTRICAL APPLIANCES FOR EVERYBODY

Among those U.S. industries selling widely overseas are the makers of electrical equipment.

Few have done more to make the comforts and conveniences of life widely available. Their radios, refrigerators, washers, and dozens of other products have brought better living to Americans and many other peoples worldwide.

Here in America the amount of electricity used has roughly doubled every 10 years. The investments required to generate it, and to provide appliances to use it, have gone up in proportion.

As a result of the billions that have been spent to research and develop such electrical equipment, the householder who worked 580 hours to buy a refrigerator in 1931, had to work only 188 hours to buy one in 1958. And the same is true of virtually all other electrical appliances.

Yet despite its rapid growth, and the constant increase in the invested capital required by the electrical industry, there are more small electrical suppliers today than there were 10 years ago.

This demonstrates the wealth-generating attribute of big business, supporting and energizing a vast and always increasing host of small business.

THE TRUTH ABOUT BIGNESS

In the light of these facts, it is time to reexamine the credo that bigness means monopoly and higher prices. In America, bigness has meant just the opposite. It has raised our living levels year by year. And now when we need it most, we find that bigness—with its resulting efficiency and economy—is also the armory of our defense.

If at this juncture we decide to stifle bigness and efficiency, we can be sure that the Russians will not. Nor will our other competitors in world markets.

Such a policy could result in the loss of our world business, a drastic lowering of our standard of living, and our inevitable decline as a world power.

We have plenty of checks today against any bad effects of bigness * * * such as exorbitant profits. What we should be more concerned about is whether our industries will stay strong enough to meet tough foreign competition in world markets and make any profit at all.

They will, if they are able to keep their prices low enough. And the only way they can do this and still pay our American workers the high wages they should get is to use our mass production weapon to the utmost.

If in this crisis we decide to go the other way—if we force big industries to split themselves into smaller, less efficient units—only three more words remain to be written.

We've had it.

Attacks on big business are also attacks on the high productivity that makes your high living level possible. When you read or hear such statements, don't let them go unanswered. In your own interest, speak up.

[From U.S. News & World Report, Mar. 30, 1959]

BIG BUSINESS NOT BIG ENOUGH?—THE STORY OF THE GROWING DEMANDS UPON INDUSTRY IN AMERICA

Once again, Government is making a strong attack on "bigness" in American business. This attack is coming just at a time when "big business" itself is more convinced than ever that it is not big enough.

This question is raised: When is big business too big?

The Government's Department of Justice has suggested that General Motors Corp. is too big. Moves are being started that may lead to the breakup of that giant of the motor industry.

Bethlehem Steel Corp. and Youngstown Sheet & Tube Co. recently were denied the right to merge, on the ground that the combined company would be too big. The Pillsbury Co. is being told that it must give up two flour-milling concerns it purchased. Continental Can Co., Inc., has been told that its acquisition of Hazel-Atlas Glass Co. and the Robert Gair Co. violates the antitrust laws.

Both the Justice Department and a committee of the U.S. Senate have launched investigations to determine whether a few big companies dominate prices and markets in steel and autos. There is powerful support in Congress for a new law to require that Government be notified in advance before any important merger is carried out.

At the Federal Trade Commission, officials continually scan moves that might limit business competition.

All along the line, in many areas of Government, the attack is on bigness.

PRESSURES FOR GROWTH

Yet "big business," now as in the past, is under great and growing pressure to grow bigger. "Small business," at the same time, is turning to the Government for more and more help. The aim of most small enterprises is to prosper and grow bigger.

Actually, the giants among this country's business concerns are relatively few in number. As the accompanying chart shows, there are only 3,550 firms employing 1,000 or more workers. The number employing fewer than 1,000 is more than 4.3 million.

Another measure of size is found in the total assets of a business. Using that scale, you find there are about 1,000 companies large enough to have assets of more than $100 million. Only a few have assets of $1 billion or more.

A glance at the table prepared by the economic unit of U.S. News & World Report, shows you the Nation's 15 largest nonfinancial companies ranked according to total assets. These firms, and others like them—the real giants of American industry—are numbered in scores, rather than in hundreds or thousands.

It is on this segment of business, small in number but great in importance, that the Government is concentrating its attack.

In the face of attack, however, big business keeps growing bigger. In 1958, the Federal Trade Commission reported, there were 899 mergers of major corporations. That came on top of 941 major-corporation mergers in 1957.

WHY GIANTS TEAM UP

What accounts for the trend toward greater and greater size in American business?

When you look into this question, you find many answers.

Mammoth strides are being made in science and technology. Vast resources in capital and new equipment are required to develop the products that science makes possible.

Research itself has become so stupendous in scope that big business, large as it is, cannot undertake it all. Government finds that it must invest billions of dollars each year to supplement private research.

As industry expands and population grows, there is growing need to find new sources of raw materials. Again, huge investment is required—so big that even the giants among corporations are forced to band together to provide the capital needed for development.

Thus, in the worldwide search for oil, joint ventures have been organized by the big producing firms to find new petroleum reserves and get them to market. In Saudi Arabia, for example, four American oil companies have invested more than $800 million to develop oil fields and lay a 1,000-mile pipeline to the Mediterranean Sea. In steel, five big U.S. steelmakers have banded together to bring iron ore from remote fields in Labrador and Quebec. High in the Peruvian Andes mountains, four American metal-mining companies have joined to develop a copper deposit that will soon be producing 30,000 tons of ore a day.

In scores of other industries, big corporations are working as partners to share the risks and the expense of tackling new and complex jobs.

A coal producer and an oil company, for instance, have formed a new corporation to make the giant electrodes needed in producing aluminum. A steel firm and an electrical-products manufacturer have formed a company to produce titanium. In Alabama, a maker of chemicals and a textile firm are jointly operating a synthetic-fiber plant, and, in the resource-rich province of Alberta, a Canadian oil company and a U.S. papermaking company have teamed up to build a $42 million pulp mill.

STRUGGLE FOR WORLD MARKETS

In today's world, competition for markets is intense. When American businessmen venture into world markets, they must compete with foreign firms that often have the backing of governments themselves.

U.S. companies now are meeting keen competition from concerns in Western Europe and in Japan—areas where labor costs are far lower than in this country. Companies in many foreign areas can get together to set prices and divide up markets. Steel companies in the United States note that such foreign-produced items as nails, barbed wire, and some types of steel sheets often can be made abroad and shipped to this country to sell at prices lower than those of similar products made in Pittsburgh, Chicago, or Cleveland.

Soviet Russia, in effect, is one big company. Its rigidly controlled economy can be directed to turn out whatever products the Russian leaders choose, without regard to the needs of Soviet consumers. Russia can dump products on world markets and undercut any competitor.

A SPUR TO COST CUTTING

To counteract the threats of lower priced imports, the big companies in this country find they must spend increasingly large sums for new equipment, automatic machinery and other devices to hold down their manufacturing costs. Only by pouring huge sums into modernized plants can they hope to offset rising costs of labor and raw materials, and the continual squeeze on profit margins.

Such spending tends to foster the growth of the largest companies, which are able to float big stock and bond issues and retain some money from their annual earnings. Less efficient operators, unable to produce profitably and stand up to sharp competition, are forced to sell or go out of business.

Look at what has happened, over the years, in the auto industry. Only five makers of passenger cars have managed to fight rising costs and sharp competition and stay in business over the years. Thirty years ago, there were 13 auto makers. Of today's remaining manufacturers, the Big Three—General Motors, Ford, and Chrysler—account for about 90 percent of all the cars produced.

TAXES VERSUS HORATIO ALGER

Today's high tax rates have a double-barreled effect on business concerns. By siphoning off dollars that might go for expansion, Federal tax policy tends to keep smaller enterprises from growing larger in the way some of America's companies grew a few decades ago.

"The Horatio Alger story of the Ford Motor Co.—which, beginning with $28,000 in 1903, was worth nearly $1 billion by 1930—could not be repeated under the present-day tax structure," one financial authority notes.

At the same time, high taxes force existing companies to be as large and successful as possible. Only by earning tremendous sums, to be split with Uncle Sam, do big companies have money left for reinvestment and for creating new jobs.

Each new job given to a worker today calls for the investment of about $15,000, according to one recent study. B. B. Turner, president of Ethyl Corp., notes: "Such spending by the big business concerns has helped build America's prosperity. It has brought a continual increase in output among workers in industry, permitting higher wages, more leisure, and extra job benefits."

These pressures—from bigger tasks to be done, from rising costs, from stiff foreign competition—are only a few of the factors that are operating to bring about bigger and bigger enterprises under single management.

BIG UNIONS AND BIG DEFENSE

Big and powerful labor unions add another pressure. Unions operate outside the antitrust laws that govern business. A single union, under a single direction, is able to shut down the Nation's basic industries. This power of big unions adds to the demand for an offsetting bigness on the management side.

Another push comes from national defense. Government finds that no single company and no single industry is big enough to do all the research and development for today's new weapons. Yet Government, in turn, is forced to look to big business for the skills in management and organizational ability that are required to carry through the production of the new jet planes, rockets, missiles, and other weapons in the Nation's defensive arsenal.

In other fields vital to the Nation's future, all the signs that Government officials see—even as they battle against bigness—indicate that big business is going to grow bigger still.

ATOMS AND OUTER SPACE

Take the development of atomic energy for peacetime use: Huge investments are re-

quired. There is little chance that early efforts to generate nuclear power will pay off in profits. Though groups of companies have joined to build atomic reactors, the projects are so expensive that there is more and more pressure for Government itself to move into the development of nuclear power.

Big as the large companies are today, they are not big enough to afford the vast sums needed to explore outer space and finance the rockets and missiles that will aid this exploration. Government is putting up most of the funds now being channeled into space projects.

In still another field, that of producing electric power, past notions of size are being revised. Says Robert Paxton, president of General Electric Co.:

"To provide a rising standard of living for the rapidly expanding population of the United States, this country must have electric-generating capacity of 1 billion kilowatts within 30 years. That means building the equivalent of six new power systems as big as the electric-power industry was in 1957, at an indicated cost of $360 billion or more, in 1958 dollars. Obviously, utility companies and their suppliers, including General Electric, will have to grow several times larger than they are at present, if the need for increased generating capacity is to be satisfied."

THE SHRINKING DOLLAR

Inflation, continuing steadily, has put higher price tags on the jobs industry must do. Only big, well-to-do firms can afford the outlays. The cost of drilling an oil well in 1948 was about $49,000, on the average. Today, an identical well costs more than $70,000. The cost of building a new 50,000-barrel-a-day oil refinery is 30 percent higher now than it was a decade ago.

Since the end of World War II, the companies in the Bell Telephone System have had to raise about $13 billion in new capital to pay for expansion of phone service in the United States. That outlay is more money than the entire Federal Government was spending per year for all purposes as recently as 1940.

HOW GIANTS COME AND GO

Businessmen have found that mere size, by itself, is no guarantee that a company will grow and prosper.

"Unless you convince your customers every single day that you are giving them good value—better than they can get somewhere else—you won't stay long at the top," says the president of one electrical-appliance company.

A long-time study of the way giant industrial concerns have ranked by size over the years bears out this comment. The Brookings Institution traced the fortunes of the 100 largest industrial companies over four decades, starting in 1909.

Of the 100 big companies on the 1909 list, only 36 still were among the largest in 1948. By 1955, only 29 remainded. Some of the original companies had completely disappeared. Others were still in business, but had been outstripped by faster-growing rivals.

Many corporations that have gotten steadily larger in recent years are selling to a diminishing share of the total market, simply because of the way the country is growing.

Fifty years ago, for example, United States Steel Corp., made 67 percent of all the steel produced in this country. Today, though it has quadrupled its capacity, it produces only about 30 percent of the Nation's steel.

Standard Oil Co. (New Jersey) in the last 10 years has vastly increased its volume of business—from roughly 1,250,000 barrels of oil a day to more than 2,250,000 barrels. But it still accounts for just about the same percentage of the free world's petroleum operations as a decade ago, because the whole industry has grown in the meantime.

A TWO-WAY STREET

One charge often made against "big business" is that it tends to squeeze small enterprises out of existence. On the other hand, growth and expansion of large firms often open new markets which small companies can share.

Small firms also depend on the large companies for orders. This interdependence of big and little firms holds true in every type of industry. General Electric Co. buys parts, materials and services from 42,000 suppliers. United States Steel buys supplies from 50,000 small concerns and in turn furnishes steel to nearly 100,000 small companies.

Discovery and development of new products, largely as a result of research by big companies, have provided many new business opportunities. Look at just one field—the manufacture of chemicals—and you get a glimpse of the spectacular progress in new-product development over the past few decades. Since 1920, for instance, the Nation has seen such chemical advances as these: antibiotic drugs, plastic packaging films, radioactive isotopes, synthetic fibers and plastics, detergents, weedkillers, hormones, rubber-base paints, improved motor fuels, synthetic fertilizers, and synthetic rubber.

THE NEW OWNERS

Today's big businesses find it continually necessary to raise new capital for developing new products and producing them efficiently and economically. The sale of securities for this purpose tends to make ownership of the big concerns more widespread.

The Du Pont Co., for example, has more than 45 million shares of common stock and 2.4 million shares of preferred stock outstanding. In addition to the individuals who own Du Pont shares in their own names, the stock is also held by 600 schools and colleges, 200 hospitals, more than 500 churches, nearly 700 charitable institutions and more than 500 insurance companies.

Small shareholders gradually are getting an increasing stake in stock ownership. Even in the country's largest company in terms of assets, American Telephone & Telegraph Co., no individual shareholder owns as much as one-thirtieth of 1 percent of the stock.

Millions of individuals today, through ownership of life insurance policies, investment funds, and equities in pension and retirement plans, are indirect owners of the big, successful companies.

Much of the criticism leveled at big business concerns today is based on practices that were discarded decades ago. "The days of child labor, 'union busting,' and sweatshops are as outmoded as the gasoline that used to run the tin lizzie," an oil-company executive declares.

Over the years, laws have been passed and agencies created to regulate various types of businesses. The Federal Government and the various States have "watchdog" agencies in transportation, communications, banking, securities trading, and other fields. Much of the Federal regulation stems from the Reconstruction Era following the Civil War, when pools and trusts were created to maintain production and prices in key industries.

New suggestions for regulating big businesses continue to be made. Only a few days ago—on March 18—a proposal was made in the U.S. Senate that prices of steel and other heavy metals should be controlled in much the same way as public utility rates are regulated.

THE RIGHT HAND AND THE LEFT

Sometimes, businessmen say, the Government appears to be working at cross-purposes in its desire to make business more competitive and, at the same time, to make use of the facilities of the Nation's big enterprises.

David E. Lilienthal, former chairman of the Atomic Energy Commission, gives this example: He asked the Bell Telephone System to take over the tremendously difficult task of redesigning and mass-producing the atomic bomb. But, at about the same time, another Federal agency, the Justice Department, was suing to split off the Western Electric Co. from the Bell System and to divide Western Electric into several parts.

In other words, a Bell System executive remarked, the Government was asking for the destruction of the very things most needed for a job vital to the Nation's security—size and organizational unity.

The debate over bigness in business still goes on. There is continued questioning about the part big organizations should have in the U.S. economy. But this much seems certain: As the Nation grows and develops, there will be many jobs for the big, financially strong, research-minded companies. These firms, holding their places in the rough-and-tumble competition of American business, have the facilities and the depth of leadership to tackle the giant tasks that people want to see accomplished.

America's business giants [1]—The 15 biggest companies, ranked by amount of assets

	Total assets	1958 profits	Number of workers	Number of stockholders
American Telephone & Telegraph Co.	$19,494,000,000	$952,000,000	725,000	1,620,000
Standard Oil Co. (New Jersey)	7,900,000,000	564,000,000	155,000	500,000
General Motors Corp.	6,891,000,000	634,000,000	620,900	750,700
United States Steel Corp.	4,436,000,000	301,000,000	223,500	311,700
Gulf Oil Corp.	3,430,000,000	[2]	56,000	93,600
Socony Mobil Oil Co.	3,238,000,000	157,000,000	75,000	207,000
The Texas Co.	3,112,000,000	310,000,000	52,500	138,300
Pennsylvania RR. Co.	2,963,032,000	12,000,000	78,900	137,100
Ford Motor Co.	2,962,000,000	96,000,000	165,000	265,000
Standard Oil Co. (Indiana)	2,769,000,000	118,000,000	46,000	151,900
E. I. du Pont de Nemours & Co.	2,649,000,000	341,000,000	85,800	209,400
New York Central RR.	2,626,000,000	[2]	62,000	40,000
Standard Oil Co. of California	2,451,000,000	258,000,000	38,400	154,000
General Electric Co.	2,421,000,000	243,000,000	249,700	395,500
Bethlehem Steel Corp.	2,195,000,000	138,000,000	140,500	186,700

Address by the Honorable S. Samuel Di Falco

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. ANFUSO. Mr. Speaker, on Saturday, April 11, 1959, I had the privilege of attending the annual banquet of the Delta Theta Phi law fraternity at the Waldorf Astoria Hotel in New York. On that occasion, the Honorable S. Samuel Di Falco, surrogate of New York County, was installed as an honorary member of the John Jay Senate of the fraternity and he delivered a very fine address.

Surrogate Di Falco's address should be of great interest to all lawyers and students of law in the country. It is for this reason that I am inserting it into the RECORD in order to bring it to the attention of all my colleagues, especially those who are trained in the law.

For the benefit of those of our colleagues who do not know Surrogate Di Falco, I want to say that he is a former member of the New York City Council and a former justice of the New York State Supreme Court, where he served with great distinction. He is a learned and eminent jurist. The thoughts he expresses in his address are most appropriate.

Among the distinguished guests present at the banquet were the following: Rev. Joseph T. Tinnelly, C. M., dean of St. John's University School of Law; Hon. Charles E. Murphy, justice of the appellate division; Hon. John R. Starkey, judge of the county court; Dr. Harold F. McNiece, associate dean of St. John's University School of Law; Prof. Arthur L. Gould; Prof. Edward R. Re; Alfred C. Cordon, chief justice of the Delta Theta Supreme Court; Timothy V. Smith, district chancellor; Joseph R. Palumbo, dean of Greater New York Alumni Senate; and John A. Flood, dean of John Jay Senate.

Following is the text of Surrogate Di Falco's address:

SPEECH OF SURROGATE S. SAMUEL DI FALCO BEFORE THE DELTA THETA PHI LAW FRATERNITY, APRIL 11, 1959

Honored guests, clergy, fellow jurists, brothers, I am highly honored by membership in the Delta Theta Phi which you have conferred on me.

I do not accept this honor lightly. It is a privilege, coming as it does, from so distinguished and prominent a law fraternity.

Yes, my fraternal brothers, fraternities play a more important role in our society. They fill the need for close companionships, for educational exchanges of information, and for the advancement of common goals.

The founders of your fraternity undoubtedly had in mind the need for close companionship among students of the law, for an educational exchange of legal information, and for the advancement of a common cause both before and after graduation from law school and for maintaining and upholding the integrity of the legal profession in the eyes of the public.

You the students and recently admitted members of the bar are standing on the threshold of a distinguished career in an ancient, honored, and proud profession, a profession which has led the struggle for liberty, for justice, and for the protection of human rights. The lawyer, from the beginning of time, has been the acknowledged leader of the community in legislative halls, in high government places, and in all other tribunals of this great democracy. This profession offers a great challenge and an opportunity for service to your community.

This is a profession of honor and esteem in our society.

To function efficiently and effectively, the lawyer must have the highest trust and the deepest confidence from his client and the public. This primarily is the basic premise upon which a lawyer-client relationship is founded.

It should be noted and emphasized, however, that the legal profession is no more troubled with undesirable or unethical practitioners than is any other profession or calling. We must at all times safeguard against the creation and promotion of a false impression to the public, that the infrequent dishonorable lawyer is the general rule, when, in fact, he is the rare exception.

For instance, you must have observed the increasingly vicious and vitriolic attacks upon lawyers who represent defendants in unpopular causes, or who represent individuals who are under general castigation or fire.

Are not these causes or these individuals entitled to legal representation and a fair trial—regardless of all other considerations—with the inherent right to able counsel? Is not the providing of a legal defense the sacred obligation of the profession and a sacred right to be provided to an accused? This is a constitutional right—this is part of our civil rights. Is it not a fact that counsel has the obligation to represent a client to the best of his ability without being deemed to be in sympathy with, or approving of, his client's cause or course of conduct? Yet, how many are there to speak eloquently as defenders of the lawyer and the profession on this issue.

May I call to your attention, my friends, another situation worthy of mention.

In the past two sessions of the New York State Legislature, a bill was introduced entitled "Establishment of a Simplified State Court System." Yet, consistently in every medium of communication, reference is made to this bill as a court reform bill.

Without arguing the merits of the proposed court plan, I believe it is poor public relations for our courts to improperly permit the reckless—irresponsible and dangerous use of the word "reform" in connection with our courts. Reform connotes corruption, wrongdoing and abuse of justice in the public mind. By definition, "reform" means "to abandon an evil course," "to give up evil for that which is good." This was never the intent of this legislation. It is more accurate to speak of court modernization, court simplification, or court consolidation. Yet, can you estimate the impression that the public or the layman gets from such a reference? What about the portrayal of the role of a lawyer on TV, in films or in a play participating or aiding a criminal in his nefarious activities? Do you think this is good for the profession?

Unfortunately, the critics are loud, numerous, and inflammatory—our defenders few, whispering, and conciliatory. I urge you, future members of the profession, and those of you who are now representatives of the bar, to uphold our profession's dignity and honor, which it has always richly earned and does deserve.

Each individual practicing lawyer is by his deed, word, and actions, an emissary of our profession and is a standard bearer of the honor, dignity, and respect which will inure either to the benefit or detriment of the legal profession. Each individual lawyer, in his relationship with the public, holds the reputation of the profession in his hands—to mold—either for good or for evil.

We members of the legal profession are the fiduciaries of an enormous public trust. We hold, in our hands, the destinies of man's civil, human, and property rights.

Though we contribute unselfishly, unswervingly, and devotedly to the public interest our good deeds are neither promulgated widely nor loudly enough.

It is my humble opinion that the time has come when we must take the responsibility for reeducating and enlightening the public. In this you, the young, can lead the way.

You must correct in the public mind, any unfounded and misguided impressions by good and favorable public relations. Lawyers must continue to be recognized as conscientious men and women of wisdom and judgment. If they are to protect their rightful roles as architects who built the best legal and judicial system, then they must be prepared to fight the forces of unjust criticism, harsh judgment, and caricatured half-truths, with wide promulgation of the truth and constructive contributions to society.

We, you and I, must mobilize every means and every organization at our disposal—as the disseminators of good will, respect, and understanding of the bench and bar.

We cannot expect the impetus for such a movement to come from the outside. If we do not seek to protect ourselves, if we do not endeavor to grapple with our probs and find solutions for them, we cannot look to others for help. Within the profession we have the necessary machinery at hand, and the finest legal minds to make that machienry work.

Be faithful to your chosen profession. Zealously and jealously guard her reputation. Be loyal to your democratic way of life. Be true to your fraternal brother and brother lawyer.

Above all, never swerve in your devotion, nor diminish your enthusiasm for that sacred adage "The true administration of justice is the firmest pillar of good government."

Let us forever keep the beacon of our beloved profession glowing brightly with our own interest, warmth, and fervor.

We must ever keep the torch brilliantly aflame, so that the public can see our sense of decency, responsibility, and honesty.

Each member of a legal fraternity, such as yours, or bar association must be a lighthouse of hope, safety, and of "on course" to the American public.

As the future bastions of the legal profession, the molding of public values should be of great concern to you.

As the legal luminaries of tomorrow, remember that the bar and your country need your patriotic assistance to lay the proper foundation for the future.

In placing the future of the profession in your hands, I know I am securing it for us and posterity.

Des Moines and Mississippi River Flood-Control Program

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. SMITH of Iowa. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include my testimony given before the House Committee on Appropriations concerning the Des Moines River Valley flood-control program, which is of vital concern to the entire Mississippi River Valley, in particular, and to the whole country, in general. My testimony was as follows:

STATEMENT OF NEAL SMITH, MEMBER OF CONGRESS, FIFTH DISTRICT, IOWA, BEFORE THE SUBCOMMITTEE ON PUBLIC WORKS APPROPRIATIONS OF THE HOUSE COMMITTEE ON APPROPRIATIONS, APRIL 30, 1959

Mr. Chairman and members of the subcommittee: I appreciate the privilege of appearing before your subcommittee to enter a formal request for $2 million to be included in the 1960 public works appropriations bill for the Red Rock Dam and Reservoir on the Des Moines River. The reservoir site, approximately 60 miles downstream from the city of Des Moines will be chiefly in Marion County, which is in the congressional district I represent, but four congressional districts in Iowa are directly affected, as well as States bordering the Mississippi River. I feel certain that the citizens of at least 25 congressional districts would be benefited by construction of the Red Rock Dam.

Permit me, first, Mr. Chairman, to commend your subcommittee for its untiring efforts in endeavoring to assign priority to the many worthy projects brought before your subcommittee. I am also aware, Mr. Chairman, of the serious admonishment you delivered in the House of Representatives earlier this week, on April 27. I agree that there are unnecessary expenses we have been doing without and can continue to get along without. My request is not in this category. The project will be an investment in every sense of the word, not a mere expense. It is an investment to save human lives and property. The ratio of benefits compared to costs for this project is 1.51. Few projects in which you ever invested money had that favorable ratio. This is a good investment from a business point of view. For the reasons hereinafter stated, I respectfully request that you give favorable consideration to the request for an appropriation of $2 million for the Red Rock Reservoir.

CHRONOLOGY

Over 21 years ago, in the Flood Control Act of June 28, 1938, the Congress approved a general comprehensive plan for flood control and other purposes in the Upper Mississippi River Basin "with such modifications thereof as in the discretion of the Secretary of War and Chief of Engineers may be advisable." The plan included a reservoir on the Des Moines River, then known as Howell Reservoir and now designated as Red Rock Reservoir (Howell site), with dam site 142.9 miles above the river mouth.

That same year a further study was authorized of the Des Moines River Basin flood problems. In the survey report of 1943 (H. Doc. 651, 78th Cong., 2d sess.) the Chief of Engineers recommended construction of Red Rock Reservoir, with the dam site 155.6 miles above the river mouth.

By the Flood Control Act of 1944, the Congress authorized the 1938 comprehensive plan, "including the project for Red Rock Dam substantially in accordance with the recommendation of the chief of engineers in document 651."

The 1943 report of the Corps of Engineers was reviewed following the major floods of 1947, which cost seven lives in the Des Moines River Basin, the evacuation of over 6,000 persons, left tens of thousands of citizens without drinking water in the tap for a month, and caused millions of dollars in damages. The engineers found that the Red Rock site would not have contained the 1947 flood and recommended construction of the authorized Red Rock Reservoir at the Howell site and a reservoir above Des Moines at the Saylorville site, with dam at mile 213.7.

RECURRING MAJOR FLOODS

The Corps of Engineers in its various reports for flood control on the Des Moines River has continuously directed attention to the recurring floods of major proportions, which have caused many millions of dollars of damages to urban areas and serious crop losses. Their magnitude and frequency are a matter of record—June 1851, June 1858, April 1862, June 1865, July 1869, July 1875, April 1876, July 1881, April 1888, May 1892, April 1897, July 1902, June 1903, June 1917, June 1935, May and June 1944, June 1946, June 1947, and June 1954—an average of a major flood every 5½ years. Moreover, every year significant flood damages are experienced, resulting in average annual flood losses, based on 1952 prices, in excess of $2 million in the lower valley below the proposed Red Rock Dam.

Local protection measures have been adopted through the years, and our State of Iowa is grateful to the Corps of Engineers for its assistance and cooperation. While these measures have served to lessen somewhat the amount of our economic losses, it is a matter of official record that our local programs are inadequate without the Red Rock Reservoir.

During the 1947 flood, Ottumwa in the fourth district—which has always suffered heavy losses from Des Moines River floods—was without an approved public water supply for 30 days. In the past few years alone, Ottumwa has obligated itself to $5 million for levees, channel improvements, and storm-water pumping stations, which will supplement the Red Rock Reservoir. In 1956 the city began construction of these improvements after approval by the Corps of Engineers. Within the city limits of Des Moines, approximately 5.5 miles of levees have been constructed. Through the years the district engineer has had to tell Iowans owning land bordering the river that nothing can be done on their losses because their properties lie in the area of the basin authorized for a dam.

Mr. Chairman, the citizens of my State have spent millions—yes, millions of dollars—in local improvement works. While these local works and the soil and water conservation programs that have been inaugurated are helpful in reducing flood costs, they cannot be substituted for the flood-control purposes of the Red Rock Reservoir.

The city of Ottumwa has now undertaken bonded indebtedness to the limit permitted by law in an effort to protect its citizens and its business district from flood damage. They have done all they can do locally and that investment is threatened, by a major flood, which could again easily occur on the Des Moines River, would probably destroy the large investment and sacrifice made by the city of Ottumwa. Citizens on a local level can go only so far with self-help projects. They now need the cooperation of Congress to begin construction of the project long recommended by the Army engineers as the project that should be constructed first.

Many sections of Iowa and Minnesota that are drained by the Des Moines River and its tributaries have experienced dry weather for the past several months. But droughts in this area have been followed by floods, and people are still holding their breath, hoping that floods will not occur. The presently swollen tributaries from Des Moines downstream can be carried by the Des Moines River channel, but additional rain on the upper end will cause serious trouble.

If the dam under consideration had been constructed before 1947, the high water crest in the 1947 flood as far south as Hannibal, Mo., could have been reduced by 2 feet and saved the entire Mississippi Valley millions of dollars in damage, and great human sickness and misery.

The Des Moines River drains an area through central Iowa and Minnesota that receives heavy rainfall. Holding back the flood waters from central Iowa and Minnesota would benefit the entire Mississippi River Valley, and the most logical place to invest in flood control is in the headwaters in this area of high precipitation.

RED ROCK NOT A "NEW START"

With reference to the present policy against "new starts," this request for funds for the Red Rock Reservoir should not be considered a new start. As a matter of fact, construction funds of $1 million were allotted to the Red Rock Reservoir under the Civil Functions Appropriations Act of June 25, 1948. It was necessary to defer construction, however, following the major flood of 1947 which almost doubled the previous recorded flood heights at some points on the river, and as a result of the Presidential deferment directive during the Korean conflict.

It should also be noted that, while many river valleys have had several projects completed, the Des Moines River Valley has been without any project, and it should not now be doubly penalized because Federal funds have not previously been spent for construction there.

IMPORTANCE OF DES MOINES RIVER FLOOD-CONTROL PLAN

The century-old record of severe and frequent flooding in the Des Moines River area, the steadily increasing population in the 21 years since the authorization of the Red Rock Reservoir, the greatly expanded industrial development—these factors all warrant the appropriation of funds at this time in order that construction of the Red Rock Dam can finally be undertaken. Our citizens are uneasy over the possibility of having to wait still longer for the start of this project. They appeal to me and point out that apart from past economic losses, which for the last two major floods amounted to more than 30 percent of the estimated cost of the Red Rock project, each year of delay, each year of postponement, means they are exposed to the hazards of additional flood devastation.

Plainly, the size and importance of the area affected by the Des Moines River Basin and the severity and frequency of flooding compel the Congress to see to it that construction is now begun on the Red Rock Reservoir.

When completed, the Red Rock Reservoir and the Saylorville Reservoir (Public Law 85-500, approved July 3, 1958), together with the Des Moines local protection works, will provide flood protection to 213 miles of the Des Moines River below the Saylorville Reservoir and to the entire area subject to flooding by the waters of the Mississippi. The President's 1960 budget included $113,000 as the amount necessary to complete the little planning that remained to be done and is now being completed. The Corps of Engineers has advised me that from an engineering standpoint $2 million can be efficiently utilized for the Red Rock project during the 1960 fiscal year. They could begin work on the project almost immediately.

There, of course, is also need for continuing the studies and surveys for the authorized upstream reservoir at Saylorville. Under the comprehensive plan another pool would be contained near Saylorville. About $200,000 is needed for making surveys relative to Saylorville. Under the plan of improvement, as now authorized, the Red Rock Reservoir will have an earth dam at the

Howell site. The dam would be about 108 feet high and 6,100 feet long. The flood-control pool would cover 65,500 acres at elevation 780 feet above sea level. Saylorville Reservoir would have an earth dam 125 feet high and 6,000 feet long. Its flood-control pool would cover 15,500 acres at elevation 884.

The Corps of Engineers has very recently estimated the tangible benefits of these two projects at $6.9 million a year, on the average. On the basis of prices obtaining in 1952, the cost of the Red Rock Reservoir has been estimated at about a $70 million total. We are asking for $2 million now. Had the Red Rock Reservoir been in operation in 1947, damages in the Des Moines River Basin would have been reduced by over $26 million—the amount of damages caused by the 1947 and 1954 floods. This is small compared to the damage to Mississippi River cities that this river valley could deliver.

These authorized projects will practically eliminate flood damage to towns, farms, roads, and railways on the Des Moines River below Saylorville. Along the Mississippi River downstream from the mouth of the Des Moines River, important levee districts and cities, including Quincy in Illinois and Canton, LaGrange, and Hannibal in Missouri would be benefited. The cost of Federal and other highway bridges in the area below the dams would be greatly reduced, and the area including the big ordnance plant near Burlington would be protected. Twice during World War II citizens of the valley had to take time out from fighting the war to fight the Des Moines River. The river should be an asset rather than a menace.

I cannot think of any investment in the future of America that is more justified and worthwhile. It is in full accord with all reports and authorizations of the Army Engineers over the past 21 years. On behalf of thousands of Mississippi Valley citizens, I respectfully request your approval of this investment.

Communism and Immigration Policy

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. PHILBIN. Mr. Speaker, I have been very much disturbed about the changed policy of this Government that has resulted in deportation proceedings against some Polish refugees.

The apparent basis assigned by the Government for this change of policy is that political changes have occurred in Poland that now renders it possible for refugees to be returned to Poland from this country without danger of political persecution, retaliation, or oppression.

While some temporary gestures of conciliation and softening of policy occurred under the so-called Gomulka government, they were shortlived indeed. In the American press, in our diplomatic reports, in all the evidence that is available, it is clear that the leopard has not changed his spots and that the Polish Government is still a Communist puppet and can be no more depended upon to administer impartial justice or refrain from ruthless actions than any other Communist government whether it be Hungary or Red China.

All the responsible evidence that we have available indicates that in fields that by any stretch of the imagination constitute a real test of fair-minded, impartial, humane treatment of human beings, that the Polish Communist government fails to measure up to standards that free-minded peoples would expect and that the United States above all should insist upon in its relations with other nations.

It is clear from available evidence that the concessions made by the Polish Government fololwing the events of October 1956 are being systematically withdrawn and that no reasonable expectation exists that democratic freedoms and human rights are being or would be consistently observed or recognized by the present Polish Communist government.

What reasonable man could doubt on the current evidence that the Polish Communist government is a government by edict, dominated by force and committee to ruthless regimentation of the Nation's political and economic systems and of the people.

The following facts cannot be denied—

First. Workers in Poland have been placed under strict party rule and discipline contrary to their will.

Second. Censorship in Poland has become more rigorous than ever.

Third. Free speech, free expression, free inquiry, free publication in Poland are ruthlessly suppressed.

Fourth. Rigid control of religious practices and worship and bans on religious education are in existence in Poland and constitute another shocking repression of individual rights.

Fifth. Religious symbols like crucifixes and other articles of great sacredness to sincere religious worshipers have been banned in Poland by the mailed fist of violence and heavy penalties on so-called offenders.

Sixth. Religious charitable activities have been repressed and religious relief services profaned in Poland so that the National Catholic Welfare Council has suspended all large shipments of relief goods to Poland.

Seventh. Malignant attacks against the religious hierarch have occurred and fake, trumped-up charges of crime brought against religious leaders in Poland characterized by particularly false, fraudulent, and unfounded claims of militarism, fanaticism and intolerance made against religious believers.

Eighth. Despicable unfounded charges were leveled against the Cardinal Primate of Poland and an unwarranted invasion of that Primate's institution at Jasna Gora Monastery was conducted by the government, its offices raided, its books, pamphlets and other documents of historic worth and deep religious significance were confiscated.

Ninth. The offices of Bishop Boleslaw Kominek were raided and searched by minions of the police state.

Tenth. The institution of higher religious education at Wroklaw was seized by the government and all its activities stopped.

Eleventh. Other leading clerics whose only offense was their devotion to God were arrested and jailed on trumped-up charges of violating governmental restrictions on the use of newsprint.

Twelfth. Ministers of the Gospel were imprisoned for their religious sermons to their flocks.

Thirteenth. The religious educational activities in the schools, programs of scientific research and studies were interfered with and the schools required to take active part in the building of communism in People's Poland.

Fourteenth. The autonomy of the legal profession was limited, thus making lawyers mere puppets and instruments of the state and depriving individuals of proper legal representation.

Fifteenth. Threats of violence and imprisonment were made against youth leaders in religion and democracy.

The very substantial flight of Poles from their country to escape these policies and acts of oppression continues and many Poles deeply attached to their native soil and nation are leaving it, driven to despair and fear to flee from oppression and persecution.

During the past 2 years the number of Poles asking for asylum in Western Europe has shown a steady increase. These facts and statistics are well known to American officials. They are also not only well known, but have been confirmed, by the Voice of the Council of Europe as attested in the statement of October 17, 1958, of Mr. Frans Goedhart, delegate from the Netherlands who declared:

> In Poland, we have seen possibly a more dramatic swing back toward the old days than in any of the other countries. Nearly all the gains by the Polish people in 1956 appear now to be lost. The freedom of the press has virtually disappeared. Travel abroad has now been curtailed, not by any regulations, but by the simple process of raising the cost of passports by no less than six times within the last year.

The British delegate, Mr. Mulley said:

> I believe that it is absurd to try to understand the situation in Poland, unless we take cognizance of the fact that there are 22 Soviet divisions in Eastern Germany.

The Denver Conference on Immigration held December 6, 1958 among other recommendations for reform of our immigration laws, recommended that our laws and the administration thereof should, to a great extent, practice the time-honored American tradition of granting asylum to victims of racial, religious and political persecution.

How can any reasonable person believe that there is anything in the history of the relations between the Soviet and enslaved countries to justify the belief that an individuals stand criticizing or opposing existing Communist governments would not be followed by forceful, repressive action and persecution of the individual and possibly his family and friends.

The facts clearly show that uprisings in Poland, Hungary and East Germany have been cruelly repressed by Soviet military force. Dissenters against Communist oppression have been murdered in cold blood. It is clear, or it should be clear, to any fairminded, thinking person that it is the fixed policy of Communist governments to persecute those who refuse to submit themselves to Com-

munist ideology, Communist irreligion and Communist hatred of democratic convictions.

In the light of all this evidence which, I repeat, is available to our Government from its own agents, as well as from authenticicated reports from other governments, and other authoritative observers and commentators on conditions inside Poland, it is impossible for me to understand how this Government could even think of changing its policy granting asylum and protection to those seeking a haven in this freedom-loving Nation, who, if they were to be returned to Poland, by every test of logic and experience, might well be exposed to ruthless treatment and possible liquidation.

This Government is becoming naive indeed, if it believes that there has been any basic change in the attitude of Communist governments toward freedom-loving, God-fearing individuals, or any assurances that these governments will not continue as in the past to punish believers in a Divine Being and in democratic principles, by ruthless persecution, imprisonment and death.

I hope that our great President, who is always so deeply concerned in a humane way with the plight of the oppressed and perseucted throughout the world, will take appropriate action to redefine and clarify the position of our Government so that the time-honored, historic principle of asylum for oppressed and persecuted peoples may not only be continued but safeguarded, and every effort made to depart from this principle shall be speedily eliminated from the American political scene.

It is not only millions of Americans of Polish blood and their friends who are interested in this problem, but all true lovers of freedom in the American Nation are interested and vitally concerned that our Government adhere to its noble traditions of protecting the weak and helpless and giving shelter to the oppressed and persecuted.

It would be a most unconscionable policy indeed for this Government to direct the deportation of any Poles or persons of any other nationality to a Communist-controlled state where such a strong likelihood exists that they would be subject to persecution, oppression, and possible liquidation.

With all my heart, I urge our great President and the administration to abandon its present course regarding the principle of asylum and make it clear that in America, the land of the free and the home of the brave, we intend to the best of our ability to protect human beings against the dread persecution of communism and that under no circumstances will we return law-abiding persons resident in this country to the control of ruthless Communist governments.

I recently appealed to the distinguished Commissioner of Immigration and Naturalization Service, Gen. J. M. Swing, and his reply is pleasing and reassuring. It is as follows:

U.S. DEPARTMENT OF JUSTICE,
IMMIGRATION AND NATURALIZATION SERVICE,
Washington, D.C.

Hon. PHILIP J. PHILBIN,
House of Representatives,
Washington, D.C.

DEAR MR. PHILBIN: This will reply to your letter regarding the deportation cases of Polish refugees.

Approximately 75 cases of Polish nationals whose claims of physical persecution have previously been approved are now being reviewed. You are assured that no single one of these cases will result in an order to deport until I personally have reviewed the file.

The matter of physical persecution claims of Polish nationals, as well as nationals of other countries which are concededly Communist dominated or controlled, is the subject of continuing discussions between the Service and the immigration committees of the Congress.

Sincerely,

J. M. SWING,
Commissioner.

In view of this letter, I am very hopeful that the very serious problem presented by the Polish refugee deportation cases is well on its way to satisfactory and humane solution, and I earnestly hope that this will be the case.

The Development of Electrification in Puerto Rico Under REA

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. SANTANGELO. Mr. Speaker, in backward countries development takes place under the leadership of men of vision, knowledge, and sacrifice. The Commonwealth of Puerto Rico has made tremendous strides in its economy during the past 5 years. Construction is going on, industry is beginning to boom, and the economy is improving. Even the rigors of farm life and mountainous living have been softened by a construction program of electrification. Over 50,000 inhabitants of the mountainous and farm areas of Puerto Rico have been served by the rural electrification program, which our REA has assisted.

One of the most brilliant men I have met, who has an intimate knowledge of engineering and electricity, is Mr. Victor M. Cataldo, head of the Power Utilization Division of the Puerto Rico Resources Authority. He received his degree of bachelor in electrical engineering in the Cooper Union College of New York in 1936. Immediately upon graduation, he worked for the Intercall Communication System in New York for 2 years after which he joined the Puerto Rico Water Resources Authority in 1939 as a junior engineer in the development of the distribution and transmission system for the south coast. He was soon promoted to the engineering division where he assisted in the design of the Garzas and Dos Bocas hydroelectric projects. In July 1, 1951 he was appointed assistant head of the power division, a position which he held up to January 1958 when he was promoted to his present position.

I was impressed and amazed at the grasp of details and the memory of this public servant during my recent trip to Puerto Rico, where I attended a seminar on the subject of rural electrification. Mr. Cataldo delivered an extemporaneous talk on the manner in which rural electrification is being developed in Puerto Rico under the REA program, with the help of the Commonwealth government.

His remarks, which I am certain will prove interesting, are as follows:

During the last 43 years rural electrification in Puerto Rico has been under continuous development. Throughout this long process of its history, various means have been used to achieve the important goal of providing electric service to the rural zone. It was not, however, until 1952 that a rural electrification program was adopted to permit intensification of rural system expansion to serve rural electrification customers in Puerto Rico.

It is the object of this talk to explain the policy governing rural electrification in Puerto Rico and the formula which made it feasible.

In the year 1915, when the Irrigation Service of the south coast constructed the Carite hydroelectric plant for the purpose of supplying electric power to irrigation pumps, the excess power was sold to the rural areas. The electric system under this and succeeding agencies rapidly expanded throughout the rural zones in the south coast and moved northwestward, bordering cities and small towns until it reached the north shores. The good quality of electric service and its relative low costs helped in the gradual expansion of the service to the urban zones.

Up to 1936 the public utility expanded rural electrification from its own construction funds. During the depression in the middle thirties construction funds, made available by the Federal Government for relief purposes, were used for rural electrification development. These funds made possible the extension of new services to rural customers and trunk distribution feeders were constructed in the rural areas to bring the electric system closer to unserved families from which service was later extended at a reasonable cost.

In the year 1946, the Commonwealth government, in its endeavor to accelerate rural electrification expansion assigned $400,000 a year to the public utility to be used together with the utility's own funds for rural electrification development. Over 18,000 rural customers were served under this program which lasted up to 1952–53.

The accumulation of large number of requests for electric service in the rural areas, and the necessity to improve the economy and the welfare of the rural families, made it evident that a further acceleration of rural electrification development was essential to the island's economy. A study was then made in 1952 which resulted in the formulation of the existing rural electrification program of Puerto Rico.

Before explaining the program adopted, some of the principles upon which it is based and the conditions under which the authority operates should be reviewed briefly.

The authority is a self-sufficient, nonprofit public corporation. The self-sufficiency has been maintained by the design of rates for the sale of electric power which are intended to be fully compensatory. The authority sells electric power at cost. The cost of the service includes the direct costs of operation and the cost of all contractual obligations, including the cost of debt service on the debt incurred for system expansion. Revenue bonds are sold in the bond market of the United States to finance the authority construction program.

Under these circumstances, the authority cannot sell power at a price below its cost lest it be forced to increase rates in order to obtain an adequate return. The authority's rate schedules have been stable.

The residential rate in effect for many years has a 75 cent minimum charge and fixes a price of 4½ cents for the first 75 kilowatt-hours of monthly consumption; 3½ cents for the next 75 kilowatt-hours of consumption; 2½ cents for the next 75 kilowatt-hours and 1¼ cents for consumption over 225 kilowatt-hours per month.

There are in the rural areas of Puerto Rico two types of electric customers. One type enjoys a reasonable income, has a relatively high electricity consumption, and/or is near our electric lines. For this type of customers an economic study is made when service is requested and a minimum monthly consumption is determined which justifies the investment required to extend the service. Service is extended if the prospective rural customer guarantees the minimum consumption for a period of 3 to 5 years.

The customer may choose instead to contribute to the cost of construction with the amount which is not justified for expenditure under the rate schedule. The authority has been extending service to this type of rural customers from the authority's general construction fund and no problem exists in developing rural electrification on this basis. However, this type of rural consumer represents a small minority.

The majority of the rural population in Puerto Rico is comprised of low income rural families most of them workers in the sugarcane, tobacco, and coffee plantations. This type of customer cannot guarantee a minimum consumption to justify the investment in rural line extensions, cannot contribute toward the construction of rural lines, and has a low electricity consumption.

For this low-income-family group the existing residential rate by itself is not compensatory, due to their low consumption and to the high investment costs of system expansion. To serve these customers it would be necessary then, either to design a high residential rate for the sale of power, or to find means of reducing the overall costs of the service to the point where the existing residential rate schedule would apply. It was decided to keep the same residential rate to apply to both urban and rural zones and to devise means of reducing the cost of rural service. This policy forms the basis of the present rural electrification program.

The investment incurred in the distribution system expansion is one of the high costs in rural service extension. The moneys used for financing the construction of rural lines for this type of customers will have to be borrowed at the lowest possible debt service cost. A decision was then made to apply for a rural electrification loan from the Rural Electrification Administration, where financing at low rates is available for this purpose. This reduces substantially the high cost of rural service.

The debt service cost on the basis of a loan at 2 percent interest is about 33 percent lower than the same cost incurred in urban customers service.

The low cost of money made available by the Rural Electrification Administration has contributed substantially toward the success of the rural electrification program in Puerto Rico. It has contributed to the extension of electric service to thousands of low income, low consumption rural customers at the same residential rate at which power is sold to the urban zones.

The low consumption of electric power by the low-income group of rural families do not produce sufficient revenue to economically justify the investment in rural line extensions, even when using low cost REA financing.

This group has an average initial consumption of about 16 kilowatt-hours per month which continuously increases at the rate of 10 percent per year. The average cost of rural line construction in 1952 was about $180 per rural customer.

A cost study of electric service to residential customers was made, excluding the cost of interest, amortization, and depreciation. It was determined from the study that the cost of this service excluding debt service and depreciation was 2.475 cents per kilowatt-hour for residential consumptions within the first block of 75 kilowatt-hours. Since 4½ cents per kilowatt-hour are charged in the residential rate for the first 75 kilowatt-hours consumption, it follows that 2.025 cents per kilowatt-hour are allocable to interest, amortization, and depreciation.

For a rural project to be fully compensatory, sufficient kilowatt-hours must be consumed so that when they are priced at 2.025 cents the resulting amount would not be less than the cost of debt service and depreciation on the investment made. An average investment of $180 per rural customer has 10 percent or $18 debt service and depreciation assuming interest at 2 percent. This would require the sale of 900 kilowatt-hours per year per customer equivalent to 75 kilowatt-hours per month, to pay the investment costs when the energy consumed is priced at 2.025 cents per kilowatt-hour.

The Commonwealth government confronted with this problem agreed to guarantee the minimum yearly consumption needed by the public utility to recover the full cost of the service.

The rural electrification program formulated in 1952 included the following conditions:

1. The authority will continue to serve rural customers able to pay a guaranteed minimum consumption without Commonwealth government help.

2. Financing will be requested from the Rural Electrification Administration to finance the extension of electric service to the low-income rural families.

3. The Commonwealth Government through legislative action will guarantee the minimum consumption from the rural customers served under the program. It will pay to the authority the exact yearly amount by which the revenue collected from the rural electrification beneficiaries fails to cover the full cost of service.

4. The yearly payments from the Commonwealth Government will be determined as follows:

(a) the authority must recover 10 percent of the investment made in rural electrification expansion to cover the cost of interest, amortization, and depreciation.

(b) of the power sold to the rural electrification beneficiaries, 2.025 cents per kilowatt-hour are allocable to the payment of debt service and depreciation.

(c) The Commonwealth Government would pay the yearly amount by which the revenue collected for debt service and depreciation fails to meet 10 percent of the investment.

5. Rural projects to extend service to low income families in the rural zone will be studied by the authority and submitted to the Puerto Rico Planning Board.

6. The planning board will select the yearly projects to be constructed from the list of projects made available by the authority.

The first rural electrification program in Puerto Rico on the basis described, was planned for a 3-year expansion starting in fiscal year 1952. It was based on a yearly expenditure in rural line expansion of about $2 million with which about 10,000 customers may be served per year.

Projections were made of yearly expenditures, customers to be served, average yearly consumption in kilowatthours and debt service and depreciation costs. Debt service and depreciation costs were taken at 10 percent of the investment and the resulting amount was to be satisfied from the revenue when the energy sold is priced at 2.025 cents per kilowatthour. The deficit between the yearly debt service and the energy sold priced at 2.025 cents per kilowatthour represents the yearly amount to be paid by the Commonwealth Government in the form of revenue.

The study made showed that the Commonwealth Government yearly contribution would rapidly increase in a 4-year period to a maximum of $375,000. It would then gradually decrease and continue in decreasing amounts for 20 years after which the rural customers would be completely self-sufficient.

The legislature, based on this study passed a law on May 2, 1952, authorizing the Department of Agriculture of Puerto Rico to enter into a contract with the Puerto Rico Water Resources Authority in which the Department of Agriculture agreed to pay to the authority the yearly revenue balance required to make the rural electrification program economically justified. The legislative commitment was for a consecutive period of 20 years, with a yearly maximum payment to the authority not to exceed $375,000.

Simultaneously with this legislative action, a loan was requested from the Rural Electrification Administration in the amount of $6,376,000 to finance the 3-year program.

Every fiscal year, the legislature approves a bill assigning the required funds to the Department of Agriculture for payment to the authority.

Twice a year, the authority reports the capital expenditures recorded in the authority's plant accounts and computes the total revenue which it must receive to compensate for debt service and depreciation which is equivalent to 10 percent of the investment. It also lists the kilowatt-hours sold to the REA beneficiaries and computes the revenue allocable to payment of debt service and depreciation by pricing this power at 2.025 cents per kilowatt-hour. A bill is then prepared covering the difference between these two amounts for payment by the Department of Agriculture.

The rural electrification program adopted in 1952 has been very successful. It has permitted the continuous expansion of rural electrification to low income, low consumption rural families which could not have enjoyed this essential service otherwise. It has been based on financing from the Rural Electrification Administration at low cost and from the yearly payment to the authority by the Commonwealth government of the revenue deficit necessary to economically justify the investment in rural line construction. It has the necessary incentives for the rural families to

make maximum utilization of electric power service, and for the authority and the Commonwealth government to promote educational programs for a better utilization of electricity. The higher the consumption of electric power in the rural zones the lower the commitment from the Commonwealth government.

A second program was installed upon completion of the first for which an additional loan commitment of $6,624,000 was obtained from the Rural Electrification Administration. This permitted a continuance of the rural electrification program to fiscal 1958. A second law was approved by the legislature to guarantee to the authority the minimum revenue required under this program. The maximum yearly commitment was limited to $400,000 for a period of 25 years.

Upon completion of this program, a third loan commitment was approved by the Rural Electrification Administration in the amount of $9,400,000 for continuance of the program up to fiscal 1961.

To date the authority, under this program has extended electric service to 48,500 families in the rural zone and expects to serve with the existing commitments about 93,000 rural families by the end of 1961.

It is expected that a continuance of the rural electrification program at the same rate will be required for 3 additional years up to 1964 after which a deceleration of the rate of construction will be required.

Of 328,253 residential customers served by the authority, 144,807 are rural customers, equivalent to 44.1 percent.

The yearly contributions made by the Commonwealth government to the rural electrification program are as follows:

1952–53	$8,277.24
1953–54	85,818.86
1954–55	177,075.94
1955–56	214,944.73
1956–57	404,835.59
1957–58	567,704.03

Last year an application for a $10,900,000 loan was submitted by the authority and approved by the Rural Electrification Administration to provide generation and transmission facilities to the 53,000 REA beneficiaries served with the proceeds of the first $3 million loans. This loan financed, among other facilities, the construction of Unit No. 2 of the south coast station with 40,000 kilowatt-hours of installed capacity. This unit was recently placed in commercial operation.

Special Citation to Farrell Lines, Inc.

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. ZELENKO. Mr. Speaker, outstanding service in the interest of the general public is always to be commended; especially is this true when the operation in question directly affects the well-being of the traveling public. Such recognition has just been given by the Surgeon General of the Public Health Service of the United States through award of the special citation to Farrell Lines, Inc., for the third consecutive year. The award is made in recognition of the excellent sanitation maintained on the company's vessels during 1958.

Farrell Lines has ever been noted for the maintenance of high standards, and is to be congratulated for this attainment. The presentation was made by Dr. David E. Price, Assistant Surgeon General, and was received by Adm. George Wauchope, executive vice president of Farrell Lines, Inc., at ceremonies on board the company's vessel SS *African Star* at the 33d Street Pier in Brooklyn.

When it is realized that this corporation operates 16 vessels which earned a rating of 95 or better on official Public Health Service inspection, which includes 166 separate items of sanitary construction and maintenance, it is evident that the accomplishment affords reason for justifiable pride on the part of both the management and all employees of the company.

Search for Peace

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mrs. GRANAHAN. Mr. Speaker, like the weather, everybody talks about peace, but few people do anything about it.

In my home city of Philadelphia, however, WIP, an independent local radio station, has been doing something about it for over a year. For its efforts, expressed through a public service program series, "Search for Peace," it has been honored with a national award.

Mrs. Ellen Stoutenberg, producer of "Search for Peace," has been awarded a McCall golden mike, the highest honor given exclusively to women in the radio and television field. She is one of seven women in the United States to win this coveted award, all of whom, in the words of the editors of McCalls, felt part of their responsibility is to help narrow the gap between the world as it is and the world as it can be.

"Search for Peace" is a unique effort for a single radio station, in that it strives to carry its message beyond normal coverage in the Philadelphia area, to the entire world. Benedict Gimbel, Jr., president and general maanger of WIP, has, from the beginning, offered tapes of the commentaries of world-famous personalities to stations anywhere in the world.

The response to this has been overwhelming. Almost 100 stations in the United States, including one in each of our newest States, Alaska and Hawaii, carry this program. In addition, it is heard over the 100 stations of the Australian Broadcasting System, over the Canadian Broadcasting Co., and by individual stations as remote as Aruba, Netherlands Antilles. The Voice of America brings it to countries normally beyond the reach of American radio.

In addition to congratulating my good friend Ben Gimbel, Mrs. Stoutenberg, and the entire staff of WIP, I should like to add a word of praise for the Philadelphia Junior League. As pointed out in the award citation, the coast-to-coast distribution of this worthwhile radio series was made possible through the efforts of this fine organization of young women.

In a day when broadcasting is often criticized for its preoccupation with rock and roll and western movies, I am proud that a radio station in Philadelphia has placed the public good above gain. Through "Search for Peace," again in the words of the citation, "Man's oldest yearning took on fresh interest and excitement."

A Guided Tour by Harry Truman

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news column written by Mrs. Monroe Sweetland, of Milwaukie, Oreg. Lil Sweetland is the wife of newspaper editor and Oregon State Senator Monroe Sweetland. She was recently in Independence, Mo., to watch the sendoff of the On-To-Oregon Cavalcade by former President Harry Truman. Mrs. Sweetland is a member of the Centennial Commission. She was one of several Oregonians taken through the Truman Memorial Library by Mr. Truman. Her warm account of that tour follows. It appeared in the Milwaukie (Oreg.) Review of April 23, 1959:

EXTRA

(By Lil Sweetland)

A GUIDED TOUR BY HARRY TRUMAN

"If I were 10 or 15 years younger, I'd ride that wagon train back to Oregon." That's what Harry Truman wrote my husband just before I left for Independence Mo. for the sendoff of the On-To-Oregon Cavalcade. But those of us from Oregon who saw our jaunty former President, 75 this summer, and walked and talked with him, thought him at least as able to make the arduous journey as those 20 and 30 years younger who are now on the wagons west.

I called the former President's office in the Truman Library at 7:45 a.m. the morning after my arrival in Independence to firm up the schedule for the presentation of the "Oregon Centennial" roses Stub Wherry had gotten together for me. To my amazement Mr. President, as he is called by everyone in Missouri, himself answered the phone and was immediate and cordial in his invitation to come right out.

And we did. Mayor John Snider of Medford, Thomas Vaughan, director of the Oregon Historical Society, Janet Baumhover, beautiful and able Radio Artist's representative and myself, all members of the Oregon Centennial Commission, Milwaukian photographer Kirk Braun, and news commenator for KPTV-Channel 12, John Salisbury.

He hasn't changed

We were greeted with the warmth, enthusiasm, and humor which endeared Harry

Truman to the Nation, to the surprise and confoundment of his opposition. Even the skeptical Republicans in our party (and I believe I was the lone Democrat) were charmed and softened by the sparkling eyes, the genuine interest, and the lack of ostentation in this man who had held the highest position in the world. Mr. Truman posed willingly for pictures of the rose presentation, even giving us amateurs pointers on how to posture for the photographers; and then to our delight he offered to conduct us on a tour of the Truman Library.

A GREAT MEMORIAL

The Truman Library is a monumental building, cast in a classic mold but equipped with the most modern and most beautiful of museum and library appointments. It was built, and is maintained, by donations from the thousands of friends and admirers of the former President as a keeping place for the priceless reminiscences of a period in history which may well be remembered because of the contributions made by Harry Truman.

Its all recorded there, and we saw it underlined and highlighted by the pithy comments and observations of the man who gave meaning to the dead documents, the cold pictures, and the sad evidences of a war torn world. We saw the original draft, in the President's handwriting (that will answer those who say I didn't write it) of the great point 4 program, the plush covered oval table on which was signed the United Nations Charter. We saw, and Mr. Truman commented on the donors, gifts from the leaders of the world, bejeweled swords and priceless rugs, gifts from countries grateful for the livesaving aid from the United States; we saw General Eisenhower's memoirs with a handwritten dedication of lasting respect and affection to Harry Truman (and Mr. President had comments on that). But all in the library is not solemn and sober. The library, like Harry Truman himself, is of many moods, and reflects many talents.

There are two grand pianos, one presented to Mr. Truman by the American Federation of Musicians on which he played a few chords for us, and a second elegant ebony instrument with a great silver spread eagle above the keyboard which was given to Margaret Truman when she lived in the White House. The corridor walls of the library are lined endlessly with the originals of the cartoons which lampooned, blasphemed, caricatured cruelly and only sometimes praised the jaunty, courageous President of the people. They are placed without prejudice, a history of the political ups and downs of Harry Truman's official life.

BESS AND MARGARET PROMINENT

There are many references in the library collection to Mrs. Truman. He calls her "The Boss" and once he referred to her as "The Madam," and many to the apple of his eye, his daughter Margaret. He talked with evident pleasure of his grandson, and the new child expected by Margaret this month. His love for his family is a glowing and obvious thing.

We were interrupted many times during the tour by others who had come to see the library and who were delighted to have run into Mr. Truman. Several small children came up to "Mr. President" and he stopped and talked with each one. He signed autographs and posed for pictures, he joked and laughed with them and was generous with his time. And his time, for a retired man is crowded. He was keeping Senator STUART SYMINGTON waiting while we went on tour (the Senator accompanied us). The guestbook for the day showing his appointments before our 10 o'clock date, showed 18 personal vistors, 9 from Missouri, the rest scattered from many States. When we returned at the end of the tour the anteroom was crowded.

MY PREJUDICES CONFIRMED

I have met and talked with Mr. Truman before. I am not an unprejudiced observer. But the 45-minute tour of the Truman Library, and the few other moments I spent with him in Independence, added new concepts to my ideas about this great man, whose greatness is cast in a mold never seen before among our Presidents.

A DIFFERENT KIND OF GREATNESS

There is no aura of obvious greatness which surrounds Harry Truman as it did, I think, Franklin Roosevelt and perhaps Woodrow Wilson. He shines with an infectious charm and homely graciousness that give those close to him a feeling of confidence in, and gratitude for, the democratic process which made this man, so akin to all of us, the chief of the greatest nation in the world.

A REAL SENSE OF HISTORY

Harry Truman loves our country. His devotion to its welfare, his humility before its greatness, and his awareness of the role it must play in a troubled world, are plain in every sentence he utters. Harry Truman is neither pompous nor pious about the great role he played in world history. More than any man I ever met he seems to "feel" history, to instinctively live and talk with the knowledge that men scores of years from now will be affected by what is done today. He reveres, and is obviously fascinated by, the past, but only "as prologue". He has an enormous sense of the dignity of the office of the Presidency, and in any other less humble man, his pride in the office would appear to be vanity or a mere reflection of his own glory.

GREAT HELP TO OREGON

It was a wonderful experience. Harry Truman did a great job for the Oregon centennial with his sendoff of the wagon train. But I will, and so will the others with me that Saturday morning, remember well the lessons in history, philosophy and humanity which Truman so generously gave us.

P.S.—A thank-you note from Bess Truman this morning, only 5 days from the date of our visit, tells me the rose bushes are planted and will replace some frozen out last winter in the Truman yard. Thoughtfulness seems indeed, to be a Truman family trait.

Amending Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act

SPEECH

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R.5610) to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to provide increases in benefits, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin [Mr. BYRNES].

(Mr. BYRNES of Wisconsin asked and was given permission to revise and extend his remarks.)

Mr. BYRNES of Wisconsin. Mr. Chairman, reference has been made to the report of the Republican policy committee. As chairman of that committee, I am very pleased to respond and say that the committee did put out advice to the Republican members that the committee was in support of H.R. 5610 as reported by the Committee on Interstate and Foreign Commerce. We took action in support of the legislative committee and so advised our members.

Inquiry has been made as to whether this action by the Republican policy committee makes the issue presently before us a political issue. I would point out to the gentleman that the Committee on Interstate and Foreign Commerce is under the control of the Democrats. They have 21 members of the committee. The Republicans have 12 members of the committee. If action by the Republican policy committee expressing support of the action of a Democrat-controlled committee makes the issue a matter of partisan politics, the gentleman is welcome to make the most of it. I would think, however, that the Democrats would welcome action by the Republican policy committee and the membership on our side in support of the legislative committees which you control.

I will point out further that we on the Republican side never at any time either in conference or otherwise attempt to bind our members. We do not, however, resist the opportunity to advise our members as to what the general feelings of the members of our policy committee are on any particular issue.

Mr. Chairman, I am no expert on this subject; in fact, there is no subject that comes before us on which I would consider qualifying as an expert. But I do not think one has to be an expert to be concerned about some of the basic issues involved in this legislation that is before us today.

If we were dealing with a healthy, thriving industry I would not be so concerned about the provisions of this substitute and the extents to which we might go in adding additional costs. I do not say I would not be concerned at all because I will always be concerned that we do not take a healthy thriving industry and put it into bankruptcy and sickness and death. But let us get one thing clear in this picture: We are dealing here with an industry that is not a healthy industry. We acknowledged that fact last year when we took action and enacted, on the basis of the economic condition of that industry, a transportation act. Is there anyone here that will contend that by that action last year we cured all the ills of the railroad industry, and that from here on it is going to be a thriving industry and you can do with it what you will? I do not think there is a member here that would make that contention.

Certainly, if I understood the chairman of this committee, who certainly is in a position to know more about it than any other single member of the committee, he did not give us the hope that we did not have to worry any more about the competitive position and the ability

of this industry to serve us and to serve the people. That is fact No. 1. We are dealing with an industry that is in a difficult situation.

No. 2: Let us remember that this is a basic industry in this country. Your railroads fold up and your economy folds up, make no mistake about that. So one thing I would caution you no matter what we do or how we vote, let us be careful, let us recognize the problem that may be involved in the consequences of our act.

Also, Mr. Chairman, we have heard talk that corporate profits are involved in this controversy. To me, Mr. Chairman, the issue here is the issue of jobs. Is it a proper approach just to be concerned about what you are going to do with a man when he is out of a job? Should you not be concerned with what you can do to assure that jobs will be available.

I listened to the gentleman from Iowa [Mr. COAD] speaking about the Northwestern Railroad, that they did not have Pullman cars, that they were closing up shops and stations and taking off trains. Why? Because of economic difficulty. The elimination of cars, of shops, of stations, and trains eliminates jobs and produces unemployment.

I suggest that we had better make sure that in our desire to take care of the unemployed we do not so act that we encourage greater unemployment.

That, as I see it, is the issue raised by this substitute. The bill as reported by the committee will put an additional cost of over $100 million on the railroads. The substitute will increase this to around $150 million. I am most fearful that this additional $50 million could very well produce additional unemployment. I am sure this is not what is desired by the average railroad worker. I shall therefore support the committee bill.

One Hundredth Anniversary of the Masonic Lodge of Plymouth, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record of Tuesday, April 28, 1959:

MASONIC LODGE OF PLYMOUTH HAS CENTENARY—ALL BUT 10 OF 350 MEMBERS AT DINNER; GRAND MASTER SPEAKS

Plymouth Lodge 332, Free and Accepted Masons, celebrated its 100th anniversary at a dinner last night at Irem Temple Country Club and heard Sanford M. Chilcote, right worshipful grand master of the Blue Lodge of Pennsylvania, speak on "Masonry of 1959."

All but 10 of the lodge's 350 members, including 27 of its 33 living past masters, were at the celebration, the biggest in the lodge's 100 years. Its history records that "an elaborate banquet" marked the 25th anniversary on April 27, 1874. Its 50th anniversary was observed in March 1899. The 75th anniversary was celebrated at a dinner attended by 275 members.

The lodge was constituted April 27, 1859, at ceremonies which were held in a small room on the second floor of the E. C. Wadhams brick store building at West Main and Downing Streets, Plymouth, for many years known as the "Company Store" of Ashley, Hunt and Co.

Its charter members were Robert Love, Joshua W. Eno, Elijah C. Wadhams, David Levi, and Bryce R. Blair, nearly all of whom were direct descendants of the early Connecticut settlers. The lodge continued to meet in the Wadhams building until December 27, 1873, when it moved to the D. K. Spry Building, West Main Street and Gaylord Avenue, Plymouth.

Members of the lodge for more than 50 years are Harry L. Minnick, Harry C. Hughes, Joseph Bittenbender, Frank Bittenbender, and Stewart S. Ferguson. Minnick is the oldest of the lodge's 33 living past masters.

Invocation opening the dinner was given by Rev. Howard R. Harrison, following which Russell Lloyd, PM, chairman of the anniversary committee, introduced former Gov. Arthur H. James, 33d, as toastmaster. H. Eugene McCarthy, worshipful master, welcomed the lodge members to the celebration.

Wilbur H. Schang, 33d, district deputy grand master, introduced Chilcote, who, complimenting the lodge on its growth during the last century, touched upon the history of Freemasonry in Pennsylvania and what the present and the future hold in store for it.

Talking on Masonry today, Chilcote said members are proud of the Masonic Home at Elizabethtown. Situated on a 1,400-acre plot, it provides for approximately 685 guests. Its modern hospital has 266 beds. It has 30 miles of paved roads. Accomplishment of this huge project gives cause for pride, he said.

The program was closed with benediction by Harry C. Hughes, past master. Tallie Reese was vocal soloist.

Officers of lodge 332 are H. Eugene McCarthy, worshipful master; Michael Mihoch, Jr., senior warden; Orville Shugar, junior warden; Kenneth R. Williams, treasurer, and Albert E. Jones, secretary.

Assisting Russell Lloyd on the anniversary committee were Andrew Oherko, Harry C. Hughes, Charles Sims, H. Eugene McCarthy, Michael Mihoch, Jr., Orville Shugar, Kenneth R. Williams, Albert E. Jones, Kenneth L. Morgan, Judge Thomas M. Lewis, Thomas Nelson, Forrest C. Cooper, and John D. Edwards.

Protection of Wild Horses and Burros

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. BARING. Mr. Speaker, I ask unanimous consent to have inserted in the RECORD a letter I have received from Mr. Emory S. Avant, executive director of Peoples Lobby, Inc., regarding the slaughter of wild horses and burros to provide food for dogs and other domestic pets. The sad plight of these animals has been told in several national magazines and other publications.

Mustangs, as has been written, are as traditional to the West as the six gun, and they are now facing extinction. In Nevada alone there are but 50 still remaining of a herd that at one time numbered 70,000. This is all due to mechanized roundups to capture them to sell as dog food.

Low-flying planes herd the horses to flatlands, where other hunters, waiting in trucks, run them to the point of exhaustion. They are then roped and hobbled until they can be hauled to slaughter. By the time they reach the slaughterhouses their hides have been practically torn to pieces and they are more dead than alive from the brutal treatment they have received.

Hunters who have contracted to bring these mustangs to slaughterhouses have devised this inhumane technique because it is the only way they can effectively round up large herds of animals at a cost low enough to sell the carcasses at a profit.

On January 19, 1959, I introduced H.R. 2725, to amend chapter 3 of title 18, United States Code, so as to prohibit the use of aircraft or motor vehicles to hunt certain wild horses or burros on land belonging to the United States. The full text of the bill follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 3 of title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 47. Use of aircraft or motor vehicles to hunt certain wild horses or burros; pollution of watering holes.

"(a) Whoever uses an aircraft or a motor vehicle to hunt, for the purpose of capturing or killing, any wild unbranded horse, mare, colt, or burro running at large on any of the public lands or ranges shall be fined not more than $500, or imprisoned not more than six months, or both.

"(b) Whoever pollutes or causes the pollution of any watering hole on any of the public land or ranges for the purpose of trapping, killing, wounding, or maiming any of the animals referred to in subsection (a) of this section shall be fined not more than $500, or imprisoned not more than six months, or both.

"(c) As used in subsection (a) of this section—

"(1) The term 'aircraft' means any contrivance used for flight in the air; and

"(2) The term 'motor vehicle' includes an automobile, automobile truck, automobile wagon, motorcycle, or any other self-propelled vehicle designed for running on land."

(b) The analysis of such chapter 3, immediately preceding section 41, is amended by adding at the end thereof the following new item:

"47. Use of aircraft or motor vehicles to hunt certain wild horses or burros."

I might say here that the State of Nevada enacted similar legislation a number of years ago to regulate the capture of wild horses and burros on lands other than those belonging to the United States.

Mr. Avant's letter follows:

PEOPLES LOBBY, INC.,
Washington, D.C., March 17, 1959.

Hon. WALTER S. BARING,
Member of Congress,
House Office Building, Washington, D.C.

DEAR MR. BARING: We are receiving a great deal of mail regarding the killing of the little burro and the wild horses of several States. Many of those that have written know about

your bill, H.R. 2725. While there are only a few States that have wild horses and burros, there are 600 humane organizations over the land with a large membership and these humanitarians are very much interested in your bill.

Several years ago, while in the West, I was invited to a burro barbecue. The thought of eating the flesh of the little animal that was left by the miners to starve and who found water and food where it did not exist, was so revolting that I was unable to eat anything for several days.

The Members of Congress are, as a whole, humane and I have no doubt but that your bill will pass both Houses.

Sincerely yours,

EMORY S. AVANT,
Executive Director.

Military Mistakes Cost Taxpayers Dearly

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. LEVERING. Mr. Speaker, the talk about intercontinental guided missiles, space age weapons needs, and interplanetary rockets has caused our people to lose sight of the huge amount of waste that is going on because of blunders in the various armed services, and not even overlooking the Atomic Energy Commission.

Not long ago, in testimony before a Senate committee, a former member of the Atomic Energy Commission testified that one man's slight error—I believe those were his exact words—cost the Atomic Energy Commission some $300 million. Think of it, Mr. Speaker. One man's error cost $300 million. This testimony was covered only sketchily in the daily papers, but consider how much talk has gone on about some messenger boy on Capitol Hill being overpaid, and then compare the amount the taxpayer loses thereby with the $300 million error of one man in the Atomic Energy Commission. And, I might add, we do not even know that man's name today.

Getting back to the Department of Defense, all of us have read some stories about waste in the military, but the enormity of such waste, I believe, has not been impressed sufficiently upon the American people.

A story in Grit, the national rural newspaper, for April 19, 1959, accompanied by a picture of some hundreds of brandnew trucks that have been declared surplus by the Army, indicates the kind of public attention that ought to be given to the really important subjects in Government. This is in-focus reporting.

This article starts out by pointing out that the Defense Department in 1958 alone wrote $7 billion off its books last year—a huge loss to the taxpayers. Think of how long the Congress could operate on $7 billion, Mr. Speaker. If our Government goes for a thousand years, and an occasional Congressman overpays one of his employees by a couple a thousand a year—much of which is reclaimed in taxes—it is not possible that Congress will waste, on itself, the astounding total of $7 billion. But this is what the Defense Department "wrote off" in one year. When we consider how many billions are appropriated every year to the Department of Defense, and the reckless manner in which the bureaucrats order everything from shoelaces to 10-ton trucks, whether these will be needed or not, or used or not, then we are coming up to some of the essential things that we, and our people, ought to be thinking about.

Under leave granted to me, I am inserting the article from Grit, for April 19, 1959, in the Appendix of the CONGRESSIONAL RECORD, and I submit that the same kind of reporting ought to be used on ferreting out the huge amounts of wastes in all the Federal establishment:

MILITARY MISTAKES COSTING TAXPAYERS BILLIONS YEARLY

The Defense Department wrote $7,500 million off its books last year—a huge loss to taxpayers.

Of that amount, $1 billion was spent for goods the military did not need and could not use. Though brandnew, the stuff was ultimately sold for approximately 8 cents on the dollar.

Most of the $7,500 million was spent on weapons and equipment which the services later considered as either obsolete or worn out, and therefore useless.

For example, a technical change prompted the Air Force to dispose of 1,500 flight helmets for which it paid $550 each. Private dealers in war surplus got them for $75 each.

Approximately $1,500 million represented aircraft and missile programs which the military, principally the Air Force and Navy, abandoned as miscalculations.

MORE LOSSES COMING UP

Further, if past experience is a reliable guide, the Defense Department will write off an additional $6 billion worth of goods this year as surplus.

The buying and selling of surplus military goods, incidentally, has become a $750 million-a-year enterprise.

Congress has been struggling for years with the question of whether the taxpayer is getting his money's worth out of the Defense Department. The lawmakers have been trying to persuade the military to use more businesslike procedures.

Investigators have found many instances where one service was declaring certain goods surplus while another was in the market for the same item. From the taxpayers' point of view, this means that the Armed Forces often buy twice as much as they really need.

Here are some examples:

The Air Force bought $60 million worth of spare parts for the F–100 fighter plane in 3 years, then found it did not need them.

BUY ENGINES NOT NEEDED

The Navy bought 793 aircraft engines, valued at $68 million, that it did not need—and was about to buy 204 more when the General Accounting Office called the matter to the Navy's attention.

On one negotiated contract (one made without competitive bidding) a carmaker was charging the Government $39.42 for missile parts. Later the same item was put out for competitive bids which brought the cost down to $2.52.

None of the $7,500 million written off by the Defense Department includes the money spent by the various services duplicating each other's work.

One illustration may suffice. The Army spent $700 million developing the 1,500-mile missile, the Jupiter, before turning it over to the Air Force, which spent as much or more developing a similar missile, the Thor.

Budget Director's Timetable

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 13, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD an editorial which appeared on April 9, 1959 in the Valley Times of the San Fernando Valley area of California. This editorial, by columnist George Todt, entitled "Budget Director's Timetable" follows:

BUDGET DIRECTOR'S TIMETABLE

"Never ask of money spent
Where the spender thinks it went.
Nobody was ever meant
To remember or invent
What he did with every cent."

—Robert Frost,
The Hardship of Accounting.

One of the questions I put to Maurice H. Stans, Director of the Bureau of the Budget, when he was here last week to address the Republican Associates of Los Angeles County, was this one:

"How is it that today's budget has increased 25 or 30 times over typical budgets when we were kids, back in the days of former Presidents Calvin Coolidge and Herbert Hoover, without anything resembling 25 or 30 times as much corresponding service presently accruing to the individual citizen from the Government?"

This was a good and hard question, according to Mr. Stans, and he sank his teeth into it to give me an answer along these lines:

"In the first place we are maintaining armed forces of 2½ million personnel in these days of the cold war, whereas our Army, Navy, and miniscule Air Corps of the roaring twenties only utilized a few hundred thousands of men. Military hardware and rates of pay are much higher than 25 years ago, which considerably influences the overall picture. This accounts for approximately 60 percent of the budget figure of 77 billions of dollars this year. Almost $46 billion, as a matter of fact, when we include atomic energy, stockpiling, and military assistance.

"The next largest item on the budget is the cost of borrowed money. In 1960, we expect that the carrying charges on our national debt will amount to over 10 percent of our expected Federal income. In dollars, our interest bill is estimated at $8.1 billion. The President has no choice except to provide for it in the budget.

"Another large item is $5.1 billion dollars for benefits and services to veterans," continued Mr. Stans. "Up to this point, three-fourths of the Government's income (about $59 billion) is pledged to future security and paying for past wars. And in none of these items—defense, interest, or veterans' benefits—is the President in a position to make recommendations at this time for substantial reductions."

Now we come down to the final $18 billion of expected outlays in the budget for the

coming year. "How about them?" I inquired.

"Here they are," said Mr. Stans. "Agriculture services and price supports, including purchase and storage of a huge supply of farm products beyond our needs, accounts for $6 billion.

"Health, welfare, education, and labor programs account for still another $4.1 billion. Services to business and to communities, including aids to housing, aviation, the merchant marine, small business, and civilian outer space programs take $2.3 billion more.

"Then there is allocated $2.1 billion for foreign affairs, including economic assistance to our free world allies to strengthen them in their resistance to Communist subversion. Another item includes $1.7 billion for conservation and development of natural resources. And, finally, there is $1.8 billion set aside for the general administration of the Federal Government, for the expense of Congress and the courts, and for contingencies.

"Included in the budget, in addition to record levels for defense, are the largest amounts ever spent for medical research, water resources, assistance to communities, education, and many other Government activities.

"Does all this sound as though we had crippled, or restricted, or weakened, essential Federal activities, as some critics would have you believe?

"True," said Mr. Stans, "for every category of program in the budget, there are those who would spend several billion dollars more—and it is no mean achievement that these proposals were resisted by the President. What the budget would look like if we undertook to satisfy everyone is beyond description."

This, then, will indicate to my readers just where the old mazuma goes when Uncle Sam takes that folding green staff from us each year in the form of income and corporation taxes.

And—oh, yes—the capable Director of the Budget also told me that the Government perforce takes a very dim view of the utopian Socialist thinkers who would like to destroy U.S. corporations, if they could. It was pointed out to me by Mr. Stans that these same business firms pay some $25 billion into the Treasury each year and it would be pretty hard to make ends meet these days without this tidy little sum to back up our gold buried in Fort Knox. Sounds reasonable enough, doesn't it?

As may be seen, we are spending all we can afford without additional new taxes being heaped upon us increasingly in the future.

Shall we give this item a bit of thought while we watch the so-called spenders in action at their posts on Capitol Hill? Who wants more taxes, anyway? Know anybody who's had enough?

Tiny Acorn Becomes Mighty Oak

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of April 28, 1959, commenting on the remarkable progress of the Wheel Chair Club, which was founded in Wilkes-Barre by Mrs. Paul Bedford in 1935:

TINY ACORN BECOMES MIGHTY OAK

The disclosure that the Wheel Chair Club, founded by Mrs. Paul Bedford in 1935, now has 100 chairs in foreign lands, as well as 21 branches of the organization in the United States, is stimulating news in a world, beset on all sides with threats of war and destruction by ruthless dictators and their stooges, to say nothing of other crises at home and abroad.

Today, wheelchairs are provided by the Wilkes-Barre club to such distant countries as Pakistan, Thailand, Turkey, and other lands in Asia and Africa.

The tiny acorn, planted here a quarter century ago, has sprung into a mighty oak, and it is still growing.

Perhaps the strangest part of this unique experiment in human relations is the nature of its growth. Mrs. Bedford and her associates did not do any direct promotion. Rather, the fame of the Wheel Chair Club spread by word of mouth, largely through missionaries who heard about the local program and contacted Mrs. Bedford when they needed a chair. Thus, backward areas that never saw a wheel chair received one as an outright gift from the city on the banks of the Susquehanna.

It would be interesting to know what the impact of this program has been. Certainly, it has done the United States a great deal of good and obviously it has done Wilkes-Barre no harm.

Little did Mrs. Bedford dream when she launched the Wheel Chair Club as an outgrowth of the Friends of Shut-ins, which she also established, that it would have such far-reaching repercussions. But, then, good has a habit of spreading.

The community knows Mrs. Bedford also as the founder of the Oldsters Club of the Playground and Recreation Association, for which she received a citation at the annual meeting in 1958. For her achievements in the Wheel Chair Club, she has been proclaimed a Distinguished Daughter of Pennsylvania and has been the recipient of the Rush Award from the Luzerne County Medical Society. The Lions Club also paid her an impressive tribute in recognition of the humanitarian work, involving a considerable investment of time and money.

For her generosity, unselfishness, and accomplishments, it is a privilege to salute Mrs. Bedford again on behalf of men and women across the sea as well as a grateful community and country.

Hon. Clarence Cannon, of Missouri

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. KARSTEN. Mr. Speaker, the State of Missouri is fortunate to be represented in Washington by one of the most outstanding Congressmen of our time, Hon. CLARENCE CANNON.

CLARENCE CANNON is no mere Representative, but, rather, he is more in the nature of a national institution. His long and distinguished service in the House of Representatives has established a record of which our State is justly proud. He has served longer in the Congress than any other Representative since Missouri was admitted to the Union. His superior parliamentary and legislative skills are without equal. Teacher, lawyer, author, parliamentarian, statesman and Congressman extraordinary describe CLARENCE CANNON.

In recognition of the accomplishments of this great Missourian the Missouri Legislature at Jefferson City has adopted House Resolution 141 designating May 13, 1959, as "CLARENCE CANNON Day." Knowing the U.S. House of Representatives has the same high esteem as the Missouri State Legislature for CLARENCE CANNON, I include as a part of my remarks the text of the resolution adopted by the legislature:

HOUSE RESOLUTION 141

Whereas the Honorable CLARENCE CANNON is the senior member of the Missouri delegation in Congress; and

Whereas Mr. CANNON has served 35 years in the Congress of the United States; and

Whereas in this capacity Mr. CANNON has been parliamentarian of the House of Representatives and is presently chairman of the Appropriations Committee; and

Whereas this great statesman is devotedly occupied with affairs in Government and is well versed in its principles and art; and

Whereas Congressman CANNON has been most influential in shaping policies of not only the State of Missouri and the United States, but also internationally; and

Whereas Mr. CANNON has edited the "Manual and Digest of the House of Representatives," and is author of the following publications: "Synopsis of the Procedure of the House," "Cannon's Procedure" (published by resolution of the House), "Convention Parliamentary Manual" (published by the Democratic National Committee), "Cannon's Precedents of the House of Representatives" (published by law), treatises on parliamentary law in the "Encyclopedia Britannica," and in the "Encyclopedia Americana"; and

Whereas it is the desire of the House of Representatives of the 70th General Assembly of the State of Missouri to pay honor and tribute to this great Missourian whose influences have been so keenly reflected upon legislative procedures: Now, therefore be it

Resolved by the house of representatives, That the 13th day of May, 1959, shall be called Clarence Cannon Day, upon which day the Honorable CLARENCE CANNON is invited to address this house, and there shall be given a reception in his honor; and be it further

Resolved, That a copy of this resolution, duly inscribed, be sent to the Honorable CLARENCE CANNON in Washington, D.C., and to the other Missourians now serving in the U.S. House of Representatives and Senate.

It's Time To Return Precious Liberties to the Freedom-Loving People of Poland

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. IRWIN. Mr. Speaker, on Sunday afternoon, May 3, I will be privileged to speak in Bridgeport, Conn., to a group of Polish-Americans anxious to see the democratic way of life we enjoy restored to their homeland.

The flame of freedom burns brightly in the hearts of the Polish people, not

only those who are now Americans but also those still in Poland and subject to the traditional Communist pattern of violating and denying the basic human rights.

This Sunday, one of the most important Polish national holidays, celebrating the adoption of the May Constitution by the Polish Diet, is to be observed.

Accordingly, Mr. Speaker, this is a time for reflection on our part—a time in which we should renew vigorously our support of the people of Poland who are enduring a difficult period in their history.

The present situation in Poland had its roots in the partition of Poland by the Molotov-Ribbentrop Pact of August 25, 1939.

In collusion with Nazi Germany, the Soviet Union invaded Poland on September 17, 1939, and on September 28, 1939, the Soviet Union and Germany signed an agreement proclaiming the dissolution of the Polish state and the partition of its territories between themselves, the Soviet Union annexing the northeastern part of Poland.

These acts violated both the Treaty of Riga and the Polish-Russian nonaggression pact.

Except for the partitioners and the allies of Nazi Germany, the world continued to recognize the legal Polish Government, which moved to London.

On July 30, 1941, the Soviet Government concluded a pact with the Polish Government in London by which it recognized "that the Soviet-German treaties relative to the territorial changes in Poland have lost their validity."

On December 4, 1941, the Soviet Union concluded a declaration of friendship and mutual assistance with the London government.

However, under the pretext of being insulted by the suspicion that it might have been guilty of the Katyn Forest massacre, which the Germans revealed in 1943, the Soviet Union broke off relations with the London government in April 1943—though it never actually withdrew its recognition of that government.

In the latter part of World War II, when the Red army entered Polish territory on July 22, 1944, its political commissar, General Bulganin, issued a proclamation to the Polish people declaring the liberation of Poland and the establishment of the Polish Committee of National Liberation.

At Yalta in February 1945, Soviet Russia wrested from the other great powers approval of the Soviet plan for a provisional government of national unity, created in June 1945 with an overwhelming majority of Communists.

The government was recognized by the Allied Powers on the condition that it hold "free, unfettered elections at the earliest possible time." This essential condition was never kept.

Finally, in January 1947, elections took place under conditions of fraud and terror. Backed by the presence of Soviet troops, the Polish Workers—Communist—Party organization exerted pressure to induce voting for the government list of candidates, and although another independent list of the Polish Peasant Party was permitted there was no public control over the counting of votes and the declared results were grossly falsified.

The rape of Poland by the Communist and Moscow-dominated regime of a dictatorial police state continued.

But in June 1956, the political and moral oppression and the economic misrule and exploitation by the regime, clearly subservient to Moscow, resulted in the Poznan revolt. It forced the Communists to make concessions and to liberalize the regime headed by Wladyslaw Gomulka, the new first secretary of the party. Moscow, fearing repercussions in the other captive nations, protested violently but in the showdown in Warsaw in October 1956 Khrushchev, who had personally flown in to stem the tide, had to give way lest an attempt at brutal oppression lead to disastrous results.

Among the gains won by the Polish people were the regime's new policy toward the church, which again permitted religious teaching in schools and other concessions which led to the liquidation of the collective farms so detested by the peasants; the relaxation of censorship which permitted greater freedom of the press—though criticism was tempered by the common knowledge that Soviet Russia would not permit the installation of a non-Communist regime; and the cessation of terror by the security police. Although these achievements by no means restored the full enjoyment of human rights, they were important.

As the Communist Party regained control of the situation, the improvement was short lived. Developments in the court of 1958 have been marked by intensified repression of the people, retrogressing toward the conditions in force before October 1956. This retreat from the gains of the Polish October is particularly evident with regard to the freedom of intellectuals, to workers' rights and church-state relations. There are many signs that the gains of October are to be further reduced.

For several months, a ruthless press campaign has been waged against the church and against religion. The Minister of Education on August 4, 1958, forbade religious instruction in state schools by members of religious orders and congregations. On August 9, 1958, the Catholic hierarchy lodged a protest, calling the order an unconstitutional violation of the basic church-state agreement.

Recent statements by leading party members indicate that collective farms are to be reinstated. Gomulka himself stated on September 7, 1958:

> The only correct road must in the long run lead to the collectivization of Polish agriculture.

There has been no genuine freedom of opinion in Poland since the loss of independence, and even the freedom of criticism which Gomulka announced at the Eighth Plenum in 1956 lasted less than a year. Censorship has been reestablished. Many papers have been banned, including the outspoken organ of the young Communist intellectuals, Po Prostu; party control was increased over newspapers and the planned weekly Europa was not allowed to appear at all. In May 1958 a ruthless campaign against the more independent newspapermen and writers was proclaimed by Werblan, head of the party propaganda machine. Today the press and other media of information are again becoming as subservient to the party and the regime as before October 1956.

I think, Mr. Speaker, we in America who enjoy our freedom must remember that the people of Poland have always manifested a strong attachment to the Western World.

We should remember, too that in celebrating the 168th anniversary of the Polish Constitution of 1791 they would like to regain the liberties accorded them by that liberal document, written chiefly by Ignatius Potocki, supported by King Stanislaw Augustus, and passed at another critical time in Polish history.

In 1772, Russia, Prussia, and Austria had taken away large sections of Polish territory in what became known as the first partition.

Facing possible annihilation, all forces in Poland united behind the new constitution that was greatly influenced by the liberal movements in America, England, and France.

Among the major provisions of the constitution were the following:

> All power in civil society is derived from the will of the people.

Commoners were granted the right to acquire land; to become commissioned officers; religious freedom was guaranteed; powers of the government were divided between the legislative, executive, and judicial branches; and a two-chamber legislature established.

Within a few years after passage of the May Constitution, Poland was completely overrun by the armies of Russia, Prussia, and Austria.

During the century and a quarter of foreign oppression that followed, the May constitution served the Polish people as a symbol of democracy and independence.

It is time, Mr. Speaker, that the gallant people of Poland regain the precious liberties given them by the Constitution of 1791 but of which they have been deprived for so many years by the tyranny of foreign oppression.

We Will Always Need the Guard

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. VINSON. Mr. Speaker, the National Guard of the United States is the Nation's oldest fighting force.

Throughout the years, the National Guard has had a long and honorable history. Today it is rightfully consid-

ered as our first line Reserve component, always ready to fight.

Its greatest attribute is that the guard is made up entirely of volunteers, enlisted men and officers, who perform their training willingly and without compulsion.

This has brought about a camaraderie, a sense of esprit de corps, if you will, so necessary to a first-class fighting machine. Undoubtedly this comes about because of the guard's militia status and the fact that it is essentially a State force where men from the same community serve together for a mutual cause.

This militia status is one that must always be maintained in the guard. For many years, more than I can remember, there have been those who would strip the guard of its status and federalize it like every other Reserve and Regular component. This would be a serious blunder for not only does it offend the sensibilities of those of us who believe in living within the spirit and meaning of the Constitution—wherein the maintenance of a militia is guaranteed—but it would tend to treat the guard like every other Reserve component merely for the benefit of uniformity.

In my opinion, we have something outstanding in the guard and I will continue to oppose any change which would deprive it of its dual status.

The guard also has a job to do in this connection. It must never be an obstructionist. It must not oppose sensible changes or reorganization when such would be in the interest of national defense. The guard, although old in tradition must be young, alert, and forward looking, in its present thinking.

We are passing into a new age of missiles which travel on the wings of supersonic speed, of space warfare and weapons too terrible to contemplate for use in a civilized world. Nevertheless, we will always need the guard. Its State missions will always be a responsibility and this will be true no matter how far we advance in technology. And it will have its Federal mission as well, for the day of conventional warfare has not passed. So long as men are required to fire weapons, to operate machines and to take and hold the territory of the enemy, the guard will be needed.

So the guard must insist that it has its place in this new world and it must struggle to retain it. A fight is not new to the guard so I have no delusions about the outcome.

Now, contractors for the National Guard Association are completing the National Guard Memorial Building. It is appropriate that such a building should be erected here at the seat of the Government. True, it memorializes those of the guard who have fallen in defense of their country. But in another sense it will be dedicated to the living, to those guardsmen who give unstintingly of their time and talent that this Nation may have a strong reserve force.

When future history is written, the guard will be just as prominent as in the history of the past. The strength and durability of this memorial epitomizes the strength and durability of the National Guard.

A Warning From Senator Byrd

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. McCULLOCH. Mr. Speaker, the Cleveland (Ohio) Plain Dealer is known throughout America for the excellence of its editorial page.

In the issue of April 29, 1959, is two editorials on one of the major problems of our times, for how we now accept and discharge our responsibility in fiscal affairs may well determine the ultimate fate of our country.

I urge every public official in National, State and local office to carefully read these editorials and to keep them constantly in mind in the days that are ahead.

The editorials are as follows:

A WARNING FROM SENATOR BYRD

One of the more sinister aspects of fiscal instability is that, like measles, it spreads. Senator HARRY F. BYRD, Democrat, Virginia, summed it up in this fashion recently: "The Federal position alone is bad enough, but it is epidemic. It has spread to State and local governments. It has permeated our whole economy. It has dangerously changed our attitudes—public and private."

It is this change in attitude which makes the future look uncertain, for it is an attitude which says: "So we're in debt. So what. Everybody else is, too. The Government is, the State is, the city is. Of course I can't afford to buy what I'm planning to buy, I can't pay for it, but then neither can neighbor Smith. I'm no worse off than he is."

This is a far and unhappy cry from the days when the Government lived within its means, and when thrift was considered a virtue, both in the individual and in Government. The present attitude is the state of mind which has brought us to the 48-cent dollar (by 1939 standards), which has stolen the value from fixed incomes and laughed in the face of prudent business methods and sound financing policies.

Moreover, as Senator BYRD has observed: "The Federal Government is now subsidizing business, industry, private finance, agriculture, transportation, power, health, education, States, localities, individuals, et cetera. By the process of cheapening our money and centralizing power in the Federal Government, we have descended to a level of state socialism which is obvious, if not admitted. Social democracy is a subterfuge for sound government and constructive enterprise. Its evils are historically documented wherever nations have stooped to it."

What could happen eventually? It isn't a pleasing prospect.

"When individuals become insolvent," said Senator BYRD, "they take bankruptcy and dispose of their obligations. When governments become insolvent their money becomes worthless and they go through a revolution wringer. The nature and process of the revolution may vary, but invariably the form of government is changed. There is no reason to think free enterprise democracy, as we have known it, could survive."

So what do we do to reduce the danger? Support the President in his attempt to reduce Federal spending; reduce our demands on the Federal Treasury; cut out all waste in Government. But, first of all, we need a changed attitude which, instead of floating about in a purple cloud of unreality, has its feet on the ground and recognizes—and accepts—the bitter facts of economic life.

AND CONFIRMATION

So maybe you thought Senator BYRD (as quoted in the above editorial) was talking through his hat, or crying "wolf" once to often, just because he believes in governmental economy.

Well, Sylvia Porter reported in her column in Tuesday's Plain Dealer that U.S. Government bonds are going begging at interest rates of 4 percent or better.

A fundamental reason for this is that investors have lost confidence in U.S. bonds. They don't want to tie their money up in them for long terms for fear that inflation will erode away its value.

True, there has not been any significant increase in inflation in the past year, but the possibility always exists if Congress is disposed to authorize deficit spending. That requires deficit financing, which puts more money in circulation and dilutes the value of everybody's dollars.

"The solution," Miss Porter wrote, "lies in renewed confidence of investors in U.S. bonds—and that in turn rests on investors' renewed confidence that our country will balance the budget and control inflation. The confidence isn't yet here."

Governments have two ways of repudiating their debts—in big doses and little doses. Soviet Russia has administered two big doses in recent years, once when savings were confiscated, again when it postponed indefinitely paying off on bonds which the people had been compelled to buy.

Inflation is a way of debt repudiation in little doses. The Government pays off its debts in dollars all right, but the dollars won't buy as much as they did formerly.

Thus, when lawmakers whose hearts bleed for the masses insist on bold new welfare programs which can only be financed by adding to the debt, they are actually subtracting something from the welfare of every citizen by cheapening his money and reducing his income in the terms of what it will buy.

The outlook for the future is not good. The ceiling on the Federal debt is now $283 billion. It will have to be raised again so the Government can pay its bills. That won't help to restore confidence in the stability of the U.S. dollar. It will take more than one balanced budget to do it.

The Aim of Foreign Aid

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. WOLF. Mr. Speaker, a few days ago our wise and distinguished colleague, CHESTER BOWLES, spoke on the theory and practice of foreign aid. It was a stimulating and perceptive discussion by a man who knows as much about the defects and virtues of our foreign-aid program as anyone in the Congress or the executive. Mr. BOWLES' comments represent a new approach to foreign aid and economic development.

The Des Moines Register, in an editorial on April 27, 1959, has commented favorably on the Bowles approach. Under unanimous consent, I insert in the RECORD a copy of this editorial:

THE AIM OF FOREIGN AID

Representative CHESTER BOWLES (Democrat of Connecticut) has proposed an overhauling of the U.S. foreign aid program that deserves thoughtful consideration. BOWLES is a former high Government official and has served as Ambassador to India and as a consultant to the United Nations. He has had a long, close, and friendly association with the foreign aid program.

BOWLES would begin by restating the U.S. objective in foreign aid. The policy now, as stated in the Mutual Security Act, is to continue the aid program only "as long as (the Communist) danger * * * persists." BOWLES believes this is a negative approach, that places a premium on a country having a Communist problem in order to qualify for American aid.

BOWLES want the United States to make clear that its chief aim is to uphold human dignity and support the aspirations for freedom.

"Our major purpose," he says, "is to encourage free peoples to stand on their own feet, to make their own choices, to defend themselves against overt aggression, and to create economic and political conditions under which the principles of liberty and human dignity can take root, grow and ultimately flourish."

BOWLES asks: "Why is it that modern equipment can make a vital contribution to increasing productivity in the villages of some countries while similar machinery sent to other countries lies rusting on the docks?" The chief reason, he finds, is a difference in determination and ability of these countries to utilize foreign aid.

BOWLES would base foreign aid on a country's qualifications for making the most effective use of the aid. BOWLES believes that to qualify for major American assistance a country should be able to demonstrate that it is making substantial efforts on its own, that it has a comprehensive economic plan, a competent graft-free civil service, and a stable government with popular support. A country's size, population, and location would also be taken into account in allocating economic aid.

Under BOWLES' plan, countries that do not meet minimum development standards would be informed of their shortcomings and encouraged to qualify for investment assistance. The United States would help supply the technical aid needed to lay the groundwork for using investment funds effectively.

BOWLES calls for a sweeping new look at the military aid program. He is fearful the present program has saddled some countries with excessive military loads and diverted energy and resources from essential economic programs. BOWLES believes the military aid program has served to suport dictators and, by upsetting the balance of power in some areas, to promote instability and suspicion between neighbors.

BOWLES believes that a new look at the military aid program and the use of higher standards for economic aid could eliminate waste and result in substantial savings. He urges putting the savings into an expanded Development Loan Fund for loans to qualified undeveloped countries. BOWLES proposes an increase for the Loan Fund from the $700 million requested by the administration for 1960 to $1 billion.

The Bowles approach is a welcome contribution to thinking on foreign aid. It is an imaginative and constructive approach that holds out the possibility of curbing waste and increasing the effectiveness of foreign aid.

Food for Peace

EXTENSION OF REMARKS
OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. KARTH. Mr. Speaker, in the May 1959 issue of the Capper's Farmer, a transcription of an interview with the distinguished senior Senator from Minnesota appears concerning his food for peace bill. Although Senator HUMPHREY'S and Congressman WOLF'S, of Iowa, United Nations food bill utilize the food and fiber resources in different ways, the purposes of the bill are similar. Both bills have as their respective goals the utilization of our food resources in ways which will aid the underdeveloped nations of the world and the starving peoples of this world in their quest for a better life.

Mr. Speaker, too many have thought of our great food and fiber abundance as a millstone around our necks. It is refreshing to know that through the leadership and explanations of Senator HUMPHREY and others, we are beginning to see the enormous use and value of our food resources—that it is a gift to be used for man; not for the purpose of rotting in food storage tanks.

Under unanimous consent, I include the interview of Senator HUMPHREY in the Appendix of the RECORD:

FOOD FOR PEACE—OUR MIRACLE WEAPON

(An interview with Senator HUBERT HUMPHREY)

(EDITOR'S NOTE.—Minnesota's Senator HUMPHREY is introducing a bill in the Senate to establish a Food for Peace Administration. Here he tells how this program would work.)

Question: "Senator, what would your proposed food for peace program do that is not now being done under Public Law 480?"

Answer: "We intend to use Public Law 480 as a base and expand upon it. We need a Food Administration—a Food for Peace Administrator. Our present arrangement is clumsy. There is really no one spot where the responsibility for the use of food and fiber as an instrument of foreign policy is centered.

"Part of the responsibility is in the Department of Agriculture and part is in the Department of State."

Question: "One objective then will be to make Public Law 480 more effective?"

Answer: "Yes; and to improve its administration. But we need a Food for Peace Administration with vitality, imagination, and momentum. The present program is short of something to make it work. We are missing the great opportunity. And I want to say that if we keep on missing it for another 5 years we won't have any more chances."

Question: "What countries would receive our food for peace?"

Answer: "I am thinking of the new nations, the rising countries, those just coming out of colonialism that need capital for development. I mean those countries that do not have American dollars.

"The great opportunity in this program is that we can sell to these countries for their own money. That is a key to Public Law 480. But we have failed to make full use of it."

Question: "Can we make use of all these foreign currencies?"

Answer: "We use what we need to pay our bills in those countries. But here is where our products become 'food for peace.' We can loan the money back to them for their economic development—to build roads, schools, factories, or whatever they may need to improve themselves."

Question: "Haven't we been criticized for delay in putting these loan funds to work?"

Answer: "Yes. The sheer bureaucratic delay in negotiating some of these loans is tragic. We not only hold back opportunity for the new countries to develop. But while the money lies idle, inflation may be eroding away its value.

"We could be building future trade and permanent good will for our country. We could be helping new countries promote health, education, and business expansion."

Question: "Education then would be a big part of a food for peace program?"

Answer: "If we can sell food to these countries for their money, they can use their supply of American dollars to buy other things they need for industrial development. We can loan their money back to them for scholarships, school facilities, laboratories, classrooms, books, and visual aids."

"Question: "Senator, Capper's Farmer readers are asking if an expansion of Public Law 480 is only a substitute for an adjustment of production that would prevent surpluses."

Answer: "We are justifiably concerned over surpluses because they are depressing farm prices. Unfortunately, lower farm prices do not show up in lower consumer prices.

"If a food for peace program were developed on a big enough scale, it would siphon off our depressing surpluses and put them to work in parts of the world that are short of food and fiber. It would upgrade our own economy and that of deficit countries.

"We could make food for peace the greatest instrument we have ever had to maintain a prosperous agriculture at home and create good will abroad."

Question: "If we expanded the Public Law 480 program, would we be accused of dumping our surpluses in the markets of our friends?"

Answer: "We could upset normal trade patterns if we acted like ignoramuses. But this kind of program would be carefully planned. I can't imagine that we would proceed without careful cooperation with our friends and allies.

"Food for peace would not be sold in our normal dollar or pound sterling markets. It would operate where there are no dollars or British pounds."

Question: "How much control would we have over the funds that we loaned back to these countries?"

Answer: "The projects would be decided upon by negotiation between the Food for Peace Administration and the recipient country, in accordance with such law as Congress might enact. But the purposes of the loan and the terms of repayment would be set forth in an agreement."

Question: "Isn't there a danger that food for peace might retard agricultural progress in such a country?"

Answer: "We are not thinking of a worldwide relief program. And, of course, our food surpluses are not unlimited. But the need of these countries is great. The pressure for a better standard of living is unbelievable. Either we must help them through democratic processes or they will fall captive to totalitarianism."

Question: "Senator, what set you at work on the food for peace idea?"

Answer: "I caught the idea on a trip to the Middle East about a year ago. I saw what food can really mean. I came back with the

feeling that our military aid program in this area was accomplishing little.

"For example, we put millions of dollars in military aid into Iraq. What happened? They used the guns to kill the very government that we were supporting. And the people felt no gratitude to the United States.

"But I am confident that if we had loaned them money for a school lunch program, or helped them with health and education improvement that could have been identified with the humanitarian impulses of the American people, we would have a reservoir of goodwill in Iraq today."

Question: "Would Food for Peace be limited to the amount of our crop surpluses?"

Answer: "Such a program should not be wholly based on the accident of surpluses. First of all, we should have a national security reserve. I mean certain amounts of foods that should be set aside for emergencies that might happen to us or our allies.

"A food reserve is as important as a stockpile of atom bombs. What good would bombs do if we had no food? One of the first acts of an enemy would be to contaminate our fields and livestock. It is good national security to have a surplus of foods."

Question: "Is cost of our farm program high compared to that of our missiles?"

Answer: "We should quit complaining about the cost of food surpluses. We are not complaining much about military stockpiles or the obsolescence of weapons. We put billions into rockets and missiles that will never be fired. Yet that is done in the name of research and security.

"Food is security too. And it will win more friends than weapons. A few tons of powdered milk in Africa will do us more good than a ton of uranium.

"Furthermore when other nations look to us for part of their food needs they will think twice before joining any bloc antagonistic to us."

Question: "From your visit in Russia last year did you get the impression that the Soviets are pushing their farm program for the purpose of using food as a tool in furthering Soviet influence?"

Answer: "Yes; definitely. Premier Khrushchev pointed out how the Soviet Union had sent foods to less prosperous countries. I predict that in 5 years Russia will be a food-exporting country.

"Imagine what Mr. Khrushchev would be doing today if he had our billion-bushel wheat surplus. He'd be the world's biggest wheat salesman and not be worrying how many rubles it would bring. He'd be spending Soviet influence with every kernel."

Question: "Senator, are you looking forward to a world food bank in your food for peace proposal?

Answer: "Yes, the food surplus producing countries might eventually get together in an international food bank. But I don't think we should wait until we can have a perfect project. We've already learned a lot from the use of Public Law 480. We should build from that and work out bilateral arrangements with nations that need our food now."

The Great Broiler Dilemma

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. HARRISON. Mr. Speaker, the great poultry industry is in trouble. Leaders of the industry are at the Capitol today, presenting the cruel facts to the Committee on Agriculture and to individual Members of this House. In this connection, and under leave to extend my remarks in the Appendix, I include an editorial as reprinted in the Virginia Poultryman of April 1959:

THE GREAT BROILER DILEMMA

Anyone who was in Dallas, Tex., the other week at the first convention of the National Broiler Council left the meeting deeply meditative upon the dilemma which this most advanced of the many segmented industries in the food industry finds itself.

Contrary to the copy book maxims, this industry, which now produces annually 1.7 billion units of the finest foods finds its future stymied and its progress and even its continued existence in doubt.

IT'S MORE THAN OVERPRODUCTION

And this arises not from overproduction, although this may be an incidental problem, but from the trade practices of the major retail distributors. Broilers are being used as a traffic builder, as a loss leader, so extensively that the major portion moves into consumption on this basis.

But as everyone in the know fully realizes it is the policies of two or three of the big chains that set standards of practice that everyone else must follow or try to follow.

Thus, the main issue of persuading the chains to take a profit, or at least a markup, would seem to center on just two or three points.

Here is an outline of the current picture and it isn't too pretty a one. A chain is getting ready for a major broiler sale. It canvasses the sources of supply asking not what is the price, but proclaiming how much it will give. The producer resists, but broilers may not be kept too long and the supply mounts up. Finally someone sells. The price let us say is 27 or 28 cents a pound.

Thus a market is created and the young chickens are set to go into distribution at prices that mean little more than cost recovery for the producer and straight loss for the chains.

EVERYONE GETS THE PRICE

We said chains, for the news that one of the major outfits has gotten broilers at this price cannot be kept secret and soon everyone is getting the price forced by the one or two.

Finally, the big broiler sale breaks on Thursday at a price equal to invoice and sometimes even less. The public rushes out to buy, filling their freezers and refrigerators with an inventory that will last 2 or 3 weeks, by which time a new broiler sale will be staged and the process repeated.

Next Monday after the sale, the chains, done with their price orgy, mark up the chicken to exorbitant heights—anywhere from 35 to 45 or 49 cents a pound in an effort to recoup their losses. The result is that demand falls flat. Broiler movement is next to nil and the supplies begin to pile up in in the warehouses of the processors.

The stage is being set for a repeat of the great profitless performance.

GREAT HOPES AND EXPECTATIONS

It was hoped and even forecast at Dallas that perhaps this nonsensible pattern for all concerned may be wearing thin and that corrective action is about to occur. One of the chainstore men said at Dallas that broilers were seemingly losing their role as a preeminent traffic builder, for everyone is now in the act of giving broilers away.

And the cost is very high to the retailer. Not only is he selling at invoice or below, without regard for normal markup and handling but the broiler sales are having a devastating effect on just about everything else in the meat case.

Chicken sales, which normally amount to about 8 or 10 percent of total meat sales, swell to 60 percent or more during the period of the great broiler busts. Thus the store loses profit all along the line.

The broiler men, devastated by their great problems, voiced the hope at Dallas that chains and other distributors could be induced to attach a markup of at least 10 percent during the sales and 20 percent at other times.

Thus everyone could live.

As may be deduced, the broiler industry is incensed and deeply concerned.

Some in the industry even voice the suspicion—at least privately—that the chains are conspiring against them, although the more sensible view, and the one to which we subscribe, is that the whole situation derives from a monkey-see monkey-do mechanism to which retailers are sometimes strangely prone. We are sure that if the vicious circle were broken and that if one chain did not fear the competitive defeat it would meet if it did not hold a broiler sale and another did, the situation would ease itself. But how is this to be achieved?

We feel that the retailers have a great opportunity at commercial statesmanship here.

RADICAL SOLUTION MAY BE ATTEMPTED

For if something isn't done, it is certain that the broiler industry will attempt a radical solution with the help of the government. The situation has just those qualities that many a politician would love to air in the headlines and via a congressional investigation. The big distributive organizations would be certain to emerge with black eyes.

What is more the public could suffer. Already, there is talk of marketing orders and governmental help even via the sudsidy route. All of which would mean restraints, curtailed production, red tape and ultimately high prices.

It will be interesting to see if the retailers will take the cue or whether they will wait until they are bludgeoned about the head by the force of law before taking corrective action.

Mr. Speaker, I also include a resolution by the board of directors of the National Broiler Council:

RESOLUTION ON RETAILER PRICING PRACTICES AS THEY AFFECT THE SALE OF BROILER CHICKENS UNANIMOUSLY ADOPTED BY THE NATIONAL BROILER COUNCIL BOARD OF DIRECTORS IN DALLAS, TEX., MARCH 20, 1959

The National Broiler Council board of directors believe currently used retailer merchandising and pricing techniques frequently block broilers from reaching the consumer in a free and orderly flow. These practices have evolved in a period of revolutionary growth and dramatic change in the broiler industry. These broiler industry changes have paralleled the development of new and equally dramatic changes in food retailing. However, this industry with all its modern technological advances and improved product, is being penalized by current retail practices, and it is our belief the retailer is jeopardizing his long-range profit possibility for this basic protein commodity as well.

We, therefore, recommend the following steps be taken:

1. Trade organizations representing the retail food industry, chains and independents, should immediately be apprised of these facts in a positive and effective manner.

2. Immediate conferences should be called so National Broiler Council leaders can personally bring these facts to the attention of the highest leadership in individual food retailing businesses in America.

3. If no action is forthcoming through the above steps, then this industry must take immediate action through other avenues to remedy these practices.

Mr. Speaker, I also include a significant portion of a statement by Mr. Charles D. Vantress, of Duluth, Ga., a major breeder of broiler stock and one of the founders of the National Broiler Council:

OVERPRODUCTION?

Now, let us take a real good look at this thing we call overproduction. That the broiler industry is overproduced is one of the biggest brainwashes in history. A guilt complex has been built in our industry on this subject:

How?

No. 1: The stores using the two-price system always have used as a justification, "Well, you are overproduced and we have to hold sales to clean out your surplus."

No. 2: Some industry people have sincerely thought some kind of voluntary production control practical and that a permanent seller's market could be achieved by this method.

No. 3: Some industry and official people have, as a matter of policy, preached that we are overproduced to try to get someone in some other area to cut back.

No. 4: The USDA has periodically preached that meat chickens were overproduced, predicting low markets, with catastrophic results to the industry.

I, personally, stand on the premise that we never have a chance to know if the product is overproduced because, except for rare, unusual occurrences such as condition X last year, along with unseasonable cold weather, causing a temporary seller's market, the industry is kept on a constant controlled overproduction basis by the two-price system in the stores. If strength is shown in the field, the flow is reduced to 25 percent in the stores by the too high price level. The resulting backing up in the industry inventories certainly then is a surplus, but it has been proven over and over that a too low price (currently 29 cents per pound) moves more than the industry is producing. In other words, never can you say the industry is overproduced without questioning at what price to the consumer? We know that the industry is overproduced at 49 cents per pound in the stores. We know that the industry is underproduced at 29 cents per pound in the stores. No one can say just what the maximum price is at which all of our product will sell because it never has been tried. At 49 cents the stores make several profits on 25 percent of the volume sold at that price which averages out into a pretty good profit on the total volume of chicken sold, but the production end of the industry gets paid on a live price based on the too low store price for all of its volume.

LOWERING HUMAN STANDARDS

How did we arrive at this situation? Who is to blame? While there was vast room for efficiency and quality gains in the industry, many in the industry, no doubt a substantial majority, benefited by this system, and certainly the public benefited by being introduced to a new food product of extreme quality, 75 percent of which was sold at extreme bargain prices. The same people responsible for this system have been the best friends the industry has had and are responsible for much of the growth and progress of the industry. The two-price system was responsible for squeezing every inefficiency out of the industry and in that respect was good for the industry, however, when practically every efficiency has been made, leaving only further breeding gains as a means of further lowering of cost, then the squeeze of the two-price system can only result in lowering of human standards. That means, growers working for less than subsistence wages while living off accumulated savings represented by their housing and equipment. It means no chance for key salaried employees in operations, or laborers, in flocks, hatcheries, processing plants, looking forward to peacefully progressing with the rest of the national economy. It means many real fine managers who have been independent feed dealers, operating on credit, which if their credit is withdrawn or even held level, will be thrown into bankruptcy. It means financial destruction for hatcherymen who, with any kind of commitments, try to put security into supply flock operation, the owners of which are farmers.

LEGAL APPROACH

The people, of the substance and numbers involved in this problem, will not lay down and lose by default. They first will ask the stores to voluntarily stop this practice. If this fails they will test the legality of the two-price system in court. It has been stated by legal advisers that tacit collusion exists when stores follow the same practice, even though no actual agreement exists; that dealers harmed by this practice can collect threefold damages. But, if this practice is found to be legal the industry people will then be forced into protective types of collectivism or combination, if the two-price system remains. This will mean the organization of growers, flockowners, and hatchery workers into AFL–CIO labor unions, feed dealers organized into trade associations for collective action, and probably merger of processing plants into bigger and/or cooperatives for bargaining power. Even Government price supports and production controls could gain favor if the two-price system continues even a few months longer. All this could happen to people who have always thought independently, and have had faith in private enterprise as a means of industry progress and consumer value. We are of the opinion that if the powers that be in the food retail trade were completely aware that the broiler price has been squeezed below cost of production by the two-price system, that the system has already achieved its value in forcing extreme efficiency in the broiler industry, and that it has already ceased to be of much value as a traffic getter, through loss-leader technique, and that a continuation of that system will force the broiler people into various forms of collectivism and combination, and that the result of this will mean considerably raised costs of production with some protected inefficiencies, making broiler meat a higher priced, semiluxury item for the public, then I think they would give quick consideration to the end of this practice.

FORWARD LOOK

If the two-price system were ended, what could we look forward to in the industry? In a free market, supply and demand would set the price. The price charged in the store would reflect the price paid to growers. If this price were too high it would come down until the flow equaled the production. Then, at any time, an individual could evaluate his business in the light of probable markets and would operate accordingly. Then we could stand a chance of improving markets by increasing demand and thus price. Only those would be squeezed below cost of production whose costs were too high (probably 10 percent most of the time, instead of 95 to 100 percent as at present) and a continuing orderly adjustment would be taking place at all times while 75 to 90 percent of the industry would be operating at a legitimate profit. No one could complain about that.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. AYRES. Mr. Speaker, the following newsletter, written by the able junior Senator of New Hampshire, the Honorable NORRIS COTTON, should be of interest to all:

YOUR SENATOR REPORTS

(By NORRIS COTTON)

Trustbusting Teddy Roosevelt said, "The corporation has come to stay as the trade union has come to stay. Each has done great good. Each should be favored as long as it does good, but each should be sharply checked when it acts against law and justice." When he made that statement, he was in the midst of a bitter war against the Fat Cats of Wall Street who named Presidents, made and unmade Senators and Congressmen, throttled competition, starved and exploited labor. Nonetheless, he clearly foresaw the hour when the pendulum would complete its swing and the reins of power would shift from the corporation to the trade union.

That hour came this week when an unhappy Senate writhed under the whiplash of giant labor. It came as the culmination of 26 months of probing by the McClellan committee, during which it published 46 volumes—16,939 pages—1,257 witnesses. It found millions of union funds pocketed by union officers, unions without elections for more than 10 years, members deprived of voice or vote in union affairs, conspiracies between union officials and employers, felons fresh out of prison in places of authority. "The abuses, thievery, skullduggery, and skull-splitting tactics are practiced more often against the workers than the employers. The arbitrary power over workers thus acquired is almost invariably used for personal power and enrichment."—Senator MCCLELLAN. Labor itself was shocked by these revelations, and the topflight chieftains of AFL–CIO, whose integrity and respectability is unquestioned, took disciplinary action against 7 unions having 2½ million members.

Three key issues highlighted the 9-day Senate struggle: misuse of union funds, dictatorship in union affairs, abuse of union power.

Dishonest officials who filched at least $10 million from members' treasuries spent it in various ways—a $35,000 yacht, a $57,000 private plane, a stable of thoroughbred horses, and large sums spread over a wide field ranging from Cadillacs and TV sets to theater tickets and women's finery. Dictatorship and abuse of power was even worse. It is an established and accepted fact that union membership is not voluntary. Workers must join or forfeit their jobs. Dues are deducted from their pay just as the Government withholds a tax. But, in addition to this, they have frequently been deprived of their vote for years at a time, forbidden admission to stacked meetings with doors barred by steel chains, forced to pay initiation fees as high as $1,000 for the right to work at their trade, and, in some instances, beaten by goons if they dared to protest.

Chairman MCCLELLAN rebelled against the mild Kennedy bill and offered a bill with

teeth in it. In a nutshell the difference between the two bills was the difference between report and reform. The Kennedy bill merely required officers of a union to report periodically to the Secretary of Labor on the use of funds and on a variety of internal union affairs. For the ordinary union member the Secretary is a long way off. The McClellan version wrote the remedy into the law of the land, enforced by a hundred U.S. district attorneys in every part of the country. It laid down a fundamental bill of rights for every union member (freedom of speech, freedom of assembly, freedom from arbitrary initiation fees and kickbacks, protection of right to sue and to participate in union elections, etc.). It outlawed extortion, secondary boycotts, and blackmain picketing. After a desperate battle McCLELLAN'S first amendment, the bill of rights, was adopted by a hairbreadth margin of one vote.

It was then that the full fury of the astonished labor leaders burst upon the Senate, especially on those Senators who had gained their election from labor's support. One by one the further McClellan provisions were watered down or beaten until finally another vote was secured on the bill of rights and a weakened, diluted version substituted. Most of the Members who had stood up and voted for it only 2 days before reversed themselves, reminding one a little of Ralph Waldo Emerson's remark that, "A hero is no braver than an ordinary man, but he is brave 5 minutes longer." Thus, for a second year in succession the Senate has marched up the hill and down again, passing a bill that is "against sin" but hardly more than the expression of a pious hope that labor's racketeers will be good.

Abolishing Postal Savings: Fiscal Insanity

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. PORTER. Mr. Speaker, the administration professes to be much concerned about balancing the budget but here it comes again pushing for the liquidation of the postal savings system.

This is fiscal insanity.

It means doing away with a profitable government activity, used by 2 million citizens, at the cost of at least $4 million.

Fiscal insanity, nothing else!

The Post Office representatives testified before the Post Office and Civil Service Committee, of which I am a member, on Tuesday. They told us that about 2 million depositors had $1.2 billion in postal savings. This money is invested in Government securities which yield on the average 2.6 percent.

The Postal Savings System, according to the testimony, makes a profit for the Government. It reduces the deficit and will continue to do so for at least 6 years.

Now here comes the administration to abolish the system, increase the postal deficit, and deprive 2 million depositors of this service. This move would cost at least $4 million.

At present the depositors are paid 2 percent interest. The profit is made on the 0.6 percent difference between the interest and the Government securities in which the Government invests. However, if you pay off the depositors, that means refinancing the $1.2 billion in low interest—no more money is available for the Government at 2.6 percent—Government securities. The new bonds which the Government will have to purchase will be at 3.25 percent interest.

Do you know the difference in interest charged on $1.2 billion for 1 year at 2.6 percent and at 3.25 percent? I will tell you: $3.8 million. Add to that the financing charges of floating the new issue and you are well over $4 million, even if you subtract the half million dollar operating costs of the Postal Savings System. Of course this would extend over for 1 year.

Economy, in my opinion, is carried too far and too insanely when profitable, useful Government programs like postal savings are sought to be abolished at the cost of more than $4 million to the taxpayers. Or perhaps I should say this is too brazen an attempt to make the bankers happy.

Kansas Telephone Association

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Kansas Telephone Association relative to funds to support the REA telephone loan program during the ensuing fiscal year. The resolution follows:

ABSTRACT FROM MINUTES OF BOARD OF DIRECTORS' MEETING OF APRIL 10, 1959

I, Douglas Gleason, secretary of the Kansas Telephone Association, 512 New England Building, Topeka, Kans., do hereby certify that the following is a true and correct copy of a portion of the minutes of a meeting of the board of directors of the association held on April 10, 1959, in Topeka, Kans.:

"The next order of business was a discussion of the REA program, and particularly the recommendations made by Mr. David Hamil, REA Administrator, to Congress for funds to support the REA telephone loan program during the ensuing fiscal year. After a full discussion, Mr. Froman moved that the following resolution be adopted:

" 'Whereas with loan funds made available through the telephone loan program of the Rural Electrification Administration, independent telephone companies, both commercial corporations and cooperatives, in the State of Kansas and in other States of the United States, have been able to provide residents on farms and in rural communities with efficient, modern telephone service. The extent and character of the service furnished would not have been possible if these companies had been required to rely upon private commercial sources for funds to finance the necessary construction; and

" 'Whereas there still remains in the State of Kansas and in other States a large number of farm establishments and rural communities not presently receiving adequate telephone service which look to established independent nearby telephone companies, both commercial and cooperative corporations, with the hope that in the near future modern, efficient telephone service will be extended to their farms and communities by those established companies; and

" 'Whereas these inadequately served farms and rural communities can be provided with modern efficient service by these established companies if low cost Rural Electrification Administration telephone loan funds continue to make available in amounts commensurate with the needs. Service to these farms and rural communities cannot be provided if reliance must be placed on private commercial sources for the necessary construction financing, and

" 'Whereas David A. Hamil, Administrator of the Rural Electrification Administration and his capable staff of the Telephone Operations and Loans Division are conscientiously and efficiently administering the telephone loan program. They are aware of the magnitude of the telephone needs of the people of this Nation and are in the best possible position to formulate and express a judgment as to the extent to which those needs can be met through REA telephone loan funds in the coming fiscal year: now, therefore, be it

" '*Resolved*, That this Kansas Telephone Association, which includes within its membership every type of commercial or cooperative business organization capable of qualifying as a telephone public utility under the laws of our State of Kansas, does hereby, through its duly elected, qualified and acting board of directors, after broad consultation with the membership of this Association, express its approval of the recommendations and request made by David A. Hamil, Administrator of the Rural Electrification Administration, for loan funds to be available for the telephone loan program in the coming fiscal year to the full extent of Mr. Hamil's recommendation; be it further

" '*Resolved*, That the approval of this Kansas Telephone Association of Mr. David A. Hamil's recommendation and request be made known to our Senators ANDREW F. SCHOEPPEL and FRANK A. CARLSON and our Congressmen WILLIAM AVERY, NEWELL GEORGE, DENVER HARGIS, ED REES, FLOYD BREEDING, and WINT SMITH and to the appropriate committees of the U.S. Senate and House of Representatives by providing them respectfully with copies of this resolution.'

"Mr. King seconded the motion and on a vote, the motion carried unanimously. The president declared the resolution adopted and instructed the secretary to forward certified copies of the resolution to the Senators and Congressmen from the State of Kansas and to the appropriate congressional committees."

Certified to and signed this 21st day of April 1959, at Topeka, Shawnee County, Kans.

DOUGLAS GLEASON.

Subscribed and sworn to before me this 21st day of April 1959.

CAROL M. TILTON,
Notary Public.

My commission expires October 2, 1960.

Thoughts for April 15

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my re-

marks, may I call the attention of my colleagues in the Congress to an excellent editorial appearing in the April 15, 1959, edition of the Wall Street Journal entitled "Thoughts for April 15":

It has long been a truism that high taxes make people disdain the law. That has been notoriously the case in France, for example; it is becoming increasingly the case in the United States.

Thus a survey recently conducted by this newspaper showed that two out of five American taxpayers interviewed admitted cheating on their returns. It was not that they used every legal provision to their advantage, but that they deliberately short-changed the Government.

Though such a poll naturally doesn't pretend to be statistically precise for the whole Nation, it is at least indicative of the mood of quite a few people. Others, who wouldn't think of cheating, pay their taxes with annoyance, anger, or disgust.

For the Government to create such a mood is bad enough; what is worse is that the thing doesn't end there. Excessive taxation breeds, in many people, a disrespect for the Government as a whole. Moreover, much of what the Government does with tax money invites both disrespect for Government and the corrosion of individual morality.

Consider the farm program, for one instance. People with a tradition of self-reliance become inured to accepting Federal handouts. Some of them, oppressed by controls, become lawbreakers. Meantime, the entire spectacle hardly enhances the dignity of Government. Because Congress refuses to face today's farm facts, the program resembles something dreamed up in a madhouse. And yet a good hunk of the tax dollar goes to pay for this folly.

Similarly, few healthy veterans can possibly believe that they are entitled to innumerable Federal benefits, but they keep on taking them because they are available; why not get what the others are getting? For its part, Congress, skittish of imagined political hot water, refuses to reform and reduce the veterans program. Again, for the public at large, the impression is created of the Government handling tax money in a silly fashion.

The more the Government gets into matters of private concern the more these twin effects show up—the undermining of individual independence and the placing of Government in an unattractive or ridiculous light.

And the outlook for the future is not auspicious. There are too many in Congress who want to expand Government much further, apparently without limit. They are looking at human existence through the wrong end of the telescope, for Government is not and cannot be the generator of wealth, as our own history abundantly proves. On the contrary, every expansion of Government, paid for through higher taxes or more inflation, is a powerful depressant on the true sources of wealth. Existing taxes are already far too high for sound economic growth.

To put it another way, just suppose that we had sound money and confidence that the Government was going to keep it sound; that we had a Government constantly cutting spending, gradually paying off the debt and reducing taxes. The effect would be electric; the economic goals proclaimed by the statists would seem piddling by comparison to what a free people would accomplish. This is the lesson of our history, and it seems incredible that so many people can manage to misread it.

We all know, or ought to, that this Government was founded in reaction to excesses of Government. It was meant to be limited, for the very good reason that the people who founded it understood that in the freest possible play of individual initiative was not only the best guard against tyranny but also the surest route to material abundance. And so long as the Government remained limited it was not the target of the widespread disrespect of the people.

Now in these reflections on April 15, it is certainly not our purpose to condone those who cheat on their taxes. What we are saying is that it is an inevitable reaction to exorbitant taxation—a tax revolt in fact—and a part of the general malady of big government.

After all, Government can hardly expect anything but disrespect when it permits excessive taxation and inflation to cheat the people of their present livelihood and future hopes.

A Bill To Correct an Inequitable Discrimination in Administration of an Excise Tax

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. MARTIN. Mr. Speaker, I have today introduced a bill designed to correct a flagrant and equitable discrimination that has risen under the admintration of a tax law.

For decades retailers have been competing with wholesalers and manufacturers in the premium, award and prize market. This involves sales made to business and other organizations for such purposes as sales premiums, incentive and merit awards to employees, for disposition as prizes, scholastic awards, and so forth. Basically these awards are given, as business incentives for scholastic or athletic accomplishment and cultural achievement in furtherance of our economic and social life. Several recent Federal court decisions ruled that sales of this nature are not retail sales as provided for in the Internal Revenue Code and therefore are not subject to the retail excise tax. These decisions, which in part lean on debates in Congress which have tended to define the term "retail," placed these products which are normally taxed at retail on an equal competitive basis in this business and organizational market with other products not normally taxed when sold at retail. In administering these decisions, a tax ruling was issued which restricted their application to sales made by firms "not engaged in retail business." The greatest impact of this interpretation is to deny tax-exempt sales to retailers as well as to restrict the application of the exemption to manufacturers and wholesalers not selling at retail. Strenuous efforts by retailers and others to obtain corrective rulings have been unsuccessful.

The net effect of this situation is to deprive the retailer as well as many wholsalers and manufacturers of any possibility of continuing to compete equitably in this premium, award, and prize market.

The inequity involved here is compounded by the character of the parties against whom it is inflicted. From an economic point of view the retail industry is, generally speaking, the weakest element in our business structure. By far, the greatest number of retailers are "small business" in every sense of the word. And yet here, through an unfortunate distinction between them and some of their suppliers they are stripped from opportunity to equitably compete in a market that they heretofore have enjoyed.

This bill will clearly establish equitable status for all sales of these incentive awards whose value is well founded by their historical use by business and industry. In this regard this amendment clarifies but does not change existing law. Last year Congress, in the Excise Technical Changes Act, in effect, recognized the value of achievement awards by exempting from Federal retail excise taxes purchases of these products by nonprofit educational organizations. The court decisions referred to previously recognize that other organizations have the same privilege in recognizing scholastic, athletic, economic or cultural achievement without tax.

This amendment will restore retailers to a competitive equality insofar as this premium, award, and prize market is concerned with other levels of industry and thus correct the dicrimination that has arisen under the administration of our tax law. It is compatible with previous Congressional decisions that clarify the term "retail" as used in other laws and Government regulations.

It is my earnest desire that the Congress take prompt and favorable action on this bill.

Seeds of Corruption

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. PUCINSKI. Mr. Speaker, I am very happy to call attention of the House of Representatives today to a very penetrating editorial which appeared in the Washington Post on April 30. It is indeed gratifying that this responsible Washington newspaper has taken cognizance of the fact that abuses recently disclosed in labor-management relations can be traced not only to representatives of labor, but also to those who frequently represent industry's interest.

The editorial follows:

SEEDS OF CORRUPTION

Employers who go before Congress with tales of paying graft and entering so-called sweetheart agreements with venal labor leaders are very poor advocates of stiffer labor laws. The latest example is to be found in the testimony of Leonard F. Banowetz, counsel and assistant secretary of the Coleman Co., of Wichita, Kans., before a House Labor Subcommittee. Mr. Banowetz volunteered the information that his company had paid $27,000 to an official of the Sheetmetal Workers Union to end a boycott of its heating and air-conditioning equipment.

The company did indeed run into a serious problem. But instead of seeking redress

through the NLRB or the courts, it took the easy road; it sought out the union leader it believed responsible for the boycott and began paying him graft. There was no blackmail or threat to destroy the business if the company did not comply with sheetmetal workers' demands. The union made no demands. Of course, it was indefensible for the union to refuse to handle the Coleman products (which according to the witness, were made by union labor) simply because they did not bear the Sheetmetal Workers label. But it was even more contemptible, as Representative PUCINSKI said, for the company to institute a system of graft and then disguise the outlays in its advertising account.

No doubt the country needs new laws to cope with situations of this kind. But it needs even more men of principle who will not stoop to the corruption of union officials for the sake of expanding their business. Mr. Banowetz freely admitted that these transactions, which took place before he joined the company, were wrong but he was in a singularly poor position to ask Congress to remedy a situation which his own firm had helped create. Law can never cure spinelessness. Businessmen who are tempted to follow a similar course ought to realize that no weakness in the law can excuse graft and dishonesty and that, if they themselves sow the winds of corruption, then can scarcely hope to avoid reaping the whirlwinds of extortion, violence, and hoodlumism.

The Case Against the Nuclear Test Ban

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. HOSMER. Mr. Speaker, for the same reason expressed by the editors of Air Force magazine in their foreword to a special analysis in the May issue entitled "The Case Against the Nuclear Test Ban," I have asked that it be reproduced here, namely, there are two sides to every question and both should be examined by thoughtful persons:

THE CASE AGAINST THE NUCLEAR TEST BAN

(We are now in the midst of a voluntary 1-year ban on nuclear weapon testing. The arguments in favor of seeking to make such a ban permanent are persuasive and have been well aired. The other side of the coin—the case against the ban—has not been so cogently expressed nor so widely circulated. Here is an analysis presenting the arguments of an expert who opposes a permanent ban on nuclear tests. We feel these views deserve expression in the interests of open national debate of a critical issue.—THE EDITORS.)

We should not agree to a permanent international ban on nuclear testing under present circumstances, despite the spontaneous and enormous appeal of such a proposal.

Rather, it is of the utmost importance to the United States and the entire world that we resume conducting such tests and utilize their results to the optimum degree in the fields of weaponry and peacetime nuclear development. This should be done as soon as possible after the current 1-year test ban agreement comes to an end in October.

The reasons for this are many—military, political, scientific, economic. And they are urgent.

Arguments in favor of a long-term ban fall, for the most part, into two categories. They are based either on a general sense of international mortality or the fear that radioactive byproducts of nuclear explosions will gradually poison mankind.

Only a fool would dismiss either of these positions out of hand. They require examination.

Unfortunately, undiluted morality, or idealism, as a national motivation has compounded a sad case history in recent years. This pragmatic truth has been an unpleasant pill for Americans to swallow.

An appropriate example, all too appropriate, perhaps, is seen in the outcome of idealistically elevated attempts at global disarmament between the two world wars of this century. The rise of the Axis powers and the horrors they wrought were a direct result. The next link in the chain was the rapid growth of Communist power in a war-ravaged world.

Another painful example comes from an entirely different area of national life. Prohibition, although promulgated in the interests of morality, actually provided an unprecedented stimulus to organized crime. The so-called syndicate and other facets of underworld life that developed as a result remain with us today; their activities are among our major problems as a nation.

Today, among many of our best thinkers, there is the sinking sensation that we are at it again, seeking with idealistic purpose to ban nuclear testing and then nuclear weapons.

The second strain of thought in opposition to nuclear testing is based on concrete biological data, fragmentary but nonetheless frightening. Yet here is presented a problem that can surely be overcome.

The peoples of the world are entitled to full protection from possible ill-effects of nuclear testing. Some of the nuclear tests of the past should have been handled more carefully. In fact, most tests—Western tests at any rate—were held amid maximum precautions along these lines. Future tests could be held underground or in space, or under other safe conditions.

The fact is, at relatively minor cost, the problem of fallout can unquestionably be avoided in future nuclear testing. Testing can be resumed without contaminating milk and other foods with strontium 90 or other harmful substances.

We can, at this point, go one step further in discussing the overall question of a nuclear ban. Let us assume for a moment, contrary to the contention of this essay, that a permanent cessation of nuclear tests at this time is desirable. How likely is realization of this end?

This, in short, is the political side of the picture. Depsite numerous concessions on our part, which have given away a good portion of our bargaining and security positions, the Soviets have not yielded to American demands for a meaningful and reliable test ban. Nor are they likely to accept any scheme which does not predominantly serve their own strategic interests.

On the technical side, the primary issue is whether a test ban could be controlled and enforced. The United States sought an answer to this question by calling an international conference of experts from East and West at Geneva last year. The result was a carefully worded technical agreement, parts of which were questioned by some members of our scientific community. This gathering was followed by the current international conference on nuclear testing at Geneva.

It now appears that there is utterly insufficient knowledge of the numerous scientific variables entering into the test ban problem. Top experts seem unable to design a truly effective inspection system.

Even if they could, constant changes of technology would require an extraordinarily flexible setup to keep the inspection system up to date. In the absence of open tests which allows nations to keep track of nuclear progress, such a periodic modernization of the inspection system would have to be predicated upon full scientific exchanges—in other words, upon the abolition of nuclear secrecy. At the present stage of history, this would seem a wildly utopian goal.

Suppose for the moment that, in spite of all, a system technically good enough to discover test ban violations came into being. It still would be necessary to prove transgressions. Verification would be extremely difficult, if not impossible. For example, it might require finding a minuscule cavity in an enormous mountain mass, a "room" 2 miles inside Mount Whittier or Mount Ararat. Creative imagination boggles at such a problem. Inspectors would require the right to dig forever and whenever they wanted, all over the globe. How much digging would the inspectors have to do before they were truly convinced that no violation did occur? How large a digging crew would be required? There are hundreds of unidentifiable earthquakes every year. Would weekly digging expeditions be required?

The Geneva technical agreement, as amplified by later negotiation, envisages an inspection force of about 6,000 men. This figure appears too low. It could not begin to meet global demands on it—including high altitude inspection and protection against specially devised technologies of evasion and deception.

For there is no reason on earth why we should trust the Soviets to cooperate in good faith to carry out a test ban agreement. If the ban were operational, events might actually force us to insist on broad-gauged verification expeditions. We would then be moving from one resultant diplomatic crisis to the next, a sorry commentary on hopes that a test ban would reduce international tension.

Or, just as in 1949 and 1950 we gave up worrying about North Korean border incidents, we could give up worrying about inspection system warnings. Disaster might follow.

In all probability, as soon as the Soviets made the inevitable discovery that the ban hampered their armament development, they would violate the ban secretly or withdraw from the pact openly. Either way, the United States would be left flatfooted while Russia took off down the arms race track.

Since the United States cannot, for any length of time, retain its qualified test personnel on a standby basis, we would lose at least 1 year before we could follow the Russian suit. If we did not make an immediate decision, we would be delayed by perhaps 2 years.

It is generally agreed that, during the period of test ban, Russian nuclear science could reach the level of U.S. atomic knowledge. Thus, in jumping the gun on the ban, Russia might achieve a decisive margin in nuclear technology.

Let us at this point depart from our hypothetical assumption that a nuclear test ban is, in fact, desirable. We have seen where the matter of such a ban stands, and where it could lead, in practical terms. This is not, however, where the brief for test resumption rests.

Rather, there are myriad positive reasons for conducting tests to push the state of nuclear progress as far as we can as fast as we can.

Twenty years after the discovery of atomic fission, nuclear technology remains in its infancy. No scientific discipline begun experimentally has ever lost the need for experiment. Nuclear physics has always been based on experiments, foremost among them explosive tests.

The international situation makes it imperative that we stay ahead in nuclear technology. The United States has been forced into a technological race which it cannot afford to abandon. Revolutionary changes in nuclear technology are clearly foreseeable. Weapons improvements are urgently and vitally needed throughout our entire arsenal.

Obviously, each new missile needs nuclear warheads which must fit its precise configuration. It is illogical to develop new weapon systems and at the same time discontinue further development of the explosives they are designed to deliver. We cannot act as though the knife does not need a blade.

It has been argued that because our "nukes" already produce all the yield that may be useful, nuclear weapon tests no longer are necessary. Perhaps we have reached the limits of practical bomb yields. Yet we cannot possibly assume that we have attained optimal yield-weight-diameter ratios. These, clearly, are of the utmost importance in missile warfare. As the weight and space requirements for control equipment to be carried in the missiles grow, as second generation missiles move through the research stage, as third generation missiles appear on the horizon, and as targets become smaller and tougher, thus calling for increased accuracies, the need for optimal warheads becomes ever most urgent.

Solid-fueled missiles will render this requirement absolutely critical. Unless we attain really high warheads for longest range and accurate ICBM delivery, we will not acquire an effective strategic missile capability, nor will we preserve our present deterrence posture. So much for the yield problem.

Our offensive capability still is based on "dirty" nuclear weapons. This is unsatisfactory because heavy fallout causes unnecessary casualties, restricts freedom of strategic and tactical action, and may "backfire" on the user.

In a very real sense lack of clean weapons also precludes effective defense against nuclear attack. Effectiveness in missile defense is a function, not only of electronics as has been asserted, but also of yield and numbers. With "dirty" defense weapons, the greater the yield and the higher the number of surface-to-air missiles, the more harmful the fallout which will rain down on friendly territory. Not so with clean warheads.

Further, defense missiles are relatively useless unless they are available in large numbers; hence those missiles should be cheap. But in order to be cheap, defense missiles should be small and uncomplicated. To compensate for the resultant relative inaccuracy, the yield must be large, but to be usable over friendly territory, large yield warheads must be clean. To complete the circle, both yield and "cleanliness" require large weights and diameters.

In the present state of the art, large yield, clean warheads must be placed in large missiles, which cannot be economical. The clear conclusion is that really satisfactory defense weapons cannot be attained without a very substantial nuclear testing program.

To emphasize this point, it might be noted that at present the power of the offensive exceeds the power of the defensive by a margin broader than ever before. It is this presently unchallenged superiority of the offensive which has made nuclear surprise attack a matter of constant, hourly threat. A much strengthened defense could price aggression out of business.

Nuclear weapons also affect defense in ground warfare. An aggressor force would find a nuclear ambush war very hard to cope with. Small combat teams armed with portable nuclear weapons, which would combine the invulnerability of guerrillas with the firepower of divisions, would be more than a match for aggressor armies. This means that nations with small ground armies would have a chance of defending themselves successfully against aggressor hordes. Such nuclear weapons could be an excellent deterrent against local "brushfire" aggression. As yet the free world has failed to develop an effective on-the-spot deterrent against the brand of limited territorial aggression. A nuclear test ban would prevent solution of this critical problem.

There are, in addition to military factors, related political reasons for test resumption. If, armed with test-developed weapons, small nations possess the capability of fighting a future war without risking national extinction, their governments will not be tempted to surrender to nuclear blackmail. An aggressive government can use war scares as foreign policy tools under the present circumstances. New weapons, developed in tests, could change this state of affairs.

Finally, and ironically, the dreaded nuclear tests may hold a key to the good life for many.

Little publicity is accorded the discouraging fact that in many areas of the world population growth is outpacing economic development. Even if capital were available in the quantities needed—which is not the case—the problem of exploiting untapped sources would bulk large. Nuclear technology cannot be considered a panacea, but it could make formidable contributions to economic growth.

Nuclear techniques could be used for the construction of ports and canals, redirecting rivers, building tunnels and difficult roads. Nuclear-aided engineering could improve the water supply of arid areas, or of any area, for that matter. Nuclear explosions could unlock trillions of barrels of oil contained in shales and sand tars, open access to other minerals. The nuclear explosive could be one of the most valuable single package assets ever discovered by mankind.

But, once more, the potential cannot be achieved without testing.

To summarize: Resumption of nuclear testing would serve the interests of the free world in almost every conceivable way. A permanent ban, conversely, would be to our extreme disadvantage.

Widely, powerfully, sincerely expressed views to the contrary would seem to be based mainly on splendidly intentioned unreality and fear of a danger that can be overcome.

All of us live today in horror of nuclear war. We must work and pray to prevent it. Unfortunately, calling off nuclear testing now by agreement with world communism cannot help. It could be a catastrophic mistake.

Amending Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act

SPEECH
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 5610) to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to provide increases in benefits, and for other purposes.

Mr. KING of Utah. Mr. Chairman, I take this opportunity to say that I am gratified that the Railroad Retirement Act, H.R. 1012, for which I voted, passed this body by a strong voice vote.

I am convinced that it would have been an injustice to the laboring men of the Nation's railroads to have enacted the alternative, H.R. 5610. While the latter embodied certain benefits for the people it was meant to help, it also threatened to erase certain gains which the same people already enjoy.

H.R. 1012 carried the benefits which H.R. 5610 contained without threatening other benefits as the latter did. For this reason, the Congress clearly took the stronger, better position in choosing H.R. 1012, and I reiterate my pleasure over its passage.

Salute to John Morrell & Co. for 50 Years of Service to Sioux Falls and the People of South Dakota

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. McGOVERN. Mr. Speaker, one of the most important institutions in the economic life of South Dakota is the John Morrell & Co. meatpacking firm at Sioux Falls, S. Dak. For half a century this splendid industrial firm has provided an invaluable contribution to the farmers, workers, businessmen, and consumers of the Sioux Falls area. The high quality Morrell products are known and enjoyed on the tables of America from Maine to California. Thousands of working men and women have benefited from the substantial payroll provided by the company. South Dakota's vital livestock industry has profited beyond measure by the purchases of Morrell buyers.

I have known both the management officials and the labor representatives at Morrell's and am proud of my friendship and association with these high caliber men. Mr. Francis McDonald, president of Local 304, AFL–CIO, a longtime Morrell employee, had this to say of the company's labor-management relations:

> Labor-management relations between John Morrell & Co. and Local No. 304 of the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL–CIO, have been carried on in an atmosphere of intelligence and mutual respect for the position of both the employee and employer.

Such wholesome relations between labor and management are a tribute to the company officials and the workers and their leaders.

Since the Sioux Falls Morrell plant was opened in 1909, six men have served as general managers: T. Henry Foster, 1909–12; W. H. T. Foster, 1912–39; J. M. Foster, 1939–44; R. T. Foster, 1944–52; H. T. Quinn, 1952–55; and the present general manager, C. I. Sall. The president of the company is Mr. W. W. McCallum and the chairman of the

board of directors is Mr. George M. Foster. I salute all of these men for the 50 years of dedicated service that they have provided in important leadership positions.

Twenty-four longtime employees of the firm were honored in the recent salute of Morrell's to the city of Sioux Falls. These distinguished employees, the departments and the date of their beginning employment with Morrell's, are listed as follows:

Charles E. Hoffman, pork cut department, September 1, 1940.

Alfred J. Reid, divisional superintendent, April 29, 1912.

Clarence G. Budde, pork kill cut department, April 15, 1912.

Margaret C. Carlson, canned meats, November 15, 1914.

Tom R. Scott, foreman, pork byproducts, November 17, 1914.

Sidney B. White, salesman, Denver, Colo., July 7, 1916.

Freda Amundson, assistant foreman, sausage manufacture, July 17, 1916.

John A. Beck, foreman, hog kill department, October 25, 1917.

Earle Manners, foreman, engine and boiler, April 13, 1918.

George W. Heckman, St. Paul branch, July 11, 1918.

Ernest S. Lacome, mechanical clerk, August 12, 1918.

Clinton M. Gardner, head cattle buyer, January 20, 1919.

Roy E. Rensberger, pork cut department, June 5, 1919.

Art C. Pepper, manager, time office, July 7, 1919.

Esten Nesby, divisional superintendent, July 17, 1919.

Roy O. Johnson, salesman, Fargo, N. Dak., July 28, 1919.

Clarence E. Graves, traffic department, September 2, 1919.

Harry E. Chappel, cattle buyer, December 29, 1919.

E. F. Jacobson, San Francisco plant superintendent in charge of operations, May 1, 1920.

Walter Zimmel, foreman, beef and sheep kill department, May 3, 1920.

Norman E. Noyes, foreman, roustabout, June 1, 1920.

Wesley G. Baker, hog buyer, September 7, 1920.

Harris Claussen, foreman, loading and shipping department, October 14, 1920.

John H. Lacome, foreman, millwright, November 12, 1920.

Always interested in the welfare of their community, Morrell & Co. published a special salute to the people of Sioux Falls in the Tuesday, April 28, 1959, edition of the Sioux Falls Argus-Leader. I ask unanimous consent that the following portion of this special edition be printed at this point in the CONGRESSIONAL RECORD:

1909 FLEDGLING IS NOW 1959 GIANT—GROWTH RECORDED DESPITE TWO WARS, DEPRESSION

In June 1909, it seemed likely that the meatpacking firm which began operations in the old Green plant would be little known nor long remembered. It took 3 days to dress the first 50 hogs which had been purchased—not an auspicious beginning for a company which now processes 600 hogs an hour.

Residents of Sioux Falls may be excused if they viewed the new venture with some skepticism, for the meatpacking companies which had started in the city had an unbroken record of failure.

The Ottumwa, Iowa, plant of John Morrell & Co. had prospered for some years when, during the winter of 1907–08, the late Thomas D. Foster saw the necessity of expanding his manufacturing facilities if the business was to continue the steady growth which it had enjoyed since its inception in 1827. After surveying possible sites in Minnesota and the Dakotas, Foster chose Sioux Falls. At the time there seemed little to indicate this would be good country in which to locate a meatpacking company, but the territory adjacent to Sioux Falls eventually became one of the country's largest hog-producing areas.

On May 12, 1909, negotiations were completed for leasing the old Green plant at the foot of Weber Avenue, and the late T. Henry Foster was directed to get it ready for business. J. C. Stentz arrived to assist Foster a few weeks later, and on June 26, 1909, the first lot of 50 hogs was purchased and dressed 3 days later.

Things may have started slowly for the Morrell company, but it soon became apparent that the small quarters of the Green plant would not be sufficient for long. By the end of 1909, after little more than 6 months' operations, the fledgling firm had slaughtered 89,203 hogs and 1,186 cattle. The 6 months' hog slaughter was fairly phenomenal for that day and age. In this golden anniversary year, however, it is the equivalent of little more than 3 weeks' slaughter.

Because of the success of the first year's operations it was only natural to plan for expansion, so land adjacent to the plant was purchased and ground for the first of the new buildings was broken in May 1910. Later that year George M. Foster, who was to become president of the company and who now is chairman of the board of directors, was sent to Sioux Falls to take charge of installing all mechanical equipment and getting the new plant in shape.

By April of 1911 all buildings thought necessary had been completed so the Green plant was abandoned and all operations centered in the new plant. Thus it was that 2 years after operations first began, the Sioux Falls plant of John Morrell & Co. was on its way to becoming the major meat packing plant that it is today—one of the best in the industry.

At the beginning of operations in Sioux Falls, all dressed carcasses were sent to the Ottumwa plant where they were cut and processed. Soon, however, there came a call for fresh meat from the local plant. This resulted in the formation of a sales department with Stentz, later the company's first vice president and director of sales, in charge. To meet the demands of the local trade, the company made fresh meat available, manufactured some lard and sausage and obtained smoked meats from the Ottumwa plant.

The success of operations in the Green plant did not go entirely unnoticed. T. Henry Foster often told of the first visitor to the plant, the late Jay B. Allen, prominent insurance man who called to wish the Morrell company well. Allen was the only well-wisher who came. Operations had been carried on at the Green plant for a year and a half and the company was just months short of moving into larger quarters when a newspaper mention of the Morrell company appeared.

On January 18, 1911, the Argus-Leader carried the following story:

"WHAT IT MEANS TO SIOUX FALLS—WHAT STARTING OF MORRELL PACKING PLANT WILL MEAN TO THE CITY

"The Argus-Leader would like to ask you as citizens of Sioux Falls to get out your pad and pencil and do a little figuring on the possible influence the starting of the new packing plant will have on the trade pulse of this city and community. It is estimated that not 25 percent of the population of Sioux Falls has any adequate idea of what this means to the city in dollars and cents. One gentleman has gone so far as to say not 5 percent of the people realize what it means. It will, under these conditions, do you good to make some figures for yourself and thus impress the matter on your mind more thoroughly. Estimate, if you please, what it will mean to have a bucket brigade of 400 men. Calculate in good old coin of the realm what it will mean to have 20 carloads of hogs and 5 or more carloads of cattle handled at this plant every day for 300 days in the year. Perhaps you cannot comprehend that the money necessary to carry on this business of the Morrell plant for the 12 months following the opening for business of this new shop will aggregate nearly $10 million."

The Argus-Leader had foreseen the future correctly. The next two decades were ones of continuous growth with new buildings added, branch houses put in operation and plant production increased to 5,000 hogs per day by 1924. Employment at the plant kept pace with the population growth of the city, both almost doubling in number in the years from 1909 to 1920.

In 1927 John Morrell & Co. was ready to celebrate 100 years in the meatpacking business in England, Ireland, Canada and the United States. It had been a good 100 years for a business which started from the sale of a bargeload of oranges.

The Sioux Falls observance of the anniversary was centered around the dedication of the Centennial Gate at the entrance to the plant on September 27, 1927. Following a band concert, the dedicatory exercises began when the plant manager, the late W. H. T. Foster, introduced Hon. T. H. McKinnon, mayor of the city of Sioux Falls, who compared the progress of Sioux Falls with the progress of the local plant.

Success, however, was not without its difficulties, brought about by two World Wars, the stock market crash of 1929, the ensuing depression of the thirties and the bank "holidays" of 1933.

President T. Henry Foster reported on the holidays and the manner in which the company acted to keep in operation:

"On March 5 all banks in the United States were closed by order of the President. We immediately printed a supply of 'guaranteed pay orders' in various denominations, which we agreed to redeem in cash at the end of the banking 'holiday.' These were used freely to pay for all livestock, supplies and labor and they were accepted everywhere without question."

The year 1933 also brought the ill-advised program for the reduction of pigs and sows on Corn Belt farms and 1934 produced the worst drought in history.

In the war years, 1942–45, more than 1,700 men and women from the Sioux Falls plant, office, and sales force, entered some branch of the Armed Forces. Those on the home-front participated actively in the Red Cross, USO, Community Chest, and various war efforts, including the purchase of more than $2 million of war bonds.

In 1948, when building materials and labor became more plentiful, four new plant buildings, department additions, and a modern three-story office building were constructed.

Today the Morrell plant in Sioux Falls is one of the most complete, compact, sanitary, and up-to-date plants in the world, with facilities for slaughtering and processing 95 cattle, 200 lambs, and 660 hogs per hour.

As of March 31, 1959, the records show the Sioux Falls plant had killed 41,105,759 hogs, 4,377,643 cattle, 5,856,337 lambs, and 109,054 calves. Thus more than 51 million head of livestock have been purchased in this area and processed for America's tables since the Sioux Falls plant opened in May 1909.

First Lumber Cut in Oregon County in 1827

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, April 20, 1959

Mr. ULLMAN. Mr. Speaker, Oregon is proud of her record for the past 21 years as being the leading State in the Nation's lumber production. With this in mind, I respectfully request permission to have printed in the CONGRESSIONAL RECORD, an article from the centennial supplement of the Wallowa County Chieftain pertaining to the history of Oregon's lumber production. I am sure this will be of interest to my colleagues:

FIRST LUMBER CUT IN OREGON COUNTRY IN 1827

(By Arthur W. Priaulx)

When in 1827 at Fort Vancouver, Dr. John McLoughlin, famed Hudson's Bay factor, gave the sign that turned the water-powered muley sawmill to saw the first boards ever cut west of the Mississippi, it was the start of an empire in the Oregon Territory.

By 1837, a sawmill was operating at Newberg, another at Salem in 1840, and still another at Oregon City in 1842. Mills, crude affairs powered by water wheels, sprang up throughout the Willamette Valley wherever lumber was needed to build towns and farms. By the 1850's, mills were operating along the Columbia River and down the Oregon coast, and they were running full tilt supplying lumber for the California gold rush.

Since 1938, Oregon has led the Nation in total lumber production, and for the past 5 years, it has produced more than half the Nation's softwood plywood, as well as a million tons of pulp a year. But this was not always so.

For eight decades, the lumber industry of Oregon was on a hand-to-mouth basis, suffering from overproduction. Only during times of great national stress, such as during World Wars I and II, did it prosper, or during times of great catastrophes, such as the San Francisco and Japanese earthquakes, when vast quantities of lumber were needed for reconstruction.

POWER MAKES PROGRESS

Power and wheels tell the story of the lumber industry's progress. First, logging was handled with jack screws as logs were felled along river banks and rolled into the water for transport to the mills. Then came horses, oxen, crude steam donkey engines; then more powerful and refined steam equipment. Away from the waterways, logs were moved by logging railroads, but there were vast areas of forested land considered inaccessible by rail.

Then, after World War I, came the technological revolution which has changed the face of Oregon and brought every tree in the State within reach of the mills. The crawler type of tractor and the logging truck, whose development was sparked by the first war, have made logging big business.

TWO HUNDRED AND FIFTY SEPARATE GRADES

From crude early sawmills which hacked irregular-sized boards and cants from Douglas fir logs, the industry today claims the finest precision machinery: electric-powered, even some electronically guided equipment. Lumber is so finely manufactured for ultimate use that mills produce as many as 250 separate grades for strength and for appearance, compared with the few simple items of the early days.

The coming of the railroads in the 1870's had its effect on opening up new markets for Oregon-made lumber in the midwest, and the opening of the Panama Canal spurred the expansion of cargo mills along Oregon's waterways as the eastern seaboard became our customer.

Today, Oregon's 8- to 10-billion-foot annual production of lumber goes to every crossroads in America and to virtually every country on the globe. Lumber, plywood, pulp and paper—the forest products—give employment annually to 90,000 men and women, among the highest paid industrial workers in the world. The annual value of Oregon's forest products at wholesale prices to the mills is $1,200 million, which is more than twice the value of all agricultural products grown annually.

Oregon will always be the leading lumber-producing State in the Nation, because man is doing something about managing our forests. In 1940, following many disastrous years of forest fires, the Keep Oregon Green program was launched under the sponsorship of Gov. Charles Sprague and many leading lumbermen, as well as dedicated public forestry officials, both State and Federal.

FIRE LOSSES DROP

Since the advent of Keep Oregon Green, forest-fire losses have shrunk from an annual average burn of 125,000 acres to less than 10,000 acres a year, sometimes as little as 5,000 acres.

The greatest single advancement in conservation in our history started the same year in Oregon and Washington: the tree farm program. Private timber owners, seeing the example of the declining forests in the Lake States and New England, decided they must manage their forest holdings for perpetual growth if the mills and factories of the State, which live on wood, were to operate permanently.

Thus was founded the tree farm program, which some have called the greatest single invention of man for the conservation of our forests. It establishes management plans for the maximum production of forest crops on every acre of private forest lands. State and Federal forests have similar plans.

FUTURE IN YOUNG TREES

After 125 years of harvesting, Oregon forests contain 440 billion board feet of saw timber, but the real hope of the future is wrapped up in its millions of acres of young trees from 1 to 100 years of age. Forest fires have been cut to a bare minimum, so seed sources are protected. Although we have developed new techniques for planting, such as aerial seeding of logged lands by helicopter and hand planting. Mother nature still reseeds about 90 percent of all logged lands naturally, the seed coming from blocks of seed trees left for that purpose.

It is the estimate of expert foresters that Oregon's 26 million acres of commercial forests will be able to produce perpetually a volume of timber adequate to maintain a forest economy at about its present level. In the rain-drenched Douglas fir forests of western Oregon, an acre will produce an average of 700 board feet in a year. In the drier eastern Oregon pine region, the growth rate is about 150 board feet per acre per year. With these definite figures available, it is possible to project with reasonable accuracy the growth rate of our vast forest resource for generations into the future.

What of the future? There are those who predict the 2-by-4 and the board will become as obsolete as the carrier pigeon in another 50 years. That's dream stuff, for there will always be a need for conventional lumber and plywood.

RESEARCH HELPS INDUSTRY

However, the Oregon Forest Products Laboratory at Corvallis, financed by a 4-cent-per-thousand tax on all logs cut in the State, is coming up with some wondrous byproducts from wood, cellulose, and bark. Private firms in their laboratories are making equally amazing discoveries as research moves into the Nation's oldest industry. It is possible that, in the near future, we may have a chemical industry here in Oregon manufacturing a wide variety of products from leftover woods from sawmills and plywood plants. The potential dollar value of this industry is tremendous.

What sort of chemicals and products can be made from wood, bark, and cellulose? From bark, you can get cork, fibres, tannins, drugs, quercitin (widely used in food manufacturing), and many other products. From cellulose, you can get wood sugars, feeding molasses, land fertilizers and extenders, drugs, chemicals, ships stores. The list is endless.

Oregon's vast lumber and forest products industry of today, with its amazing mechanical contrivances and multitude of products, is indeed a far cry from the tiny mill at Fort Vancouver which Dr. John McLoughlin proudly and prophetically started.

Oregon has some of the most productive forest lands in the world, and farsighted citizens to maintain these lands perpetually in forests, for which this land is best suited.

Free Marketplace

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Washington (D.C.) Star of February 28, 1958.

That editorial states the simple fact that fair trade cannot stand at a time when manufacturers refuse to enforce it. It further states a still more important fact, that fair trade is so inconsistent with a free enterprise economy that it breaks down under the realities of the situation. Just as General Electric has abandoned fair trade because of the tremendous cost to enforce and police its fair trade prices, so also will other industries in the future.

The fair trade bills now pending before Congress, such as H.R. 1253, are not in the public interest and should be summarily defeated:

FREE MARKETPLACE

The so-called fair trade movement, under steadily heavier attack in recent years, has suffered a major setback in the decision by General Electric to abandon efforts to fix minimum retail prices for its small home appliances. Within hours, Sunbeam Corp., a principal competitor of G–E, followed suit; and price cutting by as much as 50 percent has been reported in many cities. Although Westinghouse abandoned price-fixing efforts more than 2 years ago, the fact that G–E is dominant in its industry and has fought a long and costly battle to maintain its price controls makes its surrender a more important breach in the fair-trade front.

The fair-trade movement reached its high point about 1940 when 45 States were giving manufacturers of branded goods the legal privilege of setting retail price floors. Only

Missouri, Texas, and Vermont—and the District of Columbia—remained free price jurisdictions. Within a decade, however, the front began to crumble under adverse decisions from State and Federal courts and only 32 States now give legal sanction to the practice. Since about 1950, the rise of the discount house—invariably operating with a minimum of overhead and selling at specific percentages below established prices—has made it increasingly difficult for manufacturers to hold the price lines. Conventional merchandising establishments were left at a competitive disadvantage. For their part, manufacturers were reluctant to cut off supplies to discount houses that provided a large wholesale market.

Some persuasive arguments have been made by the fair traders, but on the whole the concept appears to be collapsing under the pressures of competition in a private enterprise economy. It has been demonstrated that retailers can make profits at lower markups than the manufacturers have specified and that customers are determined to shop for the better prices. If fair trade is difficult to enforce in the courts, it is even more difficult to enforce in the market place. In the long run, the retail industry undoubtedly will adjust fully to these economic facts of life.

Averagitis

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, in a recent article in the U.S. News & World Report we were told that unemployment is not really a serious problem in the United States. The thousands of people in my district who are jobless and who are desperately looking for an opportunity to work will find no comfort in such deceptive reports.

There are some archconservatives who believe that a little unemployment is a good thing for the country and creates a better business climate. Compared with the total labor force 4 or 5 million unemployed is a small percentage, but when we consider the suffering that comes to the families of these jobless workers' it means that approximately 20 or 25 million persons are in distress.

Since the U.S. News & World Report reflects the thinking and philosophy of extreme reactionary interests, it can be understood why they publish such deceptive and misleading propaganda. This publication claims to be independent and nonpartisan, but every competent observer realizes that it is as reactionary and partisan in politics as the Democratic Digest is liberal and democratic. Its electioneering goes on throughout the year as it seeks to create the proper political climate favorable to candidates who support its views and philosophy.

Such articles as published by this propaganda magazine are evidently part of the fight against improvement of our unemployment compensation system and against enactment of legislation to provide needed work opportunities for our jobless fellow Americans.

Fortunately, some alert and progressive editorial writers are exposing this propaganda magazine.

Under leave to extend my remarks, Mr. Speaker, I include an editorial entitled "Averagitis" from the current issue of the Machinist, and another entitled "Scrabble" from the New Era, of Reading, Pa.:

[From the Machinist, Apr. 30, 1959]

AVERAGITIS

Forgive us for saying it, but we told you so. We predicted that the politicians, the propagandists and the newspaper columnists would soon be working to belittle the problem of unemployment and to block any effective action by Congress. The AFL–CIO conference on unemployment adjourned barely 3 weeks ago and already the counterattack is well under way.

The magazine U.S. News & World Report, for example, has whittled the number of unemployed down to an even 1 million. The Labor Department reported 4,360,000 jobless last month. To the editors of U.S. News, the only jobless worth worrying about are 1,700,000 who are heads of families. From that number they subtract 500,000 because their wives are working and another 200,000 because their sons or daughters have jobs. That leaves only 1 million and that's hardly enough to worry about.

J. A. Livingston, a syndicated newspaper columnist who writes on economic and business matters, has whittled down the figures by subtracting 2 million whom he describes as between jobs. This group is the number unemployed in best of times as a result of a free society in which some people quit, some get sick and others get fired every day. This is called frictional unemployment.

We have always regarded Mr. Livingston as one of the best informed financial writers. In this column, however, he seems to ignore the fact that even the frictionally unemployed have twice the reemployment problem when they must compete with additional millions who have been laid off.

Further, Mr. Livingston appears to be suffering from that common disease called averagitis. That's a form of cockeyedness that leads people to see and talk about averages instead of realities, about families with 2.3 children, for example.

Mr. Livingston worked over the unemployment figures to prove that only 3.1 persons are unemployed for every 100 in the workforce. The reality, according to the March classifications of the U.S. Labor Department, is that 217,000 people are out of work in Detroit, Mich.; 117,000 men and women are jobless in Pittsburgh, Pa.; 64,500 adult human beings are pounding the pavements in Buffalo, N.Y.; 11,600 people are hunting jobs in Atlantic City, N.J.

As this newspaper has been repeating for many months, the truth about unemployment is that economic recovery is not evenly distributed according to any national average. Unemployment may not be a serious problem in every area. It is deadly serious to the people of 35 American cities where there has been no recovery.

No good purpose is served by trying to sweep this problem of depressed areas under the rug. We need Federal legislation to help redevelop depressed areas. No amount of propaganda can change that.

[From the New Era]

SCRABBLE

One of the favorite sports for anyone playing the word-game "scrabble" is to try to invest a word and get it past the opponents without challenge. Invariably, this requires a bit of ingenuity which only a trip to the nearest dictionary can upset.

I was reminded of this device when I picked up the latest copy of U.S. News & World Report and proceeded to read a two-page article entitled "What Unemployed Really Means." Now what it tries to do is convince me and you that unemployment isn't really so bad, and perhaps, if you look the other way and make up your own definition, the word really is quite delightful. In fact, by the time you finish the story you're certain that unemployment is just another way of saying you're on vacation, and everybody knows that vacations are wonderful.

My "scrabble" training, however, sent me scurrying to good old Webster's. And what is his definition of unemployed? "Not employed at any paid labor." Yes, folks, unemployed means exactly what it says: unemployed. You don't get a pay check by redefining the word and trying to coat it with a thin layer of sweet chocolate. Yet, that's what U.S. News & World Report tries to do.

The business-oriented magazine might taste pretty good with some of the salt George Meany suggested using on the tails of the bluebirds in the skies. But I prefer to believe that a regular pay check exchangeable for groceries is far more satisfactory than a lot of gobbledygook and outright propaganda.

U.S. News would have us believe that the 4,400,000 unemployed are young people, alcoholics, people "between jobs," farmers hunting factory work, students, or those who want only part-time work. I hunted through every line of the story to find out how many so-called full-time workers are getting only 2 or 3 days' work a week but this was completely overlooked. I presume, then, that if you work only a day a week you are classified as "employed."

The Challenge of Soviet Power

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include the following address delivered by the Honorable Allen W. Dulles, Director of the Central Intelligence Agency, before the 27th annual convention of the Edison Electric Institute on April 8, 1959, in New Orleans. I believe Mr. Dulles' timely address will be of interest to all Members of the House:

THE CHALLENGE OF SOVIET POWER

(Address by Allen W. Dulles, Director of Central Intelligence, to the Edison Electric Institute, New Orleans, La., April 8, 1959)

I appreciate this opportunity to speak to your 27th annual convention on the subject of the "Challenge of Soviet Power."

This topic is particular appropriate for the Edison Electric Institute. It was Lenin who defined communism "as the Soviet system plus electrification." The very first Soviet economic plan in the early 1920's had as one of its principal objectives the development of a modern electric power system.

In effect, the Soviets propose to electrify Marxism. What they may in fact do is either to shock their backward political institution into key with their more modernized technical and industrial skills or electrocute the whole archaic Marxist political system.

In any event, the Soviet Union has certainly sought to follow up Lenin's emphasis on electric power and has become a leader in many electronic fields. It has developed intensively the role of radio in its massive effort to promote its subversive policy on a worldwide basis. It uses electricity to jam the airways and to build an electronic iron curtain around the minds of their own people.

In my own business of intelligence, the various manifestations of electrical power are changing the whole system of information collecting in many vital fields. Electricity operates the radar which is on watch against sneak attack. It helps to make possible the ready transmission of warning of impending danger and as the mass of intelligence pours in day by day, over electric channels, it is electronic machinery which becomes a valued partner in helping us in its collation and dissemination.

The challenge of Soviet power presents today a triple threat: First, military; second, economic; and third, subversive.

This challenge is a global one.

As long as the principles of international communism motivate the regimes in Moscow and Peiping, we must expect that their single purpose will be the liquidation of our form of free society and the emergence of a Sovietized, communized world order.

They change their techniques as circumstances dictate. They have never given us the slightest reason to hope that they are abandoning their overall objective.

We sometimes like to delude ourselves into thinking that we are faced with another nationalistic power struggle of which the world has seen so many. The fact is that the aims of the Communist International with its headquarters in Moscow are not nationalistic; their objectives are not limited. They firmly believe, and eloquently preach, that communism is the system which will eventually rule the world and each move they make is directed to this end. Communism, like electricity, seeks to be an all-pervasive and revolutionary force.

To promote their objectives they have determined—cost what it may—to develop a military establishment and a strong national economy which will provide a secure home base from which to deploy their destructive foreign activities.

To achieve this objective, they are devoting about twice as much of their gross national product to military ends as we do. The U.S.S.R. military effort as a proportion of gross national product is greater than that of any nation in the world. Their continuous diversion of economic resources to military support is without any parallel in peacetime history.

We estimate that the total value of their current annual military effort is roughly equivalent to our own. They accomplish this with a gross national product which is now less than half of our own.

Here are some of the major elements which go into their military establishment. The Soviet Union maintains an army of 2½ million men and the tradition of universal military training is being continued. The Soviet Army today has been fully reequipped with a post-World War II arsenal of guns, tanks, and artillery. We have reason to believe the Army has already been trained in the use of tactical nuclear weapons.

They have the most modern types of aircraft for defense: night and day fighter, a very large medium bomber force and some long-range bombers. They have built less of these long-range bombers than we had expected several years ago, and have diverted a major effort to the perfection of ballistic missiles.

Their submarine strength today is many times that with which Germany entered World War II. They have over 200 long-range modernized submarines and a like number of less modern craft. They had made no boasts about nuclear powered submarines, and on all the evidence, we are justified in concluding that we are ahead of them in this field. We must assume, however, that they have the capability to produce such submarines and will probably unveil some in the near future.

I would add a word on the ballistic missile situation.

When World War II ended, the Soviet acquired much of the German hardware in the missile field, V–1 and V–2, and with them many German technicians. From that base, over the past 10 years, they have been continuously developing their missile capability, starting with short-range and intermediate-range missiles. These they have tested by the hundreds, and have been in production of certain models for some time.

They also early foresaw that in their particular geographical position, the long-range ballistic missile would become their best instrument in the power struggle with their great rival, the United States. As the size and weight of powerful nuclear weapons decreased, with the improvement of the art, they became more and more persuaded of this. Hence, they have concentrated on these weapons, have tested some and assert that they now have ICBM's in serial production.

They hope in this way eventually to be able to hold the United States under the threat of nuclear attack by ICBM's while they consolidate their position in the fragile parts of the noncommunistic world.

Before leaving the military phase of the Soviet threat, I want to dispel any possible misinterpretations. First, I do not believe that the Soviet now have military superiority over us; and, second, I do not believe that they desire deliberately to provoke hostilities with the United States or the Western World at this time. They are well aware of our deterrent force. They probably believe that the risks to them even if they resorted to surprise attack would be unacceptable.

Taking into account our overall military strength and our strategic position vis-a-vis the Soviet Union, I consider that our military posture is stronger and our ability to inflict damage is today greater than that of the Soviet Union.

Furthermore, we have allies. The strength, the dependability, and the dedication of our allies put them in a very different category than the unwilling and undependable allies of Moscow, even including the Chinese Communists.

But as the Soviet military capabilities and their nuclear power grow, they will feel that their foreign policy can be somewhat more assertive. In 1956 during the Suez crisis, we had the first Soviet missile-rattling as a new tactic of Moscow diplomacy. Since then there have been the Taiwan Straits and Berlin crises, and today the aggressive Communist penetration of Iraq. Hence, we must assume that they will continue to probe and to test us, and they may even support other countries in aggression by proxy. They will put us to the test.

There are two points to keep in mind as we view the military future. Firstly, with a much lower industrial base than we, they are producing a military effort which is roughly equivalent to our own; and secondly, they have conditioned their people to accept very real sacrifices and a low standard of living to permit the massive military buildup to continue. If the Soviet should decide to alter their policy so as to give their own people a break in the consumer field with anything like the share in their gross national product which we, as a people enjoy, the prospects of real peace in our time would be far greater.

I will turn now to some of the highlights of the economic aspect of the Soviet challenge.

The new confidence of Khrushchev, the shrewd and vocal leader of the Soviet Communist Party, and incidentally head of government, does not rest solely on his conviction that he, too, possesses a military deterrent. He is convinced that the final victory of communism can be achieved mainly by nonmilitary means. Here the Soviet economic offensive looms large.

The proceedings of the recent 21st party congress laid out what we might call the Soviet economic order of battle.

Khrushchev explained it in these words, to summarize the 10 hours of his opening and closing remarks:

"The economic might of the Soviet Union is based on the priority growth of heavy industry; this should insure the Soviet victory in peaceful economic competition with the capitalist countries; development of the Soviet economic might will give communism the decisive edge in the international balance of power."

In the short space of 30 years, the Soviet Union has grown from a relatively backward position into being the second largest industrialized economy in the world. While their headlong pace of industrialization has slowed down moderately in the past few years, it still continues to be more rapid than our own. During the past 7 years, through 1958, Soviet industry has grown at the annual rate of 9½ percent. This is not the officially announced rate which is somewhat larger. It is our reconstruction and deflation of Soviet data.

Our own industrial growth has been at the annual rate of 3.6 percent for the 7 years through 1957. If one included 1958, the comparison with the rate of Soviet growth would be even less favorable.

I do not conclude from this analysis that the secret of Soviet success lies in greater efficiency. On the contrary. In comparison with the leading free enterprise economies of the West, the Communist state-controlled system is relatively inefficient.

The secret of Soviet progress is simple. It lies in the fact that the Kremlin leaders direct a far higher proportion of total resources to national policy purposes than does the United States. I define national policy purposes to include, among other things, defense and investment in heavy industry.

With their lower living standards and much lower production of consumer goods, they are in effect, plowing back into investment a large section of their production, 30 percent, while we in the United States are content with 17 to 20 percent.

Soviet investment in industry as planned for 1959 is about the same as U.S. investment in industry during 1957 which so far was our best year.

Although the Soviets in recent years have been continually upping the production of consumer goods, their consuming public fares badly in comparison with ours. Last year, for example, Soviet citizens had available for purchase barely one-third the total goods and services available to Americans. Furthermore, most of the U.S. output of durable consumer goods is for replacement, while that of the U.S.S.R. is for first-time users. In summary, the Soviet economy is geared largely to economic growth and for military purposes; ours is geared largely to increasing consumer satisfactions and building a higher standard of living.

Here are some examples: while the Soviets last year were producing only 1 automobile for every 50 we produced, they were turning out 4 machine tools to our 1.

This contrast in emphasis carries through in many other fields. Our capital expenditure for transportation and communications is more than double the comparable Soviet expenditure. Yet this is largely accounted for by our massive highway building program which has been running 15 to 20 times the U.S.S.R. spending, whereas their annual

investment in railroad rolling stock and fixed assets substantially exceeds ours.

At the moment, they do not feel much incentive in the road building field. They have no interest in having their people travel around on a massive scale. Also this would put pressure on the Kremlin to give the people more automobiles.

Commercial investment, which includes stores, shopping centers, drive-in movies and office buildings, has been absorbing over $6 billion a year in the United States and only $2 billion in the U.S.S.R.

Our housing investment is roughly twice that of the Soviet even though living space per capita in the United States is already four times that of the U.S.S.R.

What of the future? In Khrushchev's words, "The Soviet Union intends to outstrip the United States economically. * * * To surpass the level of production in the United States means to exceed the highest indexes of capitalism."

Khrushchev's ambitious 7-year plan establishes the formidable task of increasing industrial production about 80 percent by 1965.

Steel production, according to the plan, is to be pushed close to 100 million net tons. Cement output is set at a level somewhat higher than industry forecasts place U.S. production in 1965.

The energy base is to be revolutionized. Crude oil and natural gas will constitute more than one-half of the total energy supply, and relatively high-cost coal will be far less important than now.

By 1965, the U.S.S.R. plans to produce about 480 billion kilowatt-hours of electricity. As a study comparing United States and U.S.S.R. electric power production prepared by a leading industrial research group pointed out, this means that the absolute gap between the United States and U.S.S.R. in the quantities of electricity generated will increase somewhat in our favor over the next 7 years.

This interesting study received a considerable amount of deserved publicity. We agree with its conclusion. However, what is true about electric power is not true across the board, as some commentators concluded.

For example, compare primary energy production trends in the two countries. Soviet production of coal, petroleum, natural gas and hydroelectric power, expressed in standard fuel units, amounted to 45 percent of the U.S. production in 1953. By 1965 it will be close to 60 percent. The absolute gap in primary energy has been closing since 1950. At the present pace, it will continue to narrow over the next 7 years.

Similarly, the absolute gap in steel production has been shrinking over the past 5 years. The maximum gap in steel capacity apparently was reached in 1958.

The comforting illusion spread by the "disciples of the absolute gap" should not serve as a false tranquilizer.

At the same time, it is important not to exaggerate Soviet prospects in the economic race. In the propaganda surrounding the launching of the 7-year plan, Khrushchev made a number of statements about Soviet economic power which were nothing more than wishful thinking. Specifically he stated that, "after the completion of the 7-year plan, we will probably need about 5 more years to catch up with and outstrip the United States in industrial output. "Thus," he added, "by that time (1970), or perhaps even sooner, the Soviet Union will advance to first place in the world both in absolute volume of production and in per capita production."

First of all, to reach such improbable conclusions, the Kremlin leaders overstate the present comparative position. They claim U.S.S.R. industrial output to be 50 percent of that of the United States. Our own analyses of Soviet industrial output last year concluded that it was not more than 40 percent of our own.

Secondly, Khrushchev forecasts that our future industrial growth will be only 2 percent a year. If this is true, the United States will be virtually committing economic suicide. This prediction I regard as unrealistic.

A saner projection would place 1965 Soviet industrial production at about 55 percent of our own. By 1970, assuming the same relative rates of growth, U.S.S.R. industrial output, as a whole, would be about 60 percent of that in the United States.

Further, when Khrushchev promises his people the world's highest standard of living by 1970, this is patently nonsense. It is as though the shrimp had learned to whistle, to use one of his colorful comments.

These Soviet exaggerations are a standard tool of Communist propaganda. Such propaganda, however, should not blind us to the sobering implications of their expected economic progress.

First of all, rapid economic growth will provide the Kremlin leaders with additional resources with which to intensify the arms race. If recent trends and present Soviet policies continue, Soviet military spending could increase by over 50 percent in the next 7 years without increasing the relative burden on their economy.

Secondly, some additional improvement can be made in the standards of living of the Russian people, even with continued emphasis on heavy industry and armaments. It is only since the death of Stalin in 1953 that serious attention has been given to improving living standards. The moderate slow-down in the headlong growth of heavy industry which then ensued has been caused, in large part, by the diversion of more resources to housing, to agriculture, and to consumer goods.

Living standards, based on present Soviet plans, are expected to increase about one-third over the next 7 years. This level, if achieved, will still be far below that which our own citizens are now enjoying, but it will look good to people who for long have been compelled to accept very low standards.

Finally, the Soviet 7- year plan, even if not fully achieved, will provide the wherewithal to push the expansion of trade and aid with the uncommitted and underdeveloped nations of the free world. By 1965 Soviet output of some basic raw materials and some industrial products will be approaching, and in a few cases exceeding, that of the United States. Most prominently, these products will be the kind that are needed for industrialization in the less developed countries.

The outcome of this contest—the Communist challenge in underdeveloped areas—is crucial to the survival of the free world.

This is an unprecedented epoch of change. Within little more than 10 years, over three-quarters of a billion people, in 21 nations, have become independent of colonial rule. In all of these newly emergent countries, there is intense nationalism coupled with the determination to achieve a better way of life which they believe industrialization will bring them.

The leaders of world communism are alert to the opportunity which this great transformation provides them. They realize the future of communism can be insured only by expansion, and that the best hope of such expansion lies in Asia and Africa. While they are attempting to focus all our concern on Berlin, they are moving into Iraq with arms, economic aid, and subversion, and giving added attention to Africa.

The Communist bloc trade and aid programs in undeveloped countries moved into high gear during 1958. The equivalent of over $1 billion in new credits was extended to underdeveloped countries by the bloc in this year. In the 4-year period ending 1958 the total of grants and credits totaled $2.5 billion, of which $1.6 billion came from the U.S.S.R. and the balance from the satellites and China. Three-fifths of the total delivered to date has been in the form of arms to the UAR—Egypt and Syria—Yemen, Iraq, Afghanistan and Indonesia. These same countries, plus India, Argentina, Ceylon, Burma, and Cambodia, have received the bulk of the economic aid.

Over 4,000 bloc technicians have been sent to assist the development of nations in the free world. About 70 percent of these technicians are engaged in economic activities. Others are reorganizing local military establishments and teaching bloc military doctrine to indigenous personnel.

The bloc also has a well-developed program for training students from underdeveloped countries. About 3,200 students, technicians, and military specialists have now received such training behind the Iron Curtain.

While these figures are still well below the total of our own aid, loan and training programs, this massive economic and military aid program is concentrated in a few critical countries and of course these figures do not include Soviet aid and trade with the East European satellites and Communist China.

India, which has received over 325 million of bloc grants and credits, is a primary recipient. The Soviet economic showplace here is the Bhilai steel mill, being built by the Russians. The UAR over the past 4 years received over $300 million in aid and credits. This investment today does not seem quite as profitable to the Soviet as it did last year.

Iraq provides a prime example of the opportunistic nature of the bloc's aid program.

Prior to the coup d'etat on July 14 last year, Iraq's economic involvement with Communist nations had been negligible. In the past few months, the U.S.S.R. has provided over $250 million in military and economic development credits. The Iraq Development Board has dropped its two Western advisers. Western technicians are also being dismissed and contracts with many Western firms canceled. Increasingly, Moscow is pressuring the Iraq Government to accept dependence on Communist support, and the number of fellow travelers in high government posts is growing.

The Soviet policy of economic penetration fits like a glove into their worldwide campaign of subversion, which is the third main element of the triple Soviet challenge: military, economic, and subversive.

International communism has not changed its operating procedure since the days of the Comintern and the Cominform. The Communist Party of the U.S.S.R., of which Khrushchev is the leader, is the spearhead of the movement. It has a worldwide mission, formulated by Lenin and Stalin and now promoted by Khrushchev but with more subtle techniques than those of Stalin. This mission continues to be the subversion of the entire free world, starting of course with those countries which are most vulnerable.

Its arsenal of attack is based, first of all, on the Communist Parties of the Soviet Union and Communist China. These in turn direct the hard-core Communist organizations which exist in practically every country of the world. Every Communist Party maintains its secret connections with Moscow, or in case of certain of the Communist parties in the Far East, with Peiping.

These parties also have an entirely overt association with the international Communist movement. At the 21st meeting of the Soviet Party Congress, there were present representatives of some 60 Communist Parties throughout the world, including two representatives of the U.S. Communist Party. The single theme of these Communist leaders was their confidence in the eventual

worldwide triumph of the Communist movement.

From time to time Moscow has made agreements such as the Litvinov Pact, in 1933, not to interfere in the internal affairs of other countries. On the strength of this we resumed relations with the Soviet. They are eager to conclude like agreements of "friendship and nonaggression," with all countries of the world. These are not worth the paper they are written on. During World War II, Moscow abolished the international Comintern to propitiate the United States, its then wartime ally. Its functions have, however, been carried on continuously under other forms.

In addition to its worldwide penetration through Communist party organizations, the Communists in Moscow and Peiping have set up a whole series of front organizations to penetrate all segments of life in the free countries of the world. These include the World Federation of Trade Unions, which claims some 90 million members throughout the world. International organizations of youth and students stage great festivals at frequent intervals. This summer they are to meet in Vienna. This is the first time they have dared meet outside of the Iron Curtain.

They have the Women's International Democratic Federation, the World Federation of Teachers Unions, the International Association of Democratic Lawyers; Communist journalists and medical organizations. Then cutting across professional and social lines, and designed to appeal to intellectuals, the Communists have created the World Peace Council which maintains so-called peace committees in 47 countries, gaining adherents by trading on the magic word of "peace."

To back up this massive apparatus, the Soviet has the largest number of trained agents for espionage and secret political action that any country has ever assembled. In Moscow, Prague, and Peiping and other Communist centers, they are training agents recruited from scores of other countries to go out as missionaries of communism into the troubled areas of the world. Much of the Middle East and Southeast Asia, and particularly Black Africa, are high on their target list. They do not neglect this hemisphere as recent disclosures of Communist plotting in Mexico show us. Their basic purpose is to destroy all existing systems of free and democratic government and disrupt the economic and political organizations on which these are based. Behind their Iron Curtain they ruthlessly suppress all attempts to achieve more freedom—witness Hungary and now Tibet.

The task of destruction is always easier than that of construction. The Communist world, in dealing with the former colonial areas and the newly emerging nations of the world, has appealing slogans to export and vulnerable economic conditions to exploit. The fragile parliamentary systems of new and emerging countries are fertile ground for these agitators.

Also under the heading of subversion we must not overlook the fact that the Communist leaders have sought to advance their cause by local wars by proxy—Korea, Vietnam, Malaya are typical examples.

In conclusion I wish to emphasize again the pressing need for a clearer understanding of the real purpose of the Sino-Soviet program. There is no evidence that the present leaders of the Communist world have the slightest idea of abandoning their goal, or of changing the general tactics of achieving them.

Those who feel we can buy peace by compromise with Khrushchev are sadly deluded. Each concession we give him merely strengthens his position and prestige and the ability of the Soviet regime to continue its domination of the Russian people whose friendship we seek.

Our defense lies not in compromise but in understanding and firmness, in a strong and ready deterrent military power, in the marshalling of our economic assets with those of the other free countries of the world to meet their methods of economic penetration, and finally in the unmasking of their subversive techniques.

The overall power of the free world is still vastly superior to that under the control of the leaders of international communism. If they succeed and we fail, it will only be because of our compacency and because they have devoted a far greater share of their power, skill, and resources to our destruction than we have been willing to dedicate to our own preservation.

They are not supermen. Recently they have made a series of blunders which have done what words could not do to help us unmask their true intentions. These very days Communist actions in Iraq and Tibet have particularly aroused Moslems and Buddhists against international communism. The institution of the so-called communes system on the China mainland has shocked the free world and even the Soviet leaders apologetically refuse to endorse it.

Despite the problems surrounding the Berlin issue, Western Europe is stronger than it ever has been since World War II. Much of free Asia and the Middle East is becoming alerted to the true significance of communism.

The outcome of the struggle against international communism depends in great measure upon the steadfastness of the United States and its willingness to accept sacrifices in meeting its responsibility to help maintain freedom in the world.

Experience of the Electric Power Plants Corp. in Attempting To Obtain a Small Business Loan

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following résumé of the experience of the Electric Power Plants Corp., Cadiz, Ohio, in attempting to obtain a small business loan, which has been submitted to me by Mr. John Gros, vice president of the corporation. This is a case history in the present administration's neglect of small business and, in view of the facts set forth, it is small wonder that Mr. Gros is looking forward to "a change of Federal administration, an administration more favorable to small business":

RÉSUMÉ OF ELECTRIC POWER PLANTS CORP., CADIZ, OHIO

1. During 1951, Power Plants, Inc., manufactured special generating equipment for the atomic energy plant, at Paducah, Ky.

2. After completion of this order, a committee of engineers from the U.S. Department of Commerce visited us, made a study of our product and manufacturing facilities, and the following was their recommendation:

3. To help the extreme unemployment situation existing at that time in Harrison County (Ohio) (mining community), by moving our manufacturing facilities to Cadiz, Ohio (county seat of Harrison County), the U.S. Department of Commerce did extend us the following inducements for our consideration:

4. Loans for working capital would be extended by the Small Defense Plant Administration in cooperation with RFC.

5. A certificate of necessity would be granted.

6. A large order for generator equipment from civilian defense.

7. The people of Harrison County (approximately 350) would erect a modern building for the manufacture of generator equipment.

8. We accepted the recommendation of U.S. Department of Commerce during March 1952.

9. During April 1952, a loan for working capital was granted us for a period of 5 years by the Small Business Plant Administration, administered by RFC.

10. In May 1952, we received a certificate of necessity No. TA–NC–15158.

11. A contract was let to build the building during August 1952, and same paid for by the citizens of Harrison County through subscription of common stock in the Electric Power Plants Corp.

12. In November 1952, the Eisenhower administration was elected to office.

13. In April 1953, we were informed by Civilian Defense Administration that the Eisenhower administration had shelved the civilian defense program, and that the present administration was not responsible for commitments of the previous administration.

14. In or about May 1953, we were notified that the RFC was ordered into liquidation by Congress, and the RFC clamped down on our accounts receivable, and left us stranded in Cadiz without working capital.

15. Our certificate of necessity, issued without having a Federal contract, did not help us at all.

16. In 1955, the Civilian Defense Administration placed a large order for generator equipment with one of our competitors, although we were low bidder on the specifications, and were informed by Mr. Val Peterson personally that we should obtain a legal counselor to handle Federal business and referred us to Senator Bender.

17. We also contacted Senator John Bricker regarding same, but were informed that Senator Bender would handle our complaint.

18. We also contacted Mr. Sherman Adams, and received the same answer as from Senator Bricker.

19. Dr. H. O. Yoder and John Gros contacted Mr. George Humphrey, Secretary of Treasury, a friend of Mr. Yoder, president of Electric Power Plants Corp. and received the same answer, to contcat Senator Bender.

20. Mr. Yoder and Mr. Gros contacted Senator Bender and were informed that we needed a legal counselor to represent Electric Power Plants Corp.

21. Senator George Bender introduced us to a legal counselor in his office, and this legal counselor was instructed to visit Mr. Yoder in Cleveland, Ohio.

22. Mr. Yoder ordered this gentleman out of his office, and was not interested in his proposition.

23. Electric Power Plants Corp. tried twice to obtain a loan for working capital from the Small Business Administration, but were informed that we must employ a legal counselor and secondly, we are too friendly with Congressman WAYNE HAYS, who had cooperated with the people of Harrison County, and U.S. Department of Commerce to induce us to move to Cadiz, Ohio.

24. This is the story of a small manufacturer who believed in the sincerity of his Federal Government.

Federal Employees Security Program

EXTENSION OF REMARKS
OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 30, 1959

Mr. MURRAY. Mr. Speaker, this morning the House Post Office and Civil Service Committee had the privilege of receiving testimony of Mr. Loyd Wright, Chairman of the former Commission on Government Security, one of the great authorities of our time on the protection of the United States from Communist subversion.

I believe that Mr. Wright's statement before our committee will be recognized as one of the great contributions to a strong and effective Federal employees security program. Mr. Wright urged prompt approval of legislation now before the committee which it is hoped soon may be brought to the floor of the House. This legislation will close a dangerous loophole in the existing program, established by an overwhelming vote of this Congress in Public Law 733, 81st Congress, which was opened by the decision of the Supreme Court in the case of Cole against Young in 1956.

I commend to the attention of all Members Mr. Wright's statement before our committee, which follows:

STATEMENT OF HON. LLOYD WRIGHT, CHAIRMAN OF FORMER COMMISSION ON GOVERNMENT SECURITY, BEFORE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, AT HEARING ON BILLS DEALING WITH THE FEDERAL EMPLOYEES' LOYALTY PROGRAM, APRIL 30, 1959

Mr. Chairman, and members of the House Committee on Post Office and Civil Service, may I be privileged, for the record, to introduce to you, Mr. Chairman and members of the committee, Mr. D. Milton Ladd, Mr. Tracy, and Mr. Brown, who were Administrative Director, Associate Counsel, and Assistant Director of Research, respectively, of the Commission on Government Security. It is indeed heartening and indicative, I believe, of the emphasis that those who have had the opportunity of studying this delicate and complicated matter of subversion feel that they have been willing to volunteer their services to assist me in presenting to you our recommendations on H.R. 1870, Mr. MURRAY'S bill, and H.R. 1161, Mr. REES' bill, and similar legislation pending before your honorable body. It might be appropriate to observe that my testimony and the testimony of my associates will fundamentally touch upon those bills.

Mr. Chairman, since I last had the privilege of appearing before you in July of 1957, I have had an opportunity to discuss the entire report of the Commission on Government Security with a great many associations, groups, political and otherwise, and civic clubs throughout the Nation. I can say to you unhesitatingly that wherever the report is explained, citizens are earnestly interested in implementing the principles of the legislation proposed by the Commission in this delicate field of security and personal rights and privileges.

We who have zealously studied this problem have great concern over the complacency with which many of our people view the acceleration of the efforts of the Communists who seek to infiltrate and subvert our Government and our country. We seem all too frequently, to have forgotten the realities of the situation. May I, just for a moment, remind you and the distinguished members of your committee, that that great American, J. Edgar Hoover, has repeatedly warned the Nation that the Communists are on the march. Recently, before a national convention of the American Legion, he said this:

"To dismiss lightly the existence of the subversive threat in the United States is to deliberately commit national suicide. In some quarters we are surely doing just that."

You will recall, I am sure, the Gaither report to the President on national security. Mr. Gaither, in addressing the American Bar Association several months ago, had this to say:

"Our security is in unprecedented peril—the ultimate objective of international communism is world domination, and the Soviet Union will pursue this objective ruthlessly and relentlessly, employing every possible political, economic, subversive, and military strategem and tactic."

It seems inconceivable that we—a Nation built upon reality and practical accomplishments—should so loosely disregard the repeated warnings of the leaders of the Communist philosophy. I remind you, if I may, that there was a little man who wrote "Mein Kampf" who told America and the world what he was going to do and we did not believe him. For our neglect and expediency, thousands and thousands of fine young Americans paid the supreme sacrifice so that you and I might continue to enjoy individual freedom. From the very beginning of the Marxist Manifesto we have been warned by the Communists what they would impose upon us to bring about our economic destruction. I shudder when I think of the opportunities that my grandchildren might not have because my generation thought so little of the warning that the Communist Manifesto should have given us. Privileges and opportunities that were yours and mine will never be theirs.

Mr. Chairman, Lenin, one of the masterminds of this evil philosophy in 1923 boastfully said, and I quote him:

"First, we will take Eastern Europe, then the masses of Asia, then the Near East, then Africa, then we will encircle the United States, which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

I respectfully submit, Mr. Chairman and members of the committee, that Lenin was far too accurate in his prognostication. Unless you now implement legislation to protect the security of the Nation agreeable to the mandate under which the Commission on Government Security was brought into being, it will happen here.

During the last 25 years the United States has had 3,400 meetings with the Communists, including Tehran, Yalta, Potsdam, Panmunjom, and Geneva. The negotiators spoke 106 million words. All this talk led to 52 major agreements, and Soviet Russia has broken 50 of them. This is, of course, consistent with Lenin's philosophy about treaties and agreements as is evidenced when he said:

"A promise is like a crust of bread—it is made to be broken."

Again Lenin commanded, and I quote:

"We have to use any ruse, dodges, tricks, cunning, unlawful method, concealment, and veiling of the truth."

More recently, one Nikita Khrushchev, presently the number one gangster of the Kremlin, frankly warned us as follows:

"If anyone thinks that our smiles mean the abandonment of the teachings of Marx, Engels, and Lenin, he is deceiving himself cruelly. Those who expect this to happen might just as well wait for a shrimp to learn how to whistle."

Mr. Chairman, these quotations may seem trite, but those of us who have had the privilege of examining the Government records, who have talked to the fine, loyal servants of the people in government, who daily combat the scheming encroachment of subversive influence and what I am sorry to say is more difficult to combat—those poor, deluded people of America who, though not Communists, for reasons sometimes obscure, follow the Communist line and assist them in their objectives; those of us who have had the opportunity of visiting Europe and the Middle East and have seen the devastation visited upon innocent peoples by this uncontrollable, avaricious, godless thing called communism, must take heed of these warnings and call upon that characteristic of which we Americans used to be so proud and which we designate as "Yankee horse sense." (I might interpolate, sir, that no geographical division is intended.)

You have before you bills contemplated to cure what I think has been a misinterpretation of the intention of the Congress. You, Mr. Chairman, and the distinguished ranking minority member, who were the authors of the bill which was struck down by *Cole* v. *Young*, are, I am sure, somewhat surprised to have a vagrant court tell you that you did not intend what you said. However that may be, we of the Commission—and I must call your attention to the fact that the Commission has expired and I therefore am speaking principally for myself, but I hope reflect the vast majority of the views of the Commission as is evidenced by the report—have accepted as our premise that only the loyal citizen is entitled to the honor and reward of working for the Government. There have been in certain areas of professional life crusaders who attempt to say that laws can be so drafted that the screening process through which loyalty is assured should only be made applicable to employees in sensitive positions. None of these advocates of such a loose policy have been able to determine, or indeed to indicate in this atomic age, what constitutes a sensitive position. These schemesters who do the bidding of the Communists and who would subvert us, are constantly sneaking down dark alleys and prying into wastepaper baskets and fitting scraps of information together so that they may divulge to the enemy our innermost secrets. It is inconceivable, for instance, that any Congressman would stand for re-election upon the platform that he advocates that a Communist should be permitted to work for the U.S. Government. Yet I submit if the *Cole* v. *Young* decision is not cured, if the true intention of the distinguished men who authored the original bill is not clarified, that will be the result. We will have in branches of Government through scheming, lying and devious tricks people unworthy of the honor and confidence of being governmental employees.

There is nothing, in my opinion, more important than to firmly establish the principle that in our glorious country only the loyal, as well as the competent, should be employed in Government service.

Mr. Chairman and members of the committee, it is with great restraint that I desist from again pleading with you to consider the whole of the report of the Commission on Government Security. We spent some $700,000 of the taxpayers' money agreeable to a mandate unanimously passed by the Congress in an effort to protect the individual citizen and all of his consistent rights measured against the necessity of protecting the security of the Nation. However, I persist in the hope and prayer, that at some subsequent time the appropriate committee will hear and consider all of the recommendations made by the Commission so that the mandate will have been fully complied with.

I make bold to make this suggestion because even members of this committee at the previous hearing suggested that the bills here considered were temporary expedients to meet an emergency situation to provide effective ways and means of separating employees in any position from the Federal payroll who are disloyal to the U.S. Government. I take cheer also because in the committee's report No. 1201, 85th Congress, the committee indicated in the following language the intent to explore the Commission's report more fully when it said, on page 6, that the recommendations of the Commission on Government Security submitted to the Congress on June 21, 1957, should be examined carefully and that sufficient time should be devoted to an exhaustive study so that comprehensive legislation may be enacted, establishing a Central Security Office to coordinate the security program of the Government.

Heartful Aspects of the Mutual Security Program

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mrs. BOLTON. Mr. Speaker, so much attention is given the military aspects of mutual security that we may tend to overlook the more heartful work carried on under the program. While the total amount of funds allocated to these activities is comparatively small, the dividends realized in terms of friendship and goodwill are enormous. Through these programs Americans are enabled to express their concern for the less fortunate peoples of the world, a concern which is inherent in the conscience of America.

Certain of these activities were described to the Foreign Affairs Committee on April 17 by the following witnesses: Mr. William H. McCahon, Chief, Voluntary Foreign Aid Staff, ICA; Mr. Richard B. Farnsworth, Deputy Chief, Education Division, ICA; Dr. Eugene P. Campbell, Chief, Public Health Division, ICA; Dr. Paul F. Russell, Rockefeller Foundation; and Dr. John D. Porterfield, Deputy Surgeon General, Public Health Service, Department of Health, Education, and Welfare. As their presentation covered four programs which are of very real interest and importance, I shall summarize their testimony under the respective program heading.

OCEAN TRANSPORTATION COSTS

This program, for which $2.3 million is requested, is designed to defray ocean transportation costs of U.S. voluntary agency gift shipments to needy persons abroad. These gifts which are distributed in the name of the American people, include food, clothing, medicines, hospital supplies, school supplies, hand tools, and other self-help items. The salient points, observations, and facts bearing upon this program are as follows:

First. All supplies involved come from private U.S. sources as voluntary donations either in cash or in kind.

Second. All costs including procurement, processing, packaging for export, and delivery of supplies to U.S. port are borne by the voluntary agencies.

Third. For every appropriated dollar spent ocean freight, roughly $15 worth of these privately donated supplies are delivered to needy persons overseas.

Fourth. During the past 3 years, the value of these supplies has averaged $27 million annually.

Fifth. Thirty-two U.S. voluntary nonprofit agencies are participating in this program, including the relief arms of the three major faiths, CARE, and the American Red Cross.

Sixth. Eligible agencies are those registered with the Advisory Committee on Voluntary Foreign Aid. This Committee was created in May 1946. It has 10 members at present, all serving without compensation, and is chaired by Mr. Charles P. Taft.

Seventh. As a condition of such registration, the voluntary agencies keep the Committee fully informed of their activities. An annual public audit is filed by each registrant. These are available for public inspection.

Eighth. The U.S. origin of the goods is made known to the recipients through labeling, special posters and literature, as well as by personal contacts of the American citizen field representatives maintained by the voluntary agencies.

Ninth. The authorities of the recipient countries exempt the supplies from all duties, tolls and taxes. Inland transportation and related costs from port of entry abroad to ultimate distribution center is paid by the recipient countries or from other non-U.S. Government sources.

Tenth. Forty countries and areas are now included in this program, 16 having been added in December 1958. The additional $200,000 requested is needed to take care of this and other possible expansion in the number of countries to be served. It is believed that with this modest increase the amount requested will be adequate to finance all estimated shipments in the coming year.

In addition to their material aid shipments, these voluntary agencies are carrying out many other useful services in the fields of refugee care and resettlement, technical assistance and self-help. These people-to-people activities serve as a useful and important supplement to the government-to-government assistance programs. They provide a good example of how Government and our private citizens can join hands to accomplish mutually desired ends.

AMERICAN-SPONSORED SCHOOLS ABROAD

Funds made available under section 400(c) of the Mutual Security Act are designed to further mutual security objectives by increasing the number and quality of human resources available to participate in economic development. Section 400(c), title 5, of the Mutual Security Act of 1954, as amended, provides that "the President is authorized to use not to exceed $10 million of funds appropriated" to assist "schools and libraries abroad, founded or sponsored by citizens of the United States and serving as study and demonstration centers for ideas and programs of the United States, notwithstanding any other act authorizing assistance of this kind." The amounts available for this program in subsequent years have varied according to demands upon appropriated funds, with $5 million proposed for the coming year.

The primary objective of this program is to enable American-sponsored schools abroad to contribute more significantly to the development of the human resources so desperately needed by the developing countries. An American-sponsored school is defined as one that provides educational facilities of two nations—namely, those characteristic of the United States on the one hand, and on the other hand, those of the host country. The student bodies include nationals of the country, third country nationals, and may include U.S. citizens. American-sponsored schools abroad are cooperative enterprises supported by U.S. citizens and local citizens. Particular emphasis is placed upon technical education at the college and university level by virtue of the mutual security program objectives.

Graduates of these schools will be among the scientific, political, and economic leaders in their countries. One of the American University of Beirut's most famous alumni is Charles Malik, President of the United Nations General Assembly. Robert College in Turkey, by virtue of its long establishment there, enjoys a wide range of contacts. At the present time it numbers among its graduates three Turkish Ambassadors, the head of one of the major political parties, senior officials of the Industrial Development Bank and a host of industrialists and technicians in private industry. Most of the American-sponsored schools in Latin America, Africa, and the Far East are elementary and secondary schools, nevertheless they also can claim economic, political, and social leaders as their alumni.

In addition to their function of actually training productive citizens and other important elements, is the fact that the American-sponsored schools abroad serve as models and demonstration centers which influence the educational systems of the host countries and thereby improve the type of education offered all the students in the country. They serve as a local demonstration of improved educational methods, materials, and teaching procedures.

In a broader sense the schools aided provide one means of contributing toward the sound objectives of developing better understanding between the people of the United States and the peoples of the countries in which the schools are established. The students of the host country who attend such schools tend to learn U.S. methods and standards without affecting their basic sense of values toward their own countries. In addition, with an American educational background, these students are ideally qualified for local employment with U.S. firms. They are also better prepared to enter American colleges and universities for advanced training.

In summary, by assisting American-sponsored schools abroad we are supporting American private initiative, we are capitalizing on existing investments, and are utilizing the skills and knowledge of Americans already working in the educational field abroad. The enormity of the developing countries' needs for trained manpower requires that we make maximum use of all our available resources.

MALARIA ERADICATION

The administration has requested that $35 million of special assistance funds be made available to continue worldwide efforts to eradicate malaria. The avowed goal of this program is the elimination of malaria from nations of the world in which reside more than 1 billion persons who are or have recently been exposed to malaria infection. Since the first appropriation for this purpose was received in fiscal year 1958, major progress has been made in 26 nations which have signed bilateral malaria eradication agreements with ICA and in some 50 additional nations receiving indirect U.S. assistance through the special malaria accounts of the World Health Organization and the Pan American Health Organization.

The role that the United States plays in the malaria eradication program is crucial to the success of the worldwide effort. Our leadership in this field was well established some years ago when we initiated a program for the eradication of malaria in the United States and followed it through to a successful conclusion. As early as 1942, we began to share with neighboring countries our knowledge of how to combat this disease.

Today, most of the underdeveloped countries where malaria is still a serious problem have manpower and can finance local costs, but do not have the equipment and materials needed nor the foreign exchange with which to purchase them. These items which we furnish can be provided only from the United States in the quantity and quality necessary for a program of this magnitude. In addition to commodities, we are also providing the top-level leadership and technical assistance where this is required.

Under the present program U.S. assistance is being extended to 26 of the 76 countries now concerned with malaria eradication. Certain of the remainder require no assistance and others are being aided by the World Health Organization, the Pan American Health Organization, or the United Nations Children's Fund. Once malaria has been eradicated by a country, it is neither difficult nor expensive to maintain that condition.

Our Government plans to continue support to many nations of the world through contributions to the special malaria accounts of the World Health Organization in the amount of $3 million and of the Pan American Health Organization in the amount of $2 million. The World Health Organization and its Regional Office for the Americas, the Pan American Health Organization play a key role in coordinating the efforts of all nations in the worldwide malaria eradication program and provide technical support for individual country programs through provision of consultation, training fellowships, training facilities, and conferences. These organizations are uniquely capable of carrying out these functions through their official channels with the nations of the world and by their ability to employ scarce experienced malaria experts without regard to nationality. Most important of all, these organizations operate in many countries and territories in which there are no ICA health programs. This is particularly significant since the mosquito is no respecter of political boundaries. The WHO and PAHO also are participating directly in and coordinating field investigations of special problems such as mosquito resistance to insecticides, and the role of drugs in eradication of malaria from tropical Africa.

It is expected that U.S. participation in the malaria eradication program will require about 5 years. Where eradication problems are particularly difficult for technical or other reasons, assistance may be required beyond fiscal year 1962. The program is expected to reach its peak during the coming year.

Described as the greatest nonmilitary international cooperative effort in history, the malaria eradication program has already made substantial progress. Malaria has already been eliminated from large areas and experience to date indicates that the objectives of worldwide eradication are technically possible and within reach. U.S. leadership and participation in this program not only results in improved conditions of health throughout a large part of the world, but also represents a truly international cooperative effort in human welfare.

COMMUNITY WATER SUPPLY PROGRAM

The sum of $5 million in special assistance funds is proposed to be used for improving community water supply facilities. Lack of safe water supplies for drinking and personal cleanliness is a keenly felt need by people almost everywhere in the newly developing countries. This situation is most critical in the smaller and moderate-size communities. Major efforts and resources have been dedicated to providing piped water for the very largest cities, but even so the urbanization growth has been so rapid as to outstrip existing capacities, often inadequately planned when installed. It is not unusual to find capital cities with one-fourth to one-half of the urban populace unserved by the public water supply. The industrial and economic development of the smaller cities and towns, so necessary to stabilize shifting population, almost without exception is contingent upon the availability of water. If it is not provided, industry will rarely come into an area.

This program is designed to spearhead greatly increased efforts attacking the gastrointestinal diseases through the stimulation of national programs to provide safe water supplies for human needs. Technical support on a broad front is needed to encourage and aid the organization and adoption of practical programs to serve the water supply needs for better health, increased productivity, industrial expansion, and improved standards of living. This attack will be carried out in collaboration with other nations, with WHO and the Pan American Health Organization.

This proposal has evolved from recent actions on many fronts to focus attention on this primary cause of much sickness and death in major world areas—the diarrheal diseases. The World Health Organization, Pan American Health Organization, the U.S. Public Health Service, and on more than one occasion President Eisenhower, have all called for combined efforts to help do away with this obstacle to economic advancement in many less developed countries.

The Inter-American Committee of Presidential Representatives in 1957 endorsed a public water-supply program for the Western Hemisphere. The worldwide needs were considered of high priority by the International Development Advisory Board. In March 1958, the Surgeon General of the U.S. Public Health Service recommended such a program, along with others, to ICA as appropriate for early implementation. The 88 member nations represented at the World Health Organization—WHO—General Assembly at Minneapolis in May 1958 resolved in favor of increased emphasis on worldwide community water-supply efforts. President Eisenhower in his August 1958 address before the U.N. General Assembly indicated water shortage and disease as two major challenges to Near East development. A resolution adopted by the Pan American Sanitary Conference, October 1958, called attention to the importance of water supply and urged further consideration in program planning. Supporting these affirmations of needs and feasibility is the 16 years' experience in such activities by ICA and the Institute of Inter-American Affairs, which have demonstrated the technical, administrative, and economic soundness of water-supply development programs.

Each year an estimated 500 million persons have one or more of the gastrointestinal diseases, which are preventable with clean water. Approximately 5 million infants die each year from these diseases, which include cholera, typhoid, and paratyphoid fever. In addition to the human suffering and death these diseases cause, they represent a tremendous economic loss to the development of growing nations.

The funding of this program is expected to highlight U.S. interest and support of a critically needed public health measure. Soundly conceived, the community water supply program should prove highly popular with the underdeveloped nations and make an effective contribution to improved health and economic development.

The Ground Combat Soldier

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD the brilliant statement of Gen. Bruce C. Clarke, commander of the U.S. Continental Army, with headquarters at historic Fort Monroe, Va.

General Clarke eloquently reminds us that the ground combat soldier is the very heart and core of our national defense system. Without the ground combat soldier, no other arm of defense can function in security with assured logistical support.

Many are beguiled these days by appealing concepts of pushbutton warfare. I would respectfully remind my colleagues that through all the ages of military history the great decisions of war have rested with the troops who finally took and held the ground. I need not specify some notable demonstrations of this classic theory in World War II.

General Clarke is one of the most distinguished Army officers on active duty today. He speaks from long and illustrious experience as a leader on the field of battle in both Europe and Asia. He is a distinguished military administrator, and a world authority on military history.

General Clarke enlisted in the Army as a private in April 1918, at the age of 17, and was appointed to the U.S. Military Academy in 1921. He was graduated from West Point in 1925, and since has been honored with many decorations, at home and abroad, for his valiant leadership in battle. His tribute to the ground combat soldier deserves a high place in our national archives. General Clarke's statement follows:

THE GROUND COMBAT SOLDIER
(By Gen. Bruce C. Clarke)

The paramount concern of the Army is the ground combat soldier. He is the focal point of all our efforts. Organizing, equipping, training, sustaining and supporting him so that he can perform his indispensable role in combat is the Army role.

This role is equally significant in any kind of war—hot or cold. It is just as important in general war as it is in limited war. For our Nation to entertain any notion to the contrary would be dangerous.

The danger could be social as well as military.

More than any other category of personnel in the Armed Forces, the ground combat soldier comes from the general populace. He is the private citizen under arms—the clenched fist of his people.

It is by no idle chance in the history of mankind that the course of democracy parallels the importance accorded the ground combat soldier in the military forces of nations. It is no exaggeration to say that the basic freedoms we now enjoy are closely related to his ascending importance on the battlefield since the Battle of Crecy. Nor is it an exaggeration, in my opinion, to say that the preservation of those freedoms will continue to be oriented by his place in the sun.

Only when men from all of the people are willing and ready to fight and die for freedom does freedom have meaning for them. Only then does democracy thrive. That is the inexorable lesson of history.

Beguiled by the mechanical marvels of an age, it is easy for people to forget the true character of the ground combat soldier's role in war. When free men have been so beguiled in the past, they have slipped back into vassalage. For the ability of the ground combat soldier to play his part in the social scheme of things depends upon the part he is given in the military scheme of things.

It will be a sorry day for all mankind in this supersonic nuclear age of ours should the ground combat soldier ever be deprived of his rightful place in the hearts and minds and military forces of his people.

In our efforts to avert this danger, a one-Army attitude must pervade all ranks. The ground combat soldier is not a guardsman, nor a Regular, nor a reservist, nor a selectee. He is simply the American fighting man on the one-Army team. I appeal to every member of the team—civilian and military—to give his cause the enthusiastic support merited by its vital importance to our country.

Clyde Eubanks, of Chapel Hill, N.C.

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a newspaper article from the Chapel Hill Weekly, published in my hometown of Chapel Hill, N.C.

I think most of us are prone to forget many of the things that have made America such a great country. I am sure that most of the communities throughout the country can look around and find some individual who has contributed so much to the beginning of a private enterprise establishment which has become traditional in the community and can be pointed to with pride as an outstanding accomplishment by an individual.

I had the pleasure and privilege of working for Clyde Eubanks, the subject of this article, for almost 30 years before I was elected to this august body—from 7 o'clock in the morning until 11 o'clock at night most of the days, 6 days a week. I like to think of this past experience and of my association with this fine gentleman, and I pass on this story of his life for whatever it may be worth to those who read it. The lesson implied in it to me is that success does not come without sacrifice and hard work, as is exemplified in the story of this man known all over North Carolina and greatly beloved by all who know him.

The article from the Chapel Hill Weekly follows:

CHAPEL HILL CHAFF
(By Louis Graves)

Clyde Eubanks will be 88 years old day after tomorrow (Saturday).

He was born in Chatham County, April 25, 1871. He came to Chapel Hill in 1892 when he was 21 and got a job as a clerk in Dr. A. B. Roberson's drugstore on the corner of Franklin and Columbia Streets where George Barclay's University Service Station is now.

His pay was $10 a month and room and board with his employer, who was both a physician and a druggist. The Roberson place was bought by the University a few years ago and the house was torn down to make room for the Ackland Art Museum.

My memory of Chapel Hill goes to just about the time of Clyde's arrival. I used to see him when I would walk downtown from my home where the inn is today. Sometimes on a fair day when he wasn't waiting on a customer he would be out on the sidewalk engaged in the favorite pastime of a small-town businessman in those days, i.e., looking this way and that and talking with whoever came along.

From end to end of Franklin Street, and on the block of Columbia Street from the Roberson store to the campus gate, the elms met overhead and made a beautiful bower for everybody passing underneath. Every street was covered with grass over its whole width except for a trail in the middle for wagons, buggies, and an occassional carriage. Pavements and automobiles had not even been dreamed of. There were no electric lights or telephones. The source of water for every water was a well, and there was no plumbing.

The latest census (1890) gave the population of Chapel Hill as 831. The enrollment in the university was about 250. There were nine buildings on the campus. The college well was a little unpainted wooden structure with a pulley under the roof. Over the pulley ran a chain at each end of which was a moss-covered bucket, like the one in the famous poem, and the students, the faculty, and visitors, when they were thirsty, would grip the chain and pull up one bucket while the other went down. Janitors toted water from the well to the rooms in the five dormitories (South, New East, Old East, Old West, and New West).

That was the village and the University of 1892 that only a small and dwindling number of people living in Chapel Hill remember.

A moment ago I pictured Clyde as taking his ease on the sidewalk. But he did very little loafing. He was too ambitious for that. There was no organized instruction in pharmacy then, but he learned a lot about drugs from Dr. Roberson; he subscribed to a correspondence course; he took time off from his routine duties to complete a course in anatomy under Dr. R. H. Whitehead in the University; and he went down to Raleigh for a 3-month course in pharmacy under Dr. William Simpson, the only North Carolinian who was ever president of the American Pharmaceutical Association.

Then Clyde went on his longest trip away from home up to that time—to Morehead down on the coast where the State board of pharmacy was holding the annual examination for licenses to practice pharmacy. He passed it with high grades and came back to Chapel Hill with his certificate.

He married Miss Stella Pritchard, and their son Paul works in the drugstore with him today.

Some 8 or 10 years before Clyde came here from Chatham County Dr. Roberson had a clerk named Isaac Emerson, commonly known as Ike Emerson, the discoverer of the formula for the celebrated headache cure and hangover comforter, Bromo-Seltzer. It has been stated and denied that Emerson made up the formula here in the Roberson store. Nobody is certain about that. But it was not until he went to live in Baltimore that he put the mixture on sale. Its merit and the clever advertising with which it was promoted brought it quickly into public favor and made Ike Emerson a millionaire. Baltimore real estate purchases and other fortunate ventures made him a multimillionaire. He gave the university

the Emerson Stadium where baseball games are played.

Clyde Eubanks did not become a multimillionaire like Ike Emerson or even a millionaire (well, maybe I ought not to be so positive about that), but by hard work and the exercise of sound judgment he mounted to the very top of our mercantile community. He has owned and operated his own drugstore for 62 years and all the other concerns that were here when he set up in business have gone out of existence.

His store even antedates the Bank of Chapel Hill.

He has been president of this bank for several years. He never misses a meeting of the board of directors and at the annual stockholders' meeting he shows himself singularly gifted as an ex-tempore speaker. What he tells the stockholders about the deposits, the surplus, etc., leaves them all aglow with pride at being admitted to such a select company. The bank, being next door to his store, is conveniently placed for presidential visits, and he saunters in at least once a day and sometimes oftener to see whether or not bandits have scooped up sackfuls of cash after having stuffed Messrs. Gobbel, Thompson, and the rest of the personnel into the vault.

A famous story about Clyde is that, when he said to his wife some 10 years ago that he thought the time had come for him to retire, she asked him, "But what will you do after breakfast?"

After giving her question deep thought and being unable to think of a satisfactory answer, he has said no more about retiring and he has continued to come down to the store every day. He enjoys this and it is lucky for a lot of people, not only for his fellow Chapel Hillians who like to drop in to chat with him but also for university alumni and other visitors. I doubt if there has ever been anybody in Chapel Hill who has equaled Clyde Eubanks for being called on by returning exiles.

One Hundred and Seventy Years Ago: The Birth of the American Republic

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. ASPINALL. Mr. Speaker, today marks the date of the birth of the American Republic under the Constitution. Exactly 170 years ago, on Thursday, April 30, 1789, George Washington was inaugurated as the first President of the United States. I think it fitting that this occasion be marked by the inclusion in the RECORD of an excellent article on the subject by Louis Ottenberg of the District of Columbia bar. Mr. Ottenberg's article appeared in the April issue of the American Bar Association Journal. The article follows:

ONE HUNDRED SEVENTY YEARS AGO: THE BIRTH OF THE AMERICAN REPUBLIC

(By Louis Ottenberg)

(On the last day of this month, the American Republic will be 170 years old. On April 30, 1789, with the inauguration of George Washington, the Constitution became the instrument of government of the United States. Mr. Ottenberg's article gives an interesting perspective, looking back over the years from a country of 170 million, stretching from Key West to Point Barrow, to the 11 wrangling States (with a total population less than that of today's Chicago) which had ratified the Constitution by that day in April 1789.)

The birth of the American Republic under the Constitution occurred exactly 170 years ago, on Thursday, April 30, 1789. The place: Federal Hall in the city of New York at Wall and Broad Streets; the occasion: the inauguration of George Washington as the first President of the United States. It was a solemn, momentous, and portentous event. It closed one chapter and opened another in American history.

The period of gestation had been long, difficult, and full of uncertainly and travail. It had begun in May 1787, at the Constitutional Convention, held in Philadelphia. By September of that year, the first sign of life had been indicated by the production of a plan of government in the form of a constitution. But that was just a beginning. The pain of the birth pangs was yet to be suffered, because by article VII of the document produced by the Constitutional Convention "Ratification of the conventions of nine States" became necessary before it became "sufficient for the establishment of this Constitution between the States so ratifying it."

Then began further suffering almost sufficient to kill the incipient Constitution. Opposing forces assembled throughout the 13 sovereign States; the proponents (called Federalists) and the opponents (called Anti-Federalists). Each side marshaled its forces for the contests to be waged in the conventions called in each State to ratify or reject the new instrument of government. Its life still hung in the balance.

What General Washington had written on January 18, 1784, to Gov. Benjamin Harrison of Virginia, was prophetically and pathetically true during the months of travail between September 1787 and April 1789. He had said in that letter that some of his "powerful" friends "predict the worse consequences from a half starved, limping government, that appears to be always moving on crutches, and tottering at every step." Continuing, he wrote:

"The disinclination of individual States to yield competent powers to Congress for the Federal Government, their unreasonable jealousy of that body and of one another, and the disposition which seems to pervade each, of being allwise and all powerful within itself, will, if there is not a change in the system, be our downfall. This is as clear to me as A B C; and I think we have opposed Great Britain and have survived at the present state of independency, to very litle purpose, if we cannot conquer our own prejudices. The powers of Europe begin to see this, and our newly acquired friends, the British, are already and professedly acting upon this ground; and wisely too, if we are determined to persevere in our folly. They know that individual opposition to their measures is futile and boast that we are not sufficiently united as a nation to give a general one. Is not the indignity alone, of this declaration, while we are in the act of peacemaking and conciliation, sufficient to stimulate us to vest more extensive and adequate powers in the sovereign of these United States?"

It was under the conditions presented by Washington that the proposed Constitution went before the ratifying conventions where the forces of hope and of fear gathered to determine whether the infant Republic would actually be born or "die aborning."

JUNE 1788: THE ISSUE IN DOUBT

Delaware was the first to ratify. Its action on December 7, 1787, was unanimous. That was a good start but certainly not necessarily auspicious. But in most of the other States ratification was marked by acrimony and bitterness, and the results uncertain until the very end. Pennsylvania, New Jersey, Georgia, Connecticut, Massachusetts, Maryland, and South Carolina all acted favorably before the end of May 1788. Then New Hampshire ratified on June 21, 1788. The nine States required had approved. Theoretically at least the Constitution was established. But what of the two key States—Virginia in the South and New York in the North? Could the prospective Republic survive without either or both of them?

In Virginia the bitter contest terminated favorably by a margin of only 10 votes (June 26, 1788). In New York the margin was only three votes (July 26, 1788). So those two large and crucial States became the 10th and 11th ratifying States. North Carolina had already rejected ratification, although it had left the door ajar for future action. It was only after the new government had been born on April 30, 1789, at the inauguration of President Washington that North Carolina ratified (November 21, 1789). Rhode Island was really the stubborn one: It held out until May 29, 1790, and then ratified by a vote of 34 to 32. Vermont was not one of the Thirteen Original States, but nevertheless it acquiesced in convention on January 10, 1790, before Rhode Island. However Vermont was not admitted into the Union until, by act of Congress approved February 19, 1791, it became the 14th State.

Meanwhile the existing Government under the Articles of Confederation, with the high-sounding title of "The United States in Congress Assembled," was still attempting to conduct the current affairs of state. Its difficulties were constantly mounting. It had little or no credit, or money, or stability; it was having trouble even getting a quorum to transact its daily business. It had been waiting to see what the ratifying conventions would do, waiting, waiting. It was "peering into the future with hope or with fear."

So it was with mixed feelings when, on the evening of July 1, 1788, it heard the Delegate from New Hampshire announce that that State had ratified the Constitution—the required ninth State to act favorably. The next morning the Delegates of Virginia also reported the favorable action by their State. With "the establishment of this Constitution between the States so ratifying the same" the die was cast—for better or for worse. Already, as Washington had written 4 years before, chaos seemed inevitable.

The news of the ratification by 10 States was soon on the streets of New York City where the Congress was in session. "The establishment of the Constitution" was promptly celebrated with processions, floats, and all the other paraphernalia of festivity. This was going on while the State's convention was still wrestling with the question of ratification.

It would seem that by this time the labor pains incident to giving birth to the new Republic would have been assuaged. But no. There was to be more anguish, and that in the existing Congress, before the torch could be passed from the old government under the Articles of Confederation to the new Government under the Constitution of the United States.

The United States in Congress assembled did not wait for action by New York. To it now fell the duty of preparing for the birth of the new Republic. It set the time for the legislatures of the States which had ratified the Constitution to select their U.S. Senators and to appoint their electors to the electoral college; also the time for the electors to assemble to vote for a President and a Vice President of the United States. It fixed the time for the beginning of the new Government. In short, it implemented the provisions of the Constitution. Those details were worked out with comparative expedition. Since Rhode Island had failed to act on ratification, its delegates in Con-

gress felt that they should not participate in the proceedings relating to the Constitution. So they left. Although North Carolina also had failed to ratify, its delegates in Congress stated openly that they did not "wish to have North Carolina associated in any vote with Rhode Island." They too would not participate in the proposed arrangements.

A CAPITAL CITY—BUT WHERE

The birth of the new Republic had to take place somewhere. But where? That now became the subject of bitter debate in Congress. The logical place seemed to be New York City, but New York State was even then in the midst of a most acrimonious struggle in spite of the masterful Federalist Papers which had receive widespread publicity. The advantages of Philadelphia, Wilmington, Lancaster, Baltimore and Annapolis were all pressed forward by their supporters. After New York City, Philadelphia seemed the next most desirable city; it had ample accommodations and Pennsylvania had ratified the Constitution by a substantial majority on December 12, 1787, just 5 days after Delaware. But Philadelphia lost the honor by just one vote, that of Nathaniel Mitchell, of Delaware, who supported Wilmington's claim. James Madison summed up the situation in a letter written to a friend on July 21, 1788: "Those who wish to make New York the place of meeting studiously promote delay. Others who are not swayed by this consideration do not urge despatch."

By the middle of September 1788, Congress realized that a full year had elapsed since the Constitutional Convention had adopted the form of the proposed Constitution. Additional delay might prove injurious to the new and as yet unborn Republic. Furthermore, delegates in Congress were leaving or threatening to leave or not voting. Necessary action was becoming extremely hazardous, but also very urgent. By that time New York State had also ratified the Constitution.

Finally Congress agreed that New York City should be the first place of meeting—the scene of the birth of the Republic—and that the first Wednesday of January, February and March, 1789, respectively should be the days for taking the steps preliminary to beginning the Government under the Constitution: the selection of Senators, Representatives and electors, counting votes of the electoral college for President and Vice President, the assembling of Congress and the swearing in of a President.

The completion of those arrangements by the United States in Congress assembled amounted to signing its own death warrant. However its final demise did not occur as anticipated. Neither did the actual birth of the new Republic.

The first Wednesday of March 1789, was the fourth day of that month. But on that day there were not enough Senators or Representatives present to constitute a quorum for business. So everyone just waited and waited. The stragglers began to arrive belatedly. Weeks passed. The anticipated birth of the new Government was delayed accordingly.

Then action came quickly. Labor pains became more acute. Everyone became aware that something was soon to happen. It did. On April 1 a quorum appeared in the House of Representatives and it organized. Frederick A. C. Muhlenberg, of Pennsylvania, was elected Speaker of the House. On April 6 a quorum appeared in the Senate and John Langdon, of New Hampshire, was chosen its President pro tempore. The Senate was soon sufficiently organized to count the electoral votes for President and Vice President. The result: George Washington received the highest number of votes and so was declared elected the first President of the United States; John Adams, of Massachusetts, received the second highest number of votes and so was declared the first Vice President.

All was now in readiness for the accouchement. General Washington at Mount Vernon was to be notified by Charles Thomson, who had been Secretary of the First and the Second Continental Congresses and of the United States in Congress assembled. The inauguration would end his continuous service of 15 years, but his selection to inform Washington was a nice gesture by the Senate. Of course, Madison had already written to Washington, his fellow Virginian, of the results of the election and that Thomson was on the way with official confirmation.

John Adams had also been notified and had arrived in New York. On April 21 he took his oath of office and began to preside over the Senate.

General Washington arrived in New York from his home in Virginia, after a journey marked by a joyous people welcoming their heroic war leader, now on his way to peaceful leadership.

Then on April 30, 1789, George Washington took the oath of office of President as prescribed in the Constitution. The new Republic was born at last. The pregnancy had been painful—but, more important, the birth was successful.

Would the baby Republic survive? Could it? That was a problem at home and abroad. All that could be said at the time was "we, the people of the United States * * *" had ordained and established "this Constitution for the United States of America."

Even the most optimistic prophets could then scarcely have seen this nascent Republic grow from strength to strength as it did—from the 13 weak States to 49 strong ones; from a Nation of some 3 million strong along the Atlantic seaboard to one of 175 million extending from ocean to ocean and from Canada (and far northern Alaska) to the Gulf of Mexico; from a helpless babe to a mighty world power. Unity attained; freedom maintained. And all in a mere 170 years.

Truly, in the words of the Psalmist (118: 23): "This is the Lord's doing; It is marvelous in our eyes."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.
